3527. (*Chairman.*) Then there is another class of payments that you make. You make payments directly for small contracts, do you not?—All sums under 100.

3528. And you make payments for local allowances and travelling claims, do you not?—Travelling claims are always paid by us: not all local allowances.

3529. Do the pay lists exhaust all the imprest payments?—No, they would be the principal imprests from the Station Pay Office; but from the District Pay Office, it is not so?—There are small amounts in some cases for the payment of subordinates and small sums for postage.

3530. But in an ordinary station the pay lists would exhaust the imprest?—In a station, yes, but not in a district; it is rather peculiar, because, as a matter of fact, the District Paymaster is also, though he has a different name, the Station Paymaster at nearly all the stations; in fact, at all the stations now that has been for the last eight years.

3531. (*Mr. Gibb.*) How is that; he is stationed at a district?—The District Paymaster is the Station Paymaster at the Headquarters Station of the district. Take, for instance, the South Eastern District.

3532. The Headquarters of the district being in the same place?—Yes, Dover. The District Paymaster there, who has the district payments for the whole of the South Eastern District, acts as Station Paymaster for Dover itself.

Col. T. W. Drage, C.B.

5 Feb. 1901.

Col. T. W.
Drage, C.B.
5 Feb. 1901.

3533. Then, I understand that, except at the districts, the pay lists exhaust the imprests, and at the districts the other payments under the imprests are comparatively small?—Yes.

3534. (*Chairman.*) Now, as regards the direct payments for small contracts under 100*l.* for local allowances and travelling claims the Paymaster makes them direct, does he not?—No, not all local allowances, because they are paid, a great many of them, by Cox's and other agents.

(*The Secretary.*) Again, the Home District is peculiar, because you do not issue the pay of the troops?

(*Witness.*) No.

3535. (*Chairman.*) But leaving London aside for the moment, in a normal district the Paymaster would make all the payments for small contracts under 100*l.* for local allowances and travelling claims?—Yes, nearly all and we pay contracts, of course, here too.

3536. But taking a district outside London, you would not only pay contracts, but local allowances and travelling claims?—All travelling claims are always paid by the District Paymaster.

3537. And local allowances?—Staff and Departmental Officers draw through their agents, Regimental from Station Paymasters.

3538. Through Messrs. Cox?—Or other agents.

3539. They could get them through the Paymaster, but they prefer to draw them through Agents?—I suppose they do, because they have the money there and they can draw it as they require it. If they drew the money from us, we should give them a cheque. This refers to pay, not allowances.

3540. But as regards officers' allowances, they go through the Agents?—Except travelling allowances, which are all paid by the District Paymaster; Staff and Departmental Officers draw through Agents, and Regimental through Station Paymasters.

3541. (*Mr. Gibb.*) You mean they never appear on the pay list at all?—There again, with the Artillery and Engineers, they do appear on the pay list.

3542. It might be clearer if you were first of all to describe the general practice at the outlying districts?—Certainly.

3543. (*Chairman.*) Yes. I want to get at the normal practice in the normal districts outside London. There, I understand, the Paymaster makes all payments for small contracts and for travelling claims; but as regards local allowances, the officers would go to Agents?—Only for Staff and Departmental Officers, Regimental Officers draw from the Station Paymaster.

3544. The Paymaster would have nothing to do with them?—No. Of course, all officers have the option of drawing through Agents or through the Paymaster; but, I think, as a matter of fact, we do not get many. I think at Gibraltar I had one officer; with three battalions of Infantry, seven companies of Artillery, and four of Engineers, there was only one officer in the whole lot who drew his pay from us.

3545. (*Mr. Gibb.*) And who looks after the Agents?—I think the Agents' accounts are all treated in exactly the same way as our accounts are, but I think they submit them quarterly instead of monthly.

3546. (*Chairman.*) All local allowances for men, I suppose, come through the Paymaster?—Yes, all local allowances for men come through the Paymaster.

3547. What is the difference in London?—In London the District Paymaster does not act as the Station Paymaster.

3548. Not as regards small contracts?—The Station Paymaster has nothing to do with contracts. The Station Paymaster is entirely for the payment of troops. It is the District Paymaster who has to do with payments under contracts.

3549. How are small contracts done in London?—We pay them there, all under 100*l.*

3550. (*Mr. Gibb.*) You being the District Paymaster?—Yes, I am the District Paymaster.

3551. (*Chairman.*) And these payments which are effected by the District Paymasters are, of course, audited at the War Office?—Yes.

3552. You pass them in in a form in which they can be audited?—We pass them in in a monthly account,

3553. (*Mr. Beckett.*) Do you send up all the vouchers?—Yes.

3554. (*Chairman.*) Then, in addition to these duties, I have seen it stated that Paymasters give particular attention to the balance sheets of Company Officers. I suppose that refers, not to the imprests, but to some other accounts, canteen accounts, and so on?—The balance sheet of the Company Officer really accounts for all funds. The Company Officer very often has a number of funds that he puts into his balance sheet. The canteen is a Regimental account.

3555. But are all these funds public money?—No.

3556. They are mostly not?—They are mostly not; they are mostly what are called company funds.

3557. Are they subscriptions, or what are they?—Subscriptions as a rule, cricket clubs and such like, they have numbers of funds. At Gibraltar they had a fund called the Currency Fund.

3558. Then, as regards these funds, is there any duty imposed upon the Paymaster, or does he act as a kind of friendly adviser?—He is supposed to see that the public funds are not being used in connection with these private funds.

3559. But they are all kept in one account?—Yes.

3560. But as long as the public funds are not being used for these private purposes he has nothing more to do with the private funds?—No; he has nothing more to do with the balance sheet. He has no right to call upon the Officer Commanding for any explanation with regard to the balance sheets of these funds.

3561. Is his advice ever sought?—In connection with the pay lists, yes.

3562. In connection with these funds?—No.

3563. Not at all?—No, I think Company Officers and Commanding Officers are very particular about these things. If they do, it would be in the most private manner. I have known a Commanding Officer come down and ask the Paymaster to go through the accounts.

3564. Just to check them for him?—Just so; but not very often, they do not care about it as a rule.

3565. Then practically your duty with regard to them is to see that the public money does not get mixed up with the private money?—Well, to see that they are not using public money for these funds. For instance, if a Commanding Officer's cricket fund is getting low, not to let him get 20*l.* or 30*l.* in debt to the public funds for the purpose of using the money for the cricket fund.

3566. (*Mr. Gibb.*) Are the items relating to public funds in the same account as the items relating to private funds?—Yes.

3567. If there is no duty on the Paymaster with regard to private funds, would it not be more convenient if the accounts were separately kept?—I hardly think so. You see then it would necessitate the keeping of a couple of accounts at the bank, and they do not care about that kind of thing, and the banks do not care about it.

3568. (*Chairman.*) They do not care about keeping two accounts for the same person?—Two small accounts, because the accounts would be very small.

3569. (*Sir George Clarke.*) I suppose the reason is, that the subscriptions to these funds are covered in some cases by small deductions from the men's pay?—In nearly all cases.

3570. That is what first brings them into the pay list?—Yes; there is a heading to that effect.

3571. But it is separately dealt with?—Yes, it is kept entirely separate, but in the same account.

3572. (*Chairman.*) What possibility would there be of an officer using public money when the cricket club fund was running low?—Supposing he had 100*l.* more than was necessary, he could use that 100*l.* for the cricket club if we did not examine the balances.

3573. If he got 100*l.* more than was necessary for what?—For the pay of the men.

3574. (*Mr. Beckett.*) If he drew it from the Paymaster?—Yes.

3575. (*Chairman.*) But I understand that the Paymaster would not issue anything at all considerably in excess of what he knew the Company would demand?—No, but you do not know what the recruiting or any,

thing else may have been during the month. You cannot tell within 100l. probably.

3576. So that in theory a man at the beginning of the month might ask for more than he required?—Yes, he might do so.

3577. If ever he does such a thing, does he return that money at the end of the month?—Yes, he is only allowed to have a certain balance.

3578. What is the balance?—As a rule 10l.

3579. That is all?—That is all.

3580. But do cases of public money being used for these private purposes ever occur?—I have never known a case.

3581. It would be very difficult under the scrutiny of the Paymaster, who sees the whole balance sheet?—Very difficult; beyond the last day of the month, you know.

3582. (Mr. Beckett.) Sometimes a temporary arrangement might be made from the public funds?—They might do it in the middle of the month.

3583. (Chairman.) But you would find it out at the end of the month?—Yes.

3584. (Mr. Gibb.) You say the accounts you are now speaking of altogether are very small in amount?—Yes, very small.

3585. What would be about the sort of amount of public money that would be in these accounts?—It is very hard to say.

3586. (Mr. Beckett.) What sort of turnover a month—1l. or 10l.?—I misunderstood you; I thought you meant what would be the amount of the pay list.

3587. (Mr. Gibb.) No, the amount of the public money which is mixed up with the private funds in one account?—Anything from 30l. or 40l. to 300l. or 400l. I have known as much as 300l. in the fund accounts.

3588. (Chairman.) But it could not be more than what the officer demanded on requisition for the company. At the beginning of the month he sends you in a requisition for the money necessary for the company?—Yes.

3589. And in theory he might use that?—He would not get it. He does not get his money at the beginning of the month altogether—he gets it by instalments, weekly. He is supposed to pay weekly, and to draw his money weekly.

3590. (Mr. Gibb.) But the public money which is included in this account is, *inter alia*, the money drawn for the pay of the troops, is it not?—Yes, the money he draws from us is only a certain amount of cash; he has really got his money in the bank. His money, for his company funds, would probably be in the bank.

3591. What I am not quite clear about is, what public money does the officer have in his possession at any time other than the money drawn for the pay of the troops?—He would have a certain amount for compensation for clothing, but, with that exception, none—no public money at all.

3592. So that the public money in his hands at any one time which he had not immediately to pay away to the troops would be exceedingly small?—Very small. They never have more than a week's pay and allowances; and the allowances are nothing, of course.

3593. (Mr. Beckett.) Is it invariably the custom all through the Army to mix up these public and private accounts?—So far as I know it is.

3594. (Chairman.) It means that one balance sheet is kept for the whole accounts of the company by the Commanding Officer?—Yes.

3595. Do you see any disadvantages in a system by which both public and private money is kept in the same account?—I do not think so; not if the Regulations are complied with; the Regulations are clear enough, that they are not to use public money for private funds. I do not see any great disadvantage in it.

3596. (Mr. Gibb.) Does the officer pay the public money that he receives into his banking account?—In nearly every case; they do not always do it. Abroad, for instance, when they draw cash they may take it up to the barracks.

3597. But if an officer drew a cheque on his banking account for a private purpose, there being no money at

his credit other than the public money, he would be really drawing public money for his private expenses?—Yes, if he did that. But it is the case, I suppose, that they have never been without money really in their company funds.

3598. Are there not some impecunious officers?—A good many of them. We do hear occasionally of their going wrong, of course, but not as a rule.

3599. It does not strike you as a disadvantage?—No, I do not think so.

3600. (Chairman.) But a careless man might want to pay up something to his cricket fund and would draw the money out of the bank?—He might do so, of course.

3601. Using, possibly, public money?—Yes; but then the funds, I should say, are invariably in credit.

3602. When you send down the money to an officer on an imprest, which you say is done four times a month to include payment to his company, in what form do you send it down; do you place a certain amount to his credit with a local bank?—If you are at the same station, you would send it to the bank; it is more convenient.

3603. And the Station Paymaster would place so much to the account of so and so?—Either of the Officer Commanding the company, or of the Adjutant, in some cases the Adjutant keeps the account.

3604. The Sub-Accountant, whoever it is?—Yes, you place it to his credit in the bank once a week.

3605. For paying the men, does he actually draw out that money?—He draws out what he likes.

3606. When he effects payment he draws out the money in hard cash?—Yes.

3607. So many hard sovereigns and so much silver, or whatever it is?—Yes, whatever he wants.

3608. But in theory, if a man were called upon to make a small payment for a cricket club or anything of that kind, he would give a cheque on this one account of his in the bank?—Yes.

3609. Then do you see, at the end of every month, that whatever balance of public money he ought to have is actually there?—No.

3610. Then how are you enabled to make sure that the public money is not used for these other purposes?—The balance allowed is so small.

3611. But you have no means of finding out whether he has actually got the balance in the bank?—No; you simply take his statement. You have the Officer Commanding the company, who is in many cases a Major, and the balance is only 10l.

3612. Yes, the sum is not large?—If it is in excess, he has to give an explanation, and if the explanation is not satisfactory, it is sent to the Officer Commanding the regiment.

3613. As regards travelling claims, do they give you a great deal of trouble?—Yes, a great deal of trouble. I have an officer employed from about 9.30 in the morning to 4 o'clock every afternoon checking them.

3614. That is to say, testing whether a claim which is presented is in accordance with the Regulations?—Yes, in accordance with the Regulations, and in accordance with the railway fares.

3615. First, you want to know whether the man is entitled to take that journey?—You get the order for the journey, which tells us that.

3616. Whom does he get the order for the journey from?—The General Officer Commanding is really the person responsible for the journey, but, of course, in many cases they get it from Headquarters.

3617. (Colonel Miles.) It is given in the form of an order or a route?—Officers do not move on a route, of course, not in the ordinary way of travelling claims.

3618. (Chairman.) What you have to see is that he has proper authority for the journey?—Yes, and then that the items charged in the travelling claim are in accordance with the Regulations and with the railway fares.

3619. (Mr. Gibb.) To see that the railway company have not asked too much?—Yes, we have to see that very often; however, the railway companies give it back again. An officer is, of course, entitled to conveyance at two-thirds of the fare, and the railway

Col. T. W.
Drage, C.B.
5 Feb. 1901.

Col. T. W.
Drage, C.B.

5 Feb. 1901.

companies will give the money back again if they have overcharged, as long as they get a proper voucher for it.

3620. (*Chairman.*) But when you say that you see whether the claim has proper authority, whether there is proper authority for the order, do you ever question whether that authority has been given in accordance with the Regulations or not? For instance, if the General Officer Commanding the District issued an order to an officer to undertake any journey, would that be final for you, or would you question whether he had authority in accordance with the particular regulations, whether that particular class of officer was entitled to travel in that particular way?—Not now; a few years ago we might, perhaps, have done so, but now the General Officer Commanding is final as regards the order for the journey.

3621. (*Mr. Gibb.*) Is that under any written regulation that his judgment is final?—I think so. The General can now order any journey he likes.

3622. (*Chairman.*) That is final as regards the authority?—Yes, the General has nothing to do with the details of the claim.

3623. Then you examine the claim to see whether the right fares have been charged?—Yes, to see that the right fares have been charged and the right allowances; and that the claimant has not taken cabs when he was not entitled to them.

3624. And does the question of local allowances give much trouble?—No, I do not think so; not at home, any way. They are all laid down clearly enough.

3625. But there are allowances in respect of various things, are there not, quarters and fuel, and so on?—Yes, but they are all clearly provided for. If quarters are not given you have an allowance laid down in lieu. If you do not get fuel and light in kind, you have the allowance provided for in the Regulations.

3626. And at Foreign Stations there are special allowances?—There are special allowances, each Foreign Station has its own local regulations.

3627. I suppose there would be no means by which you could reduce the work in connexion with travelling claims?—I do not think so. Officers are always saying they do not know how they have been done out of their expenses. I think they could know with very little trouble, and if they cannot take the trouble, all they have to do is to go down to the Pay Office and they will always get any assistance that they want.

3628. One or two officers of the Pay Department before other Committees have laid considerable stress upon the desirability of the Paymaster being constituted what they called a financial adviser to the General in Command. Have you any views upon that subject?—Yes, undoubtedly the Paymaster has more experience in financial matters than any other officer in the district can have, because he sees the War Office Audit, which nobody else sees, and he is prepared to understand the requirements of the War Office.

3629. You mean to say he understands the Regulations?—He understands the Regulations.

3630. But if the General or any officer wants information as to the Regulations, he would send to the Paymaster and ask him?—Yes, always. I think what some of the officers complain of, is that they are not in close enough communication with the General Officer.

3631. That is rather a matter for the General Officer, is it not?—More than anything else, yes.

3632. Do you attach much importance to the claim that has been made, that the Paymaster should be more of a financial adviser; do you understand that anything special is meant by the phrase "financial adviser" in the context, further than that it would be advisable, perhaps, that the General should be in closer relations with him, and should avail himself more of his advice?—I do not think there would be so many references to the War Office, for instance, if the General consulted the Paymaster more frequently. Of course, in the old days they used to have what they called the Commissariat Officer, who did nearly the whole of this work, and who was entirely an administrative officer; but now they have officers who do a great deal more work—more combatant work—than the old Commissariat Officer, and as they do that work, they naturally leave the other portion of the work to their clerks.

3633. (*Mr. Gibb.*) What officers are you referring to?—The officers who have now succeeded—the officers of the Army Service Corps as they are called now.

3634. You say they have more officers who do account work?—No, I do not think I said that; they have more combatant work than the old Commissariat officers used to have. The Army Service Corps is now a combatant corps altogether, and the Commissariat officer was not a combatant officer.

3635. (*Chairman.*) When you say that it would be well that the General Officer should be in closer relations with the Paymaster and consult him more, do you mean to say as regards the meaning of the Regulations governing pay and travelling expenses and local allowances, and so on?—Yes.

3636. You do not mean to say as regards the making of contracts?—No, we have nothing to do with the making of contracts. The contracts are merely furnished to us. I do not think we want to have anything to do with them, and I do not think we should have anything to do with them.

3637. You would then understand that what this phrase "financial adviser" means is that there should be a closer communication between the General and the Paymaster on the question of the interpretation of the Regulations?—Yes, or where there is a doubt.

3638. Of course, as regards contracts, they are not made in any case by the Paymaster?—No.

3639. And the Paymaster would have no particular knowledge to bear on that matter beyond the ordinary common sense knowledge that a man might have of those affairs?—No.

3640. He would have no business experience, or anything of that kind?—None whatever.

3641. (*Mr. Gibb.*) But you make payments for the claims under the contracts?—Yes; we are furnished with the conditions of the contract by the Army Service Corps Officer on the Staff of the General.

3642. Then, if a claim comes in under a contract, what certificate do you require on the claim before you pay it?—We require a certificate that it is in accordance with the terms of the contract.

3643. From whom?—From the Army Service Corps Officer, not the staff officer, but the officer in charge of the ordinary supplies or barracks.

3644. And you never go into the question?—Yes, we check them all. He gives a certificate.

3645. (*Chairman.*) You check the amount, but you do not go into the question whether it is a good contract or not?—No, not whether it is a good contract; we go into the question whether the bill we receive is in accordance with the terms of the contract and whether the rates and things like that are correct; in fact, we check them right through.

3646. (*Mr. Gibb.*) Do you check them before they are certified by the Army Service Corps Officer or afterwards?—Afterwards, when they come to us.

3647. Then have they received any checking before he signs them?—Yes, he is supposed to check them and enter them in his bill books.

3648. Then he checks them and signs them?—Yes.

3649. And then you do so?—Yes, then we check them over again. It is very necessary. We find a good many of them wrong.

3650. Although they are signed?—Although they are signed.

3651. (*Chairman.*) Do you mean errors of computation, and that sort of thing?—Yes, we find that even from railway companies; they send in bills which are not quite correct sometimes, and they have to go back again.

3652. (*Mr. Gibb.*) A bill that you ask payment for is a different thing from a bill that you are going to pay?—Yes.

3653. (*Chairman.*) The Army Pay Department and its present organisation is a comparatively modern establishment, is it not?—1878.

3654. I suppose at first the work was novel, and there was some difficulty before the officers got accustomed to it?—Of course there were not a very large number when they first started; the duties have been increased very largely; the duties have been altogether altered since 1878.

3655. But I suppose with the experience of all these years the department is generally getting more familiar with its duties, and, therefore, more efficient and more competent?—Yes, I think so.

3656. Up to what limit of age can a man be taken on to the Army Pay Department?—35.

3657. Are they ever taken at that age?—Yes, if a man finds he has no chance whatever of getting his majority he probably thinks he will try for the Pay Department.

3658. At about the age of 35?—Yes.

3659. In your opinion is not that rather an advanced age at which to take up a totally new set of duties?—In some ways it is, and in others it is not. We want men who are thoroughly steadied down when they come to the Pay Department. On the other hand, when a man comes in late in life he is—

3660. Getting stiff in the joints?—Getting a little bit of a grumbler; it is absolutely no choice except Hobson's.

3661. Would you prefer to see the limit of age reduced, and get your men younger?—I think they ought to have certainly from five to seven years' service.

3662. (*Mr. Gibb.*) Why?—The man's previous service; you see, is in the Army, and he learns all the ins and outs of the Service and the requirements of the Service. I am sure of that, because I know we have had men from the War Office who, although first rate men and hard workers, never got thoroughly into the ins and outs of the Service like they do when they are mixing with the men themselves.

3663. (*Chairman.*) But if a man had five, six, or even seven years' service, that would not take him over the limit of 30 years of age?—No. Of course the Pay Department was almost started to give a chance to some men who were being turned out on account of age.

3664. Was that the object of starting the Pay Department?—No, I do not think it was the object of starting the Pay Department, but I think that had a great deal towards helping it on. That is only a private idea of mine, but I think that is the case.

3665. You mean to say that it has been treated, to some extent, as a provision for men who were being turned out of the Service on account of age?—Yes, that was when it was first started. That was about 1878 or 1879.

3666. Would you think, as it is now that there would be any advantage in reducing the limit of age; insisting, perhaps, that the men should have five or six or seven years' service, but that they should come in at a lower age than 35 in all cases?—Yes, I think 35 is too old. As I say, a man at that age comes in because he is absolutely forced to, and his promotion is slow; he is coming in amongst men a good deal younger than himself, and comes in under them.

3667. He does not enter at the bottom of a career with the chance of making his way up?—No, he knows that he has no chance of getting into the highest rank.

3668. A man coming in at 35 years of age would practically have no prospect?—Absolutely none.

3669. And therefore he would probably take less interest in his work?—No doubt.

3670. (*Mr. Gibb.*) Is your correspondence with the War Office a large correspondence?—Yes, but that refers more to London than anywhere else.

3671. In a country district, is it large?—No, very slight, as a rule. For instance, where perhaps I get from 40 to 70 letters, or perhaps from 50 to 80 or 90, here, from the War Office, in the day, at an out-station I would not get more than three or four.

3672. What would be the cause of those?—They would be entirely in connection with special authorities being given here, and that probably all to do with the exceptional state of affairs existing at present.

3673. But speaking for normal times and throughout the country, you do not find that there is a needless amount of reference to the War Office by the Paymasters?—No.

3674. Now, I did not quite clearly understand what you said about the direct payments and imprests. Do

the Station Paymasters make any direct payments?—You mean other than imprests?

3675. Other than imprests. Yes?—Very few.

3676. Substantially, then, the Station Paymasters issue imprests for payment of troops?—Yes.

3677. And the District Paymasters issue imprests for payment of troops and make their own payments?—The District Paymasters who act as Station Paymasters, which is in nearly all cases.

3678. If the District Paymaster did not act as Station Paymaster, he would have no interest in that?—He would make no issues to troops, but I think this is the only station of that kind now.

3679. Then, that being so, what are the relative proportions of work involved in connection with the direct payments and the imprest issues in the office of a District Paymaster?—Of course there is a very great difference between stations. It is very hard to say.

3680. Take a large district?—If you get to a place like Gibraltar you pay the wages of, perhaps, a couple of thousand men—you make direct payment to them. That would take a couple of days in a week.

3681. I was thinking more of the Home Districts. What district have you had personal experience of?—This one.

3682. Other than the Home District, I mean?—In the South Eastern and Dublin.

3683. Then take Dublin. What would be the relative amount of work in Dublin in connection with direct payments and in connection with imprest issues?—For the district work in Dublin I had four officers. I should say in a place like Dublin it would be about equal.

3684. (*Sir George Clarke.*) At Gibraltar, where the District Paymaster and the Station Paymaster are lumped together, how many officers would there be of the Army Pay Department?—When I was there we had four. I think they have only two now.

3685. And how many Military clerks?—I had seven Military clerks and two Civilian.

3686. And could you say about what would be the total sum which would either be disbursed by the department or examined?—I think at Gibraltar it was somewhere about 40,000*l.* a month.

3687. Then I take it that the great part of the office work would be the examination of the pay lists and bills?—Yes.

3688. In a big district like Ireland, would it be possible to reduce the paying centres, and to disburse, say, from Dublin?—I do not think so; I do not think it would answer to have everything done in that way. I find a good deal of bother from it here in the Home District. We have had a great deal of extra work, and I find the office is a very large one. I think they can get through their work better by not doubling up too much.

3689. (*Mr. Gibb.*) What sort of bother do you mean?—A good deal of trouble in getting clerks, and then there is a very great deal of worry for one man to open the letters. I had this morning close on 400 letters, and to try and get a little idea of what is in nearly the whole of them is a great deal of trouble,—the worry is very great.

3690. (*Sir George Clarke.*) But I meant rather in the small stations, would it be possible to deal with them by cheque or by Postal Order, and not to have a disbursement officer at those small stations?—Of course it could be done, but I do not think it would be advisable, because you have got the Paymaster on the spot, and he is, or ought to be, and I think he is a good deal of assistance to the local troops. You see, none of these small stations are for district offices; they are all for station offices.

3691. At a Foreign Station now, like Gibraltar, where large sums are dealt with, would you get many queries from the War Office leading to much correspondence?—No, I do not think so.

3692. Then practically your audit is generally accepted?—I will not say that, but I do not think that the disallowances are many.

3693. I think you said that there had been a difference in the duties of the Pay Department since 1878. What is the nature of that difference; is it that there is more examination?—To begin with, about 1887 they

Col. T. W. Drage, C.B.

Col. T. W.
Drage, C.B.

5 Feb. 1901.

did away with Paymasters attached to Regiments; that made a great alteration in the Pay Department.

3694. Then was the Regimental Paymaster simply a cashier, or did he perform the audit duties which the Pay Department now perform?—For his own regiment.

3695. He did audit that?—He compiled his own pay lists from the company pay lists.

3696. Then the difference was in the distribution of the duties, rather than in the nature of the duties prior to 1878?—Yes.

3697. It is not the fact that a greater amount of responsibility for duties has been thrown on them?—No; it was that more was thrown on one officer, because it was a reduction; you do not have on an average one officer to a regiment as you had then.

3698. (Colonel Miles.) As I understand it, the Super-vising Staff Officer of the General, in regard to all travelling claims, allowances and expenditure generally, that is outside regulation, is the Assistant Adjutant-General for B. P.—Yes.

3699. That officer is now in most districts an Army Service Corps officer?—Yes, entirely I think.

3700. At any rate, in most cases he is an Army Service Corps officer?—Yes.

3701. Taking travelling claims for example, they are initialled by him before they are passed to you?—No, he never sees them. He used to at one time approve them, and that is where there was a good deal of bother, because as I myself pointed out to the General, they were approved by his order, and I objected to writing observations on a claim that had been approved by the General. I said it was not correct. Then they afterwards approved them subject to a detailed audit. Now they have nothing to do with them. It is only in case of doubt, not provided for by the regulation, that we send a claim to them.

3702. And with regard to the question of allowances generally, such a question as lodging allowance, that is outside the regulation, that would generally come through him, through the Assistant Adjutant-General for B. P.—Entirely.

3703. And at present are your communications with the General, through the Assistant Adjutant-General for B., instead of being made direct?—Yes, questions respecting allowances.

3704. Then, what would be meant by closer financial relations with the General would be that they should be direct?—They do not go to B., a large number of things—all questions connected with pay—go to the Adjutant-General, because they are mixed, to a certain extent, with discipline. But there is a good deal of Post Office work.

3705. Between whom?—Between the Assistant Adjutant-General and the Chief Paymaster. All questions respecting pay are referred to the Chief Staff Officer, and the Chief Staff Officer does nothing but put on: "Chief Paymaster, will you please give your opinion"?—that is double work.

3706. Are you speaking of the Home District?—Of every district. As a matter of fact, in the Home District a good many of the cases really come direct to me, because they know they come eventually, but the order is that they are all addressed to the Chief Staff Officer.

3707. The advantages of being more direct with the General are. I take it, that the General would then see the actual expenditure—what actually does go on in the form of expenditure?—He would then be more in touch with what certain services are actually requiring.

3708. That would be an advantage?—Yes.

3709. The object in the procedure, which has now ceased, of the Assistant Adjutant-General for B. approving travelling claims when it was first started, was that there should be one staff officer charged with the supervision, first, of the necessity for the service and, next, of the most economical mode of carrying out that service in regard to travelling claims?—Yes. I think myself that they do not, and they never did, look into those travelling claims sufficiently, that they trusted entirely to the Paymaster as the work was done by us.

3710. That has stopped now?—Yes.

3711. Taking the question of observations by the War Office on claims and on pay lists, do you think they have tended to increase, or do you think on the whole they have remained about the same?—I have been here for two years and I have none, I will say practically none, considering the enormous amount of money there is. I suppose one way and another there is considerably over a million a year, and we get very few observations.

3712. On the whole they are not increasing?—No.

3713. (Mr. Gibb.) Does that answer equally apply to your accounts of the imprest issues, and to your direct payments?—The War Office have nothing to do with the imprest issues; they have only to do with any moneys accounted for. The War Office see that the money is properly accounted for.

3714. I meant the account of the payments made under the imprest issues?—The War Office check the payments to see that the payments are in accordance with the Regulations, but they do not check the amounts I issue; they know nothing whatever about them.

3715. What I wanted to make clear was whether your answer applied equally to both branches of your work?—You mean as to district work and station work?

3716. Yes, as to the small amount of queries?—I think, as a rule, the queries are not so heavy, but I think that is, to a certain extent, because the work is being better done now. I think the officers are getting more accustomed to their work; at least, I hope so.

3717. (Colonel Miles.) You mean the Military officers?—No, the officers of the Pay Department. I myself have made as many as 150 observations on a single pay list.

3718. On a company pay list?—Yes.

3719. That is a matter of discipline?—Yes, of course. If a pay list comes in like that, it is of course absolutely a case of no attention whatever. A case like that would of course always be sent to the Commanding Officer.

3720. (Sir George Clarke.) May a very considerable time elapse between the rendering of an account and the receipt of the War Office audit observations upon it?—Nothing like what it used to be. We get them now within about four months.

3721. (Mr. Beckett.) What do you find is the most fruitful source of error in these pay lists; are the amounts badly calculated or are they not, according to regulation?—It is, more than anything else, wrong computations.

3722. Arising from carelessness?—Yes, from men's names being carelessly copied from the previous month's pay lists; it is all carelessness and nothing else; downright carelessness.

3723. That is, on the part of the Station Paymaster?—No, on the part of the company officer.

3724. The Station Paymaster, I gathered, principally acts in the capacity of a cashier, does he not?—More in that of an auditor. He does not pay the money to the troops; he pays it to the company officer.

3725. And the company officer pays it to the troops?—Yes.

3726. (Sir George Clarke.) Has the question of allowances for clothing come before you?—Yes.

3727. Is that rather a complicated question?—Terribly; it is the worst business we have had for any number of years; it is a terrible business, the clothing account and compensation in lieu thereof.

3728. (Colonel Miles.) It is not simplified; it is as complicated as ever, is it?—I do not get them in my office here, but it was at first almost as much as the company pay list; it was a terrible business.

3729. (Mr. Beckett.) I suppose the whole question of allowances is extremely complicated, is it not?—No. I am of course pretty well acquainted with them now, and I know where to look for everything, but do not find it so. There are, of course, certain questions that you have to refer that are not provided for.

3730. But, on the whole, it works easily?—I think so.

3731. (Sir George Clarke.) Do you think that the allowance regulations are susceptible of simplification?—I do not think so.

Col. T. W.
Drage, C.B.
5 Feb. 1901.

3732. (*Mr. Gibb.*) Are you now speaking of the clothing?—No, not of the clothing, of the allowances. I should not like to say much about clothing without going into the question. If the Committee had anything to do with clothing, I should say they should have the proceedings of some kind of a local committee, have it thoroughly threshed out first and then submitted to them. It is a most intricate question.

3733. Who is responsible for the clothing regulations?—The Chief Ordnance Officer does it now, but I do not think he was responsible for starting the business. It is not a bad business, but it is so complicated.

(*The Secretary.*) It is not the system of clothing; it is the money compensation in lieu of issues in kind.

(*Witness.*) Yes. They are getting a little more settled now, but when it first came out it was almost impossible to understand it.

3734. (*Mr. Beckett.*) But you still think it could be made to work more simply and easily?—I think so. I am sure there could be some arrangement by which it could be simplified.

3735. Do the Paymasters make representations to that effect, do you know, to the Chief Ordnance Officer?—I have no doubt they have done so, because it made an enormous increase to the work.

3736. Are the Paymasters consulted as to the working of the Regulations which are laid down?—No; it is left to them to represent matters.

3737. But you say they do not often make representations to Headquarters?—No. Of course, sometimes they are bound to do so.

3738. When they find it impossible to work a regulation?—Yes. Of course we have had more references in the last 18 months in reference to allowances to women than ever before.

3739. What does a Station Paymaster actually do in the way of audit, not very much, does he?—Yes, he audits everything; he verifies every single item and every name.

3740. He is the Auditor?—He is the Auditor.

3741. And he is checked in his turn by whom?—By the War Office.

3742. Then his accounts do not go through the District Paymaster at all?—No.

3743. (*Sir George Clarke.*) Has the strength of the Pay Department proved inadequate for the requirements of war?—Yes. You see we have all been drawn upon, every district has been drawn upon to send officers to South Africa, they have been partially replaced by retired officers, but the work has been doubled.

3744. Then you are now short-handed everywhere?—Yes, everywhere. They have probably about the same number of officers, but they have twice or three times the amount of work.

3745. And as regards the Military clerks, how long does a man require to pick up the work of the Pay Office?—After twelve months a man ought to be a very good clerk.

3746. What age do you take them at?—It is according to the length of service; he must have 12 months' service, I think.

3747. Could a lot of the work, computing work and so on, be done by boys?—I should not like to trust them. I get them to write envelopes; I should not like to trust them to do any computations.

3748. (*Colonel Miles.*) Are your staff separate from the Military staff clerks?—Yes.

3749. (*Mr. Beckett.*) You referred just now to a Commissariat officer; by whom is he replaced—the Assistant Adjutant-General for B.?—Yes.

3750. But their functions are not quite the same, are they?—They are supposed to be, but the present man is a combatant officer, and has certain other duties which the old Commissariat officer had not.

3751. Do you know why the old Commissariat officer was abolished; was there any particular reason for it?—Progress, I suppose; and I suppose they thought that it was not in sufficient touch with the Army.

3752. With regard to this system of mixing public and private accounts, you say it is done to relieve the

banks of work?—I will not say it is done actually for that, but I fancy it is the idea of Officers Commanding companies that they do not care about keeping two accounts for a small amount.

3753. Do you suppose that the banks are aware that public and private money has been mixed up in these accounts?—I do not know. Each bank signs an agreement when the money is placed there, when it is public money, that they will produce it at any time if called upon by the Secretary of State for War.

3754. (*Sir George Clarke.*) Does the staff of the Pay Office always contain a certain number of Civilians?—No.

3755. You only take on Civilians in times of stress?—I suppose the intention is that, as a rule, there will be nobody but the Army Pay Corps. Of course, in times like the present, we are bound to get whoever we can, Civilians, boys, or anybody.

3756. In normal times?—In normal times, at nearly all stations, the Army Pay Corps provides the clerks.

3757. (*Mr. Beckett.*) I should like to say that I think the officers must be under a misapprehension to a certain extent as regards the simplification of accounts. It is a very well recognised principle in banking that it is always better to place moneys that are applied to different purposes to different accounts under different headings, and the extra amount of trouble given to the bank would certainly be very slight indeed, because the officers might sign cheques on the No. 1 Account and the No. 2 Account. I want to ask you, therefore, do you not think that it would be a better arrangement and a more business-like arrangement that the officer should have one account for his private funds and another account for his public funds?—So long as he has them in his book, where he has a place to keep ledger accounts, and so long as he has them properly kept, I do not see the object in keeping two banking accounts. If you have 100*l.* in your bank, and make ledger accounts showing that 50*l.* belongs to the public and 50*l.* to the cricket fund, say, I see no reason for it. As a matter of fact, really, in many cases there are about 10*l.* or 12*l.* of the public funds, and the banker does not want to keep an account for that, and the Company Officer does not want to keep it in his drawer.

3758. You mean so small an amount as that?—Yes, the amounts are very small indeed.

3759. (*Mr. Gibb.*) But is that quite so? You told us that they might be small after the cash has been drawn for the payment of the troops, but that for a certain period, at least a few days, the amount might be considerable. I understand that when an officer gets the money for the payment of the troops he would pay it into his own private banking account?—No, he would pay it into his public banking account. It would be a certain amount of private money that would be in his public banking account.

3760. That is the same thing?—Except that his private banking account would not be open to the inspection of the Secretary of State for War, whereas his public account would.

3761. Still, he pays it into one account, which is not, as I understand, distinguished as a public account?—Yes, it is distinguished as a public account.

3762. (*Chairman.*) But money is paid into it which is not public money?—Yes. The thing is this: he gets this money from stoppages from the men's pay.

3763. (*Mr. Gibb.*) We are rather getting away from the particular point which is, whether at any time there is a substantial amount of money in the account?—I have known large sums of money, but not as a rule, very seldom. The case I have known was under very exceptional circumstances which will never occur again, it was the case of the Currency Account at Gibraltar.

3764. But if the money is paid into an account when received by the officer, there must be that amount of money (money to pay the troops, I mean) in the account between the date of its being paid in and the date of its being drawn out?—Yes.

3765. (*Mr. Beckett.*) And, of course, it would be possible when there was that amount of money lying to his credit at the Bank, say, 200*l.* or 300*l.*, that he might draw money out of it on the plea that it was being paid privately?—Of course nobody knows what he was drawing it for before.

Col. T. W.
Drage, C.B.

5 Feb. 1901.

3766. (*Chairman.*) He might draw it to pay something in connection with his cricket fund?—He might; it is very unlikely. But the private money that you have there mixed with the other would be so small that I do not think it is worth considering.

3767. The amounts of these small regimental funds are so small?—They are made up by pence from the men; probably a penny or twopence a month for the cricket fund, and so on. Something like that.

3768. It is practically inconsiderable?—No doubt.

The witness withdrew.

Mr. F. T.
Marzials.

Mr. FRANK T. MARZIALS further examined.

3769. (*Chairman.*) I do not know whether you have had time to think over the suggestion which was put forward yesterday, or whether you have any further opinion upon it which you could offer to us?—Yes, I have thought over it to some extent. The last question you asked me to consider, I think, was the question whether, assuming that the Paymaster was made only a cashier, I should regard it as better to have the examining branch, the extension of the War Office, here at Headquarters in these buildings, rather than to have it at the headquarters of each district, taking Dublin as a typical case. That, I think, was the question you asked me to consider.

3770. Yes?—Then, I think as regards that, I must again a little fall back, please, upon the question that I put yesterday: If the Paymaster is to exercise no audit at all, if he is to take the claim, whether the claim is for the pay of staff or a claim for payment to any contractor, as sent in to him by the department responsible for that kind of business, and, without any examination on his part, is to pay it, the further question arises, is the examination of those claims to be made by the War Office, whether local or at Headquarters, before the payment, or is it to be made after the payment has been made on the responsibility of the department originally putting forward the claim—any subsequent adjustment being merely the adjustment of a disallowance? If a claim is to be pre-audited before payment, as in effect it is by the Paymaster at the present moment, then I think it would be desirable to have the extension of the War Office in the district locally, rather than to have the claim brought here. And I say that, for this reason: that I think if all this immense multitude of claims had to come up here for pre-audit before payment, there would be an immense glut, an immense centralisation, and I do not know that the work would altogether be very satisfactorily done. If it is not to be that, if there is only to be a full examination after payment, a mere examination of the charge in an account, as in effect it is at present, then I think it had better be done here, and had better be done on one complete system, and under one head. That, I think, must be my answer to your question. But I think that, in any recommendations that you make about this, you will have to settle very clearly for yourselves whether the claim is to be audited before payment or audited after payment. Mark you, the difficulty of that question is, that as regards many of these claims, if they are only audited after payment and not before, recovery becomes almost impossible. You can drop upon the officer who has made the mistake, but, in practice, you cannot get the money back from him. From a contractor it is almost impossible to get money back at all except by undesirable legal process of a very doubtful kind; and from an officer who has received money as against the Regulations it is always extremely difficult to get it back, because it is a very great hardship upon any man who has received money, thinking, and let us say, reasonably thinking, that that money was due to him, and who has then spent it; it is extremely hard upon him to call upon him to refund it at a subsequent date.

3771. (*Sir George Clarke.*) Could not all claims except the pay claims, all claims for bills, go direct to the local auditor, and having been audited there, then pass to the cashier for payment?—That might be done, no doubt; and if that were the *modus operandi*, then I am inclined to think that some local arrangement for audit would be better than a centralised audit here, in view of the terrible concentration of bills. If every single one of the thousands upon thousands of vouchers had to come here before payment, I am afraid that would involve a glut here, and occasion some little hardship, from the fact that there would be delay in payment.

3772. And as regards pay lists, a pre-audit would not be necessary, because you have the power of recovery from the officer afterwards?—On the pay list itself the over-charges are not generally very frequent or very large. Most officers draw their pay through their

agents, and very few of them draw through the local Paymaster.

3773. But you have the company officer to fall back upon in the case of the company pay lists?—You have; but the personal over-charges on account of the men are not very large; occasionally there would be a few shillings of good conduct pay and that kind of thing, but the amount involved is not large.

3774. (*Chairman.*) So that there would be no difficulty in recovering so small an amount?—Practically, there would be very much less difficulty where the amounts are not important; where it is only a few shillings one does not hesitate, but when it arrives at many pounds, as it often does, without question it is a hardship to a man to have to repay that which he has received and expended, thinking himself that it was a legitimate receipt.

3775. (*Sir George Clarke.*) Then the claims which would require pre-audit would be those put forward by people who are not in the Service, by tradesmen, contractors, and suppliers generally, over whom you have no control?—And besides that, there would also be the claims for the pay of the various kinds of staff, for the headquarter staff of the district, and for their allowances, and also, what indeed is a terribly detailed work, the work of the travelling claims.

3776. (*Chairman.*) But, as regards the pay of the headquarter staff, that is of the officers on the headquarter staff? Do they not generally draw that pay and allowances through an Army agent?—Yes, except abroad.

3777. Is it not the almost universal practice?—Yes, almost universally so; except abroad.

3778. (*Colonel Miles.*) A lot of the subordinates draw from the Paymaster?—Yes, all. If I may go on and elaborate this a little more, I think that in any suggestion which you make for any dissemination of the War Office from here, you will have to consider to what extent that involves additional staff, and additional staff not always of a particularly cheap character. I think it will be necessary that you should have at each headquarters of a district some financial representative of higher standing and fairly well paid, so as to be superior to any kind of influence that might be brought to bear upon him; and also your local examiner would have, I think, to be an examiner of a somewhat higher type than you are able to employ here, because here we endeavour to divide our subjects as much as possible. We have one class of examiner, for instance, who deals with pay; we have another class of examiner who deals with supplies and stores; and we have another class of examiner who deals with fortifications. These various branches are really specialist examiners; therefore, they would be men simply capable of dealing with one kind of thing well. But if you are having a much smaller staff as you would have in your various districts, the examiner will have to keep in purview a full knowledge of the regulations and the circumstances attending all these various classes of charges; and I think that, to some extent, you would have to have a rather higher type of examiner than that which you can safely employ here. I think that is a point that you will have very carefully to bear in mind.

3779. (*Chairman.*) You would require to have a rather more expensive agency to discharge more multifarious duties?—That states the case precisely.

3780-1. (*Sir George Clarke.*) But a certain amount of specialisation among the lower class of examiners would be possible in the local War Offices?—It would, no doubt. The difficulty there would be that you would have so much smaller a body that you would have to use them more freely from subject to subject than you do here. I also, myself, attach a great deal of importance, so far as we here at Headquarters are concerned, to the desirability of our being in close touch with the accounts, with the actual cash effect of what is done. Our business is, of course, very peculiar in

certain respects. It is very different from any commercial business working to a dividend. We have no money result to produce for our expenditure; no tangible cash earnings to show; and unless we see what amount of trouble is being given by the various regulations that we put forward, where the hitch comes through their not being understood, what re-arrangements seem desirable, and in short, how our expenditure is working, we are a little in the dark. That is the trouble, of course, with all bureaucratic government. It has a difficulty in keeping absolutely in touch with the result of its actions. If you take the accounts away, you take away one additional source of knowledge from us.

3782. (*Chairman.*) That tendency to keep men in the central Government for a long time, so that they get out of touch with the real wants and necessities and difficulties of the district officers, has, if I may say so, been found to be a considerable difficulty with the Government of India, and it is being largely put right in the case of India by insisting that the men should not be in the central Government for more than a certain time, so that they pass backwards and forwards from the districts to the central Government, and *vice versa*. Similarly, I should propose, with regard to the War Office, that the men in the district detached audit branch should be interchangeable with the men at Headquarters here in the War Office, so that you would have men coming in here constantly who would be able to tell you here where the difficulties actually arose. I think that would get over your opposition?—I am quite prepared to admit that, and I am quite prepared to admit, looking further, that the men who went from here, assuming them to be reasonable human beings, as no doubt they would be, would get an additional education from being attached to districts, which perhaps they would not get here.

3783. (*Mr. Gibb.*) But I understood your point rather to be that by a local distribution of audit, the heads of the Accountant-General's Department would be more thrown out of touch with the actual expenditure?—I think the office throughout would suffer in that way; I mean to say that I think the Account Branch of this office here would have a tendency to lose touch with the effect of what it was doing.

3784. You are not speaking now of those subordinates who might be transferred, sometimes from the War Office to a district, and sometimes from a district to the War Office, but you are speaking of officers above those, having the control and management?—I was rather speaking of both. The men whom you would detach from here, the men who would have to take charge at any of these places, would have to be men of some status and responsibility,—men such as, supposing they were here, I should look to to come to me with an additional suggestion, or to start for themselves any improvement.

3785. (*Chairman.*) The presumption is that in future the man who rose to your responsible post would have spent some time out in a district headquarters?—That is quite possible. There is another point that I wanted to speak about, if I may, here.

3786. We shall be very glad to hear anything you have to say?—There was a point that Mr. Gibb asked me about yesterday, upon which I thought I should like to give you a few observations, and that is the question about the man who audits here being altogether separate from the man who, to a certain extent, administers the expenditure. Some 30 years ago an attempt was made, and in fact it was done, to completely divide the two. There was a Chief Auditor and an Accountant-General almost of equal status, the Accountant-General being the man who authorised or administered, so far as the Account Branch does administer expenditure, and the Audit Branch being a branch which purely audited, exactly as the Audit Office would do. The arrangement lasted about two or three years, and then I think it was found cumbersome,—that there was some sort of, I will not say antagonism, but at any rate waste of power as between the two branches, and the arrangement dropped. I think it was also felt to some extent that the separated audit got mechanical, and that it was better that the auditor should be in close touch with the administration. But now, here, as regards the sub-division which is the most distinctly administrative of the financial sub-divisions, that is to say, the sub-division which deals with pay,—for pay is not dealt with in itself by any of the Military branches—in that subdivision there is a

separation; there is F. 1, which deals with all the correspondence relating to pay and allowances in the nature of pay; and there is F. 3, which takes all the accounts and examines the pay portion of the accounts. At the same time I do not think that has been quite done as a matter of principle; I think it has been done rather as a matter of convenience, because the subject was so large that it was not quite possible for one Principal to combine superintendence over the two sub-divisions. But there we have what you obviously have in your mind, although, as I say, the arrangement has not been made as a matter of principle, but rather as a matter of convenience. In the other sub-divisions, where we partially administer, as for instance, with regard to stores, or with regard to supplies, or with regard to buildings, in those sub-divisions the accounts are examined, and such administration as there is, is done in the same sub-division, not perhaps, always by the same clerk, because the examiner would probably be a slightly lower class of clerk than the administrator, but, at any rate, under the general direction of the Principal. I thought I should like to make that point clear.

3787. (*Sir George Clarke.*) I am not quite clear whether the same principal clerk can now be employed at the same time in supervising audit duties and in supervising administrative duties. Is a line drawn in the duties performed at one time?—No, in most of the branches, except F. 1 and F. 3, the same Principal would be performing both duties.

3788. And you do not think a distinct line can be drawn, I do not mean a line that would prevent his passing from one side to the other, but a distinct line of administrative duty to be performed at one time separate from audit duty?—I am afraid I do not quite gather what you mean with regard to one time: do you mean from month to month?

3789. I mean that there may be a change at any time from being head of one branch to being head of another branch, but that at one time only audit duties or only administrative duties should be performed?—That could be done, no doubt, but in many of these rooms there certainly would not be full work for a principal and assistant principal doing the administrative part, and for an equal staff doing the examination part. The staff as it is is sufficient now, and is capable of grasping both sides of the question and doing the work. The proposal would mean a duplication of staff, and in my mind beyond that I think the arrangement would be undesirable for this reason, that in the administration the presence of the account, and the way in which the account comes out, and the form in which the charges appear, and their frequency, and the difficulties they give rise to, are to us who have not got the education of a dividend to work to, the best education as to how the expenditure is going and how the expenditure can best be regulated; that is what I have always found in my own sub-division, when I was in charge of a sub-division, that a man came to you with a question and you took it up, and you went into it from the account, and the account revealed the trouble to you. The arrangement proposed could unquestionably be made, but it would have to be made with a separate audit staff, and therefore at some cost, and also, in my view, with some loss of efficiency.

3790. (*Mr. Gibb.*) I gather that your meaning is that the necessity of going through the account item by item for audit purposes was a kind of education for the administrative work?—I think so without question. Lord Haliburton, I know, entertained that view, and so did the late Sir George Lawson, who was a very able administrator; and my own experience is certainly in that direction.

3791. If you were not obliged to go through the account in that minute manner for audit, you would be more inclined to give it a very cursory examination for administration?—That is so.

3792. (*Sir George Clarke.*) But the result of this intermixture is that the auditor can spread himself over all sorts of questions of policy and administration, can he not?—Certainly; the actual auditor of the account is very seldom the principal of the sub-division; the auditor is generally a man somewhat lower down, but it is always open to him to come to the head of the sub-division and to suggest to him anything that occurs to himself when he is auditing the account; and as you say, the auditor thereupon becomes a means of influencing the administration.

Mr. F. T.
Marrials.
5 Feb. 1901.

Mr. F. T.
Marzials.

5 Feb. 1901.

3793. So that the auditor becomes not only an auditor in the ordinary sense of the word, but a critic of the whole administration of the affairs of which he is the auditor?—Yes, distinctly, he may be so, and to my mind, strange as it may appear to you, it is desirable that he should be so.

3794. (Mr. Gibb.) Then your further point on that is, that if such a criticism as Sir George Clarke is suggesting occurred to the mind of the auditor, he would have to pass the criticism through the administrative critic before it descended upon the shoulders of the criticised person?—Distinctly.

3795. (Sir George Clarke.) I suppose the outside man rather takes this sort of view: That so and so is the auditor and that any audit criticism he produces is all right; but when so and so, who is nominally head of the audit branch, proceeds to criticise your administration, you feel a sort of irritation as if he had gone outside his proper lines?—There of course you are embarking upon a very large and important question, indeed, a question that really touches, one may say, the whole organisation of this office. Right or wrong, the whole organisation of this office is that there should be certain administrative branches mainly of a Military character. You have your Adjutant-General, who is responsible for the discipline of the Army, and for raising troops; you have your Director-General of Ordnance, responsible for its arms and its general equipment; you have your Inspector-General of Fortifications, responsible for its barracks and its forts, and you have your Quartermaster-General, responsible for its transport and supplies. Then, side by side with these branches, you have certain financial branches, a part of whose duty it is to regard the various points and questions raised from the money point of view, and to advise the Secretary of State upon them. A very limited view of the functions of the finance branch is that they are simply an auditing branch and no more, that they have only to take the expenditure and see that the money is spent and that the money's worth is produced in the shape of men or goods. But that is not the position that we claim, nor is it exactly the position that the Orders in Council have given us. Our position rather is that in an immense business like this, where the commercial money test does not come in, it is desirable that there should be, in the actual formation of policy, a distinct branch more permanent in its personnel than the Military branches, which change from year to year, and that that financial branch should have the power of criticism and advice. Of course their criticism and their advice must be taken like all criticism and advice; if it is nonsense and foolish, it is useless and in the way. The tree has to be judged by its fruits. The Secretary of State, as we consider, has a claim to be told the exact financial bearings, which are often very difficult to appreciate, of any new measure that may be proposed, and we also claim to give advice as to its urgency at that particular moment with regard to such funds as may be available; and even beyond that, to give advice from the purely financial point of view as to whether the proposal is worth the money. I know of course that there are very strong opinions upon this question, and that I am walking upon, I will not say dangerous ice, but thin ice.

3796. (Mr. Gibb.) On that, if the finance department representing economy differed from a spending department representing efficiency, which in your judgment should prevail?—I think unmistakably the efficiency should prevail at all times, assuming it to be acknowledged efficiency, and assuming it to be efficiency of an urgent character. In our constitution of the office as it stands at the present moment, the ultimate arbiter in all questions is the Secretary of State; the Secretary of State in that case would consider and probably take the Military opinion, and that Military opinion he would nearly always follow, no doubt, but he would not always follow it. Many of these questions become questions of large policy; he might even have to place the opinion of his Military advisers against the opinion of the Cabinet generally.

3797. And I suppose the criticism of the spending department is that finance representing economy can never resist the temptation of the cheapest bargain?—I do not think that that is quite so.

3798. You do not think that is a just imputation?—No, I think not. We traverse an enormous amount of space one way with another, and I have no doubt the

Military departments might bring up a case now and again where they think the money might have been desirably spent, and the finance department might think the expenditure has not certainly been productive, but one has to look at it broadly.

3799. (Chairman.) How far would your financial criticism go? Supposing there is a proposal from a Military branch for such and such a thing, do you put to the Secretary of State how much that would cost?—Yes, certainly.

3800. Would you also point out that the proposal might be carried out in a more inexpensive way; that would be within your province, would it not?—Certainly; we claim that if it occurs to us within reason that there is a more economical way of doing the thing, it should be done in that way.

3801. Would you go still further and contend that the whole proposal was extravagant and unnecessary?—Not except in a very extreme case. One would not put it exactly in those terms probably.

3802. In the first place, you act simply reporting to the Secretary of State that such a thing will cost so much?—Yes.

3803. In the second case, you act practically as an ally of the Military department in pointing out that the same result could be obtained in a cheaper manner?—Quite so.

3804. If you go beyond that and say that the whole proposal is unnecessary, then it might seem that you are getting on to debatable land. I want to get from you whether you ever do go beyond those two points?—I do not know that in actual practice we should ever go beyond them; we should always recognise that efficiency was the paramount thing; but it is our duty to place before the Secretary of State the expense, and if we thought it could be done cheaper; and even I think we might go beyond that, as to relative necessity from the point of view of expenditure and income.

3805. Necessity with regard to other demands?—Yes; you have to remember that one has to impress on everybody connected with the Army that finance in its large aspect is no question of a finance branch, or any departmental branch at all. The country will not year by year incur more than a certain amount of taxation for the Army. They will give a certain amount, but no more, and if that amount is wasted on one thing it must be saved on another. I may also say the Military branches do not always proceed exactly as one man.

3806. Each Military branch is likely to have its own pet child, I suppose?—It very seldom comes to this, that a proposal means the whole Military branch on the one side, and the Accountant-General's branch on the other.

3807. You express, do you, an opinion on the necessity of one Military proposal, in your judgment, over another?—I should do so.

3808. (Mr. Gibb.) From a cost basis?—I should scarcely touch it, except from a cost point of view.

3809. (Mr. Beckett.) Practically, you pronounce on expense and expediency?—Yes, that is about it.

3810. (Mr. Gibb.) Expediency from the point of view of expense?—Purely.

3811. (Chairman.) You say, "Money will be forthcoming for this proposal within our limits, and money will not be forthcoming for the other proposal, therefore I consider the first proposal the more practical of the two"?—Yes, that would be so. At the present moment, for instance, the Estimates for next year are in contemplation. There are a great number of new proposals of one kind and another going up yearly before the Secretary of State, as to what shall be taken and what shall not be taken. I and my branch produce for the Secretary of State statements indicating the cost of all these things, but we very seldom express any opinion as to ultimate desirability or non-desirability; occasionally we may as to the desirability. We know, and the Military branches know perfectly well, that the whole of those things will not be covered; they probably amount to some 4,000,000L. or 5,000,000L., which the state will not allow. Many of these proposals are not things of which one can say they are not more or less desirable.

3812. (*Colonel Miles.*) With regard to the question of giving an opinion as to the Military expediency, it affects small questions as well as large ones, does it not. Take the question of a man being on duty or not, you would claim to give an opinion as Military authorities?—No, not as to Military duties.

3813. But such cases have arisen, have they not?—Yes.

3814. For instance, where an allowance is claimed where a man is said to be on duty, a discussion has arisen with the Accountant-General's Branch as to whether the man was or was not on duty?—I do not think, except in a very extreme case, the Financial Branch would refuse to accept the Adjutant-General's view as to what was duty or not.

3815. (*Sir George Clarke.*) Do you think the Civil War Office has quite accommodated itself to the later changes; that is to say, to the handing over of certain votes to the Military heads by the Minister?—I think so—honestly, I think so.

3816. Does not it rather follow in the older lines where Military officers were not to the same extent supposed to be responsible for the administration of their several Votes?—That is quite true. For instance, the Quartermaster-General within the last 10 years has been responsible for his own expenditure, but I do not think we have traversed or quarrelled with his administration.

3817. But it seems to me to follow that each Military head of a spending department wants a permanent Civil staff under him, to advise him, when he is forming his estimate, as to the effects of things, to keep the accounts of his Vote, and let him know at any time how that Vote stands, and, lastly, to advise him with regard to any fresh charges or changes of allocation he may wish during the year; that seems to be a function to be discharged by a permanent Civil skilled branch under every Military head, the spending branch. That is one important Civil function which, I think, should be Civil, and should be performed by skilled experts; but then comes the other function, the subsequent function of audit, and it seems to me those two ought to be separate and a line ought to be drawn between them. In one case you get the administration done by bringing direct and personal views to the notice of the Military head, and therefore you avoid misunderstandings, whereas at present sometimes, perhaps, there are controversies which do lead to a certain amount of friction. Cannot those two functions be subdivided, each of them being most important, and each of them being naturally Civil and permanent staff duties?—I admit, and it is a matter I have very often thought about, the strong arguments that there are for that. I quite admit their force and their power. I would even go further, and give you an additional argument, if you like, in the matter, that is, that the having to deal with the expenditure would itself be to the administering Military officer a great help in his administration. But, to my mind, the reasons why that is not a desirable plan are that the Civil officer, placed in that case under a Military officer loses the independence which, I think, he ought to have, because, as I have said before, our position with regard to the Army—the financial position—is a very strange one as compared with the commercial position. There is absolutely no check on return and expenditure, except some external check. The Civil officer whom you place with a Military officer to advise him would necessarily and naturally be his subordinate, and not an independent critic. That is one point. Secondly—and here I am touching on very delicate ground, and I should like to touch it with all possible care—the Military officer who comes here does not come here for any length of time; he is here for only five years; during a certain amount of that time he must be learning his business, and while he is learning his business he must be to a great extent in the hands of the subordinate. A high Civil officer would not accept the position of being under a Military officer in that way, and therefore, in all probability you would have to rely on a non-commissioned officer or officer of the Quartermaster class to retain the continuity of your branch; and that is not a desirable arrangement.

3818. I should have thought your argument rather went to show that the permanent Civil official, who, I suppose, would be an Upper Division clerk, would become an exceedingly powerful person in the Military

department by his permanence and by his accumulated experience?—I very much doubt to what extent he would accept the position.

3819. Of course, he would have nothing to do with the junior Military officer; it would be impossible to put him in any respect under young Captains; he would be the right-hand man for financial questions of the Military head of the department. Do not you think his position would certainly be a very strong one?—I think his position would be a very strong one, but I do not think it would be the position of absolute independence which I should like. It is not, however, a case in which I wish to minimise the force of your arguments, and say there is nothing in them.

3820. When you say he is a critic, you only mean, do you not, that he is a critic of the comparative cost of things?—No, I should say, to a certain extent, that he is a critic of something more than that, or ought to be; he is not a mere computer in the matter.

3821. (*Mr. Gibb.*) The Committee have had the evidence of Colonel Drage this morning, and, as I understand it, there are certain direct payments made by Paymasters, and there are also certain payments made through imprest to sub-accountants, the latter being mainly for the pay of troops. Does your observation in regard to pre-audit and the careful distinction which should be drawn between pre-audit and post-audit apply to payments for the troops as well as direct payments by Paymasters?—No, it applies simply as regards direct payments; as regards payments made to troops by imprest, it does not apply.

3822. That is to say, if the audit were centralised in the War Office, that would not create any difficulty in regard to the accounts for the payment of troops?—No, none at all. You have quite comprehended that there is a complete difference between the two.

3823. As regards the direct payments made by District Paymasters, those would be mainly payments under local contracts, would they not?—To a great extent, but not altogether. There are various payments made both for the pay of subordinates, and also travelling charges, and charges for lodging allowance, and various matters of that kind, which are not made to contractors; but payments to contractors, probably, in the Home District would be the larger amounts, no doubt.

3824. They would be either payments under contracts or payments in accordance with regulations, would they?—That is so.

3825. And in one case the person paying has to see whether the payment is due under regulation, and in the other case to see whether it is due under contract?—That is so.

3826. In regard to the payments under contract, do you consider that the Paymaster is the officer who is responsible for seeing that the claim of the contractor is in accordance with contract, and correctly charged and computed?—Yes.

3827. I suppose in all cases in claims on contracts, the claim is in the first instance examined by the department having charge of the contract?—That is so.

3828. And it comes to the Paymaster certified by some officer in the department?—Certified by the officer that the terms of the contract, whatever they are, have been observed, or that the goods have been actually received and brought to account in whatever store account is concerned.

3829. Still, would not you say the Paymaster has discharged his duty when he sees that he gets a claim from a contractor duly certified by the department responsible?—No, speaking generally, he would have himself to check according to the terms of the contract, i.e., to check the bill by the contract.

3830. Do you think it is desirable to take away from the spending department, which has the responsibility for the work referred to in the contract, the full responsibility for examining and checking and certifying the claims?—I do not think it is desirable to take away their responsibility for it, but I think it is desirable that some extraneous person should have the power, and exercise it, of checking and seeing that that every bill is correct.

3831. From what point of view?—From the point of view that that bill may be an erroneous bill, the contractors may have supplied unnecessary things either

Mr. F. T. Marzials.

5 Feb. 1901.

Mr. F. T.
Marziale.

5 Feb. 1901.

by collusion or without collusion, or charged for things not supplied, or charged an excessive cost, or there may be mistakes. If there was a mistake or a fraud, the responsibility of the original person who had accepted the bill from the contractor would remain.

3832. Taking these things one by one, I presume all goods delivered under contract are inspected?—Yes.

3833. And whether the audit is by Paymaster or by anybody else, I presume the certificate of the inspecting officer as regards quantity and as regards fact of delivery is conclusive?—Yes, it is conclusive to this extent: If it is an article that has to be brought on, as a great many articles have, to a store account, it is our universal practice to see that all cash is translated into stuff. Where we have a charge for goods, whether food or building materials or whatever it is, we see that the goods are brought on charge in the store account, which shows receipt into store and the way in which the goods have been used.

3834. But it is also conclusive, is it not, in its being a complete satisfaction to the Paying Officer that the quantity of goods alluded to have been delivered, have in fact, been delivered?—Quite so.

3835. And that they were in point of quality in accordance with the specification?—Quite so.

3836. Then there remains the question whether the price charged is according to contract?—Yes.

3837. Ought not the spending department to satisfy themselves before certifying the account that the price charged is according to contract?—Certainly.

3838. And if they do, is there any real advantage in doing the same work over again in the Paymaster's Office?—I think there is, as a check upon the spending department itself, which is one step nearer to the contractor. Some check of that kind would have to be exercised; whether it is desirable for the War Office to repeat that check afterwards may be a different question, but that that check should be exercised I think is unmistakable. I do not think one can quite leave the receiving department unchecked in its relations to the contractor. Occasionally things do go wrong—some local contractor will get hold of an unhappy sergeant and there are bogus bills for work not done, or goods not supplied.

3839. I am only talking of a comparison between the price charged in invoice and the price fixed in contract?—Yes.

3840. If the receiving department checks the bill and compares it with the contract, do you not think the certificate of the receiving department on that particular point could properly be accepted?—I think myself there ought to be a check; I quite see your point.

3841. If the contract provides for payment at 10s. a ton for any article, and the charge entered in the account is 12s. a ton, say, a receiving officer who passed that would run a very great risk of being found out, would he not?—Distinctly.

3842. Quite apart from a regular systematic check by the Paymaster?—Certainly.

3843. Then as regards the mere arithmetic of the account—the adding up of the figures and charging out the items—do you not think that that might be fairly left to the receiving department to do before certifying the account?—Of course that is rather the point involved, the question whether the department immediately in communication with the recipient of the money ought not at some stage to be checked in its transactions; to what extent, in practice, there are mistakes found at these various stages which have had to be rectified by the Paymaster, I cannot tell you, I really do not know. Those mistakes would not come here, they would be rectified by the Paymaster, and we should not see them.

3844. You understand that the questions I am asking have no reference to the general supervision of administration?—I perfectly understand that. You are merely speaking now on the question as to whether the examination given to the bill by the department which has received the goods ought not to be sufficient without any further check on the part of the Paymaster or on the part of this office.

3845. Any further check at least in the way of pre-audit?—Yes; I think as regards that class of goods perhaps it might be so; but, as I say, I should rather hesitate to give you an absolute answer on that until I knew to what extent really practically mistakes arose.

Of course I perfectly understand your point. Your point is, that if the bill can be accepted in that way without pre-audit, you could simply make the Paymaster a cashier without danger, and the bill might come to the local War Office or the War Office here, simply as a cash payment made by him and subject to our examination without the intermediate examination of the Paymaster, and so do away with the necessity of the bills coming up for pre-audit either to Dublin or to this office.

3846. The question we are discussing, of course, has a strong bearing on the relative possibilities of War Office audit and local audit, and if mistakes of a character that might escape through the receiving department were made, such a mistake as an error in addition—any mistake of that sort—would not be difficult to correct after post audit, would it?—Not usually, perhaps.

3847. I mean, difficult to get corrected by adjustment with the contractor?—Quite so.

3848. On the assumption that pre-audit by the Paymaster is not necessary, which of the two systems, local audit or centralised War Office audit, do you consider, would be the most economical?—I think, myself, the War Office audit, that is my own opinion about it.

3849. If it is practicable to confine the audit to a War Office audit, you would favour a centralised audit?—That is so.

3850. The Committee have had tendered to them a memorandum by Sir Ralph Knox, in which he says:—“Auditors could certainly be sent to the various districts to conduct a local audit, and where the accounts are extraordinarily bulky, as in the case of Woolwich and Pimlico store accounts, a permanent local and concurrent examination is carried out, but it would be an extravagant plan to provide a local examination of the great variety of accounts which exist in a district. These accounts, when rendered to this office, are distributed.” Then I go on to these words:—“It would be very difficult and costly to provide a properly qualified staff, and endless varieties of ruling would arise if the decisions were to rest with the local auditors.” Do I understand from your evidence that if pre-audit is necessary, you would agree with that opinion?—I agree with this, that if pre-audit is necessary it would be desirable to have the pre-audit at one of these local places rather than here. I think the immense conglomeration of work here would be very unwieldy.

3851. I am afraid I have put my question unhappily. If pre-audit is necessary, do you consider local audit would be essential, notwithstanding the objections to it which Sir Ralph Knox mentions?—I will not say essential, but if you will allow me to substitute desirable for essential, I will accept that.

3852. What do you say as to the danger of varieties of ruling if there were local audits?—Of course, that is the great point about decentralisation; directly you decentralise you must have varieties of ruling, it is one of the evils you have to accept.

3853. If there is a difference of ruling it comes to be known in other districts and at the Head Office, does it not, and if it is an undesirable ruling it is corrected in time?—No doubt it might be corrected in time. Those who have got the least favourable ruling would probably appeal, and we should have to decide as to which ruling ought to prevail.

3854. As regards the working regulations, you said something as to the great desirability of the Head Office being in close touch with the working regulations, so as to see and know their effect. Do you, before putting a regulation in force affecting, we will say, the Paymasters' work, as a rule consult the paymasters about it or not?—If it is a matter likely to affect them, we, in the first place, should consult the Quarter-master-General's Branch, Colonel Kitson, who is the administrative head of the Paymasters, and a very capable officer, and if there was any doubt about the proposal, we should probably write to a half-a-dozen of the best Paymasters we could think of, and ask them how they thought the proposal would work.

3855. Would you subsequently, after the new regulation was in force, seek by special application to Paymasters to find out how it was working?—No, I think we should probably wait and see if they complained, or if they said this or that was not working well. Many of these things are matters in which it may be desirable

to carry out some regulation with regard to the men's pay or their messing allowance, or any other allowance, but which in practice prove to be complicated and difficult. For instance, there was a regulation brought out some years ago that the men were to get 3d. a day if they were 19 years of age. Well, the difficulty of getting the birth certificates of these men proved to be insuperable; the thing was not workable.

After a short adjournment.

3856. (*Chairman.*) I want to ask you a few questions on the statements which the Committee have received from the various finance branches. Referring to F. 3, at the top of page 3, it is stated that "a considerable amount of attention has also to be given to the balance sheets of company officers, showing their liabilities and assets, and the state of their accounts generally." We have had some explanation on that point from Colonel Drage, from which the Committee gather, I think, that the company officer, in the public account which he kept in the local bank, would also include in that the accounts of various company funds, such as cricket club funds and things of that kind, so that in theory, at any rate, there might be a possibility of his making payments as to those particular company accounts out of public money?—That would be so, no doubt.

3857. But Colonel Drage thought the matter would not be of much consequence, because these company accounts are very small, and the balance of public money which the officer holds is also very small?—It is very limited; it is not a large account; it is quite within hand as a rule.

3858. Do you see any objection or danger in this way of mixing up public and non-public money in an account?—It is semi-public money, although it is not absolutely public money. It is not personal money belonging to the Captain himself—he is merely a kind of trustee for it—I have never known of any practical difficulty. With the small amounts involved in a company, I do not know that there is any practical danger. If it was a very very large thing, no doubt it would be desirable to have separate accounts, but the transactions here are generally so small that I do not think there is any great danger about it.

3859. The system is well known to the War Office, has been well considered, and the authorities think there is no danger about it?—Yes. It used to be possible at one time for the Paymaster to hold funds of a similar kind and to abuse them, but that has been for a long time put a stop to; there the regimental funds of a whole regiment might have been large, but here the funds of a company would not exceed, perhaps, more than a few shillings, and I do not think it is a material matter.

3860. With regard to the work of F. 4, referring to the last page, in respect of the audit of Volunteer efficiency books conducted by F. 4, would it not be possible to accept the statement of the Commanding Officer as to efficiency, which, I understand, in this case is mainly constituted by attendance, without F. 4 looking behind the certificate of the officer, as it were, and counting up the attendances?—I am afraid that all the Volunteers are not always very particular and exact with regard to their claims for Capitation allowance; there is a tendency to exaggerate their numbers and their attendances. I do not think it is undesirable that the check is exercised, it cannot be a very large matter.

3861. Are many errors detected?—I fancy so. I can let you know how far that may be. Some errors in the Volunteer returns do distinctly take place.

3862. (*Sir Charles Welby.*) The point is, I suppose, if it were not for your examination the errors would be larger in number?—Of course that is so with regard to all audit; it is more a question of prevention than absolute finding out.

3863. (*Chairman.*) Would it be possible to reduce it to a test audit so as to minimise the work?—I think it might. I will inquire into that if you will allow me, and let the Committee know at some future time.

3864. (*Sir Charles Welby.*) I suppose if a Volunteer Commanding Officer were found to be deliberately giving false returns of efficiency, it would be a serious Military offence, would it not?—Yes, if done deliberately.

3865. (*Sir George Clarke.*) But how could audit detect that? Must not that be taken on the certificate of the

Commanding Officer?—That, no doubt, can only be by comparison of the returns produced with the returns forwarded on which the claim is made; but as regards the ultimate fact of the men having attended on such and such a day, that must depend on the accuracy of the entry made at the time by the sergeant instructor.

3866. (*Chairman.*) It is practically an arithmetical calculation?—Yes, that is so.

3867. (*Sir Charles Welby.*) With regard to the F. 4, it deals not only with efficiency books, but the camp returns are examined in full. I imagine the same query would apply there?—Yes, the same remarks apply to both.

3868. And also as to the last paragraph: "The only issues made through Paymasters are the allowances &c., earned by Volunteer Officers at Schools of Instruction. These are paid direct by Paymasters and are examined by F. 4 in full." There again, the same query would apply?—Yes, there again the same query would apply.

3869. Then in regard to the Army Reserve, it is stated here that all payments of Army Reserve pay are effected by money orders issued by Paymasters, the value of these orders is recovered from the War Office on a claim sent direct by the General Post Office, the claim is checked in full with the lists sent in by the Paymasters. It strikes me as questionable whether that is necessary?—The difficulty about that is this: apart from the audit here given, there is no audit really on those claims at all. The Post Office exercises no check whatever; they simply pay any money order that is produced, but whether the money order produced has really been issued against an existing Reservist, there is no check except the check we give here, and with regard to that, losses distinctly have occurred both with regard to the Reservists and also with regard to the pensioners. There have been cases in which some fraudulent clerk in the Paymaster's Office has got hold of the money orders, which are usually kept under lock and key in a safe by the Paymaster, and has filled them in, stamped them with the office stamp, and made off with the proceeds.

(*The Secretary.*) And this, of course, is the only way of checking that?

(*Witness.*) Yes. There was a considerable fraud of that kind which occurred at Woolwich.

3870. (*Sir Charles Welby.*) With regard to the Yeomanry, the charges for the pay of the Yeomanry are dealt with in the districts on the same system as the Militia, but they are examined in full by F. 4, as upon them to some extent depends the issue of annual grants to the force. Does not the same remark obtain there as regards the Volunteers, that it might be conceivably possible to accept the statement of the Commanding Officer?—Yes, and I will make the same inquiry as to that.

3871. (*Chairman.*) With regard to the work done by F. 5, on page 4 of the Memorandum, the Army Medical Department, it appears, examines the invoices of all contractors for medical stores fully, and then passes them on to F. 5 for payment. F. 5 examines a percentage of the items. Are we to understand by that that F. 5 casts up the totals to see if they are correct?—No. I think they cast up the totals; but, besides casting up the totals, I think they take a test of a few of the items in the contract and see the amounts are correct. Those are not large accounts. I think they come in twice a year, or something like that, and they are checked by the Medical Department. Some time ago I wanted the Medical Department to give up the examination of them altogether and let me have the contracts, and let me check the whole thing; but they said they preferred to keep an eye on them, so we agreed to have a smaller test audit. There, again I think, it would not come to very much if we accepted the audit of the Medical Department, which, as a matter of fact, had been done for a considerable number of years.

3872. The present system seems to be a duplication. Do you think that what you suggest might be done?—Yes, I think we might accept their audit. I think we really took that audit on more as a matter of principle than as a matter of necessity; that it was our duty to see the thing was correct; but we acknowledge there had been no great error occurring under the previous arrangement.

Mr. F. T.
Marzials.
5 Feb. 1901.

Mr. F. T.
Marzials.

5 Feb. 1901.

3873. Would your remarks equally apply to the veterinary accounts?—They might. I might say that neither the medical nor veterinary accounts are accounts of a very large character; they are small accounts.

3874. Will you turn to the work of F. 7 on the first page of the Memorandum. That branch, F. 7, appears to completely audit all Pension Accounts at the War Office?—That stands in exactly the same position as the payments of the reservists, which I mentioned a few minutes ago in answer to Sir Charles Welby. Those payments are made on an Army Postal order, and unless we examine the list of the Army orders sent us by the Post Office with the statements of the pensioners existing, we have no real check that it is not a bogus thing altogether. That is the object. Our own audit there is the sole audit that that account gets.

3875. Would a test audit meet the case?—I imagine probably it would; a test audit of one month's account and then leaving another month. For instance, completely doing it and not doing it for three months, and taking different accounts at different times, would probably meet that case.

3876. That would lead to some reduction of work?—It would.

3877. A considerable reduction?—Yes, I think a fair amount of reduction.

(The Secretary.) I suppose you would probably save four or five boys.

(Witness.) Yes, it is not highly skilled labour in any sense; it is simply a check of the postal order with the list we have here. There is nothing elaborate about it; it is a cheap form of labour.

3878. (Mr. Gibb.) Who sends out the postal orders in the case of pensioners?—The Paymaster; the Paymaster for that purpose is a Post Office official, as it were; he has a Post Office stamp, makes out the Post Office order to the pensioner, and sends it out with his stamp on it.

3879. (Mr. Beckett.) The War Office does not examine money orders in connection with payments to pensioners, does it?—It does not examine the money orders themselves, but it examines the list sent by the Post Office. It examines the list of what the Post Office has paid with the list of pensioners we have here to whom the Post Office orders have been issued.

3880. But there is no examination of the Post Office orders themselves?—No, the Post Office have done that. The Post Office have a return of what they issue, and that return is compared with the list of the recipients, the pensioners; there can be no possible collusion. Do the Committee wish me to take a note as to the possible reduction of labour as to this?

3881. (Chairman.) Yes, the Committee would be glad to hear what you have to say on the subject. Will you please turn to the last paragraph, as to the Chelsea and Kilmainham In-Pension Accounts, which says, "The audit by the War Office is as complete as possible, though it is, owing to the nature of the accounts, in many respects only a test audit." Would it not be possibly sufficient to accept the certificate of the officer in charge of these hospitals, and possibly to make sure that things were correct by sending down a surprise visit of inspection from time to time?—That might be done. They are not very large accounts, and I do not know that it would be worth while having a surprise visit simply for them; but, taking the surprise visit in connexion with the Head Pay Office at Dublin, it might be done in that way. Of course, it depends so very very much on whether one considers that every account rendered to this Office which has not been examined by some person in a position of either independence or quasi-independence like the Paymaster, should be passed here without a proper audit and check. I think that is a dangerous position to take up—that any account should be presented here by an expending officer without check.

3882. Without complete audit?—Yes, unless in the case of these accounts, which have been audited by the Paymaster, and which stand outside him, as it were, in which case we should accept his examination.

3883. (Mr. Gibb.) In those cases the Paymaster sends out the postal orders according to a list which he prepares and checks, does he not?—You are speaking now of the pensioners, not as regards these particular accounts at Kilmainham.

(The Secretary.) In these particular cases these men are living in the hospitals.

3884. (Mr. Gibb.) I am referring back to the general question?—In those cases the Paymaster receives from the reservist or pensioner a certificate certifying that he is alive on a certain date. On that he prepares his list of the money orders he is going to issue, and at the end of the month or quarter he issues those orders.

3885. He being an officer, as you have described, of a quasi-independent character?—I think not here, because he makes the absolute payment. My independence applies really only to the imprest accounts.

3886. (Sir Charles Welby.) If there were a system which created a local branch of the Accountant-General's Branch in Ireland, the Kilmainham pension account would be audited there, would it not?—Distinctly, but the point would still remain whether it ought to be audited at all or not.

3887. (Chairman.) Referring to the next page "Paymaster General's non-effective account," I see there "no pay list is received with the account, but only a schedule of the payments made"?—The Paymaster General sends in a receipt of the recipient of the retired pay which is noted off in the lists kept here. That again is a question of cheap notation against the man's name as to the date on which he has received his retired pay.

3888. (Sir Charles Welby.) Has this to do entirely with officers?—Absolutely, or Civil Servants.

3889. (Chairman.) And that is done in full, is it?—Yes; it is a very mechanical form of check; it is simply seeing quarter by quarter that every officer on retired pay sends in a proper voucher for his retired pay when he receives it.

3890. And do you think that it ought to be done as completely as at present, and that it is necessary?—I confess to having had many doubts about it myself.

3891. Then you would see no danger in this practice being altered?—No, I would not.

3892. Would that be a saving of work?—Some work, but not a very great deal, and work of a cheap character; it would be a saving of work distinctly.

3893. The Director of Contracts told the Committee that all bills that come under contracts made by him go the Accountant-General's branch for examination and audit, "and doubtful questions arising out of the contract they have to refer for my opinion. I think myself, the Director of Contracts being the commercial side of the Finance Branch, that the audit of those bills could be with advantage and with considerable saving of work effected by the Contract Branch. It would save a certain complication of work, and I could arrange my contract books so that the bills could be checked with the records kept in the Contract Branch, just as well as they are done in the Accountant-General's Branch." Have you any opinion on that proposal?—I do not think it is a sound one myself. I think it is very desirable that the Contract Branch should be kept strictly and entirely to its work of making contracts, and once there is any payment to be made under the contract, it should fall on the Accounts Branch to make it. If there is any question arising afterwards on the contract, then the Accountant-General should refer to the Contract Branch as to the exact terms of the contract, whether the payment was in accordance with it or whether there was anything requiring variation; but as regards the cash payment, I think that falls within the province, not of the contracting officer, but the paying officer. My objection is not one of mere technical arrangement. I think it is undesirable that the Contract Branch should be the actual paying persons. I think that an independent examination and check is desirable. The proposal as it seems to me would involve a dislocation of the existing arrangement, and not be in accordance with principle.

3894. (Chairman.) And you would see no corresponding advantage in it?—No, I do not see any.

3895. (Mr. Beckett.) I should like to direct your attention to something which came out in evidence before the Committee on Decentralisation with regard to the German Army, where General Brackenbury says, at page 39, "We have it in evidence that in Germany there is practically no audit in the War Office at all; the audit is carried out at the Headquarters of the Army Corps by the audit branch of the Intendant

" Office, and all that the War Office does is merely to compile the returns which have been sent up there." Under this proposed decentralization audit, I suppose in England, as in Germany, there would be a very large diminution in the audit work done at the War Office. Would it be possible to carry it out, do you think, to the same extent as is done in Germany by appointing for a local army corps an especial Intendant who would be responsible for the local audit?—I am not quite sure that I understand the question. We have no exact functionary here who would answer to the local Intendant; he would have to be created. An attempt was made to create such a functionary some years ago in the Office of the Chief Controller, but the functions clashed with those of the General Officer Commanding to such an extent that it was abolished, so that I do not know how you

could carry out the suggestion unless you created a new office altogether, or modified the German proposal in the sense of having the audit done by a section of the War Office from here. I think that would be the only way in which you could carry the suggestion out. You would have to create a body for the purpose. Either that body must be totally independent, which I suppose to some extent the Intendant is, or else you would have to create a body decentralised from this office, but in close touch and in absolute communication with it, and with frequent transference not only of personnel but of duties.

3896. (*Sir Charles Welby.*) And I suppose you would say a German Army Corps' Headquarters corresponds more with this office here than with any military district in this country?—That is so, considering the size of area administered and the number of troops.

The witness withdrew.

Mr. GEORGE POTTS WIGHT called in and examined.

3897. (*Chairman.*) You are a principal clerk in F. 3, I believe?—Yes.

3898. The Committee have before them a statement signed by yourself giving them an account of the work of your branch. Have you a copy of it before you?—Yes, I have.

3899. The first division of the work is the charges coming through the company pay lists—good conduct pay, company pay, and extra pay of all kinds. You audit one-eighth of these pay lists, do you not?—Yes.

3900. That is to say, each pay list would, on the average, come up for examination about three times in two years?—Yes.

3901. Under this work of examining the charges coming through the company pay lists, on the top of page 3, you say that "a considerable amount of attention has also to be given to the balance sheets of 'company officers'?"—Yes.

3902. That is, with regard to other moneys than the moneys issued on imprest, is it not—company accounts of all kinds?—It was intended to refer primarily to the money which they receive for the payments to their companies on imprest from the Paymaster. We do not examine the company or regimental funds.

3903. Is all that is done with regard to them done by the Paymaster in order to see that public money is not being taken for those funds?—Yes, and when we look at a pay list attentively, that is to say, one in eight, we do the same. We see that the company officer is not using public money to finance the different funds—the messing fund, cricket club fund, and so on.

3904. And can you make quite certain of that from the accounts?—Generally. The assets appear, of course, on one side and the liabilities on the other, and we see that the assets which are shown in the company balance sheet do not exceed the liabilities, that is to say, that the company officer is not using any of the money which the Paymaster has given him to pay his messing bills. It is only another way of saying that we see he is getting a sufficient amount from his men, or taking sufficient stoppages from his men, to pay the messing bills or the cricket club bills. It is really a small item in our examination work, and we do not give a great deal of attention to that particular feature of the balance sheet.

3905. As to the balances on seven-eighths of the pay lists, you only give a limited examination?—Yes.

3906. You check the totals into the Paymaster's General state?—Practically, all we do is to see that we have a receipted voucher for every payment, in accordance with the recommendation of Sir George Lawson's Committee, which you have had before you; in other words, we see that we have a pay list signed and certified, and we carry the totals into the Paymaster's general state, which is a recapitulation form. We treat the pay list as one voucher.

3907. With regard to what are known as "district" services, particularly as to all payments in the nature of pay made under that heading, do you examine them to the extent of one-sixth?—Yes.

3908. Do you consider that the Paymaster stands, in relation to these payments, in the same relation as he stands to the money which he issues under imprest?—No, certainly not. He is not, strictly

speaking, an auditor of this group of charges at all. I should make it clear that there are certain payments which come under this group which really are payments made by means of an imprest, that is to say, indirectly by the Paymaster, the division into "regimental" and "district" services being a loose one. The payments which the Paymaster himself makes—for instance, deferred pay, the pay of an officer or clerk, or a nurse—are made directly. Of course, he cannot audit those. An audit in the ordinary sense of the word, I take it, must be an independent examination. We have hitherto considered it sufficient to watch these carefully to the extent of one-sixth, and we think we can keep the Paymaster straight by so doing.

3909. Do you detect any errors?—A certain number, but not a great many. We may see that a Paymaster is going wrong on some point, and we may note that it is a point on which other Paymasters are likely to go wrong, because, perhaps, the regulation is rather complicated, or a little obscure. Then, if we find a weak spot like that, we go for it rather carefully in all the other accounts and try and set it right. This, of course, is preventive work, and there is little or nothing to show for it in the shape of disallowances. On the other hand, if, in a certain group of payments we do not find much to comment upon, we give up examining them for a little time, and economise in that way.

3910. The Paymaster's account always remains in the custody of your branch, does it not?—Yes, we receive it and keep it to the last. We take out the charges which are examined by the other divisions of the office, and put them into what is called a schedule, and send them to the proper quarter for examination. Then we see that that schedule comes back to us, and any disallowances which are made are properly carried out.

3911. (*Mr. Gibb.*) Are these schedules bulky?—Some of them are. For instance, the transport schedule in a big district is very heavy. Our work is simply this: we take out the necessary vouchers, see that the total of the Paymaster's covering abstract agrees with the charge in his account, put it into a "schedule," and pass it to F. 5. It is examined by that branch, and we do not see it again until we get their decision. That is done with all the Votes which we do not examine ourselves.

3912. (*Sir George Clarke.*) You said that as regards the district charges the Paymaster was not regarded as an auditor; therefore, as regards those charges there would be nothing more than one-sixth audited, would there?—Yes, that is what it comes to. Theoretically, I suppose, they should be audited in full, but since the Report of Sir George Lawson's Committee, was acted upon, we have dropped to one-sixth.

3913. (*Chairman.*) Has that meant a considerable reduction of work?—Yes.

3914. Has it meant any reduction of staff?—It meant a considerable reduction at the time, but since then we have had a great deal of work in other directions, what with the growth of the Army and one thing and another; and, of course, the war has upset everything, so that we only felt the full benefit of the reduction for a short time.

3915. You say, "When an account is completely examined, the classification is reviewed, and mistakes, which are very often numerous, are pointed

Mr. F. T. Marzials.

5 Feb. 1901.

Mr. G. P. Wight.

Mr.
G. P. Wight.

5 Feb. 1901.

"out to the Paymaster." Is classification only reviewed when the account is completely examined?—I think I may say yes. We did try at the beginning to review it always—we gave it up as quite impossible—we had not the staff to do it; and now we only review it when we examine an account thoroughly, and we think that is sufficient. Of course, if the examiner saw a very large amount which he knew to be wrongly classified, he would obviously correct it, but he would not hunt about for mistakes.

3916. (*Sir George Clarke.*) Is not the local classification a very small matter?—Unfortunately it is not, the headings of the Estimate are so very numerous. Parliament insists upon it, and I have been engaged in a small struggle for the last two or three years endeavouring to get the items telescoped. We get one or two telescoped each year, but that is about all.

3917. (*Chairman.*) You are gradually arriving at it, are you?—Very slowly. For instance, pay is separated from good conduct pay, from extra pay, from extra duty pay, from messing allowance, which is another variety of pay, and you can quite understand all that means work.

3918. (*Mr. Gibb.*) Who is responsible for settling the headings under which expenditure is to be classed?—I am not quite sure; I suppose the Accountant-General has a say in the matter; and I believe we take the Treasury into consultation when we do anything serious in the way of amalgamating items.

3919. Who would be responsible for classing good conduct pay under the heading "Pay" if it were done?

(*The Secretary.*) The Treasury would have to be consulted before such an arrangement was carried out.

(*Chairman.*) Would it mean consulting the Public Accounts Committee?

(*The Secretary.*) Not in the case of such a small point as that, but in the matter of telescoping the Votes it would be necessary; we frequently reduce or amalgamate subheads without reference to the Public Accounts Committee.

(*Witness.*) I was answering the question that it is not a small matter to keep these things straight. Many mistakes are made in Paymasters' accounts, for his clerks naturally do not appreciate all the distinctions which we insist upon.

3920. (*Chairman.*) With regard to Agents' accounts, the great majority of officers draw their money through Agents, do they not?—Yes; all regimental officers, or practically all. They have the option of drawing through the Paymaster, but they very rarely avail themselves of it. They find it a convenience to have a banker in London.

3921. And the Agents render these accounts quarterly?—Yes.

3922. And they are very thoroughly examined, are they?—Thoroughly examined in every respect.

3923. That is, I suppose, assuming an officer got a local allowance at one station which you have passed and he is removed to another station, the Agent would go on claiming that local allowance all the same?—He might. I should say that allowances, in the ordinary sense of the term, are issued by the Paymaster; it is pay and items in the nature of pay which are charged by the Agents, with some exceptions; but generally speaking, the items are pay and extra pay, and things of that nature which are charged by the Agents, and the lodging and fuel and light allowances are in the Paymaster's accounts.

3924. In what way does the Agent render his accounts badly?—Carelessly, I should say. Their plan, when they are in doubt about an item, is to charge it, and if it is wrong, the War Office throws it out.

3925. They do the best they can for their client?—Yes; I think on a quarterly account we get from 500l. to 1,000l. disallowances; that is not at all uncommon.

3926. (*Mr. Gibb.*) Out of a total of how much?—That, I am afraid, I cannot say straight off. Not one per cent., I should say.

3927. (*Chairman.*) But there is a good deal of work with regard to those accounts with Agents, is there not?—A great deal. One of our difficulties is this: At foreign stations the staff and the departments normally draw their pay through the Paymaster, and it is often difficult to prevent overlaps, to see that you do not get pay charged in two places, because the Agents at home go on crediting an officer with his pay, no

matter where he is, and we have to be very careful in examining to see that we do not get the charge twice over.

3928. Can you suggest any way of minimising that work?—A very simple plan—I know it is unpopular—is that the Paymaster should always pay the officer.

3929. But I suppose the Agents are a great convenience to the officers?—Yes.

3930. (*Mr. Gibb.*) But would not the convenience be retained if the Paymaster paid the officer by sending a cheque or money order to the credit of the officer's account with the Army Agent?—I think so.

3931. The payment would pass through the Paymaster's account, but it would be discharged as between him and the officer by a payment to the credit of the officer's account?—I think that would be a very good plan.

3932. (*Chairman.*) Then you would be practically sure the right man would be paid?—Yes. You understand it means increasing the work of the Paymaster, and, therefore, may mean a little increase of staff.

3933. (*Colonel Miles.*) It would be a very large increase, would it not, taking Aldershot?—Yes, I suppose it would at Aldershot.

3934. (*Chairman.*) But, on the other hand, there would be an economy of work in the audit?—Certainly. I, personally, think it is the right thing to do, but I know it is not generally so regarded.

3935. (*Mr. Gibb.*) It would not be very large at any individual station, would it?—At a big camp like Shorncliffe, it would be considerable.

3936. (*Sir George Clarke.*) The Regimental Paymaster pays on separate Votes, does he not?—Yes.

3937. That would not give rise, I suppose, to much difficulty?—The Agents charge all the regimental pay, and credit the officer's account, and the Paymaster pays all the allowances.

3938. Do disallowances arise out of regimental pay?—Not very many, I think, but items like engineer pay and artillery pay are a great source of trouble.

3939. (*Colonel Miles.*) There are very few disallowances on a line officer's pay, are there?—Very few; they chiefly arise on those items which are governed by the 61 days' rule, under which staff pay and corps pay may not be drawn for more than 61 days' leave.

3940. (*Sir George Clarke.*) Those are corps allowances and not regimental pay?—They are grouped by us under the the Pay Vote, not under the Allowance Vote.

3941. (*Chairman.*) Then as regards the regimental pay, there is not very much trouble?—I think not, except that you get officers going on and off the staff, and acting on temporary Staff appointments, which causes trouble. I think the suggestion that has been made that the Paymaster should charge all pay and send the cheque to the Agents, is a good one.

3942. (*Mr. Beckett.*) I see you say, "A considerable amount of attention has also to be given to the balance sheets of company officers, showing their liabilities and assets, and the state of their accounts generally. The officers in question are frequently quite inexperienced in financial matters, and consequently in danger of losing money." That seems to me rather an unsatisfactory state of affairs?—I agree that it is unsatisfactory, but it is part of the system, on which the accounts of the British Army are managed, that the company officer is the real paymaster of his men.

3943. You say, "The officers in question are frequently quite inexperienced in financial matters, and, consequently, in danger of losing money"?—You will doubtless understand that the officers, as a rule, do not like finance, and will not take any interest whatever in it; they are constantly getting into muddles.

3944. Does the company officer compile the pay list himself?—The company officer is charged with the duty of paying his men and keeping the company pay list and, what is the foundation of the pay list, the pay and mess book, which is a statement giving the men's names, showing how much they get every day and week, and working that up into an account. Of course, he has a clerk to assist him, the colour-sergeant of the company.

3945. The clerk has experience, I suppose?—He ought to have experience, but in many cases he has

not. That, of course, is the real trouble; that is where the real difficulty is both for the Paymaster and for ourselves. The company "accountants" lose or riddle away the cash.

3946. (*Chairman.*) The company officer does?—The company officer does. When I say the company officer, I should add that very often he does not pay any attention to the matter; he is supposed to pay his men, but he does not do anything of the sort.

3947. He is responsible?—He is responsible.

3948. (*Mr. Gibb.*) How does it affect you? As I understand, you say you are satisfied when you see the pay list certified by the Paymaster without examining behind to seek into the details of the document?—Yes, in seven cases out of eight, but in the eighth case, that is to say, when we are charged with the duty of complete examination, we go into these things. Besides they are referred to Headquarters. The local people get into a muddle and do not know how to adjust it; they say, "There is a deficit of 50*l.*, what am I to do?" They write to Headquarters, then it is someone's duty to sit down and unravel the matter.

3949. (*Mr. Beckett.*) It seems to me in a system of this kind a test audit of one eighth is hardly sufficient; it cannot work satisfactorily, can it?—I think it is sufficient.

3950. You say a considerable amount of attention has to be given to the balance sheets of a company officer; that means the pay sheets, I suppose?—No, at the end of his pay list he has a balance sheet showing he owes the Paymaster so much on his public money. Then there are other items, for instance, what he owes to his men, and what his men owe him. Some of the men may be away, some in debt, some in hospital or detached, and all that has to be worked out, down to his cash balance, which he ought to have in his till, but which very often is not in his till.

3951. How often is this balance sheet examined, every month?—No, one out of eight. That comes under the heading of complete examination.

3952. (*Mr. Gibb.*) That is by the War Office?—That is by the War Office. The Paymaster is supposed to look at it, and if he sees anything wrong to find out what it is all about. For instance, he may see, as I have done, "Cash deficient," or "overdrawn at bank," say 20*l.* or something of the sort. A good Paymaster who was on the *qui vive* would want to know what that meant, and report it to the Colonel, and get some sort of inquiry, because a young and inexperienced officer may be losing money, or his clerk may be swindling him, which is not at all uncommon.

3953. (*Mr. Beckett.*) You say a good Paymaster; would that imply that a bad Paymaster would let the whole thing slide and pay no further attention to it?—He is not specifically told anywhere to go into a matter of that sort; but naturally a careful man would take it up at once, while a man who is content with doing his bare duty, or one who will not move without a regulation, would probably let it slide.

3954. Supposing he does not go into it, would that deficit appear in balance sheet after balance sheet?—Yes, and probably get worse, of course.

3955. (*Sir George Clarke.*) But that would mean, surely, the Paymaster is not doing his duty. The Paymaster, I understand, is the only complete auditor of these accounts, and if there is a deficit from time to time, would not he be neglecting his duty in not finding it out?—But you understand the Paymaster is treading on delicate ground. The entry in the balance sheet would mean there was a deficit in the funds of the company. The company officer is in a very peculiar position. He holds public money, and what may be called regimental money, which is *quasi* private; that is to say, as you know, he collects stoppages from his men, 3*d.* a day, roughly, which are credited to a messing account, out of which he pays the bills for their tea and coffee and such like. That is what we sum up under the heading of regimental funds, which are not public. He may lose money there, he may get into a muddle, have a deficit on that, and, of course, the Paymaster can only call his attention to it and say, "Look here, there is something going wrong." His duty is to tell the Colonel or officer commanding the troops at the station.

3956. That would be his natural course, would it not?—Yes; I do not know that it is laid down in black and white, but he should do it.

3957. (*Mr. Beckett.*) It seems to me that a great many undetected errors must inevitably creep in on account of insufficiency of auditing, and the inexperience of a company officer?—But the audit is very thorough, as regards charges against the public; the Paymaster's audit, I mean, is complete, in theory. Not a single penny can be charged against the public which is wrong. The Paymaster reviews every single penny which is charged against the public very carefully.

3958. Then it is only in the balance sheet of the company officer that errors would arise, is it?—Yes, errors such as we have been discussing. We occupy a sort of grandmotherly position towards the officer and soldier, and we try and help the inexperienced officer to prevent him losing money, and also look after the soldier. For instance, we check forward from month to month any credit balance on a soldier's account. If the company pay list shows 10*s.* is due to a soldier in January, it is checked forward into February, in order to see that the soldier gets it.

3959. (*Sir George Clarke.*) Then your check only applies some weeks afterwards, does it not?—Yes.

3960. And would not the poor officer be getting further into difficulties all the time?—If the Paymaster did not point it out to him, there would be a tendency for things to get worse, no doubt.

3961. (*Mr. Beckett.*) With regard to classification that classification is made by the Paymaster, is it not?—Yes, because he picks out of the company pay list the items which go to pay, messing allowance, and extra duty pay, and so on, and sums them all up into what is called a general state, under the proper Vote heading.

3962. (*Sir George Clarke.*) Are not they on the pay sheets to start with?—They are, but they have to be carried out of that into the Paymaster's summing up.

3963. That is purely a clerical operation, is it not?—Purely, but, of course, the company officer naturally knows nothing about it, or is careless about classification. He does not bother his head whether a charge goes against extra duty pay or extra pay, and the Paymaster has to divide that up under the proper headings.

3964. (*Mr. Beckett.*) Do you think there might be a simplification of the process at all?—I think not.

3965. You think it is satisfactory as it is?—Quite; so long as we have the headings we have. I think it is done in the most simple manner possible.

3966. (*Sir Charles Welby.*) I should like to ask a question about what you describe as the limited examination which is applied to seven-eighths of the pay lists; which is, of course, applied to all the pay lists, because it is also applied to the one-eighth?—Yes.

3967. And you said that consisted of the production of a receipted voucher for every payment?—Yes, that is the phrase used by the Committee which drew up the present scheme of examination, which provides that we must secure a receipt voucher for every payment.

3968. Must you secure the signature of the soldier for every week's pay which is paid to him?—No, we are now dealing with a group of payments. The pay list is treated as one voucher, and the signature of the Officer Commanding that it is a correct statement of his disbursements, and the certificate of the Paymaster that he has examined it, and the balance is all right, makes it a complete voucher.

3969. What do you require to satisfy yourself; do you require the signature of the Paymaster who he has satisfied himself the payments are correct?—Yes.

3970. Do you also require the signature of his sub-accountant?—His sub-accountant signs it; we see that he signs it.

3971. It is quite clear that that is necessary?—Yes, the extra work involved is a trifle; if you have the pay list open in front of you, there it is.

3972. It makes no difference in working whether you see yourselves these vouchers from the sub-accountants, or whether you take from the Paymaster a certificate that he himself has seen these sub-accountants' vouchers?—We do not go over the vouchers in the pay list which the Paymaster has gone over for us. They come up here tucked into the pay list, but we do not go into them. Of course, if we saw anything suspicious, we should.

Mr.
G. P. Wight.
5 Feb. 1901.

Mr.
G. P. Wight.

5 Feb. 1901.

3973. But that is the Paymaster's business, not yours?—That is the Paymaster's business, not ours.

3974. Does it not mean a very large amount of carting backwards and forwards of these sub-accounts coming up with the Paymaster's monthly statement?—No, they come up and stay here because they are in duplicate. The regiment keeps the duplicate.

3975. The fact of their being in duplicate seems to me to point to there being extra labour?—It is only the pay list which is in duplicate, because the men's names have to be checked forward from month to month, and while you are examining one pay list up here the regiment must be checking forward to the next month's pay list.

3976. I cannot see why all that cannot be cleared away down in the district, and you accept the certificate of the Paymaster that it has been done; do you see the point?—Yes.

3977. (*The Secretary.*) That would not affect the question of the duplicate pay list?—No; perhaps we misunderstood one another. We only check forward the men's names in one-eighth of the pay lists; in the seven-eighths we do nothing more than look at the general state or abstract, run a blue pencil across the signatures, and check the totals into the Paymaster's recapitulation form.

3978. What is the object of it coming up at all?—Because it is the voucher for the payment; how can you pass the charge against the public, unless you have some sort of voucher?

3979. My point is that the Paymaster's voucher is sufficient for you, because you say in respect of those payments he is an independent auditor?—Yes.

3980. Therefore, why cannot you be satisfied with his audit?—As regards the correctness of the individual charges in the pay list, as to whether private Jones is entitled to 3d. messing allowance or not, we let the Paymaster settle for us. But you say the Paymaster is to send us a sheet of paper supporting a charge of 100l.

3981. And the 3d. appears on that paper?—We do not go into the 3d., but we take the whole document as a voucher for a charge of 100l. made against the Army Votes.

(*Mr. Gibb.*) Why could not the Paymaster send you half a sheet of paper with the amount and his name on it without sending you all the accounts and vouchers?

3982. (*Sir Charles Welby.*) Why cannot you accept his certificate that he has gone through it himself, and seen all the necessary vouchers?—Because he receives cash from us. He gets 10,000l. a month from us, or whatever it is, and he has to get a discharge for it.

3983. (*Mr. Gibb.*) But is that an answer to the question? The question was whether it was necessary to combine in one document the Paymaster's signature and all the detailed accounts, involving in consequence the sending up the detailed accounts as well as the certificate?—I think it is necessary, if for no other reason than that we have constantly to refer to pay lists; but I should have thought it necessary from an audit point of view. Do you mean you would take a certificate from a Paymaster saying: "I have seen the accounts of 'A' Company of the 1st Staffordshire Regiment, and they total up to 100l.," and I charge 100l.?

(*Sir Charles Welby.*) And "I have examined them, and satisfied myself that the charges are correct according to regulation."

(*Mr. Gibb.*) It is a perfectly clear question. There are the two functions; one man may examine vouchers and certify, another man may audit and see that there is a certificate of the previous examination of vouchers.

3984. (*Sir George Clarke.*) The point is that you regard the Paymaster in a double function, do you not; as a cashier from one point of view, and as auditor from the other?—Yes.

3985. As to the cashier point of view, you say you cannot pass his charges without a voucher, which is a detail of the charges?—Quite so; he receives cash from our issuing branch.

3986. (*Chairman.*) But you do not look into the details when it comes up?—No, except as to one-eighth.

3987. Therefore, for practical purposes, instead of having a large sheet with a great many items on it and

the total at the bottom, with the Paymaster's signature, you might have a small sheet with a total at the bottom with the Paymaster's signature without all these items.

3988. (*Sir Charles Welby.*) That is my point. As I understand it, the War Office advances money to the Paymaster?—Yes.

3989. The Paymaster advances money to his sub-accountant, and the sub-accountant pays the soldier?—Yes.

3990. The soldier signs a receipt to the sub-accountant, the sub-accountant clears himself by producing that receipt or voucher to the Paymaster?—Yes.

3991. Why is it necessary for the Paymaster to produce that original document to the War Office? Why should not the War Office be satisfied to accept a certificate from the Paymaster that he has received in due course those vouchers, and that they met the case?—You would, at least, want the certificate of the officer commanding the company, would you not—that he had expended so much of his imprest?

3992. (*Mr. Gibb.*) In order to send a pay sheet to the War Office, a complete duplicate has to be made to be retained by the Paymaster. There are two copies made, I understand?—Yes.

3993. Why should there be more than one?—There are several reasons. The company must have a copy, as the pay list shows the balances due to and from the soldier.

3994. (*Sir Charles Welby.*) After the Paymaster has satisfied himself, why should not he tell the War Office he has satisfied himself and hand the document back to the Company officer?—I should not regard that as a satisfactory voucher.

3995. You will clearly understand I am only suggesting this in regard to payments in respect of which he is an auditor and not a cashier?—Yes.

3996. (*Mr. Gibb.*) And on the assumption that Mr. Wight has given that he does not examine the vouchers except with regard to the eighth, that he only examines to see that the Paymaster has certified the account?—I regard this as a voucher in support of the total charge made against the public. What is there to prevent a dishonest Paymaster charging 300l. or 400l. and saying, "I have examined the account of A Company of the Staffordshire Regiment, and find it correct."

3997. (*Chairman.*) Are you not mixing up his double function?—Is it not because he receives cash from us that he has to send us this document as a discharge?

3998. (*Mr. Gibb.*) If you send a cheque for 100l. to a man so that he may make a number of detailed disbursements, you may be satisfied with receiving his receipt for the 100l., if you trust him to disburse correctly and get vouchers?—We have given this Paymaster 10,000l., part of which he has ladled out in hundreds to various sub-accountants. At the end of the month you look to him for an account of his 10,000l.; what has he done with it? You propose, I understand, that if he will say, "I hereby certify that I gave 100l. to A Company, and they have spent 90l.; and 100l. to B Company, and they have spent 90l.," and so on, he may charge the latter amount against Army funds on the strength of that certificate.

3999. (*Sir Charles Welby.*) Of course he might take a receipt from the Company Commander to the effect that that Company Commander had received 100l. without necessarily sending up the whole of this detail?—You mean we might have a certificate from the Captain of the company that he had so many men on pay and that he paid them so much, and the Paymaster would send that on to us?

4000. Yes, having himself examined all the detail?—Of course, that would do, except that there is another point: how are we to examine other pay lists without the aid of this detail? I do not look at this detail for this month, it is not absolutely necessary for me to have this detail, but I want it the next month or the month after; we want it for all sorts of things. If all you mean is that only this recapitulation or abstract should be sent up as a voucher it could be done, though I do not see what would be saved by it; it would be a little less bulky, that is all.

4001. (*Chairman.*) I think this confusion which exists with regard to the functions of the Paymaster arises from the fact that the Paymaster does discharge

two functions, on one side being a cashier, and on the other side an auditor, and that brings the Committee to the suggestion which has been made, that possibly a good deal of correspondence could be saved and other advantages could be gained if the Paymasters were made cashiers and nothing more, and if the audit of the payments they made was conducted, say, in a large Command like Ireland, by a branch of the War Office which would be attached to Dublin. Under the suggestion you would practically have a small section of the War Office which does the work here now, which would be transferred to Dublin, and would do the entire audit of expenditure incurred in Ireland, the Paymasters being made mere cashiers. How would such a suggestion occur to you?—Mr. Gibson mentioned to me a somewhat similar proposal, and I have been thinking it over a little bit. It seems to me that it would be very wasteful *prima facie*.

4002. In what respect?—That first of all you would save very little of the Paymaster, I imagine, and you would have to multiply the Civil staff by splitting it up into I do not know how many stations.

4003. Assuming for a moment that we are dealing entirely with Ireland, and only with regard to the Irish accounts, would it be very wasteful to attach a small section of the War Office to Dublin, and make it conduct the audit there, the Paymasters in Ireland being made entirely cashiers?—If they were only cashiers, I suppose you mean the War Office audit would have to be in full. For everybody who is now auditing regimental pay lists in the Pay Offices in Ireland, you would have to have a corresponding Civilian clerk.

4004. The whole of the audit would be done by the Civil Audit Branch in Dublin?—Then the Paymaster would be wasted as a cashier. If you want to move in that direction, it seems to me there is nothing short of making the whole thing Civilian. I think it is a distinct economy that the Paymaster audits the regimental accounts. The pay list must come back to the man who makes the imprest. He must receive an account to see how the money has been spent, so that he must receive the pay list.

4005. Of course, it is an economy in the first instance to have one man to do two jobs, but I do not think any ordinary business establishment would like to have their cashier also discharging the duties of an auditor?—There is also this objection. There would be very much greater delay in auditing the account under the plan you propose, for this reason, that the Pay Office staff, being composite, is engaged in all sorts of things, they can turn on to the audit of regimental accounts directly they are received. In the first week in the month, pretty well the whole of the Paymaster's staff is turned on to the audit of the regimental pay lists as they come in, and they are polished off in a week or a fortnight.

4006. But the payments are made four times a month, are they not?—He sends an imprest, but that is an advance generally made weekly. For instance, he has ladled out, say, 200*l.* in the month of January in four instalments; in the first week in February he receives the account, and he can turn on his whole staff to audit it, and get it settled in a week or 10 days. Then for the rest of the month he is compiling an account for the War Office, preparing vouchers for the payment of pensions and Army Reserve, and all sorts of things. Now, if the War Office were to audit it would take a month to do a month's accounts, and we should not get the accounts until after they had been to the Pay Office, because the Paymaster must receive the pay list, take out the totals, and put them into his general state. Then it would be passed to the auditor, and it would mean a great deal of delay, which is serious in these matters.

4007. (Mr. Gibb.) Are you giving sufficient weight to the consideration that under the suggestion the Paymaster would merely be cashier?—I think it would be a great pity to have a Paymaster merely a cashier; we should lose the benefit of his services to a large extent.

(The Secretary.) But your answer applied to a scheme where he would be cashier?

(Witness.) Yes. The cashier has to keep a ledger account with the company to which he issues imprests, has he not?

4008. (Mr. Gibb.) The cashier has to make the payment for the amount of the account, but he has not

necessarily to examine the account before he makes the payment?—No, but he would have to see, surely, that he got a voucher in discharge of so much in order that he might credit the company with so much.

4009. You would have to keep in mind, would you not, that the demand on the cashier would simply be a demand for a definite sum, and he would have no duty except to issue that sum. The preparation of the demand would, I presume, be performed by the company officer and the audit of the pay list afterwards would be performed by the local audit officer?—Then would the local audit officer have to look after the cash balances of the company officer? Every time a Paymaster sent to a company a cheque for 100*l.*, he would have to report it to the Civil Staff at Dublin, so that they might secure credit for that sum.

4010. I presume the local auditor would have to make a full audit, and therefore would have to look after the cash balances in the hands of the company officers?—And also all the balances of the men when they were transferred from one company to another, which is a very important matter.

4011. I presume that would be so. In other words, he would take every function?—I was thinking the Paymaster would look after the cash entirely to the end. I had not quite understood your plan.

4012. (Chairman.) The Paymaster would be merely a disbursing officer?—He would simply be a cheque drawer, nothing more.

4013. (Mr. Gibb.) From one answer you made, I thought you would develop your criticism in rather a different direction, as showing that a system of decentralised audit of that sort would not reach in its benefits all the stations, because the local auditor would, according to this proposal, be stationed at Dublin, but the pay to the troops would have to be disbursed at all the stations throughout Ireland?—Not necessarily. It is as easy to send a cheque from Dublin to Fermoy as from Cork to Fermoy. We have troops now at stations where there are no Paymasters. As a matter of fact, the Paymaster almost always pays by cheque; it is very rarely he takes down a bag of coin.

4014. Then in a case of that sort, what is done to check the company officer's demand for pay, in other words, his pay list which he prepares as the basis of the pay?—He gets his imprest in advance.

4015. I mean if there is no Paymaster on the spot to check it, how is it checked?—It would have to be checked by the audit clerk in Dublin.

4016. How is it done at present? You said, that at some stations pay was disbursed although there was no Paymaster at the station?—The Officer Commanding a company at Buttevant, for instance, sends in the usual form to Fermoy through his adjutant and says: "I want 100*l.* for the payment of A Company of my regiment on the first of the month," and the Paymaster sends it.

4017. Sending with it a pay list?—No.

4018. No details?—No; of course, if he asked for anything very outrageous, say 500*l.*, the Paymaster would probably send a telegram asking why he wanted so much.

4019. Then in such a case at the present time there is no pre-audit of pay lists?—Of demands for cash in that way, no. It is simply a cash requisition. The Paymaster would know by experience whether the demand was reasonable, all companies being about the same size and, as I say, if he was asked to send a cheque for 100*l.*, he would send it without question; but at the end of month he would receive this document in which the Officer Commanding would debit himself.

4020. We were told by Colonel Drage this morning that the errors in the pay lists, prepared by company officers, were exceedingly numerous?—Yes, they are often very numerous.

4021. I rather gathered from him that those pay lists were as a rule examined and checked by the Paymaster before the money was actually disbursed to the troops?—No, that could not be so, or they would have to pay of their own pockets.

(The Secretary.) What he meant to say was that the company accounts are frequently very badly rendered, and the Paymaster has an extremely important and arduous duty to perform in auditing them.

Mr.
G. P. Wight.
5 Feb. 1901.

Mr.
G. P. Wight.
5 Feb. 1901.

4022. (*Mr. Gibb.*) If the pay lists are not examined by the Paymaster before the money is disbursed, what objection would you see to these pay lists being sent up to a local auditor stationed in Dublin, performing the work of full audit for the whole of Ireland?—I think it would be expensive to begin with, that you would have to increase the Civilian audit staff to a very great extent, and that you would not save correspondingly in any reduction in the Army Pay Department; you are still going to keep the Paymaster as a cashier only, thereby wasting a good officer.

4023. Why do you assume that the suggestion for a local audit should be considered by itself; the subsequent dealing with the Army Pay Department would have to be considered in the circumstances created by the change, would it not?—Certainly. Then you could undoubtedly examine all the pay lists of all the regiments in Ireland at Dublin and audit all expenditure there. The cashier, I take it, would report issues to Dublin. I understand this to be your plan. The cashier would tell the auditor, "I have issued so much money to A, B, C, D, and E Companies, you must secure credit for it and get a pay list and examine that pay list."

4024. Taking that plan, as you have it in your mind, do you think it would be an improvement on the present system, bearing in mind that it would provide for a full audit of the payments now made through imprests by the Paymasters, as well as all direct payments now made by the District Paymasters themselves, so that it would practically, as proposed, relieve the War Office of all the duties of audit and examination of accounts within defined districts?—There is one great objection which occurs to me, and that is: How are you going to secure uniformity in the interpretation of all our difficult and very complicated regulations—and we have some very difficult and complicated regulations—if you have this decentralised audit, and you have no sort of test audit at Headquarters? It might go on very well for the first month or two, while people all thought the same thing, but after a little time you would find these audit officers getting out of touch with one another because they had no central authority.

4025. (*Chairman.*) Do not you think that would be provided for by making the officers in Dublin and the officers here interchangeable; if they were to serve for a time in Dublin, and then come here to refresh themselves with the traditions of the office, while at the same time the Central Office would send down its inspectors from time to time, and in that way secure uniformity between Dublin or any other district?—Yes, there is undoubtedly something in that.

4026. In all proposals for decentralisation there immediately arises the danger of want of uniformity, but it is a danger which has been generally practically met?—Yet, I think you will find correspondence will be increased; there would be inevitable correspondence with Headquarters and a great deal of it.

4027. If Headquarters delegated its powers, correspondence could only arise in cases which occurred outside the four corners of those delegated powers?—Yes.

4028. The suggestion is that the certificate of the auditor in Dublin should be accepted as final at the War Office?—Yes, undoubtedly.

4029. Therefore, unless there was a difficult question which he could not deal with under the delegated powers he had, and under the instructions which he took down there, he would no doubt have to refer to Headquarters, but I should not imagine it would involve such a very large amount of correspondence?—I suppose it is realised that all payments that we make are made under regulation, and some of these regulations are very complicated and very elaborate, and are constantly being elaborated.

4030. Are they constantly being elaborated and never being simplified?—We are always having new schemes thrown out, new ways of doing things, new ways of paying people, new allowances, and so on, and all that makes difficulty. In fact we are always in a transition state—I suppose there is nothing quite like it in a commercial house. I do not think that that is realised quite. Take messing allowance as an illustration, it is popularly supposed that every man in the British Army has 3*d.* added to his pay, but if anyone reads the Regulations they will discover that

first of all he must not have his 3*d.* till he is 19; he must not have his 3*d.* until he has been six months on service, and that six months must not include any day when he has been in hospital or on furlough; and there are various other rules just as complicated governing other rates of pay and allowances. All that makes auditing very difficult.

4031. These rules were introduced for Military reasons, were they not?—Not exactly, I think the House of Commons pressed them on us.

4032. (*Mr. Gibb.*) Looking at the proposal from an alternative point of view, and assuming that the Paymasters were, as suggested, cashiers, and then let all the audit work be done at the War Office as a centralised audit, that is to say, remove from the Paymasters the audit duties which they at present perform and have them entirely performed at the War Office; does that strike you as a proposal which would work?—It does not strike me as a good proposal; it strikes me as excessive centralisation, which I think is bad; at present it seems to me that we are getting all the rough work of auditing done locally; all that can profitably be done locally is done locally in close touch with the regiment. There is another little point I should like to mention. The Paymaster, being a soldier, is more in touch with soldiers than a Civilian ever can be, and I think he does the rough work of regimental audit exceedingly well; we get it done in the district and we only do at Headquarters what I may call a departmental test audit, i.e., the department which frames the regulation and knows what it means sees that it is carried out as was intended. That is the only advantage of anything like centralisation, I think, and I do not think the plan of having all the auditing done at Headquarters is a good one. Of course, in times of war it would be impossible to work such a thing.

4033. Does the present system work satisfactorily during war time?—So far as the audit goes, I think it works as well as any system can ever work in times of war, when you have, as I say, rates of pay, &c. drawn under complicated regulations, and when the system of payment is as complicated as it is at the present moment.

4034. I suppose that means that in war time there can be very little audit, whichever system is adopted?—You see the Paymaster does the regimental audit practically, and, so far as I have been able to see from the Cape accounts, I think he has done it very well. We test audit here and there, but we have hardly done it as regards regimental accounts during the war because we have no staff for such work, and have been obliged to devote special attention to the new corps raised at home. To have had the audit centralised at the War Office would have meant breaking down altogether. I am sure that our examination and audit is rendered far more difficult than it need be because of the complications in the soldier's pay and allowances. That is a point which very few people ever touch upon. Anyone who takes the trouble to pick up the Royal Warrant will see what I mean. The soldier has half-a-dozen different kinds of pay.

4035. Are you indicating that in your opinion there is unnecessary complexity or that there is an inherent complication?—There is, I think, unnecessary complexity; it has grown up in the course of years. For instance, in recent years they have added messing allowance, and we have good conduct pay, corps pay, engineer pay, armament pay, specialists pay, &c.

4036. "They" being who?—The authorities. I will not say who. It has come on in natural process. Someone has thought it would be very nice if the soldier got something more. They give him something more, but do not consolidate his pay, and of course all that makes the work of audit very difficult. A certain amount of complexity of course is absolutely necessary, but I do think that is a direction in which we might really reform—the telescoping of the various kinds of pay. Then auditing would become more simple. Certain varieties of pay are not issued for Sundays. Other varieties of pay they do not get when on board ship and so on.

4037. I suppose you must provide for the contingency of a Sunday occurring or a voyage occurring?—But I think you see what I mean; there is a regulation to that effect, and you lay upon the auditor, whether Paymaster or War Office clerk, the duty of seeing that that regulation is carried out; he is helpless when he has to do it,

and if the Officer Commanding makes a mistake, as he very often does, it has to be pointed out to him, and an irritating disallowance is the result.

4038. Do you, in the course of your work, call attention to difficulties due to the complexity of the rules which you have to carry out?—Occasionally. You will quite understand it is not a thing which you can be constantly doing; one has other work to do, and it is not the duty of the auditor to be continually saying "This regulation will not work," and so on.

4039. I should have thought that he was just the man to say it if he found, in carrying out the duty, that it was exceedingly complicated; he would naturally remonstrate, would he not, and ask for an alteration?—I have tried in a small way.

4040. (*Sir Charles Welby.*) If I might, for a moment, go back, I want to make sure if you understand what I have in my mind. What I want to suggest is this: whether you could not be satisfied with a certificate in some such words as the following from the Paymaster every month: "I attach vouchers signed by the Captains of companies for the imprests advanced to them during the past month, and I certify that I have examined the accounts in detail and satisfied myself that all the payments made by them have been correct and according to regulation"?—But surely he would have to say, "And I have also spent so much." I think the duplicate pay list will always be wanted in some place, if not by us, by the Paymaster.

4041. For what purpose is this list *here* required at the War Office at all?—If you had any examination at all, it is obviously necessary to check forward; you check forward names and rates from one month to another.

4042. My point is, cannot you put the responsibility of that on the Paymaster?—We do in seven cases out of eight. Then we get all sorts of questions about soldiers' pay. I suppose you would decentralise that; supposing someone wanted to find out about a soldier's pay, I suppose you would send them to the district?

4043. Yes, I would send them to the unit?—I should be very glad if that could be arranged, but I am not very sanguine.

4044. (*Mr. Gobb.*) In the case of a demand for the payment of a large number of men in a commercial

concern, a pay list is prepared by the Paying Department with the name of each man, the amount due to the man being inserted. That is totalled up, and that pay sheet is sent forward to the accountant to be checked, and for the purpose of getting the money to pay it; the pay sheet is then returned to the Paying Department with a cheque for the money, and the money is disbursed. As I understand Sir Charles Welby, he is suggesting the same kind of procedure should be adopted here?—You pay your wages in arrear; you produce your pay sheet, send it in and get your cheque. We do just the converse. We send the money in advance and get the pay sheet afterwards. Then we have a monthly pay list. The soldier is paid four times a month, on the 7th, 14th, 21st, perhaps, and on the last day of the month.

4045. But, it seems to me, drawing the money in advance simply means that the sub-accountant draws the money on account?—Yes.

4046. And afterwards accounts for it by producing the complete pay list. In any case, if he has in his possession a complete pay list, one does not see why he need send forward that pay list until it is required for full audit?—In other words, you allow him to charge the public with pretty well what he likes if he will only give a certificate that it is correct; is not that what it comes to?

4047. He, being in that capacity, the auditing authority?—Yes, but he also holds Government money.

4048. As cashier truly; but that is the vico of the present system, that the Paymaster combines in his person the double functions of auditor and cashier?—I see what you mean, but it seems to me that there is no difference between giving a certificate that the total of that pay list is so much, and giving a certificate that the total of something else he has paid himself is so much, if we do not know who certifies that the pay list of a company comes to 200*l.*; for anything we know, it may come to 100*l.* only.

4049. (*Sir Charles Welby.*) But then the sub-accountant has to produce vouchers, you see?—But he does not show them to us under your plan.

4050. Yes, that is my point?—That is, he only sends a receipt for the imprest.

The witness withdrew.

FOURTEENTH DAY'S MEETING.

TENTH DAY'S EVIDENCE.

At the War Office.

Wednesday, 6th February 1901.

PRESENT:

MR. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Colonel H. S. G. MILES, O.B., M.V.O.
Sir CHARLES WELBY, BART., C.B., M.P.

Mr. H. J. GIBSON, *Secretary.*

Sir RALPH H. KNOX, K.C.B., further examined.

4051. (*Chairman.*) I think you were a Member of the Committee that reported on audit of Army Accounts in 1896, generally known as the Lawson Committee?—Yes.

4052. Paragraph 17 of that Report which you signed contained a recommendation as regards Aldershot:—"That the Chief Paymaster might advantageously be freed from all payments except the issue of imprests to his Sub-Paymasters, and that the labour now spent in the consolidation of their accounts might more profitably be expended in subjecting these to a

"local audit. As the Chief Paymaster would be freed from cash payments, this audit might be accepted as disinterested, and a small test audit only applied at the War Office." That recommendation was equivalent, was it not, to making the Chief Paymaster a local auditor for the War Office at Aldershot?—Yes, it went a long way in that direction.

4053. It was never carried out, I believe?—No, it never was carried out.

4054. What reason was there for its not being carried out, do you recollect?—No, I cannot recall

Mr.
G. P. Wight.

exactly what the reason was. I cannot say that I myself was strongly in favour of the change, but Sir George Lawson and Colonel Playfair, who, I think, was a Member of the Committee, were very anxious, at all events, that an experiment should be made of such a system at Aldershot. You see they only recommended that it should be applied to Aldershot, and I, never having any objections to experiments, coincided to that extent with them. But I had no very strong opinion in favour of it as a system.

4055. I thought that was possible, because it struck me that the recommendation conflicted rather with what you said in your Note, which you were kind enough to send to us the other day, that "it would be an extravagant plan to provide a local examination of the great variety of accounts which exist in a district" ?—Quite so.

4056. And again, that "the auditors would require to be skilled in nearly all classes of accounts and the regulations governing them" ?—That was really my view; but my two colleagues on that Committee were very anxious to try the thing at one station which which was a large and important one, and I accepted their recommendation, as it was limited in that way.

4057. And what you have said in that Note agrees with what you said before the Decentralisation Committee of 1898 ?—Yes, I think it will be found to do so.

4058. What you said before the Decentralisation Committee was in answer to Question 1377. The question was: "Would that audit under the Chief Paymaster be the sort of audit that you would be satisfied with, or would it be too much like the Paymaster's audit?" And your answer was: "I think the staff would be certain to be recruited from the men who had been employed in the pay work. For a local audit of that kind, the men could certainly not be the same class or recruited in the same way. There would be a certainty of collusion between the audit clerks and the pay clerks." It occurred to me from the language of that answer that your objection to a local audit was possibly chiefly directed against a local audit conducted by a Paymaster with men under him recruited from the ranks of those who had been employed in pay work, and that perhaps you would not have the same objection if the local audit were not to be conducted by the Paymaster, but were to be conducted by a section of the War Office detached to a command in order to carry out the audit. For instance, taking Ireland as a typical case of a large command, if it were proposed to detach to Dublin what would be a small section of the War Office to conduct the audit of all expenditure in Ireland, although it might seem to you open to objection from other points of view, still, it would present itself to you in a different aspect, in that there would no longer be the difficulty of its being conducted by the Paymaster and men recruited from the pay ranks ?—It would meet very largely that point, I think.

4059. But there might still be the objection of greater expense, that is to say, that a small local audit section at Dublin would have to deal with all kinds and classes of expenditure, and as their duties would be complicated, you would possibly have to employ a more expensive agency than is necessary now at the War Office, where, having a large staff, you can specialise a comparatively cheap agency to one particular duty which becomes almost mechanical ?—That is my opinion. You see our audit is not a very simple audit; our audit is an audit of authority, much more than a mere checking to see whether a voucher is countersigned by particular people, and therefore to be accepted as all right. As regards the great mass of charges that come into an account, they are governed by regulations, volumes upon volumes of regulations, which are the limits within which the local people work, and it is the business of our auditor, just as it is the business of the Comptroller and Auditor-General over us, to see that charges are passed only in accordance with those regulations, and it requires a considerable amount of experience and training to become acquainted with those regulations in a way to enable men intelligently to examine the accounts. Of course, as I said in that small memorandum of mine, where the work is arranged according to subjects in this office, the men constantly working at those particular subjects become quite *au fait* at that particular class of regulations, and examining the accounts day after day, they can do it with very great rapidity and with intelligence, having

over and above them the chief authorities for dealing with those particular regulations.

4060. Your opinion, I take it, is that such a proposal would result probably in greater expense ?—Yes, I think so. I cannot see but what it must necessarily do so. In fact, if you ever break up an establishment and dissipate it in that way, unless you relieve it of a considerable part of its work, it always leads to expense.

4061. But of course, the fewer local centres there were the less the increase of expenditure would be ?—Yes.

4062. If you had, for instance, a local War Office in every existing district it would be expensive, but if you had *ex hypothesi* Ireland as one Command, Scotland as another, and England with a couple of Commands, it would not be so expensive ?—The increase would not be so great as if you had 10 commands.

4063. And I fancy another objection that will have occurred to you is, that there might be a variety of treatment in decision in the local War Offices ?—Quite so, in the rulings that might be given when a question as to the interpretation of the regulations arose. In fact the important ones would necessarily have to be referred to Headquarters.

4064. Is it not an objection to all plans of decentralisation, that you lose uniformity ?—Yes it is, and therefore the onus lies upon those who propose the decentralisation to show that there are advantages to be derived from such decentralisation.

4065. But that objection would be met to a considerable extent, would it not, by the powers which the local audit department took from the War Office being very carefully laid down and also by the provision that the officers in Dublin should be interchangeable with the officers in London, so that the men from Dublin would bring up local knowledge here, and the Dublin Office would be refreshed by men familiar with the traditions of the Central Office ?—Well, of course, there is a great deal to be learned by men going about and obtaining local knowledge with regard to all administration. The man who has local knowledge is certainly a better man than the man who has none, and the local knowledge which we have generally obtained by means of inspection through our inspectors we have found always of the greatest possible value; but I think there would be a difficulty in making a very interchangeable staff. I do not know whether we should find it easy to get men to enter our Service as Civil Servants, if they were liable to be moved about to any great extent in that way.

4066. There is no difficulty in finding recruits for the Civil Service now, is there; there are a great many candidates for the Civil Service ?—A good many men come, but the War Office is not a very favourite office now; its scales are not so good.

4067. It is not so much in favour as other departments of the Civil Service, probably in the main because particularly the entering scale is not so good ?—It is so; and for that reason it is an inferior office, and the men who come out at the top in the examination, if there is any other office available, prefer to take that to taking the War Office; but if you further add to that, that they are liable to be what I might term bucketed about from one station to another, unless you pay them very much more, I think the probability would be that the men we should get would be still lower down on the list than those we get now.

4068. Assuming for a moment that the scale of pay was made the same for the War Office as the scale which exists at the Colonial Office, the Home Office and elsewhere, do you think there would be any difficulty in getting a plentiful supply of competent recruits, even if they were liable to be bucketed about ?—I think the men would generally prefer to be located in London and serve at the War Office. Therefore, if there was a preference left, we should get those men who were still lower down on the list.

4069. But you would get competent men ?—Well, we get good men; men who distinguish themselves at the University, not all very strong men, but we find that those men who take the best positions are generally very much superior to our men; although their University Honours are good decidedly, still the men who come out at the top are better than the men who come out 20 places or 30 places lower down the list. But I think that pay with the class of men who enter the

Service is a very considerable attraction. If you gave them local pay, and gave them another 100*l.* a year for going to Dublin or Aldershot, or something of that kind, that probably would overcome some of the difficulties.

4070. (*Mr. Gibb.*) You think that all people have an irresistible preference for London over the Provinces?—I think they have, especially men who have been trained at the Universities.

4071. (*Sir George Clarke.*) Would not living be cheaper in Dublin than in London?—We have not found that any great attraction. I know Dublin very well, and all I can say is that, having the option between the two, I know where I should elect to live.

4072. (*Chairman.*) But I think I gathered from you just now that you felt *ceteris paribus* it would be desirable for the clerks here to have local experience and local knowledge?—I think local knowledge is a great advantage, but I think sufficient local knowledge is obtained by the system of inspection which prevails. But, of course, supposing you had four places which would be centres, that would give local knowledge as regards the particular place where the audit office was located, but it would not give such local knowledge as is obtained by inspection of all the places in a district.

4073. No, but besides giving what is strictly called local knowledge, it would be a knowledge which is developed by contact with troops at these centres, and they would learn exactly where the difficulties lay?—I do not think such knowledge would help the auditors much in dealing with the expenditure.

4074. And might there not be some advantage in such a proposal in the greater facility with which these local audit detachments might, if required, be moved abroad in case of operations?—I have always thought that for foreign service and for war service more particularly, such audit as we now have by means of the Paymasters as regards the mass of the expenditure, that is to say, the payment of the men, provides, so far as you need provide, for a local examination. Take this big war that is now going on; the payment of that great mass of troops, something like a quarter of a million, is a most difficult thing to deal with in detail. I remember the experience of the Crimean War. That which hung fire more than anything else was settling what was due to the men, and getting together their accounts, and so forth. I think that is done very well indeed by means of the system which we have now of the Paymasters checking the Company Accounts. As regards the great mass of the expenditure of other kinds, the whole of it has been paid for here at the War Office. The whole of the stores have been purchased and paid for here. The horses that have been purchased have been practically paid for here.

4075. But take the case of small contracts?—But we have been able to obtain very little in South Africa. Nearly everything has been imported. We are now commandeering some horses and so on, which perhaps would have been better done a long time ago.

4076. Has there not been a proposal mooted during the present war that audit offices should be sent out from the War Office to South Africa?—Yes. We had a request by the Chief Paymaster out there, that someone should be sent out in order, as I understood it practically, to get rid of the arrears which had arisen in the accounts, owing to the tremendous pressure. That was work which we looked to him to do himself, and it was not a matter of audit, but only a matter of the excessive amount of work which had been thrown upon him.

4077. It was not a matter of audit, you say?—Not from the War Office point of view. It was that work which was thrown upon him, practically, getting the accounts of the men together, and seeing that the company pay lists were brought in properly and examined; but he found that he was overwhelmed with it; his staff was not big enough to do the work which practically had fallen to him to do, and he cried out; but his remedy was to establish a local audit, whereas really what was wanted was a larger staff and a trained staff, which could not be obtained, to enable him to cope with the enormous amount of work that was thrown upon him.

4078. (*Mr. Gibb.*) It really wanted the assistance of an experienced staff?—Yes, an enlarged staff, just in the same way as here we have been obliged to

extemporise everywhere to increase our staff, but we could only increase it at the bottom; we have got, I suppose, 150 additional clerks in this office, all come out of the street, and we have been obliged to train and educate them to do the work which had to be done here.

4079. (*Chairman.*) But I suppose, generally speaking, the greater the distance in time that separates the audit from the actual expenditure the less valuable the audit is?—I think the audit should be as rapid as you can possibly make it always. I think the audit is strengthened very much by its coming quickly on the top of the transactions.

4080. Therefore, if you had a local audit in South Africa, it would be valuable in that particular; that is to say, it would save time?—As regards the expenditure which is most difficult to cope with, which I have mentioned, the detail pay of the men, we have arranged that the audit shall be local, so far as it can possibly be made so. Practically, we accept the Paymasters' audit subject to a test, but under the circumstances it is a very meagre test. But as regards the other payments, I do not know that the short delay of sending home the accounts here really is of much importance; I think that providing a special audit out there would be a very difficult thing to do under the circumstances.

4081. Under the present circumstances, but if you had a local audit which had been accustomed to superintend, and to maintain an independent existence, it could be much more easily moved out to South Africa?—Of course, it would have to be replaced where it had been serving.

4082. Precisely?—But, assuming a local audit should be provided for, it could be just as easily provided for by detaching a batch of men from the War Office. But, of course, this expansion to meet these extraordinary circumstances is an extremely difficult thing. We here at the War Office (just as that department would be supposing you proposed to move it) have been subjected to a tremendous strain. Notwithstanding all the troops that have gone out of the country, we have not been able to spare a man; a good deal of inspection work and so forth has had to be given up in order to cope with the enormous increase of work arising from the mobilisation of the whole of the forces of the country. Supposing an office was organised in Dublin, and we proposed to send it all out, I expect it would have to be supplemented; but again that Dublin audit would have to be replaced or provided for supposing it was moved away.

4083. A suggestion has been made that if local audit branches were established they might take over all the audit work, and that the Paymasters might be reduced to the position of mere cashiers. What is your view as to that?—If a local audit was established in that way, certainly I think they should take over the whole of the work, including that which is done by the Paymaster in the examination of the company accounts. I might perhaps historically explain how this company account business has come about. In former times the pay lists that came in to us were six-monthly accounts; that is, the regimental pay lists. The pay lists represented the whole of the pay of the regiment for six months, and that was compiled by the Paymaster.

4084. (*Mr. Gibb.*) Six months in advance?—No, six months in arrear. That was compiled by the Paymaster from the company accounts; he examined these company accounts, and in his office did make up what was called a consolidated pay list for the whole regiment, which was a sort of muster roll as well as an account of the pay for the whole six months. That of course took a long time to prepare. We seldom received the account in less than a couple of months, say six weeks to a couple of months, after the date of the account, and of course for the earlier payments it was considerably in arrear of the actual transaction, and it did not work satisfactorily, but it did admit of, comparatively speaking, rapid examination here, and the whole of the audit of those accounts was done in this office. Inquiry was made into this, and it was pointed out that practically the pay list was a concocted account, whereas the real account was the company pay list, which was rendered monthly by the Captains of companies to the Paymaster, who, after examining them, introduced them into his account; and it was thought very desirable that the original account should be the account which should be examined; also that it secured a more rapid audit of the actual charges to

Sir R. H.
Knox, K.C.B.

6 Feb. 1901.

Sir R. H.
Knox, K.C.B.

6 Feb. 1901.

have the account rendered monthly instead of half-yearly. This, however, of course, meant throwing upon the War Office an enormously increased amount of work. The names were repeated, of course, in each of these monthly pay lists instead of being inserted only once in the six-monthly account, and all the names of these men had to be checked forward. Then it had to be considered how this increased labour was to be dealt with, and after consultation with the Treasury, it was decided that inasmuch as the Paymaster was absolutely independent of the Captain of the company, that examination which he had always given to this monthly pay list before, with a view to consolidating it into the account which he rendered, should be taken as the audit, subject only to our test of a certain proportion of these monthly accounts. This was held to be a sufficient security that the Paymaster and his staff were continuing to examine the company pay lists in the same way as they had examined them before. In that way the work of the War Office continued practically constant in quantity, so that there was no increase to the staff of the War Office in order to cope with this much increased mass of accounts.

4085. (*Sir Charles Welby.*) Twice a year?—From twice a year to 12 times a year.

4086. Now it is spread over?—Yes; and we found the system work very satisfactorily. It is complicated now, because there has been introduced into it an elaborate system of compensation for clothing, which comes into the same accounts, and which could not possibly have been worked in with the six-monthly system I think, but it has increased the labour of the examination very considerably.

4087. (*Chairman.*) But as regards the Paymasters would it not be your general opinion that, on the whole, military men would deal better with soldiers than civilians; that if your Paymaster were a pure civilian there would be much more friction and difficulty than there is now, when he is a military man?—I did not know it was proposed that the Paymasters should be civilians.

4088. I was asking you as a general question whether that is one reason for having your Paymasters constituted as they are, that soldiers deal better with soldiers?—My opinion very strongly is that everybody who is attached to a movable army and serves with the Army and works with the Army should be a soldier; and should be so regarded, one man just as much a soldier as any other man; that the functions, however different they may be, are all equally military, and I think that all the men should be regarded as soldiers.

4089. (*Mr. Gubb.*) When you say "regarded as soldiers" they need not necessarily have had a military training, but you mean that whilst with the army they should be regarded as soldiers although having had a civilian training?—Yes.

4090. (*Sir Charles Welby.*) Recognised as a military body with military rank, you mean do you not?—Yes, that is what I mean. I do not see any objection to their having a military training, not a high military training, but at all events some military training—taught how to shoot and move about in fours. It appears to me that is all the rank and file need know.

4091. The Paymasters used to be practically a civilian body under the Financial Secretary, up to quite a few years ago, did they not?—No, they were generally military men; sometimes retired men were appointed, a certain number from the Army, but there was an occasional job in the way of a civilian.

4092. But have they not been constituted to a much greater degree a military body in the last few years?—No, the regimental Paymaster was like the doctor and the Quartermaster of the regiment in former times; they were all part of the regiment, and they were almost all military men. In some cases they used to go on half pay to get appointed as Paymaster.

4093. Who did they report to at the War Office?—They reported to the Finance Branch.

4094. They were not under the military department at the War Office?—No.

4095. Therefore in that sense they were not military appointments as they are now?—Well they reported to the War Office, and questions of their appointment and status and so on were dealt with in the Finance Branch.

4096. They were dependent upon the Finance Branch for their appointments and promotions?—Yes, their promotions used to be made in the Finance Branch according to their merits as paymasters and accountants.

4097. Therefore they were in a position of greater independence as regards the military authorities with whom they were in contact?—No; the Regimental Paymaster was under the Commanding Officer of the Regiment and the Commanding Officer had to sign his accounts and go through them. Practically the Paymaster was a servant of the Commanding Officer of the Regiment.

4098. Then he served two masters practically?—The War Office, of course, is above everybody. I do not think that it could be said that he served two masters.

4099. But my point is this: I suppose you would admit that the control that is really vital and effective is the control of the man who has power over your future, who has it in his power to say you are fit for promotion, or unfit for promotion, you are fit to retain the position or unfit to retain the position. That, under the old system, as I understand, rested with the Finance Branch, and in that sense the Paymasters were in a certain degree independent of the Military authorities, whereas now they are dependent for their position and their promotion and their future prospects upon reports made practically by the General Officer Commanding under whose command they are serving?—There were reports just in the same way, I think, on the Paymasters from the General Officers and Commanding Officers.

4100. But the Paymaster could appeal from the decision of his military superior to the Finance Branch who were really in the last resort his masters—his official fathers?—He could always say, "I hold this to be contrary to the regulation, and I think it wants a decision from Headquarters," and that decision was obtained as a matter of course.

(*The Secretary.*) He has that power now; that power is unaltered.

4101. (*Chairman.*) Would you see any advantage in placing the Paymasters under the Accountant-General instead of under the Quartermaster-General?—No, none whatever. I think the advantage is all the other way. They are military men, and they are performing a military function. In their localities they are the Financial Officers of the General, and they are soldiers, and should be regarded as soldiers.

4102. And as regards their promotion, I suppose the Accountant-General's Branch has really quite a sufficient voice. They are consulted?—They are consulted. Reference is made with regard to any important promotions, certainly to the higher positions. When it is suggested that a certain promotion should be given to a certain man they are asked their view upon it; they are given an opportunity of expressing their opinion on the matter. The Accounts Branch are always consulted.

4103. And that opinion would have very considerable weight?—Certainly; and if there was a difference of opinion it would go to the Secretary of State for decision.

4104. Are there many cases that go to the Secretary of State for decision, or do they generally come to an agreement?—They generally come to an agreement, but yet for the highest ranks it comes up either to me or to the Secretary of State.

4105. In your opinion, have the Paymasters shown a tendency of late years to discharge their duties more smoothly and more efficiently than they did. I suppose when they were first instituted naturally they took some time to learn their work?—The system that has been established as the Pay Department has been an enormous improvement on the old Pay Department. It is a hierarchy now. Men admitted in a junior position go through a probation. They are taught, and they have to respond to the test which is imposed upon them; they then act in a junior position in offices, and then subsequently rise up to higher and more important charges. The old system was that anybody was put into the position whether he knew anything at all about it or not, he never had to be properly qualified; very often they relied entirely on their Paymaster Sergeant, and gave him some extra pay to do the whole of the work, and did very little of it themselves. It was as bad a system as could be,

the old regimental system, but it is immensely improved since then, and a very large number of Paymasters are very excellent Paymasters, and take an immense interest in their work, and do it very well.

4106. The limit of age at which a man can be made Paymaster now, I understand, is 35. Does that strike you as rather high? Would there be an advantage, in your opinion, in getting them in younger, provided always that they had a certain amount of military experience?—I think a largish number of the men who are appointed now are men of much shorter service and younger age than that, though occasionally a man finds that he is not likely to do much good in going on in the more combant part of the work, and casts his eyes upon the Pay Department as a quieter billet, which would suit him better; and some candidates come in in that way, though I cannot say I have recently very closely watched the appointments to the Service. But the original idea, in forming the Pay Department, was to provide for older men who had had a fairly long service, and who would, under the rules then existing, be soon, probably, compelled to retire; it was thought an economical arrangement to provide for work of this kind, which was more or less sedentary by appointing men of that class, who had experience as company officers.

4107. How far was it the idea to provide for the work or to provide for the men?—I think it was thought that men who had had experience as Captains of companies, who were reported upon as good men, would make very good Paymasters, and that if you took them at a certain age, such as 35 or 40, it would save the expense of making a new man by taking a man who was already made, and who would be due very soon for retirement.

4108. (*Colonel Miles.* And they did in that way get some very good men?—Yes, they did get some very good men.

4109. (*Sir Charles Welby.*) Is there much competition for appointments in the Army Pay Department, do you know?—They have a number of men on the lists, I think.

(*The Secretary.*) They have a long waiting list; in fact, for the last few years they have had a rush of candidates; they have men waiting to come in to the department before they have completed the four years' requisite service.

4110. (*Chairman.*) Then are you satisfied with regard to the limit of age, or would you like to see it lowered?—I cannot think that it is a very satisfactory thing to have men jumbled together in that way, performing the same duties, who vary so much in age. I do not think it can be good to have some men of 25, and other men verging on 40, as new men in a department. I think it should be much more either all one way or the other.

4111. Generally speaking, the position of the Paymaster in being an officer who audits accounts, through whom money is issued, and who, in some cases, pays bills, strikes people who are new to it as an anomalous one. The general theory is that an auditor should have absolutely nothing to do with money which should pass through him in any way. I suppose that point has been considered over and over again at the War Office?—Yes, I think it has, but I think my explanation just now of the old system of the pay list, and the Company Account explains how we have drifted, I may say, to this present arrangement. The payments to the men, the account of which is contained in the Company Account, are absolutely made by the Captains of the companies, assisted by the companies' staff. That account is rendered monthly by these cashiers to the Paymaster, the Paymaster being the man who makes the imprest to the Captain of a company, and who then sends in the company pay list as his voucher to relieve him of the amount of expenditure that is there recorded. The Paymaster is charged with the duty of examining every bill which comes to him for payment, and he examines that bill to see that it is all right, subject to the test that we make of one-eighth, I think it is, of the work, that is to say, one company account out of eight company accounts; we consider that that examination is sufficient and satisfactory. Here I might explain that when I say one-eighth, that is our general rule; it may be that some accounts for a certain month might not be touched at all, because if there is anything which appears irregular or the

accounts are not fairly well rendered, the whole of those are examined; but what we undertake to do is to examine one-eighth of that class of account. We take the eighth regimentally as much as possible, but sometimes one account might not be examined at all in one particular month, but the whole of another account might be; so that it is absolutely uncertain what examination we apply to the accounts when they come up here.

4112. Then whatever theoretical objections there are to a Paymaster discharging these conflicting and apparently irreconcilable duties, in practice the system has been found to work well?—Yes, we find it has worked very satisfactorily indeed.

4113. And you are quite able to accept the Paymaster's audit of the company lists?—We find that our test audit, coming after them, has that moral weight which an audit should have (and the whole purpose of which is that moral weight) and does secure the rendering of those accounts in a very accurate and satisfactory manner as a rule.

4114. As regards the audit at the War Office, I think at one time you were inclined to hold the opinion that the War Office audit might be transferred to the Comptroller and Auditor-General?—I have expressed that view before, I think, some Parliamentary Committees.

4115. But I think you modified it subsequently, did you not?—Well, it was so resisted by the Treasury; they were quite horrified at the notion that there should not be a strong departmental audit, that I really have not given it a thought since. But I am a most strong believer in the necessity for having an audit absolutely independent.

4116. That is rather another point, is it not?—They thought that a departmental examination was sufficient, subject, of course, to the control of the examination of the Comptroller and Auditor-General. It is that examination which, practically, secures the independence of all the audit which takes place. The Comptroller and Auditor-General is the most independent man in the whole Kingdom; he has the run of the whole of the accounts; he can call for anything, and we, the departmental men here who examine the accounts, know that that audit is coming after our audit; and that fact secures an examination in the Department equal in character to the examination of the Comptroller and Auditor-General; just as, taking it one step further down, the examination of the same kind here, the departmental audit and test of the Paymaster's examination of the Company accounts, secures the same character in that. I do not say it is so absolutely good as an entirely independent audit, but there is an advantage in having the departmental character as well. But if there is to be a choice between the departmental character and the independence, the independence is paramount according to my view.

4117. (*Mr. Gibb.*) In that answer are you not using the word "audit" in two different senses. The audit of the Comptroller and Auditor-General is an audit in the ordinary sense of the term; the audit at the War Office is, as I gather, an examination as well as an audit?—No, the audit of the Comptroller and Auditor-General is equally an examination as well as an audit.

4118. But, supposing a question arose on a particular item, whether that item ought to have been expended, does the Comptroller and Auditor-General in his audit go into a question of that sort, or does he apply himself only to the fact whether it has been expended?—No, his audit is an absolute audit of authority over and above the Secretary of State as the interpreter of the regulations. If an expenditure is incurred which the Comptroller and Auditor-General thinks is not covered by the regulations, he interprets it, and queries it, and that is discussed before the Public Accounts Committee of the House of Commons; in fact, almost all the queries that are raised by him are queries of that kind. That is what I call an audit of authority. They compel us to limit our expenditure by the regulations which are laid down, and that is the whole theory. Where regulations involve expense they are all supposed not to be sanctioned by the Secretary of State only, but by the Treasury, and the Treasury empowers the Comptroller and Auditor-General to see that his examination takes care that the Secretary of State does not exceed his powers by acting in excess of those regulations which they have sanctioned as the limit of his expenditure.

Sir R. H.
Knox, K.C.B.

6 Feb. 1901.

4119. In any matter covered by the regulations?—Yes.

4120. (*Chairman.*) Speaking generally, the theory is, is it not, that the Secretary of State for War or the head of any other spending department must satisfy himself through his own machinery of audit and account, that he is discharging his responsibility of expending the moneys entrusted to him by Parliament to be spent for certain purposes, that he must see that they are being spent for those purposes, quite independently of what may be done by this outside audit, which is only responsible to Parliament?—That is the view which is held, I think, generally, and by the Treasury particularly. They think that a departmental audit is absolutely necessary, and that the Secretary of State, who is responsible for all this expenditure, should be watching it in such a way as to really be discharging this function of responsibility, and so that he sees that his subordinate people are not exceeding the powers that have been granted to them.

4121. To go back to the question of decentralising the War Office audit by the suggestion of moving local detachments to Dublin and such places, would it be your view that the Accountant-General at the War Office would be rendered less efficient for the purpose of making financial criticism on the bearings of any new proposals by seeing less of the practical work done under him?—I think it would lessen his knowledge and experience of the working of the regulations. I think that in dealing with the proposals that come before him where any expense is involved, to consider, it is of the greatest possible advantage to have within reach those who are practically interpreting these regulations every minute of the day by passing the expenditure governed by them.

4122. But he would have to have, at any rate, a small staff to help him to deal with difficult questions which were referred to him by the local audit, and some of the expenditure would always have to be audited up here, I mean expenditure of other kinds, not the expenditure incurred in Ireland, but expenditure of a large class?—With regard to that class of expenditure which is governed by regulations, which are our machinery for decentralising the whole of the work of the administration of the army, the working of those regulations can really only be ascertained by the examination of the accounts, which shows their working and brings to light the difficulties that may arise from time to time, and if all the questions that arise are to be settled locally, or the great mass of them—

4123. The great mass, I suppose, would be settled locally, but any question that arose outside the authority which had been delegated to the local department, or any question of great difficulty, would be referred here. That would keep the Accountant-General in touch with the actual working of the regulations, would it not?—He would not, I think, be able to deal with the thing so intelligently as he would if he had the actual accounts here to deal with, and saw not only the exceptional case which arose, but the ordinary working of the regulations where no exception was taken. You do see that in dealing with the large number of charges included in the account.

4124. But he himself would most probably be a man who had passed through the mill, and been at one of these local centres. He would be familiar with it, and have the feeling of the thing at his fingers' ends?—Well, if our affairs went on the same for, I was going to say, 20 years; but even for two years, his previous experience might be of some use; but our changes are so frequent and so numerous that I am afraid previous experience is a thing that you must try and get out of your head almost, if you want to go along comfortably. I may say that it is of extraordinary value when a regulation has been issued and threshed out here (in which, of course, everything cannot have been foreseen) to have the experience of the account before you to see how that regulation is working. It is of very great value.

4125. Such a thing, for instance, as the regulations with regard to the soldier who is over 19—messing allowance?—Yes, all that kind of thing.

4126. (*Mr. Gibb.*) In the Reference to this Committee we are asked to advise "whether the detailed financial audit, as conducted in the War Office, is required by the public interest." I gather from the evidence that you have given that you are practically of opinion

that the existing method of auditing the accounts is required in the public interest, and that the mode of conducting it does not admit of any improvement?—It is going a long way to say that a thing does not admit of improvement; but I think that the examination that is given is absolutely necessary in the public interest. I think that the way in which it works shows that it is efficient for its purpose; that things that go wrong are comparatively few; that it gives ample and very satisfactory experience of the working of those regulations to the people who are administering the expenditure; and I, myself, at the present time, do not see any way of bettering it.

4127. Your experience of its working has not led you to see any defects that you think could be removed, or any features which should be improved?—No. I confess that I do not, at the present time, see it. We have been gradually evolving the system which we now have, and I think that the system works better than any we have had before, and I think it is extremely satisfactory.

4128. Of course you acquiesce in the view that the Paymaster, in consequence of being partly an auditor and partly a cashier, is in an exceptional position, and that an audit by him is not a kind of audit that would be accepted in most commercial concerns?—Yes, I so understand it, although I think that it must be held that even the cashier who makes a payment, when he is charged with the duty and responsibility of seeing what he is paying is regular, in doing so, and protecting himself, is applying an audit; and it is in that sense that the local Paymasters who make these payments are auditors and examine these bills, that come to them for payment. If a man has a large bill to pay he is bound to see that it conforms with certain rules and regulations, and in doing that he practically applies a local examination or audit before he makes the payment; and we have held that the examination of the company accounts is very much of that character.

4129. That comes substantially to this, does it not, in his capacity of auditor, trust him: in his capacity of cashier audit him, and the Paymaster is not to be distrusted in one capacity because he also fulfils the duty of the other office?—I do not think we trust him, as it were, implicitly in either capacity.

4130. But still it is a very exceptional thing, is it not, that a man should be placed in the position of being at the same time an auditor and a cashier?—I think that we regard him really as a cashier, but in discharging that duty as cashier we make him responsible that every bill that goes to him for payment is, within certain limits, regular. I cannot think that that is going beyond what is required of a cashier. A man who pays my cheque over the counter is bound to see that my name, or something very like my name, is attached to it, and that it is in usual form, and properly dated, and has a mark on the back of it if it is payable to order, and so forth. All that is included in the cashier's duty, and what we expect a Paymaster to do is to examine in the same way very much. It may be going a little bit too far in the case of these company pay lists, but we say, "We look to you to perform certain functions with regard to that, and we do not trust you implicitly, but we go over your work and see that you are doing it properly."

4131. But if the cashier duties of a Paymaster were removed, you could trust him implicitly as auditor, could you not, and thereby diminish the double work of carrying out a detailed audit at the War Office?—We certainly should have here what may be termed administrative audit.

4132. A test audit?—A test audit, but an administrative audit; and, of course, we have outside it, the audit of the Comptroller-General. That local audit, I do not think, could be entirely relied upon. As a matter of practice, however, on emergencies, you are obliged to accept an examination of that kind, but, as a matter of principle, I think you must have your administrative audit and your outside completely independent audit.

4133. You point to the War Office audit as very exceptional, inasmuch, as it consists, not only of the ordinary audit, but an examination to see whether the payments are made in accordance with authority?—Yes.

4134. And you attach very great importance to uniformity of interpretation?—Certainly, the greatest importance.

4135. What proportion of the expenditure passing through the Paymaster's examination would be dependent on regulation, and what proportion outside regulation, such as expenditure under contracts, and so on?—I have not, certainly recently, had any figures before me. The great mass of the expenditure is under regulations, it is only the contract payments that are not under regulations, and the mass of those are paid up here.

4136. The mass under regulation means, does it, that the bulk of the expenditure would be on the pay of the troops?—The pay and allowances of the troops.

4137. In regard to that part of the expenditure, you practically do now rely, do you not, on the Paymaster's audit?—Subject to our test examination of one-eighth, we do rely on it.

4138. It has been suggested to the Committee that it would be advantageous to confine the Paymaster to what may be called cashier duties, and to establish a local branch of the Audit Office at various centres. As I understand, you are against that suggestion?—Yes, I am; I think that the present system is a better system. I do not say that they could not be locally examined, because they could, but, I think, that the present system is a much better system.

4139. Look at the suggestion from an alternative point of view. Supposing the Paymaster's duties were confined to those of a cashier, and the audit duties were centralised at the War Office instead of being conducted, as now, partly by the Paymaster, do you think that suggestion would be an improvement?—I think it would be much better than the other one, but, of course, there is a disinclination to largely increase the establishment of the War Office, which, certainly, would have to be increased if an examination similar to that which is now made locally, were made up here. I think that the present method of distributing the labour works so satisfactorily, that such an improvement as that is not necessary.

4140. Then take a third mode of dealing with the matter; suppose the payments of cash were provided through local banks without passing through the Paymaster, and the Paymaster's duties limited to those of audit, do you think that would be an improvement?—I do not know that I quite understand the arrangement.

4141. At present the Committee understand that the regimental officers get the pay for their troops through the Paymaster?—Yes.

4142. And that the Paymaster also makes direct payments under contracts, and so forth, and thus occupies the double position of cashier and auditor?—He generally makes the advances to the company officers by means of cheques upon the bank, and, of course, then debits them with those advances, keeping a separate ledger account with each company officer.

4143. But if the pay lists were provided for either direct from the War Office or by one of two cashiers in districts, the Paymaster would then have never handled cash, and would be in a position, would he not, in which he could be entirely trusted as auditor?—But how would the cash get to the company officers, and by whom would it be regulated?

4144. The company officer would make a demand for the cash required for a particular week for the payment of the troops?—Upon whom?

4145. He now makes it by demand upon the Paymaster?—Yes.

4146. He might, according to the suggestion made, make it either directly on the War Office or on local cashiers?—Which would be banks?

4147. Which might be banks, or who might be officers independent of the Paymaster, but whose duties as cashiers would be of an exceedingly simple character, because they would merely consist of issuing a cheque to the company officer in return for the demand he made; and then the pay lists on which that cheque was expended would go to the Paymasters and be thoroughly audited by them?—But who would keep the ledger account of the captain of the company?

4148. As regards cash paid?—Yes.

4149. The cashier or the War Office?—Then, when the account was audited, that account would go to the cashier as a complete document, stating the amount with which the company officer would be credited?

4150. No, the cashier would obtain the receipt of the company officer for the amount, that is to say, the cashier or the bank which issues the money?—Then there must be some account kept of what is entrusted to a company officer in order to debit him.

4151. A detailed pay list, showing the detailed expenditure of the amount received from the cashier, would go to the Paymaster and be fully audited by him?—But I do not quite see who is to keep the cash account, as it were, with the company officer. The company officer is sent so much money by this cashier or bank, say, 100*l.* or 200*l.*

4152. According to the suggestion made, I think it would be immaterial whether the cash account were kept by the bank or by a public officer occupying the position of a cashier for a district; we will say a cashier allocated in Dublin, through whom cash for distribution to all the company officers throughout Ireland would be made?—But then, when the company officer was sent so much money, someone would have to keep an account to see how much should be debited against him, and he would have to be relieved of that charge by means of some voucher, or some account rendered to him. Who would keep that account?

4153. The account rendered by the company officer?—No, the account with the captain of the company. Who would return his balance? He is entrusted with 100*l.*, and he would send in an account showing he had spent 95*l.* Who would be keeping that account to show he had a balance of 5*l.*, and see that he produced that 5*l.* if necessary?

4154. The Paymaster, because he would have the pay list, which would be the detailed voucher for the expenditure, and he would have the cashier's record of the amount paid to the company officer?—Then who would have to keep the account? The cashier would have to report to him what money he had issued to the captain of the company, and the Paymaster would have to render an account as against each one of the company officers.

4155. The Paymaster, as I follow the suggestion, would be the accountant and auditor, and the cashier would simply be the person who issued the cash; and, therefore, the cash would never in any form pass through the hands of the Paymaster?—Then who would render the account to the War Office?

4156. The War Office would ultimately get the detailed pay lists, having been audited by the Paymaster, and which would, therefore, be subject to such a test audit as the War Office thought fit to adopt?—I think that is something very much what was suggested here by my colleagues on the Committee of 1896, that there should be a division of functions in the Pay Department, and a certain number of them should be set aside as cashiers, and that a certain number of them should be looked on as auditors, and that is the way in which the work is really done in the Pay Department now. The men who make the cash payments are not the men who examine the accounts. They are divided, but they are under one chief, and the chief is the man who is held responsible, and who renders the account to us.

4157. And it is obvious, is it not, that under the present system there is the objection of the Paymaster, himself an accountant, being the person through whom the cash passes?—Yes, that is so.

4158. And if that objection could be got rid of by the expedient of having a few cashiers independent of the Paymaster, does it not strike you that that would be a good thing to do?—I am not so sure whether it would be a good thing to do.

4159. Perhaps you would like time to consider that suggestion?—In answer almost, I think, to the first question that was put to me, I said I had no objection whatever to the experiment being tried at any one of our stations to see how it would work, and I still have no objection to the experiment being tried; but I am not quite so sure it would be satisfactory.

4160. Do you see any objection to it? You see the advantage of it in clearing, as it were, the position of the Paymaster by making him an officer on whom the War Office can more completely rely as auditor. Do you see, on the other hand, any objection to it?—I should like to see the experiment tried before I give any distinct opinion about it; there would, of course, have to

Sir R. H.
Knox, K.C.B.

Sir R. H.
Knox, K.C.B.

6 Feb. 1901.

be constant references between the cashier and the Paymaster.

4161. It would have, would it not, this further advantage, that the Paymaster, being constantly engaged in the complete audit of all the accounts, would get knowledge and experience which would enable them in time of war to carry out a more effective audit than under the present system?—War expenditure varies very much from the peace expenditure.

4162. You would probably agree that it is desirable to have a system which lends itself to rapid expansion and useful application in time of war?—Certainly.

4163. And by this system of making the Paymasters practically responsible, subject to test, for complete local audit, and relieving them of purely cashier duties, you do give a very valuable financial training to a number of officers, which training would be useful in peace time and in war time?—I do not think they would get more than they do now. I think it would be precisely the same work; they would perform the same functions, but there would be a division of the present department into two departments, a Cashier's department and a Paymaster's or examining department.

4164. But you would place the Paymasters in such a position that the War Office might, at any time if so disposed, accept their audit as final and complete, would you not?—I do not think their audit should be finally accepted under any circumstances, but should be subject to test.

4165. I gather that that is your view, but if the War Office at any time did wish to get rid of this detailed financial audit, they could do so safely as regards financial audit, apart from uniformity of interpretation, by having the Paymaster, as proposed, relieved of the cashier's duties and devoted to the complete audit of local accounts?—I do not think they would gain, under that system, more experience than they gain now.

4166. It would be an audit which would be absolutely trustworthy, would it not?—So far as it went it would be satisfactory; but, being conducted with incomplete knowledge, there would be great liability to erroneous interpretation, which, in war time, I admit is not of very great importance.

4167. (Sir Charles Welby.) Do not you think, perhaps, under these circumstances a central audit, which consisted of occasional surprise visits, might possibly suffice?—No, I do not think so; I think the accounts must be rendered here, and here we ought to see that there are vouchers for the expenditure, and that is one of the things which the Comptroller and Auditor-General is bound to check.

4168. (Mr. Gibb.) Under that system, where would you stop?—We stop at the Comptroller and Auditor-General, because he is an absolutely independent officer. I am prepared to admit, however, that an audit under a system which separated the examination from the payment would be more complete, and could be admitted as more complete in that way than under the present system.

4169. (Sir Charles Welby.) And, *pro tanto*, might lead to a relaxation of a further audit here?—It would diminish the extent to which it would be necessary to audit the expenditure here.

4170. But exactly to what extent it would enable that to be relaxed you would not like to say at present?—No, I should not.

4171. (Mr. Beckett.) *Aprpos* of what was said just now about the experience gained by a Paymaster auditor, are not you rather of opinion that the greater responsibility placed on the Paymaster by the present system gives him a better financial training, and makes him a more expert auditor than he would be if he were never permitted to handle cash, and only audited theoretically?—As I have said, I believe that the functions in the department are divided, as has been suggested, but within the department; I am, of course, speaking with regard to the big offices, but, of course, there are a large number of stations which are outside what we call a large station office—outside Dublin, and Portsmouth, and Plymouth, and so on, where the staff is not large and the functions are not divided.

4172. The point of my question is, do not you think the present combination of his duties as cashier and auditor gives him as great a financial experience and

training as he could possibly have, if his duties as cashier were taken away from him?—Certainly.

4173. (Sir George Clarke.) May I take it that you are quite satisfied with the present test audit of one-eighth, and one-sixth in certain cases?—Yes, I am, quite.

4174. Lord Haliburton, in the memorandum he furnished, says, "It is essential to remember that the civil check which formerly existed in every command throughout the Empire was completely abolished a few years since, and that the only civil check on Army expenditure is that now at the War Office." I do not quite know to what Lord Haliburton alluded?—I think he must refer to the fact that we have adopted so largely the test examination instead of the thorough and complete examination, which we had under the six-monthly pay list system.

4175. Was that check existing in those days in every command of the Empire, as he puts it?—Yes.

4176. A separate civil check in every command?—He means, I think, that the accounts came here for an examination in the Finance Department of the War Office; I think that is what he meant.

4177. Then it is really only a question of the transference of certain audit duties to the Paymaster, which used to be formerly performed here?—No; as I have explained, they used not to be performed here; the examination of the company accounts the Paymaster always did, but he presented to us a consolidated account of the pay lists which he examined, and we accepted that consolidated account as his payments.

4178. Then I do not quite see what Lord Haliburton meant. He speaks as if some important civil check had been abolished in commands some few years since?—That is what I think he alludes to. We used formerly to examine in detail the whole of the six-monthly pay lists which used to be rendered, every item was gone through. We have substituted for that a much more bulky account—the monthly account—and we have given up the detailed examination of it to the extent that we have substituted a test audit instead of a complete examination of the company accounts.

4179. You spoke of the danger of losing uniformity if there was a decentralisation of audit, do you know whether that actually occurs in India where, I think, the audit is decentralised into four districts?—I cannot say that I do, but, of course, there is a machinery for referring questions which are regarded as of importance up to headquarters for final decision.

4180. As regards the Civil Service objecting to be knocked about from station to station, it must be the case in India, must it not, that they are liable to serve over very much larger areas, and that that does not operate as a check to the candidates for the Civil Service?—An Indian civil servant, of course, is liable to be constantly moved all over the country, but he knows what he is going in for. He may be appointed, of course, to any one of the many different departments of the Indian Civil Service. But I was comparing liability of that kind with the absence of any such liability in the other home departments of the State, and what I feared was, that that extra liability, which is certainly one of discomfort, so to speak, would tend to give the War Office men who were lowest on the list in the competitions for the Civil Service.

4181. If, in future years, larger powers generally over money were given to districts, might not the establishment of local audits, not only become more convenient, but actually strengthen the Accountant-General in dealing with the decentralised powers of generals?—In our Service, I really do not see what further financial powers of any dimensions can be given to the local generals. As regards small things, they have very full powers at the present time; but as regards larger thing which may affect expenditure and certainly the interpretation of Regulations, I do not think further powers can be entrusted to them satisfactorily.

4182. But, as a general question, do not you think the decentralisation of audit should rather follow on the decentralisation of powers?—I think that would give rise to a difference of treatment, a difference of treatment and decision in different districts which would be inadvisable.

4183. If the system of the auditing of the War Office generally had been decentralised, would not some of

the tremendous pressure which has been brought to bear on the department during the war have been mitigated?—No, I think it would not; I think what we have found is that it is more easy for us here to meet the increased amount of work, than it is to meet it in the districts. The districts would have been placed in an extraordinarily difficult position in consequence of the withdrawals of their staff in order to meet the demands of the war abroad; they have found it most difficult indeed to cope with the work they have had to do. We have found difficulties here, but I believe we can, as it were, expand in the lowest grades of the office more satisfactorily than any of the districts can.

4184. Then you do not think that in an ideally organised military system no great and excessive strain should be thrown on a War Office on the outbreak of war?—I think, when a war breaks out, everything has to be expanded, and the extent to which provision should be made for that expansion beforehand is, of course, a big question of policy. I certainly think that, where the work is centralised, it is much easier to meet an excessive strain, than where the strain affects many stations away from headquarters. This is the seat of the final authority, and I think you can get a decision here more easily as to how the difficulty should be met.

4185. Do you see any vital objection to the gradual establishment of a Military Finance Branch of the Indian type?—I cannot say that I am familiar with the type of the Indian Finance Branch. They have a Finance Branch, which is quite independent in its working, of all the rest of the Service, and resembles the department which exists here; of course we work under Parliamentary institutions, and on different ideas as regards financial control from those which are exercised in India, although they are, in broad principles, much the same. But, I think, the principle of having a Financial Control Branch which is a Civil Branch, as distinct from the Military Branch, is the proper principle.

4186. Yes, of course, it must be absolutely distinct; but you do not think any special advantage arises, do you, in having the rank and file, as it were, of the Finance Branch civilians?—I think they should be recruited in a different way from the rest of the Service—that there should be a Civil Branch and a Military Branch.

4187. (*Sir Charles Welby.*) In your experience of Paymasters, on the whole, that they are men of independence, who can be trusted to stand up against financial suggestions which they have reason to believe are improper according to regulation?—Men vary very much in character as regards those matters; some men are more easy going than others, but I think there are some men who are very strict, and who maintain a strict view, and require superior sanction for expenditure which they think is not strictly within regulation.

4188. Should you say that, as a class, they could be trusted, for instance, to stand up to a General Officer Commanding in the event, let us suppose, of his wishing to strain the spirit of the regulations with regard to expenditure?—I think, if the examination was final with them, they could not be trusted; but it depends entirely on the fact that they know their work will be overhauled by quite independent people, that gives them their independence; the Comptroller and Auditor-General gives us our independence here.

4189. (*Mr. Gibb.*) And who gives him his independence?—The House of Commons, absolutely; without the Comptroller and Auditor-General above us, I believe that our administrative and departmental audit here would be worth very little.

4190. (*Sir Charles Welby.*) To carry that a little further, there ought to be someone above him to make him do his duty, I suppose?—No, he is absolutely independent; you make him as independent as possible.

4191. (*Sir George Clarke.*) If the Paymaster were under the Financial Secretary, would not his independence, apart from pressure, of Generals of stations be established?—If they were under him, it ought to be a Civil Department and not a Military Department in any sense, and I see difficulty in working it as a Civil Department.

4192. (*Sir Charles Welby.*) You attach importance to the objection of having two sets of clerks, one a cashier

establishment and the other an audit establishment, sitting side by side, I understand?—Yes; even if they are not interchangeable, there is a disadvantage. For instance, I may refer to the Comptroller and Auditor-General's Branch here; it carries out a concurrent audit in this office, and the men sit in this office and have access to all the accounts. Their rooms adjoin our principal account room, but the Comptroller and Auditor-General takes good care to be constantly changing those men.

4193. And is that fear at the root of your doubt whether the system suggested to you, just now, by Mr. Gibb, would enable you to dispense in any material degree with the audit you now exercise up here?—It might be modified to some extent, but I do not think to such an extent as would admit of any considerable reduction in the work here.

4194. (*Sir George Clarke.*) I think you laid stress on the difficulty of getting the personnel of the decentralised branches to have knowledge enough to deal with all the subjects which would then have to come under their notice, which are now classified by subjects here; but must not the Auditor-General's people have that knowledge now, or how could they deal with things as they do?—They are, of course, men who come, from time to time, new to the work, but they are superintended by men who have had considerable experience, and are really that class of men that it would be necessary to have in each of these different districts. One of the principal officers of the Audit Department is in charge here, another at the Admiralty, and others at different public offices.

4195. So that they really specialise themselves for offices rather?—No, they are changed, as I said. The Controller and Auditor-General sees that changes are from time to time made; but these men are men who have had very large experience. It may be those who get into a position of charge are men who have worked in the audit of this particular office or the Admiralty. They are highly trained men and highly paid men too, and it would be necessary to have at least men of the same calibre in charge of the decentralised audit.

4196. Much more is really demanded of the Auditor-General's head officials than would be demanded of the heads of these local audit branches?—Their work would be very much the same.

4197. But they, of course, range over several departments of the State, and may be transferred from one to the other?—Yes.

4198. So that their range is very large indeed?—Yes, very large. They work, I have observed, in groups of offices; you will find one set of the audit men will be changed within two or three offices, and another set will be changed within another two or three offices. They do their best to destroy what I have described here as the personal equation between the auditor and the offices.

4199. (*Mr. Beckett.*) I gather, then, that it is very strongly your opinion that the present association of duties in one man as cashier and auditor is attended by no real disadvantage or danger to the public interest?—I do not think it is.

4200. And any change might be sacrificing practical efficiency to theoretical perfection?—I think so.

4201. I gathered also you said that under the present system you considered practically the Paymaster checked himself in the same way as a cashier does by the automatic balance which is applied to his book at the end of the day, and if his book balances, that is a fair check on the correctness of his account?—Quite so.

4202. I mean this, that you say the fact that the cashier has to balance his account, and is responsible for the correctness of his account, is, in fact, a sort of audit?—Quite so.

4203. Such as is applied in any business by the balancing of a cash book at the end of the day?—Yes.

4204. And you do not gather that it is of any more absolute importance to apply a detailed audit of a very severe kind to any item than it would be for an auditor at the end of a year to examine every item in the book of a cashier?—In so far as I understand, in a business of that kind there is practically a division of work necessary—say, for instance, in a bank—between the men who are at work upon the cash of the day; that division of duties operates as a check one upon the

Knox, K.C.B.

6 Feb. 1901.

other, and the balancing of those books practically is a daily audit.

4205. That is quite correct; but, of course, as regards the War Office, the system of audit must be entirely different. The object of a business audit is to strike a balance between assets and liabilities, that case, of course, does not apply to the War Office at all?—Not at all.

4206. And, practically, if you get a system which assures a fair examination of accounts, you have all you want in the public interest?—Quite so. We are spending an income here, and we look after it as expenditure, and we decentralise the rules under which it is expended as far as we possibly can. We issue rules for everything—perhaps it is overdone to some extent—but the rules are thought out by men who have experience all over the Army and they are laid down as guides to the outside people. But it is our business, inasmuch as those rules are the absolute limits of expenditure within our control, to see that those rules and regulations are complied with; and, I think, the system we have established in order to secure that is as good a one as I can conceive.

4207. As to the part of the Paymaster's duties that relates to the issue of pay, I gather you think there is practically no room for fraud or malversation of any kind without the chance of its being immediately detected?—The payments are made by the Captains of companies to their men and the system is briefly this. There are 31 days in the month, it is known what rate of pay each man is entitled to, the man every week gets an advance against that, and at the end of the month his account is balanced—he has had so much, and the balance due is paid to him. The account of all the men of the company is rendered a few days after the end of the month to the Paymaster's Office, and the Paymaster goes through it and checks the names and sees that everything is regular and renders it up here, where it is examined to the extent I have described, one-eighth, or sometimes, as I have said, the whole account is examined. It is absolutely a test or surprise examination; no one knows to what extent it has been examined; and I think that has secured, as I know, a very accurate account of all the expenditure of that character.

4208. And as far as you know there have been no cases of misappropriation of cash come under the notice of the War Office?—No, there are far less than there were under the old régime. The old six-monthly system, where the pay list was made out in the Paymaster's office, used to lend itself to fraud and the men who worked up those accounts had opportunities to cook them in a way which admitted of money sticking to their hands.

4209. And you think the addition of officers to hold the post of cashiers would increase the number of officials without increasing the efficiency of the check?—I think that probably would be the result. You would have to have independent men in that position; you would have double heads, in fact, instead of only one as now.

4210. As regards payments of local bills by Paymasters, do you think the present system is equally satisfactory?—Yes, I do. It is, of course, a good deal a question of the regulation of cash, and the rules which govern it are rules which have been practically made by the Treasury. The Treasury regulates from day to day, as it were, the amount of money which is placed at the disposal of the Secretary of State; they watch it as carefully as possible; they consolidate the whole balances of the country and hand over to the Paymaster-General the money to be spent. If we had to entrust all our Paymasters with money sufficient to meet the demands for very large bills coming in at various times for payment, we should have to establish an enormously elaborate machinery for watching the cash placed at their disposal; and the present arrangement which necessitates all the larger bills coming up here for payment by the Paymaster-General works with extreme simplicity. Of course, a night's post is all that divides us from any part of the Kingdom, and we are able, if there is any difficulty, at once to arrange with the Paymaster-General or the Treasury for any additional advances that may be required in consequence of any abnormally large claims being made upon us.

4211. As regards the smaller accounts, it seems to me it would be quite possible for a Paymaster to

arrange with some local tradesman or local contractor, in such a way that he might receive a considerable commission on the contract or the account. What means are there in existence now for detecting a fraud of that kind?—The Paymaster has nothing whatever to do with the local contract. If a local contract is made it is made entirely by the department which requires the articles, and the Paymaster simply makes a cash payment for small bills under 100*l*.

4212. And he does not order anything himself?—He does not order anything himself.

(*The Secretary.*) All he could do would be to get a tradesman to send in a bogus bill?

(*Witness.*) Yes, and that would be forgery.

4213. (*Sir Charles Welby.*) Do you think it necessary that the detailed pay list, with the list of names, the company pay accounts, should come here in bulk every month?—Yes, I think so. I think it is only in that way that we can apply what I should call a real test audit. It is not known what part of the account we are going to examine, and we must have the whole of it at our disposal in order to decide what part of it shall be examined.

4214. In regard to those pay lists, the Paymaster is an auditor and nothing else, is he not?—I could not exactly say that.

(*The Secretary.*) He supplies the cash as well for the payment of the troops.

4215. (*Sir Charles Welby.*) He is a cashier to this extent, that he issues imprests to the sub-accountant?—Yes.

4216. Would it not be enough for your purposes if he sent here vouchers for the advances he has made to the sub-accountant, and a certificate to the effect that he has examined the company accounts and that they were correct according to regulation, instead of sending a big document containing the name of every individual soldier in bulk?—No, I think we must apply a test examination.

4217. But, as I understand, it is not merely a test examination, but an examination in full?—Only an eighth of the accounts, which is the test.

4218. Mr. Wight, in his memorandum, says:—"To seven-eighths of the pay list a limited examination is applied, which practically means checking the totals into the Paymaster-General's state, and seeing that certain forms and certificates are completed." My suggestion is, could not you accept the Paymaster's certificate as an auditor that he has satisfied himself that these pay lists are correct, and so avoid having them all sent up here in bulk?—No, I think we must have the voucher to show that he can claim to take credit for the amount which is there stated.

4219. As I say, he must have a voucher for the amounts that he has advanced to the company officer, but that is a very much less thing than this detailed document giving details of how the money is expended?—Yes, but he has to take credit just as much as the company officer has to take credit for the amount which has been disbursed, and that amount might be stated at 10*l*. less or 10*l*. more, or any amount he liked to set down; you must have a voucher in support of that credit.

4220. Cannot you accept your Paymaster as a sufficient auditor in respect of these payments?—No, not if he is the cashier, certainly not, because he takes credit for the amount of the company pay list.

4221. And he produces the voucher?—But the voucher is the company pay list; that is the only evidence of payment.

4222. There might be a simple document signed by the company officer, might there not, saying "I have received 150*l*."?—That is only a debit against him. What is taken credit for as against the public expenditure is the amount shown to have been finally expended.

4223. That is the detail of the 150*l*?—But we could not pass as a final charge against the public accounts an imprest of 150*l*.; that is contrary to every principle.

4224. If you do not accept the Paymaster as your auditor, of course you could not; but my point is, why should not you—as he does not disburse the money in detail—why should not you accept his audit of it as an audit which would be satisfactory to you?—We should then have no voucher for it.

4225. Then why should not your Paymaster be your auditor for that purpose, and why should not you accept his word for it, instead of doing it all over again?—You cannot do it; if he is cashier you cannot allow him to take credit for amounts which he himself merely states that he has paid, without evidence of actual final payment.

4226. But he is only cashier in the sense of advancing sums to sub-accountants for which he gets receipts; the Captain of the company is the real cashier, and I should have thought the Paymaster's audit would have been sufficient?—He could not charge as a final charge the imprest that he has issued. In taking credit for having paid away so much money, he must produce evidence of the payment having been made for certain purposes. The company pay list takes credit for having spent so much for pay—so much for good conduct pay. If a man was an absolutely independent auditor, it would be sufficient to send up a tabulated statement, if you do not care about maintaining the test audit; but I think the test audit is absolutely necessary.

4227. (*Chairman.*) In order to maintain the test audit you must have it all up?—You must have it all up.

4228. It has been stated to the Committee that there is a good deal of work involved in connection with the officers' accounts which comes through Cox and other agents, and that the claims sent in by Army agents are very careless. It appears that the claims are sent in direct through Cox, and the account of the officer in no way passes through the company account. Would it not be possible, instead of a claim being sent in by Cox, to receive here from the company a statement of what was due to the officer, and then that that amount should be paid to Cox, so as to get rid of these inaccurate claims and the consequent disallowances?—I did not know that the claims that came through the agents were so inaccurate as that. Of course, mistakes cannot be avoided altogether, and I have heard it stated that some of the accounts are not so well rendered as when the agents received a large payment for their work, which they do not now. But the system of agency as the method of issuing pay to the officers is a system which the officers prize very much.

4229. I do not propose to interfere with the system at all, as I see it is of very great advantage to the officers, but instead of the agent sending in a wrongful claim for so much money, why could not a cheque be sent from here to the agent for the right amount of money, and placed to the officer's credit?—It would be a very elaborate arrangement to have the personal accounts of all the officers kept here.

4230. Could not they be included in the company accounts?

The witness withdrew.

(*Witness.*) No doubt the pay of officers could be issued through the company accounts, and it is open to them to draw it in that way if they like; but I think the examination of it would be more difficult than the examination now in the present form.

Sir R. H.
Knor, K.C.B.
6 Feb. 1901.

4231. (*Chairman.*) We do not propose to force an officer to accept his pay from the Paymaster, but that some device should be adopted by which his accounts could be kept with the company accounts, and then, when the list comes up here, it would be seen that so much was due to the officer, and a cheque sent to the agents for that amount?—I think it would throw a great deal of additional work on the office, and I do not see what is to be gained by it.

4232. It is a question of which would entail most work, disallowing the inaccurate claims or adopting such a suggestion?—The latter would mean overwhelmingly more work for the War Office.

4233. (*Mr. Gibb.*) If, in point of fact, the examination of the agent's accounts involves an unnecessary amount of trouble, would it not diminish the trouble if the paying authority could, in the first instance, make the payment themselves?—If the officers' names were inserted in the company pay lists, just the same as the men's, and it ceased there, and was finally audited there, it would be a simplification; it would be all charged in the company account, and be finally settled.

4234. Why should not it cease there, in the case of an officer just as well as in the case of a soldier?—You mean that the officer should receive his pay through the company account.

4235. Not necessarily, the item would be passed through the company pay list. Supposing the total came to 200l., distributed among 10 officers, for instance; that 200l. would be sent to Cox with a list of the officers to whose credit each portion of the amount was to be placed?—That would have to be done by the Paymaster who made that charge in his account, and the officers would have to trust, as it were, to that being all right, and would have no one to come down upon if anything went wrong.

4236. It would be a question of Cox examining the Paymaster's account instead of the War Office examining Cox's account, would it not? As the War Office say there are a great number of errors in Cox's account which require a great deal of examination, that trouble can be got rid of, can it not, by adopting the suggestion made?—It would throw upon the Paymasters and the company officers the duty of making out the claims of the officers, and I verily believe they would make just as many mistakes as the agents do, probably more.

FIFTEENTH DAY'S MEETING.

At the War Office.

Tuesday, 12th February 1901.

12 Feb. 1901.

PRESENT:

Mr. OLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary.*

Draft suggestions for carrying out the Audit of all Army Accounts at local centres by detached branches of the Accountant-General were discussed and agreed to.

Mr. Major was called in and discussed the proposed regulations for the Contract Branch.

SIXTEENTH DAY'S MEETING.

ELEVENTH DAY'S EVIDENCE.

At the Ordnance Factories, Woolwich Arsenal.

Wednesday, 13th February 1901.

PRESENT:

MR. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Col. E.
Bainbridge,
C.B., R.A.

13 Feb. 1901.

Colonel EDMOND BAINBRIDGE, C.B., R.A., examined.

4237. (*Chairman*.) You have been Chief Superintendent of Ordnance Factories since 1899, I believe?—Yes.

4238. And you are charged with the administration and working of the Ordnance Factories?—Yes.

4239. And you submit estimates of the expense necessary to carry out the orders that you receive and you prepare for audit in the Finance Division, and for submission to Parliament the accounts of expenditure incurred in the factories?—Yes.

4240. We want to ask you a few questions with regard to the making of contracts in the first instance. When the head of one of the factories makes a requisition for material for manufactures that requisition comes to the Stores Branch which is under you, does it not?—Yes, it practically comes to me.

4241. It comes to the branch which is under you—your Store Branch?—Yes.

4242. Who is the head of that branch?—The head of the Store Branch is Mr. Sketchley.

4243. He is a Staff Clerk, is he not?—He is a First Division clerk, what is called here a Staff Officer.

4244. Do you see those requisitions when they come into your Store Department?—They go to the Store Department, or if they are for machinery, they go to the Chief Mechanical Engineer, who draws up the specifications for them, and they are all submitted to me or my Civil Assistant for approval before they go up to the Director of Contracts. The more important cases I see myself.

4245. And they go up from you to the Director of Contracts?—Yes: that is the procedure for all requisitions from the departments, not large stores such as oil, coal, and that sort of thing; that is the ordinary maintenance for the year.

4246. I am referring particularly to materials wanted for the purposes of manufacture?—Yes, some of that we have a stock of, not for particular orders, but for what we know will be required during the year. Then comes a requisition from a department for any material that they may want for any special orders. If I have not got it in store we have to demand it.

4247. How do you get your stock in the first instance; is it an accumulation of old material?—No, that is part of our capital stock. We buy it. We buy so many thousand tons of coals a year; so many tons of copper, so many tons of spelter, which we know from previous experience the departments will want, and that we keep in our store.

4248. You buy it out of your annual vote?—Yes.

4249. You keep it in store, and deal it out as it is wanted?—Yes.

4250. Is that bought under the Director of Contracts?—That is bought under the Director of Contracts.

4251. (*Mr. Gibb*.) And you requisition for it?—Yes.

4252. That is an annual requisition?—Yes, an annual requisition without its having emanated from a department.

4253. (*Chairman*.) That annual requisition emanates from yourself?—Yes, based on our previous experience.

4254. (*Mr. Mather*.) In consultation with all the heads of departments, I suppose?—I do not know that we consult upon that particular point. I should not consult them as to how much coal I should want, because I have a general stock for all the departments.

4255. But for all metals; you buy pig-iron and all sorts of steel; the requisition for that goes out after the matter has been discussed between you and the heads of the departments?—If I were going to buy a new brand of pig-iron, say, I should consult the department concerned, as to the brand of pig-iron, but I should buy my pig-iron in bulk.

4256. You would buy a general supply year by year that you know you will want?—Yes.

4257. (*Chairman*.) Basing yourself on experience of previous years?—Yes.

4258. Then any new demand which comes from the factories during the year would also come to you, and be initialled by you and passed on to the Director of Contracts?—Yes.

4259. And the Director of Contracts effects the purchase?—The Director of Contracts puts it out to tender, and then refers those tenders to me and asks me whether I will take the lowest tender.

4260. Does he always refer the tenders to you?—No, there are a number of instances where he has not referred them to me.

4261. Is there any understanding that he should refer the tenders to you?—Yes, with regard to certain classes of tenders.

4262-3. Is it by mutual agreement then that certain tenders are not referred?—No, there is no arrangement that I am aware of, but the practice exists.

4267. (*Chairman*.) But the general rule is that he refers all tenders back to you?—He refers tenders back to me, and asks if I will take the lowest.

4268. And if you do not wish to take the lowest, what happens?—He almost compels me to take the lowest tender. I have some instances here which I have had looked up for another purpose. In the first instance, the Department puts forward the names generally of two or three firms that it knows are able to supply the article; then the Director of Contracts generally adds a number of firms to the list, of his own initiative—

4269. Let us get this quite clear. When the requisition goes up to the Director of Contracts, the requisition

goes up with a recommendation that the order should be placed among such and such firms?—Yes.

4270. To those firms he adds certain names of his own initiative?—Yes.

4271. Then the tender is put out?—Yes.

4272. Then it comes back to you?—Yes.

4273. Then, as a rule, if you prefer to take a tender other than the lowest, would the Director of Contracts agree with you?—In some cases if I can specially prove that I must have the special thing from a special man, he will do it; in other cases, instances of which I could show you, he has almost compelled me to take the lowest tender.

4274. How do you say “almost compels” you?—May I give you an instance?

4275. Yes, I should like one; there is a great difference between “almost compels” and “compels”?—Well, here is one for steel. Siemens’ round bars, where Firm A. were specially recommended. This is the memorandum: “Tenders for round steel received, and Firm A. specially recommended. After several references, I was on 17/9/97 practically forced by Director of Contracts into accepting Firm B. or C., on grounds of price.” (This is the statement of the Superintendent of the Carriage Department to me.) “On 27/10/97, I wrote that the bars supplied by Firm B. were totally unfit for axle trees, and strongly urging that the contract be cancelled and placed with Firm A. as previously recommended. The Contract Department, by forcing upon us firms who cannot supply proper material, causes great delays in manufacture, and in the long run increased expense. More than a month was lost in this case in correspondence, which ended in the order being placed with the firm which has now signally failed to execute it.” On 3/12/97, Firm B. wished to send in an annealed bar from rejected supply. I declined, the test results having proved so unsatisfactory. They then offered fresh bars. On February 14th, 1898, they forwarded 12 bars; these were tested, found unsuitable for tubular axle trees, but accepted to be used for other purposes, 22/3/98. Ultimately I received satisfactory supplies from Firm A., the firm I had recommended in the first instance, who delivered the 50 bars between 22/11/97 and 25/11/97.” That took from the 30th July 1897 to the 25th November 1897.

4276. Then you objected in the first instance to the tender being placed with the lowest tenderer?—Yes.

4277. And you finally appear to have given way or to have been overruled?—I was practically forced into it.

4278. (*Mr. Gibb.*) But why did you object to taking the lowest tender?—Because we knew that they could not do the work.

4279. Had you had previous experience of the Firm B.?—We had.

4280. (*Mr. Mather.*) Did you represent that to the Director of Contracts as your reason for not accepting their tender?—Yes.

4281. And after that nothing more was said?—After that the tender was placed with them.

4282. Without any further reference to you?—No, he passed it me with an assurance from the Firm B. that they would supply hammered bars. Then the order had to be cancelled, and ultimately the order went to Firm A.

4283. (*Sir George Clarke.*) The point is, is it not, that in all these cases the things are required for something which we have promised at a particular date, and therefore the time is all important?—Yes.

4284. (*Chairman.*) You say that you were practically compelled to take the lowest tender, and you gave that as an instance, but if you had insisted in your protest, to whom would you have appealed against the Director of Contracts, to the Director-General of Ordnance?—No, I have no appeal at all. I must be guided by the Director of Contracts. I do not think I have ever put a special case up to the Director-General of Ordnance. I generally arrange my own affairs with the Director of Contracts as best I can.

4285. But it would be open to you to bring the matter before the Director-General of Ordnance, would it not?—Yes.

4286. And if the matter were brought before the Director-General of Ordnance, and he supported your objection, the decision of the Director of Contracts would not be final?—No, but that would all mean tremendous correspondence and delay, whereas probably I want the things within a fortnight.

4287. (*Mr. Mather.*) But in such a case would not Sir George Clarke, or some equally competent person, represent you by going to the War Office and seeing the Director-General of Ordnance, who would represent it as a matter of extreme importance that the steel should be of the very highest quality?—Yes, but then you see we have such an enormous quantity of contracts in the year that if we were to do that we should always be at it. There were 2,646 contracts in 1899–1900.

4288. But such a case as that which you have just given us occurs very seldom, does it not?—I have had a good many. These cases were selected for another purpose. Here is another case about bicycle balls. In this case with regard to the balls which we have been using, anti-friction balls for gun mounting turning round, there were complaints of many breakages, therefore the Carriage Department recommended that supply be obtained from Firm D., who supplied the best balls. This tender was put to open competition, and a lot of tenders were received from Firms A., B., C., D., and E. Then the Director of Contracts says: “Have you any remarks to make before I accept Firm B.,” one of whose two offers was the lowest. On 22.12.00 I reply: “We specially require balls which can be thoroughly depended upon: and as Firm B. supply Firm A., their supplies would probably not be such as we require, nor of course would be those of Firm A. Firm C. also has not given satisfaction. Please, therefore, place the order with Firm D., upon whom we can depend.” Then the order was ultimately placed with Firm D. on 3rd January 1901, the demand being 24th November 1900.

4289. (*Chairman.*) Could you tell us roughly out of those 2,646 contracts, how many cases of this kind would arise? We do not want to tie you down to an exact figure, but could you give us a general indication of the percentage?—Such a case very often arises. There are, of course, some things which are special things, which can only be got from one man, but when the order goes out to open tender, I am always asked to accept the lowest tender, and when I have no reason for not accepting the lowest tender, I do so, but when I know from previous experience, or from the previous experience of my Superintendents, that it would not be wise to do that, then I raise objection. I cannot tell you the exact numbers without going into all the cases.

4290. Would it be 10 per cent. of the whole?—I do not know; not so many as that, I should think.

4291. (*Mr. Gibb.*) In the case that you have mentioned, was Firm U. on the list of contractors who you proposed should be invited to tender?—That is going back to the round steel case?

4292. Yes. You, as I gathered, agreed to a certain list?—No, on that occasion we especially recommended Firm A.; he was the only man we recommended, but when the Director of Contracts put out the tenders, he put them out to Firms C., B., A., and five other firms.

4293. You practically said that nobody should be asked to tender but Firm A.?—Yes, in that particular case.

4294. (*Mr. Mather.*) The fact is that you wanted Firm A.’s steel?—We wanted Firm A.’s steel.

4295. (*Sir George Clarke.*) But the reason of our pressing for Firm A. on that occasion was that we had to deliver these things at great speed. They were for field carriages which were wanted in a hurry, and therefore we could not stop to make experiments with firms that we knew could not do the work?—That is so.

4296. (*Chairman.*) You would only know of the unsatisfactoriness of these other contractors through previous experience of their work?—Through previous experience of their work, or through a knowledge of what their work was in their shops.

4297. How would you get a knowledge of what their works were in their shops?—By visiting them.

Col. E.
Bainbridge,
C.B., R.A.
13 Feb. 1901.

Col. E.
Bainbridge,
C.B., R.A.

13 Feb. 1901.

4298. Is that part of your functions?—We are allowed to do so, and we do so to a great extent.

4299. Is it laid down that you shall do so?—I am not forbidden to visit them, therefore I can, and it is part of my duty.

4300. Whom do you send to visit works for you?—If it is connected with machinery, the Chief Mechanical Engineer or one of his assistants. In other cases the head of the department, or one of his experts, would go. The Superintendent of the Gun Factory was away visiting works for some time to find out their capacity.

4301. I think we have rather derived the impression from other evidence which has been given to the Committee, that, though the departments do send occasionally to satisfy themselves as regards the capacity of the contractors, it is not part of their regular business, that they have done it more or less *sub rosa*, and that in fact objection has been taken to it, but I gather from you that it is part of your normal functions?—No, I do not say that there was a paper concerning it, but no objection was taken to my visiting works.

4302. Or to your officers visiting them?—Or to my officers. In fact it is a recognised thing, because the Director of Contracts asked me if I am visiting these works to let him know, so that he may be able to send a man with me, and I replied that I would whenever I could.

4303. (Sir George Clarke.) That means that it was only recognised as part of your rights recently?—We always did do it.

4304. (Chairman.) And nobody has objected?—Nobody knew, but I was asked to produce a paper why I was visiting certain works, and I replied because I could not be up to date unless I knew what was going on, that it was part of my business to visit works for the purpose and when this went to the Director of Contracts, he then said that he agreed, and he only asked me if I did visit these works to let him know, so that he might send somebody down too.

4305. (Mr. Beckett.) Do you find that the Director of Contracts often supplies you with the names of fresh firms?—I do not know what his list is. Supposing I send three names up, tenders may come back from six or seven more.

4306. Have such firms who have been recommended to you by the Director of Contracts subsequently turned out to be valuable people, or have contracts been placed with such firms as you have not been previously acquainted with?—I do not think so.

4307. (Sir George Clarke.) Practically we get information of all the firms who are likely to do our work?—At the beginning of the year, just when the war was breaking out, I wanted to get a lot of new firms in, and the Chief Mechanical Engineer and his assistants went round most of the works in England, and drew up a voluminous report saying what each man could do.

4308. (Mr. Beckett.) That was done from your department?—From our department.

4309. (Chairman.) But as a rule there is no co-operation between you and the Director of Contracts in making out the list of firms who supply the particular articles which the manufacturing departments may require?—No, I have my own list, and he makes additions to that list himself.

4310. But he does not communicate to you or discuss those additions with you and have a common list?—No, not until it comes down in the form of tenders.

4311. You do not know anything about the men that he places on the list till the tenders come down to you?—Not necessarily.

4312. He does not communicate with you about placing men on the list?—He occasionally inquires what I know of a firm, and also occasionally informs me that a firm has been placed on the list, but I do not know his full list.

4313. Do you ever recommend to him a man to place upon his list?—Yes.

4314. And does he accept that recommendation?—Yes, he would not hesitate for a moment to put a man on the list if I recommended him; at least I should think not.

4315. It comes to this then, that he has a list to which he makes additions that you suggest, and to which he also makes additions which you do not

suggest, and of which you know nothing?—Nothing, or very little.

4316. (Sir George Clarke.) Sometimes we know, and sometimes we do not know?—Yes.

4317. (Sir Charles Welby.) I suppose the contract is actually placed sometimes with a firm which he has placed on the list which has not previously been brought to your knowledge?—Yes, if we know sufficient of the firm to think they can do the work.

4318. (Chairman.) Then he does sometimes add to the list, does he not, some names of firms who may be useful?—Yes; his business of course is to get as many firms in as possible.

4319. To widen the area?—Yes.

4320. That I suppose is a useful business?—A very useful business; we do not want to exclude firms at all if we know that they can do the work. All we object to is the delay that occurs if we buy material which turns out afterwards to be waste. We spend a great deal of labour and work on this, and a lot of money, and then when we come to the finished article, or the nearly finished article, it is rejected.

4321. In fact it comes to this, that there is steady pressure on the part of the Director of Contracts in the direction of accepting the lowest tender?—Yes.

4322. (Mr. Beckett.) Before finally placing a tender with a firm that is not recommended by you, does the Director of Contracts consult you in anyway?—Yes, he consults me, but he does not always act on my protest.

4323. (Chairman.) And you never carry your protest up to the Director-General of Ordnance?—I do not think I have ever done so; I do not know whether it has been done by my predecessors.

4324. It would be open to you to do so?—Yes, but as I said before, the element of time comes in very much.

4325. (Sir Charles Welby.) The result of disregarding your protest is sometimes delay in time and unsatisfactory quality?—Yes, but supposing I went up and on paper protested to the Director-General of Ordnance against the Director of Contracts, what terms should we be on after that?

4326. (Chairman.) I suppose you would be on the terms of two people working together with zeal for the public service?—I do not know what a man's feelings would be after you have reported him to the chief of your department. We try and work together as much as we can.

4327. (Mr. Mather.) You mean that it would be a very strong matter?—A very strong matter: I feel that he ought to give way to my protest himself without that. I do not say that he does not very often do so; I only say that he does not always do so.

4328. (Sir Charles Welby.) In the great majority of cases he would defer to your protest?—Yes.

4329. (Chairman.) Are you generally dissatisfied with the delay in getting the material through the Director of Contracts?—There must be delay if you come to think of it. In the first place, having got our specifications and things out, we have to send the requisition to him; it takes two days going through the two registers. Then he puts out the tenders.

4330. Which two registers?—Our register here and the War Office Register. Then it comes back through those two registers; sometimes the contract is not placed for two months, but I think the average time is about a month.

4331. When you say that the contract is not placed, does that mean that the tenders are not put out?—No, it means that the order is not given to the firm. I was looking into the matter yesterday, and I should say that the average time is about a month.

4332. What is the delay which takes place before the Director of Contracts calls for tenders?—I do not know what he does up there of course. I suppose he calls for tenders at once; then they have to give the firms a certain time to tender in.

4333. But the time that you have to give the firms to tender in could not be shortened; the only waste of time it seems to me under this system is the necessity for your going up to the War Office Register, and then the War Office Register returning it to you?—Then comes the consideration of the tenders here.

4334. When they are sent down?—When they are sent down; because they send down a lot of firms that

we do not know anything about perhaps, and we have to make inquiries about those firms before we can say whether we will accept the lowest tender or not.

4335. (*Mr. Gibb.*) That you would have to do in any case if the tenders were returnable to you?—If the tenders were returnable to me I should only have issued the tenders to those firms which I knew could supply, and there would be no inquiry to be made afterwards.

4336. (*Chairman.*) You would only issue them then to a limited list, but the general desire being to have as large an area of supply as possible, you would probably have to increase your list in that case?—We should have to increase our list, and we often do. We give firms trial orders.

4337. Then the same delay would arise as regards the careful examination into the tenders when they were returned to you?—No, because if I put down three names for a particular thing, I should give it to one of those three, but in the meantime I might be giving trials to other firms, so that next time I might have five.

4338. And that process might go on almost indefinitely; you might come to have 15?—Yes, but all the men I had on my list would be good men, and I should be making inquiries all the time to increase my list.

4339. When you had your larger list, and the tenders were returned to you, although all the men might be good men you would still be some time considering which tender to accept?—No, I should then take the lowest tender.

4340. Would you take the lowest tender without hesitation?—Certainly.

4341. (*Mr. Mather.*) That is to say, from anyone of the firms that you approved of?—Yes.

4342. Supposing that tenders come down from the firms that are added by the Director of Contracts, and one of them is lower than that of any of the firms whose names you are familiar with, would you rely on that tender being executed, assuming it to be given by the Director of Contracts, with the same faithfulness and accuracy as it would be by one of the firms whose names you had given?—No.

4343. How would you check the execution of the contract, according to your specification, on the part of that firm whom you did not know, but whose tender happened to be lower than that of the firms you did know?—I should, as a rule, protest against their having the order until I knew something more about them—until they had had a trial order.

4344. Because you would not have confidence in your specification being thoroughly worked up to?—No, I do not think that specifications can be made sufficiently binding for that.

4345. There is always a latitude for a man to avail himself of in making one part which may not appear important to him weaker than you like?—Yes.

4346. (*Chairman.*) But your difficulty would be got over to a great extent, would it not, if no firm was placed on the Director of Contracts' list without your previous assent?—Yes, that would meet it.

4347. Then with regard to the execution of orders when they are given, is there much delay about the delivery of articles?—Terrible delay, as a rule. That is of course the fault of the firms.

4348. That is a thing I am afraid that everybody who orders articles in this country is exposed to, not only the Government?—Yes, but of course in some cases the delay is simply because a man has tendered and has not got the plant for executing the work at all. I have one case here, about steel sheets, the tenders were not passed to the Royal Carriage Department to see, and the first intimation that anything was wrong was the rejection of the articles. We did not specially name any maker, so far as I can see, for them, and the order was placed with a firm we knew nothing about. I wrote and asked the Director of Contracts to cancel the order and to obtain the sheets elsewhere, at the firm's request, because it could not supply them.

4349. (*Sir George Clarke.*) And he admitted he could not supply them?—Yes. After two months of correspondence the contract was cancelled at the request of that firm.

4350. (*Chairman.*) Then assuming that you were consulted about the list of contractors and that you really had the determining voice as to what contractors should be placed upon that list, the delays owing to that particular difficulty of a contractor having been given an order, when he has not the proper plant, would be done away with?—I should think so.

4351. You would still be left with those delays, which I am afraid cannot be avoided, which are ordinary trade delays?—No doubt.

4352. (*Mr. Mather.*) Have you any power at all over those delays by sending your own people round, competent persons to represent the case to the manufacturer?—I have no power of fining contractors for not complying with the contract.

4353. (*Chairman.*) Do you send down a man to stand over an order and supervise it?—I have no power to do that. I think Sir George Clarke has done it sometimes. In a case of great pressure, like war pressure, when it is absolutely necessary that we should have articles, we have sent round to see if we could expedite them.

4354. There would be no difficulty in your doing that if you had sufficient staff?—No.

4355. As regards fines you have no power?—No.

4356. You make a recommendation?—I state the delay, and it rests with the Director of Contracts to decide whether he will enforce the fine or not.

4357. Do you think that his general policy with regard to enforcing fines is sufficiently rigorous, or do you think that fines should be enforced with greater severity?—From personal knowledge I cannot say, but I gather that the infliction of fines is hardly ever imposed.

4358. It is an extremely difficult thing to do.

(*Mr. Mather.*) And is hardly ever done in any business.

4359. (*Chairman.*) If you were to inflict fines rigorously every time, would you not simply have prices put up against you?—Yes.

4360. And about purchasing in default, you state that occasion has arisen for purchasing in default?—Yes, we have purchased in default, and then the Director of Contracts has to recover the money from the other firm, but that is always a difficult process.

4361. But if a change were made, by which you would have a voice in determining the contractors who should be on the list, a considerable part of your difficulties would disappear?—Yes, that is to say, if the Director of Contracts were to propose certain firms for the list and not to put them on the list unless I approved, that would reduce the delays, because, if so, we could accept the lowest tender straight away when it came.

4362. Would such a proposal as that meet your views to a great extent, and place the system upon a satisfactory working basis?—Well I would rather have the power of purchasing to a greater extent than calling for tenders to a greater extent. At present I am allowed to place orders up to the value of 25*l*. I would be glad to see that limit increased, I think it would save a great deal of correspondence and trouble.

4363. What would your idea of a limit be?—I have got a table here showing the number of contracts, made for me by the Director of Contracts, this is for the last completed year, 1899–1900; out of a total of 2,646 contracts, he gave out 629 contracts of 25*l*. or under.

4364. (*Mr. Gibb.*) What are those contracts for?—I have not got that in detail.

4365. (*Chairman.*) They would be for material?—They would be for material and small things.

4366. (*Mr. Mather.*) Small fittings, I suppose, of all kinds?—Yes; now if you were to bring me up to 500*l*. I should have 2,231 out of 2,646. If you were to give me a limit of 250*l*. I should have 1,998 out of 2,646.

4367. 2,646 being your total?—Yes, for that particular year.

4368. (*Chairman.*) That would leave about 648 orders to be dealt with by the Director of Contracts?—Yes.

4369. What would be the money amount, supposing the limit was increased up to 250*l*., what would be the proportion of the total amount of money with which you deal that would then be within your own

Col. E.
Bainbridge,

18 Feb. 1901.

disposal?—About 130,000*l.* of these 1,998 orders as compared with 1,250,000*l.* on the remaining 648.

4370. (*Mr. Mather.*) Do you know the total annual money value of contracts now given under 25*l.*?—I am limited to 4,000*l.* for special purchases made under special authority at will. In addition there have been contracts under 25*l.* in value, made by the Director of Contracts for me to the amount of about 11,000*l.*

4371. (*Chairman.*) Supposing that your limit was advanced from 25*l.* to 250*l.*, would that satisfy you?—That would be a great improvement.

4372. (*Mr. Beckett.*) And up to 500*l.*, still greater?—Yes.

4373. (*Chairman.*) And no restriction at all would be best of all, you consider?—Well, that would be best of all, but of course there are certain difficulties about it. Under the present system the Director of Contracts has a responsibility. This is how I put it: "The system proposed by the Royal Carriage Department would require skilful and careful management on my part to obviate charges of making monopolies or aspersions of another sort." All that onus would come on me.

4374. I think that is a very valuable point. As it is the onus comes not on the Director of Contracts but on the Financial Secretary, whose officer he is, and who can defend himself in Parliament?—Yes.

4375. If it came upon you it might surround you with an atmosphere very unmerited, but still a very unwholesome atmosphere of suspicion, and a great deal of your time might be taken up in having to answer questions that might be directed to you from Parliament?—That is the one objection that I can see.

4376. (*Mr. Gibb.*) And if you got a voice in the selection of firms you would apparently get practically what you want?—Well —

4377. (*Chairman.*) Supposing you got a voice in the selection of tenderers for the list, plus an increased limit of unrestricted purchase, you would feel very comfortable?—Quite so.

4378. (*Mr. Gibb.*) But even without an increased limit, would you not?—I should like very much to have an increased limit.

4379. (*Mr. Mather.*) That is for convenience of manufacture?—Yes, and I do not think I should have any trouble about that sort of thing if I had it.

4380. (*Mr. Gibb.*) Do not you think you would be better without an increased limit if you had a voice in the selection of tenderers, because you would then get rid of all the trouble of placing the contracts, and get rid of the objections that you have alluded to in your memorandum there?—Well, I do not know.

4381. (*Sir George Clarke.*) Supposing you have no power beyond the 25*l.* limit, and you want, as you frequently may want, to buy a thing at the price of 26*l.*, surely it is a great nuisance in a hurry to have to invoke all this formal machinery when you know you can get the thing at once?—Oh, yes.

4382. (*Chairman.*) Supposing that the limit were extended, who would actually effect the purchases?—We should issue tenders from here just as the Director of Contracts does from the War Office, and as soon as the tenders were received I should refer to the department concerned, and ask them if they agreed to accept the lowest tender. If they said Yes, we should give the order at once.

4383. You would substitute yourself for the Director of Contracts as regards those purchases?—Yes.

4384. Yourself, personally, not any particular officer under you?—My Civil Assistant, Mr. La Brooy, would be the man who would do it.

4385. Who effects purchases for the articles under 25*l.*? I suppose they are not by tender; you send out and buy them?—Some of them are by tender; in other cases we may buy them; that is done by our Store Branch, which is under Mr. La Brooy. He is the head of the Clerical Staff here, and he has under him Stores, Finance, the Work Accounts, and Pay—four branches.

4386. He has no expert knowledge of materials?—No.

4387. He is not an expert buyer in any sense?—No.

4388. The expert knowledge would be supplied by the department which frames the specification and the

order, and who would inspect the goods whenever they are received?—Yes.

4389. But the same work which is now carried on in the Director of Contract Departments, would be transferred here?—Yes.

4390. (*Mr. Mather.*) But Mr. La Brooy, I presume, without having technical knowledge, is well acquainted with the sort of articles that you want from year to year in your manufactures?—Yes.

4391. And better acquainted than anyone on the staff of the Director of Contracts?—Yes. Things that come in are inspected by the departments for whom they are intended.

4392. And he becomes acquainted with the names of the things and the things themselves?—Yes, and with the firms from whom they come.

4393. (*Chairman.*) But he has no technical knowledge; he could not tell you whether a piece of steel was a good piece of steel?—No.

4394. (*Sir George Clarke.*) But he is in personal contact with the superintendents who see the articles?—Yes, but he would not give an opinion as to the quality.

4395. (*Chairman.*) He is no expert?—He is no expert.

4396. Mr. La Brooy manages all your clerical work, does he not?—Yes.

4397. Is he your accountant?—Well, he has got the Account Branch under him, yes, he is really my accountant; but, as I say, I am divided into four different branches, each under a staff officer, and all under Mr. La Brooy, who is under me.

4398. He is your sort of civilian under secretary?—Yes, he is my Civil Assistant.

4399. Then, if you wanted information as regards the progress of your vote, and where your expenditure stood at a given moment, Mr. La Brooy would be called upon to furnish it to you?—Yes.

4400. And he would furnish you with that information?—Yes.

4401. Then, as regards the audit of your expenditure here, how is that conducted?—There are two audits here; they are both what are called test audits. This is the book of our accounts that is submitted to Parliament, which is very voluminous (*producing the same*). There are two auditors here, one is the auditor of the Comptroller and Auditor General, the other is the auditor of the Accountant General.

4402. The auditor of the Accountant-General is the officer who helps the Secretary of State to discharge his responsibility for seeing that he expends the money upon the objects for which it is voted. The representative of the Comptroller and Auditor General, who is a purely parliamentary officer, stands outside; he can come down and ask for any information, and make a test audit whenever he likes for the purpose of satisfying Parliament; but it is the other Accountant-General who exists for the purpose of satisfying the Secretary of State?—The Financial Secretary.

4403. The Accountant-General under the Financial Secretary?—Yes.

4404. The Secretary of State is the man who is responsible in the last degree?—Yes. Of course the local auditor does more than audit; he wants to know a great many things; he wants to know why we work on piece-work, &c.

4405. Are you now speaking of the audit of the Comptroller and Auditor General?—No, the audit of the Accountant-General; he is termed the local auditor.

4406. His duties are not only those of what we may call strictly audit, but of seeing that you spend the money according to the regulations?—More than that; he wants to know why on a particular work we are not working on single piece-work, but on gang piece-work, and all that sort of thing.

4407. Are there certain limitations laid down that you must work in certain cases on piece-work and in other cases not on piece-work?—No, that is left to me as administering the factories—to me and the superintendents, and I do it the best way I can, but he criticises it.

4408. (*Mr. Mather.*) But the cost books of the establishment would be under the supervision of the local auditor?—Of both auditors: they are constantly in

here; they ask questions, and they go up and see my books in the room upstairs.

4409. They know where to refer for the cost of everything that is produced here in labour, materials, and fixed charges, everything that goes up to make the cost?—Yes, they have or can have entire knowledge of it.

4410. (*Mr. Gibb.*) But you have the cost books, they do not keep them?—No, they do not keep them.

4411. (*Mr. Mather.*) That is a regular part of your office?—Yes, but if you want to go into accounts Mr. La Brooy can give you better information than I can.

4412. (*Chairman.*) Yes, I only want general information from you, and will ask him about particulars?—If you please.

4413. (*Mr. Mather.*) You satisfy yourself from time to time, I suppose year by year, that so far as manufacturing is concerned, your establishment is maintained at the highest possible efficiency and economy?—Yes, that is one's constant business; I myself and the superintendents are always at it.

4414. And are you satisfied yourself that economy is regarded by all your staff?—Yes, we are always trying to economise, trying to lower prices, trying by improving our machinery to get things done at a lower rate.

4415. And you compare from time to time the cost of certain things, one year with another, and find whether you are moving in the right direction, either as regards efficiency or economy?—Yes, and if I do not do it I am soon let know, because the War Office want to know why my price is more than the trade price. They often ask me questions.

4416. Do you maintain a record of your own prices, so that you can immediately answer a question when it is put to you?—Yes.

4417. (*Sir Charles Welby.*) Are not the trade prices rather checked by your prices than the converse?—The trade prices vary. It is a good thing to be a Government contractor; in some cases their prices are below what we can possibly touch, but what their reason is for taking things at such prices I do not know. In other cases, and in a great many cases, our prices are much lower than theirs, and if our prices were not lower than theirs, their prices would of course still go on getting higher and higher. The fact that you can get things from the Ordnance Factories at a certain price brings them down to a limit.

4418. (*Sir George Clarke.*) In gun-making, for instance, is there not a great economy in our prices as compared with trade prices?—Unfortunately we are not allowed to make steel, and therefore we have to buy it. There are only a certain number of steel makers in England. I would not say that they form a ring, but certainly their prices are very great and very similar, and steel has gone up of course since the days when we made steel. I think if we made steel here probably their prices would come down lower.

4419. And as a matter of fact influences are brought to bear against our making steel?—Yes.

4420. (*Mr. Mather.*) Have you any steel foundries here?—Not for guns, for shells we have; the trade did not object to that, but they did object to our making forgings; we buy the steel of them and then forge it ourselves.

4421. (*Sir George Clarke.*) If you tried here at all to enlarge your boundaries with a view to increasing production and to lower prices, the trade generally would combine to stop it?—I hesitate to answer that question because it was a question before Sir Francis Mowatt's Committee, which I believe was a confidential paper.

4422. But evidence has been given on that point?—I know it was trade influence of course that took away my steel foundry, and there was the forging question, too.

4423. (*Chairman.*) I supposed that is a matter of policy, and it is settled as a matter of policy whether the Ordnance Factory should be developed to a great extent, or whether it should be developed to a limited extent, and that for the rest of our wants we should rely upon the trade of the country?—Yes, I think so. At the

present moment trade is full up and you cannot get things from the trade, and therefore we are hard worked, but I believe the future policy (whether it is a wise one is not for me to say) is to be that we are to be limited in our supply, and the trade of the country is to be encouraged, that is to say, if they can get things from them.

4424. (*Sir Charles Welby.*) I suppose you will admit that it is sound policy that factories like these should not be running at full pressure in normal times, so that they would not be capable of dealing with any sudden emergency?—Certainly.

4425. (*Sir George Clarke.*) But you do not think that the factories should be hampered in any way in improving their plant in order to give the trade an advantage over them?—No, not in improving their plant.

4426. (*Sir Charles Welby.*) Sometimes it is necessary in order to induce firms to lay down extra plant to give them some sort of guarantee of continuity of orders?—I know that sometimes firms complain that they do not have continuity of orders, that they have to lay down extra plant and then are not sure of getting orders.

4427. And if extra plant were laid down here with the result of taking work away from the trade, they would complain still more?—No doubt.

4428. (*Chairman.*) With regard to enlarging machinery and effecting economies, I suppose you are generally advised by the Chief Mechanical Engineer?—Yes, it is his duty to advise me on such points.

4429. And his knowledge, I suppose, is of considerable assistance?—Yes, he has two assistants.

4430. And is their time pretty fully occupied?—It ought to be.

4431. There is work there for them to do?—There is full work for them to do; they draw up the specifications and that kind of thing, and they consult with the superintendents of departments.

4432. (*Mr. Mather.*) Specifications for what do they draw up?—For machinery.

4433. That is to say, machine tools and appliances for the workshops?—And for any new machines that we want to buy.

4434. That you want to use for the purpose of manufacture?—Yes.

4435. (*Chairman.*) What are your relations with the Inspectors of the Inspection Department?—The Inspector only passes the finished article. So far as gun-steel is concerned the Inspector tests the forging when it is ready, that is to say, he tests one forging at the steel works when it is in a soft state, before it has hardened; it then comes down here, and we have practically bought it, and then it is hardened and rough bored and certain work done on it, and then he tests it again to see whether it is fit to go into the gun, and he then accepts it or condemns it.

4436. Is the Inspector under your orders?—No.

4437. Under whose orders is he?—He is under the Director-General of Ordnance: Colonel Hadden is Chief Inspector at Woolwich.

4438. The point I want to get at is this: is he quite independent of you?—Yes, quite.

4439. (*Sir Charles Welby.*) What is the position of the Chief Mechanical Engineer in regard to you; is he immediately under you?—Yes; there are three branches of my general office, as you will see from this paper (*handing in the same*).

4440. Then where do the factories come in, under one of these three branches, or separate?—They are quite separate; there are three branches of my central office.

4441. What other duties has the Chief Mechanical Engineer besides those you have told us of?—They are all set out in that paper.

4442. (*Mr. Mather.*) Could you let us have a copy of that sheet?—Yes.

4443. You would give him anything to do that you thought proper in addition to what is prescribed in this paper?—Yes, but still, after all, there is especial work there; he has to see about the feed of machines, and all sorts of things. He has plenty to do in that way.

4444. (*Chairman.*) He has plenty to do?—Yes.

Col. E.
Bainbridge,
C.B., R.A.

18 Feb. 1901.

Col. E.
Bainbridge,
C.B., R.A.

13 Feb. 1901.

4445. (*Sir Charles Welby.*) With a view to securing economical working in the workshops?—In the factories.

4446. And are his functions in that respect in your opinion valuable in their results?—The thing is that of course to a certain extent he takes the responsibility off the Superintendents. It is a question whether the Superintendents should not be self-contained, and do that sort of work themselves; that is a matter of policy which I am not consulted upon.

4447. He acts more or less as an outside check on the work of the different departments?—Yes.

4448. (*Mr. Mather.*) But you can employ him on any work that you think proper in addition to those duties?—Yes, any work suitable to a Mechanical Engineer.

4449. But his duties under that description would be to take care that all the machine tools in the various workshops were doing their work efficiently as to speed of production, and also to recommend to you the supply of other tools, to throw out old tools, and put in new ones which might do the work better?—That is a little duplication. I should look to the Superintendent to do that. I should hold him responsible to look after his tools and that sort of thing.

4450. (*Mr. Gibbs.*) In certain matters the Chief Mechanical Engineer superintends the Superintendents?—No, he is supposed to assist and advise.

4451. (*Sir Charles Welby.*) He is supposed to assist you as head of the whole department?—Yes, and to advise and assist the Superintendents.

4452. (*Mr. Mather.*) He is a sort of advisory Mechanical Engineer?—Yes.

4453. But he has no executive functions?—No.

4454. (*Sir Charles Welby.*) Supposing anything went wrong with regard to labour questions, and it was proved that the men were not working as economically as they might, who is responsible—the head of the factory concerned?—The head of the factory concerned.

4455. Would it be the duty of the Chief Mechanical Engineer to ascertain any such thing?—Yes, and if he ascertained it, it would be his business either to inform the Superintendent or me if he thought right.

4456. If the Superintendent did not agree with him, it would be his business to report the matter to you?—Yes.

4457. And there his responsibility would cease?—Yes, there his responsibility would cease, and it would come on me.

4458. (*Mr. Mather.*) Labour questions, in the first instance, would be dealt with by the Superintendent of the Department?—I am not quite clear what you mean by labour questions.

4459. A question of wages, say of the men, that would be dealt with by the Superintendent?—That would be dealt with by the Superintendent according to his powers. His powers and my powers are limited.

4460. And discharging and taking on of men?—That is done by the Superintendent.

4461. The Chief Mechanical Engineer has nothing to do with those questions?—Nothing.

4462. Would the Superintendent of each workshop be responsible for recommending to you that some tool was becoming unfit for its work and was already obsolete, and that a new tool had been brought out for the purpose of doing the work better and more economically; would the suggestion for such a change come from the Superintendent, in the first instance, or from the Chief Mechanical Engineer?—The Superintendent would either, if he had the power, which depends upon what the tool was, get the tool himself, or if he determined that I should have to purchase it, he would send it up to me and I should refer it to the Chief Mechanical Engineer for his advice.

4463. But the Superintendent himself has no power to buy a tool; he has to report it to you?—It would depend upon what it is.

4464. (*Sir George Clarke.*) We are making tools every day ourselves?—Yes.

4465. (*Mr. Mather.*) Say a new machine to be bought outside?—That would, of course, have to come through me, and then it goes to the Chief Mechanical Engineer, who advises me on the subject and in conjunction with the Superintendent draws up the specification,

4466. There is where the Chief Mechanical Engineer comes in?—Yes.

4467. (*Mr. Gibbs.*) The Chief Mechanical Engineer is practically your officer for supervising the various factories, is he not?—No.

4468. His duties are these, are they, "The Chief Mechanical Engineer gives such advice and assistance as he may deem necessary, or may be asked for by the Chief Superintendent, or by the Superintendents of Factories, on all matters relating to the introduction, extension, improvement, and maintenance of all machinery and appliances in the Ordnance Factories," and so forth?—Yes.

4469. "And advises generally as to the most economical methods by which the work can be carried out"?—Yes.

4470. That reads to me as if he were an officer under your superintendence, on whom you rely for advice as to any matter within the factories?—For advice with regard to machinery.

4471. And wages?—Yes, and anything connected with it he would advise me upon, but he has no power over the Superintendents; he cannot go to a Superintendent and say, Do this, or Do that; he can only advise me.

4472. That is what I say; he is really your officer, who has to advise you as to machinery within the factories?—Yes.

4473. (*Mr. Mather.*) He superintends the entire organisation of the manufacturing plant of the factories in the sense of examining it and reporting upon it if it is not doing its work efficiently in any department, and receiving from superintendents of departments certain requests they may have to make to improve their plant?—Yes, he has free access to the shops to tell them what he likes, but of course we rely upon our foremen and managers to a great extent to know that the machinery is in proper order, and also upon the superintendents.

4474. But they would naturally consult with him over those questions?—Yes; they would report to the Superintendent, who would either take the advice of the Chief Mechanical Engineer or come to me, and I should take his advice.

4475. It would not necessarily come to you through the Chief Mechanical Engineer?—Not necessarily; it may come straight from the Superintendent.

4476. (*Sir George Clarke.*) There is only one question that I want to get clear on the evidence, that is to say, that all responsibility for delays in the output of work here would be visited on the factories—that delays in promises made here would be visited on the factories?—It would be visited on my devoted head first from the War Office. I cannot give the factories away and say, "That is all the fault of the department." The responsibility comes upon me.

4477. And that is the reason why you wish as far as possible to check any delay arising, as they frequently do, in the supply of materials?—Yes.

4478. So that you cannot be held to the date that we give unless you have adequate control over the materials out of which the things were made?—No, I often have to say I am very sorry I cannot keep my promise in this case, because I cannot get the things out of the contractors.

4479. (*Chairman.*) Then the responsibility falls upon the contractor and not upon you?—The onus of it comes really upon the Ordnance Factories. People say, "Look at the Ordnance Factories; you cannot get anything out of them."

4480. (*Sir George Clarke.*) And there is not on your part or on the part of any of us any wish to restrict competition in the supply of materials, but it is really that we do not like to be committed to people who have no reason to think can carry out our work?—It is just the opposite; we do not want to restrict competition, we want to throw it open as much as possible.

4481. And also it is our object to take the lowest tender whenever there is any reasonable hope of getting the thing done?—Quite so, because it affects our price.

4482. (*Mr. Gibbs.*) In all cases where tenders have to be taken, do you see much advantage in your taking the tenders instead of the Director of Contracts taking them, quite apart from the question of the limit of

amount?—There would be this advantage, that I should know exactly what was going on. As I stated before in the early part of my evidence, we should not have to deal with men that we knew could not supply.

4483. But assuming that you had a voice in the settlement of the list of tenderers, and had acquiesced in the list, do you see any advantage in the mere act of sending out the invitations, and dealing with the tenders after they come in being transferred from the Director of Contracts Office to yours?—I think it would be a question of time.

4484. It would only be the delay involved in your sending up the requisition to the Director of Contracts, instead of sending out the invitations to tender from this office?—And then the further delay of his sending down the tenders to me to know whether I will accept them, and my sending them back to him to say I will.

4485. But I understood you to say that if you had acquiesced in the first instance in the list of names to be invited to tender, you would always accept the lowest tender?—I could not allow the Director of Contracts to accept the lowest tender without reference to me, because something might have occurred in the meantime which would be an important thing, and you would have to look into it; so it would have to come here to be considered.

4486. Then it is only just the question of a double reference?—Yes.

4487. It would be a question of a delay of a very few days?—My average time I tell you is a month, and we often get three months if there is any argument over it.

4488. But supposing you had yourself the duty of getting in tenders, do you think that you could get the contract placed really in a less average time than a month?—Yes, I think so.

4489. You would have to do the work quicker, that is at present done by the Director of Contracts, which occupies a certain amount of time?—I should only have to deal with my own contracts, not with what the Director of Contracts has to do; look at his list; think of the enormous number of contracts he has to deal with.

4490. (Chairman.) That depends upon his having an adequate establishment?—Yes.

4491. (Mr. Gibb.) It strikes me that if you took that duty, you would be taking a duty that does give rise to a good many questions that might place you in a difficulty for very little advantage, because, if you had practically a voice in deciding on the list of firms, the only inconvenience you would suffer by passing the order through the Director of Contracts is the slight delay that occurs in sending it up to his office, and his sending the tenders back to you?—Supposing in one particular instance I was not prepared, although the man was on the list, to accept the lowest tender, then I should be able on my own responsibility to go to another man, whereas at present I have to give my reasons and explain the whole thing.

4492. (Chairman.) But that would not often happen if the list had been made out before?—It ought not to happen often.

4493. (Mr. Gibb.) But if for a particular object you wanted to buy Firm A.'s steel and Firm A.'s steel only, one does not see that you would have any difficulty in buying Firm A.'s steel?—I have given you a case where it was actually Firm A.'s steel that I wanted when I could not get it—I read it this morning. Firm A.'s specially recommended, and the order goes to Firm B.

4494. But it may have been that you recommended Firm A., but were perfectly content to take any steel according to the specification?—No, I think if I specially recommended a firm, the Director of Contracts ought to take it as good and give it to that firm, but I do not often specially recommend a firm.

4495. (Mr. Mather.) In that particular case which you quoted, the name of Firm B. was not on the list you had acquiesced in?—No, certainly not; we recommended Firm A. only; then there came down tenders from Firms C., B., and A.

4496. (Mr. Gibb.) Was that a case where you wanted Firm A.'s steel, and Firm A.'s steel only, do you remember, or was it that you wanted a high class of steel?—We knew that we could rely upon Firm A.;

the order was very pressing, and therefore we thought the wisest thing was to go to Firm A., who we knew would give us what we wanted.

4497. Then it was not a case where it was Firm A.'s steel and Firm A.'s steel only that you wanted?—No, this was a case where we knew we could get the steel we wanted from Firm A. in the time we wanted.

4498. But I suppose that Firm C. could supply steel of equally good quality?—He might or he might not; we were not certain that we should get the quality of steel that we wanted from him.

4499. Does not that arise from your not having had sufficient experience of them?—We had large experience of Firm C.

(Sir George Clarke.) We have had more experience with Firm C. than others; they could not have done it in that particular time.

4500-1. (Mr. Gibb.) But there ought to be no difficulty in a case of that sort, when you want a particular article, in your getting it?—I read you another case this morning.

4502. (Mr. Beckett.) Supposing that your limit were raised, and, therefore, your purchasing power largely extended, do you think that in the event of sudden pressure, your knowledge of contractors would be sufficiently extensive to enable you to deal with them as well as the Director of Contracts?—I should say that my knowledge of contractors was infinitely more than that of the Director of Contracts, who has no technical knowledge.

4503. And you are continually taking care to keep your knowledge of the contractors up to the mark?—Yes.

4504. (Sir Charles Welby.) You mean more with regard to what they could do?—Yes.

4505. (Mr. Beckett.) You are just as well acquainted with the state of the markets in relation to the particular things that you want as the Director of Contracts?—Yes.

4506. (Mr. Mather.) Is it not the fact that you maintain now a familiar acquaintance and touch with the sources of all the materials that you require to manufacture here in the market?—Yes.

4507. You do not rely upon the Director of Contracts furnishing you always with information that you require about the sources of the materials that you have to manufacture?—No.

4508. You keep up through your own staff a running connexion with the sources of supply?—Yes.

4509. So that you always know where you can rely upon obtaining any article that you want?—Yes.

4510. That will apply also to all articles in the shops, new machine tools, and conveniences of all kinds that come out from time to time?—Yes; that the Chief Mechanical Engineer is always busy about—inquiring as to the latest machines, the latest tools, and everything of the sort.

4511. What I want to get at is that the office of the Director of Contracts, who finally orders everything for you above 25l., does not relieve you of the duty of keeping up to the very latest date with all the appliances, both in the form of tools and in relation to the factories?—No.

4512. With reference to cost; do you take any notice whatever in your cost-books of capital account?—Yes.

4513. Do you charge any interest on capital account before taking out final cost?—Yes, depreciation on buildings and machinery.

4514. Therefore you know what your capital account is here?—Yes.

4515. And you depreciate that account on the usual business lines?—Yes, 5 per cent. on buildings and 10 per cent. on machinery.

4516. Who determines whether you shall supply a new appliance or tool in your shops for your manufacturing purposes, manufactured by yourselves, in preference to its being bought out in the market?—We decide ourselves; a Superintendent may put down

against a departmental machine that he can make it himself, or he may ask me to go to contract for it. It would come to me in any case.

4517. But you have the sole control of determining whether a large tool, to cost say 1,000*l.*, should be made here at the Arsenal, or whether a similar tool should be bought from the makers outside?—Yes.

4518. And that is not referred to the Director of Contracts in any way?—No.

4519. That is purely internal administration?—Yes.

4520. Is there a large manufactory of home-made tools here?—Yes, we make a great many.

4521. Those are taken into your capital account then, I suppose, at cost price?—Yes, plus indirect charges.

4522. All the fixed charges, the incidental charges?—Yes.

4523. But they are taken in only at cost price?—Yes.

4524. And from that cost you reduce 10 per cent. every year as you would upon the tools bought?—Yes.

4525. Comparing your cost with the cost of outside makers, you are quite clear that on labour, cost of wear and tear, and all incidental expenses connected with the factories, you follow the usual lines of a manufacturer who works to a profit?—We should decide in the first instance whether we could make the thing ourselves or more cheaply buy it, that is the thing we should go upon; we should not do it for the sake of giving ourselves work.

4526. But you know, from time to time, by comparisons that you are able to make, that the whole régime of the factories here produces a result not inferior as regards cost to the results produced outside by the manufacturers?—Yes, for the things we undertake to make.

4527. (*Str George Clarke.*) One more question. There is, is there not, under the present system a considerable

The witness withdrew.

Mr. H. F.
Donaldson.

MR. HAY FREDERICK DONALDSON examined.

4534. (*Chairman.*) You have been Chief Mechanical Engineer of the Royal Ordnance Factories since 1898 I believe; your title has been changed in the meantime, but your functions have been the same?—Yes.

4535. And your functions, as laid down, are to give such advice and assistance as you may deem necessary or as may be asked for by the Chief Superintendent or by the Superintendents of the Factories on all matters relating to the introduction, extension, improvement, and maintenance of all machinery and appliances in the Ordnance Factories. You are practically an expert mechanical adviser—is not that your position?—Yes, put in a few words, I think it is.

4536. Concentration sometimes does not tend to accuracy; but is that accurate?—Yes, I think so.

4537. You have free access to all the buildings and you and officers under you continually go round and satisfy yourselves as to the economical working of the machinery and whether any improvements can or cannot be introduced?—Yes.

4538. If you had any improvement to suggest in any one of the factories, would you suggest it to the Superintendent directly or would you suggest it to the Chief Superintendent?—As a rule, I have gone a little outside the regulations laid down for me and have gone to the Superintendent of the Factory.

4539. You consult with him about it first?—Yes, so as to avoid as much writing as possible. I mean to say that generally the Superintendent and I bring the thing up to a certain point where action is required, and then of course it reaches the Chief Superintendent, but besides that, I am constantly in touch with the Chief Superintendent of course, and in conversation he is well informed as to what is going on on nearly all points; in fact I may say on all points.

4540. You have two Assistant Engineers under you, have you not?—Yes.

4541. And your work is not confined to the Ordnance Factories at Woolwich, but it carries you to Enfield?—Yes, and all the out stations.

4542. Including Birmingham?—Yes.

re-duplication of clerical labour by all this contract arrangement, that is to say, the whole of the demands have to be framed in your office to go to the Director of Contracts, when they might just as well be put upon tender at once?—Yes.

4528. So that a comparatively small addition to your staff would enable you to make all those contracts, relieving the Director of Contracts of his duties in connexion with them?—There would certainly be that advantage. I could not say what addition to my staff would have to be made.

4529. But it would not be large?—No.

4530. (*Str Charles Webb.*) You say that valuable additions are from time to time made to your sources of supply through the agency of the Director of Contracts?—I do not think I said that.

4531. I thought I understood you to say that?—It may be that some firms are added.

4532. I think you said that you recommended firms to the Director of Contracts to be placed upon his list, and that he very usually added other firms to that list, and that occasionally a firm which he recommended, which had not been suggested by you, tendered, and their tender was accepted with your consent?—It might be so; he might, of course, recommend to me a very good firm, but then I should give them a trial order, and then take them on. With a new firm, that one knows nothing about, if one can afford the time, one gives them a small trial order to bring them on the list.

4533. But you admit that it may happen that a firm which has been brought to your notice, and put upon the list by the Director of Contracts, may turn out to be a satisfactory firm, and therefore a valuable addition to your sources of supply?—Yes, it might be so.

4543. And I suppose that your hands and those of your assistants are pretty fully occupied?—Yes.

4544. I suppose the making of contracts does not come directly before you in any way, but your experience and position would enable you to form some opinion upon the question?—Do you mean the actual making of contracts?

4545. I mean the system under which they are made?—I supply the specifications and say what we want to the Chief Superintendent, and he then puts those demands in the ordinary course through the Director of Contracts, so that I do not have anything to do with the making of contracts, only with what I may call the beginning and the ending of them.

4546. (*Mr. Gibb.*) Do all specifications pass through you?—All machinery specifications, not all material; only such material passes through me as there may be any special difficulty or question about.

4547. (*Chairman.*) Have you any general opinion as regards the system under which contracts are made?—I do not quite follow the question.

4548. Does your experience lead you to think that the present system, under which contracts are made through the Director of Contracts, leads to unnecessary delay, or have you had no opportunity of forming an opinion about it?—If I understand your question right you mean to ask whether things would be better if we ordered direct?

4549. Yes, it comes very much to that?—In some cases I think it would; if we take a machine, for instance, a new class of machine, probably in the first instance has to be bought as an experiment only, because one does not rush into a large order for machinery to start with; one begins with a small order, and if it is successful then, of course, it is extended. The process by which that machine is got is just the same whether it is for a single machine or whether it is for a hundred of them; it has to go to the Director of Contracts, and unless we specially say it is a particular article that we want, a great quantity of firms are invited to tender for an article which may not be at all what we want. If we say we want a particular machine, then the Director of Contracts places the order with the particular firm I mention.

4550. That is the general practice?—Yes, there is of course just that much more writing, that is the only thing about it.

4551. That is to say, instead of the invitation to tender being issued from here, it has to go up to London to be issued from there?—Yes.

4552. And, with regard to the making of tools of importance inside the factories, instead of purchasing them from outside, are you consulted as to that?—Yes, in many cases I actually prepare the drawings in my own office. By tools, you mean machines, I suppose?

4553. Yes?—I do not touch the actual cutting tools as a rule, I have done that too, but not as a general rule. But if it is a question of a new machine which is going to be made in the Ordnance Factories (it is not very common to make the whole new machine unless it is the using up of parts of old machines), in some cases I have made the drawings, in other cases they would be made by the superintendents. I would not like to say I know all that have been made; I do not think I do; I am not consulted in regard to some of them.

4554. That is a matter for the discretion of the superintendents, I suppose, whether they consult you or not?—Yes.

4555. But they would consult you upon anything of importance?—I imagine so.

4556. You are also consulted, are you not, with regard to such questions as piece-work rates and wages?—No, I should not say I was; I have made several suggestions.

4557. It is laid down in your duties, that you report to the Chief Superintendent on the general character and output of the work, with a special reference to speed and feed, piece-work rates, wages, quality and cost of labour?—I conceive that to be an action on my part, and not on the Superintendent's.

4558. It is laid down as part of your duties?—Yes, but as an action of mine, and not as an action of the Superintendent.

4559. Yes?—As an action of mine it is fulfilled.

4560. You do that?—Yes.

4561. You are a general expert adviser in the factories, with a view to economy and things being kept up to date?—Yes, I take it so.

4562. (*Mr. Mather.*) I presume under this definition of your duties, namely, that you advise generally as to the most economical methods by which the work can be carried out, that would bring you directly into intercourse with the Superintendents of the various departments, and you would be constantly conferring with them as to new appliances that were known throughout the country in other workshops, and so far as your judgment went and your knowledge of them at the time, you would feel it wholly your duty to advise the Superintendents that they might adopt those appliances with great advantage in their own factories?—Yes.

4563. And there is constant connexion between you, which brings you continually together all through the year?—Yes, it may be by actual conversation—it may be by sending a note with an illustration of a machine or method, or by an extract from a newspaper.

4564. You make them acquainted with it and talk to them about it, and recommend sometimes that they might adopt such and such appliances with great advantage to economy in their department?—Yes.

4565. That requires you to keep in close touch with all that is going on in the country in any other workshop or other machine shops throughout the mechanical trades of the country?—Yes.

4566. And in order to do that have you to travel much about yourself, or do you send your assistants round to see what is going?—It is either one or the other; it depends upon the face of it, whether the case is sufficiently met by an assistant going; otherwise I go myself. Perhaps the best answer I can give to your question, is that the other day I went to Berlin to see a particular shop.

4567. Shop organisation, I suppose?—Yes, that is so.

4568. I suppose that would mean, putting it in common language, that one of your chief functions is to take care through shop organisation here that the constructing departments are kept in knowledge of the latest appliances that are used all over the world?—Yes, or perhaps in some other particular shop not necessarily in universal use.

4569. I mean the latest appliances or inventions that might serve your purpose here better than something that you are using to-day?—Yes.

4570. You consider it your duty to bring it at once before the authorities here?—Yes. As a rule a report of that nature is not sent to any Superintendent, but direct to the Chief Superintendent.

4571. But apart from that, you would bring your knowledge of that particular production before the officers here?—Yes, the particular knowledge acquired by any particular visit is generally transferred to the department which it is most likely to benefit, or is thought most likely to benefit, by means of my assistants to the Managers in the first instance, and is discussed between them, as to the suitability or otherwise, to meet the special requirements here.

4572. So that your function really brings these factories into line with the very best factories of a similar character that are known in any country, not alone in England, but elsewhere?—Yes.

4573. You bring to bear upon the work here the light that is afforded by any experience in any part of Europe, or even America?—Yes.

4574. In that sense you are feeding with ideas, as it were, and information, the Superintendents of the Factories, who, of course, are daily engaged in constructive work requiring all their time and attention, and have not the means of finding out these discoveries for themselves?—Probably they have not got the time to do it.

4575. I say they have not got the time?—Exactly.

4576. Therefore you consider it a bounden duty upon your part to continually supply them with all that may possibly be a help to them?—Yes, I do not think if the question was put to any or all of the Superintendents they would give you any other than an answer in the affirmative if you asked them whether that line was followed. Of course that is not for me to say. I am not aware of having pursued any other course.

4577. I only wanted to get at how you regarded it yourself. You have a drawing office in connexion with your department, I suppose?—I have two draughtsmen, and what I may call a clerical draughtsman, who deals with figures and so on.

4578. In addition to the two assistants—Ashton and Banister?—Yes.

4579. These assistants do not make drawings for you?—Yes they do, but as a rule they have their hands quite full enough without actually doing the drawings.

4580. What is the specific duty of your two assistants—Ashton and Banister—what do they do day by day? Do they go through the shops day by day, continually?—Yes.

4581. And make notes and report to you?—Yes.

4582. What would come under their notice, say in the Gun Factory, that they would bring to your attention?—A matter itself may appear a small one, but may be an initial step leading to something very large afterwards. For instance, they might draw my attention in the Gun Factory to a particular machine, say, which was or was not working properly. I will assume that it was not working properly, that is to say, it was standing for a considerable period of its time, and not earning the interest due upon the machine, and out of that might arise the answer that that machine was really obsolete, and was uneconomical to work. Then we get into suggestions for the purchase of new machinery.

4583. And the Superintendents accept your interference, so to speak?—I do not think that is quite a fair question to ask me.

4584. But you have no difficulty in working amongst the Superintendents harmoniously?—No, I think we get on very well together, on the whole.

4585. Have you also the engines and boilers and power plant under your inspection?—No.

Mr. H. F. Donaldson.

13 Feb. 1901.

Mr. H. F.
Donaldson.

13 Feb. 1901.

4586. And no electrical machine?—No.

4587. No yard appliances, no cranes?—I thought you asked me have I the control of them?

4588. Have you the same supervision of these things that you have of machines in the shops?—I should say no; whether I am intended to or not I do not know; I have not got it.

4589. (*Sir George Clarke.*) But you would make recommendations as regards cranes and things of that sort; I think I have known you to do so?—Cranes actually in the shops, yes. I was thinking more of the wharf cranes, and store cranes, and electric lights.

4590. (*Mr. Mather.*) Have you any distinct responsibility in connexion with these duties? could anything be brought home to your staff or to yourself in connexion with one of the shops in which machines were still being used that were obsolete, for instance, if you had not detected it or they have not reported it to you? is that in the consulting department?—There is only the responsibility, as I understand it, which is due to a consulting engineer, if I may use the term.

4591. (*Sir George Clarke.*) Do you see any advantage arising out of the intervention of the Director of Contracts in the purchase of machinery?—As, shall I say, a commercial engineer, no.

4592. That is exactly the point of view; practically do not you do the whole of the work short of making the actual purchases, all the inquiry and specifications and all that is done by you, so that you merely invoke the Director of Contracts, as it were, to record what you wish?—Yes, but I believe the Director of Contracts has a process which we have nothing to do with which entails a considerable amount of trouble, in opening the contracts, which I have never met with in any of my work elsewhere. There appear to be from what I am told (I have never seen it done) a quantity of people brought into the room to open contracts in which the Director of Contracts is not admitted.

4593. But when you want to buy a special machine for trial, do not you find yourself involved in a correspondence in order to get that particular machine?—Not lately, a distinct impression of our wishes on the subject prevails now.

4594. I understand that you have expressed your willingness to take over a general responsibility for the purchase of special materials for Arsenal purposes if your staff was sufficiently increased?—I am ready to do anything for the good of the place.

4595. And you think that arrangement would be beneficial to us, enabling us to get our things quicker and better?—It is conceivable. In many cases I do not think it would quicken matters; in many cases I think very likely it would.

4596. And you do not think that any insupportable responsibility would fall upon you in doing that?—No, I do not think I should care about having to collect a quantity of people to open contract tenders though; it seems to me that either a man is to be trusted or he is not; if he is to be trusted he ought to be trusted to open his tenders himself without having to call in, I think it is, six people to do it.

(*The Secretary.*) I should like to say that there is some misapprehension on this matter. The only requirement is that all tenders should be opened conjointly by a member of the Contracts Branch and the Accountant-General's Department.

4597. (*Chairman.*) You think that if you undertook the duty of the Director of Contracts, in some cases conceivably it might result in more expedition, and in some cases it might not, but have you ever thought of the other side of the question, namely, the fact that there is a great political jealousy and watchfulness about contracts, and the Director of Contracts, is now an officer of the Financial Secretary, who can reply in Parliament, and deal with all that political and other criticism which otherwise would come upon you, so that a good deal of your time might be taken up in having to supply information to answer all kinds of political queries?—I have not looked at it, of course, from a political point of view at all. I understood the question to be: Was it to the benefit, or was it conceivably to the benefit of the Ordnance Factories as a producing concern? I am no politician.

4598. (*Sir George Clarke.*) But do you think there is any probability that any question of that kind would arise? I suppose you have had considerable experience in dealing with contracts before you came here. You understand how to handle them as well as the Director of Contracts does, and it seems to me that that is a bogey. I cannot see where scandal is to arise?—But I understood the question to be whether the present arrangement with the Director of Contracts was not advisable from a political point of view.

4599. (*Chairman.*) Yes, you said you thought that if you took over the contracts here, in some cases it would result in more expedition, and, in others, perhaps not. I wanted to know whether you had also considered it from a more general point of view?—No, I have not. I am looking at it simply as a business man, if I may use the term, not with regard to politics at all.

4600. (*Sir Charles Welby.*) I think that one branch of your duties is to report to the Chief Superintendent with regard to piece-work rates, wages, quality, and cost of labour?—Yes.

4601. Is that a branch of your duties that takes up much of your time and gives you much trouble?—It takes up a good deal of time. I do not mean to say in constantly putting the results on paper.

4602. But you are constantly satisfying yourself on labour questions?—Yes, and to a large extent constantly drawing the Chief Superintendent's attention to anything that strikes me.

4603. To points that seem to you to conduce to bad economy?—Yes; but of course, in taking up an incidental—shall I call it, discovery—I think I may say it is almost a rule that it strikes much deeper than a mere incident, and becomes part of the general organisation, and therefore the amount of writing that I have done on the subject of general organisation is, I regret to say, extremely large.

4604. By general organisation you mean organisation of the labour?—Yes, as, for instance, when Lord Lansdowne was Secretary of State there was a very long paper that was laid before him for consideration as to whether a trial should be undertaken, and the outcome of it was that a trial should be made. Then came the war, and up to the present nothing has been done.

4605. There was some allegation of improper practice in that case, was there?—No, it was a proposal to introduce another method of remunerating piece-work labour, to put it shortly.

4606. (*Mr. Mather.*) How much piece-work have you here in comparison with the whole amount of labour that you have?—That is a question of which I should like notice, but the amount of day-work labour is small.

4607. Nearly everything is on piece-work?—Yes.

4608. (*Sir George Clarke.*) It is a little under two-thirds.

4609. (*Sir Charles Welby.*) Do you find that these constant representations that you say you are obliged to make to the Chief Superintendent with regard to labour questions bear good fruit; is your advice as a rule attended to?—As a rule it is not a matter in which you can see immediate results, therefore I am unable to say. That a move is made I think is generally the case.

4610. (*Mr. Beckett.*) If the Superintendents discover any defects in their machinery, do they as a rule report to you, or to the Chief Superintendent direct?—A defect amounting to a breakdown, do you mean?

4611. A serious defect—I put it in that way?—So long as it is in the category of a new machine they would advise me; if it were in the category of an old one, they would not probably report to anyone, but would put it right.

4612. But when they were not able to put it right themselves, they would go to you first?—No. Probably they would go in the first instance to the Chief Superintendent, and he would pass it on to me; that is really a matter that would be dealt with according to convenience; if we happened to run across one another, probably it would be done direct; if it were a question of putting it down on paper, it would go to the Chief Superintendent.

The witness withdrew.

MR. JUSTIN T. LA BROOY examined.

4613. (*Chairman.*) You are Civil Assistant to the Chief Superintendent of the Ordnance Factories, are you not?—I am.

4614. You are practically a civilian under secretary in a technically military department?—Practically.

4615. You superintend all the stores and finance business, and accounts, and pay, on behalf of the Chief Superintendent, is not that so?—Yes.

4616. Now with regard to the Store Department, all correspondence with regard to contracts and supplies of stores is conducted under your general supervision by the head of a branch?—Yes.

4617. When a requisition comes in for a particular material from one of the factories, it comes into the Store Department?—Yes.

4618. Then I suppose that is submitted to the Chief Superintendent, and is initialled by him?—The first step taken then would be that the Storeholder would look to see whether he was really running out of the store requisitioned.

4619. That is to say, if it was an article which he had in store?—Yes.

4620. But requisitions often come in for articles that are not in store?—Yes, and which we should not keep in store, such as gun forgings or carriage castings, and so on, which we should not keep in store merely in expectation of orders.

4621. Then those are taken by the branch concerned to the Chief Superintendent, initialled by him, and then passed on to the Director of Contracts?—Yes; as a matter of office detail the Chief Superintendent himself is only troubled with the more important demands.

4622. And that branch conducts all the correspondence with the Director of Contracts as to a contract which is finally made?—Yes.

4623. Now with regard to small purchases for amounts under 25*l.*, are they made by the Store Department?—They are all brought to me, every one of them.

4624. And you make some of those by tender, do you not?—All of them.

4625. For amounts under 25*l.*?—We invite three tenders.

4626. You invite tenders in every case?—Yes.

4627. Are there no instances in which you simply send out as a matter of urgency and buy at a shop?—That is very occasionally done, but only very occasionally, because in each one of those cases we require to know precisely all the circumstances. It is one of the things we watch most carefully.

4628. Supposing a case arose, and you sent out to purchase in a hurry at a shop, who would make the purchase?—I should send out the foreman of the stores.

4629. Who would have some technical knowledge of the article?—Yes, or I have also requested, say, the Superintendent of the department requisitioning to select. For instance, supposing we are very badly in want of some iridio-platinum, I have, in such a case, telephoned down to the Laboratory and requested the Superintendent to send one of his people, who is qualified to select it, up to Johnson and Mattheys to select the stuff that was wanted and bring it down with him; and then I should write up to the Director of Contracts and ask for a covering authority.

4630. Which you get in every case?—He has never refused a covering authority when the circumstances have been explained to him.

4631. And with regard to tenders that you make for articles under 25*l.*, I gather that you call for tenders from a small approved list?—From local lists.

4632. Is it always from local people?—We go to people like Doulton or Churchill, or Chadwick, or say Davy Hill or Burgoyne and Burbidges for drugs, when we should go up to town; or we may go further afield; but generally, other things being about equal, we should buy from local people.

4633. I suppose the point is that if it is from local people that you can get it done more quickly?—We do not want to spend more time than necessary in getting it done.

4634. If you once go up to London to people like Burgoyne and Burbidge's, is there much economy in time then?—There is this much economy, that if we write to the Director of Contracts, there is the passing of the paper through the Register to the Contracts Branch, and passing the paper on its return here, which may amount to three transits or so.

4635. Now as regards the audit here, could you tell us generally how that is conducted?—To a certain extent there is overlapping of duties, but, judging by the queries raised, it looks as though there were generally some sort of tacit arrangement as between the Exchequer and Audit Department, who have their representative here, and the local Auditor, by which they try to avoid going over the same periods for their audit, but when it comes to the examination of the balance sheet for the year, or the capital account for the year, or the indirect expenditure for the year, both sets go into the same accounts in great detail.

4636. When you say there is overlapping between the representative of the Controller and Auditor General and the War Office local Auditor, you seem to consider that both those audits are of the same character and the same value?—The result to us is practically the same.

4637. The theory of the Comptroller and Auditor General is that he has not got to assist the Secretary of State in any way, but to satisfy himself that the Secretary of State is spending the money which Parliament has voted upon the objects for which it is voted; he is absolutely independent?—Yes, responsible to Parliament alone.

4638. Why do they arrange among themselves not to overlap?—Perhaps I ought rather to have said they do not generally waste their energies in auditing the same amounts again.

4639. Having made that arrangement with the local Auditor, the Controller and Auditor-General would not proceed at any time to come down suddenly and audit him; or might he?—That is entirely within his own power, but, as a matter of fact, we do not find that periods selected by the one man are also selected by the other. I cannot say that there is any arrangement. I can only convey the impression created by the queries raised. But on the large accounts, as I mentioned just now on the balance sheet, the capital account, the indirect expenditure statement and the comparison of prices, both of them go into all the figures used and methods followed in detail.

4640. Who is the local War Office Auditor?—Mr. Harris, the head of a branch in the War Office.

4641. When you call him the local Auditor, does he come down here and conduct the audit here?—He is only able to come down here occasionally, but he has a staff assisting him.

4642. Actually here?—Actually here.

4643. And they make a test audit of all the Factory accounts?—Yes.

4644. And you prepare those accounts for audit?—Yes.

4645. That is to say you see that the money is spent according to regulations and for the purpose to which it is appropriated?—Yes, and see that the money spent is all correctly abstracted to the orders for which it is spent.

4646. That is a question of classification, is it not?—A question of the appropriation of the wages to the orders on which the wages are earned, for instance.

4647. So as to get at the real cost?—Yes.

4648. (*Mr. Mather.*) Is it an audit of the cost book really?—Yes, and of the documents leading to it. Seeing that our work is paid for by the customers, as it were, of the factories, the Army, the Navy, India, the Colonies, and so on, on those cost records, of course the auditing of the cost records becomes important to every one of the customers. Practically the factories' cost accounts are audited on behalf of the customers of the factories.

4649. (*Mr. Gibb.*) They are the basis of your appropriation of charge against the receivers of your manufactures?—Yes.

4650. (*Chairman.*) Are they ever questioned by the receivers of your manufactures?—At times an office

Mr. J. T.
La Brooy.

18 Feb. 1901.

Mr. J. T.
La Brooy.
13 Feb. 1901.

like the India Office will say that they think such and such an article has been charged too high or they want to know further what the cause of the excessive cost, as they consider it, is, and it is explained to them.

4651. If the India Office insisted that it was charged too high, is there any tribunal to settle between you?—I do not know of any.

4652. (Mr. Gibb.) In the charges against the India Office, do you include a percentage for superintendence?—Yes, the charges are built up precisely in the same way as a charge against the Army or Navy.

4653. And a charge for interest on capital?—No, there is no charge made for that.

4654. (Mr. Mather.) You charge depreciation and you charge nothing more?—We charge for depreciation, but a committee that sat, presided over by Lord Randolph Churchill, had a report presented to it by certain accountants, Messrs. Whinney and Waterhouse, in which a strong representation was made against any charge for interest on capital, and ever since that charges for interest on capital have been dropped out of our accounts.

4655. It is not included in the cost?—It is not included in the cost. Prior to that we charged for invested capital and working capital both. There was one account including interest and depreciation and another excluding them.

4656. One would be profit and the other simply cost?—Yes.

4657. (Chairman.) Were those rates of depreciation settled at the time when the Committee reported?—Those rates of depreciation have been in existence ever since I can remember. I may say that India has protested that they are much too high.

4658. Then you reply to any audit queries which are made by the War Office or to the War Office on the part of the Comptroller and Auditor-General?—We reply to any audit queries that may be made by the War Office and furnish the War Office with replies to any queries made by the Comptroller and Auditor-General.

4659. I see that it is also part of your duty to prepare replies to all Parliamentary questions relating to the Ordnance Factories; does that amount to much?—Not very much, but occasionally we get questions that have to be gone into in a very great hurry; they are chiefly personal grievances and the like. A workman who was unable to convince the Superintendent that he was not drunk or misbehaving manages to get a member to take up his case. Then we are called upon to produce a great deal of evidence in the matter.

4660. If the workman has a vote?—Yes, and most of them have; and about discharges of workmen too. We have had cases of one and the same workman going to seven or eight members of Parliament and getting his case taken up by one after the other successively. First one man, say the local member here, Colonel Hughes, takes up the case, he investigates it, and drops it finding it is a bad case. Then the man goes to some other member, and one after another takes it up, and each time the same question comes down with slightly different wording. Many of these questions do not go beyond private notice, but the trouble given is the same as though they were formally put.

4661. (Mr. Mather.) The audit that you have spoken of up to now is not purely an audit in the accountants sense of the word; it simply means keeping the cost books up efficiently in order to the work being done?—Yes.

4662. You have not spoken of the balance sheet; do you make balance sheets up to the end of the year and have all the accounts audited by an accountant?—Yes.

4663. By an outside accountant?—By the local Auditor and the Comptroller and Auditor-General.

4664. They finally bring out the balance sheet?—They audit the balance sheet which is prepared for them.

4665. You prepare it?—Yes.

4666. And they audit it?—Yes.

4667. And it is certified as being correct?—It is certified subject to reservation; you find remarks by the Comptroller and Auditor-General at the end of the statement.

4668. Does that, so far as these factories are concerned, finish the auditing for the year, or is there any other test audit made somewhere else?—There is nothing beyond that.

4669. That is accepted by the Accountant-General as the final balance sheet?—I am afraid I am not quite clear. All the statement in the production vouchers, as they are called, is prepared here, and so are these documents (pointing to the accounts submitted to Parliament). When these documents are submitted to the Accountant-General by the Chief Superintendent, the Accountant-General sets to work and examines the balance sheet, the capital account, the indirect expenditure, and the statement in the production vouchers in detail. Then he is also bound by law to pass these over to the Comptroller and Auditor-General for his examination, who then sets to work and makes his examination; and as the result of his examination he makes certain remarks on the accounts; you will see these remarks on page 243 of this book. Those remarks he submits to Parliament, and then it is for the Parliamentary Committee on Public Accounts to consider those remarks any further.

4670. But there is no further audit—no further test of your account supplied to the War Office in London?—No.

4671. You have finished with that business here?—Yes.

4672. And you certify that those are correct?—Yes, we certify it is correct before we send it up to London; we send it up to the War Office, and it is audited by the War Office, and also audited by the Comptroller and Auditor-General.

4673. But your local Auditor and the representative of the Comptroller and Auditor-General here have examined those accounts and practically certified them before?—Not those accounts; they have examined the books which lead up to the production vouchers.

4674. Then you compile the whole thing yourself?—Yes. I may say that there is one portion of this book here that is prepared entirely at the War Office—this Statement of Assets and Liabilities.

4675. If you had a larger command of money for expenditure here without reference to the Director of Contracts, do you think that that would add great facilities to the work of the Chief Superintendent here and his Staff?—We should not have so much time to wait before we got our stores.

4676. That depends, of course, upon many things; but apart from the time taken in sending up your orders now to the War Office, and the obtaining of tenders on the part of the Director of Contracts, would there be any benefit, in your opinion, by contracts being made here direct up to, say, 250*l.* instead of 25*l.*; would it facilitate the work here of the Arsenal as a whole?—It would facilitate the work chiefly by that very saving of time which you are alluding to.

4677. (Mr. Gibb.) And that only?—I do not think I am in a position to speak as to the rest, but certainly there would be about a week saved on each one of those cases.

4678. Do you work through the registry here?—Yes.

4679. Do you find that that causes what you think unnecessary delay in papers being dealt with?—No, it causes a certain amount of delay, but I look upon it as inevitable delay because of the confusion that would result if we had no registry.

4680. (Chairman.) Which would cause much greater delay probably?—Yes.

4681. (Sir George Clarke.) The Director of Contracts has told us that within his experience there are no general complaints against contractors as regards delays in deliveries at the War Office—is that your experience?—As a matter of fact we have seldom troubled the Director of Contracts with regard to delays, except when we have found really that the contractor, whom the Director of Contracts looks upon as more or less a person with whom he should deal, does not pay sufficient heed to our remonstrances and representations. Of course a large number of delays we have dealt with ourselves, not reporting them to the Director of Contracts; it is only in a very small percentage of cases that any report has gone to the Director of Contracts.

4682. Then I take it that a very large number of communications have to go from you to contractors to hasten them up?—Exceedingly large.

4683. Telegrams, letters, and everything else?—One year I estimate that we sent about 1,500 telegrams urging deliveries, on account of delays.

4684. If a line were drawn between stores bought in bulk and bought by the year, and stores bought for special orders here, could you say about what the relative amounts in the orders would be?—One would be about 740,000*l.* as against 460,000*l.*, taking the last completed year—1899–1900.

4685. Which would be which?—740,000*l.* on account of goods bought for special orders, and the other 460,000*l.* for articles such as aluminium, antimony, bismuth, beer grounds for moulders, and miscellaneous articles and copper and the like, which we purchase simply in bulk.

4686. And coal?—Yes.

4687. You have told the Committee that the factories have to bear the responsibility of all questions which arise in regard to labour, and those questions, of course, are considerable; would it not be equally easy for the factories to bear the responsibility of any questions that might arise in Parliament, or elsewhere, in regard to contracts which they made themselves?—I do not see any reason why we should not; taking it in the largest sense I do not see why we should shirk responsibility in that matter.

4688. Labour questions are very often more difficult and more likely to occur than any questions that could arise on any contracts made in this place?—Yes.

4689. Now, as regards audit, you said that there are practically two outside audits here?—Yes.

4690. As regards bills, I take it that there is a most complete examination of the bills in this office entirely in civil hands?—I should like to say with regard to bills prepared here for payment of contractors —

4691. Before payment?—Yes; that during the 12 or 13 years that this office has been in existence with a central store account, there has not been a single bill in which a wrong amount has been paid. There have been certain queries raised where an error has been made either in the rate inserted in the bill or in the quantity inserted in the bill; but in the moneying out, the final column, as it were, on which payment is made, has always been correct. There has been a correction needed in the rate column, or the quantity column, but never a correction in the amount payable.

4692. (*Mr. Gibb.*) That means that the examination of the bills by the factories has always stood the test of audit?—Yes; and let me go a little further. In the course of the last two years when we have found a man make three mistakes, I think it is, either in the rate or in the quantity, he has been degraded.

4693. That is severe?—You have to be severe when acting in a fiduciary capacity.

4694. (*Sir George Clarke.*) Then practically these bills are liable to be audited three times; first by your Department, which does them thoroughly, then in the test audit by the Accountant-General's Department, and on the top of that by the audit of the Comptroller and the Auditor General's Department?—I am not sure that the term audit would be applied with regard to our own examination, but the bills are most carefully examined before they go forward.

4695. Then the Department which examines those bills under you is absolutely independent of the Department which is demanding the things?—Of course quite apart from the Department which has demanded and is using.

4696. It is just as independent as any branch of the War Office would be of the factories themselves?—Certainly in the case of things bought for orders. In the case of things bought in bulk, there is the Storeholder, who makes up his demand from the state of his own stores; he is a member of the store branch, but he is apart altogether from the section of the store branch in which the bills are prepared for payment.

4697. So that practically you have an independent examination of those bills?—Yes, because the storeholder has nothing to do with the bills.

4698. Then with regard to the audit done by the Accountant-General's Branch down here, that does not

extend to a large number of the bills?—No, because all bills above 100*l.* go up to Pall Mall for payment, and the bills paid by the Paymaster here also go up as part of his account for examination to Pall Mall.

4699. Is there any reason why the whole of the audit should not be done by a branch of the War Office here?—I do not see any reason; but that is rather for the Committee.

4700. Then there is stocktaking here is there not?—Yes.

4701. How often is that done?—There are stocktakings of various kinds. There is one continuous stocktaking. We have some men going round all over the stores continuously taking stock here and there; they have to send up their records into the store branch to show what they have taken, and what discrepancies they have found. It is a report of work done daily. Then, in addition to that there is a large stocktaking with members of the Store Audit associated at uncertain periods during the year both here and at out-stations.

4702. That is then a partially independent audit of stores, practically it amounts to that?—Yes.

4703. It is a very expensive operation, is it not?—I should not describe that as so expensive. There is also the taking of stock of all the stuff that is being used in the foundry, the rolling mills, and places like that, and there the expense is comparatively large, because the stock has to be taken generally by working overtime so as to prevent any interruption to the work itself, and the expense of ascertaining the stock actually left in the workshops is certainly very large there by comparison.

4704. (*Mr. Mather.*) Is that done week by week?—Quarterly.

4705. What advantage is there in doing it quarterly over yearly?—It is supposed to enable you to get at the current cost of producing castings or producing strip.

4706. You may get at the general cost of castings weekly by taking the cost of fuel, iron, sand, and everything that is used; but to take stock of a large concern like this once a quarter is perfectly ridiculous; no one working for profit could afford to do anything of the kind, and how you could afford to do it if you do not work for profit at all I do not understand —

4707. (*Mr. Gibb.*) By whose order was it done?—It was introduced under the late Director-General of Ordnance Factories, on the advice of a committee that was appointed to go into the question of the Ordnance Factories accounts.

4708. (*Chairman.*) What committee was it, do you know?—A committee consisting of the Director-General of Ordnance Factories, the Assistant Accountant-General (formerly Mr. Major and afterwards Mr. Seed who succeeded him), and then there was Mr. Hurst who was formerly local Auditor here —

4709. A Departmental Committee of the War Office?—Yes.

4710. (*Sir George Clarke.*) It was a committee appointed with the idea of effecting economies in the Arsenal?—To secure uniformity of account.

4711. Still I put it that the sum taken up in stocktaking in the year must be very considerable?—Yes. There is an estimated rate adopted for the issue of castings during every quarter; there is a balance sheet actually made out for the foundry account at the end of the quarter after the stocktaking, and there is a revision of estimated prices every quarter.

4712. I suppose you could not give us a rough estimate of the cost?—Not at this moment. I could have the figures got out.

4713. (*Chairman.*) I think we should like to have them?—Certainly.

4714. (*Sir George Clarke.*) Apart from money value, of course it very frequently interferes with our work, does it not?—Yes, there is just that difficulty. We have to edge in the stocktaking, as it were. Generally it comes in late on Saturday, and they work until Sunday in order to prevent the stoppage of the regular work of the place.

4715. Then do you think it would save correspondence if all bills were paid down here? Do you see any objection to that course? They would have to be examined, I presume, by the Accountant's Branch here,

*Mr. J. T.
La Brooy.*

13 Feb. 1901.

Mr. J. T.
La Brooy.

18 Feb. 1901.

and save references?—There have been so few references arising on bills, that that is inappreciable. The only references arising have been with regard to these few errors in quantities or in rates—not more than three or four in the course of a year—so that the correspondence on that is inappreciable.

4716. But you think it would be a good thing in principle if the audit could be completed within the Arsenal walls, as it were?—I think it would make matters more comfortable all round.

4717. (*Sir Charles Welby.*) You told us that in respect to purchases up to 25*l.* you invited tenders from local people only?—Chiefly.

4718. (*Chairman.*) You gave us one or two instances of going to London for drugs, but you gave us the impression that you chiefly purchased them here?—Yes, but we go for many other things.

4719. (*Sir Charles Welby.*) Supposing your limit of 25*l.* was raised to 100*l.*, would you then think it possible to place your contracts locally, chiefly?—No, not chiefly.

4720. You would then have to go to a wider field of supply altogether?—Yes.

4721. You would have to go to London, and probably beyond?—As a matter of fact very often when we are sending up to the Director of Contracts and asking him to enter into a contract, we have previously ascertained where a supply could be obtained, and tell him so.

4722. But in respect of small amounts, you can dispense with the machinery of the Director of Contracts altogether by having this small limit?—Yes, to that extent we are prepared to dispense with that machinery, because we find out first whence we could get a supply and we write to the Director of Contracts and say such and such articles are wanted and such and such firms are recommended to supply them.

4723. But if you had the power to purchase up to 100*l.*, you would have to go into the general market, and would no longer be able to confine yourselves almost entirely to the local market?—But it is not to the local market when we write to the Director of Contracts.

4724. You do not quite seize my point, I think. At present your limit of purchase is 25*l.*?—Yes.

4725. And with respect to purchases within that limit you deal almost entirely with the local market here in Woolwich?—Chiefly with the Woolwich district.

4726. You tell me that if that limit were extended to 100*l.* you would be obliged to go into the general market?—Yes, as we already do with respect to articles costing over 25*l.*

4727. But at present you have to do it through the agency of the Director of Contracts under present circumstances?—I beg your pardon, there is a preliminary inquiry made by us through going to the general market before we go to the Director of Contracts and ask him to contract.

4728. (*Mr. Gibb.*) You are indicating that you do not find any disadvantage under the present system of going to the Director of Contracts?—No; that there is a great loss of time —

4729. (*Chairman.*) There is loss of time in your letters going up there and coming back here?—Yes, and writing back again.

4730. And if your limit of purchase were increased over 25*l.* you would practically have to do all that the Director of Contract does. You would have to buy outside Woolwich?—Certainly.

4731. (*Mr. Gibb.*) I thought you said that the purchases under 25*l.* were obtained by tender?—Yes.

4732. Would it be tender on a limited list?—Yes.

4733. Altogether a limited list?—Yes.

4734. (*Sir Charles Welby.*) A local list?—To correct any misunderstanding I should say we buy more in the Woolwich district than in any other district, not more than in all other districts. Last year out of our 4,000*l.* aggregate the orders placed within a radius of

six miles from here were about one fourth in number, and one ninth in value of the whole. Further, we received authority from the Director of Contracts to purchase specially about 13,000*l.* worth. With this the proportion got from local people represented one fifth the number and one eighth the value of the total orders.

4735. The other point is rather with regard to the auditing done by the Accountant-General Branch down here. You say that in respect of the factory accounts Mr. Harris and his staff's audit is accepted as final; there is no further audit at the War Office?—There is no further audit at the War Office.

4736. Mr. Harris, you tell me, is not permanently located down here; he is more at the War Office than here?—Yes.

4737. Who takes charge of the auditing staff down here in his absence?—I am not quite sure who it is at present, but it is generally a Second Division clerk.

4738. I do not know whether I am right in putting these questions to you, but do you know, as a matter of fact, whether this staff of his down here is a permanent fixed staff, or whether it is interchangeable with the War Office, and interchanged?—It is interchanged, certainly.

4739. (*Chairman.*) Do the men actually come down here from the War Office and then pass back again, and so on?—I have not known many.

(*Secretary.*) Yes. Practically this branch is more or less in process of formation now, and they are absolutely interchangeable with the office in Pall Mall.

4740. (*Sir George Clarke.*) If the limit of purchase were extended to 250*l.* it would be a very considerable advantage to us in getting our work done?—It would certainly be a very great convenience. I have gone into the question of what number of contracts it would dispense with.

4741. (*Chairman.*) It would not dispense with contracts; it would dispense with references?—I should have said papers about contracts. It would dispense with references to the Director of Contracts in somewhere about 1,800 cases out of 2,600.

4742. It would be a convenience in so far as it saved the time that is now consumed by your referring first to the Director of Contracts and then his sending back to you?—Yes, and the reply to him before the order is placed.

4743. (*Sir George Clarke.*) And in discussion that may occur in some cases?—I set down just the transit delays at about six days.

4744. (*Chairman.*) Why should they be six days?—There is the preparation here of the letter to go up; then it is registered here; then it goes to the War Office and it is registered there, and then it filters through.

4745. (*Mr. Gibb.*) But the preparation and registry here would be in one day, I suppose. You post at night the letter you write in the morning?—The letters go by War Office messenger the next day.

4746. (*Chairman.*) Why should they go by War Office messenger. Can they not go by post?—We resort to the messenger as much as we can.

4747. What is the point of resorting to the messenger?—Simply that there is a messenger going constantly backwards and forwards, and we make use of him rather than send these things by post.

4748. To give him something to carry?—As a matter of convenience.

4749. (*Mr. Mather.*) To justify his existence?—He sometimes complains, I believe, that he has more than he can carry.

4749A. If the letter were sent by post, is it a matter of a penny stamp, or are the letters carried free?—We pay a lump sum of 150*l.* annually to the Post Office on account of communications conveyed for the factories.

4749B. Is that shown in the account?—It is brought to account, and forms part of the cost of our productions.

The witness withdrew.

SEVENTEENTH DAY'S MEETING.

At the War Office.

Thursday, 14th February 1901.

14 Feb. 1901.

PRESENT:

Mr. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Proposed regulations for the Contract Branch were further discussed and finally agreed upon.

EIGHTEENTH DAY'S MEETING.

TWELFTH DAY'S EVIDENCE.

At the War Office.

Tuesday, 19th February, 1901.

PRESENT:

Mr. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. W. MATHER, M.P.

Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Mr. GUY D. A. FLEETWOOD WILSON, C.B., examined.

4750. (*Chairman*.) You have been Assistant Under Secretary of State at the War Office since March 1898, I believe?—I have.

4751. I want to ask you certain questions with regard to the Central Branch of the War Office; you have given a very complete description of the work of that branch in your evidence before the Powell-Williams' Committee on War Office Establishments, and you have added to the opinions that you expressed there in your memorandum under the date of November the 15th which you communicated to the present Committee. On page 25 of the Powell-Williams' Report you have given an analysis of the work carried out by the three branches into which the central office is divided; I take it that that analysis is complete and you probably have nothing to add to it?—It is complete in the sense that it is the work that is now done in the Central Branches.

4752. And among the recommendations which you made in that memorandum of November the 15th, I think you said that you wanted to take away from C. 2—?—Which page have you got, if you will allow me to ask?

(*The Secretary*.) It is page 11, I think.

4753. (*Chairman*.) It is in your memorandum, I think, you said that you wished to transfer the actuarial work which is now done by C. 2, and to pass it over to the Accountant-General?—That has been already carried out. I took the opportunity when the Accountant-General's Branches, or most of them, were transferred to Cleveland House, owing to the necessity of finding room for the increased Military staff here

i 15090.

to urge the Permanent Under Secretary to carry out that recommendation, and he fell in with my view and has transferred the actuarial work to where I think it ought properly to be, in the Finance Branch.

4754. And in your memorandum I think you also proposed to place the Parliamentary work, which is now done by the Contracts Department in connection with labour questions, under C. 2, but I think that was a consequence of your recommendation that the Director of Contracts should disappear altogether?—That is so; that his work should be broken up.

4755. Assuming that the Director of Contracts is maintained, would you see any object in that particular work of his being transferred?—I see no object if the Director of Contracts remains as he is, but if his position is in any way modified, and his more important work left him.—I am assuming that—then I think it would be an advantage to take what I may call the report work into the Central Branch; but you were quite right in saying that my recommendation was part and parcel of a whole scheme, under which the Director of Contracts would be entirely broken up.

4756. That was a way of providing for that particular work which is now discharged by the Contracts Branch in the event of the Contract Department having disappeared?—Yes.

4757. What does that Parliamentary work of the Contracts Branch consist of?—I gave it that name for want of a better, but, of course, there is a good deal of work which devolves on the Director of Contracts in consequence of votes in the House and Committees of the House germane to his work, and in the prepara-

Mr.
G. D. A. F.

19 Feb. 1901.

tion of returns and reports on the general condition of the labour questions as affected by Government contracts. If you have a powerful and highly placed Director of Contracts, I see no reason why he should not continue doing that; if, on the other hand, you broke up his branch, it would, I think, probably drift into the Central Secretarial Branch to deal with. All the rest of the Parliamentary work is done in the Central Branch, and it would, I think, be only natural and expedient to get it altogether.

4758. Assuming that the Director of Contracts remains, the Central Branch would then call upon him for information in regard to questions before Parliament concerning his department, just as it calls upon the Inspector-General of Fortifications, or the Adjutant-General, or anybody else?—As regards actual questions in the House, that would not be affected, because they are all dealt with already in the Central Branch, and they call for information from every branch concerned; I mean questions in the technical sense of the word. The larger questions that may arise over Debates, and that sort of thing, he would deal with at present, and, as I say, if he remains with his present position and status I see no reason why he should not do that. The Director of Contracts would know about it, and presumably would have something to do with it.

4759. I understand that what really most interested you, if I may say so, in the evidence which you gave about this division of the central office, was the branch known as C. 1?—Yes, the Registry, that is to say.

4760. I think you expressed the opinion that the Registry was not adequately provided for now?—I consider that the state of the Registry at the War Office is a scandal. I use the term advisedly. Papers are constantly being lost, and the business of the department is frequently arrested in regard to most serious matters, because papers cannot be promptly traced. The actual condition of the papers is such that it is almost impossible in some cases to deal with the subject-matter. The general working of the Registry is so unsatisfactory that since I have been Assistant Under Secretary of State I have received insistent and most strongly worded protests from the high military officers, who have to conduct the work of their departments, and it is especially so in the case of the Inspector-General of Fortifications, who has to deal with large questions concerning the tenure of land, the sale of land and buildings, and so forth, where it is absolutely essential to have the papers in a proper state to work upon with ease, and where it is also essential to have the papers immediately forthcoming when they are wanted. I may add also that the strongest representations have been made to me by other departments who sometimes have to deal with our papers—I believe I am not exaggerating when I say that the Treasury Solicitors view with dismay having to take up a case on our papers. The office itself suffers very much from the point of view of delay and so forth. I should like to say very emphatically that I do not think the officials in charge of the Registry are in the slightest degree to blame. On the contrary, I think they have shown the greatest possible devotion to their duties and have done the very best they could under the circumstances; but I must point out that the condition of the Registry at present is entirely different to what it was formerly. Our very best men have received their training in the Registry; Sir Ralph Thompson, who was a most excellent and successful Permanent Under Secretary, often told me that he attributed the knowledge of his work and his success in later life to having been in charge of the Registry; it was always considered a duty that a good man should be put at the head of, and it was put in charge of a principal clerk and of a leading principal clerk, if I may so say. There was also an adequate staff of seniors and juniors of the Higher Division, but comparatively recently the whole of this has been changed. An attempt has been made to treat the Registry as though it were a mere paper room in which all that was required was to take a paper out of the pigeon hole when it was wanted. I need not point out that in the War Department, administering, as it does, enormous and varied interests, being, in fact, a contracting and administering department of every sort and kind, the papers vary very much in importance; some of them are of the very first importance, and I think it is perfectly unreasonable to expect a Branch like the Registry, which naturally increases in volume *quâ* work every month almost, to be satisfactorily and successfully run when it is in charge of a Second

Division Clerk who has under him a very large staff of Second Division Clerks and Abstractors and Press-men. He cannot possibly exercise the proper control over them, however good a man he may be; and I do not think he has either the aptitude or the training, as a rule, to fulfil the duties of the post. I think that one of the very first things that should be done is to re-establish the Registry on a proper footing. I would put it under the guidance of a Chief Clerk and Registrar and make him responsible not for the mere ticketing of papers and labelling them in their pigeon holes, but for intelligently dealing with the subjects that come up to be registered, annexing properly those papers which should be annexed to them, and in fact arranging the papers in such a way that, from the Secretary of State downwards, those who have to deal with them should be relieved of what is now an absolutely unwarrantable burden of work attributable only to the state of the papers therein and to the way they are registered to numbers haphazard whatever their subject may be. You will have a paper, for instance, which deals with boots, and it is registered under "Boots"; a side issue is raised on the question of testing leather arising out of those boots; then you open up a tremendous discussion on the Inspection Branch; then arises a question of adding to the Inspection Branch: next comes a long wrangle as to what the status and salaries should be. I am only giving you an imaginary case, but I have not the slightest doubt that if I had time I could find hundreds of such cases. All that is jumbled together in one bundle under the original number, and you get a chaotic condition of papers which I honestly admit beats me to deal with them, and I have had 30 years' experience.

4761. Then I take it that the function of the Chief Clerk and Registrar would be that he should be responsible for weeding out masses of papers which come under a certain number, and for selecting those which really bear upon the question at issue and putting them in a compact and intelligent form before the question goes forward to the higher authorities?—Quite so. There is another function which I think is a very important one that he should discharge and which he can only discharge if he is a man of certain standing and certain status, and that is this: In a big department like this every newly appointed officer, whether he be a civilian or a soldier, thinks it incumbent upon himself to start a new theory of Army administration; at any rate he will start a paper on a given subject; there may be several other papers going round the office on that subject at the same time. If you have a man at the head of the Registry who is a man of character and position, he will point out at once that that subject has been thrashed out, or is being thrashed out, and is being dealt with, and that it is quite futile to start a new paper on the subject, giving everybody a great deal of trouble over it and adding thereby to the work of the department without any satisfactory result. At the present time the head of the Registry is not in a position to argue the case at all; he gets an order to register a paper; it is done; and he could not possibly do otherwise. Whereas if you had a man such as I have described at the head of the Registry he would control the number of papers and the manner in which the various subjects were dealt with, and that, I think, is a matter of considerable importance. I have known five or six papers on the same subject circulating through the office, all being started by different people and all being dealt with at the same time. Once they are started you cannot stop them. It is like a stone rolling down hill.

4762. Would he be responsible also, in your opinion, for deciding which papers were urgent, and seeing that really urgent papers were dealt with in priority?—I think that would be a very prominent feature in his duties. At present there is a reckless use of what are called green jackets, or green outsides. Naturally, every man thinks his own paper the most important in the office, and he is very apt to start it in a green jacket to get priority for it. As the Registrar is at present constituted, you have him not in a position to discuss the question at all.

4763. He cannot take off the green jacket from a paper?—Certainly not, and so you may have what is a trivial subject taking precedence of other subjects which are of real importance, simply because it was started in a green jacket. I think that with a properly conducted Registry, and with a proper head of that Registry, a great deal of that could be stopped, and, what is even more important from a business point of

view, that a very important question, which was also a very urgent question, would be watched and followed. At present a man goes from the Registry,—a subordinate man,—and says they are asking for paper 4,622, and it is very much wanted; and, if the person in that room is busy or is not in a humour to look for that paper, I do not think much will come of the request. If you had a Registrar such as I have indicated, people would think twice before they lost the papers or mislaid them.

4764. (*Mr. Mather.*) What does a green jacket mean?—It is a danger signal, it means that the paper has urgency, priority.

4765. Supposing that someone has written a minute of grave importance at that moment, is that clothed in a green jacket?—That is clothed in a green jacket, and properly so; but you may have also somebody else who thinks his minute of equal or more importance and he puts it in a green jacket too.

4766. (*Chairman.*) Is that at any time; I take it all your papers may be in green jackets?—Yes, there are numbers of them.

4767. (*Mr. Mather.*) By what light does anyone exercise the function of starting the paper in a green jacket?—By the light of exercising his own judgement on his own work.

4768. The head of a department?—No, the head of a section would do so. Who shall I say—Colonel Robb or Mr. Fawcett, or any gentleman in that position would start a green paper as often as he liked.

4769. (*Sir Charles Welby.*) I think a green jacket refers to urgency rather than to intrinsic importance, does it not?—Yes.

4770. (*Chairman.*) Urgency in point of time?—Yes.

4771. (*Mr. Mather.*) And the question of urgency rests with the individual promoting the circulation of the document?—Not if the document arises outside the office.

4772. (*Chairman.*) Take the case of a question from a district?—That is dealt with by the head of the Registry, and he uses his judgment as best he can. The present man is a very intelligent man, and I hope I may be allowed to say that nothing which I mention in my evidence is to be taken in any way as a reflection on him. He has done his work very well under great difficulties; but, naturally, in his position he is out of touch with a great deal of important work in the department, and something might come into the department the urgency of which he did not realise; whereas if you had a man in the position I have indicated at the head of the Registry, his position would enable him to be in touch with the general higher work of the department, and he would be on the look-out for certain things.

4773. And his position would be such as to demand attention?—He would have a controlling and guiding influence over the actual papers, and over the work on them throughout the department.

4774. (*Sir Charles Welby.*) You do not propose, I suppose, that the head of the Registry should be in a position to override the responsible head of a department on the point whether a question was urgent or not?—Certainly not. The utmost that he would do would be to indicate that he thought it was being overdone, that is to say, he would bring it to the attention of the Assistant Under Secretary of State and say, "Had you not better tell this gentleman that he is really overloading the Registry with certain papers," and so forth. But at present there is no control of any sort.

4775. He would at all events be able to insure that the paper was not put into a green jacket on the initiative of a subordinate of the department without the authority of the responsible head?—Yes, and what is still more, he would see that a paper was put in a green jacket which was an urgent paper although it might not have been put in a green jacket. You might have a case, for instance, which, when it was begun, was not a very urgent case, but which would become an urgent case in the course of a couple of days, and he then would follow the paper and have it in his mind's eye and turn it into an urgent paper. There are many cases, I am sure, which have come under the special knowledge of Sir George Clarke—orders, for instance, from Woolwich, and so forth; which suddenly develop into a very urgent question.

4776. (*Sir George Clarke.*) Practically it has come to mean this, has it not, that green papers cease to have any serious significance?—I know that in the hundreds of papers I get every day, a third of them are green, almost half. I should say.

4777. Therefore, it is just like the cry of "Wolf"; it ceases to have effect?—Exactly.

4778. (*Mr. Mather.*) Will you kindly give us an illustration of how this Registry affects questions such as you have alluded to, say, in Sir George Clarke's Department; what relation would the Registry have to any kind of order?—This is the Central Registry here. All papers are registered here, so that if any correspondence came, say, from the Admiralty, which affected the manufacture of guns, it would be registered up-stairs before it went down to Woolwich. Every paper is registered, just as in the case of every railway company every letter goes into the Secretary's office.

4779. It is a record?—It is a record.

4780. (*Chairman.*) Therefore, if a letter came from the Admiralty about gun carriages, let us say, for Sir George Clarke's Department, there would be nobody of sufficient competence and authority in the Registry to say whether it was an urgent question or not?—No, I do not think there is anybody. You may have a very good Second Division man killing himself over it, and I am bound to say he does it well; but, I do not think it is right that he should be put in that position.

4781. His position could not carry sufficient weight?—I do not think it could. Another thing that I do not think has been pointed out is this, that without in any way impugning the probity of the men of the Registry, I think it is a very unfair temptation to put in the hands of men in the enjoyment of extremely modest salaries, to give them the custody of papers which represent a money value of thousands of pounds for the information contained in them. Our secret Registry is in charge of a Second Division Clerk, and, to his honour, there has never been any leakage; but, I do not think it is right that we should have no well paid and well placed official whom we can hold responsible for the custody of these confidential documents. Sometimes it is advisable—I have felt it myself—actually not to indicate too clearly the secrecy of a paper, because of my not being able to send for a man rather more of my own standing, and to say, "You must be very careful of this, and watch it, and put it away." "You clearly understand that there are political considerations, or international considerations, which render it a very secret paper." I think, as regards all these papers of the greatest gravity—and every single paper has to go into the Registry—there ought to be a Higher Division man in charge. In my opinion, we have Higher Division men doing infinitely less important work than that, and it was always considered so in the past. It is an entire innovation treating the Registry as if it were merely a big room with pigeon holes and papers in it.

4782. (*Mr. Mather.*) The Permanent Under Secretary of State has complete control of the Registry, has he not?—The Registry used to be under me, and was especially under me as part of the Central Branches; but I felt it my duty to represent very strongly to the Permanent Under Secretary that I thought the condition of the Registry, as at present worked, was a source of absolute danger to the department, as well as a grave inconvenience. I had to go even further, and respectfully inform him that unless the Registry were put on a sound footing I must ask to be relieved of all responsibility connected with it; and Sir Ralph Knox relieved me of that responsibility, and took the Registry into his own hands, and has been personally answerable for it ever since that time. You will find a reference to that in my evidence before the Powell Williams' Committee, I think. If I may quote for one moment my evidence before the Powell Williams' Committee, you will find it at Question 429. I say: "I consider that the Registry ought to be one of the most useful agencies for the proper control of papers, and for safeguarding against undue delay in dealing with papers," and so on.

4783. (*Chairman.*) I gather from you that the substitution of a staff clerk for a Higher Division clerk was not due to any scarcity of Higher Division clerks, because you said just now that some Higher Division clerks are employed on work which is very much less responsible and important than that of the Registry?—From my point of view, so far as I can judge; but I may say, as I have been reminded by your Secretary,

Mr.
G. D. A. F.
Wilson, C.B.

19 Feb. 1901.

Mr.
G. D. A. F.
Wilson, C.B.

19 Feb. 1901.

that the real reason why the Registry was denuded of Higher Division clerks was that when the scheme was drawn up, practically at the instance of Sir Ralph Knox, it was decided that the Registry could do perfectly well without Higher Division clerks; and, in my opinion, it has been going from bad to worse ever since.

4784. I think you have also expressed the opinion, have you not, that in the drafting of letters there was something to be desired?—That is, you are now leaving the Registry, so to speak, and going to the question of the secretarial work of the Central Branches, I think, you mean, do you not?

4785. Yes. What I want to get at is this: in your opinion, would these draft letters come up through the chief clerk?—Yes, I think the chief clerk and Registrar would be able to do a great deal towards improving the drafts of letters; he would not only be in charge of the Registry, but, as chief clerk and Registrar, he would be the immediate head of the whole of the Central Branches; and I think that one of his most important functions would be to see that the tone and grammar of the correspondence which emanates from this office was materially improved.

4786. That is to say, that when a letter came up from a branch, if it was ungrammatically or obscurely expressed, in his opinion, it would lie with him to amend it before the letter went on?—Yes, I do that incessantly. I sign enormous numbers of letters, and from the standpoint of signing alone I think it would be a great advantage to have a chief clerk, because there is an enormous amount of correspondence that comes to me, or to Sir Ralph Knox, for signature, which takes up a great deal of time, and which might more properly be signed by the chief clerk; but I do not like to shed it, because I really am very often positively ashamed of the letters which are about to go out.

4787. Then, in your opinion, there should be some system of devolution by which the chief clerk would sign unimportant and routine letters without their coming up higher?—Yes, just as the Assistant Accountant-General signs letters which do not go as high as the Accountant-General.

4788. What would be the relation of the chief clerk and Registrar to the Assistant Under Secretary?—He would be exactly in the same position in regard to the Assistant Under Secretary that the Deputy Accountant-General and the Assistant Accountant-General are to the Accountant-General, and that the Assistant Director of Contracts is to the Director of Contracts. If I may say so, what I think would be a satisfactory arrangement *quod* the Central Office would be this: that the central Branches, whether or not a chief clerk be eventually appointed, should be directly under the Assistant Under Secretary, and controlled by him, just as the Account Branches are controlled by the Accountant-General and the Contract Branches by the Director of Contracts. That would relieve the Permanent Under Secretary of an enormous amount of very inferior work with which he is burdened at present.

4789. Was not that the case before Sir Ralph Knox took over the responsibility?—Yes, very much more so than it is now. In the days of Sir Ralph Thompson, I must say that not very much was done by the Assistant Under Secretary of State, but I think that was mainly attributable to the fact that the then Assistant Under Secretary of State, although a most excellent official, and most willing and anxious to do his duty, had been a regimental officer the whole of his life, and had had no training or experience in administration, but was suddenly pitchforked, if you will pardon the term, into a position of responsibility and control in a public department, and I think it was very natural that he was never able to get a real grasp of his work; and for that reason Sir Ralph Thompson, who was an exceptionally capable and very quick worker, and knew the work of the department very well, naturally centred a great deal of the work into his own room which ought never to have been there, and which I know he, himself, had no wish to grasp or retain, because he often complained of having a great deal of work which ought never to have come up to him.

4790. (Mr. Mather.) But when this department was more or less under your own supervision and control as Assistant Under Secretary, why did you not carry out the reform that you contemplate?—Because I am entirely subordinate to the Permanent Under Secretary, and his views did not coincide with mine.

4791. It was that you disagreed, and therefore you gave up?—Under Lord Haliburton, when we had Sir George Lawson as Assistant Under Secretary, who was one of the ablest officials we have ever had in the Civil Service, if I may be allowed to say so, until his health entirely gave way, the two men worked precisely as I did with my Assistant at Pimlico. The papers were first posted up to the Assistant Under Secretary of State, who weeded out those of minor importance and dealt with them, passing on those of first importance, or, in which an important principle was involved, to the Permanent Under Secretary. This enabled the Permanent Under Secretary to have leisure to assist the Secretary of State, and to master the graver questions of Army Administration. This, of course, in no way militated against the Assistant Under Secretary undertaking any particular job, if I may use the term, irrespective of the ordinary papers which the Secretary of State, or the Permanent Under Secretary, would ask him to undertake as his own particular thing and to watch throughout. But the machinery, up to the time I came here, was that which I have indicated, and when Sir Arthur Haliburton was Permanent Under Secretary he never, I think I am right in saying, would do work which he thought was not the first man's work, but always looked to his second man to do the second man's work; and the result was that a very great deal of work was got through very successfully.

4792. (Chairman.) It has been suggested, has it not, that the Assistant Under Secretary, might practically discharge the duties of Chief Clerk and Registrar without having a Chief Clerk and Registrar distinct from him?—I think it is absolutely impossible, for two reasons. First of all I do not think you will ever have another Permanent Under Secretary of Sir Ralph Knox's capacity and inclination to take a great deal of work which is not really of first class importance and which would at once find its proper place with the Assistant Under Secretary. In the second place the volume of work generally of the Department is so great that it would be quite out of the question, I think, for the Assistant Under Secretary of State if he is to do these various jobs, in addition to the routine work, to act as Chief Clerk and Registrar with any success. Practically he is doing the duty of Chief Clerk now. I would like to point out with regard to this that there is an enormous quantity of work in this office, which is of a very delicate character, which has to be dealt with, and carried through more or less by one man, and which is really hardly War Office work at all, but which arises out of War Office work. With your permission, I will give an instance of that, and I will also say that it is an example of the necessity for having the Assistant Under Secretary of State a little bit freed from the lower class, the third class work, which comes up to him. In the course of the war in South Africa, it was considered advisable to expel a great number of people of various nationalities who were termed "Undesirables." We obviously at once got into very strained relations on this point with every Foreign Legation and Embassy in this country. The Foreign Office were naturally very closely interested in this matter; the Colonial Office equally so; and a triangular correspondence between the three departments arose of a character which required the greatest tact, the greatest attention and the most prompt method in dealing with it. It so happened that I was in charge when this began, and I was allowed to carry it through to the end. That (*pointing to a bundle of papers*) is the correspondence, telegrams and letters. I am not at liberty to give them to the Committee without the permission of the Secretary of State, and I do not think the Committee would want it, but here is the collection of letters, telegrams, and Minutes going on the whole day long, from the 3rd of July to the 29th of August, requiring, as I say, the greatest possible attention, and care, and a great deal of tact and a great deal of delicate handling.

4793. That is rather an exceptional case under pressure of war, is it not?—I have had a great number of cases of this class. Another case was the raising of the Yeomanry. You at once get involved in correspondence and personal relations, not only with the Yeomanry Committee, but practically with all the magnates of every county, and if you deal with that class of work as ordinary office work, you will defeat the object you have in view, because it will be scattered all over the department, each branch will deal with it from its own standpoint; and you cannot expect officers, military officers especially, in the various branches to realise the niceties of the situation in each particular district.

That is another class of work which has to be followed up and carried through.

4794. I gather that these are illustrations in support of your main contention that the Assistant Under Secretary of State has plenty of important work to do, and that he would not have sufficient leisure to devote to the Registry; and, therefore, a Chief Clerk and Registrar is necessary?—Yes. I think, also, that a Chief Clerk and Registrar is necessary, because it would be a very long job, and one which would entail the entire attention of a man for several months to elaborate and introduce a new system in the Registry which would be satisfactory. I should think it would be a year before you got it in full working order and a man trained for it.

4795. Then you advocate, very strongly, the appointment of a Chief Clerk and Registrar?—Yes, I advocate very strongly the establishment of the Central Branches which I have intimated in my table on page 15 of my memorandum.

4796. (*Sir Charles Welby.*) Would he draft letters or would he revise the drafts made in the departments?—He would, of course, draft all the letters that are now drafted in C. 2. I do not mean himself.

4797. He and his staff?—Yes; he and his staff would draft all the letters which are now dealt with by C. 2, which, as you are aware, are mainly letters between public departments, and the political letters raising questions with public bodies, and so forth; but, I think, if he were a man of position and a man of character, well suited to the place, he would also be able to improve very much the general letters. There is some correspondence in my opinion which is now carried on in the Military Branches which might be better done in the Central Branches. I do not allude to correspondence on money matters with the Treasury, but the general inclination has been to consider every letter to the Treasury as purely a finance letter, whereas sometimes we have to write upon matters in which no money question is involved at all.

4798. In fact you would be inclined, if such a Chief Clerk were established, to transfer to him a great deal of the drafting of letters of real importance which is now done by the departments?—I would be inclined to let him draft a great many of the letters, most of the letters, in fact, which did not deal with the technical and particular work of the departments from which they emanate. I would never interfere with absolute freedom of action in regard to the military authorities in the War Office. Obviously, the Adjutant-General's letters and most of the Quartermaster-General's letters would be written under their direction, and drafted as in accordance with their views; but very often questions arise in a great many cases with the Inspector-General of Fortifications, for instance, which have really nothing to do with the military aspect of the case at all; and those letters, often addressed to public bodies and to corporations who have to be humoured, would, I think, be much better done in the Central Branch by a man whose sole duty it would be, and whose literary knowledge would apply.

4799. I should just like to put to you one difficulty which strikes me in connexion with these suggestions of yours: I take it that you would propose in the case of some paper raising an important question emanating from one of the Branches of the War Office, and necessitating a reference to some other public department, or somebody outside the War Office, that the procedure should be that that proposal, after leaving the department concerned, or the departments concerned, should, in the first place, go to the Chief Clerk for him either to draft the letter or revise the draft already made by the Department concerned; it would then go from the Chief Clerk to the Assistant Under Secretary in order that he might see whether it was of sufficient importance to go further. Assuming that it was of sufficient importance it would then go to the Permanent Under Secretary, who, if it was a matter of first-rate importance, would then pass it on to the Secretary of State?—Those would be very extreme cases.

4800. It seems to me that in a case where it was of sufficient importance to reach the Secretary of State that procedure rather elaborates the circumlocution?—No, I do not follow you altogether. Practically, what I would suggest would be inverting the present system. Under the present system the officer who is dealing with the paper writes a Minute from which a letter is drafted by a subordinate in his own Branch. It is then sent up for approval if it is an important paper.

4801. Sent up to whom?—Sent up either to me or to the Permanent Under Secretary for signature.

4802. It would not go to the Chief Clerk at that stage?—I propose to invert the machinery; I should say, instead of that letter being drafted (a letter of the character which I have been indicating) in, say, a Military Branch by a subordinate who sends it on to me, and I then have to correct it very often from the purely grammar point of view, and waste a good deal of time on it, it would go to the Chief Clerk, and if it was not a very important letter, he would sign it, and ought to have authority to sign it. If it was a letter of sufficient importance, he would see that it was decently drafted before it came to me at all; then I would judge, as I do now, whether it was a letter I could sign or whether it was of such importance that it would go up, but it would only be in very exceptional cases, as is the case now, that the actual letter goes up to anybody else beyond me or Sir Ralph Knox.

4803. (*Chairman.*) Does that mean that the Chief Clerk would draft the letter upon the Minute?—Yes, his Branch would.

4804. Not that he would amend the draft that came up?—Yes; all letters not written in his Branch he would amend, if necessary, or one of his officers would.

4805. But for a certain class of letters you would make him the actual drafter?—I think it would be better in the case of letters to other public departments in which the Military aspect was not very predominant.

4806. Has that procedure been followed in any other Public Office; is it not rather that the Principal Clerk amends and frames the drafts that come up from the departments?—Yes, that is what he would do; but I think there are some letters which do not appertain to any department except the Secretarial Department of the Office; they happen to go into a Branch, because they deal with—what shall I say—the repainting of a County Council bandstand of a particular colour at Woolwich, and as such they are put down to the Woolwich number, and go to the Inspector-General of Fortifications who, I think, is very often burdened with it; very often it is merely a question of saying, "There is no objection to your painting this bandstand," and, I think, that class of correspondence would be very much better done in a Central Branch than done by highly paid Military Officers who are very busy on more important work.

4807. (*Colonel Miles.*) Would not that mean that they would have to read the whole of the papers and draft the letter on them?—I do not mean to say that I wish them all done in that way, but that by carefully going through them a certain class of letters might be added to the letters which are now written by C. 2.

4808. (*Chairman.*) I should have thought myself that the more practical way and the way that obtains in other offices is for the draft to come up from the department and then to be amended by the Chief Clerk?—That is what, I think, I indicate; that is what I suggest being done in all cases that do come on for signature. That is the system I advocate.

4809. All letters that come up from the Branches could be amended?—Yes, I must point out (perhaps it is not quite prominently before the Committee) that the letters which deal with the subject matter which is immediately under the particular Branch are signed by officers of that Branch; it is only a certain class of letters that come on at all. I am not dealing with the mass of correspondence in the office. For instance, in all correspondence with the Army the letters are signed by Adjutant-General, and neither the Permanent Under Secretary of State nor the Assistant Under Secretary of State sees them. Similarly the Quartermaster-General signs all letters that are purely Quartermaster-General letters; they never come on. But questions arise that are difficult for them to understand, that are neither fish, flesh, fowl, nor good red herring.

4810. (*Mr. Mather.*) Nobody's business?—Yes, nobody's business, and I think that all letters of that class that are nobody's business should go into the Central Office.

4811. That business is, of course, the Permanent Under Secretary of State's business?—Yes.

4812. And those matters should be regulated by him from day to day?—Yes. Take the case of the Colonial contingent over here. It devolves upon the Quartermaster-General to house and feed them, but the

Quartermaster-General has nothing to say to private efforts to entertain them, and yet he is deluged with letters from people, saying, "Will you let 20 of these 'men go and see a Punch and Judy show in my 'gardens to-morrow morning'?" That is not the Quartermaster-General's business at all, and very possibly the reply might be drafted by a subordinate official in the Quartermaster-General's office in a very curt and military tone which would not quite meet the case, and which would lead to friction with the public, from which this Office very much suffers.

4813. (*Sir Charles Welby.*) As a matter of fact the letter on a subject of that sort under the existing system would be drafted in the Central Branch now, in C. 2 would it not?—Practically, it is very difficult to say that they are. I think the tendency has been to take them. It is very difficult to break up a correspondence when it is once started, and, I think, it would be well to relieve the Military branches of what is not Military.

4814. (*Mr. Mather.*) In that particular class of case the Quartermaster-General would send that letter forward to the central office to be dealt with there?—Yes; practically it would never go to him at all; it would come straight to the Central Department.

4815. (*Chairman.*) A suggestion has been made by one General Officer Commanding a district, that the principal cause of delay in correspondence is the fact that all the letters which reach the War Office from whatever quarter of the world are passed into one central Registry. He has suggested that there should be several registries in the War Office, that practically every great department in the War Office should have its own Registry; and that when people are corresponding they should put some mark on the envelope to indicate to which Registry this letter was to find its way; do you think that that would be practicable?—I should think the very reverse. It would certainly lead to an enormous increase of confusion and I think of delay, and I fail to see what advantage you would get. The one means by which you may hope to keep things a bit together and pass them quickly through, is to have what you may call a post room, one place where the correspondence is poured in like the Sorting Office at St. Martin's-le-Grand, and then shoot them out with the utmost rapidity to the departments concerned. I do not know what would happen to a letter if somebody put a wrong number on its envelope and it went to the wrong Department.

4816. (*Sir George Clarke.*) But there have been a good many complaints about letters sometimes getting into the Registry and then being started on the wrong path?—I think that is attributable not to the volume of letters which go into the Registry nor to the system, which is a very good one; it was started and invented by Sir Ralph Thompson, who was an official of great experience, and works admirably. I think, if there has been delay, it has been owing to the fact that they are not properly staffed and not properly controlled. I think if they had proper officers of proper standing to control it, the actual work would be satisfactorily done.

4817. In some cases, when letters come in, it requires a considerable amount of discrimination to see off-hand to what branch they should go next?—Yes, and I think a certain amount of time is wasted, because there is not a Registrar. At present, if there are any letters in the Registry as to which the officer in charge of the Registry is in doubt (and, of course, there are many, owing to his not being a man of considerable status), he has to wait until he can get hold of either myself or Sir Ralph to know where he had better mark them to.

4818. Then, if evils arise out of a wrong distribution of letters, you attribute them to a general weakness of the head of office in discriminating power and administering power?—Not altogether. I think, perhaps, to the lack of sufficient authority to take the responsibility in many cases. If you had a chief clerk he would decide it, and say, "My opinion is that it should go to that 'branch, I have good reason for it, and it shall go to 'that branch.'" A Second Division clerk does not dare to do that, and he has to wait until he can get hold of either of Sir Ralph or myself.

4819. (*Chairman.*) He is continually referring?—He always does refer, and I should be annoyed if he did not with a great many of the papers, because I think he is not in a position to form an opinion, and ought not to decide in an important matter.

4820. (*Sir George Clarke.*) Then supposing you retain the centralised Registry, you do not think it would be a good thing that subjects of a certain class should be marked with certain letters on the envelope which would at once send them to the department concerned?—No, I do not think so. I think it is a most important thing to retain the Central Registry. Decentralisation comes in strongly when you have once started a paper; it is transmitted from branch to branch, and, I think, there is no particular undue delay in dealing with it; the machinery is sound if it is properly worked with a proper staff.

4821. You do not think it would be better to have something of the same kind as used to be done formerly. Before everything was addressed to the Under Secretary of State, I think letters used to be addressed to the departments?—Yes, but they all went upstairs just the same.

4822. You do not think it would be well to mark them outside in that way?—I do not see any advantage in it, because the great bulk of the letters which would be addressed to the Commander-in-Chief or Secretary of State or the Permanent Under Secretary, would all have to be opened in the opening room and put in their jackets, as we call them, and all entered in the Index Books with a number put against them. Otherwise, you would lose all trace of them. Whether they were addressed to one man or another, they would have to go through that mill. In olden days, when letters were addressed to the Commander-in-Chief or the Adjutant-General or the Quartermaster-General, no doubt it helped a little, because you saw at once at a glance without having to read so much, where they ought to go. I never, personally, could see the advantage of the change that was made.

4823. But it is a matter of some importance, is it not, that a letter when once issued from the Registry should be launched on the right course at once?—Yes.

4824. And its speed in passing through the office might be affected if it took a wrong start?—I do not think there is any risk of its taking a wrong start and going to the Quartermaster-General instead of the Adjutant-General. I think the lines of demarcation in the business are so clear and so distinct that the case would hardly arise.

4825. (*Mr. Mather.*) What, on a rough average, is the number of letters received in a year?—I really could not tell you. You shall have a return if you wish it.

4826. Could you give us an idea of the routine when letters come here; are they put into one room?—They go into one room and are all opened there.

4827. No matter to whomsoever they are addressed?—All letters except private ones.

(*The Secretary.*) Letters are all addressed now to the Under Secretary of State.

(*Witness.*) Some come in otherwise addressed. In point of fact, the other day the Quartermaster-General had a letter addressed to him by the Dean of St. Paul's, and on the outside of the envelope was "Quartermaster Clarke."

4828. (*Chairman.*) But the rule is that the public is given to understand that all communications should be addressed to the Under Secretary of State?—Yes.

4829. (*Mr. Beckett.*) What is the fact with regard to works letters, of which you must have a great number?—Enormous. They are marked for the consideration of the Inspector-General of Fortifications.

4830. By whom?—By the head of the Branch. If you had a chief clerk and registrar, I think he could burke the minute writing on a good many papers. If you had a man in the position and status of chief clerk and registrar, I think he could constantly take upon himself to say, "I am not going to refer this to any 'branch; it is a lunatic inventor who says he can get 'to the moon with a cannon ball; I shall send him a 'printed acknowledgment and put it aside.'" Now it is treated like first-class important letters and sent to some Branch.

4831. (*Mr. Mather.*) Is a printed acknowledgment sent to every letter, no matter on how trivial a subject?—I am not prepared to say, but in a good number of cases it is, I cannot say certainly, but I do not think there is an order, as at the Army and Navy Stores, for instance, that a halfpenny receipt card be sent at once,

(*The Secretary.*) It is in the rules; but it is not invariably carried out if there is a reasonable chance of a reply being sent in the course of a day or two.

4832. (*Chairman.*) It is observed with discretion?—So I understand.

4833. (*Colonel Miles.*) Is there any delay, do you think, in the transit of correspondence between branch and branch during the process of minuting?—In the transit of papers I think there is delay.

4834. They all go the Central Registry to be registered again in the transit?—No, they go straight from branch to branch, the number of the paper and the number of the transit is entered on a sheet and that sheet is posted up at the Registry. There ought to be no delay, but if you ask me whether there is delay, I think there is; but there again you have nobody who is keenly interested in watching the paper.

4835. (*Chairman.*) But in theory the head of one branch can carry a paper to the head of another branch, only notifying it to the Registry?—Yes, and if he were to take it with the intention of bringing it back at once he would hardly notify it.

4836. (*Sir George Clarke.*) I see on page 15 of your Memorandum you only allot one junior clerk to the Registry; is not that rather underdoing it?—I have put the minimum in all this Secretary's Office. As you know, of course, this is quite aside of any war pressure work; but I, myself, am of opinion that your Higher Division should be highly paid, and should do only very responsible work.

4837. But as regards the particular thing which is to be reorganised, to keep a more efficient watch over important papers, to record important decisions, and generally, I suppose, to watch over the transit and relative importance of papers, as you have explained it to us, it looks to me insufficient to put that whole Section C. 1 under one junior?—You must take them all in relation. I strongly object to the present system under which a junior clerk of the Higher Division is given ordinary routine work, as, I think, it is at any rate not the best work for him. The whole of this scheme, as I have said, is based upon having good men, and insisting upon getting good men, paying them well, and making them do responsible work. This Registry, you must understand, is part and parcel, it is a mere sub-division of the whole of the Central Office, and to control that central office I want a chief clerk who would be under me, a principal clerk, two seniors, and three juniors available for the work of those three sub-divisions; I think if you got a chief clerk, a principal clerk, and a senior available for the general work of the whole three branches together, one junior ought to be enough with intelligent staff clerks under him, to look after the actual registry work, because really the maintenance of discipline and intelligence is all you want.

4838. (*Colonel Miles.*) He would bring all the difficult cases to the head of his Branch?—Yes; I have worked it at the minimum, and I ought to say (I think I have said in the memorandum) that you could only work it on the figures I have given by weeding out bad men ruthlessly; it is no use keeping them. I have made no allowance for weak vessels.

4839. Then is it not hopeless to expect that we shall have no weak vessels?—I do not think so. You are doing it in the Army. I do not say for one moment that you have not got weak vessels in the Army, but still you are beginning to be very drastic in the treatment of young officers of a year's standing in the Army, and I see no reason why you should not apply the same system to the Civil Service. I would get rid of clerks in their first year's service who did not promise to develop into thoroughly efficient public servants.

4840. (*Chairman.*) Have you anything to add as regards the other two branches, C. 2 and C. 3, in addition to what is in your memorandum?—No, I do not think I have; and I would like to be allowed to say that in giving the evidence I have given to-day, if I have appeared to modify my memorandum I did not wish to create that impression. What I wish to go by is my memorandum.

4841. (*Colonel Miles.*) The first one?—Yes, on War Office Reorganisation.

4842. (*Chairman.*) Just one point as regards C. 3, the Regulations, is the Branch which copes with Regulations adequate in your opinion?—Do you mean as at present constituted?

4843. Yes?—No, I do not think so. The Office being arranged as it is, I think there ought to be a second Higher Division man there. The Army Regulations Branch is, of necessity, in close touch with very important, and very often very confidential work, and, I think, it ought not to be left in charge of a Second Division Clerk for two or three months in the year, owing to the illness or holiday taking of the Principal. But I would like to say that, coupled with the proposals which I have made, taken with the proposals which I have made for re-casting the whole three, I would not propose, as you see, in my arrangement here to add to that. The establishment has been denied what it has a right to; I have pressed for a second Higher Division man in the Regulations Branch for the last two years, but I have been denied it, and, I think, the result has been that the work of the Branch has suffered. At this moment there are a number of regulations which are practically obsolete, because it has been impossible for one man to control and supervise the work.

4844. (*Mr. Mather.*) Who has denied you the request?—Well, I have not had it.

4845. To whom did you make the request?—To the Permanent Under Secretary.

4846. Does not the whole of your evidence to-day point to this consideration, that the Permanent Under Secretary of State is charged with all the responsibilities that you have described, and if the departments are not thoroughly well administered, the responsibility must rest with him?—He would be the first to accept that responsibility; obviously he is the head of the office.

4847. And there is nothing further required so far as system is concerned, apparently; but some further administrative power is required on the part of the Permanent Under Secretary?—He has the administrative power.

4848. But if the administration is not perfect, the responsibility rests with him?—Entirely.

4849. And from what you have said to-day, nothing, it seems to me, in the nature of adding to the various departments in the way of staff, could make up for indifference on the part of the Permanent Under Secretary?—No, assuming that as a typical instance.

4850. The officer himself is there; he has been established?—Yes.

4851. He is competent to undertake all the duties you have described, and he has the power to increase the staff and raise the salaries?—No, we cannot raise the salaries.

4852. He could, if there were certain promotions required, refer the case to the right quarter and fight it out?—Yes.

4853. Therefore, indirectly he is responsible for the whole deficiency of the department that you have referred to?—Yes, the responsibility must rest with the head of the Office.

4854. Then what can anyone do from outside? If the Permanent Under Secretary is not held responsible by the Secretary of State for all these things going well, what is to be done except change the Permanent Under Secretary?—You are at present engaged, as I understand, in going into the whole question of the staff and work of the office; you are taking evidence from the various officers in it. The Permanent Under Secretary in this particular case, I fancy, is perfectly satisfied with the working of the office. I am not. It rests with you to take his view or mine.

4855. That is a point; but, so far as our inquiry goes, if we found the system in itself perfect, or practically perfect, we should be bound to say that in the carrying out of that system gross scandals, as it has been put in one case, or neglect of work in other cases take place, and we should be bound to point out that the system is all right but the administration all wrong?—If you take my view, but it does not in the least follow that you would take my view.

4856. That is your view?—My view is as I have ventured to place it before the Committee.

4857. Am I right in assuming that that is the view that you hold, that there is nothing to change in the system, but it requires to be managed in a more masterly manner?—I have been endeavouring to show what changes I consider necessary.

4858. (*Chairman.*) Is it not this, not that there is nothing to be changed in the system, but that the

Mr.

Wilson, C.B.
19 Feb. 1901.

Mr.
G. D. A. F.
Wilson, C.B.

19 Feb. 1901.

Permanent Under Secretary would have power to change it in any direction if he thought it advisable?—Yes.

4859. (*Mr. Mather.*) So that the remedy is to fix upon the Permanent Under Secretary the responsibility of carrying out all these acts of administration in the most perfect way?—Yes; but only to this extent. The responsibility for the Army rests with the Commander-in-Chief, but you can easily and readily understand that it may be advisable to go into the question whether the Quartermaster-General's Branch had not better be worked in another way and the Adjutant-General's Branch had not better be worked in another way. You ought not to destroy, and never can destroy, the responsibility of the titular head of the place; but when you are making an inquiry such as you are at present engaged upon, I presume that you take the evidence of the various officials in order to see how the present arrangements work and whether they would be improved by certain modifications.

4860. We are only making inquiry to-day as to how the Central Office has been worked under the head of the Central Office; therefore, we are really examining into the effects of the administration of a certain high official of the War Office?—As personally responsible to the Permanent Under Secretary for these three offices (or two of them: one I have shed) I have endeavoured to place before you the reasons why I am not satisfied with their composition and with the outcome of their work, and to indicate in what direction I would like to see them altered.

4861. And if you were the Permanent Under Secretary of State, you would see no difficulty yourself in altering the system to suit the views which you have expressed to-day?—No, none whatever; that is what I have endeavoured to indicate; it would only be a question of getting the Secretary of State to approve and the Treasury to grant.

4862. (*Chairman.*) Let us come to a concrete instance. When you say that there is a point at which although the Permanent Under Secretary of State is responsible and has power you can assist him, you should practically strengthen his elbow. I think it is Sir Ralph Knox's opinion and also yours that the Higher Division Clerks should, as regards pay and prospects, be put upon what is known as the Ridley scale. I think that has been put forward by the War Office again and again and has been always refused by the Treasury?—Yes.

4863. If this Committee made a recommendation that they thought that essential, we should be forwarding the views of the Permanent Under Secretary?—Yes, I might point out that I do not think those proposals have ever been put forward to the Treasury coupled with such a large reduction of the Higher Division staff as that which I venture to propose.

4864. That is to say, when those proposals have been put forward by the Permanent Under Secretary, the Treasury have, I believe, always maintained the attitude that they were perfectly willing to accept them, provided there were a material decrease in expenditure?—Yes, in numbers; and I have ventured to attempt to indicate how the two should be carried out, the reduction of numbers and the increase of salaries. I think you will find it on pages 15, 16, and 17.

4865. (*Mr. Mather.*) Reduction of numbers, increase of salaries, and total decrease of expenditure?—I think I show a slight decrease; you have it on page 17.

4866. (*Sir George Clarke.*) Your principle is that the work would be better done by fewer people, provided the general average standard was raised?—Yes, and I think that is the experience one derives from looking at almost all public institutions; great numbers of underpaid men do much less work than a smaller number of well-paid men.

4867. (*Sir Charles Walby.*) With regard to this scheme set forth in your Memorandum, do you not think it leads to a rather elaborate chain of responsibility?—Would you mind telling me which you refer to?

4868. On page 15. As I understand it, supposing an important question arose in the Army Regulations Branch, requiring reference (say) up as far as the Permanent Under Secretary, under your proposed re-organisation, C. 3, the Registry Branch would refer the matter to the principal clerk, who would be common to the 3 C's; he would refer to the chief clerk who is in general charge; the chief clerk would refer the matter, as I understand from your proposal, to the

Assistant Under Secretary, and the Assistant Under Secretary, if he thought it of sufficient importance, would send it on to the Permanent Under Secretary?—No, I do not think that would be necessary at all. In the first place, you are taking only an instance in which the paper would go up to the Permanent Under Secretary.

4869. Yes, I take that?—Then in that case I think it would be perfectly reasonable for the principal clerk to pass it up straight to either the Assistant Under Secretary or the Permanent Under Secretary; that practically is the system we have already adopted in the office. The Assistant Accountant-General passes papers straight up to the Accountant-General, or even the Financial Secretary when it is obviously a big thing. For, instance, C. 3 in dealing with Regulations would never dream of passing through all those persons a mere paper, of which there are a great many, which requires the mere formal approval of the Secretary of State.

4870. (*Sir George Clarke.*) But, as a general principle, do you not think it is undesirable to have a continually ascending scale of individuals? Here we have, I see, taking this one branch, the Principal Clerk, then the Chief Clerk, then the Assistant Under Secretary, and, lastly, the Permanent Under Secretary; does not that mean, in practice, that everything must go up to the Permanent Under Secretary successively through all those people?—No, certainly not; you must not lose sight of the fact that the Permanent Under Secretary is the head of the whole office for the work of the whole office; he is not answerable for one particular branch; he is working the whole department. His assistant, to enable him to get through the great volume of work, and to take his duties when he is away, is the Assistant Under Secretary of State. This is a particular branch of the office, just as the Quartermaster-General's Branch is a branch of the office, but the head of the Army, as a whole, is the Commander-in-Chief. This is only a section of the many branches which are under the Permanent Under Secretary, assisted by the Assistant Under Secretary, and most of the work of it would never go beyond the Chief Clerk.

4871. But in actual working the Principal Clerk could not very well say, "This is a paper which had better go to the Permanent Under Secretary at once," could he?—Yes, he certainly could.

4872. Then would his immediate chief, the Chief Clerk and his next chief, the Assistant Under Secretary, not be aggrieved?—No, they would say at once, as they do now, "This is obviously a big thing and had better go straight to Sir Ralph." It is an understood thing that there should be a certain amount of division in the actual class of work which you take. There are many papers that I never would see at all; they would be obviously papers for the immediate consideration of the Secretary of State on one minute from the Permanent Under Secretary.

4873. Then it is possible to drop out links from this somewhat long chain?—Yes. The object of putting in the chief clerk is as much as anything to arrest a great deal of indifferent work going up to these people; the various branches of the War Office are smothered in detail work of secondary importance, and you can only stop that by having a buffer. I may perhaps be allowed to read for the information of the Committee an office memorandum which has been issued under the instructions of the Secretary of State, and which runs as follows:—"In no case will a paper be minuted 'by more than one gentleman in the room from which it emanates, or, in all but exceptional cases, by more than one staff officer, before it reaches the Financial Secretary, or the Secretary of State, as the case may be.' Then this is the point:—"The Permanent Under Secretary and the Assistant Under Secretary will not both minute papers. The Assistant Under Secretary will go direct to the Secretary of State on papers which he deals with." That principle would be carried right through whether you had a Chief Clerk or not.

4874. But that, of course, is a recent office regulation?—Yes; it is one I have been asking for for a very long time; it does not affect my view of the situation, I mean.

4875. (*Chairman.*) To turn to another point in your memorandum discussing the agency which should be employed in the Military branches; at the top of page 5 you say that you are "strongly of opinion that the constitution of the Military branches should be en-

"tirely Military." I want to call your attention to the word "entirely"; does that mean that there should be no Civil clerks at all?—Yes.

4876. That there should be no Second Division Civil Clerks with Military officers over them?—Yes.

4877. But that the whole branch, from top to bottom, should be Military?—Yes. One of my objects is the creation of what is very much wanted, namely, reliable, intelligent, and well-trained Military clerks.

4878. Apart from the object of creating (certainly an object worthy of attention) efficient Military clerks, do you think that the work in the Military branches would be done better and more economically if the Second Class Clerks had their places taken by Military clerks?—I do not say more economically, but practically the clerks I indicate as Military clerks would be Second Division Clerks in uniform.

4879. I think it has been stated, has it not, by Sir Ralph Knox, as the result of his experience, that he thought the Second Class Civil Clerk was a more economical agent than the Military clerk?—I quite agree, if you take the Military clerk as he is now; but the Army is suffering, and suffering greatly, from the want of properly trained good Military clerks; the supply is very small indeed, as any soldier will tell you, and the difficulty is especially with the supply branches; and the orderly work generally in districts is suffering very much owing to a lack of those clerks, and I want to make this a nursery of them.

4880. Then your object in advocating the exclusive recruiting of clerks for the Military branches from Military clerks is rather to train up Military clerks for the Army than to promote greater efficiency here?—I think you would get greater efficiency also.

4881. In the long run?—When once you had got your material. Given your trained staff, when you had got your clerks, which you require to create to a certain extent, I think it would work much better. There is a tendency now in these mixed branches to—well, how shall I put it without being offensive—to ring the changes a little bit on the Civilian *versus* Military, and Military *versus* Civilian. If you get a very sharp young Civilian, he soon finds that he can get a good deal out of a good-natured Military officer who is only here for a limited period; and, on the other hand, if you get a Military officer who is disinclined to work hard and to go into things himself, he finds that an intelligent young Civilian clerk can do a great deal of his work, and he trusts him, and gives him work that he would not dream of giving to a man in his own service, because the discipline element would come in.

4882. Does not the existence of a certain Civilian element made for continuity of tradition?—No, I do not think so in the Military branches; because, practically, the great bulk of the men are in subordinate capacities, who would have nothing to say to continuity of tradition; and I think I may add that great respect for tradition has been one of the sources of evil in this office.

4883. But I suppose it helps very much, when a question comes up to be dealt with, to have a man who knows how the question was dealt with ten or fifteen years ago; it is not like having to deal with it the first time?—On the other hand, you must remember that a great deal of our work is governed by military regulations, and they vary every month.

4884. I think in every business one regards it as a very important element that there should be one or two gentlemen with long experience of tradition and usage?—Yes, and you will have those men in the office, just as you have them in a City office; but you do not require to have that traditional knowledge, if I may put it so, in all the sub-divisions of your City office, and we do not want it here.

4885. (Sir George Clarke.) The Second Division Clerks do not preserve the continuity of the office in any way?—No. Where you want your continuity is in your manager and assistant manager in a bank; but you do not want continuity in the detail clerks.

4886. (Chairman.) The continuity which is now kept up in the Military branches, so far as the Civilians keep it up, is kept up by the Higher Division Clerks, is it not?—No, largely by other branches of the office. No doubt it is convenient to have a man who has at his finger ends some minute details in connexion with medals and crosses, and you do find an old clerk

who has been here for 40 years, who is a walking dictionary on some matters of very minor importance, and it is a convenience to consult him. But, on the other hand, if he is laid up with an attack of bronchitis, the whole branch is arrested, because nobody else has ever had a chance of knowing anything about it.

4887. (Sir George Clarke.) In any case, you look upon a mixed staff, Military and Civil, as wrong?—I think it is absolutely wrong from every point of view, and I think it works badly, as far as I can judge.

4888. (Mr. Mather.) That is to say, you think the Executive office should be Military?—What I call the Military branch should, in my opinion, be entirely Military. I do not think it is a good plan to mix the two.

4889. (Chairman.) What would be the opinion of the majority of officers who have administered Military branches on that subject; would not the majority of them be in favour of maintaining some Civil employment?—I think I must ask permission to point to the evidence given before the Powell Williams Committee in regard to that. The majority of Military officers were against parting with Civil clerks; but I respectfully submit that many of their objections broke down, in my humble opinion, under cross-examination.

4890. They may have broken down; but they still retained their opinion, did they not?—No, I think I may say, and say correctly, that since that evidence was given they have rather modified their attitude, and there is a tendency on the part of the Military side to accept Military officers in the place of Civilians.

4891. (Sir Charles Welby.) Do you think that the appointment of this Committee may possibly have had something to do with that tardy confession?—I think it is very likely; but I think, also, that they have got accustomed to the idea. They were very averse to it for years; it was against tradition; and then one or two broke down the rule. Sir Henry Brackenbury, for instance, at my earnest solicitation, appointed a Staff Captain instead of a confidential clerk. A very few years ago the Military heads of Departments told you that they could not get on, that it would be impossible to work their branches without a confidential clerk. Now, Sir Henry Brackenbury, has broken through that rule, and it has answered admirably; he has a young Staff Captain of the Royal Artillery, and it has worked extremely well. Another one who parted with his Civil confidential clerk and took a Military Staff Captain is Sir Coleridge Grove, the Military Secretary, and I know he is perfectly satisfied with the change.

4892. (Chairman.) Is there not a danger that these Military Staff Captains may be torn away any day for active service?—We have the case of this particular war, where there has been a phenomenal call for officers of every description. I should say that the Director-General of Ordnance's Staff Captain is probably one of the very best young soldiers in the Army; but he has not been allowed to go to the war; he has been kept here; just as the Quartermaster-General, the Adjutant-General, and the Director-General of Ordnance have been kept here.

4893. Has he not, *quâ* soldier, lost a lot of experience which he might otherwise have gained?—He has gained, on the other hand, an immense amount of experience in the home administration of an army in the field, which I take is of as much value.

4894. (Sir Charles Welby.) But it is the fact that even the original force sent out to South Africa in the first instance contained large numbers of officers who were taken away from their duties at Headquarters for that purpose?—It contained a large number of officers taken away for that purpose, but a large proportion of them were from the Intelligence Department; and I believe it is rather understood that the Intelligence Officers, who have studied the country and the particular locality where a war takes place, are to be available for the use of the General in the field.

4895. But I suppose, broadly speaking, you would say, from your experience, that it is a very great inconvenience to the proper conduct of the business of the department in time of strain that officers should be taken away from headquarters at such a time in order to take the field?—I should think it was absolutely dangerous myself; but I must point out, if you ask me that question in reference to my suggestion that the Military branches should be entirely manned by soldiers, that that hardly applies; because it is generally speak-

ing the high officers who insist upon going to the war, and, if they do, I do not see that there is any particular objection to the juniors going, the continuity vanishes, I mean to say, immediately. In the Nile Campaign, speaking from memory, there was a clearance of everybody out of this office, and very grave difficulties ensued I have always understood.

4896. (*Colonel Miles.*) But it was not so in this last war; a very small number of officers went?—Yes. I do not think there ever was a war where the proportion of the headquarter staff who went out has been so small; in fact, it was only when they were so short of officers that the higher military officers were allowed to go.

4897. (*Sir Charles Welby.*) But, as you say, most of the important men who were taken away were at the head?—Yes. I think, of course, it is very wrong, but what are you to do? They insist upon going.

4898. I suppose you would consider that it would be an essential condition of replacing Civilian clerks by Army officers, that some limit should be put to the extent to which such officers may be taken away from this office in order to take part in active operations?—Yes, I think so; but I think that that principle now may be taken as accepted, and I do not think anybody really combats the fact that it is the principle; you must make exceptions at times but I think that the tone of those who govern the Army is strongly averse to letting the Headquarters staff go straight away when there is a war.

4899. (*Mr. Mather.*) Would you define the Military Branches?—The Adjutant-General's Branch, the Quartermaster-General's Branch, the Director-General of Ordnance's Branch, the Military Secretary's Branch, and the Inspector-General of Fortifications' Branch.

4900. Take the Director-General of Ordnance's Branch; does not that comprise a considerable number of duties which are bound to be performed by Civilians?—I am not talking of the manufacturing establishment; I am talking of the work here—office work. I do not think there is any work in that Branch which could not be better done by soldiers with technical knowledge than by Civilians. It has gone very much better since they have reduced the number of Civilians and introduced the Military Branch.

4901. The Director-General of Ordnance's Branch all round?—Yes. I remember when many of his branches were entirely governed and controlled by Civil principal clerks, and I think the improvement is so patent as to be beyond dispute.

4902. Is it the case that his office at present is entirely administered by Military clerks?—With the exception of one branch, O. 6, which is curiously enough the Provision and Supply of Arms, Ammunition, Equipment, &c.; there they seem to have five Civilians, but with that exception they are almost all soldiers, and that I, think, is the most glaring instance of the absurdity of the present arrangement; that you have in the Director-General of Ordnance's Branch a number of civilian clerks in a branch the duties of which are described as "Provision and Supply of Arms, Ammunition and Equipment, other than those special to "Royal Artillery," &c.

4903. You would not consider the Director of Contracts' Branch a part of the Director-General of Ordnance's work, although he is there to serve him?—It has nothing to do with him at all; it is a totally different branch of the office.

4904. It was instituted to serve his purposes?—It is the purchasing department for every branch.

4905. (*Sir Charles Welby.*) Would you include the Works Department, that is to say, the Department of the Inspector-General of Fortifications?—No. I stated that I would take away the ordinary works from the Inspector-General of Fortifications. It would relieve him of a great deal of work which I think could be done by Civilians possessed of technical knowledge, and leave him more time to deal with the far more important work, the real work of his position.

4906. Do you draw a distinction, then, between barracks and fortifications?—Yes, a very marked distinction; and also between the administration of land and War Department buildings. I do not see the slightest reason why you should have highly paid expert Military officers with great technical knowledge wasting their time over the drains of a Quartermaster's house.

4907. Would it be practically possible to draw a hard and fast line as between works for barracks and buildings generally on the one side and fortifications on the other?—I see no reason why there should be any difficulty so long as the Inspector-General of Fortifications had the absolute authority as regards the place where the buildings were put, and the class of building, and non-interference with fortifications, and so forth. I do not see why the Office of Works, so to speak, the Civil Office of Works, should not provide the barracks at Knightsbridge for the Life Guards just as they are building a new War Office for the Headquarter Staff in Whitehall.

4908. Might not the contract for some building at a station include both defensive works and barracks which might be almost part of the same building?—I do not see why it should, but if it did, obviously no arrangement should be allowed to interfere with the Military necessities of the case. You may have an exceptional case of that character, but there are an enormous number of cases where that difficulty would not arise.

4909. (*Sir George Clarke.*) If you made the Civil Works Branch a special one, built up from the ground floor, would it not give rise to considerable expense?—I do not think so. I do not see why the Office of Works should not do it.

4910. You would have to employ some highly trained Civilians with large salaries?—The Office of Works undertakes all the buildings for the Government, some of them of the highest class and character.

4911. But such things as the requirements and even the prejudices of soldiers have to be considered in building a barrack?—I think there would be no difficulty. First of all, I think a great deal more should be done in having what I call standard patterns for barracks and Government buildings. I think there is a shocking waste of time and money in developing particular plans for particular houses on particular spots. I believe a great deal could be done by having standard patterns and plans, and, if you had those, you could put out your Barrack A. or Barrack B. to contract, that plan having been first passed, if you like, by the Inspector-General of Fortifications, and the Quartermaster-General, of course. I do not propose that a Civilian should build any barrack as he pleases, but the actual building work, I think, might be perfectly well controlled and dealt with by Civil establishments, and I think it would be a great relief to the Inspector-General of Fortifications.

4912. In the out stations a great deal of building work is in Military hands, and you would have, would you not, to establish branches for this new Civil work all over the world?—No, I do not think so. I think, if you had a small job, there would be no reason why a local engineer should not undertake it just as the Office of Works would use any machinery that was available on the spot in connexion with a legation house or a consulate abroad.

4913. (*Mr. Mather.*) As a matter of fact, the Civilians build the barracks; it is all done by contract?—Yes.

4914. And a Royal Engineer, whom the General Officer Commanding may have about him, acts as Clerk of the Works?—But you will find that there are a very large number of highly paid officers at Headquarters engaged on nothing but the Works Division of the Inspector-General of Fortifications.

4915. But that would include fortifications?—No; I am talking of the Works Division.

4916. (*Sir George Clarke.*) You mean rather, do you not, that the present high cost of superintending the work in districts might be reduced by its being done by fewer officers, rather than that the Inspector-General of Fortifications' work should be reduced?—There is a large amount of work and a certain amount of highly paid staff at the Headquarters which is dealing with barrack work, but there are also in the districts a large number of Royal Engineers who are doing practically ordinary builder's work. For instance, what advantage is there, if you want a storehouse built at Pimlico, in passing it all through the Inspector-General of Fortifications' Office? It is perfectly unnecessary. Why should you not tell the Office of Works, "We want a building here of such and such a character," and they would build it for you, just as they build you a new office. When I was down there, there was always some building going on, and I

had engineer officers constantly there looking at *this* and watching *that* and coming in and measuring work, and I was ashamed to see them engaged in that class of work. If I complained of a smell in a latrine, I used to have a Captain of Engineers come down to smell it. I think it is perfectly ludicrous.

4917. But there is such an immense amount of work going on all over the country under barracks and fortifications, that you would want something more than the present Works Department?—Yes, many other considerations would affect the case as to whether that particular department could undertake it; but I think it is a pity to have highly trained Military expert officers in the enjoyment of high pay, especially at a time when we are always told that we are short of engineer officers, and when the Secretary of State is invariably pressed to add considerably to the establishment of the Royal Engineers. I think it is wasteful to have them engaged smelling small drains at Pimlico and building huts.

4918. That, of course, is not a question of the present establishment of the Inspector-General of Fortifications' Office, but is the much larger question of the possibility of making a Civil Barracks Department for the whole of the United Kingdom?—Yes, I have no doubt that it would be possible to combine with it the fullest possible use of the Commanding Royal Engineer of the district, and so forth; but, broadly speaking, without going too minutely into detail, I am of opinion that it would be a very good thing to relieve the Inspector-General of Fortifications of the bulk of his purely civilian building work, and to release thereby a number of very useful and capable engineer officers who are very much wanted for purely Military work.

4919. (*Mr. Beckett.*) I want to ask one or two questions in regard to the delay in the Registry Office. We were all very much struck in the Yeomanry Committee with the fact that we could not get answers to questions which we put to the War Office till after a delay of some days, and in some cases of some weeks. Was that in any way due to defective arrangements in the Registry Department?—No, I do not think so. In the case of the Yeomanry, I watched it carefully myself. I was closely associated, as you know, with the work of the Yeomanry Committee. The fact is, if you start an entirely new organisation and try to graft it on a very old-rooted department, it takes time to fit the one bit into the other, and we were constantly blocked for want of a decision; without your knowing it, it was constantly necessary to refer a matter to the Treasury, because it involved expense. There were no precedents for the Yeomanry, so that it created new law; and, obviously, all that tended to cripple us in our efforts to push the thing through with rapidity. I do not think there was any case in which the Registry held back papers, or in which papers were unduly detained in branches. I think it was unavoidable in every case from lack of precedent or the necessity to obtain a decision.

4920. Of course, it is hardly possible to compare such a small thing as that with the War Office here; but with regard to distribution of letters, we found it answer very well to have the special department marked on the envelope and letters sent there at once?—But you must remember that you were dealing with one thing. You very often find that it sounds to the lay mind an extraordinary thing, that if you telegraph from Dover, the telegram comes up to London to go to Shorncliffe; but it is proved to the satisfaction of responsible intelligent Officers at the Post Office that that is the most expeditious way of dealing with it. Just in the same way it seems a laboured process to subject a cheque of £1. to all the safeguards that you subject a cheque for one million to, but from a banker's point of view, you find it advisable to do so.

4921. I think you referred in your memorandum to the buff paper system; what is that system?—I was dealing with a particular department; I was merely alluding to it on the question of a check on minute writing; I found that by sub-dividing the papers of a branch into papers which were going up to the higher officials, and those which would not go up, I checked a great deal of Minute writing, because the ambitious young man who wanted to have a chance of writing fine English for the Secretary of State to see, dropped it when he found it was not going out of the branch. I found it answered very well, and I should like to introduce something of the same sort here.

4922. Have you put the suggestion before the Secretary of State?—Yes, I brought it to the notice of the Permanent Under Secretary, but it synchronised with his taking over the Registry.

4923. Do you think it is likely to be adopted so far as you can tell?—That depends entirely on what view is taken by whoever is at the head of the office. If I had charge of the Registry, I would try to introduce something of the same sort.

4924. In answer to Question 437, on page 28, of the Powell-Williams Committee, I see you make use of these words: "I fail to find any branch where the junior men can be educated in what I may call the good tone of clerical work and of dealing with papers."—Yes; I think it would be an enormous advantage to have a Central Branch or Secretariat of the character I have indicated in my evidence, if only from that standpoint. We get young untrained officials, men of distinguished academical career possibly, but not good clerks. You have to learn to be a clerk, just as you have to learn to be a soldier. They are now scattered broadcast and drowned either in the Finance Branch or the Contracts Branch or the Military Branch, and they never go through what I call a preparatory schooling in the best tone of clerical duties. I think it would be a great advantage to have a branch which you could pass your young men through and give them a training of that character.

4925. How would you secure the young men passing through that branch; would you take any man who had shown a particular capacity?—My great belief is that you should train all your men early and see what you can get out of them; one man will develop a capacity for a special work rather than another; but I should like always to try and make my man a good clerk. I think there is a great tendency, owing doubtless to the very much higher attainments resulting from the University examination which is possessed by the Higher Division men who come into our public departments, to look upon good clerking with contempt. I, being a clerk myself, and, having been a clerk all my life, consider that the first duty of a clerk is to be a good clerk, and I think it is very important to catch your young man when he comes in and to train him even to what I may call the tidy habits of an office; and I think it would be a very great advantage to have a central office where they would get what I call a good tone; I do not mean, of course, a social tone, or anything of that sort, I mean a good clerical tone.

4926. My banking experience entirely bears you out in that view; in our banks we think it necessary to train a man to be a good clerk, so that he should be capable of undertaking other duties?—Exactly.

4927. (*Mr. Mather.*) It is the universal rule of all commerce?—But I am sorry to say it is not observed in many of the Government Departments.

4928. (*Mr. Beckett.*) There is one more point, and that is with regard to the system for getting rid of incompetent men after a year's trial. You say that that might be extended with advantage?—It is a rule of the Service, but I think I would carry it out very drastically.

4929. That, of course, depends upon the head of the branch, does it not?—It depends here upon the Permanent Under Secretary, but he would be guided, of course, by the head of the branch.

4930. (*Sir Charles Welby.*) Have you ever known the rule to be enforced, as a matter of fact?—I have known it to be enforced, but not under a year; that is the point. For instance, we had a case of a man who was obviously unfitted for the duties which he would be called upon to discharge in this office. The merciful view was taken, and he was allowed to stop on here until he had been here 12 years; his incapacity then became so acute that he was turned out on, practically, no pension at all. I pointed out at the time, and I think it is very obvious, that you cannot punish a man more severely than that; you turn him adrift at an age when he cannot begin a new profession, when all his worst points have crystallised, and you give him a pension which will not keep him in bread and butter or bread and radishes. It is far more merciful to take a man when he has only been in the office a year, and you ought to be able by that time to gauge whether he will develop into a good clerk or not, and say to him, "You will very likely make a very good Civil Engineer, or a very good

Mr.

Mr.
G. D. A. F.
Wilson, C.B.
—
19 Feb. 1901.

" Imperial Yeoman, but you will never make a good official in a Government Department, therefore you had better go." He goes without any reflection on his character; he can get other employment; he is quite a young man, and the Public Service is materially benefited.

4931. (*Mr. Beckett.*) Do you mean to say that in your experience there has been only one case that you know of of a man being dismissed for incompetence?—I know of no other.

4932. Now, one would think that the Government Departments must teem with incompetent clerks; considering the vast number of clerks that come in, there must be a considerable proportion of them?—I think you are forgetting that in the Civil Service you have a very severe weeding process, owing to competitive examinations, before your men get into it, and, therefore, the proportion of failures would be infinitely less than it would be in commercial houses, for instance, where they take a man on the chance of his turning out well, and on his reputation.

4933. Quite so, but still the mere fact that you can point to only one case in 30 years' experience shows that the weeding out is not done so perfectly as it should be?—I prefer to answer in the words of one of my predecessors, who said that it pointed to the fact that the gentlemen who administered the business of the War Office were of exceptionally good character.

4934. (*Sir Charles Welby.*) You have only been referring to the Upper Division clerks who have had a better education?—Yes.

4935. These remarks do not refer to the mass of Lower Division clerks?—No.

The witness withdrew.

Mr.
J. A. Flynn.

Mr. J. A. FLYNN examined.

4941. (*Chairman.*) You are Principal in C. 3, are you not?—Yes.

4942. Which deals with warrants and regulations?—Yes.

4943. How long have you been in that department?—About three years.

4944. When a new regulation is made, does the proposal emanate from the particular department concerned of the Quartermaster-General, the Adjutant-General, and so on?—Yes, in the normal course.

4945. And do they put forward a draft of the new regulation?—Not necessarily. The theory is that the Branch originating the change, puts forward a draft, but they very often send the papers to C. 3, and ask us to draft it. Under the new system, which has been just sanctioned, the normal course for an important change of regulation will be for C. 3 to call together a Committee to deal with it, and draft it, or arrange who shall draft it. The new system has not actually come into working yet.

4946. Let us say for instance, that the Quartermaster-General's Branch wishes an important modification in a regulation; they would come to you with the proposal, and you would convene a meeting of certain people to consider that proposed change?—I do not think we should call a meeting if it were purely a Quartermaster-General's regulation. If it were a regulation in which several of the departments were concerned, though the Quartermaster-General took the lead, then it would be our business to call the Committee, or in some other way bring the lot together.

4947. That is to say, you would bring together the representatives of each department affected by the regulation?—That is so.

4948. That Committee would meet together and discuss it?—Yes.

4949. Would they settle on a form of drafting?—I do not think so. They would consider what arrangements should be made to put a provisional draft before them, or to draft it afterwards. You never can agree upon the form of wording a lot of matter in Committee, I think.

4950. Then who would do that; would you, after the Committee, get out a form of words, and let it be circulated to the different departments concerned?—We have hardly worked the new arrangement yet, so it

4936. (*Mr. Mather.*) On the question of clerks, when you advocate that the Military side should be entirely staffed with Military clerks, how would you provide for sufficient clerical work to be done by Military men?—That is what they would do.

4937. How would you train them to begin with?—You have a considerable number of them already called Military staff clerks; some of those men are of the greatest possible capacity from a clerical point of view.

4938. You must have a considerable number of junior clerks?—Yes, these are junior clerks.

4939. What sort of Military men would you take?—Orderly Room clerks from the ranks; a great number of your Second Division clerks have brothers who are privates in the Army, and we have had Second Division clerks who have gone into the Army because they can make a better thing of it.

4940. (*Mr. Beckett.*) Do you not find that a Military training to some extent unfits a man for clerical duties?—At present, but not with the new class that are coming on, and I want to create a new class of Military clerks. And I must point out that it is on those Military staff clerks and Orderly Room clerks that you depend to administer the whole of your Military Districts. Therefore, if those Military Districts can be worked by means of Military staff clerks and Orderly Room clerks, there is no reason that I can see why the same class of men should not do the same class of work at Headquarters; if you introduce them at Headquarters, you have the great advantage of getting your Military clerks into Headquarter work just as you do your officers, and then, when they have improved in knowledge and experience you can draft them back, as improved material, to run your Military Districts.

is difficult to say what would happen. I think the case of the Special Army Order a few weeks ago about the Imperial Yeomanry would be fairly typical. A rough draft, after a consultation between C. 3 and the Adjutant-General's Department, which was principally concerned, was drawn up by an officer in the Adjutant-General's Department. He consulted C. 3, and he consulted other people who were concerned at various stages, but still he only professed that it was a provisional draft. The Committee then met, went through the provisional draft, and made certain alterations; then after that the matter was carried through by C. 3. The matter was in final shape, and after that it became a mere matter of wording.

4951. Do you give the final wording then?—It may be that we accept the wording originally put forward.

4952. If not you give the final wording?—Yes.

4953. So as to bring it into general harmony with the expressions and language of the regulations?—I fear I must say that at present I try to bring it out of harmony with the way the original regulations are expressed, because I think they are very long winded and badly expressed.

4954. Still, I suppose, to some extent you do bring it into harmony; you do not want to get new phraseology or style?—As the lawyers say, there is always an advantage in keeping to words that have been used a long time and so have acquired a fixed meaning; and of course one would see that a warrant should go in proper warrant form, and so on.

4955. But now if this proposed regulation came up to you in a draft that was not absolutely perfect, and you cast it into its final form of language, would it be issued in that final form of language which you had given it without reference to the departments concerned?—Not unless the alterations were purely verbal.

4956. Therefore, apart from purely verbal alterations, they would assent really to the final form in which the regulation was issued?—Yes, that is so, taking always a normal case. Sometimes a thing has to go through in a hurry, and somebody has to settle it and do it forthwith; but in a normal state of things alterations would go back to the Branches principally concerned.

4957. But when a thing is done in a hurry who does it then; are you ever called upon to draw up a regulation in a hurry which has to be issued without being

referred to the department concerned?—Certainly; several regulations have been decided upon at 5 o'clock to come out that night, and they have had to be drawn up by getting together as many people as could be got. For example, both the Orders with regard to the Yeomanry, but more particularly the original Order about the Imperial Yeomanry, were drawn up in that way. There was some little complaint afterwards that some of the Branches concerned had not been consulted, though there was nothing materially wrong with the Order, as a matter of fact.

4958. That may be a matter of skilful drafting or of chance?—Yes.

4959. Does it not seem rather risky to draw up a regulation which any particular department had to carry out, without the department which had to carry it out being given an opportunity of expressing its views?—Undoubtedly; but, of course, it is for the Secretary of State, in such a case, to decide whether the haste is worth taking the risk.

4960. I suppose that does not often happen?—No. Perhaps if we had not been just having a war time, in which abnormal cases occur pretty frequently, I should not have thought it occurred often enough to mention. It would not often occur in times of peace.

4961. I understand that you are not very satisfied with the language of the regulations?—I am very dissatisfied with the way the regulations are expressed; but there are many very bad regulations, which could not, to my mind, be made much better (or I should have tried to do it) without having better rules to put in the regulations.

4962. But on the matter of the policy of a regulation you have, I suppose, practically no voice?—In theory we have none. If a regulation appears to be a bad regulation, as a matter of fact we do raise the question.

4963. If it comes in conflict with any existing regulation?—We have very little *locus standi* unless it does; but as a matter of fact if I thought a regulation were a bad regulation, and I could not say that it was in conflict with others, and object to it on technical grounds, I should go to the people concerned and mention my objection privately. They are generally very willing to consider it.

4964. You mean to say that you would question the policy, possibly the Military policy, embodied in the regulation?—I think there I had better give you an example. By some curious slip, when the Royal Reserve regiments were formed, it had been laid down—intentionally, I understand—that each old soldier who came up would wear the uniform of his old regiment. Now as all the Scotchmen, for example, were to be formed into one regiment, it occurred to me that they would look a very extraordinary figure on parade. I went and spoke to the Adjutant-General and he said it was quite absurd, and he put it right.

4965. There you were helping the department by pointing out an oversight, but that is hardly what I meant?—My point is that mistakes of that nature occur so frequently as to show that the regulations had better be framed by the people who have some voice in what is to be done, and that divorcing the making of the regulation from the making of the rules on which it is to be based is not good. The number of cases in which, from O. 3, there has come a change of the actual proposal, has been very considerable indeed.

4966. A change in the actual proposal, owing to your pointing out that the actual proposal was, perhaps, inexpedient?—Yes, there have been at least four or five such cases in the last month.

4967. (Mr. Mather.) And they might be inconsistent, I suppose, with other regulations?—They were partly cases of inconsistency. For example, in one that I raised a query on, rather through having some knowledge of pension matters than as C. 3, I pointed out that it would be inconsistent with the spirit of the regulations to give embodied Militia Service a value for pension which service as an ordinary soldier had not. They were not all cases of conflict with regulations; in some of them it was simply that the decisions were inexpedient as I thought.

4968. You have regulations, of course, classified—regulations for Volunteers, regulations for Militia, regulations for Reserves, and so on, and for the ordinary soldiers?—Yes.

4969. But it is not necessary that the regulations for one branch, say, the Militia, should be quite consistent with the regulations affecting the ordinary soldiers of the line, is it?—No, certainly not.

4970. (Chairman.) Coming back to your dissatisfaction with the way in which the regulations are expressed, is anything done in your branch to simplify the language of the regulations and Royal Warrants?—Yes, an attempt is made, but if you take, for example, the Pay Warrant. After a great deal of consideration of that warrant, I am of opinion that it could not be made a good book of regulations unless some of the conditions were simplified. If I might give an example from the part I know best, because I worked at it before I was in the Regulations Branch, I feel sure that if anyone without previous training in Army pension matters sat down to assess a dozen cases of soldiers' pensions, and I was allowed to pick out the cases and I gave them several hours to do it, they would not get more than half a dozen right. If regulations do not allow intelligent persons with some knowledge of the subject to deal with cases like that, I think they are bad regulations. On the other hand, I have read through the Admiralty pension regulations, and I believe, though I have never worked out an Admiralty pension, I could assess a sailor's pension under them. They are simple regulations; while ours are excessively complicated. Refinements have been introduced from time to time, and you cannot make good regulations while so many refinements are made, and while you give way so constantly in every case. A case comes up that only occurs once perhaps in a few years, and it is not exactly met by the regulations, and somebody invariably says: "Let us put an exception in the regulations."

4971. (Colonel Miles.) And that was true also of the old Allowance Regulations before your time?—Yes, I hope we simplified them a bit. I think they have had a great deal more revision than most regulations; I am sure they are better than the Warrant.

4972. (Sir Charles Welby.) I suppose the pay and pension regulations are complicated because the conditions of Service are so complicated; that is the root of the mischief, is it not?—That is the root of the mischief I should say with regard to pay. I am not sure that it is with regard to pensions. I think that when a man comes to a pension, he is a man of one condition, a man of long service, and has ceased to belong to many of the varied classes. I should say it is rather that we are trying to apply a system which was intended for a different state of things, for an army in which short service was the rule, and from which there would be very few pensioners and all would be under stereotyped conditions. For example, the leading rule for pension is that a man's pension shall be assessed as at the completion of 21 years' service; the assumption was that he would not be kept on beyond that. As a matter of fact, not one quarter go at the end of 21 years, so that the leading rule for assessing pensions applies to only a minority of cases. Then when it was found that men did serve after 21 years, of course, application was made for them to have more pension, and instead of having a rule basing pensions on length of service the authorities kept to the rule of assessing at 21 years with all sorts of additions and deductions. That is only one of many instances in which these additions, deductions, and refinements come in. We cannot make a good regulation if the authorities who give the decisions will have such refinements.

4973. (Chairman.) Your regulations become intricate and complex, because they have to be fitted to, and express an intricate and complex state of things?—No, I think the state of things is not so complex as the regulations.

4974. But if you have all these different classes of pay and pensions, you have to have regulations expressing all these different classes of pay and pensions?—But you could wipe away half the complications of the pension regulations if you based pensions on length of service with some allowance for superior service.

4975. Precisely, by changing the subject matter on which the regulations are based; but while the subject matter itself is so intricate and complex the regulations to express it must remain intricate and complex?—Yes, but the complications now go beyond the complications of the subject matters, I think.

4976. Those extra complications that go beyond the complications of the subject could be reduced by editing and compression, could they not?—No, because they are complications, not of regulations exactly, but of the

Mr.
J. A. Flynn.
19 Feb. 1901.

Mr.
J. A. Flynn.
19 Feb. 1901.

system. Take the rule, for example, that the pension is to be assessed in the first instance, as upon the completion of 21 years' service.

4977. I take it that is the subject matter?—I could alter it, I could simplify the regulations.

4978. If you could consolidate the present rates of pay, and all that, you could make your regulations similar, but it is the intricacy of the subject matter that causes the intricacy of the regulations?—My view is that the subject matter is made more intricate than it need be or would be if the detailed effect were considered before the decision was given.

4979. (Mr. Beckett.) But given the subject matter as it is, with no possible change in it, do you still think you could simplify the regulations?—To some extent; that is our effort.

4980. (Chairman.) I gather you could not do so to any material extent?—Not in the case of the Pay Warrant. In some cases the regulations can be improved very much by re-writing. The Volunteer Regulations and the Militia Regulations are being re-written.

4981. But not the pay and pensions?—No.

4982. They will give more trouble, I suppose, than any other?—Yes, I think so, certainly.

4983. (Sir George Clarke.) Can a soldier ever know what his pension is to be?—I do not think any soldier could make it out from the Pay Warrant.

4984. Therefore, it must operate, to some extent, against the attractions of the Army if a man can never make out what his pension is to be; and at the end, probably, when it is made out, thinks it is not as big as he expected, and so has a grievance?—Quite so; he has to go through several steps of calculation, addition, deduction, and then another addition before he can arrive at what his pension will be.

4985. (Chairman.) Given the various subject matters with which your regulations deal, in so far as you can attempt to simplify the regulations, you do so in your branch?—We do so, or we should have done so, if we had not had war, or some other pressure.

4986. You must exclude war for a moment; but in normal times you would be steadily directing yourselves to simplification of your regulations so far as the subject matter admitted?—Yes, we should take up one or two books at a time each year for re-writing and improvement.

4987. Have you a sufficient staff and sufficient time to be able to make any material impression upon that work?—We have not a sufficient staff for thoroughly recasting any number of books; we cannot very well be doing more than recasting thoroughly one book at a time—perhaps two, if we had a full staff. In my time we have not had a full staff, even during the war; leaving out the boy, we have only had three men out of four.

4988. How long with your present staff, excluding war, would it take you to recast them?—Many years, even if the present staff were raised to its normal. The theory of the authorities, not mine, is that the regulations were recast and put into good shape some years ago, and that what we are to do now is to keep on patchworking. I try to re-write faulty regulations as much as possible, and when a lot of additions are proposed I say, "Now you might re-write the thing and put it in half the space," and we do that with little pieces at a time, but it is slow work.

4989. (Mr. Mather.) Who gives you authority to do that?—We have authority to do that.

4990. You can revise, recast, and throw out matter?—If we throw out matter we should consult the branches concerned in the matter thrown out.

4991. Even if new matter conflicted with the old, could you not throw out the old without reference?—We should do so if we felt sure it was all right; but unless we found explicit directions to change it, it would indicate that something had been overlooked, and that it would be better to ask the department concerned.

4992. Do these regulations numerically increase as time goes on, or have they rather been numerically reduced?—I do not think of late years there has been very much gain or loss. I know there was an official statement in existence some years ago, before my time, that they had been reduced by a large number of pages in the total—I think to about six-sevenths of what they were; but, as a matter of fact, that was done by increas-

ing the amount printed on each page. I do not think we let them grow, because we are rather careful about that.

4993. Is it your opinion now that by proper codification of the regulations from top to bottom you could concentrate them and reduce them very much, and make them simpler to understand?—We could do that if, when we pointed out that there was some little inconsistency which complicated matters and perhaps doubled the size of certain regulations, that little inconsistency could be removed. Sometimes I am afraid it would be said, "That is an important point; it is a little point from a theoretical point of view, but if you altered it, it would hit certain deserving people very hard, and therefore you must keep your inconsistency." But I think there are a great many such inconsistencies that could fairly be removed, and provided when we found that it was necessary for simplification the pruning knife could be used a little on the matter, we could certainly improve, shorten, and simplify the regulations.

4994. To whom would you give authority to do that?—It would depend upon the subject matter.

4995. To whom do you represent the cases that occur to you of revision from time to time?—The Permanent Under Secretary, but we have had, owing to war pressure in my time, so little opportunity of doing that that it is rather what we should do than what we have done.

4996. But you have been in office three years?—Yes.

4997. And going back anterior to the war, the same thing existed?—In the earlier part of my time I was not in charge of the branch, and the then chief was not greatly in favour of reforms.

4998. Is there any means by which you could show to the proper authority a simplification, for instance, of the old pensions system, which might simplify the regulations and altogether improve the Service?—I have pointed out the necessity for a new system for pensions many times, both in writing and verbally.

4999. To the Permanent Under Secretary?—Yes, but he does not agree with the alteration.

5000. (Sir George Clarke.) In the case of the Messing allowance, which has given rise to a considerable amount of financial trouble, who would fix the conditions under which that allowance, which was originally understood to be 3d. extra pay to the soldier, was issued?—So far as I know, the conditions were fixed by the Secretary of State himself.

5001. So that it was the conditions which were fixed outside of you which made the complication in granting the allowance which has arisen?—Yes. We pointed out that complications would arise at the time the regulation was first made, and several times afterwards.

5002. When you say the Secretary of State, do you mean the Secretary of State, or would it not go beyond the Permanent Under Secretary?—It was the Secretary of State, so far as I know, in the case of the Messing allowance.

5003. That is a case, is it not, in which a very small financial loss would have been occasioned by making the regulation very much simpler, calling it pay and treating it as pay?—That was the view of the Branch, both of the then head of it and of myself.

5004. Then, as regards the Clothing Regulations, would those Clothing Regulations be settled by one of the committees you spoke of?—I do not think so; they are too technical, more what you might term departmental regulations.

5005. Then how would they be drafted?—They would be drafted; I take it, by the Clothing Department in consultation with the Finance people if the Finance department were concerned, and we should merely edit.

5006. Have you examined those Clothing Regulations yourself?—My knowledge of them is very slight.

5007. You are not able to say whether those are among the Regulations which you think could be simplified?—No; I am afraid I have not sufficient knowledge of them without specially reading them.

5008. But you know that they are exceedingly complicated in their working now, and that there are a great many complaints about them?—I should imagine that that was owing to the clothing system—the compensation system—rather than to the regulations themselves.

5009. But the regulation is the system?—But, the Regulation Branch did not make the system.

5010. But the complication of the regulation arises out of the way the compensation is worked?—I should imagine so, but I am not familiar with the Clothing Regulations, or their working. I know something of the compensation system myself, and think it an extremely bad one.

5011. Do you think that if time and labour were available, a considerable simplification and codifying of the regulations could be carried out?—Yes; but I do not think any substantial improvement could be obtained unless there were some better system put into Regulations. I think it is improvement of the subject matter even more than in the wording of the Regulations that is wanted.

5012. That is to say, in some cases altering the wording of the Regulations would really mean an alteration of policy?—Yes.

5013. (*Mr. Mather.*) Are these Regulations numbered consecutively?—No, they are not; there is a huge number of them.

5014. What number would you say?—I am afraid I really could not say off-hand. I had very short notice of being examined, or I would have looked it up.

5015. Are there hundreds?—There are over a hundred, certainly. In a book known as the General Index, there is a list, at the beginning, of Army Regulations, and I feel quite sure there are over a hundred, but I could not say how many without looking it up.

5016. (*Colonel Miles.*) When you are framing Regulations, do you ever get assistance from the Army Pay Department?—Do you mean outside the Office?

5017. Yes—say on the question of the Travelling Regulation, or Fuel and Light?—C. 3 would not do so; presumably the Pay Branch here, or the Finance Branch would, if necessary. C. 3 does not go outside the Office. It would be the Branch administering the Services in which that would be done.

5018. (*Sir George Clarke.*) I rather gather that you say that the complication arises, among other causes, from a desire to meet all exceptional cases under regulation—to cover everything as it were?—Yes, I think so.

5019. That is to say the War Office try to protect themselves in all cases that can possibly arise by a regulation which shall cover anything, and, consequently, must be somewhat complicated?—Yes. If you go back to the root of things, I should say that the red tape in the regulations, and indeed in everything else, arose from the War Office being too much harried by the Treasury, and by questions in the House of Commons, and by too much attention being paid to newspaper criticism.

5020. And carrying it one step further, it is one form of central control in detail; that is to say, the regulation has to be framed to cover everything, because the responsibility for settling anything is not delegated outside the War Office?—Yes, I think it is partly that; but I think it is still more, as you were saying previously, for the protection of the War Office. I will give you an example. I attacked the paragraph in the Queen's Regulations which says that, when soldiers are coming back from gymnastic exercise in cold or windy weather the non-commissioned officer in charge is to see that they turn up their coat collars and button them. This seemed to me an absurd regulation, and I spoke to some officers in the Adjutant-General's Department about it, and they say: "We believe that arose because some man or men caught violent colds and had pneumonia and died, and we were attacked by the Press" and by questions in the House."

5021. (*Mr. Mather.*) Could they not turn up their coat collar without orders?—That was my point. It was outside the editing of the regulations, but it seemed to me that I was editing nonsense. There are a good many more examples of that sort in the Queen's Regulations.

5022. (*Sir Charles Welby.*) That particular regulation was of old standing, was it not?—I do not know its age.

5023. (*Sir George Clarke.*) And even when you have got your regulations I suppose there are constantly cases arising which are not covered by them, which would lead to correspondence and reference here?—There always must be. I should hope you could never reduce life to a regulation.

5024. (*Mr. Mather.*) Probably there is another regulation saying that no coat collar must be turned up without the order of the Sovereign?—I cannot admit that. C. 3 would be liable to something very severe if they allowed two absolutely contradictory regulations to be co-existent.

5025. (*Sir Charles Welby.*) Sir Redvers Buller in his evidence before the Decentralisation Committee made the following remarks; he said "In my opinion, and I think I have verified it sufficiently, the whole system of reports and regulations, and warrants, under which the British Army now serves, has grown up entirely for the benefit of War Office clerks, and to find work at the War Office rather than to find control for the Army. What I mean is this, the gentlemen of the War Office do their work extremely well and accurately, but their work is work of supervision, and they do not like to let go out of their hands any power derived from a constant tying-up of Generals more and more by regulation. The result of their making those regulations in such detail is that unless they follow out that practice they have nothing to do." Should you say that it was within your competence to make regulations which should have the effect of tying up Generals Commanding Districts?—No. I should say that we are only editing the regulations. Sir Redvers Buller should have applied his remarks to the branches that make the regulations.

5026. Any regulations which would have the effect of limiting the discretionary power of the Generals Commanding Districts would emanate from the particular departments concerned with the subject?—Yes.

5027. (*Colonel Miles.*) Or they might come from the Finance Branch?—Or they might come from the Finance Branch. If I noticed a new regulation restricting the power of General Officers Commanding, having in view the report of the Decentralisation Committee, and the general understanding that that report laid down a line for the future, I should call special attention to it and ask whether it was to be allowed to go out.

5028. Can you tell us what is the procedure with respect to any proposed new regulation which emanates from the Finance Branch, what steps are taken to secure the concurrence of the Military Departments concerned?—We should refer to whatever department happened to be concerned. If it were purely a matter of accounting there would be only the Branch of the Quartermaster-General dealing with the Pay Department to consult, I think.

5029. Then it would rest with your discretion supposing a draft regulation was put forward by the Finance Department to decide whether that draft regulation should be referred to the Military Department which might be interested in it, or not?—Yes. I think we are given that discretion by the Order in Council, or at any rate by the instructions upon it. It is for C. 3, whosoever the regulation emanates from, to see that the other departments concerned are consulted.

5030. It is not your discretion, but your duty to do that?—It is our duty to do it.

5031. And you would consider that you were neglecting your duty if you adopted a regulation proposed by the Finance Branch without first of all securing that the Military Department concerned had had a voice in the matter?—Certainly.

5032. (*Mr. Beckett.*) You said that you considered the regulations drawn up for the Navy were much simpler, and a better system than those drawn up for the Army?—I was merely referring to the Pension Regulations.

5033. You could not say the same as regards any other parts of the regulations?—I have not compared them.

5034. (*Sir George Clarke.*) Do you think that great elaboration of regulations conduces in any way to economy?—I should say not. If you teach people to swim with corks they will never swim properly. The only way to make people careful is to put responsibility upon them. I remember a curious instance when the Quartermaster-General's Department took over from the Admiralty the charge for the Sea Transport for the Army. There was something that the Finance people here thought was unreasonable to ask for, but the Quartermaster-General's Department pressed the Admiralty for it. The Admiralty objected to the service;

Mr.
J. A. Flynn.
19 Feb. 1907.

Mr.
J. d. Flynn.
19 Feb. 1901.

but before the controversy was finished the Vote was transferred from Navy to Army Estimates, Quarter-master-General's Department. Sir George Lawson then said to Q.M.G. 2, "This is now your Vote; you can do as you please;" and they said, "As this is now a charge in our Vote, we will not do it," and they did not do it.

5035. (*Mr. Beckett.*) Do you consider that the ideas of policy which underlie these regulations could be carried out with equal precision by a simpler system?—Yes, if you speak of broad ideas, but, unfortunately, we do not get broad ideas; we get a decision with 10 or 12 refinements.

5036. When you say you do not get broad ideas, do you mean that by the time a new proposal arrives at the stage of being put into regulations it has been hampered and hedged round by all sorts of restrictions and additions, which make it impossible to frame a simple regulation to cover the case?—Quite so; so many people have had a voice in it, and they have each got a little bit in, and it has not been considered that the little bits do not agree with one another.

5037. (*Chairman.*) A broad idea, in the case of messing allowance, would be 3d. a day addition to every soldier; but when it is only to be given to a soldier physically equivalent to 19 it becomes complicated?—Exactly.

5038. (*Colonel Miles.*) When the regulations are finally drafted and drawn up, yours is the Branch that is finally responsible for them; is not that so?—Yes, but we are not responsible for the subject matter, though if we detect any error in that, we point it out.

5039. You have the last voice in them?—Yes, we actually send them out to the world.

(*The Secretary.*) But before they are signed they go to the Commander-in-Chief, and he can stop them.

5040. (*Mr. Mather.*) That is before you come in, for final decision?—Yes.

5041. (*Chairman.*) You put the ideas and wishes of other departments into official language?—Yes. I think it is also our duty to point out to the authorities anything that appears to be bad of any kind.

The witness withdrew.

NINETEENTH DAY'S MEETING.

THIRTEENTH DAY'S EVIDENCE.

At the War Office.

Wednesday, 20th February 1901.

PRESENT:

MR. OLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.O.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. Miles, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary.*

Sir RALPH H. KNOX, K.O.B., further examined.

Sir R. H.
Knox, K.C.B.
20 Feb. 1901.

5042. (*Chairman.*) I understand that you desire to give us your views upon the Central Office. I think you may take it that we are generally familiar with the way in which the work is divided amongst the three branches?—Certainly.

5043. Some statements have been made to us to the effect that the Registry does not work in the most satisfactory way possible, that there are delays about letters, that there is no officer of sufficient authority to be able to determine what is an urgent letter, that under the present system a great many of the letters which are marked "urgent" are not perhaps really urgent, and there is no head over the Registry who can control "urgency" in any way. It has therefore been argued that the Registry should be put under an officer of superior standing to the gentleman who now is at the head of the Registry. What is your opinion generally on the subject?—In former times a clerk of considerable position, a Principal Clerk, did have charge of the Registry, and, being an extremely able man, he in that position, as Principal Clerk of the Registry, did a great deal in working and managing the office. But he developed his position to such an extent, mainly due to his great personal ability, that he became, although head of the Registry, almost the Chief Officer in the whole of the Department, and rose from that position to be Chief Clerk, then Assistant Under Secretary, and then Permanent Under Secretary. I mean Sir Ralph Thompson. But what I, and most people who knew him, perceived was that in that position he was really doing the work of the Permanent Under Secretary all the time. I do not believe that for the ordinary work

of managing the Registry, the immediate work of receiving the papers and sending them out and so forth, a man of that calibre is wanted; but I do think that the Assistant Under Secretary, who is really our Chief Clerk (in fact the position was that of Chief Clerk, but in order that he might fill the position of the Permanent Under Secretary when he was away, he was made an Assistant Under Secretary), that one of the chief duties of the Assistant Under Secretary should be in his position as Chief Clerk the superintendence of the work of the Registry, and seeing that things were going satisfactorily. And it is only a person who holds such a position as that who can really, as it were, use the Registry for controlling the business of the Office; because a man who is even holding the position of Principal Clerk could not exercise any sufficient authority over the important officers who were in charge of the various branches of the department; if anybody is to pull them up, or give directions to them, it must be some one well above the position of a Principal Clerk.

5044. Would the Assistant Under Secretary's duties in normal times, excluding the pressure of military operations, allow of his devoting sufficient attention to the Registry, with a proper staff under him?—Certainly. I look upon that as one of the principal duties that he has to perform, together with the allotment of the accommodation of the Office, and looking after the Office Staff, so to speak. Those are his proper functions really.

5045. Has he been discharging them, as a matter of fact, lately?—His time has been occupied with many

other things; but those are the functions which the former Assistant Under Secretaries discharged. Sir George Lawson, who preceded the present Assistant Under Secretary, was always in constant touch with, immediately directing the Registry, and introducing changes, experiments, and improvements from time to time.

5046. The present Assistant Under Secretary, I understand, rather attempted to decline responsibility for the Registry, unless he could have a larger staff of superior officers under him?—Unless he had a senior officer sitting in the Registry to do the work himself.

5047. Then, he having declined to some extent that responsibility, upon whom did it fall?—He is not, and cannot be, disconnected from the direction of the Registry, of course; but he has not taken up, as it were, any function of looking into the procedure of the Registry, and so forth; that has been discharged by the Staff Clerk who is now in charge of it.

5048. (*Mr. Gibb.*) Might I ask, as I was not able to be here yesterday, that you should just briefly describe what duties the head of the Registry is supposed to perform?—Every letter which comes to this Office goes to the Registry and is there opened, and, according to its subject, it goes to one of the various clerks who are employed there to register it.

5049. Is the head supposed to open and read everything that comes in?—No, only the letters that come from certain offices, but the various clerks are directed to refer to him any letters of special importance, and also cases where there may be any difficulty in deciding how the paper should be registered, or to what branch it should be referred.

5050. Then the determination of the importance rests with the clerk absolutely?—Yes, with the clerk.

(*Chairman.*) With the clerk at the head of the Registry.

5051. (*Mr. Gibb.*) As I understand it, not with the head of the Registry?—No, but with the man into whose hands the papers happen to come.

5052. (*Chairman.*) Subject to the authority of the head of the Registry, to whom he should appeal in case of doubt?—Yes.

5053. (*Mr. Gibb.*) But the head of the Registry would never hear of it unless the clerk chose to bring the particular matter before him?—No, he would not; that is to say, we have been lately receiving something like 3,500 communications a day, excluding papers of certain kinds, such as the tenders for contracts, and so on, which are not registered in the same way, but go direct to the Contracts Branch. Of course, no one man could receive and handle all those letters; but it is the duty of those who open them, where a letter strikes them as important, or when it comes from an important person, to hand it over to him.

5054. (*Chairman.*) He is responsible, like the head of every other department who delegates his authority, as far as he can, to his subordinates?—Yes.

5055. (*Mr. Mather.*) And he gives his instructions to his clerks accordingly?—Yes.

5056. As he takes more or less interest in that department, he would give his own instructions to his clerks?—Yes, he would, they work under him. Of course he brings to me any important papers that reach him, and I see them also the first thing in the morning.

5057. But if the Assistant Under Secretary does not take charge of that department, it falls into the hands of his second man, his staff clerk?—Yes.

5058. And that staff clerk acts practically without any leader?—I do not think it can be said that he does not refer to other persons; he refers to the Assistant Under Secretary, and he refers to me; in fact, as I say, he brings to me letters of a certain class every morning.

5059. That is to say, within his discretion, within his own judgment?—Within his own judgment.

5060. (*Mr. Gibb.*) These are letters which he thinks you should deal with?—That I should see, at all events, when they come into the office.

5061. But the determination as to whether a particular letter is urgent, as I understand it, practically is left to the clerk who opens the letters?—It rests with him to decide whether it shall be registered as urgent.

5062. And if it did not strike him that there was any special urgency about a letter, an urgent letter would

take the ordinary course?—It would go to the Branch that had to deal with it within an hour or so, and if they were to see that it was a paper that in their opinion (they being connected with that business) was an urgent one, they would make it urgent according to our technical processes.

5063. Then all letters passing through the Registry reach the hands of the person responsible for dealing with the subject in the course of an hour or so?—Yes.

5064. (*Chairman.*) It is really the Branch who decides whether the letter is urgent or not, and puts a green cover on?—Yes, they do; but the clerks in the Registry exercise their discretion to a great extent, and a very large number of papers that emanate from them every day are put in a green cover, which is our mark of urgency.

5065. You mean to say that the Registry people put them in a green cover before distributing them?—Yes, in registering them, those that they think urgent they would put it in a green cover; but that paper would reach the Branch, whether it was green or not green, within an hour or so.

5066. Then the Branch might see other letters besides those in green covers that had gone to it already, and of itself put green covers on them?—Yes, certainly.

5067. And that happens?—Yes, that happens.

5068. (*Mr. Mather.*) But you attach, I suppose, great importance to the head of the Registry being a man of considerable ability and trustworthiness in every way?—He is a selected man, but the man who is now in charge is a man who was appointed as Second Division Clerk by competition. He has been selected from that for the higher grade in the Second Division, and then selected from that as the Staff Clerk.

5069. But was he selected to that as a Second Division Clerk, in view of the fact that the head of the office was really the Assistant Under Secretary?—Yes, certainly.

5070. So that really he ought to act as the Assistant Under Secretary of State, and you would look to the Assistant Under Secretary of State as being responsible for the action of that clerk?—Yes.

5071. But if the Assistant Under Secretary does not do that share of the work which you expect of him, who is to blame?—I do not say that the daily work of the Registry in the examination of papers and so forth in the Registry should come before the Assistant Under Secretary, but that to the extent to which the Registry is used for pushing the business through the office, watching the progress of papers through the Registry, pulling anybody up who offends against the rules, and so on, watching the machinery of the working, and observing things that may go on or that ought to be set right, or seeing that improvements may be introduced, he is the man who would be looked to for that duty.

5072. (*Chairman.*) Then in normal times you see no advantage in introducing a Chief Clerk between the Assistant Under Secretary and the Staff Clerk, who is at the Registry?—No, certainly not.

5073. (*Mr. Mather.*) There must be a considerable amount of correspondence day by day requiring an immediate reply that day, which perhaps the clerk could not allot to these various departments, which he himself would probably have to attend to. Has he any power to see that letters are answered by clerks in a formal manner; is he responsible for anything of that kind?—No, he is only responsible for sending the letter to the Branch which must deal with it.

5074. And is there a General Branch not dealing with any specific question, an Office Branch, for instance, separate from all the other departments, having to deal with what you call the ordinary correspondence?—No, the whole of the work of the Office is divided according to subjects, and according to the subject of the letter it goes to the particular sub-division or room that is charged with dealing with the business in reference to that subject. The Registry has nothing to do with considering the question at all; its function is only to receive the letter, register it, annex the papers that may have been received on the subject before and dealt with, so that the file shall be complete in going to the Branch, and to send it to the Branch that will deal with it as soon as possible, and when the paper is dealt with, to look through it, noting any important decisions as a sort of index, and putting the papers away.

Sir R. H.
Knox, K.C.L.
20 Feb. 1901.

Sir R. H.
Knox, K.C.B.
20 Feb. 1901.

5075. There would be a Commercial Department, I suppose, as well as the departments of the Quartermaster-General, the Director-General of Ordnance, and so on—a Central Commercial Department dealing with ordinary matters and general inquiries?—No.

5076. Supposing someone offers you a wonderful discovery or a patent to do something remarkable, what would be done with it?—The Director-General of Ordnance, through his Branches, deals with all such questions. The whole of the work that is in the habit of coming to us is distributed according to subjects to the officers who are responsible for dealing with each part of the business.

5077. And you can divide it up so closely that there is no difficulty in distributing it immediately?—No; but supposing there is a difficulty, the Staff Clerk brings it to me, and I give instructions.

5078. (Sir George Clarke.) The annexing of papers to a paper that comes in would often be a matter requiring considerable knowledge and experience in order to annex the right papers and analogous subjects that might be brought in?—No. Of course we direct anyone who is in correspondence with us always to quote the number which is inserted in the letter we write to them, so that it gives a clue to the former correspondence. That is a key to the papers that should be annexed to it.

5079. But beyond that there may have been previous decisions on an analogous subject, to bring which in to this matter by annexing them, would be exceedingly important?—Yes, it is important, but the Registry is in most cases able to annex papers dealing with a subject of that kind because all papers dealing with a certain subject have a similar number, and that is a clue. A man looks through the sheet of the Register to see whether the subject has been dealt with before, and, as I said, they have their index as well which denotes important decisions on the subject; they use their intelligence to attach those papers, but if they fail to do so, which is not very unusual, the Branch which deals with the particular subject possesses notes of the important papers they have dealt with,—they take a note of the important decisions—and they see before dealing with their papers—at least the best of the men in the office always see—that those papers are annexed before they can consider the subject.

5080. Then I understand that you do not consider that the Registry is working badly just now. We have a good deal of evidence on the subject that papers sometimes get lost, and do not turn up, and that other papers get started on the wrong lines. I take it that you do not hold that view?—Well, in order to get things done quickly, a certain experiment has recently been tried which it was hoped would lead to greater dispatch in some cases, which I may explain. It was thought that when a letter was written to which a reply might be expected fairly soon, that paper might be kept in that Branch awaiting a reply, so as to avoid having to send up that bundle of papers to the Registry and having it put away, so as to be able to deal with the other paper when it came in very shortly. I am afraid that has not been a success, but that keeping the papers in the various rooms (which, under the former arrangement would when dealt with, be returned to the Registry at once and put away, and then annexed to the reply when received) has led to papers becoming stranded; that whereas formerly we had the certain note in the Registry that a letter had been written on such and such a day, and was put away and could be traced at once, these papers, in an incomplete state, have remained about in the different branches waiting for the answer to come.

5081. (Mr. Gibb.) Is that failure in your judgment due to the experiment itself being on a wrong system, or to the experiment having been loosely and carelessly carried?—It has led to a large accumulation of papers in these various rooms without any very satisfactory way of keeping them.

5082. Of course the experiment as described by you would practically involve each Branch keeping an index or list or record of their own papers instead of, or in addition to, the register number?—Yes.

5083. If that were not done, you would hardly expect the experiment to succeed?—To work it properly, presses and cupboards for keeping in a very orderly and satisfactory way these papers would be required in each one of the divisions. That certainly was not done, and these papers have been kept on the desks of those

men who were awaiting these replies, and the huge accumulations of papers in the different Branches has led, I think, to some difficulty in tracing the papers from time to time.

5084. (Sir George Clarke.) Do you consider it the duty of the Registry to follow up papers from time to time and trace them through the office?—No, I do not think that is part of their duty, although I myself tried an experiment with that object a short time ago; but unfortunately this plan, which I have described, had meanwhile been introduced, which proved my experiment a complete failure. That was this: I instructed the Registry, whenever they found that a paper had not been dealt with and so returned to them within a certain time, that they should send to the Branch which had last received that paper a query to ascertain what had become of that paper, and why it was that it was not working along. Unfortunately, this plan of keeping the papers still open in the various Branches acted, of course, entirely in opposition to this machinery which I established, because a great number of the papers that were looked after in this way were found to be kept in the different rooms waiting the replies, and it had not been reported, as it were, to the Registry that the papers had been dealt with in any way. I think it would be a very good plan to revert to the old system, and also to establish systematically that plan which I have mentioned, of sending and tracing a paper which had not been finally dealt with by a query to know how it was that no steps had been taken with regard to it.

5085. (Chairman.) Then, as things are at present, if there are complaints of delays in getting answers from the War Office, you would not attribute it to the fault of the Registry?—Certainly not.

5086. But to delays in the Branches, owing to overwork or carelessness, or to other causes?—Yes, I should attribute it entirely to that.

5087. Are you aware that there are complaints of delays?—Of course people have different notions of what a delay is. Our instructions are, with regard to anybody who writes, to acknowledge the letter immediately, if it is thought that it cannot be answered at once or within a comparatively short time; I do not know but that that sometimes gets lost sight of, arising from the fact that the necessary inquiries made with regard to it have occupied an unexpectedly long time, and so delay in replying does no doubt, from time to time, take place.

5088. Are you satisfied yourself, as a general rule, with the drafting of letters that go out from the War Office?—Well, they vary certainly very much.

5089. It has been contended that if there were a Chief Clerk in charge of the Registry, a part of his functions would be seeing to the drafting of letters?—A man could not, in one Branch, draft the letters for the whole office.

5090. Not that he should draft the letters for all the branches, but that he should amend certain letters or call the attention of the branches to letters being badly drafted, and thereby exercise an influence on the side of good drafting in the Office?—Only those letters come forward for observation that have to be signed by persons of certain position. It is the etiquette of the Office that the Under Secretary should always sign letters in reply to Under Secretaries of State and to Members of Parliament, and to people in that position; but the mass of the letters are written in the branches themselves, and never come beyond them. The Principal of the Branch, or the man in charge of that Branch, is responsible for the drafting of that letter, and it could not be worked in any other way.

5091. Some branches do their drafting better than others, I suppose?—Yes.

5092. But, on the whole, are you satisfied with the drafting, or do you think it is a matter which leaves room for improvement?—It might be improved. I think, at times. Some people are extraordinarily punctilious, I do not say wrongly, as to their style. I have known persons of importance in this Office who never could see the draft of a letter that they did not re-write half of it, and others are, perhaps, too easily satisfied. Letters come up to me which I see indifferently composed; but they are sometimes written, I find out, by very eminent people indeed in the Office.

5093. (Mr. Beckett.) When Sir Ralph Thomson was the head of the Registry, did he exercise a sort of

supervision in the drafting of letters?—No, none at all.

5094. (*Chairman.*) It would be outside the function of the Registrar?—Quite.

5095. (*Mr. Mather.*) There are other functions besides the opening and distribution of letters every day in connection with the Registry: the Registry has really very large responsibility in the keeping of records of everything that passes through the War Office; it is a place of reference for papers at all times?—They are charged to look through the papers when they are finally closed, and to note any important decision that has been come to on the point, and they keep what is called an Index for such important decisions. If a subject comes up for consideration, and we want to know whether it has been previously considered, and someone recollects, as it were, a decision, but cannot make a complete reference to it, we find this Index is of very considerable use to us.

5096. (*Mr. Gibb.*) And is this the only index of important decisions that is kept?—No; every division which deals with particular subjects is charged to note important decisions as precedents dealing with the various subjects of which they have charge.

5097. (*Sir Charles Welby.*) And, of course, the Registry is also the depository for all closed papers, a storehouse, as it were?—Yes, it is a storehouse. All the papers are in their presses, some of them more handy than others: some of them, the older papers, are in our cellars, and some are upstairs near the division where the clerks are, and, of course, from time to time, we send very large numbers of old papers to the Record Office; but the main lines which are followed by the Registry are the lines which, I may say, were elaborated by Sir Ralph Thompson during a very long career, and I suppose no man ever had charge of so large a business and more carefully watched the machinery for getting through such an enormous amount of business as comes to us; he laid down those lines guided by his very long experience. The present practice follows the lines which he developed and laid down.

5098. Minus the very capable head?—No, not at all. There is a very capable head now. I know that the Registry has been in charge, since Sir Ralph Thompson left it, of men who were distinctly inferior to the man who has charge of it now, although they were Principal Clerks.

5099. By "capable," I meant a man of high standing and position in the Office; I was not referring to his actual capacity?—They were Principal Clerks.

5100. (*Mr. Mather.*) The Registry is directly under your Department, is it not?—Yes, it is in the Central Department.

5101. And you are eventually responsible for that Registry being very well conducted?—Certainly.

5102. And you would take the blame in case any irregularities came in, or any laxity of attention?—Yes, but I should look to the Assistant Under Secretary to keep me more in touch with it; he should watch the procedure.

5103. As your deputy?—Yes, as my deputy.

5104. But he, of course, is only your deputy?—Certainly.

5105. All the sins would find their way eventually to you?—No doubt.

5106. (*Sir Charles Welby.*) With regard to the functions of the Registry as regulating the progress of papers, did I correctly gather from you that they do to some extent follow up papers with a view of preventing undue delay?—No, they do not. What I said was that I started a machinery for seeing that no undue delay occurred, but I found that it failed; because, not very long before that, permission had been given to the branches to keep papers for an unlimited time waiting for replies to them instead of sending them back at once to the Registry. I think if they were all sent back to the Registry, and we then had some such machinery for sending out a kite to inquire after any paper that had not been dealt with in a certain time, that would help very considerably to push on papers.

5107. (*Mr. Gibb.*) You spoke of an order being given; did you give that order?—I gave that order, but I found that a previous change which had been introduced upset it as a piece of machinery.

5108. Introduced by you?—No.

5109. But can any body except you introduce a change of that sort?—It was just before my time—at least, that is my recollection of it—or it may have been immediately after I took charge, and it was thought that it would be a very good thing to do in order to deal with papers more rapidly.

5110. (*Sir Charles Welby.*) Then at present, may we take it that there is no systematic arrangement for preventing the side tracking and delaying of papers in the course of their progress through the Office?—No, the heads of the branches who receive those papers are held responsible for sending them on with the utmost rapidity.

5111. Is it also the fact that there is no machinery in existence, or, at all events, that it is not the function of the Registry, as at present constituted, to prevent more than one paper running on the same subject at the same time?—That is so. Of course, if a man writes a letter, if a paper arises from a letter addressed to this office, it is necessarily registered as an independent paper; then some other man may write a letter on exactly the same subject, but they must be dealt with separately, as two different communications.

5112. It is not considered to be in any way the business of the Registry to secure that two sets of papers dealing practically with the same subject should not be making their way through the Office at the same time?—No.

5113. That might easily happen under existing conditions, might it not?—A paper develops. The Quartermaster-General may start a paper on one subject, which is very cognate to a subject which the Adjutant-General may be starting at the same time; and the Inspector-General of Fortifications may also start a paper on something approximating it; and those papers as they develop might practically be dealing with the same question, though started as independent subjects.

5114. With luck?—No, not with luck; but they might go on absolutely independently, the Inspector-General of Fortifications consulting certain branches about one portion of the subject which he was interested in, while the Quartermaster-General might be consulting other people, and the Adjutant-General might be consulting others.

5115. (*Mr. Gibb.*) On exactly the same question?—Not exactly, but pointing as it were to the same question, which after it had been minuted by one or two persons might practically become the same question. But it would not be within the power of the Registry to check that.

5116. (*Sir Charles Welby.*) As a matter of fact, have you not often in your experience in this Office found inconvenience to arise from more than one set of papers on the same subject wandering at the same time through the Office, and not getting focussed by any Central Department?—Yes, I have certainly.

5117. And it is the fact that there is no definite machinery for preventing that kind of performance at the present time?—The Registry has not the machinery for doing that, certainly. I do not know that there is any. I think there ought to be a machinery, but I say that that machinery is the Army Board.

5118. (*Mr. Mather.*) What do you mean by starting a paper?—Any one of the important officers in a department may think that some portion of a subject should be taken up and considered; it is his business to be watchful, and he may send up to the Registry any Minute he may write on the subject, and so start the consideration of that subject.

5119. For distribution?—To go to the Registry, and then to be marked back to him; and then he would consult the other branches, which necessarily would have to be consulted before any action was taken upon it.

5120. That is starting a new subject?—Yes.

5121. (*Sir George Clarke.*) Then you think that the proper cure for the evils, if any, is that all the proposals should be focussed at the Army Board?—I say that all questions of any proposals should be considered in the particular branch, and, before they come to, certainly any conclusion, should be brought up by the officer who is responsible for that subject to be considered by the Army Board.

Sir R. H.
Knox, K.C.B.
20 Feb. 1901.

Sir R. H. Knox, K.C.B. 5122. And the Army Board would really do all the proposing, and by showing all its members what the others were doing it would in that way prevent two papers on the same subject starting at the same time?—Yes.

20 Feb. 1901.

5123. (*Sir Charles Welby.*) But the Army Board consists of the five greatest officials in the War Office, and you surely would not put upon those high officials of the War Office who compose the Army Board the duty of securing that papers on comparatively unimportant subjects were not overlapping each other and occupying time?—Sometimes in order to push along the consideration of a question which is urgent and which it is seen must be considered by more than one branch, those who are charged with the executive duty of carrying it out could very easily meet together as a Sub-Board as it were—they would be the lower officers—to consult about the particular points that it might be necessary to consider and deal with before any step might be taken, such as the construction of some small work, or some small questions of changes of establishment, and so on, which necessarily may affect more than two branches, and the Finance Branch when it is a question of new expenditure. If there were a machinery for bringing the representatives of those branches together to deal with the question and run it through, what would by the present system take a week or 10 days could be done in a couple of days, I think.

5124. (*Mr. Mather.*) Is not that your function now; is it not a part of the function of your office to bring together all these various representatives?—Not to call together these various individuals and tell them to consider it, because the paper would not come to me in that stage. I should not know it was going on.

5125. (*Sir Charles Welby.*) Then we may take it from you that, in your opinion, it is at all events not the function of the Registry to prevent the overlapping of papers and the undue reduplication of papers in the Office; that their responsibility begins and ends with receiving the letters and passing them to the proper branches, and that they have no discretion in the matter of what papers shall be allowed to go forward, or in seeing that the same subject is not taken up on two papers?—No, it is not their function; that duty is not entrusted to them.

5126. And in the same way, it is in no way their duty to regulate the process with which you are familiar—I think you referred to it just now—by which a paper started on a very small point grows and develops and changes into, perhaps, a very large question of organisation which may be also under discussion on another subject?—No, it is not the duty of the Registry to watch that.

5127. For example, there may be a paper touching the quality of a particular issue of saddles, and that might easily develop into an argument as to the sufficiency of the Inspection Branch, and from that as to the whole organisation of the Director-General of Ordnance's Department. Is there any machinery in existence for preventing a great question of that sort from being tacked on, inadvertently almost, as you might say, to the mere original question of the satisfactory quality of a few saddles?—No, there is no machinery which would put a check upon that. I do not think that that sort of thing arises to any extent, but certainly there ought to be an understanding that people should not fly off at a tangent and start new hares when the main subject under consideration is definite.

5128. But in practice they very often do go off at a tangent in that way, I think you will agree—

5129. (*Chairman.*) Would not the Permanent Under Secretary come in there if he found papers coming along in that way?—But they would not come to him.

5130. But if they did come to him?—Yes, if they did come to him; and if that sort of thing was developed to any large extent I think an instruction should be issued, telling people that they were not to do such things as that.

(*Secretary.*) It has been laid down over and over again that only one subject is to be dealt with on one paper.

(*Witness.*) It is, of course, difficult here with us to secure a compliance with those rules which may be laid down with regard to these things because our staff, the

staff of the Office, as you no doubt are aware, is always changing; in the Military Branches the officers serve only for five years, and some of them for less than five years, and you cannot expect them always to be *au fait* with the rules which govern the procedure in the Office.

5131. There is one other question I want to put to you, and that is with regard to the question of confidential papers and their custody, because there are a considerable number, are there not, of papers dealt with in this Office and kept in this Office which are of an extremely confidential nature?—There are a good number of papers that one would not like to have talked about outside the Office, no doubt.

5132. And they are under the charge of the gentleman who is now at the head of the Registry?—Yes.

5133. Without making the smallest reflection on the gentleman who is now at the head of the Registry, who, I believe, enjoys the complete confidence of his superiors, do not you think there is something to be said against a system which places the custody of such important documents in the hands of anyone but an official of really high standing?—No, I do not think so.

5134. You see nothing in that objection?—Nothing whatever.

5135. (*Mr. Gibb.*) I suppose these documents, if they are in the custody of the head of the Registry, are accessible to his clerks?—No, not necessarily. The Confidential Press, as we call it, is really in the charge of the head of the Registry and his assistant, and if papers are regarded as especially confidential, we have all sorts of contrivances in the way of boxes and keys in sending the papers round so that they can only be opened by these persons; and if they are marked to be treated as specially confidential, they only come into the hands of those two men. Therefore, if anything leaks out, as it were, we know through whose hands they passed.

5136. (*Chairman.*) You told us that one difficulty in getting the instructions obeyed is because in the Military Branches the officers are constantly changing, and that leads to the question of the agency which is to be employed in the Military Branches under the Military heads. It has been suggested that in the Military Branches all Civilian agency should be excluded, and that the branches should be recruited entirely from Military officers and from Military clerks; have you any views upon that point?—I think it would be extremely difficult to obtain Military clerks in the number that they would be required efficient for the work that they had to do; that is to say, soldiers, men who have been trained as soldiers and taken up the clerking work of the Army. We find very great difficulty in getting sufficient of these men for the District Offices and positions of that kind, and there is certainly not an excess of them. But if you were to add to that a demand for a much larger number for work here, and that of the best quality, I think that you would find a great difficulty in obtaining them.

5137. Would a possible compromise be that all the Higher Division clerks now in the Military Branches should be withdrawn, and that the Second Class clerks should remain under Military officers?—Of course, there are none of these plans which are unmixed goods or unmixed bads; it is a question of compromise, and balance of evils or advantages, as all things are; but I think the better plan would be to have no Higher Division men in the Military Branches, and that there should be an increase in the number of the Military officers, junior Military officers more particularly, who should be employed here, and that matters should be so arranged that the continuity of the work of the Office should be preserved by those officers succeeding one another.

5138. Not being shifted so rapidly, or all at the same time?—Or all at the same time; that if it was a five years' appointment they should be 2½ years together, so that when a new man came in his brother officer would be able to give him such an amount of training and education as would enable him to take up the work, and the official style and methods, and so forth, so that they should never be at the mercy of a man who was below them for carrying on the business of the Office; that they should be able to rely one upon another to do the work. I think that that would work very satisfactorily and that it would be a great advantage to the officers themselves, and a still greater advantage

to the Army, if a larger number of officers were passed through this Office to learn something about administration.

5139. The argument, up to the present time, in favour of keeping Higher Division Clerks has been chiefly that of continuity, has it not?—It has.

5140. You think that might practically be got over?—I think it might. I remember, however, recommending this to Sir Redvers Buller when he was here, and I was very sorry to hear him say that he did not think there were men in the Army who were competent to come up and do the work.

5141. Then as regards the Second Division clerks, would you be in favour of eliminating all the Civilian Second Division clerks, or of keeping some clerks Military and some Civilian?—I think it might be found that a mixture would be the better plan. I think you can have some Military clerks, some of the divisions of this office are worked entirely by Military clerks.

5142. And some are mixed?—There are some divisions that are entirely worked by Second Division clerks. I think the mixture is very bad; they should be either all Second Division clerks or all Military clerks, in a division, I mean.

5143. As it is desirable, is it not, to get a certain number of trained Military clerks, that rather leads to all the clerks in the Military departments being Military, if we are not to have them mixed?—No, not mixed in what we call a sub-division, or a room. I think that all the men in a room should be either all Military clerks or all Civil clerks.

5144. Then how would you do? Would you say that all the clerks in one division of the Adjutant-General's Department should be Civil, and in another division Military?—Yes, I think that would work fairly satisfactorily.

5145. (*Mr. Gibb.*) Why do you think they should not be mixed?—They are men of a perfectly different status, and there is rivalry and jealousy; and they are paid differently, and they are oil and vinegar very much. But I think that in advocating a larger number of officers being introduced to do this work, the danger is that they will not do it if they have anything like a strong body of clerks under them, especially if they are familiar with the work.

5146. (*Chairman.*) Strong Second Division clerks?—Strong Second Division clerks. The tendency would be to throw off what I should call the clerical work, which I think these men should do, on to the clerk.

5147. That is an argument for having Military clerks, is it not?—No, I do not know that it is. Occasionally you get hold of a Military clerk who is first rate, very good indeed.

5148. But he would not be as permanent as the Second Division Civilian clerk?—Yes, he would be. Many of those men who come up here as Military clerks remain here for the rest of their lives.

5149. In all cases?—Unless a man misbehaves himself.

5150. (*Sir Charles Welby.*) They cease to be Military, in fact, in anything but name?—They are always men of considerable service before they are selected to come up here as clerks.

5151. (*Chairman.*) Then it does not assist the outside districts at all to get good Military clerks who have been trained up here at Headquarters?—They are always men who have been pretty well trained outside before they come here.

5152. And when they come here they are permanent?—Yes.

5153. Do you regard that as a good system, or do you think they ought to pass to and fro?—It works fairly; I think it is the best system of working it. I think that to have an interchange of clerks between the districts and Headquarters would be very risky indeed.

5154. Then when you talk of a Military clerk, you mean a clerk who has been a soldier, but who becomes really a purely Civilian clerk?—The best educated men are selected from the regiments or the corps of the Army, and are put on to clerk's work in the various offices in the districts.

5155. But when they come here they cease to be Military, except in name?—They wear an uniform down

in the districts, and they wear an uniform up here now. But I think, whether they are in a district, a home district, or up here, they are only clerks.

5156. (*Mr. Mather.*) They keep their rank, I suppose?—Yes.

5157. Are they Captains or Lieutenants?—No, they are all non-commissioned officers.

5158. Up to what rank would they be?—A good many of them, when they come to a charge as it were, or a sub-charge, in a division here, are made Quartermasters; they get Quartermaster's commissions, they serve as Quartermasters, and they are paid (we have tried to work it on those lines) about the same pay as a Staff clerk of the Second Division, that is to say, varying from 350*l.* to 450*l.* a year.

5159. (*Mr. Gibb.*) Are they supposed to be brought here for their good, or for your good?—It is a bit of both. It is a considerable promotion to them; they serve longer here. It is a longer career for them. A man has not to retire so early, and be pensioned so early, as he would if he was in a district.

5160. (*Mr. Mather.*) They are more men of education?—They are always better educated than the rest; they are selected as clerks because of their superior education. We have had extraordinary instances of men who have taken degrees at the London University; but they are very rare birds.

5161. (*Chairman.*) Speaking generally, do you consider that the Military clerk is as efficient as the Second Division clerk?—He is always slow; you never can get him to do anything quickly.

5162. Slowness is an advantage, is it?—Well, I do not know; it is not supposed to be so here; unless you can do a thing in half the time that an ordinary individual can do it in, you are not thought anything of here.

5163. Apart from slowness, are they an economical agency as compared with Second Division Civilian clerks?—I doubt it. We get Second Division clerks who are really very good young fellows indeed. I do not say they are the larger proportion, but there are many amongst them; they come in by competition at 17 years of age; the examination is in very elementary subjects, but still the competition makes it extremely severe, and the men who take anything like good places get wonderful marks in the competition.

5164. (*Mr. Mather.*) What advantage is there in employing Military clerks at all?—It is supposed that they get on better with Military officers, that the discipline and so forth is better, but they are inferior except in very extraordinary instances, I know and I have in my mind men who were as good as anybody, who came as Military clerks into this office; extremely clever men; very good men indeed.

5165. (*Chairman.*) Apart from the fact of their getting on better with Military officers, or being supposed to get on better, do you think that these posts are looked upon as prizes which are at all valued by a soldier?—I do not think they form an attraction in recruiting, but I know of one or two cases, in the Engineers for instance where they have some very good clerical work, in which men were enlisted practically as clerks and hardly ever did a day's soldiering. A man that we had here for a long time, and who was an excellent clerk, enlisted practically as a clerk. They enlist them in the Engineers for trades, and amongst them they have the clerks. I know of a couple of men who spent almost all their time, after a few years at Chatham, here in this Office, and they were very good men indeed, especially good men for the particular class of work on which they were continuously employed all their lives.

5166. (*Mr. Gibb.*) Do you think that is a good system, that we should consider the future career of a man as a clerk, and that by enlisting capable clerks and giving them a few years' Military training, it would combine the natural advantages of both systems?—I do not think you would get, as a rule, superior men to come in as clerks; you have not anything sufficiently definite to promise them. In the case of these men that I have in my mind it was possible to make a definite promise to them, and, I think, they came in consequence of that promise.

5167. Then, as I follow your evidence, it comes practically to this: that the main advantage, if not the only advantage, in having Military clerks is that they get on better with the officers who are over them; is not that so?—Yes.

Sir R. H. Knox, K.C.B.
20 Feb. 1901.

Sir R. H.
Knox, K.C.B.

20 Feb. 1961.

5168. (*Chairman.*) Is that a very substantial advantage? Do not the officers really for all purposes get on equally well with the Second Division Civilian clerks?—I do not know that they do in all cases. Where the officers really do their work I think they may get on pretty well; but where the Civilian is left to do the work, and the officer gets the credit of it, I think it does not work satisfactorily.

5169. As regards the Higher Division Civilian clerks here, I believe you have expressed the opinion on more than one occasion that you would like to see what is called the Ridley scale adopted here?—Yes, certainly.

5170. I think you have made a request for it more than once?—Yes. I think the Office is very unfairly treated in not having as good a chance of picking its men as the other offices; it is only accidentally, when there are no vacancies in other offices, that we get the very best of the men.

5171. Why has that scale, which was recommended for all the departments by the Ridley Commission, been denied by the War Office?—Our Office is bigger than most of the offices, and the Treasury looked at it from that point of view. "You have such a lot of men, we cannot pay them all 200*l.* a year." I think that was the argument.

5172. But, as a matter of fact, in recent years you have considerably reduced the number of your Higher Division clerks?—Yes, very much indeed, and, I think, that ought to be taken into consideration. Our establishment of Higher Division clerks now is, I think, about 50; between 50 and 60.

5173. And you do not look forward to that being enlarged?—No, if we can keep upon our present lines. Roughly, the calculation was that it gave us two men in every one of our large sub-divisions, a chief and a deputy, and gave us then a small margin in excess for what we call learners, whom we look to employ as learners for about three years, and as private secretaries; but otherwise we look to have a Higher Division man as the principal, and another Higher Division man as his deputy, or second, as our establishment.

5174. You think it would be a good thing to break down that resistance of the Treasury?—I think so. I think they would be willing to give it, so far as I can hear, if we can present anything like a decent establishment. The Treasury have varied the highest rates of pay in almost all the offices, and I do not know that the work does not admit of some variation in the different departments.

5175. What you look forward to principally is the enrolment at entrance?—But I think we must preserve, at all events, our 900*l.* a year as the maximum for our Principals. The Ridley Commission really recommended 1,000*l.* a year; we have got for our Principals 900*l.* a year as the maximum, with a few appointments above it going up to 1,000*l.* That is practically our scale.

5176. (*Mr. Gibb.*) Why should a Principal in the War Office have less than a Principal in the other Public Departments?—I should be very glad to see it, I admit, the same in all the offices.

5177. (*Chairman.*) I do not think that the Ridley recommendation of 1,000*l.* has been carried out in the other departments?—No.

(*Secretary.*) It has in the Colonial and other Offices; the Home Office scale for principal clerks is 900*l.* to 1,000*l.*; the Colonial Office, 850*l.* to 1,000*l.*; the Foreign Office, 900*l.* to 1,000*l.*; the Treasury, 1,000*l.* to 1,200*l.*

(*Witness.*) If you take the larger offices like the Admiralty, the Post Office, and the Inland Revenue, you find that there is a variety. I confess I should be satisfied if we keep our 900*l.* a year for what we call the Principals, of whom we must have a large number, with what we call our staff appointments going up to 1,000*l.*

5178. But for the purpose of attracting good men to the Office, what you look to chiefly is the entrance salary?—Provided the pay of the highest appointments approximates.

5179. But the entrance salary is the difficulty there?—Yes, I think so.

5180. (*Sir Charles Welby.*) You made a remark just now, which rather surprised me, that you considered that the interchange of Military clerks between the

Military Departments of the War Office and the districts would be very risky. In what way do you mean?—I think when once you bring the men up here you should tie them finally here, and that to return to the districts with the knowledge that may have passed through their hands in this Office, where a good deal of confidential work does exist, as subordinate non-commissioned officers' clerks would be a distinctly risky thing to chance.

5181. You consider that many of them up here are practically in confidential positions?—Well, they see necessarily the papers that come into their Branch. Once a paper comes into a particular division, dealing with the questions taken up by that division, you cannot say into whose hands the papers may not go; letters may be written, letters copied, and so forth; they would have a chance of seeing all the work that is done in their division, and I think once they are up here, the more you can separate them from the men who are outside the better. It is better that those outside should not be intimate either with our ways or our staff.

5182. Then with regard to the Upper Division clerks, I understand you, on the whole, to advocate the complete removal of Upper Division clerks from the Military side, or from certain departments on the Military side, and their replacement by officers?—Yes, I do.

5183. Would that apply to all the Military Departments or only to certain of them?—I think it might apply to all the Military Departments.

5184. Including, for instance, the Works Department?—Yes.

5185. But I understand you to think it is absolutely essential, if such a change is to be successful, that the officers who replace the Higher Division clerks should really do the work themselves and not allow themselves to become figure heads, the real work being done by the clerks of inferior standing under him?—Quite so.

5186. Otherwise the result of the experiment would merely be that the work would continue to be done by clerks as before, but by clerks of inferior standing than formerly?—Yes.

5187. (*Sir George Clarke.*) Do you think that if Second Division clerks after passing their competitive examination were called upon as a condition of their appointment to serve for two or three years in the Army, that would produce a dearth of candidates?—I do certainly. I do not think these men have any notion whatever of service in the Army.

5188. But with the certainty of a prize at the end, and that being the only entrance, do you think that would choke them off?—I do not think you would get them to do it.

5189. (*Mr. Beckett.*) I see that Sir Evelyn Wood has said in evidence that he considers the clerks on the Military side are not of the same value intellectually and educationally as some of those on the Civil side; are you of that opinion or not?—The Second Division clerks are all of the same class.

(*Sir Charles Welby.*) I think that evidence refers to the Upper Division.

5190. (*Mr. Beckett.*) I should still like to have your opinion?—As regards the Higher Division men, the Military side has had the advantage of very few Higher Division men appointed under the recent Orders in Council. Their Higher Division men were men who came in under the old system, and they were not so well selected as the men are now for the Higher Division. Some of them though were remarkably good men, some few of them; but I think, as Sir Evelyn Wood says, that taking the general run of them they certainly were not such strong men as the men we get now by the competition for the Higher Division.

5191. Does not that point to the fact that if you were to make this change the work would be less efficiently done?—I am assuming that the officer who comes in would be for those purposes plus his Military experience and knowledge outside as good as the Higher Division man is.

5192. But the selection of the officer would be something of a chance, would it not, because he would have little previous experience in the particular work that he was called upon to do when placed in this position?—All the men who come up here are men who have either distinguished themselves very much as soldiers,

or have qualified at the Staff College where they undergo some instruction in almost all the subjects a man is likely to come across in the Army, and some of them, a very good proportion of the men who joined the Office in recent years as soldiers, are remarkably good men, very good men indeed.

5193. Do you find that they like to join the Office?—I think it varies. I have heard that a very few weeks' experience has sickened some men of it entirely, and others take a great interest in the thing; they see things from a different point of view, it opens their minds really, they begin to understand some of the rules and regulations of the Army, and when they go away, many of them have said that their experience of three or four years here has been absolutely, according to their opinions, invaluable to them.

5194. When you find that officers do not take kindly to the work, do you still keep them at it, or are they removed and others put in their places?—When they really do not care for it, I think they manage to get out of it. They are not here absolutely necessarily for their five years or three years; they hear of something else going, and they go in for it.

5195. Then, as regards the officers, it comes to this—that you have practically the survival of the fittest?—It ought to be so.

5196. And it is so, to some extent?—Yes, it is so to some extent.

5197. (*Colonel Miles.*) But, as a rule, officers stay when they come?—As a rule, I think you find they do, but the change must be trying. They have been accustomed to a life so entirely different out of doors, and when they come here they find that they have to work from 10 or 11 in the morning to 6 or 7 o'clock at night, and it is something so different to what they have been accustomed to that I can quite understand some men not liking to change his habits to that extent.

5198. (*Sir Charles Welby.*) But the appointment of officers to the Headquarter Staff has nothing to do with you, but rests with the Commander-in-Chief?—Yes.

5199. (*Sir George Clarke.*) Do you think that if every Higher Division clerk was required to pass a period as an officer in the Militia, it would be regarded as a tremendous hardship?—I do not see how he is to do it, but I must say I should like to see them serve as Volunteers. I did so myself, and I derived very considerable advantage from the service I gave as a Volunteer.

5200. You do not think it could be arranged, without any great detriment to the Office, that certain officers should be away for certain trainings, and others for certain other trainings, and so on?—It is very difficult to say; I never thought of that. Of course, I know there have been men in the Office, and I know some Second Division clerks who are officers in the Militia who get off for their month's training—but that means that they spend their whole holiday in that way, and some men like it; but I think they would learn quite enough as Volunteers.

5201. (*Mr. Beckett.*) I see that you have stated that it is difficult to arrive at any conclusion as to the relative cost of the Military clerk and the Second Division clerk?—I think there is very little difference between them.

5202. And as regards the Second Division clerks, I see you have said that the Military clerks, as regards quality and capacity, are not to be compared with them?—I do not think they are; the young men of the Second Division Clerks, I do not say they are all so, but a good number of them, come in at 17 years of age, they are quick-witted and intelligent and we find they pick up their work very well; and catching them young in that way they become habituated to the ways of the Office, and so on, and develop into very useful men, and some of them very good.

5203. Practically they are thoroughly well trained in the work they have to do?—Yes.

5204. Whereas Military clerks are in some ways disqualified by their previous training?—I do not know that; I do not think you can say they are disqualified.

5205. But you referred to the outdoor life, which is surely to some extent a disqualification for an indoor life?—Those men who come up to us have been clerks in their districts and they become clerks comparatively early in their Military life, and they have had a clerk's

training; but I think invariably you may say they are slow men.

5206. (*Mr. Mather.*) There seems to be no advantage in employing Military clerks so far as the Service is concerned, because it is not a training school for Military men to get to know something of Military work which may be of use to them in their after profession; but once here, they are here for life?—Yes.

5207. Therefore, they cease to be anything but clerks?—Yes.

5208. (*Colonel Miles.*) But they are clerks, are they not; those N.C.O.'s whom you propose to come here as Military clerks are already Military clerks?—Yes.

5209. And whether they are serving here or whether they are serving in a district, they are doing clerical work?—Yes.

5210. They belong to a corps, but as Military Staff Clerks?—Yes.

5211. And one advantage among others, that we gain, or which it is supposed we should gain, by having Military clerks is that they have some technical training in Military work, say with reference to the moves of troops, with reference to allowances, or that in some form or another they possess a knowledge of the questions that are dealt with in Military Branches, so that they are to a certain extent conversant with the questions?—They have a technical knowledge no doubt, but I do not think that is of very great value to them; I think that anyone who is working here in the Military Office soon picks up what is necessary.

5212. Take an embarkation; it is rather useful to a clerk to have been embarked himself?—I do not know; it may or may not be.

5213. (*Chairman.*) To come to the War Office Council. It was instituted in May 1890, was it not?—Yes, it was given a technical name and a public recognition; but such meetings had taken place for a long time before then.

5214. It was formally constituted. You, as Permanent Under Secretary, are a member of that Council?—Yes, I am always present at the War Office Council.

5215. How often does it meet?—It varies, according to the pabulum which has presented itself.

5216. It has no stated times of meeting, so many times a week or month?—No, it has not.

5217. It meets when summoned together?—When summoned together.

5218. By the Secretary of State?—Yes, and that depends upon the number of subjects which he has from day to day decided should be considered at the War Office Council.

5219. And that depends upon the idiosyncrasy of the Secretary of State to a large extent?—Yes; and as they accumulate, then his attention is drawn to the fact that there are a certain number of subjects which are outstanding which he has decided should be referred to the Council, and when three or four of them have been noted, then the Council is summoned at his convenience.

5220. Roughly speaking, how often does it meet—once a month or once in six months?—Sometimes I have known it meet more than once in a week, and once a week or once a fortnight, but recently it has not met very often. The pressure of the war business has set it aside at least.

5221. (*Sir George Clarke.*) It was not found to be wanted for the purposes of the war?—No.

5222. (*Chairman.*) Could you tell us generally what class of questions it would deal with?—There is no particular class; almost any subject may afford a question which would be considered by the War Office Council. It is summoned generally when probably there is a difference of opinion which has been expressed by various persons who have considered a subject and have minuted a paper, and the Secretary of State finds that it would be advisable that he should have a conference with these various officers together and ascertain more distinctly what their differences are. Sometimes he himself feels that he does not know enough about the subject and would like to have a conference with them in order to be instructed so as to enable him to give a decision upon the point.

5223. Then it does not meet regularly like a Board of Directors?—No, it does not.

Sir R. H.
Knox, K.C.B.
20 Feb. 1901.

Sir R. H.
Knox, K.C.B.

20 Feb. 1901.

5224. Before which all important subjects are brought?—No.

5225. If it did meet more regularly, do you think it would lead to greater despatch of business and hasten departmental operations?—Not the War Office Council, the Army Board best.

5226. (Mr. Mather.) Who are the men forming the War Office Council?

(Chairman.) They are detailed on page 41 of the War Office List: the Under Secretary of State, the Financial Secretary, the Commander-in-Chief, the Adjutant-General, the Quartermaster-General, the Inspector-General of Fortifications, the Director-General of Ordnance, and any other official who may be summoned by the Secretary of State.

(Witness.) Yes.

5227. (Mr. Mather.) They are the highest officials?—Yes.

5228. (Sir George Clarke.) I suppose the War Office Council confines itself mainly to matters of Military policy?—No, I do not think so; sometimes a knotty point comes out of the working of the Regulations and the Secretary of State does not feel competent without a conference with them to come to any decision, and he may appoint a meeting on such a subject as that.

5229. Is the general effect on the whole to lessen the amount of possible correspondence?—No, I do not think so.

5230. But in some cases I suppose it does hasten decisions?—I do not know that it does, almost every point that is discussed might be decided by the Secretary of State without any Council.

5231. (Sir Charles Welby.) Would you not say that the War Office Council had been rather used by the Secretary of State in cases where there was a very marked difference of opinion between two of his great officers who seemed to be unable to arrive at any common ground on paper, and he would then call the War Office Council together in order that the thing might be argued out before him and place him in a better position to arrive at a proper decision than by merely reading a succession of Minutes?—I have stated something very much to that effect while you were out of the room. Those are some of the subjects.

5232. (Chairman.) The Army Board meets with greater regularity, does it not?—No, it does not.

5233. Of the Army Board, the Permanent Under Secretary is not a member?—No, the Assistant Secretary of State attends, and the Accountant-General always.

5234. (Mr. Mather.) And otherwise the Commander-in-Chief?

(Chairman.) Yes, the List is given on page 40 of the War Office List.

(Witness.) The Commander-in-Chief and the chief Military officers.

5235. The Adjutant-General, the Quartermaster-General, the Inspector-General of Fortifications, the Director-General of Ordnance, the Assistant Under Secretary of State, the Military Secretary, the Director of Military Intelligence, the Accountant-General and additional members may, when necessary, be summoned by the President to attend the Board?—Yes.

5236. What are the class of subjects which are considered by the Army Board?—They are really, under the present arrangement only those questions which are referred to it by the Secretary of State.

5237. Or by the Commander-in-Chief?—By the Secretary of State.

5238. (Sir George Clarke.) And the head of a department cannot initiate a subject for discussion at the Army Board?—No, not under the present arrangement.

5239. (Colonel Miles.) It deals with promotions, does it not?—That is a Special Board.

5240. (Mr. Gibb.) Then, except for its composition, it is practically the same as the War Office Council: to talk over a matter which the Secretary of State wishes talked over in personal conference?—They are very much the same officers, certainly.

5241. (Chairman.) And neither of these Boards then could be said really to be a means of generally expediting the business of the Office by getting the

authorities from several departments to sit round the table and settle then and there the questions in which they are jointly concerned?—It is not, but the original conception of the Board was that it should be.

5242. Yes, but it is not?—It is not.

5243. Then, in your opinion, would it be an advantage if the original conception was reverted to?—The greatest possible advantage, I think.

5244. (Mr. Mather.) Would it form a solution for many of the difficulties that have caused complaints with regard to the War Office administration, if that Board were a permanent Board acting like directors do in public companies?—Yes, I think so.

5245. (Chairman.) You would advocate its meeting at stated intervals?—I would.

5246. And that any questions of moment which concerned two or three departments should, as a matter of definite procedure, be brought up before it?—I think so very strongly.

5247. Would you change its composition in any way?—I do not think so. As it is constituted, I think it is all right.

5248. I suppose in the absence of any high officer, like the Adjutant-General, his place would naturally be taken by his Deputy?—Yes, it should be.

5249. (Mr. Mather.) For current affairs any three, probably, would form a quorum; it would not be necessary for them always to attend; the Board would have a working number?—But I think a representative of each department should be present in the absence of the chief himself.

5250. And do not you think it most important that the Permanent Under Secretary should be a member of that Board of Directors, and as he is the head really, or ought to be, and I presume is nominally or theoretically the head of the whole business departments of the War Office, he should be chairman?—This is a Board that is not supposed to decide anything, but to prepare things for the decision and approval of the Secretary of State—at least that is the way I should look at it—and when the Permanent Under Secretary gives advice to the Secretary of State, it is rather after the thing has been thrashed out by the Army Board, represented as he would be, and should be, by a person entirely in his confidence, the Assistant Under Secretary; he would see that the thing was going right and was properly considered. I do not think that the Permanent Under Secretary himself need be a member of the Board.

5251. (Mr. Gibb.) But surely if such a Board were to be of any practical use, its decisions would not have to be the subject of criticism and review by the Permanent Under Secretary afterwards before submission to the Secretary of State?—They might be.

5252. Would that not be a matter in which he should be associated with the Board, in the personal discussion and settlement of each important question?

5253. (Chairman.) And give his criticism then?—I should be inclined the other way.

5254. (Mr. Gibb.) On what ground?—I think his position is better as it is for dealing with the policy of the question.

5255. His position might be better, but is the position of the Public Service better?—Yes, I think the position would be better for the Public Service.

5256. (Mr. Mather.) But that would be taking a very limited view of the utility of such a Board, would it not,—that everything had to be recorded and submitted through you to the Secretary of State? I thought from your paper that you meant that the Board should be established, as you describe it, like a Board of Directors, with administrative power, power to absolutely settle a certain class of questions of themselves within the War Office, power delegated by the Secretary of State to that Board, representing generally what might be supposed to be his view, and also acting with perfect knowledge of all questions which he could never possess, only reserving for his sanction certain high questions of state or of policy, but so far as the administration is concerned of the whole of the War Office, this Board would be responsible to him through you, or with you sitting at the Board, all in perfect contact with the routine business of every department, and in perfect harmony with the whole of the War Office?—I do not think you could give to that Board that power.

5257. (*Chairman.*) Not unless the Secretary of State attended it?—No, not unless the Secretary of State attended it. And it is rather to preserve the position and responsibility of the Secretary of State, independent of the Board, that I think it is necessary that he should not be a member of the Board. It would be open to all these officers to propose anything which they thought was for the advantage and improvement of the Army, and they would obtain the consensus of their colleagues, and they would work the proposal out completely, subject to the criticism of the financial officer who would be present on that Board. You cannot put the Financial Secretary and the Secretary of State and the Under Secretary of State on that Board; but they may all have, and should all have, a voice in dealing with the matter finally. But I would use this Board in order to secure that everything should be threshed out completely and satisfactorily, and that the pros and cons from every point of view should be ascertained and weighed before any proposal is made to the Secretary of State, and then with the scheme thoroughly and completely before him, he would be able to decide upon grounds of policy or any other important grounds, whether it was a proposal that he should adopt.

5258. (*Chairman.*) In threshing out a proposal, supposing that some members of the Board wished to shape the proposal in one way, and other members of the Board wished to shape it in another way, is there any voting at the Board?—Yes. It is not recorded, but in many cases the decision or the recommendation is made as that of the majority of the Board. There have not been many cases in which members have thought it right or advisable to dissent; but I think it was contemplated as the Board was first designed that, in the case of a dissent, it should be known to the Secretary of State before any recommendation was made.

5259. Would it be fair to say, and accurate to say, that the Board has been rather drifting into oblivion? It did a great deal of work and very good work during the war; and all that really worked very much in the way in which it was intended to work; demands came before the Board from the seat of war, and the various Chiefs foresaw or anticipated certain things that had to be done, and they did take these things (under the pressure) before the Board themselves and the Board then made their recommendations as to what should be done.

5260. Questions in which two or three departments might be interested?—Certainly.

5261. (*Sir George Clarke.*) But that procedure would have been irregular in peace time?—Yes, it would.

5262. Then your view, I take it, is that the Board is to make recommendations to the Secretary of State?—Yes, just as now an individual may make a recommendation to the Secretary of State.

5263. To make collective recommendations?—Yes.

5264. Informing the Secretary of State of any dissent?—Quite so.

5265. In such a case when a thing had been threshed out like that upon the Board, do not you think it would be an advantage to the Permanent Under Secretary to have been present, in order to have heard the arguments on all sides before making any further representation to the Secretary of State; otherwise it seems to me that he would only be in possession of the paper view of it, and would not have had the greater advantage of hearing the thing discussed by the Military officers concerned?—I do not deny that there would be advantages, but, as I have said, in most of these things it is a matter of balance, and I think that the advantage is the other way.

5266. (*Mr. Mather.*) Is not the Admiralty plan a very effective Board for administrative purposes as well as for general policy?—Yes, but there—at least, so I understand—the First Lord of the Admiralty is a member of the Board.

5267. And so in your case, I take it, the Secretary of State is *ex officio* anyhow a member of the Board?—No, he is not; he is of the War Office Council.

5268. That would practically sink into oblivion, the War Office Council?—No, I do not think it would. I think that then, if the Secretary of State could not decide upon the recommendations of the Board as put before him and when put before him, he would then

have a Council and would practically become a member of the Board, not with a view to the Council giving a decision, but with a view to his giving a decision.

5269. The Council would be the same individuals?—It would be a conference between the same individuals, but the Secretary of State would be the man who gave the decision.

5270. (*Sir George Clarke.*) Besides these two Boards, there is a Joint Committee, or Board, is there not, of the Admiralty and War Office?—Yes, there is.

5271. Does that meet often?—Not very often—according to the subjects coming up; it is not very frequently that subjects requiring the consideration of the joint Board recur, but they are always called *ad hoc* if there is any question that comes up of sufficient importance.

5272. They are questions of coast fortifications and things of that kind mostly, I suppose?—Yes.

5273. (*Sir Charles Welby.*) With regard to Mr. Mather's suggestion just now, that the Permanent Under Secretary should be Chairman of the Army Board, would there not be a little difficulty in that case from the Commander-in-Chief sitting as a member of a Board of which the Permanent Under Secretary was chairman. It is hardly in accordance with the theory of the position of the Commander-in-Chief in this Office, is it?—No, it is not.

5274. (*Mr. Mather.*) I rather put it to you as representing the Secretary of State at the moment.

(*Chairman.*) Apart from the meetings of these two Boards, would it be possible to institute lower down a Board of your officers for the despatch of minor questions?

(*Witness.*) I am very much in favour of that, too. These higher officers, members of the Army Board, would come into conference, not with a view to executing their various charges, but with a view to originating and recommending any proposals that probably the Army Board would take up. In the process of business, however, in this Office there is a large amount of executive work, which, ordinarily speaking, you would look to the head of the department to carry out entirely himself, but he finds that that work touches the work of other branches according to our division of various responsibilities, and in order to get a thing through easily and rapidly it is very advisable that the subordinate officers, the deputies, *i.e.*, the men immediately below them, should come together and consult rather than have the papers sent round to all the different Branches to see whether they have anything to say or whether it affects them more than was supposed.

5275. Should it meet regularly and at stated intervals?—I believe there is sufficient work of that kind to engage officers of that standing quite once a week; but I should like to test it and decide by experience.

5276. You would like to introduce it experimentally?—Yes.

5277. (*Mr. Mather.*) This would constitute the Board I had in my mind rather when I spoke of administrative difficulties; this Board would become a kind of executive Board in deciding the difficulties that come up?—The difficulty is in pressing forward a thing which has been determined upon.

5278. (*Sir George Clarke.*) But it could not be an executive Board because it would consist of subordinate officers who could not pledge their chiefs?—It is rather to ease the difficulties that arise and to get rid of the friction. If these men get together, they would see where the friction had to be smoothed off.

5279. (*Colonel Miles.*) You mean to carry out some proposal that had been approved by the head, say, reliefs of linked battalions, and so on?—Yes.

5280. That the subordinate members would work out the details of the principle approved?—Yes.

5281. (*Chairman.*) Who would preside at such a Board, in your opinion?—I think that is a detail which might be left; I cannot just at the moment say.

5282. (*Mr. Mather.*) Would it not come under your control as chairman?—The Assistant Under Secretary might take charge of it, I think.

5283. (*Mr. Beckett.*) Who would be the members of such a Board?—They would be more corresponding with the position of deputies. The Deputy Inspector-General, the Deputy Accountant-General, the Deputy Director of Ordnance, and those men who are really

Sir R. H. Knox, K.C.B.

20 Feb. 1901.

Sir R. H. Knox, K.C.B. charged with seeing that the work, as it were, is carried out in detail; they are responsible for the executive work of their departments.

20 Feb. 1901.

5284. (*Chairman.*) To revert to the Army Board, you attach importance to its meeting at regular intervals?—I think there is sufficient work generally to require a meeting at regular intervals; whether it should be once a week or once a fortnight is a mere detail, but certainly there ought to be regular meetings.

5285. It would have a more regular permanent life if it met more regularly?—Yes, it would.

5286. (*Sir Charles Welby.*) And you think it would not be desirable that the Army Board and the War Office Council should be merged into one Board under the Presidency of the Secretary of State?—No, I think not. I think that the Secretary of State's time is too much taken up, and I think it is necessary to preserve

his absolute independence as regards his decision upon all these matters.

5287. (*Chairman.*) Such a proposal as Sir Charles Welby has made would be equivalent to introducing the Admiralty Board?—Yes, it would be exactly the same.

5288. (*Sir Charles Welby.*) I am merely putting this as a suggestion, but of course it would be clearly understood that such a Board would not be binding on the Secretary of State?—No.

5289. It would be merely an advisory Board, just as the existing ones are?—Yes.

5290. And I believe the Admiralty Board is so, too?—Yes.

5291. (*Mr. Mather.*) But it is very clearly defined; it has an enormous influence upon the whole course of the Navy?—Yes.

The witness withdrew.

TWENTIETH DAY'S MEETING.

FOURTEENTH DAY'S EVIDENCE.

At the War Office.

Thursday, 21st February 1901.

PRESENT :

MR. OLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.O.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary.*

Gen. Sir H. Brackenbury, G.C.B., G.C.S.I.

21 Feb. 1901.

General Sir HENRY BRACKENBURY, G.C.B., G.C.S.I. (Director-General of Ordnance), further examined.

5292. (*Chairman.*) We have lately had it put before us that in the Military Departments of the War Office the whole of the clerical staff should be Military. I think in the Ordnance Department, looking at the War Office list, it is very preponderatingly Military?—It is so.

5293. I see that in O. 6 you have a few Second Division clerks?—Yes.

5294. Have you any views upon that subject?—O. 6 and O. 7 are the only branches of my office which have civil clerks, and I think as regards O. 6 the work is very well done, but I have discussed that with Colonel Jeans, and there is nothing in the nature of the work which could not be equally well done by Military Staff clerks. You could not take all these five men away at once and put in five Military clerks, but if, for instance, when the first one went you brought in a Military quartermaster and then, as the others disappeared, brought in a Military Staff clerk in place of each one, I think that might perfectly well be done.

5295. Then I may take it from you that you think these Second Division clerks could all be replaced by Military Staff clerks, but that as regards the public interest the work could be equally done by one set of men as by the other, but it is not desirable to have them mixed?—That is so.

5296. And as the majority of the men in the Ordnance Department are already military you would, on the whole, like to see the principle carried out completely?—Yes, I should. Perhaps I may mention that in O. 7 there is a Staff clerk, Mr. Little, who was specially brought into the War Office from the Clothing Department at Pimlico when the clothing was transferred to the Director-General of Ordnance;

because of his knowledge of the working of the Army Clothing Department; but he is too good a man for the place he is in, and there is no reason why, now that the working of the clothing is understood, he should not be replaced by a Military clerk. Then a little bit lower down in O. 7 you see "Questions connected with the dress of Officers." For that there is Mr. E. H. Dallimore who has got at his finger ends the whole of these complicated extraordinary questions of the patterns of officers' dresses and so on, and it would be very difficult to replace him by a Military clerk at present; but in the course of time he must go, and when he does go I do not see why he should not be replaced by a commissioned Military clerk, a quartermaster. The clerk holding this position has to see contractors and show them all the patterns, and it is very desirable that he should be a man in a good position, not likely to be in any way got at.

5297. Then you would make the transition from the few Second Division clerks you have to Military clerks gradually, as opportunity arises?—I would do it gradually as opportunity arises.

5298. And as regards the Military Staff clerks, is it your idea that when a Military Staff clerk comes to the War Office he should remain there permanently, or should he be transferable between the War Office and the districts?—I do not know that I have thought that question out, there is a great advantage in keeping men; of course they get to know the technical run of work and it is a pity to move them oftener than necessary, it always disorganizes the Branch for a certain time.

5299. I asked you the question because one of the arguments in favour of moving Military clerks which

has been given to us is that it has been contended that Military clerks might be trained here and then would be very valuable in the districts where it is alleged that there is an insufficient supply of good Military clerks?—Of course, at present it is rather the other way; we bring the Military clerks from the districts to the War Office, and it is rather a plum to get there, because they get better pay.

5300. It is not a question of better pay, but the idea is that you might get more efficient Military clerks in the districts if you took men that had been trained here, and that would lead to transference backwards and forwards?—I have not considered that point enough to give an expression of opinion, but I should have no objection to that if it was thought desirable.

5301. You have no Higher Division Civilian clerks at all?—None.

5302. Do you find any difficulty due to want of tradition and knowledge of the office from the fact that you have Military officers who only remain with you for a certain period and then go?—No.

5303. I suppose that is owing to arranging that they do not all go at once?—Yes, one man goes when his time comes, and another comes in.

5304. I was referring to the five years' tenure?—I think the five years' rule is an excellent one.

5305. It prevents an officer being turned into a clerk?—Yes, it prevents an officer being turned into a clerk. An officer goes at the end of his five years and another good man comes. You have to be very careful about the selection of the men you bring into the War Office. I have had more than one change since I was here in my department, and I have always found that the men I got were excellent men.

5306. But you do not find that your department suffers in continuity from the fact that these officers are continually being changed after five years?—No.

5307. (*Sir Charles Welby*.) Let us take a particular branch O. 3 of which Colonel Elmslie is the head, with only one warrant officer and five Military Staff clerks under him?—Yes.

5308. When his time comes to go somebody may be brought in from outside who has no special knowledge of the work of that Branch?—I should not bring in a man without special knowledge of the work of that Branch. All that you have to do is to bring in an able man with a good business head, with a thorough knowledge of horse, field, siege, and mountain artillery.

5309. (*The Chairman*.) Under proper sanction?—Under proper sanction.

5310. (*Sir Charles Welby*.) That actually supplies all you want, you think?—Yes.

5311. (*Mr. Mather*.) Speaking of Military clerks from the point of view of efficiency of service, do you consider that they are more capable than Civilian clerks would be throughout your Departments?—Throughout the whole Departments of the War Office do you mean?

5312. Throughout your own Departments?—They are equally capable I should say.

5313. Then is there some Military advantage in having Military clerks?—There is. It is a Military advantage, that in many of the Branches of my Department the men understand the material with which my Department has to deal, they are nearly all men who have been in the Artillery, these Military Staff clerks in my office; I will not say all, but a great number of them are.

5314. But they are selected, I presume, upon some principle of efficiency, being capable of doing the work you want them to do, with knowledge of the articles perhaps that you have to pass through your Departments?—No, I cannot say particularly that. They come in with a general knowledge.

5315. A general knowledge, with a Military bias to it?—With a Military bias. I mean a general knowledge of Military equipment.

5316. And upon that ground they are superior to Civilian clerks?—On that ground they are superior.

5317. (*Mr. Gibb*.) By whom are the Military clerks selected who come into the Ordnance Department?—By the Adjutant-General. If I want a Military Staff clerk, I apply for one, and a man is sent to me from the Military Staff clerks.

5318. And on what principle are they selected, do you know: is it simply a question of being an intelligent soldier?—I am afraid I cannot tell you. That is Adjutant-General's business.

5319. The question I was going to ask you, based on these, was whether you think it at all an advantage that a man should be enlisted with the distinct object before him of becoming a Military clerk, whether you would get a better type of Military clerk if you provided from the very beginning of his joining the Army that he was to be a clerk, and thus encourage men who really intended to spend their lives as clerks to pass, before going into the office for clerical work, some years in the Army?—I think, under the present system you get very much the same thing, because a certain number of men who are clerks or have been clerks enlist, and they are found out almost immediately and are sure to be taken. If a good clerk enlists he is sure to be taken into the Regimental Orderly Room very soon, and then he passes on from that and joins the Military Staff clerks.

5320. I think we have got the impression, at least I have, rightly or wrongly, that the Military clerk is not just as good a clerk for clerical purposes as the civil clerk?—It depends upon what the clerical purposes are. If you ask me if the Military Staff clerks as a rule would be capable of doing the work which the higher division clerks do, I should say, no.

5321. (*Chairman*.) But we are now dealing solely with Second Class clerks?—If you are dealing with the Second Class I think they are just as good. You may now and then get a man who is not.

5322. But looking to the average?—Looking to the average for our work they are just as good.

5323. We were told by one of the witnesses that he thought they were practically as good as the Second Division Civilian clerks, but on the whole slower?—I have not had personal experience of their work to enable me to say that, I never see it practically; I do not see the clerks in my office. I ask about them from the heads of the branches. I see their work and it is very good. They draft letters, and draft them very well.

5324. Have you any particular recommendations with regard to what we may call the internal organisation of your Department to make at this present time?—No, I do not think so. I made some little alterations in the Department.

5325. Nothing of principle?—No, I think now I do not see anything that I want to change at present. The great step which has been of immense advantage to me, was that which I got carried out last year, of getting a Branch of the Accountant-General's Office put into my office, which has been a great assistance and advantage to me. When I say, put into my office, they did not change their rooms at the War Office, or anything of that kind, but the Branch does the accounting work, and keeps all the financial accounts and records of my office, and its Head is my financial adviser, and he keeps me straight and prevents my going wrong; whereas, under the old system, I was always being tripped up by the Accountant-General for having gone wrong.

5326. (*Sir Charles Welby*.) At the same time this Branch remains responsible to the Accountant-General?—Yes, it does remain responsible to the Accountant-General; it keeps the accounts for the Accountant-General in the form that he likes under him, but does everything for my Branch, and it is an immense advantage.

(*The Secretary*.) And saves reduplication of work.

(*Witness*.) It saves reduplication of work.

5327. (*Colonel Miles*.) That Branch works, in fact, in close touch with you?—It works in the closest touch with me.

5328. Have you sent for information from it, or asked for information?—I got the Accountant-General to draft the regulations for the head of this Branch; he sent them to me for concurrence, and we agreed upon them, and in those regulations it is laid down that he is to be my officer to give me any financial advice and assistance that I require, and that I or the Deputy Director-General of Ordnance may send for him at any time to give that advice and assistance. In the same way we got a Branch put into the Clothing Department at Pimlico, and in the same way the Chief Ordnance Officer at Pimlico may send for the Head of that Branch to give him any financial advice and assistance.

Gen. Sir H.
Brackenbury,
G.C.B.,
G.C.S.I.

21 Feb. 1901.

*Gen. Sir H.
Brackenbury,
G.C.B.,
G.C.S.I.*

21 Feb. 1901.

5329. And at the same time they remain responsible to the Accountant-General?—They remain responsible to the Accountant-General, who is charged under the Act with being responsible for all military accounts.

5330. Do you not think that that system might perhaps be extended to other branches?—I have said so in the little memorandum that I sent to the Committee.

5331. (*Mr. Beckeff.*) Might it be extended to local commands, to General Officers commanding districts, at Dublin, Aldershot, and so forth?—I believe the Chief Paymaster is supposed to be their financial adviser, but I have always felt myself that the Paymaster's Department and the Accountant-General's Department here ought to be all merged into one.

5332. Supposing that the Accountant-General had a representative there, do you think it would be a good thing?—I think the Chief Paymaster ought to be his representative; he is the head financial man of the district.

5333. (*Chairman.*) Before we turn to that Memorandum of yours which you have mentioned, there are two other questions about your Department that I should like to ask you?—May I say one thing before you go on? I always reserve, when I have said that everything in my Department was satisfactory, the question which I have headed my Memorandum here with, about the contracts.

5334. (*Mr. Mather.*) I was going to ask you, you naturally do not withdraw the statement you have just made to the Chairman, but you make that reservation?—Yes, I make that reservation always.

5335. (*Chairman.*) My question relates to your Department, not with regard to other Departments, but to its internal organisation?—Yes.

5336. (*Mr. Mather.*) Is the Ordnance Committee in your Department?—Certainly.

5337. Is it not the fact that there is a great deal of circumlocution connected with that Committee, and that questions are referred to it from other places before a decision can be arrived at, sometimes on very trifling matters?—It is a Committee that works very slowly, and it works very slowly for many reasons, which it would be rather long to go into. No question can be referred to the Ordnance Committee at all except by me.

5338. Can you not suggest some rapid mode of dealing with those questions and hastening the Ordnance Committee?—I must tell you that the position of the Ordnance Committee was very much worse as regards rapidity of doing business until I became Director-General of Ordnance. When I was President of the Ordnance Committee myself, we were not allowed to correspond direct with the Superintendents of Factories. We were not allowed to correspond direct with the Naval authorities; we were hampered and tied down in every direction. I swept those restrictions away, and in concert with the Admiralty agreed upon a new set of rules which gave the Ordnance Committee direct access to the Director of Naval Ordnance, to the Captain of the "Excellent," the Captain of the "Vernon," to all Superintendents of Factories, and everybody whom they wanted to consult. This change did away with a good deal of sending papers backwards and forwards to the War Office, and so on, and in that way shortened business, but it still is a Committee that works very steadily; and it works very steadily for many reasons. Its work is almost entirely experimental work. I refer a question down to them. They require the opinion, in the first place, probably, either of the Chief Superintendent of Ordnance Factories, or of one of the Superintendents of Factories, and the Chief Inspector also probably, and the papers are sent to them; they take a considerable time to report; the matter then comes back to the Committee; it is considered by the Sub-Committee which deals with that particular branch of the work; it then comes before the full Committee; and the papers may have to be sent to the Civil members, Sir Frederick Bramwell and Sir Benjamin Baker, and the chemists; then they consider them, and they may think that a certain article ought to be made and tried; then that goes to the Chief Superintendent of Ordnance Factories; he has to make this thing, and it takes a long time; then the trials have to come off, and when those trials can be carried out is dependent upon what other work is going on, what arrangements are available, and so on; and it is a very long time before any of this experimental work gets settled.

5339. And have you no suggestions to make for improvement in the procedure?—I should be very glad to consider any suggestions that are made to me and do my best to carry out anything that appears useful, but I have none to make.

5340. (*Sir Charles Welby.*) Does the Committee only consider questions referred to them by the Director General of Ordnance?—Yes, only those.

5341. No one else has power to refer to it?—No; if the Admiralty wants any question referred to them the Director of Naval Ordnance sends it to me, and I refer it to the Committee as a matter of course.

5342. (*Chairman.*) I suppose the deliberations of the Ordnance Committee must be slow because they are based upon difficult and delicate experiments to a great extent?—Yes.

5343. And you have also to employ on the Ordnance Committee men the whole of whose time you cannot take up, great outside experts like Sir Frederick Bramwell and Sir Benjamin Baker?—Yes. Nothing trifling goes to them, but questions connected with the designs of guns and alterations of guns, specifications of steel, acceptance and rejection of forgings, and so on.

5344. (*Mr. Mather.*) I think it has transpired during this inquiry that some very trivial matters come up in their orbit to you as Director General of Ordnance which you might settle at once on the spot instead of referring them to the Ordnance Committee, if you had more freedom?—Oh, I have perfect freedom; whether I refer the question to the Ordnance Committee or not rests with me.

5345. In all matters of experimenting with guns and any other matters of that kind you can, of course, never limit the time in which they would be completed; one would not think of that for a moment; but I am speaking now of the routine work of the War Office. When certain questions come up before you which do not appear to be of very much importance, upon which you know yourself, before you refer them, what ought to be done, they are referred by you to the Ordnance Committee?—If I were satisfied that any certain definite thing ought to be done, I should not refer it to the Ordnance Committee.

5346. Then you have not the slightest fear of taking any amount of responsibility yourself?—Not the least.

5347. You never would refer anything unless you felt it was necessary to have somebody else's judgment besides your own?—No. I should only refer a question to the Ordnance Committee when I think it ought to go to them, and I ought to have their opinion upon it. There is no want of power or authority vested in me, I have plenty of it.

5348. I only raised the question, to begin with, on this matter because the evidence directed my attention to some trivial affairs which appeared to be quite unnecessary to submit to the Ordnance Committee, and yet they went to it?—Could you give me an instance?

5349. I cannot from memory, but that was borne in upon me?—I would be glad to have an instance. I should be very sorry, for instance, if it was a gun to take responsibility without reference to the Committee. Something is found wrong, say, in the first pattern of a gun, one of our 9·2-inch guns, the latest pattern made; in the first gun that was proved it was found that something went wrong. It goes down to the Ordnance Committee, they investigate it and say it is due to a defect in the design. Now, that design had been approved by that Committee, by Sir Frederick Bramwell and Sir Benjamin Baker and by all the Members of the Ordnance Committee, and I would not have taken the responsibility for altering that design on my own shoulders for anything in the world.

5350. (*Mr. Mather.*) I should have thought it was a perfect plan for showing how not to design anything properly—that Ordnance Committee?—I cannot agree there.

5351. I think two or three capable men, instead of a large committee, would have done things very much better.

5352. (*Mr. Gibb.*) It is a good large Committee?—It is a good large Committee.

5353. (*Colonel Miles.*) But all the Members do not come together on every question?—No, not on every question.

5353a. (*Sir Charles Welby.*) But supposing a difficulty arose in the course of manufacture and the head of the factory concerned had a definite recommendation to make for an alteration in the design which he thought would conduce to simplicity and better results, supposing he was quite clear in his own mind and made a definite recommendation to you, would you accept his recommendation or would you refer the question to the Ordnance Committee?—If it was the modification of a design which design had been settled by the Ordnance Committee, I should, unless it was a most exceedingly trivial thing, refer it to the Ordnance Committee—even a little question like boring another hole for a screw in the breech of a gun I should refer down to the Committee, because it is a question of how it will possibly affect the strength of the gun in comparison with the strain, and I should be taking the opinion of one man, who may be a very capable man, but still one man, against the opinion of the whole Ordnance Committee. There have been cases and there are cases in which I overrule the Ordnance Committee.

5354. (*Mr. Mather.*) Have you the power to do that?—Yes. I have not accepted their recommendation in more than one case. If the matter affects more than myself, if the Director of Naval Ordnance agrees with me that we do not think the recommendation of the Committee is necessary, it may be something which they may think desirable, but we do not think necessary, we should say, "We agree; we will not do it"; or it may be on different grounds; but it rarely happens. For instance, the other day, with regard to the sides of the ammunition boxes of field gun limbers, when Sir Andrew Noble asked me about it, I referred it to the Ordnance Committee because they had settled the design, and the Ordnance Committee were against this change, but I overruled them upon my own responsibility. I said, "Let the contractor make them in two pieces"; I was perfectly satisfied that it was not a change of any real importance and I overruled the Committee.

5355. That seems such a trivial matter?—It is not a trivial matter.

5356. (*Sir Charles Welby.*) Still, you feel bound to let the Ordnance Committee have its say?—Yes.

5357. (*Sir George Clarke.*) To sum up your evidence generally with regard to the employment of Military clerks, you consider generally that Military business should be managed entirely by Military men?—Military business by Military men, yes.

5358. But you think that in each spending department there should be a small Civil Branch looking after accounting, and advising the head of the Branch upon the course of its expenditure and the cost of its proposals?—Yes.

5359. And you think it would be desirable to hand over the Paymaster's Branch to the Financial Secretary as the head, with a view to some ultimate amalgamation of the Paymaster's Branch and the Accountant-General's Department?—I think it is very desirable that the Paymaster's Branch and the Accountant-General's Branch should be amalgamated. I think that there is a want of touch between the paymasters in the districts and the War Office, between what I should call district finance and War Office finance.

5360. Then you think that if the Paymaster were under the Financial Secretary as the head, his financial position would be strengthened. Of course he would be trusted more by the Accountant-General's Department?—I should amalgamate the whole Pay and Accounts Departments into one, like the Military Accounts Department in India. The Military Accounts Department in India is a Department, and the head of that Department is the Accountant-General in the Indian War Office, that is the Indian Military Department; he is the head of that Department, and his Deputy-Accountant Generals are also men of that Department.

5361. But the officers of that Accounts Department in India are Military, are they not?—They were Military originally, and they adopted the Accounts Department as a career; they serve in it first of all for five years provisionally, and then if they are considered good men and fit men they are appointed for a second five years, and at the end of the ten years they are either rejected or are permanently accepted for the Accounts Department.

5362. And you think there should be no obstacle to a Paymaster who has shown himself specially proficient and apt in finance, rising to the position of Accountant-General?—I am very anxious to see the Departments

more interchangeable. A Paymaster should come into the lower branches of the War Office, the Accounts Branch, should go out again into the districts, and come back again into the higher ranks here.

5363. And you think it would probably improve the class of man you get into the Paymaster's Branch if there were at the head of them some possible prizes of that kind?—I do not know enough of the Paymaster's Branch at present to say whether the class of men are the right men or not.

5364. (*Chairman.*) Would not the corollary of that be that the Accountant-General's men should also rise to the highest position now open to Paymasters?—Undoubtedly.

5365. (*Sir George Clarke.*) And you do not see any advantage or any principle in placing the Paymaster under the Quartermaster-General as the War Office head?—I have never really considered that question; it has never come before me in any form, and I have not considered it. It was made an Army Department and I suppose it had to be put under some Military head for administrative purposes, and therefore was put under the Quartermaster-General.

5366. (*Chairman.*) On the same principle as you want Military Staff clerks?—In the same way as the Army Ordnance Department is under me for administration; but, of course, the Quartermaster-General has nothing to do with paying the Army.

5367. (*Sir George Clarke.*) Nothing. And lastly, you do not anticipate any difficulty in obtaining any such Military Staff clerks as you might want for your office?—No, I think there is no difficulty.

5368. The Service provides the class of man?—All our experience is that it does so.

5369. (*Mr. Beckett.*) I understand that in your office there are Second Division Civilian clerks employed to a certain extent, are there not?—There are about eight.

5370. Do you think it is advisable to retain those civilians?—I think it would be desirable to replace them gradually by Military clerks on general principles.

5371. Do you think in the War Office generally it would be advisable to employ Military clerks to a greater extent than is done?—I should not like to speak about Departments other than my own. I do not know enough of their work.

5372. (*Colonel Miles.*) With reference to the amalgamation, as we may call it, of the Pay Department and the Accountant-General's Department, you would still retain the military characteristics of the Pay Department somewhat on the lines of the present constitution?—Yes, I should. I should take men in in the very early stages of their career, if they are to come from the Army; I do not care whether they come from the Army to start with, or whether they come from civil life to start with.

5373. It would be something more in the nature of the German Intendant system, where you have an infusion of the Military element?—Yes, I should have it just like the Military Accounts Department in India.

5374. (*Mr. Mather.*) I should not like the reply which you gave to my questions about your responsibility connected with the Ordnance Committee to pass without your qualifying it somewhat. I asked whether you had the power to decide all questions that you would submit to the Ordnance Committee, and therefore only submitted those questions which you could not decide yourself, or did not care to decide yourself, and you said yes?—Yes.

5375. Then you gave me an instance, the ammunition boxes which you had before referred to, where the side of the box was required by the contractor to be made in two parts instead of one, in order to expedite the work; and you instanced that as a case which you submitted to the Ordnance Committee to know whether they approved of the proposal that the sides of those boxes should be made in two parts instead of one?—Yes.

5376. But is not that a typical case of what a trivial matter is?—I do not think it is a trivial matter.

5377. Because you yourself decided it eventually; you did not agree with your Committee; therefore, either the Committee was incompetent to deal with it, or you yourself might have dealt with it to begin with?—I might have dealt with it myself to begin with, but I had not at the time the information before me to enable me to deal with it. I sent it down to the

Ordnance Committee, knowing that the Ordnance Committee would consult the Superintendent of the Carriage Department upon it.

5378. That was Sir George Clarke?—That was Sir George Clarke. The Ordnance Committee did consult Sir George Clarke, who sent in a memorandum, and the Ordnance Committee, after considering that memorandum, said that they did not recommend that it should be done. I had not seen that memorandum of Sir George Clarke's. The Ordnance Committee did not give any reason why it should not be done; and I then sent the paper down to the Chief Superintendent of the Ordnance Factories, and said I should like to know what the Superintendent of the Carriage Department said. On that there was sent back to me the minute by Sir George Clarke, which had been laid before the Ordnance Committee, and on consideration of that minute, and on asking practical advice elsewhere, I decided that it was safe to make the change. The Ordnance Committee merely said they did not consider it desirable, and I said, Well, it must be done; it may possibly not be quite as strong, but considering the difficulties we are in of getting supplies, and as insisting upon sides being one piece might delay almost indefinitely the getting of the wagons, I said, it is to be done.

5379. And that was the procedure required in order to answer the simple question of Messrs. Armstrong, whether they might make these ammunition boxes upon their own responsibility as constructors?—Oh, their own responsibility would be nothing whatever to me. If an ammunition wagon goes into the field and fails, their responsibility is no help to me.

5380. When I say their own responsibility, a firm like Messrs. Armstrong would never suggest such a thing as making a side of a box in two parts without making it of the most solid timber and being certain that they could obtain the timber necessary to do it?—I am not so sure about that. It is not a question of the solidity of the timber, but of the solidity of the side of a box subject to great strain, if made in two pieces instead of one.

5381. How long did it take for this answer to be given to Messrs. Armstrong, when this most imposing committee of Military engineers and civil engineers had to be called together to decide upon it?—No, excuse me, they had not to be called together in order to do so. They sit permanently three days a week, and the Sub-Committees sit at other times; this was referred down to them, and it would go before them at the next meeting on the day or the day after they received it, and they are there in the Arsenal where the Superintendent of the Carriage Department is.

5382. How long would it be before Messrs. Armstrong would receive that answer?—I daresay a fortnight.

5383. (Colonel Miles.) We should consider in the Army, should we not, that anything in the nature of an ammunition box or its fittings, although it might seem trivial in itself, was really a very important matter?—A most important matter. If the sides of these boxes gave way, a nice mess we should be in. But it was when I got Sir George Clarke's minute about it, and I also got the minute of the Chief Inspector at Woolwich, who considered that it might safely be done, because there were certain irons which support the box —

5384. (Sir George Clarke.) Which I put in for the purpose?—Yes, that I said it might be done.

5385. (Mr. Mather.) Then the direct, quick, short-cut manner of settling the matter would have been a direct communication between yourself and the head of your own Department at Woolwich, from whom you would have got a direct answer?—Yes, but I prefer the course which I took.

5386. You think it was worth the delay?—I think it was. It so happens that the Ordnance Committee did not take the same view. Sir George Clarke's minute, I may say, did not give a very decided opinion one way or the other; if anything it was perhaps a little against the alteration.

5387. (Sir George Clarke.) I was against making the joints in the way they proposed; that was my strong point they joined the parts the wrong way?—Quite so.

5388. (Mr. Mather.) Eventually you decided the whole thing yourself?—Eventually I decided the whole thing myself, after having got the best advice that I could get.

5389. (Chairman.) To leave the question of the Ordnance Committee now, and before coming to your Memorandum, there are a couple of questions I want to ask you. It has been stated to us by a contractor that the foreign Governments pay much better than the British Government, that the vice of the British system lies in the Treasury regulations, which require all money under a vote to be spent within the financial year, while contracts can only be paid for on completion. He goes on to explain that a foreign Government will very often pay something on account, and therefore the contractor feels under an obligation to push on the work for which he has got something on account; while the British Government only pays at the end of the work, and, therefore, the contractor does not quite feel under the same obligation; and at the same time, as unexpended balances are returned to the Treasury, work has often to be pressed on with great and indiscriminate hurry, in order that it may be got through in the financial year. That brings us up to the whole question of unexpended balances being returned to the Treasury, and I should like to hear your views about that?—The present system, of course, is not a business-like system from the point of view of the manufacturer and the point of view of the Supply Departments, but I do not see how you are to alter it. As a practical matter of fact we always have every year a large carry-over; and it is exceedingly awkward for us if that carry-over is much larger than we have estimated for, because then at the close of the year we have to return the unexpended money to the Treasury and pay the carry-over out of the vote for next year. Supposing, for instance, we had estimated that we should have a carry-over of 200,000*l.*, and then we find that that carry-over, owing to the trade not having delivered, is 500,000*l.*, that leaves me the difference between 200,000*l.* and 500,000*l.* short in what I can order for next year. I estimate that I shall want so many millions, or whatever sum it may be, the next year for the supplies which I must order in that year; and if I have to appropriate 300,000*l.* or 400,000*l.* of that to paying for the carry-over from the year before, I am that much short in what I can order in the following year. That is where the system is so awkward for us.

5390. (Sir Charles Welby.) You mean that the order is carried over, but the money to pay for it is not carried over?—Exactly.

5391. (Chairman.) I suppose the difficulty of unexpended balances (perhaps not in your Department, but elsewhere) is to a certain extent got over by these loans, for instance, for barracks?—Yes.

5392. But that would not help you?—No. I have a very strong opinion indeed that orders like the immense orders we have been giving for millions of pounds for guns ought to have been provided for by loan; but that of course is a matter for the Chancellor of the Exchequer.

5393. Like the Naval programme for shipbuilding?—Yes.

5394. But do you experience really much practical difficulty from the present system?—Yes. I did not last year.

5395. For what reason?—Because of the war; the war has so upset everything. But in the first year I came here I did. When I came here in 1899, just at the close of the financial year, I did experience immediately afterwards—after April—considerable difficulty, because the carry-over was very much larger than the carry-over which had been anticipated, and I found myself saddled with the arrears of payment, and very heavy arrears of payment too, for things which had been ordered for delivery in the previous year, and therefore I had not got sufficient money to order those things for which I had estimated, and for which money had been provided, because the money granted had to be diverted to pay for this large carry over.

5396. Let me take you back a little further in your experience. You found yourself face to face with this system when you were Military Member of the Council in India, did you not?—I found myself face to face with the same difficulty there.

5397. Did you find that it caused you much practical inconvenience then?—No, because as a rule we were able to have the carry-over; it was generally given more or less in the estimate.

5398. It was taken into account, that is to say, in framing the estimates for the next year?—Yes; but it is a very small thing in India compared with what it is

here, because the bulk of the stores for India are bought here in England. It is here in England that the carry-over system fails.

5399. (*Mr. Gibb.*) But there would be no difficulty if you were allowed to carry over always; the difficulty arises not from the system, but from the fact that the money voted does not sufficiently cover all you want?—I think it would be an immense advantage if it were definitely and distinctly laid down that any carry-over of that kind which had been estimated to come into payment in the year, and which did not come into payment in the year because the stores had not been delivered, was to be re-voted and given to you for the next year. If that could be done it would be an immense advantage, because then you would know that you might at once place orders for the whole of the money you had got in your estimates in, say, 1901-2. We do not find out until two or three months after the close of the financial year how much carry-over there is.

5400. (*Chairman.*) That would be practically carrying over any unexpended balance in a suspense account?—Yes.

5401. And saying that when that money found its way into the suspense account it must be considered as cash spent?—Exactly.

5402. That is what it amounts to?—Yes.

5403. (*Mr. Mather.*) That is to say that it was earmarked, put aside for that particular purpose?—Yes.

5404. (*Mr. Beckett.*) And that it could not be withdrawn?—Quite so.

5405. (*Chairman.*) Have you ever urged that point?—No, I cannot say that I have.

5406. Would it facilitate your work if some arrangement of that kind were made?—It would, certainly. I did urge it before Sir Francis Mowatt's Committee.

5407. (*Mr. Beckett.*) Do you find that money is spent, which would not otherwise be spent, in order that it should fall within the amount voted for the year?—It is not so much so in my Branch as it is, I should think, in, say, the Works Department.

5408. For fortifications?—It must be so there; there is so much money, and you shove along and get the work done lest that money should not be spent. It must be so.

5409. (*Chairman.*) Then there is another minor point which has been made by a contractor. He states that the Admiralty meets the requirements of contractors much better, because the Admiralty makes payments on account, and the War Office always refuses to make payment until the contract is completed?—I know the principle of the War Office is not to make payment until the contracts are completed, but I think it is from time to time departed from.

5410. I gather that it is much easier to do so at the Admiralty, there you have one immense work like a ship which takes several years in building, and it is natural that you should make payments on account as the ship advances towards completion; but in the War Office you have nothing which quite corresponds to that?—I have not in my Department, certainly.

5411. Do you ever make payments on account in your Department?—Of course I do not have the making of payments. If a contractor wanted a payment on account he would go to the Director of Contracts and ask him, and the Director of Contracts would go to the Accountant-General. But in special cases connected with this war we have made some payments on account. But where my Department's vote is always, as it were, being charged with payments on account is in carrying on the Ordnance Factories. The Ordnance Factories have of course to have solid sovereigns to pay their wages with.

5412. (*Mr. Mather.*) But they are dealt with exceptionally on that account, I presume, as all manufacturing Departments must be dealt with?—Yes. For many years, as you know, the vote taken for the Ordnance Factories was 100l., that was all; and the whole of the payments for the Ordnance Factories came out of Vote IX., the Vote in the Army Estimates for Stores; so much money for guns, so much money for carriages, and so on.

5413. Like giving orders and paying for them?—Yes. That money has to be given to them to carry on, pay wages, buy materials, and so on. And the Navy do the same.

5414. (*Chairman.*) In answer to our letter of the 16th January, you sent us in a short Memorandum. The first two sections of that deal with the Director of Contracts and the Accountant-General?—That is so.

5415. As regards the Director of Contracts, we have had the advantage of having your views, and as regards the Accountant-General, so far as relates to your own Department you have told us, and told us again this morning, that you have made an arrangement which is considered satisfactory?—Yes.

5416. Then you go on to say: "There should be a Military head over all the administrative and supply services (I suggest a Military Under Secretary of State), whose duty it should be to see that all proposals are considered from all the administrative and supply points of view"; that is to say, as I understand you consider that there should be some authority over all the Military Supply Departments, who would bring them together and push the work on in conjunction?—Yes, that he should see that they worked together and see that the questions are taken up.

5417. Such an officer would, in fact, practically correspond to the Military Member of the Council in India?—It would be the same sort of thing; that is really the organisation that I had in view, the Secretary of State as it were taking the place of the Viceroy, and the Supply and Executive Departments being represented by the Military Under Secretary and Commander-in-Chief respectively.

5418. Then the Commander-in-Chief would be left entirely free for the executive duties of command?—The executive duties of command and all those great questions which the Commander-in-Chief has to consider, and which he is wanted for.

5419. This officer, who you suggest would be a Military Under Secretary of State, would therefore be the person responsible for the efficient working of all the Supply Departments, the Director-General of Ordnance, the Inspector-General of Fortifications, and so on?—Responsible for bringing them together, for collating their work, and seeing that every question that came forward from the Commander-in-Chief was considered from all the different points of view. Now, I do not see that there is anybody who does that at the War Office.

5420. Was the Army Board provided to any extent to meet such a difficulty?—The Army Board as it is now constituted was, I think, intended to meet that difficulty, but the Army Board very seldom meets.

5421. If it met more regularly would it provide for that difficulty to a greater extent?—I do not think it would do it in the same way; you bring together a great many very busy men with perhaps nothing to talk about particularly. But if you had someone whose duty it was to act as a sort of permanent head, who should have all the Supply Departments brought together two or three times a week (you do not want the Commander-in-Chief, the Adjutant-General, and the Military Secretary) you would, I think, greatly improve the business.

5422. You say that the Military Under Secretary?—I suggest that name; I do not care what he is called; I suggest Military Under-Secretary because I think if he is to be over the heads of Departments for this purpose he must have some very definite and distinct position under the Secretary of State.

5423. Assuming that he is called Military Under Secretary, you say that the Military Under Secretary would submit papers direct to the Secretary of State without the intervention of the Permanent Under Secretary. What would be his relation then to the Permanent Under Secretary?—I really do not know.

5424. The relation of the larger boa constrictor in the Zoological Gardens to the smaller boa constrictor?—The Permanent Under Secretary, I think, might disappear. I never can quite find out what good he is myself. The Financial Secretary has definite and distinct duties laid down in the Order in Council; he has the Accountant-General under him, and all the finance of the Army, and he has the contracts; but the Permanent Under Secretary has not got any definite duties of any sort, kind, or description.

5425. (*Sir Charles Welby.*) Does not your proposal to create a Military Under Secretary practically consist of the revival of the office of Surveyor-General of Ordnance,

Gen. Sir H.
Brackenbury
G.C.B.,
G.C.S.I.

21 Feb. 1901.

Gen. Sir H.
Brackenbury,
G.C.B.,
G.C.S.I.

21 Feb. 1901.

as it was at the time when that office was filled by a Military officer?—No, I do not think it quite does. I am not proposing to re-create the office of Surveyor-General of Ordnance. The Surveyor-General of Ordnance had his own Department, his own finance, and his own accounts, and he was the actual absolute head of everything and ordered everything. But I should not remove in the smallest degree the direct responsibility of the Director-General of Ordnance, the Inspector-General of Fortifications, and the Quartermaster-General to the Secretary of State. I only think that there should be one man with sufficient authority to be able to bring them together, and see that they are all really taking up and working out every point in connection with any proposal that comes before the Secretary of State.

5426. (*Chairman.*) But he would be primarily responsible to the Secretary of State as the Military Member of the Council in India is responsible to the Viceroy?—He would be responsible to the Secretary of State in the sense of seeing that the thing had been thoroughly thrashed out by all the Departments, and then he should present the case to the Secretary of State, so that the Secretary of State might have the fullest knowledge of it.

5427. That would be rather different from the position of the Military Member of the Council of India?—It would be a little different.

5428-9. I understood you to say at first that your proposal was to constitute something analogous to the Military Member of the Council in India?—Yes.

5430. My difficulty is to know how far your proposals could be carried out and still keep within the Order in Council?—I think it could be done perfectly well within the Order in Council. If, for instance, this Military Under Secretary, as I propose to call him, were appointed, he would simply take the place of the Permanent Under Secretary.

5431. As regards the Military Departments?—I mean to say that the Permanent Under Secretary or the Military Under Secretary, neither one nor the other of them is mentioned in the Order in Council. The Permanent Under Secretary is never mentioned in the Order in Council; he does not exist so far as the Order in Council is concerned.

5432. But you would want to have an officer of very considerable authority for dealing with these distinguished Generals at the head of the Supply Departments?—Yes, you do; but if he has a position given to him by the Secretary of State as Military Under Secretary of State, I think he has that authority.

5433. (*Mr. Beckett.*) I did not quite gather what his relation would be to the Commander-in-Chief?—It would be just the same sort of relation as that of the Permanent Under Secretary is now, I think.

5434. (*Sir Charles Welby.*) But I suppose the necessary result of the creation of such an officer would be to remove from the Commander-in-Chief the power and the duty he now has of generally supervising the work of those Departments which you propose to place under the Military Under Secretary?—I think it would merely relieve him from the detail of supervision.

5435. That is to say on all questions affecting the equipment and arming and housing and feeding of the Army, the Commander-in-Chief would cease to be responsible?—No, I do not think he would. He would cease to be responsible in this sense, that I should take away from him the actual Supply Departments, and give him time for other duties, which he has not got now. It would be his business, through his officers, the Quartermaster-General and so on, to see that the whole Army is properly provided for, and, if anything was not done, to make a representation at once.

5436. But in case of a difference of opinion with regard to any question of equipment or arms, who would have the last word, the Commander-in-Chief or the Military Under Secretary?—The Secretary of State. Wherever there is a difference of opinion on that sort of thing you must go to the Secretary of State. But I do not think a question of equipment or arms would ever arise. The Military authorities say what they want, and then the Supply Departments set to work to get them what they want.

5437. (*Mr. Beckett.*) I do not quite see where the Commander-in-Chief would come in?—He would come in just exactly as he does in India.

5438. (*Chairman.*) He would command the Army?—Yes, he would command the Army.

5439. (*Mr. Beckett.*) But with regard to questions of Military equipment and so forth they would be settled by the Military Under Secretary on his own responsibility in the first place, I suppose?—What happens at the present day? The Commander-in-Chief says, "I want so-and-so; I want a gun for heavy field batteries of position to do such-and-such things." He says that now. Under the present Order in Council the Director-General of Ordnance is responsible for the pattern of that gun. He takes the pattern up and works it out. The Commander-in-Chief would say the same under my proposal, the Director-General of Ordnance would take it up and work it out. It would not make any difference with regard to that.

5440. Would he go first to the Military Under-Secretary when he wanted anything, or apply direct to the head of the Department, the Director-General of Ordnance?—He would go to the Director-General of Ordnance direct.

5441. And the Director-General of Ordnance would carry out the recommendation of the Commander-in-Chief at once?—No, he cannot carry it out because it involves expenditure. Then he would find out what money was involved, and then put forward the proposal through the Military Under Secretary.

5442. And demand for the money?—He would say: This is going to cost so much; does the Secretary of State approve of the provision? But it is not so much for that that it is wanted, it would work the same so far as that system is concerned. It is where something is asked for that concerns more than one Supply Department that it is wanted. Take a simple case: the Commander-in-Chief says he wants an increase of so many thousand men to the Army. That seems at first sight a simple thing, you have to get so many thousand men, and there is an end of it. But it is not so. Every Department is concerned in it, and there is nobody now who sees that all those Departments are consulted, and that every side of that question is considered before the proposal goes before the Secretary of State. It involves probably additions to barracks, it involves clothing, equipment, arms, and ammunition, it involves pay and pensions. There are all these different sides of the question which have to be taken into account; and there is nobody now in the War Office responsible for bringing all these Departments together, and seeing that every question is thoroughly thrashed out.

5443. That would be the duty of the Military Under Secretary?—Under my proposal it would be the duty of the Military Under Secretary.

5444. (*Mr. Mather.*) What happens now? Supposing a demand for 20,000 men were made, surely it must be made to each Department; it must go to all? You, for instance, have to do your part in providing equipment and clothing?—It is a toss-up whether the paper gets to one at all, till after a decision has been made.

5445. Do you mean that there would not be a Council called together of the heads of the Supply Departments and all those affected by this Order, at once to carry out the plan of campaign, so to speak, by which these men should be provided in the shortest time?—No, I assure you that only the other day it was decided to raise a large force of Imperial Yeomanry, Mounted Infantry, and so on; this got out, and was common talk in the War Office; but I who am responsible for clothing these men, arming them, and equipping them had never been asked whether I could clothe them, arm or equip them.

5446. (*Sir Charles Welby.*) That is not for want of the existence of proper machinery, because the Army Board exists for that very purpose?—It was not referred to the Army Board till after a decision was taken; it was settled by the Secretary of State and the Commander-in-Chief together, and I was never told.

5447. Who in that case did not avail themselves of the organisation at their disposal for the purpose?—Exactly.

5448. (*Mr. Beckett.*) Under your proposal what would happen in such a case as these Yeomanry being required. Would the Commander-in-Chief first of all submit that proposal to the Military Under Secretary?—I take it that if he had such an officer as that, if the proposal came from the Commander-in-Chief, he would submit it to the Military Under Secretary.

5449. And he would call together his heads of Departments at once?—He would call together his heads of Departments; he would say: here is this proposal, I shall take it into the Secretary of State and tell him of this proposal, but let me have by to-morrow morning, or by the afternoon if you cannot let me have it in the morning, what you can do towards raising them. There is nobody to do that.

5450. (*Sir Charles Welby.*) May we take it that your proposal for the creation of this officer is really only intended to secure the smooth working and harmonious co-operation of the Supply Departments of the Army, and would in no way derogate from the power or responsibility of the Commander-in-Chief for securing the efficiency of the Army from all points of view?—Certainly.

5451. (*Mr. Mather.*) I take it that it is the Secretary of State's duty to supply the Army with everything—(*Mr. Beckett.*) I was going to ask you whether such a proposal would not withdraw from the Commander-in-Chief a great many duties that occupy his time, but which would be better withdrawn from him, inasmuch as it would give him leisure for turning over in his mind other perhaps more important questions?—I think so.

5452. (*Sir George Clarke.*) Then the principle you advocate is that there should be a separation between personnel and matériel?—I should rather say between executive and purely administrative functions. The Commander-in-Chief commands the Army, and is responsible for the discipline of the Army, the training of the Army, that it is comfortably quartered, and the man properly clothed, and all that sort of thing; but he cannot do all the detail and supervise all the details of the supply work himself, and there is nobody now to do it.

5453. And the second thing you have before your mind is the focussing of all the work of the Supply Departments so as to bring it into harmony and to ensure that every question affecting all those Departments should be put before the Secretary of State in a harmonious and consistent form?—That is it.

5454. And you think that the present machinery, whether because it is bad machinery or because it is not suitable, does not suffice to bring about that result?—I do not think it does. It does not, I may say, bring it about.

5455. (*Sir Charles Welby.*) To make your position quite clear, may I put a concrete case to you. Let us suppose that the Military Under Secretary on the advice of experts in the Director-General of Ordnance Department, let us say, which is one of the Departments under him, has strongly recommended a particular type of quick-firing equipment for a field gun. Let us suppose (what at least must be conceivable) that the Commander-in-Chief and his advisers, as may very well happen, take a different view of this equipment and think that, though it is theoretically a very good and excellent piece of mechanism, yet it would not stand the racket of war, and, in fact, they might take the view that no form of quick-firing equipment would ever practically be valuable to the Army. I want to get clearly from you, who in a case of that sort, would have the last word and be responsible for the result?—The Secretary of State.

5456. Then the Secretary of State is responsible for the efficiency of the Army and not the Commander-in-Chief?—The Secretary of State, under the present Order in Council, has a Commander-in-Chief who is given supervision, but the Director-General of Ordnance deals with all questions of patterns and armaments and is the adviser of the Secretary of State on all duties and questions connected with the duties of his Department. Therefore, if there is a question of this quick-firing gun, or whatever it is, he is responsible for the pattern, and he advises the Secretary of State. If the Commander-in-Chief differs from him the Secretary of State has now the ultimate decision.

5457. But this is governed by another part of the Order in Council which says he is subject to the general supervision of the Commander-in-Chief?—Yes, certainly.

5458. Which, as a matter of fact, gives the Commander-in-Chief the right to the last word in a case such as that I speak of?—Certainly, and I have not the slightest doubt that the Commander-in-Chief would have the last word, and I cannot quite conceive any Director-General of Ordnance putting forward a

proposal of that sort in opposition to the views of the Commander-in-Chief.

5459. That is to say, in a case of that sort the Commander-in-Chief's view should prevail?—Unquestionably; I cannot conceive that it could be otherwise.

5460. (*Colonel Miles.*) The functions of the Military Under Secretary, whom you suggest, would be more to carry out what has been approved and ordered?—Yes.

5461. Not so much the introduction of a new pattern, which would be a Military question?—No, that would not come before him unless a question of finance was concerned, or when it might affect, and it would affect, the duties of two Departments, and so on.

5462. (*Sir George Clarke.*) In every case of that kind under our constitution the final decision must rest with the Secretary of State?—It must.

5463. So that the object of the War Office is to see that every aspect of the question is put before him?—Yes.

5464. (*Mr. Mather.*) That is to say his position is, theoretically, that of the final judge, because he can only represent Parliament in the sense of saying this or that shall be done, when the expert knowledge governing the Army, providing the Army, and fighting the Army, if necessary, shall say: This is the consensus of opinion of the highest authorities, that that ought to be done, and he says it shall be done. He has no means of knowing otherwise?—It is more than theoretical, it is practical; and where the practical nature of it comes out is in the way he cuts down our estimates. The Commander-in-Chief says "I want this," and the Secretary of State says "You cannot have it."

5465. (*Sir Charles Welby.*) That is the Government of the day?—No, before it gets to the Government of the day.

5466. Does not your proposal practically come to this: that the Permanent Under Secretary ought to be a Military officer of high rank and standing?—That is practically what it comes to, with this special duty, because the Permanent Under Secretary now has no special duties, and I want to make it his special duty that he should bring together all those questions of supply, of money, and so on, and see that every question which touches those supply branches is considered from all points of view before it is laid before the Secretary of State.

5467. (*Mr. Beckett.*) I do not quite gather what your opinion is with regard to the position of the Military Under Secretary in financial matters?—In financial matters his position would simply be that he would see that the financial aspect of every question was considered before it went before the Secretary of State.

5468. What would the Accountant-General have to say?—The Accountant-General would be consulted. If the head of the Department had not done that the Military Under Secretary would do it; he would take care that the financial effect on each of the Supply Departments had been estimated and considered before it was placed before the Secretary of State.

5469. And that is not done now?—It is done, or it is not done; there is nobody responsible for doing it.

5470. (*Mr. Mather.*) You propose that the Military Under Secretary should be the head to call them together?—I propose that he should have a special control over the heads of these Departments for this particular purpose of seeing that every proposal not merely for the mobilisation of a Military force or to reinforce a garrison station abroad, but that all questions which came forward involving the Supply Departments and finance were properly considered from all the different points of view.

5471. At a Board?—At a Board if he wished it; he would bring together, if it was anything urgent, at once, all the heads of the Supply Departments into his office.

5472. Or he might consult them separately?—And if he were an Under Secretary of State he could send for the Accountant-General and get him there too. He would either do it by bringing them together, or he would send the question down to the one or two who might be concerned and say, Let me have your proposal at once.

5473. Then he would become Managing Director of the War Office?—He would become Managing Director

Gen. Sir H.
Brackenbury,
G.C.B.,
G.C.S.I.

21 Feb. 1901.

Gen. Sir H. Brackenbury, G.C.B., G.C.S.I.

21 Feb. 1901.

of what I should call the Supply Departments of the War Office.

5474. (*Sir Charles Welby.*) You are not a believer in Boards as a means of getting through business quickly?—The Army Board has been absolutely invaluable for the purposes of the War Office.

5475. (*Mr. Mather.*) But it does not meet sufficiently?—You see it takes away seven or eight very busy heads of Departments from their work, and brings them to this Board. Commanders-in-Chief who sit in the chair as Presidents are liable to be rendered unpunctual, by being called away on their duties, and then there is a certain amount of desultory talk, but at the same time where it has been absolutely invaluable has been in enabling the different Departments to know what the others were doing. For instance, taking this very question of raising this Imperial Yeomanry, they were ordered to be raised, and not one of us heads of the Supply Departments was ever told a single word about it; the orders had actually gone out that they were to be raised and recruited, and so on, and we had never been told anything about it. Then I was asked by some of my colleagues if I would speak to Lord Roberts, and ask him to call an Army Board. I spoke to Lord Roberts and told him that we were getting into just the same difficulties as we began the war with for want of bringing us together for consultative purposes, and I asked him to summon the Army Board, and he kindly summoned it the next day. He then told us (it was the first official information that we had of it) that these forces were to be raised; then I asked for time, and at the Army Board the next day I was able to say how quickly I could arm, clothe, and equip those men, and the Quartermaster-General was enabled to take up the question of transport, and the Accountant-General took up the question of the provision of the money, and so on.

5476. You say you heard that this force of 20,000 men was going to be raised. In what sense; was any order given for it?—Yes, but that order had not reached me or my Department.

5477. (*Chairman.*) Perhaps you saw it in the newspapers?—I am not sure that I did not.

5478. (*Mr. Mather.*) Did you say that Lord Roberts never heard of it?—No, I did not say that.

5479. Then it was really an order; you knew that to be a fact?—I believe it was settled verbally between the Secretary of State and the Commander-in-Chief.

5480. (*Sir George Clarke.*) Did the Army Board at all meet at the time when war was trembling in the balance, early in September 1899?—Yes.

5481. And the questions as to the amount of transports and supply required were considered then at the Army Board?—Yes, I think they were.

The Witness withdrew.

Gen. Sir E. Wood, G.C.B., G.C.M.G., V.C.

General Sir EVELYN WOOD, G.C.B., G.C.M.G., V.C., examined.

5486. (*Chairman.*) You state that it is impossible to give any report on War Office Reorganisation until the future system of Army organisation is decided?—That is so.

5487. May I take it that what is in your mind is a point, on which we have received a certain confidential intimation, that some larger system of responsibility in district commands is in contemplation, and when that is carried out, it will materially modify the situation?—That is exactly what I meant.

5488. Until that is carried out, it would be idle to consider in full detail what the establishment of a Civil and Military staff of a district should be, would it not?—Perhaps I should not go as far as to say it would be idle, but I do not think any substantial advance will be made until you do determine that—that is the first principle.

5489. But in the Minute you have given us, there are some criticisms as regards your own Department?—Yes.

5490. You say your Department has no power as to pay?—No.

5491. Does that mean that your Department has no power as to the interpretation of regulations affecting pay, when the matter comes up from the districts?—

5482. As regards your Memorandum, is not that framed so as to make it subject to the limits of the Order in Council, so that it does not represent your views as to the reorganisation of the War Office, if those limits could be exceeded; we must not take it that it represents your final view as to the best arrangement of the War Office?—No.

5483. We are to take it with that limitation?—Yes.

5484. (*Sir Charles Welby.*) Only one last question, and it is a very simple one: Do you propose that the Military Under Secretary, or whatever he may be termed, should be a permanent official, or subject to the five years' rule which governs the other great Military officers?—I should make it five years with power of extension. I would only say this: I put forward this proposal because I have always held one very strong view. I was head of the Intelligence Department for five years, and saw a great deal of the working of the office then, from 1886 to 1891; again, I have come back into the War Office as Director-General of Ordnance, and have been here for two years; and this general supervision of the work by the Commander-in-Chief is in my opinion absolutely impossible for the Commander-in-Chief personally to carry out in any real and true sense; he is overloaded with work. Now it is the inevitable tendency of all minds, I think, when they have to think out high problems, and have also got to deal with a mass of daily routine questions, such as fall upon the Commander-in-Chief, in connection with the discipline of the Army, the training of the Army, and so on, that they will work off all these routine questions first, and that leaves no time for the other questions, or it leaves them only the rag end of a tired brain. The more you can relieve the Commander-in-Chief of all that sort of work the better. I used to think that the right way to do it was to give the Commander-in-Chief a Chief of the Staff, but I am very much afraid that the Chief of the Staff would also get so taken up with all these executive questions, that he would only become a sort of filter for the Commander-in-Chief; and, therefore, it is that I would like to separate, as it were, the two branches, command and supply. I am not in the smallest degree inclined—it has never entered into my head or thoughts—to diminish in any way the power of the Commander-in-Chief, but I want that he should really have the time for his own great work of commanding the Army and training the Army, and that when he is absent at manoeuvres and inspections and so on, this office, as far as all the Supply Departments are concerned, should not be left without a head, as it is now. There is no head.

5485. (*Mr. Mather.*) It is the case in all large concerns outside the War Office that the head of a large concern has nothing to do with the details; he is thinking out policies and new sources of trade and so on; and you are recommending something equivalent to that at the War Office?—Yes.

There is much difference between "Warrants" and "Regulations." The Finance interpret warrants; soldiers usually interpret regulations. Speaking as to questions of detail, when there is a question of whether a lance corporal is to be paid or not, involving a very minute sum, there is nobody in the Adjutant-General's Department who can settle that. How it is generally managed is, that one of my heads of branches may go over to the financial side and settle it amicably with them; but the Adjutant-General cannot say, So-and-so shall be paid. That is the point I want to bring forward—that I have not the power which even the most subordinate general has—even a Brigadier-General.

5492. What power has a Brigadier-General in interpreting regulations?—Mr. Gibson will tell us that up to the last Commission it was 5l. I think it has got to a hundred now. What I have in my mind is that the moment we go to war—and I have said this not once, but 20 or 30 times—the Military got such enormous powers as run away with their business capacity; they have never had the training in peace time to enable them to look at both sides of the question. That is what I have had in my mind. I personally have had the advantage of being Quartermaster-General, and, besides that, I have had financial training in private

life. But remember I did not get that training by virtue of being Adjutant-General. The smallest point, as to 2d. or 4d. a day for lance corporals, goes over to the financial side, and that is what one of my subordinates meant when he put that expression into my mouth.

5493. You mean to say when a question comes up from a district to you and requires an interpretation the Finance Department is the Department which is in all cases charged with interpreting the regulations; you are simply a post office for passing the thing on?—Yes. To give you a concrete example: I went to Salisbury Plain in August last year, and I found men of the line, chiefly Militia, doing Army Service Corps duty, owing to the whole of the Army Service Corps being away. The General on the spot had not the power of saying that they might have working pay, although they were doing Army work and not regimental work. He had to send it up, but neither I nor the Quartermaster-General could say, though they are doing Army work, they shall have extra pay; that had to go over to the financial side.

5494. The financial side had to pronounce whether it was Army work or not?—The soldiers would have to persuade them it was Army work. In this very case it was very evident, and I think, there being no Army Service Corps there, and the financial side not being able to contest the point it would have been simpler if I had been allowed to settle it at once. My point is that the Adjutant-General should have been allowed to order payment in such a plain case.

5495. That means that the Financial Department is the Department which interprets regulations, does it not?—Yes; I think it really points to the desirability of the Adjutant-General having with him one or two financial people who would show him the other side of the question.

5496. Do you mean one or two representatives of the Accountant-General's Department planted within his Department, as has been done in the case of the Director-General of Ordnance?—I think if I had had one or two people with me who had some financial training, and I had been allowed to give the decision, it would have been better. At present as to rates of pay I try to settle it, and then it goes to the financial side, and they in almost every case agree—it was not always so—they used not to do so. I am not speaking of this last crisis, and I am not speaking against the Finance Department, because I think the soldiers never had a more reasonable colleague, since they do not always call: "Give, give, give!" Now, I do not want to convey that there has been any obstruction. Since I have been in this office, now six or seven years, I have had the greatest assistance from the financial side.

5497. But you would like some power of interpreting the regulations yourself, I understand?—I would, subject to larger questions always being referred; and I am afraid, given that power, when we were at war, I should waste money, unless previously accustomed to the work.

5498. Owing to your want of familiarity with the regulations?—Yes, and because I have never been accustomed to look on both sides. All the people under us only look at the soldiers' side; we train people in the War Office to look at the side of the country, and they do not know much about soldiers. We feel that the last person who puts the question to the Secretary of State is a person who cares more for the country than for the individual soldier.

5499. The civilian, I suppose, puts the last question?—Yes. He being personally, I should say, a civilian. I have made this point, and I think Mr. Brodrick has accepted it, that the Permanent Under Secretary should not of his own motion express any opinion at all as to whether the Adjutant-General or Quartermaster-General is right or wrong, but should only collect facts and report them.

5500. Do you mean when the Permanent Under Secretary brings the thing before the Secretary of State?—Yes. When we differ all my papers go to the Permanent Under Secretary and to the Secretary of State, and he may not see me; and constantly we have had decisions against us when the last person who has been heard is the civilian.

5501. The soldiers' opinions were expressed on the paper, I suppose?—Yes; but I need not tell you if it is in court the counsel who speaks last has a preponderating influence generally with the jury.

5502. (*Mr. Gibb.*) Where would you draw the line? Do you think the Adjutant-General should have absolute power to interpret any regulations, and act upon his own view?—I will give you a list by tomorrow of cases which have been in discussion between us—I cannot say in dispute, because we never have a dispute practically, but cases which I am obliged to refer.

5503. (*Chairman.*) Could you lay down any limit, assuming that the Finance Department is the Department which primarily deals with the interpretation of regulations, within which you would desire authority conferred on your Department to deal with the interpretation?—Yes, and I should save you time if I were to send you my views to-morrow.

5504. You stated generally that you considered the staff of your Department to be inadequate at the present moment?—I may state as a fact that I know of four officers in my branch who come, as I do, at 10 in the morning, and as I have for two years worked 60 to 70 hours a week; it has affected my health, and I am not so good a man as I was. Some of my officers stop here longer. My deputy comes here at 10, and stops here habitually till a quarter to eight. Please refer to my minute of 1.1.01. I am very fond of hunting, but I have had only eight days this year.

5505. The particular difficulty is, is it not, that the men at the heads of divisions have too many clerks and too much work, which they have not time for thinking about or controlling properly?—That is so.

5506. What is your opinion about the substitution of Military clerks for Civilian clerks in Military Departments?—I have stated it in my memorandum pretty fully, and that was the bit I read out just now. I ought to be honest and say I have turned round in the last two or three years, because I have previously given evidence perfectly opposed to that.

5507. I was going to say, in 1895, you stated you viewed with apprehension the elimination of the Higher Division Civilian clerks from the Departments?—Yes, I was afraid that we should have no continuity at all then.

5508. Do you think you can contrive to have continuity by taking care that all your Military men do not leave at the same time?—I do not think you can ever resist it in war service, unless rules are promulgated and maintained. You see the previous Commander-in-Chief went away two or three times, and he cleared the office of all the people he wanted. I have had three deputies in two years. I am supposed to have a deputy who is able to take all the details off me, but in two years I have had three deputies.

5509. Is not that an argument in favour of permanent civilian clerks?—I think not, I am talking of the Adjutant-General's deputy now. I think it is very much in favour of a hard-and-fast rule, that the Secretary of State should lay down, that when an officer comes here in a certain position, he should not be allowed to go away.

5510. That he should put in his five years, or whatever the term is?—Yes, and that you should not take him away to war; but Lord Wolseley went himself, and he took his staff off, and when Sir Redvers Buller was going this time he took my deputy away. I got another man who suited me just as well—I am not saying anything against individuals—but he was left some time, and then Lord Wolseley sent him away, and I have now got a third one.

5511. Your general view is, I think, that you would substitute Military officers and Military clerks for civilian agency, both Higher Division clerks and Second Division clerks?—I advocate the replacement of the Higher Division clerks by Staff Officers, retaining the Second Division clerks in their present places. Military clerks can be utilized for returns, training, deserters, and other non-confidential matters.

5512. I think you make an exception in A. G. 4. You say there is much of a responsible and confidential nature there, in which it is for obvious reasons undesirable to employ Military Staff clerks?—Yes, and it is also the case in A. G. 1, in which branch "Returns" could be done by Military clerks. Second Division clerks will be necessary for other work.

5413. In that department you would have Military officers and Second Division civilian clerks, would you?—Yes, as well as in A.G. 1.

Gen. Sir E. Wood, G.C.B., G.C.M.G., V.C.

21 Feb. 1901.

Gen. Sir F.
Wood, G.C.B.,
G.C.M.G.,
V.C.

21 Feb. 1901.

5514. I am afraid the reasons are not so obvious to me as they are to you. Will you explain, please?—I have three cases before me now: two officers tried by Field-General Court-martial for being drunk. We do not want to hand that matter over to a Military Staff clerk, but we do not mind civilians seeing it. Then there are accusations against officers. Probably, all of you read the accusation made against a young officer of Artillery of taking money out of the locked till. We would sooner that did not go back into the hands of a sergeant who might have to serve under that man.

5515. You contemplate the possibility of your Military Staff clerks going back again to the Army, do you?—I should like it, and it is often necessary for purposes of discipline. I am quite certain officers and men should go back—not all of a lump, but the more you can disseminate the views of the War Office into the Army, and of the Army back to the War Office, the better. I have stated in this paper that my one reason for keeping more officers was because I should like an officer who had been here to go out into the districts.

5516. But your objection to entrusting this confidential knowledge of these accusations to Military Staff clerks would disappear, would it not, if the Military Staff clerks were permanent here?—I am afraid not, because the Civilian clerk has the position and status of a gentleman, while the Military Staff clerk is an ordinary man—was a private soldier—and does not, perhaps, feel as the others would the social degradation consequent on selling secrets. Moreover, an outlet for promotion is essential.

5517. But the Second Division Civilian clerk is drawn from much the same class?—But by the time that man gets up to deal with that class of paper, he knows he has so much to lose, that he is a much higher class man than the non-commissioned officer is generally.

5518. I think you are dissatisfied with the promotion of the civil clerks on the Military side?—I say frankly that we never on the Military side have a voice in determining the promotion of the staff under us. I think myself it is generally fairly done, and I think the people who do it have generally got the best men, but the clerks under us feel that they do not get a voice at all, and therefore we shall never satisfy them if the Permanent Under Secretary does the work. If a Military adviser sat on the Board with him, the clerks would know at all events that their side would have a hearing. I do not desire to imply that there is any improper selection, but there is dissatisfaction.

5519. (Mr. Gibb.) Amongst the Civilian clerks?—Yes, they feel that if they come to the Military side they are lost—that they will not get any more promotion.

5520. (Chairman.) With regard to the general work of your Department, and its relation to the other work of the office, you complained before Mr. Powell Williams's War Office Committee that the Adjutant-General's meetings had been abolished to the great disadvantage of the work?—Yes.

5521. Would you tell the Committee something about that?—The Adjutant-General's meetings were composed of the same officers, with the exception of the Commander-in-Chief, as the late Army Board was before the Army Board was changed quite recently. At this meeting the Adjutant-General, the Quartermaster-General, the Director-General of Ordnance, the Deputy Adjutant-General, and the Inspector-General of Fortifications, sat and discussed informally every proposition so as to get every side of the office view, and they then, if they agreed, or if they disagreed, took it to the Commander-in-Chief; he then had before him the people holding opposite opinions, and he formed his own opinion.

5522. Can nothing go to the Army Board except on the motion and authority of the Secretary of State?—We do not send anything to the Army Board. When a demand comes from South Africa for, say, 30,000 more horses, or so many more wagons, that goes to an Army Board and we all have our say in it.

5523. Does that go to the Army Board?—Yes.

5524. Apart from questions concerning the war, in normal times would a question only go to the Army Board on the motion of the Secretary of State?—It can only go to the Army Board by permission of the Secretary of State; he naturally very seldom initiates it. I bring up a proposition, or the Quartermaster-General brings it up, and we say: May this go to the Army Board? or perhaps we ask for a decision, and he

says, No, I will not give a decision until it goes to the Army Board.

5525. Is the Army Board in your opinion a good piece of machinery for bringing together work which concerns two or three Departments, and getting it settled?—No, it is too cumbrous. I would allow the Adjutant-General's meetings again. I do not think when you get a person of the rank of Field Marshal Commanding-in-Chief presiding, you would get quite the same freedom of expression that you have from people of all the same standing.

5526. (Sir Charles Welby.) You think the Army Board is too big a hammer to crack some of the nuts which the Adjutant-General's meeting used to crack conveniently?—I think so. I think it is too big altogether. The fact is, we do not get full enough discussion at the Army Board. We meet at 3 o'clock in the afternoon, after I have been five hours at work, and am tired, I do not think we get full discussion when the paper is full of subjects.

5527. (Mr. Mather.) And these questions you think might be dealt with by a committee of the Army Board, or by some other Board?—Yes, I think there are small things now on which the Commander-in-Chief and the Secretary of State might take the opinion of the people who met at the Adjutant-General's meeting. I must tell you, I evaded Lord Wolseley's abolition of it. I do the same thing in another way, but not by so convenient a machinery, though my machinery depends on personal influence, and it would be better if it did not, I think.

5528. (Chairman.) What you want is a smaller Board which would focus and bring together all questions in which two or three Departments are interested?—I think so. I think it has been said, that the heads of office should meet together once a week. I think if it had not been called an Adjutant-General's meeting, it would have been running to this day, but it was thought the Adjutant-General's meeting was too powerful.

5528a. Who would preside—not the Commander-in-Chief?—The Adjutant-General. If the Commander-in-Chief goes to Scotland, say, although there may be Field Marshals in command, the Adjutant-General commands the Army, that is the constitution.

5529. He takes on the Commander-in-Chief's work of exercising supervision over the General Supply Department, does he?—Everything, he represents him in everything. The thing has occurred with Field-Marshal Lord Roberts, being in command in Ireland when General Sir Redvers Buller commanded the Army. That is our constitution at present, and it is the most convenient really. It grew up no doubt from the late Commander-in-Chief going abroad for a month or two, to Homburg and other places. It would not have been convenient to appoint an acting man, because the moment you appoint an acting man he wants more pay, and is, moreover, not acquainted with the current work.

5530. (Sir Charles Welby.) But it is laid down in the Order in Council I think, is it not, that the Adjutant-General represents the Commander-in-Chief in his absence?—Yes.

5531. It is part of the written constitution of the War Office and the Army?—Yes, he acts for him. Take the case of Lord Wolseley two years ago being away yachting. He had had an operation and was ill; I was then Commander-in-Chief I think for two months, and I could not get at him, but there is an understanding in that time that you will not do anything that you know the Commander-in-Chief would not like.

5532. (Chairman.) But you would like, in order to bring the work together and get it through quicker, to see the Adjutant-General's Board re-established, probably under some other name?—Yes, to avoid that word I should like to say the Adjutant-General's meeting is recognised as a weekly meeting of the heads of Departments.

5533. Do you think the work of the office suffers now a good deal from that meeting not taking place?—I am certain of it.

5534. (Mr. Mather.) This Board would not be executive in character, but only consultative, would it not?—Yes, advisory.

5535. Advisory to the Commander-in-Chief?—Advisory to the Commander-in-Chief.

5536. And the Commander-in-Chief then decides whether anything shall go forward to the Secretary of State?—Yes.

5537. (*Sir Charles Welby.*) That seems to put the Commander-in-Chief back to the position he occupied before 1895, does it not, as being the immediate head of all the Military Departments at the office?—It would put him in this position, when we handed in our proceedings to the Commander-in-Chief they would be discussed among the Army Board or not, just as the Commander-in-Chief liked; I should deprecate having any meeting which was to force the hand of the Commander-in-Chief, because that would be taking the control out of his hands.

5538. (*Chairman.*) You would be, would you not, modifying the constitution that exists under the present Order in Council?—Do you mean with regard to the meeting.

5539. The fact of that meeting coming together without the Commander-in-Chief, and then addressing him, would put the Commander-in-Chief, would it not, in a different relation to the Adjutant-General and Quartermaster-General from that which he now holds?—I think the only effect would be that it would relieve the Commander-in-Chief of certain detail, but I wish to guard myself by saying this: I do not want to set up any other authority than that of the Commander-in-Chief in this office, and I should like him to be able to ignore all the recommendations of this weekly meeting if he liked.

5540. I gather you are not in favour of minimising his authority, but increasing it?—That is it, but I want to relieve him of a certain amount of detail.

5541. (*Sir Charles Welby.*) Would not you say the object of such a meeting as you advocate would be that the heads of Departments should consult among themselves, rather than with the object of advising the Commander-in-Chief; because as a rule the Commander-in-Chief does not interfere, under the present constitution, with the every-day business of the Military Departments, does he?—I can tell you what the late Commander-in-Chief did; but as to the present Commander-in-Chief it is yet too soon, because there are three davenportes full of papers which he has not yet had time to peruse.

5542. (*Mr. Gibb.*) The Commander-in-Chief can at present consult each head individually, can he not?—He does now.

5543. Your suggestion is that it would be more convenient that the heads should meet together and express their opinion unitedly when they are in agreement?—I am rather afraid of the last word, unitedly. I would sooner that the officer who puts the thing up to be talked about in discussion at the weekly meeting took it alone to the Commander-in-Chief, and told him the result. I should prefer if the Quartermaster-General initiated a question he should take it himself to the Commander-in-Chief.

5544. But the officer initiating the proposal who took it to the Commander-in-Chief would, by means of this meeting, be enabled to tell him, would not he, whether the others had agreed with his opinion or not?—Yes; in other words I would never allow the Adjutant-General to take him all the papers that were discussed. I would make the officer who initiated the paper take the paper to him and say, "We have discussed this at our weekly meeting; they thought so" and so. I do not agree with them, or, I do agree with "them."

5545. It seems to me that that would not alter in any way the constitution or position of the Commander-in-Chief; that would merely be a means of more conveniently collecting for him the various opinions?—Yes.

5546. (*Mr. Beckett.*) Assuming that you had a weekly meeting, I understand you would not allow the Quartermaster-General to take his paper on to the Secretary of State if the other members objected to his proposal?—I think the effect would be where the Commander-in-Chief took it or put a minute on it to the Secretary of State, it would be settled in about half the time, for we should not be obliged to refer back to one another. What happens now constantly is, that one of us puts forward a thing which has not been agreed to by the other side; he objects, and fights as long as he can, and struggles, and there is

a wordy warfare going on sometimes for many weeks. To give you an instance in point, the Adjutant-General is impressed by the shouts of Commanding Officers that they cannot get any tailors, that they cannot get any shoemakers, and he proposes that the Boy's Home and the kindred institution, the Shaftesbury Asylum at Bagshot, should train boys, and the War Office should give them a premium. That goes through every department until it comes to the point to whom these boys are to be affiliated—whether they should be affiliated to the Army Service Corps or formed into a corps themselves, which is very different. If we had threshed this all out at the weekly meeting, I, who had initiated it, might have taken it to the Commander-in-Chief and said, "I want to put them on to the Army Ordnance Corps, but the Director-General of Ordnance will not have it; what we did, was, we fought on paper for it a long time." But without the Adjutant-General's meeting I could not do that, and eventually, in this case, Lord Wolseley said he really could not make up his mind, and the matter has been under discussion for about a year and a half. Now, if we had met together at the weekly meeting, and eventually when we could not agree we had then gone to the Commander-in-Chief and said, "Now, will you decide between us," I think he might at once have given a decision. It is a terribly long thing to read; I think I am the only person in the office (or perhaps Sir Henry Brackenbury does) who knows it all.

5547. (*Mr. Mather.*) Would it make the working of this Board simpler if you were a member of it, with the other heads of Departments?—Of the Army Board?

5548. Yes; would it work better if a Permanent Military Secretary, representing the Commander-in-Chief, were chairman of that Board?—I should like to think that out a little. I think that there is a feeling now that the Commander-in-Chief has not been strong enough, and I am afraid the effect of having any Board over which the Commander-in-Chief himself did not preside would be to lessen his authority, and that the Secretary of State might go behind him and accept the opinions of the Army Board.

5549. (*Chairman.*) It is in theory possible, is it not, that the Secretary of State might take the opinion of the Adjutant-General or Quartermaster-General against the Commander-in-Chief?—Yes. I should deprecate an official Board of the heads of the Army sitting without the Commander-in-Chief—I am not alluding to the weekly meeting.

5550. You would approve the existence of an Army Board presided over by the Commander-in-Chief, and in addition to that your weekly meeting, presided over by the Adjutant-General?—Yes; I should like to have a weekly meeting of the heads of Departments, presided over by the Adjutant-General as before.

5551. (*Sir Charles Welby.*) To prevent misunderstanding, I am afraid from the things which have been said they would leave the Committee under the impression that the heads of the Military Departments in practice now only approach the Secretary of State through the Commander-in-Chief; whereas, as a matter of fact, in regard to the greater mass of everyday business, the heads of the Military Departments go direct to the Secretary of State, do they not, that is the practice, is it not. Your answers would rather give the impression to anybody hearing them for the first time, that the Commander-in-Chief was the channel of communication between the Military Departments and the Secretary of State; but that is not exactly his position under the existing constitution, is it?—I do not know that I quite catch your point.

5552. (*Chairman.*) I think the point, if I am not misrepresenting Sir Charles, is that under the existing constitution the heads of the Military Departments, the Quartermaster-General and the Adjutant-General, do go direct to the Secretary of State. Your suggestion of this Board meeting, and their then going to the Commander-in-Chief, might leave the Committee under the impression that it was the practice now for the Commander-in-Chief to be the channel of communication between the Secretary of State and the Adjutant-General, Quartermaster-General, and Director-General of Ordnance, &c. P.—But he is now, since Sir Charles Welby left the office, in theory, as he was before in effect.

5553. Since Sir Charles left the office the Order in Council has been modified, has it?—Yes.

Gen. Sir E.
Wood, G.C.B.,

Gen. Sir E.
Wood, G.C.B.,
G.C.M.G.,
V.C.

21 Feb. 1901.

5554. Or shall we say that the regulations for War Office procedure put rather a distinctive complexion upon the Order in Council?—I think they were put in in consequence of statements made that the Commander-in-Chief had not seen all papers.

5555. (*Mr. Gibb.*) Supposing the heads of Departments represented at the Adjutant-General's meeting were of one opinion and the Commander-in-Chief were of another opinion, could the Commander-in-Chief practically prevent the opinion of the other officers reaching the Secretary of State in an official form?—No, I do not think he could, because I should protest, and I have again and again protested on the Army Board.

5556. Is not that the solution of the question we are discussing—that in practice matters go through the Commander-in-Chief, but in constitution each head of Department is entitled, if the Commander-in-Chief takes a different view from him, to go direct to the Secretary of State?—I should tell you that the mind of the late Commander-in-Chief was so constituted in some of his ideas that he has turned to me on an Army Board, not once but a dozen times, and has said, You and I are the two wise men, but the Army Board have beaten us.

5557. (*Sir George Clarke.*) May I take it that your strong view is that it is desirable that Military officers should gain in peace time something of what you call financial experience?—Yes.

5558. So that in time of war, when great expenditure comes, they may have had some previous training for their duties?—That is so.

5559. And you also say that you think the personnel of the Adjutant-General's Office should be a purely Military one, except as regards A.G. 4?—Yes, as far as control is concerned. As regards clerks, I would not employ Military clerks except on returns, training, deserters, and other matters of a non-confidential nature. The Second Division clerks would do the rest.

5560. Do you think there is any great difficulty in obtaining a sufficient supply of good staff clerks for your purposes from the Army?—No, I say there is no difficulty in getting staff clerks from the Army good enough for the purpose, and that when the people find out that they are taken we shall get a better class of people who will come and enlist with that object.

5561. And you think it would really encourage recruiting among an educated class if you had more prizes to offer them in the War Office?—I am certain of it.

5562. Do you see any advantage in the present system, under which the Pay Department is placed under the Quartermaster-General?—In contradistinction to whom?

5563. In contradistinction to being placed under the Financial Secretary?—Yes, I think that an officer in the Army will take any decision of a Military officer much more willingly, but that they will not lie down at once but go on kicking, though the decision is as right as possible, if it is a decision on the Civil side.

5564. Have not the officers in the Army now to accept frequently financial decisions coming from the financial civil branch?—I think not; I think there is always a great inclination to fight. When you have people who are trained up from joining to obey their superior officers it is not reasonable to expect they would take a civilian's decision—in fact, they do not.

5565. Then, you do not think it would be an advantage to make an arrangement which might ultimately lead to some kind of fusion between the Military Finance Branch, that is to say, the Paymasters' and the Civil Finance Branch, the Accountant-General at the War Office?—I should like to think about that. I have not done it. I must tell you that I suppose I got on with the Paymaster's Department, because the head of that office asked to come to me instead of remaining where he was. I have not been thinking of it lately, and I would sooner not express an opinion on it.

5566. You have said, I think, that your office is very much overworked, and you want a very much larger staff?—Yes.

5567. You say, also, that owing to the abolition of the office of Deputy-Adjutant General, Royal Artillery, A.G. 1 and A.G. 4 have been very much overworked, because you did not get any compensating officers to take their place?—Yes.

5568. Do you think it would be better to increase those branches or to restore the office of Deputy-Adjutant-General, Royal Artillery?—I hold a most decided opinion that it has not only been entirely for the good of the Army, but for the good of the Artillery, to break it up. It would be a misfortune for the Artillery and a greater misfortune for the Army, I think, if you reinstated it. It was proposed to go further, and break up the Engineers, but I resisted it; but I am quite clear as to the Artillery, and I believe if you ask any of the junior officers in the Service they would all tell you the same—that they are all more in touch now with the whole of the Army than they were when they were ruled by one man. If you read the minutes of Mr. Powell Williams's Committee, and when you find it took 40 signatures to get a corporal promoted, no one would ever now desire, I think, to go back to that system. I think you ought to weigh a good deal of what I have said here, because I have been the agent, you see, of decentralisation. I have been trying to shove everything off myself (and I personally have created seven depôts of Field, and five depôts of Garrison Artillery), in order that we may mobilise more quickly in the future; so that I am the apostle of decentralisation, and for taking it out of this house; so that I think I ought to say I am an interested witness here.

5569. (*Colonel Miles.*) Practically the whole executive administration of the Army falls upon the Military Departments, does it not?—I think so.

5570. The issue of all orders, and instructions, and communications, no matter how they may have been arrived at?—Yes.

5571. I may take it, I think, as you have already said, that all branches of the military department—not only the Adjutant-General's, but the Quartermaster-General's, and the others with which you come into contact—are very heavily worked?—That is so. They all do more work than any civilian.

5572. They do more work than any civilian branches?—Yes. I am speaking of people in civil life, because I know that some in the Contract Department have been working till 10 and half-past 10 at night. I was talking of men of business.

5573. With regard to finance, whereas certain decentralisation has taken place in districts, giving General Officers Commanding more financial power, no such powers have been given to yourself or to any of the higher Military officers here?—No.

5574. And you are in the same state as you were before?—Exactly; there has been no change here.

5575. You have no power of granting those extras of pay you spoke of, lance-corporal's pay and extra duty pay, &c.?—No, it has to go over to F 7 or F 9—F 1, I think it is.

5576. On all questions which go forward to the Military Departments, the higher civilian officials under the Secretary of State have the last word, have they not?—Yes.

5577. The relations between the Accountant-General's Department and the Military are very friendly now, I think?—I should say not only now, but have been for 6 or 7 years.

5578. Have they given you every assistance?—Every assistance.

5579. That I think is generally agreed to on the Military side?—For 7 years I have had the warmest and most cordial assistance, and whenever I have wanted to make a point against the financial side, I send over and say: "One of you come here; I know I have right on my side, only I do not know how to do it." I have always had the warmest assistance since I have been there.

5580. And especially so, I suppose, during the war?—I should say, in the war, we have had unlimited power. We have been practically allowed to do what we think fit.

5581. (*Mr. Mather.*) But before the war how were you placed?—Before the war you may take it the Adjutant-General would not like to do anything without full concurrence from the Financial side.

5582. (*Colonel Miles.*) Do you agree that a closer touch between the Military Department and the Finance Department is advisable and desirable?—I say it is essential to smooth working and economical working.

5583. That a spending Department, say, like the Quartermaster-General's Department, should be in closer touch with the bills for their expenditure?—Yes. You asked me just now for an instance as to spending money. Although the Adjutant-General does not spend money, he gives orders which necessitate expenditure every day. This is a fair instance. Take an officer ordered home from India, while the General Commanding would like him to go from one battery to another instead of going home; the Adjutant-General, for adequate reasons, which may not appear reasonable to the Quartermaster-General, orders him home. That is a matter of daily occurrence, and could be arranged at these weekly meetings I have spoken of.

5584. Do you think that it is desirable in every way to train officers in those higher responsibilities which they must take when active service comes?—Yes.

5585. (*Sir Charles Welby.*) What has been your experience of the effect of the decentralisation steps that were taken in consequence of the Committee of two years ago? Has it had a favourable effect on the working of your Department should you say?—I should say, although I cannot at the present moment state any beneficial effect, I think, undoubtedly, it is so. We have had fewer references, and officers have been more inclined in this late crisis to act on their own responsibility. I must say that it has had the effect, on the other hand, of giving one or two people, who perhaps had not been trained, ideas which are inevitable. A General has built a billiard room for the sergeants' mess which we have been struggling for for 25 years with the Secretary of State to allow. That would cure itself; if that man had been trained to know what he should do and what he should not do he never would have made that mistake.

5586. Has the decentralisation which has been effected produced much effect on the volume of work passing through your Department?—I think it is impossible to tell, because since it was effected we have been working at top pressure, so that I do not think really we could tell. Every night of my life I take home work.

5587. Are you of opinion that all that can be done in that direction as regards your Department under existing conditions has been done?—No.

5588. Do you see your way to further steps in that that direction?—I should not like to name them now, but I do not think we have gone far enough.

5589. But you are not prepared to go into particulars now as to the direction in which it might be carried further?—No. I would like you to tell me first of all: Are we going to form Army Corps?

5590. I am afraid I am not in a position to answer that question; but assuming that there were going to be, we will say, fewer and larger Military Districts than at present, could you indicate in what directions you could see your way to decentralising the work of your Department?—I should say no end of references which now come up here need not come. Even with the powers we have I do not think we have done enough. I commanded two districts, and in those two districts I made my Chief Paymaster my financial officer. Whenever I had a paper returned from the War Office disallowing anything, I made myself very unpleasant to this Paymaster; he had never been trained in that way, and I said, "I think it is a disgrace that if I allow a thing which comes back disallowed, I have to stop it here." The generals who are old boys, who have been brought up under a different system, with no responsibility, have not yet realised all this. I would not like to tell you off-hand, but I feel certain we can go a great deal further in the way of decentralisation. I feel certain a great number of papers come to us which need not come to us. As long as we have a House of Commons which concerns itself with every letter written to the papers we shall have difficulty.

5591. Do you think House of Commons questions are largely responsible for the degree of centralisation that prevails?—Yes.

5592. And that there is danger in any system, however elaborate a system of decentralisation may be instituted, of it gradually drifting back, through this intervention of Parliament, more and more towards a centralised system?—Yes.

5593. May I take you back for one moment particularly to the work of your own Department. Looking

through the detailed description, as shown in the War Office list, of the work of your different branches, it certainly strikes one on the face of it that there is a good deal of work transacted there which might conceivably be transferred to Military Districts?—I am certain of it.

5594. May I take one or two of the headings which occur to me in that light? I see under A.G. 1 the "proportion of units and detachments for embarkation"?—As to the proportion of units and detachments, that must be done here, because the proportion of a draft for embarkation first of all has to be arranged according to the country to which they are going, and the age of the men, and it has to be arranged with regard to the number of people who are coming home from the station to which they are going. Take a battalion, which is a unit in peace time, which is going out and is going to relieve its link. It will go out, perhaps, 540 strong, and would take over the balance of 1,000 in the country it is going to, which has still got, we will say, in India, two or more years to remain. That must be done here.

5595. It would not be possible in that case to tell the General Commanding the District the date on which the battalion under his command would have to go abroad, and the strength to which it would then have to be made up, and leave him to work out the details, would it?—We do leave as much as we can, but I am afraid we must always have the numbers. The Commander-in-Chief, say, in the Punjab, would not like to have to correspond with the General Officer Commanding in the North-Western District, for instance, if the battalion happened to be there. I do not see any way of getting out of that.

5596. Partly owing to recruiting being centralised, of course, you prepare your units by drafts from the depot, which may be in a different command to that in which the battalion is?—Yes, that is constantly happening.

5597. (*Mr. Gibb.*) In preparing a draft do you get the names of the men who are to be sent out through the General Officers Commanding Districts?—No, the Officer Commanding the battalion does it. We say that "certain numbers of your people having three years' service, or four years' service, or that a certain number, may be exempt." I may say that every officer wants to keep his best men and send the ones he least likes out to India. When a man misbehaves, for instance, a common expression is: "Now you will be for the next draft," and the man out there resents that. We do not go into that, we say certain men—corporals or lance-corporals—may be exempt, and then say: "Send the rest."

5598. You do not select the individuals to go?—No.

5599. That is left to him?—We are obliged to watch it because the General of the District is sometimes asked to prepare a draft of 200 men and send us up numbers. Sometimes they write and say there are not 200 men, and we say "really." Then we find the General has a servant or the Staff Officer has a groom, and he has been excused, so we are obliged to watch it in that way.

5600. Does that answer apply to officers as well as to men?—No, practically the officers are generally keen to go, and there is no difficulty about them. Their names come to us. They are nominated by the depot; but that is done in a perfunctory way; a depot officer in two years is sent abroad, and when a man wants to go earlier he sends up his name; it works almost automatically.

5601. (*Sir Charles Welby.*) I see "Leave of Absence" and "Furloughs" put in as a heading?—Yes.

5602. That strikes one as the sort of work which would naturally fall to be dealt with either in the units or by the General Commanding the District?—It is. I think that refers to when there is any trouble—the man being on furlough and getting into trouble.

5603. "Regimental and Garrison Institutes and Canteens"?—We do not manage them, but issue general instructions under which they are conducted.

5604. "Leave and Training of the Army Reserve"?—I think we must do that because it becomes a question for the Secretary of State, and varied from year to year.

5605. "Militia and Yeomanry Training Arrangements"?—It is so often necessary to send the Militia out of its district to train that that is necessary.

Gen. Sir E. Wood, G.C.B., G.C.M.G., V.C.

21 Feb. 1901.

Gen. Sir E.
Wood, G.C.B.,
G.C.M.G.,
V.C.

21 Feb. 1901.

5606. If the districts were larger that would cure itself, would it not, and it would be easier to arrange it locally?—It would cure itself.

5607. Then I go to A.G. 2 "Recruiting Subdivision." I see there "Reports of Fraudulent Enlistments"?—I am afraid you must keep the recruiting here, for this reason: we will say we are in normal times, and we want to get the battalions up so that we turn the tap on to certain battalions—say we leave the fourth battalion alone and turn it on to the fifth.

5608. These are what you may call the side issues, such as discharges, re-engagements, extensions of Army service, continuance of soldiers in the Service after completion of engagement. Is it not conceivable that all those things might be arranged by Generals locally?—We thought so, but the moment we tried it we had to stop it, for the Generals let the men go broadcast, and we found the Army was being depleted. A kind-hearted General would let them all go away, so we had to damp it down.

5609. That is not very promising from the point of view of decentralisation, is it?—No, but we must be patient; it is difficult to take your old officer out of beaten tracks, and I expect the Generals to go wrong in the first instance.

5610. So you would not take the fact that that has not worked very well in practice as an argument against persevering?—No, I say persevere. I say generally speaking, go on, as it is the only logical system.

5611. Then as to A.G. 4, the Discipline sub-division—the "Deserters, Rewards for apprehension of and "expenses in connection with deserters, and fraudulent enlistment"?—I will tell you why that comes here. A man deserts, say, at Cardiff, and is picked up in Norfolk. The two people wrangle over him, and that is the reason why it has been referred here; I do not say that it may not be, and perhaps we shall not get Cardiff to agree with Norfolk finally.

5612. Finally, under Discipline come questions as to cooking. Is it essential that that should be dealt with in Pall Mall?—No, I think the whole of it might be dealt with at Aldershot, except for this reason, that Aldershot says it has not more room; but when you squeeze Aldershot a little it has more room you find. The fact is, Aldershot is more impressed with the comfort of its own cooking class than it is with finding cooks for the Army, so that constantly a district is telling us it cannot do more, and we find, when we come to look into it, that it can do more.

5613. You are quite prepared to put forward, are you, a scheme for devolving a good deal more of the work which is now done here upon the branches or sub-districts?—Yes.

5614. (Mr. Beckett.) With regard to questions in Parliament, do you consider them an unmixed evil?—No.

5615. There are certain cases, are there not, when the question calls attention to a legitimate grievance?—Yes.

5616. Or to an unsatisfactory point in the working of the Army system?—Yes, but they are very annoying, and occupy time which might be much better occupied; but I should be very sorry to attempt to stop any questions at all.

5617. Do you consider that they are serious drawbacks to the smooth working of the Army in some respects?—Yes.

5618. Did you quite understand my question?—Yes, I think so. These questions occupy a great deal of

your time, and are a great nuisance, and stop you doing more useful work, but I would not stop them. The Secretary of State, I think, or whoever is answering the question, might do a good deal in damping them down, but I think it would be a mistake to say "We shall not answer."

5619. I see there is one branch of the Department which is almost entirely occupied in framing answers to questions?—That is so.

5620. And if, in your opinion, it tends to centralisation it is a very serious evil?—It must tend to centralisation, otherwise we should have a Secretary of State stating two conflicting decisions.

5621. (Mr. Mather.) You mean if the decentralisation were carried on in large Army Corps districts, the Secretary of State would have much more difficulty in giving explanations concerning those commands than he does now from the War Office?—Yes, but I think even then it would be necessary to come to the Secretary of State for War.

5622. (Mr. Beckett.) Would it be possible to give a few instances of the mischievous results that follow from injudicious questions in Parliament?—I do not know that they have any bad effect on discipline, but I can give you a ghastly instance by next Tuesday of the number of questions which are poured on to my head.

5623. In your memorandum I see you say: "Until it has been definitely decided what is to be the Military and civil staff of General Officers commanding"—What do you mean by "civil staff"?—I should like him to have some financial adviser; one of the people who have been trained here; then those questions would never come up here.

5624. You also say it is necessary that all the branches of the Adjutant-General's Department should be in a position to frame estimates and financially consider the cost of the present or proposed personnel of the Army. Is that done by the Accountant-General at present?—Yes.

5625. But does he not act under a requisition as it were?—I think Mr. Gibson can really tell you; he knows more about that than anyone else; but I, as Quartermaster-General, and trying to calculate expenditure myself, found practically that my work was useless, because from many points of view they probably do it very much better. But I think you would make us much more chary of proposing an expenditure of money if we knew what was coming.

5626. But if you had to frame these estimates, would it not lead to a large increase in your staff?—I do not think so.

5627. You say that the officers now do not say, give, give, give, as much as they used to?—Yes.

5628. Is that because they have had so much money at their command?—No, I think it is now because we have more trained officers from the Staff College at the head of the Army who try to look at the thing from a business point of view.

5629. Do you think that the heads of departments here and Generals commanding districts would pay proper attention to economy?—I doubt whether at present there is much economical feeling in Generals of Districts.

5630. Then you would not entrust very large powers of expenditure to them?—We shall have to educate them up to it.

TWENTY-FIRST DAY'S MEETING.

FIFTEENTH DAY'S EVIDENCE.

At the War Office.

Tuesday, 26th February 1901.

PRESENT :

MR. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

General Sir RICHARD HARRISON, K.O.B., C.M.G., R.E., examined.

5631. (*Chairman*.) You have been Inspector-General of Fortifications since 1899, I believe, and before that you were Quartermaster-General?—For a short time, yes.

5632. So that you know where the two departments come in contact?—Yes.

5633. I should like to ask you a few questions on the memorandum which you sent in to us on the 14th of January?—Of course, I did not know then exactly what was wanted. I wrote a short one to form the basis of any discussion.

5634. There are a great many points that arise out of it. You tell us in the second paragraph how work is initiated, and then you tell us in the next paragraph that a subject once started is dealt with by minutes between the departments or by conferences. Are those conferences called from time to time *ad hoc* to discuss a particular question?—I meant by conferences the meetings of officers to talk over a subject.

5635. Not a meeting at any stated interval?—Not a formal conference. I meant that we found that very often it was better to conduct business and carry it out by calling two or three officers to meet together and discuss the subject, than by writing from one to the other.

5636. Those would be officers belonging to the different departments?—Yes, between myself, for instance, and the Quartermaster-General—between the Inspector-General of Fortifications and the Quartermaster-General. A great many subjects, nearly every subject, in fact, connected with barracks has to be dealt with by these two departments conjointly.

5637. Would it save time, in your opinion, if all new proposals that affected more than one department, which affected your own department and some other department, were referred to some central board?—I hold to a central board to initiate subjects, to take up any big new subject—for instance, the redistribution of troops in England, or some big subject like that.

5638. I am not referring so much to that as to the possibility of a Board composed of officers representing all departments with which the question is concerned to meet together and thresh out that question sitting together round a table?—You would waste a certain amount of time, because you would get some officers who are not at all concerned with the subject who have to sit listening to subjects that they have nothing to do with. The conferences that I was alluding to were conferences between those who were immediately concerned with any particular subject.

5639. But a great many questions in your department concern you and concern the Quartermaster-General and also concern the Adjutant-General?—Yes, and it is very convenient that those three officers should meet occasionally and discuss questions; but if

i 15090.

you were to bring in other officers you would be wasting their time by making them sit and discuss for hours and hours when they might be doing good work elsewhere.

5640. I should not propose to bring in the Commander-in-Chief, but to bring in the Head of the department concerned?—If he has time for it, of course it would be a good thing if he could settle the thing; but he has a good many other things to do.

5641. How far does the Army Board assist in settling questions?—It has not at present dealt with that sort of subject. It is laid down in the Regulations, which you have got, no doubt, what the Army Board is to do. It is really concerned chiefly with foreign expeditions and mobilisation; it is laid down in the War Office Regulations. I would like even that; but it is rather more convenient for any special question like, say, a barrack question, that the officers immediately concerned should meet and discuss it.

5642. Then would you be in favour of the institution of any Board upon which your own department, the Quartermaster-General and the Adjutant-General were represented, which should meet at stated intervals and deal with questions in which all three departments were concerned?—That would be a good thing. It used to exist here, but it has died out. It used to exist three or four years ago.

5643. Did it exist in the form of the old Adjutant-General's Meeting?—Yes; it was a very convenient arrangement.

5644. And did the Adjutant-General's Meeting actually deal with these subjects?—Yes. It was before my time; I heard of it.

5645. But you know of it perhaps as Quartermaster-General?—Yes, the Quartermaster-General, the Inspector-General of Fortifications, and occasionally the Director-General of Ordnance, if he was concerned, used to attend, I believe.

5646. Did that Board meet while you were Quartermaster-General?—No.

5647. Then you only knew of it as having existed?—Yes. It was in Sir Redvers Buller's time. I practically succeeded him; at least I went to the Quartermaster-General's Department when Sir Evelyn Wood went to the Adjutant-General's Department.

5648. The object of a Board like that, meeting at stated intervals to deal with questions in which the various departments were concerned, would be to get over the delay which it is alleged arises very often now from the frequent reference first from one department to another, and then from that department to a third, so that the questions take very long in getting settled?—Yes.

5649. You have, I suppose, some knowledge of the question, though it may have taken place before you

Gen. Sir R.
Harrison,
K.C.B.,
C.M.G., R.E.

26 Feb. 1901.

Gen. Sir R.
Harrison,
K.C.B.,
C.M.G., R.E.

26 Feb. 1901.

came to your present post; but we are all familiar with the allegations?—We do meet now occasionally, but it is informally; we try and arrange a meeting every now and then on some subject to settle it as far as we can. But then we do not form a body that can settle a subject; we can only recommend.

5650. That is to say, the recommendation would have to be approved by higher authority?—Yes.

5651. Still you would all get together and make an unanimous recommendation?—That is it.

5652. As it is now there are said to be very great delays by the constant references between the different departments?—Yes.

5653. Take an instance that happened before you were in your present post, like the building of the Winchester Barracks. There was enormous delay there. That was before your time?—Yes, but I have heard a good deal about it. The building is going on now.

5654. But it was a long time before it was settled?—Yes, it was a long time before it was settled. It was the preliminaries that took the long time. The building itself has taken a good long time, but the preliminaries took a great deal longer.

5655. The preliminaries to settle what was to be built?—What was to be built, and where it was to be built, and so on.

5656. And these preliminaries consisting very much of correspondence and discussion between the various departments before they could be brought to agree?—Yes; and a great many others were concerned, because the Winchester Barrack is a barrack that is intended for the Rifle Brigade and the 60th Rifles, and all those concerned in those two regiments were more or less interested, and they were all consulted; so that there were a great many other people to get together than is usually the case. I have no doubt that that added to the length of time in settling the preliminaries.

5657. If you had had a Board meeting you would have had a nucleus of the people interested who might have pushed the question on?—I think a Board, with a certain amount of power, would certainly have pushed the questions on more rapidly; but, of course, an informal Board will do it to a certain extent. If a Board has power to settle a thing, why then it will help things very much indeed. It would expedite matters wonderfully. If an individual is allowed to settle things it is quicker still. But that, I suppose, will never happen.

5658. We have had a statement also—to come to a more recent case,—that two years have been consumed in considering the details of certain new barracks at Pembroke and Malta?—Perhaps you had better ask Colonel Watson about that; he will be able to give you full information about it.

5659. You would wish us to reserve that for Colonel Watson then?—If you please.

5660. And there was another question at Malta about barrack accommodation at Floriana, would you like that referred to Colonel Watson also?—I think so—two questions of barracks at Malta—yes, please.

5661. Very well. Does the delay over such work arise at all from the practice of the detail working plans being drawn out at the War Office and then referred to the station. What happens now with the plans for such works?—Colonel Watson will explain all that in detail better than I can, I think. Sometimes the plans are done at the station and sometimes they are done in London, but generally when it is done in London, it is done as a convenience to the station. But I think Colonel Watson will explain all that better to you, because he is always at work on it, and he will give you instances.

5662. Then we will keep it for him?—I know generally how it is done.

5663. Then in your memorandum you go on to state that your department is hedged round by "a network of checks" such as you believe do not exist at all in Civil life?—Yes. I explain that, I think, by saying that a Civil architect goes on with the work without any check at all—you trust him; and I think we might be trusted as much as a Civil architect.

5664. You give us no remedy; you say, let the same amount of trust be granted to the Inspector-General of Fortifications—that is to say, let him make his own

contracts?—Yes. You have been going into the contract question.

5665. What you mean by that, I gather, is that you should have liberty to make all your own contracts without any reference at all to, and without using as your intermediary or agent in any way, the actual Director of Army Contracts?—Yes. If you have two people to do a thing it will always take a great deal longer than where one person has to do it. They may be both good people, but they will go on arguing about every question, and every little detail has to go on backwards and forwards like a shuttlecock between two battledores, and it takes a long time. If the Director of Contracts could do the whole job I would let him do it; but he has not got the experience or the knowledge to enable him to do it.

5666. Does a Civil architect make his own contracts?—Yes, certainly; all those that I have over dealt with.

5667. (*Mr. Gibb.*) Very rarely?—There is no Director of Contracts in with him.

5668. An architect never makes the contract for the work he has to carry out; the contract is made by his employer?—He calls for tenders. Of course I do not mean to say that we would not call for tenders; we should call for tenders. The whole work would go on the same as it does now with the exception that one person would do it instead of two.

5669. (*Chairman.*) You would decide which tender should be accepted?—Certainly, and we should only take those firms we could trust. The architect does the same. I have built a good many private houses, and I know how it is done. I have worked in private life as well as public; I have built several houses for myself in different parts of the world, and therefore I have an intimate knowledge of how a small work is done; I will not say a big work, but in the case of a small work when your architect has made his plans you find out the names of three or four good firms round about whom you can trust, and you call for tenders from them; but you would not call for unlimited tenders as a rule; it is very seldom done. It is done for big works no doubt occasionally.

5670. But it is not the architect who decides on the tender?—He provides the designs. In my case the architect has carried out the whole business from beginning to end.

5671. (*Mr. Gibb.*) The architect advises but does not decide?—You yourself decide, certainly.

5672. (*Chairman.*) But your theory seems to be that you would act both as architect and as employer who settled which tender was to be accepted?—I see. What you mean is that the Director of Contracts represents the owner?

5673. Precisely?—I look upon it that the Secretary of State represents the owner (the King, in our case) and we are responsible to him.

5674. How far, if liberty was granted to you to make your own contracts, would you delegate power to the General Officers Commanding?—I would give it them up to 4,000*l.* or 5,000*l.*, I think, for convenience. If there was a very large contract it would be better probably to make it in London, where you could get a larger field; but I think we might say up to 4,000*l.* or 5,000*l.* Personally I think you might almost give them unlimited power and allow them to appeal if they wanted a broader field than they could get in their own district.

5675. (*Mr. Gibb.*) Unlimited power to do what?—To call for tenders.

5676. (*Chairman.*) And to accept tenders?—And to accept tenders; to nominate a firm to do the whole thing.

5677. To put the contractors on the list from which tenders should be called for?—Yes, certainly.

5678. And to decide who should do it?—Yes, under the Inspector-General of Fortifications, who should be the responsible man to the Secretary of State.

5679. Then would you delegate absolute power, or would the General Officer Commanding appeal to you?—If you trust him you must give him the power.

5680. When you say he is under authority he would not appeal to you in every case?—He would be responsible. If he employed a bad man and I went down, or one of my officers went down to inspect and found the work bad, we should be down on the General; but now

you cannot be, because the General says, "Oh, but I have got a contractor we did not recommend, that we knew to be a bad man." Therefore you cannot make the General responsible at all. You have to say, "Oh, well, I cannot help it."

5681. The present rule is that the General Officer Commanding may be able to deal with contracts up to the value of 2,000*l.* P.—Yes, that is new; that was done since the Decentralisation Committee reported, and it has only just begun; it is hardly known yet; it has just begun to work.

5682. How far has that really conferred power upon the General Officers Commanding? One General has told us that this new power really means nothing, as all tenders under 2,000*l.* are referred to and accepted by the Director of Army Contracts P.—Over 2,000*l.*

5683. I understand General Fraser to say all contracts P.—It ought to be over 2,000*l.* Under 2,000*l.* he can grant them.

5684. (*Mr. Mather.*) But General Fraser thinks it is useless?—It is not much use at present because it has not gone far enough; that is really the whole point. If you are going to make a General responsible you must give him a certain amount of power or else you cannot make him responsible; it is no good setting a man to run and tying his legs together.

(*The Secretary.*) General Fraser means that he is practically bound to accept the lowest tender.

5685. (*Chairman.*) He says "Therefore the powers are absolutely illusory" P.—What he means is that it is subject to check; the Director of Contracts can say to him, "You did wrong there; you accepted a tender that was not the lowest."

5686. (*Mr. Mather.*) The point is that on the list supplied to him of contractors satisfactory to the Director of Contracts there are firms, one of whom may be the lowest in the tenders, to whom he would not like to give the work at all, but under the present circumstances he is compelled to give him the work. If he had to make a list of contractors worthy of being entrusted with the work, then he would take the lowest, but he has no control over the list of contractors P.—That is so.

5687. Therefore the powers given to him, he says, are illusory P.—That is what I say; it is not enough.

5688. (*Mr. Gibb.*) He has the power up to 2,000*l.* P.—Yes, but he has not the power of regulating what firms are to tender.

5689. But for a contract up to 2,000*l.* he has?—No, not even then. That is really the whole point; he has not the control of the firms that tender.

5690. But has he not as much power as anybody else except the Secretary of State P.—No, the Director of Contracts settles that certain people are to tender besides, and then he is obliged to accept the lowest tender.

5691. But as regards works up to 2,000*l.* the General Officer commanding has power to seek tenders according to the present Regulations P.—Yes.

5692. Then if he thinks that a tender higher than the lowest should be accepted he can secure that his view will be carried out, unless the Secretary of State thinks otherwise?—You mean that it has to be referred to the Secretary of State for decision?

5693. Certainly; if the Director of Contracts took a view different from the General Officer commanding, the General officer commanding could obtain the decision of the Secretary of State upon it?—I suppose he could, but I do not quite know how he would do it; you mean he would go and see him, or try and see him?

5694. Or get his decision upon the point?—Yes.

5695. (*Chairman.*) I think General Fraser's point is this: he regards the authority to deal with works up to 2,000*l.* as merely nominal, because he says he has no voice in the selecting of the firms from whom tenders are called; that list is selected, he has no voice in it, he has to assume therefore that all the firms on the list are of equal value, and therefore he accepts the lowest tender as a matter of fact; he having been furnished with a list of persons who are said to be all equally satisfactory, in the formation of which list he has not been consulted, when the tenders come in from those people he takes the lowest as a matter of fact, all being equal?—That is so.

5696. (*Mr. Gibb.*) But surely there is a little confusion of mind there. The fact that the contractor is on the

list and invited to tender does not make it necessary to accept his tender although it is the lowest P.—No, that is so in theory.

5697. And as I read General Fraser's memorandum, he thinks that in cases under 2,000*l.* the General ought to be enabled to accept a tender higher than the lowest without criticism from the Director of Contracts, but I do not understand that he carries that further than this, that the Director of Contracts may criticise; he cannot order unless the Secretary of State approves P.—But he settles the contractors in the first instance.

5698. The Director of Contracts cannot order the General to accept a particular contract?—No, but he can order him to employ a certain man; at all events that that man shall tender I mean to say. He can say, "You must call upon Mr. Somebody and Mr. Somebody else to tender besides those you have on your list."

5699. But the fact of asking a man to tender may have a salutary effect on the other tenderers, but that cannot compel him to accept a tender which he does not like?—I do not like to answer for General Fraser; I do not know quite what was in his mind.

5700. (*Chairman.*) I think what was in his mind is really clear. He says, "I have no voice in selecting the list, I am told to call for tenders from a list of contractors, and that list has been made without me. I have to assume that everybody on the list is of equal value; therefore, I naturally accept the lowest tender." What General Fraser really desires is to have a voice in the determination of the list of contractors. Passing away from that point, let me ask you this: The Committee have been considering the advisability of recommending that the heads of all Supply Departments, including the Inspector-General of Fortifications, should in the first place have a determining voice in the list of contractors to be employed from whom tenders are called for, and should have absolute authority in accepting any tender on their own responsibility up to 500*l.*, that is to say, in case the Director of Contracts wished another tender to be accepted and the Inspector-General of Fortifications was not of his opinion, the Inspector-General of Fortifications should without appeal absolutely decide that question. How far would that meet your views?—Up to a 500*l.*?

5701. Yes; it was not made particularly for the Inspector-General of Fortifications. I gather you would want it to be carried higher?—At present Generals have it up to 2,000*l.*

5702. But they have it in such a way that not being consulted about the Lists they contend, at least General Fraser contends, that it is really useless?—I do not know quite what to say. In the case of stores, power up to 500*l.* would be an advantage to us; at present the Generals have only power up to 50*l.* for stores; that would enable us to carry on day work which we cannot do now.

5703. But I gather that you would desire in the first place this limit of 2,000*l.* for the General Officers Commanding to be made effective?—Up to 5,000*l.*

5704. You would not rest with 2,000*l.*, you desire to go up to 5,000*l.* P.—I should give them more power and increase the amount. I should give them entire power to work it up to 5,000*l.* in districts.

5705. You mean by entire power, allowing them to determine the list of contractors and settle which contract should be accepted?—Yes; I do not think any contractor should ever be thrust upon them. When they report that a contractor does bad work in three or four things, I do not think that that contractor should ever be thrust upon them; it is not fair; no private person would employ a contractor that he knew did bad work. I would not.

5706. (*Sir Charles Welby.*) Do you think in practice the case often arises of a contractor being forced upon a General Officer Commanding?—Yes, we have had several cases.

5707. What sort of number of cases?—I reported a case only last week of bad work.

5708. Do you think there are any appreciable number in the last five years say; can you give any idea of the number of contractors considered as bad by General Officers Commanding, who have been forced upon them?—I do not think I can. We fight hard, of

Gen. Sir R.
Harrison,
K.C.B.,
C.M.G., R.E.

26 Feb. 1901.

Gen. Sir R.
Harrison,
K.C.B.,
C.M.G., R.E.
26 Feb. 1901.

course, to exclude these men, but it is a great deal of trouble.

5709. Do you often have to fight?—I think very often. I would rather others were consulted about it, because it does not come immediately under me; I know a great deal of correspondence takes place on the matter.

5710. (*Mr. Gibb.*) Colonel Watson told us before when dealing with the subject of contracts, that tenders were always referred to the Inspector General of Fortifications before being accepted?—Yes, they go backwards and forwards, that is what I say.

5711. And I did not understand from him that he had had any difficulty in getting a contract accepted which your department desired to be accepted?—We have had difficulty with contractors. I do not quite follow the question. We have had contractors employed, I think Colonel Hildebrand gave you evidence about it—against our wish.

5712. Colonel Hildebrand's evidence was rather different; as I understand, he dealt with a different class of work from that which Colonel Watson dealt with?—He does fortification work and Colonel Watson does barrack work.

5713. Lists of tenders are submitted by the Director of Contracts to the Inspector-General of Fortifications for decision as to the acceptance of tenders, but have you had during the last five years we will say—?—That is not the position, so far as I understand it, that we were discussing. We were discussing whether a contractor that we consider is not fit to do work should be employed when he once tenders. When he is one of the men that tenders and we get the tender, then it is past alteration; you are bound to accept his tender.

5714. I confess I do not see it in that light. It is a common practice to invite a large number of contractors to tender, reserving the question of acceptance?—When you advertise generally.

5715. Or even on a selected list it is not uncommon to put on the list firms whose tenders you would hesitate about accepting, but you decide the ultimate acceptance without reference to the original placing on the list?—You see I have not personal experience enough to say whether we make observations with reference to those tenders. I have no doubt that Colonel Watson will tell you whether he has often to do that or not.

5716. But if there had been any real difficulty it would have taken this shape, would it not: that you wanted a particular tender to be accepted, and the Director of Contracts wanted another tender to be accepted?—Yes.

5717. Then, what I was going to ask you is: Have you had during the past five years any number of these cases of difference of opinion as to the tender to be accepted?—I think if you were to ask Colonel Watson he would give you the cases in his Branch. Each Head of a Branch deals with his own tenders. There are three Branches.

5718. (*Chairman.*) Then we will reserve it for Colonel Watson?—If you please.

5719. (*Mr. Gibb.*) But I should put the same question as to General Officers, whether you know that General Officers Commanding have in point of fact been over-ridden to any extent when they have recommended definitely the acceptance of a particular tender?—I could get instances, but it is only just started.

5720. (*Chairman.*) There is hardly sufficient experience yet, you mean. However, I think we may take it that you would like to see General Officers Commanding given full and effective power up to 5,000*l.*?—Yes.

5721. Then you go on with your recommendations. You say, "Let the Inspector-General of Fortifications be subject to only one audit." What audit is there now? When a work is done, to what extent do you accept the certificate from the Commanding Royal Engineer in Charge?—As regards the checks that are made, the Accountant-General would tell you better—he has put forward a paper here, I think, about it. The Accountant-General checks the bills and the ledgers and so on.

5722. Let us come to the check in the Inspector-General of Fortifications Department first?—This is in my office. They check some of the bills in my

office, and then there is what I understand to be a regular audit afterwards of the whole of the accounts; but I do not know the detail of it; at least, I would rather not give evidence about it because I do not know enough about the audit. It would not come before me at all.

5723. But there is an audit carried out in your own department, is there not, by your own officers? You have surveyors and others?—Yes, but the Accountant-General does that.

5724. He does it afterwards?—He is responsible for it.

5725. I thought the Inspector-General of Fortifications was responsible in the first place?—The generals are responsible for the bills they send up, and then those are checked by the Accountant-General in my office with the assistance of the surveyors; they are passed backwards and forwards to the surveyors; that is to say, the books are passed backwards and forwards between the gentlemen who are checking the accounts and the surveyors in my office; it is all done in the office.

5726. It is done in the office, but there is a first process by which the Inspector-General of Fortifications does it, does he not?—No, they are not under me; it is done under the Accountant-General.

5727. The surveyors are under you?—The surveyors are under me, but the surveyors work with the Accountant-General. The surveyors are simply used to give technical opinions; the surveyors check the bills, and so on; they go through a certain percentage of the bills.

5728. Before they are passed on to the Accountant-General?—No, it is all done concurrently.

5729. Then what is precisely your recommendation, that you should be subject to only one audit?—I do not think this present system is necessary at all.

5730. You do not think the audit that is carried on now is necessary at all?—I do not think it is any good at all; I think it is waste of time, the whole of it.

5731. Then you would simply accept the certificate of the Commanding Royal Engineer in charge of the works?—Yes, we should check it in our office by the surveyors.

5732. Then that would be an audit?—It would be our own. We should be responsible. We should do that anyhow.

5733. What would that checking consist of?—Just going through the bills and seeing so far as you could on paper that the work was done, and that it was according to the correct prices.

5734. Adding up the quantities and taking out the measurements and so on?—There would be a certain amount of addition done no doubt, but chiefly to see that the material, or whatever it was, the material or the labour was properly priced.

5735. From the papers?—From the papers. It is only a certain amount of check; the real check is, of course, on the ground, seeing that the work is done. When you build a house the real check is the measurement that is made on the spot.

5736. (*Sir George Clarke.*) The only real check in such a case is that which is applied on the spot; that is the only real check that is possible in such a case?—That is what I said.

5737. There can be no other in the nature of things?—I do not see how any amount of paper check afterwards is of the least use, but you can check some of the bills to see if they are properly made out, and whether the prices are correct, and so on.

5738. (*Chairman.*) Then the check that I understood you to propose just now to be done in your department by the surveyors is one that is really illusory?—No, not by the surveyors; the checking that is done of the bills under the Accountant-General. I think the Accountant-General himself says it is no use.

5739. (*Mr. Gibb.*) But what do you do in your office that the Accountant-General cannot do in his?—I do not think anybody can really check whether a building is properly constructed or not unless he sees it—unless he goes down to see it.

5740. The question rather was that you described the Accountant-General's examination of the bills as illusory?—I think it is quite illusory.

5741. Is not the check in your own office (apart from the local check) equally illusory?—Well, I do not know. A certain amount of checking of the bills, I think, is necessary just to see that the prices are correct.

5742. That an accountant can do as well as a surveyor?—No; it requires technical knowledge to a certain extent. A surveyor's clerk, of course, could do it; anybody who has been trained to the work could do it.

5743. (*Sir George Clarke.*) Also you have the drawings, of course, in your office; therefore the surveyor who has a certain building reported to him as completed can check it by measurement?—Yes.

5744. Which, of course, the Accountant-General's people could not do at all?—No.

5745. Then I suppose you also check the prices?—They check it in the office.

5746. Your surveyors also check the prices?—Yes, of course that is exactly what they do, it is the prices of material and labour and so on, that can be done in the office, as they check the bills, that is all; but the actual checking of the building done must be done on the spot.

5747. (*Mr. Gibb.*) You would never take a measurement from a drawing to supersede the measurement on the ground?—No.

5748. Then if they do not agree you take the figures of the measurement of the completed building?—Yes.

5749. There is really not much check there.

5750. (*Chairman.*) If they do not agree I suppose you send down to see?—Then you would have an inspection. If you make the Generals responsible for the work entirely, you must have a certain amount of central inspection and the inspection is a very valuable thing. I am called Inspector-General of Fortifications and I have certain officers called Deputy Inspector-Generals and Assistant Inspector-Generals, and if their time is all taken up in the office they have no time to go round about and inspect, and the inspection is the way to ensure that your work is done well and done more or less on some system.

5751. Then may I say that your recommendation amounts to this, that you would accept the certificate of the man on the spot and would check it only by sending down inspectors?—By sending down inspectors.

5752. You would do nothing in your own office; you would not check from the drawings or anything of that sort?—No, except that we should check some of the bills through the surveyors.

5753. Would that check be of much value?—I think of a certain amount of value.

5754. But the real value would be the inspector of the work on the spot?—Yes, if we found that a bill came up and the bill was certified and was incorrect, then of course we should come down upon those who were at work, on the General and those under him.

5755. But even if you had no reason to think it was incorrect, would you not be in favour of sending your officers down to make surprise inspections?—Yes, periodical inspections; I am arranging for it; I have begun it already, and am doing it now. Theoretically it has been supposed to be done up to now, but there have been so few officers, and they have been so hard worked that they could really barely get through their day's writing.

5756. They have been so hard-worked owing to their having had to do so much checking?—Owing to so much correspondence between one department and another. That is what takes the time. The correspondence between the Director of Army Contracts and our office is something enormous. Every single thing goes backwards and forwards.

5757. Do you get to the true cost of buildings? I mean, do you show clearly the pay of soldiers and the cost of Army stores that go to make up part of the total cost of a building, because I understand that you supplement contract labour on buildings sometimes by the employment of Military labour and by the use of Army stores; therefore do you get in those cases to the true cost of the building?—We do not often mix the two. A contract is a contract. If we build a building by contract it generally would be built right through by contract.

5758. But there are a considerable number of cases, are there not, where it is otherwise?—There are some, but as a rule works you do by day work you do right through by day work; but I think there are a few cases where it is mixed.

5759. In which cases, at any rate, you use Army stores?—Then we have to buy the stores. If you mean, for instance, guns; if you want to get the value of a fort, of course guns are supplied by another department, and the carriages by another department, and so on. You could get the price of any fort or the price of any barrack; we could work that out quite easily.

5760. It is stated that works done under lump-sum contracts have so many variations that these contracts often become not lump-sum contracts, but measurement contracts?—Extras, you mean, I suppose.

5761. Yes?—That depends upon whether changes are made while the building is going on. That sometimes happens; but that is, of course, beyond us. Very often when you begin a building there are changes in Army organisation or something of that kind which interfere with you. You will be told that you must put another sergeants' room in the barrack or something or other of that sort, or an extra store, or something that compels you to make what we call extras to the contract. And that is done generally on the contract prices.

5762. (*Mr. Mather.*) On the schedule of prices?—Yes.

5763. (*Chairman.*) But as a rule you would be content subject to inspections to accept the certificate of the Commanding Royal Engineer on the ground?—Certainly.

5764. Are you satisfied as things are now when you have not been able to carry your inspection very far, that those certificates are generally quite accurate?—Yes; I think they are good. I think the work is very fairly done under great difficulties very often.

5765. An allegation has been made that a bill was recently put forward for work as completed when that work had not actually been begun. Do you think such a thing is possible?—There might have been such a case. I should have been very angry with anybody if I had found it out. I cannot say whether it has ever been done or not. It is possible it might be towards the end of a year. There is a system, you know, of carrying on works by the year, and towards the end of the year you have a certain amount of money to spend and you cannot always complete your building. I do not know of a case at present, and I cannot bring you a case. I could search for some if you wanted to see any.

5766. (*Mr. Gibb.*) We have been told of a case where it was said that the thing has happened; has it not been brought to your notice?—Where is that? It might be a long time back.

5767. The date is not given?—I should report the officer if I found it out, and he probably would be turned out of the Service.

5768. (*Chairman.*) To continue with your Memorandum. You say, "Let the Inspector-General of Fortifications get what staff he requires and settle their conditions of service"?—What I meant by that was that we have had great difficulty in getting a sufficient staff. I have to go and fight over nearly every officer that I want; I constantly have to do so. It is a question of Army Estimates, you know, and I get a new station at Wei-hai-wei or Esquimalt or some station of that sort, and I have to bring forward extra staff to carry on the work of that station. It takes a long time before I can get them, and every now and then I do not get them at all. Then some other station has to be denuded in order to supply the necessities of this new place.

5769. That means that you cannot get the necessary increase to the estimates?—What it means is that in Civil life you have all the staff you want to carry out any work.

5770. But in Civil life you are checked by your profit and loss account at the end of the year?—Exactly.

5771. Profit and loss determine the staff?—That is what I meant by what I put about staff; that your hands are more or less tied. Sometimes, you have great difficulties; I will not say you cannot get it

Gen. Sir R.
Harrison,
K.C.B.,

26 Feb. 1901.

eventually, but it takes you a long time and a great deal of trouble to get sufficient staff to carry on your work. That hampers one very much. Then a war breaks out like this one in South Africa; 200 of your best men, and I do not know how many of your foremen of works and clerks, and everybody else, are suddenly taken away and sent out there. You have to supply their places as best you can by getting retired officers and various people you can get from Civil life, temporary men and so on. We manage to do it in time, but it creates great difficulty in our work.

5772. That is rather a description of the practical difficulties under which you labour, is it not, than the recommendation of a positive measure to remedy those difficulties. But I do not suppose you would contend that you should be given fuller power of engaging men than any other department has got?—I was saying there that I think it is impossible for anyone to carry on work unless he gets sufficient people to do it, and I was putting that as one of the *sine qua non*s, that I must have enough people to carry on the work.

5773. You also say that you should be provided with such funds as you consider necessary for the proper maintenance of forts and barracks. I am afraid that comes to this, that when there is only sufficient money to go round to everybody, the Inspector-General of Fortifications must get what can be allotted to him, like every other Head of a department?—Up to the present time we have not really had enough money to maintain our barracks and keep them in proper order. I have been trying very hard to get more; I got some more last year, but it is always a fight to get it; it is always, more or less, "What shall we cut out? let us cut a little more out," and we cut something else out.

5774. If reductions are made, on your total vote, economies are nearly always made on the maintenance, on Part III.?—I look upon it that you should have enough money on Part III. to keep your barracks in repair. That is the first essential thing; and it is absolutely necessary that there should be enough for that. Part II., after all, is only to supply improvements; Part I. is, as a rule, to build new additional barracks, and so on, and also improvements; but Part III. is essential. I should begin by Part III., get enough money on Part III., and afterwards get as much as I could on the other Parts. That has not been the case heretofore, Part III. has been scamped to supply money for Parts I. and II. However, I stopped that, so far as I could, directly I came into office three years ago. It will take a great many years before the barracks can be patched up and made to do. I mean to say when a barrack gets old and worn out, and has not been kept in repair for a great many years, it requires a great deal to make it good.

5775. (Sir Charles Welby.) The allocation of the money between repairs and maintenance in the services was always in the discretion of your predecessors; it was not imposed upon you from outside, for instance, by the Secretary of State; he would decide the total amount available for the year, and you would have the allocation of it?—It has so grown into a custom and a sort of system that I do not know whether they did or not. I must say I had no difficulty. When I put forward an application to the late Secretary of State for more money for maintenance, he gave it to me at once; but there has been always a habit, more or less, of considering that a certain amount of money was required to keep the barracks in repair, and that has become a sort of second law, and nobody has been allowed to alter it. I suppose that is really what did it. But there is no doubt that barracks have run down owing to insufficiency of funds.

5776. (Chairman.) But that insufficiency of funds has resulted, has it not, to some extent in a policy, before you became Inspector-General of Fortifications, of sacrificing Part III., if any reductions had to be made, rather than sacrificing Part I. or Part II.?—I think partly that and partly it is due to the custom of putting in Part I. services that ought to have been, to my mind, in Part III. An officer in a station had only a certain amount of money to carry out his repairs, and he saw some building going more or less to decay, and he said, "Let us leave it a little; I have not got money enough to do it, but I will leave it until it becomes a big service; then it can go into Part I." Directly a service becomes over 1,000*l.* in value it can be put in Part I., and a great many of these maintenance services

and big repairs did go into Part I. Now I am going to alter that.

5777. The result of that must have been very bad economy?—Very bad. It is a curious system, but it has been going on for many years; I do not know who started it, or whether it has been always going on. Personally I think Part I. should be confined to new work, but that all repairs and maintenance should go into Part III. Then you know where you are; you can see that all the money spent in Part III. goes to keep your barracks in repair. I am trying to start that now, in fact I have started it to see how it goes; I do not know whether I shall get money or not.

5778. Then you say that you as Inspector-General of Fortifications should bring forward for annual estimate or for loans, such new services as Army changes render necessary. You do that now as a matter of fact?—We bring forward as a rule. We get from the Generals requisitions up to about a million and a half on barracks; and I suppose the amount of money we get is about 100,000*l.* towards it.

5779. The gist of your remark is that all your recommendations are not accepted?—Not a tenth part, not a twentieth part.

5780. That is to say, there is not enough money to go round for everything?—No; but now the system of loans has been started of late years, and the loans are really taking the place of what used to be Part I. In old days everything was done on Part I., there were no loans; but now loans are taking the place of what used to be Part I.; and it is a most excellent system, because you do not have to hurry the work. If you have only money to build a work in a year, there is a great hurry towards the end of the year to get the building finished: because there was only so much money to be spent in the year and if you did not spend the money it all lapsed and had to be voted again next year.

5781. (Mr. Mather.) Did that ever apply to building operations? did that restriction upon you apply to such works as buildings, barracks, and fortifications?—Yes, everything in the old days.

5782. And in the old days were these works stopped at the end of the financial year?—Another sum of money had to be voted; you usually carried on as best you could, but the amount of money that you had in the one year lapsed, and you had to have another vote put in to carry on for next year.

5783. That is not the case now?—No, now these big works, as a rule, are done on loans, and therefore you carry them on consecutively. It is better, of course.

5784. (Chairman.) But you did not actually stop your building at the end of the year; you went on in confidence that you would get the money voted next year?—Yes.

5785. (Mr. Mather.) You went on credit, I suppose?—Yes. There was always a little rush to get the amount of money spent that you had put down for the year. Suppose you put down 2,000*l.* to be spent for a year, and towards the end of the year you had only spent 1,000*l.*, there was a certain amount of blame, or an idea of blame anyhow, attached to the officers on the spot for not having spent the money that was given them; and there was always a struggle to try and spend it. That was bad. That still happens.

5786. (Chairman.) That blame only meant, I suppose, blame for not having made the estimates accurately?—But it was almost impossible, because they did not get the votes out till July or August sometimes, while the financial year ended in March.

5787. (Sir Charles Welby.) You said just now that you only got one-tenth of your requirements in money for works, but I suppose you are referring to the time previous to the policy of loans?—No, that happened this year. About a million and a half was asked for.

5788. (The Secretary.) Those are demands from the General Officers all over the country, which you did not recommend yourself.

(Witness.) No. About a million and a half was asked for by the Generals.

(The Secretary.) Which you cut down considerably yourself.

(Witness.) Yes, we had to reduce them, and reduce them, and then eventually the balance would have been passed over. I do not object to it; I only mention it to show some of the difficulties that we have to face.

(*Sir Charles Welby.*) I was only afraid that your answer might cause misapprehension.

5789. (*Mr. Mather.*) It seems necessary to explain it, as you said that not one-twentieth of what the demand amounts to can be granted. That implies a feeling on the part of the Generals that they had better ask for twenty times more than they want in order to get it?—Very likely, but it shows that there is something not quite right, does it not, in a system which allows of that?

5790. (*Chairman.*) But to return to this question of expenditure at the end of the year, in making these estimates you have to take into consideration the question of time also, and, therefore, if an estimate was made that 2,000*l.* could be spent within the year on a certain building, and if at the end of the year you found that you had only been able to spend 1,000*l.*, you would be open more or less to the reproach of having made an inaccurate estimate?—I am afraid I do not follow the question.

5791. You have been asked to make an estimate for a building up to the 31st of March, and you say 2,000*l.*; if you find that up to the 31st of March you have only spent 1,000*l.* upon that building, critics might turn round upon you and say that you had made an inaccurate estimate, and that you had not sufficiently reckoned with the element of time, is that not so?—The time is uncertain because that depends upon when Parliament votes the money; we cannot spend the money until Parliament has voted it.

5792. Parliament votes the money in the summer?—Sometimes; I do not think that Part I. of our Vote last year was voted till July or August.

5793. Then what happens to Part I.—Buildings?—They have to wait until the money is voted.

5794. Not for continuation services?—No, I beg your pardon.

5795. Is there any way of anticipating the vote?—As a rule we only put in a small amount of money for the first year because of that, for the continuation service; but these continuation services are, I hope, dying, and they are, I believe. All those services will go to loans, I believe, in future; so it has been settled, I understand.

5796. But as regards new works, is there no way of anticipating parliamentary approval of the estimates; do not you begin beforehand?—We might begin making the estimate.

5797. But do you begin the work before the estimate is voted; is there no way of anticipating the estimate but by Treasury sanction or otherwise?—We do not as a rule begin building until we get the authority. I do not think we ever do; I do not think there is a case of our having done so.

5798. (*Mr. Mather.*) And a whole year might elapse sometimes, and you lose the building season?—We go on with repairs and that kind of thing; we should not begin a new work.

5799. (*Mr. Gibb.*) Do you ever have a contract for any building before the service is voted by Parliament?—I do not think so; I know we go on with Part II. and Part III., but that is different.

5800. (*Chairman.*) If you get authority from the Accountant-General and from the Treasury, that is sufficient?—Sufficient to enable us to go on?

5801. Yes, to anticipate the estimates?—I suppose if we got an order from the Secretary of State, which that would be, we should go on.

5802. We have been told that there is a regular practice of that kind.

5803. (*Mr. Mather.*) The point is, do you ever lose a whole year for building purposes owing to the fact that you have no sanction to go on with your work until the approach of winter.

5803A. And therefore you have to wait until the winter is past and the building season begins again, before you can proceed with a work which has been already sanctioned?—Yes, in the past it was the commonest thing possible; it is a very common complaint of Generals that they have to do all their work in the winter.

5804. Then is that altered to-day?—If you have money on loan you go on and build when it suits you.

5805. So that there is no inconvenience arising now from the fact that once a building has been sanctioned, there is not sufficient means at your command to go on in the right season?—Not under loans; that could go on perfectly, but on the barrack estimate it is still the same.

5806. But what does it matter whether it is on loan or by annual vote, in the case of the first year; you still cannot begin until the service has been voted by Parliament?—Yes, first the service has to be voted, and then we have to make our plan.

5807. So that the question of providing the money by loan, or of providing it by annual vote does not help you in the first year of a new service?—I do not quite follow you. The loan once voted, we can go on spending it.

5808. But I understand that your point is that you do not know until possibly August in that year whether or not you are at liberty to go on with a particular work?—That is it.

5809. (*Sir Charles Welby.*) In respect of a loan, you would not attempt to begin the work in the same year that Parliament had voted the loan; you would put into the loan the works that you were going to begin under the loan in the following spring?—But you have not got to think what month it is in the year; you are not obliged to begin to build in winter.

5810. (*Chairman.*) We have been informed that there is a regular machinery by which sanction can be obtained from the Treasury to begin new works in anticipation of the estimate?—I do not think that matters much now, because I hope all that is being altered, and that we shall get big works done on loans altogether. The continuation services are unsatisfactory, no doubt, and large services under the Barrack Annual Estimate are unsatisfactory.

5811. Is there really much hurry, and therefore uneconomical expenditure at the end of the year, because it is thought that the money is going to lapse?—That is so in the case of money on the Barrack Annual Estimate.

5812. I have heard stories to the effect that at one time or another towards the end of the year on barracks the Commanding Royal Engineer would come round and say, "I have so much which I can spend; show me a little job here and a little job there"; and everything is done in a great hurry; and it has been explained to me—I do not know whether rightly or wrongly—that that partly results from the Inspector-General of Fortifications keeping back a considerable reserve on the money at his disposal for Part III.; I think you keep back about 5 per cent. of that money; is that not so?—Of course that depends upon whoever is working it. I have tried to keep back as little as possible; I just keep back a certain amount of what we call storm money; that is to say, some storm takes place in Bermuda, or in some particular place, and you have to suddenly send them out a sum of money to make it good.

5813. It is more a question of the amount that I am referring to?—It is a question of administration in the office.

5814. It has been alleged that the amount kept back has been rather large and that at the end of the year the Inspector-General of Fortifications, finding that he has still that money, says, "You may have small credits all round"?—I dare say it has been so; it is a temptation; people like to keep a reserve in hand in case of anything happening; but I have tried to spend all the money as far as I could.

5815. How much do you keep back yourself?—Each branch keeps back a certain amount; I think it is very little now.

5816. But would the total amount kept back on Part III. amount to 5 per cent.?—I dare say it might, originally, you know; you go on the whole year utilising it. I leave it entirely in the hands of the officer who works it; Colonel Bagot would deal with that particular matter.

5817. Then you go on to state in your Memorandum that the Inspector-General of Fortifications should make his own Regulations. I suppose that the Regulations for the Department do emanate from you as a matter of fact now?—I was speaking generally. Practically there is really not very much criticism of our Regulations. I have just made some new ones.

Gen. Sir R.
Harrison,
K.C.B.,
C.M.G., R.E.

26 Feb. 1901.

Gen. Sir R.
Harrison,
K.C.B.,
C.M.G., R.E.

26 Feb. 1901.

5818. What criticism is there of your Regulations?—Everybody has a say, you know. They go round to every department in the War Office, and everybody writes what he likes and puts in his remarks.

5819. But substantially you get what you propose?—If you go on fighting long enough you manage to get it. It is a question of determination. It has taken me three years to get out my last Regulations.

5820. Then you say in your last paragraph that you are in favour of the association of Civil Clerks with officers at Headquarters, chiefly from the point of view of continuity?—Yes; I think so.

5821. Do you mean there to refer to Higher Division Clerks or Second Division Clerks?—As a rule, our officers draft all letters; being technical letters, they draft their own; we have only Second Division Clerks.

5822. You have no Higher Division Clerks?—We have one or two of the old Royal Engineer Clerks left, but I think perhaps I need hardly mention them, as they are dying out; there are only two or three left; besides that we have only Second Division Clerks.

5823. Therefore you would like to continue having Second Division Clerks?—Yes.

5824. And the Higher Division Clerks might disappear altogether?—Yes. I do not think we should require them. There are one or two special cases like the clerk of the Lands Branch which wants a special man; but I have no doubt we can work it when the time comes.

5825. When you talk of continuity, do you find a difficulty in your office from the fact that your officers are constantly going backwards and forwards, and that the tradition of the office suffers in consequence?—War touches my office very severely.

5826. Apart from war, in normal times, is there any difficulty?—They are there only for so many years. For five years an officer is allowed to go on staff employment, and then he goes somewhere else and you may get in officers who do not know the work at all. I am dependent upon the Adjutant-General for the officers he gives me.

5827. You mean to say that you do not select your own officers?—No, I may recommend officers for certain appointments.

5828. (Sir Charles Welby.) Do not all such recommendations go to the Army Board for consideration?—Certain selections, not all. The district selections go to the Army Board.

5829. Do not the officers of your department at headquarters?—The higher ones would. I do not think the lower ones do. The Deputies would go, not the Assistants.

5830. (Chairman.) Who appoints the Assistants?—The Adjutant-General.

5831. Does he carry out your recommendations?—The Deputy-Adjutant-General, who is an engineer and who works under the Adjutant-General, is supposed to come to me. It is laid down that the Inspector-General of Fortifications is to advise on appointments (I forget the exact wording) to all important commands—something of that sort; but you may read that in different ways. What is an important command?

5832. (Mr. Mather.) But as a rule no officer is imposed upon you, if you do not accept him?—No, we work very harmoniously together. I do not want to create a difficulty at all. There is no difficulty about it. But as a matter of fact the Adjutant-General does appoint the junior officers employed on the engineer works.

5833. (Sir Charles Welby.) And that rests with the Adjutant-General because he has a Deputy-Adjutant-General for Royal Engineers in this office, the Royal Engineers, unlike any other branch of the Service, having regimental headquarters in the War Office to themselves; so that in respect of such appointments for any other branch of the Service except the Royal Engineers the appointment would rest with the Commander-in-Chief and not with the Adjutant-General. Is not that so?—No, I think it is the Adjutant-General just the same. Our appointments go to the Commander-in-Chief, or rather to the Military Secretary.

5834. That is what I meant. Is it the Military Secretary or the Adjutant-General?—The Military Secretary would make the appointments.

5835. But you said just now the Adjutant-General?—I meant the Military Secretary. The Deputy-Adjutant-General, Royal Engineers, deals with the Adjutant-General for discipline and training, and with the Military Secretary for appointments.

5836. (Chairman.) But you have no recommendation to make with regard to the way in which officers are appointed?—No; I would not now. It is a big question and I am satisfied with the way it works at present. It depends very much upon the individuals, of course. It might be very disagreeable; it might be a very difficult matter; there might be a good deal of friction between the Inspector-General of Fortifications and the Deputy-Adjutant-General for Engineers, but I have not had any.

5837. As regards the purchases and sales of land, they are always made by the Inspector-General of Fortifications from Headquarters, are they not?—We work it; yes.

5838. Entirely from Headquarters here?—Yes, it is our business. There are a good many people consulted about it.

5839. But you do not delegate any power to the General Officers Commanding with respect to purchases and sales of land?—There has been a certain amount of delegated power since the Decentralisation Committee, but so far as I know it has not answered, and I think by the latest decision it has come back again to Headquarters. It is a very difficult thing to delegate, and practically it has come back to Headquarters, I think.

5840. (Sir George Clarke.) In stations abroad do not the General Officers Commanding make the whole arrangements for purchases of land—at Malta, say?—I think they do. No, we have to settle the question. It is all in rather a transition state, so that it is difficult to give any evidence about it, because we have been testing so many ideas about how it ought to be done. The late Financial Secretary had an idea that it ought to be done in a different way, and after trying all sorts of different ways I think he came to the conclusion eventually that the best way was what had been going on, and so now it is rather coming back to what it was two or three years ago; that is to say, we make enquiries locally, and then we have to settle eventually whether it shall be bought or not, and make the final arrangements. But there are a good many officers concerned in it. We have a special surveyor whom the Treasury know and believe in—not a works' surveyor, but a land surveyor—and then of course we do all our buying through the Treasury Solicitor, he does all the legal work.

5841. (Chairman.) Some of the General Officers Commanding have suggested that they should be entrusted with large powers for the purchase and sale of land in the districts in conjunction with the Treasury Solicitor. Would you in principle be favourable to such a measure?—I think it is impracticable now. That is one of the points we have been trying; but it has given so much trouble in writing backwards and forwards to the Treasury Solicitor, and getting our surveyor and the local surveyors, that the whole object of it has really ceased. The object was to save trouble and time, and it has given a great deal more trouble and taken a great deal longer.

5842. Would you be in favour of their having power to deal with such matters up to a certain limit and getting the necessary local assistance?—The purchases of land are not very many.

5843. But for the leasing of land?—I think they do lease it now; they work leases under the Quartermaster-General. I have nothing to do with leases; but I think it is really hardly worth while delegating that. I am thoroughly in favour of delegating to the generals all that you possibly can.

5844. (Mr. Gibb.) Are you speaking now of taking leases?—No, I am speaking of purchases. I said that leases were not done under the Inspector-General of Fortifications.

5845. Do you mean taking land on lease, or leasing land that belongs to the War Office?—That last we do, leasing land that belongs to the War Office; we represent the landlord's work more or less, but the Quartermaster-General deals with hiring land.

5846. (Chairman.) He rents land?—Yes.

5847. Is there any more reason why the Quartermaster-General should rent land and you let land than

that it should be done under one department only?—It works rather better. He really has the dealing with the troops, and you have to hire a piece of land very quickly sometimes.

5848. (*Mr. Gibb.*) I am afraid I have not quite got it clear yet. Are you speaking of taking land on lease or letting land on lease to other people?—I am speaking of taking land on lease.

5849. (*Chairman.*) The Quartermaster-General rents land and the Inspector-General of Fortifications lets land?—Yes, we let land that belongs to Government; we let it out for grazing or something.

5850. (*Mr. Mather.*) The Quartermaster-General would hire temporarily any land for the purpose?—Yes, he would hire the building or land, or anything of the kind for the immediate wants of the troops.

5851. Who is the authority locally to protect any property of the War Office?—We are the custodians of what are called the War Department lands.

5852. Does the General Officer Commanding take charge of War Office property?—Yes, through the Commanding Royal Engineer.

5853. Does he deal with all questions of encroachment?—Yes.

5854. And questions of trespass?—Yes, all land questions he is in charge of; his Commanding Royal Engineer works under him entirely.

5855. Can he at once decide on matters such as encroachment or the erection of fences on the War Office land, promptly on the spot?—Encroachments was one of the Decentralisation Committee questions; and as it stands now, I think, with regard to certain encroachments, the Generals are allowed to deal with them, and certain encroachments have to be reported to the War Office.

5856. And there have been complaints, too, from General Officers Commanding that they have no such power; that there is great difficulty about encroachments?—Generals have told you so?

5857. That hundreds of cases arise in the course of a year that they could deal with in a few minutes on the spot, but they have to make a communication to the War Office?—But some of these very smallest encroachments give us an infinity of trouble.

5858. And therefore they would be better dealt with on the spot by the General Officer Commanding?—Oh, no; having been so done, they produce trouble afterwards, I mean.

5859. (*Chairman.*) They are very delicate matters?—Yes, they are very delicate matters and very difficult matters sometimes.

5860. (*Mr. Mather.*) The thing having been settled by the War Office up here, it has given a great deal of trouble afterwards because it was not settled properly?—No, I mean if it had been done locally.

5861. I am putting this to you, that it is complained locally by some General Officers Commanding that they have no such power to settle such questions?—I say that this was one of the questions of the Decentralisation Committee, and that certain powers had been delegated to them, but I cannot say exactly how much at present. It is one of those things that is in process of going on. So that when a General says he has not got the power I think he makes a mistake; he has power to deal with certain encroachments.

5862. (*Chairman.*) Then say that the Quartermaster-General hires a house, when necessary, for the troops, does your department in any way intervene in it to say whether the house is a proper house or not, or does the Quartermaster-General do it on his own responsibility?—I think he has a report. The Commanding Royal Engineer generally make a local report.

5863. Do you consider that the functions of the Inspector-General of Fortifications overlap at all with the functions of the Quartermaster-General? You have held both positions?—I think you must work harmoniously together. I do not think there need be any overlapping. You want to be constantly in communication.

5864. Do the two departments overlap?—It is like tenant and landlord. The Quartermaster-General acts as a sort of tenant; he acts for the tenant, you may say. The Inspector-General of Fortifications acts for the landlord; all repairs to houses, landlord's repairs,

he does, the Quartermaster-General furnishes. I do not think you could alter it in any way. It works very well.

5865. Have you ever considered yourself the question, which has been mooted in some quarters, of transferring all barracks away from Royal Engineers to a civilian agency?—I have thought of it. You would have to build up a huge department to take it over. You mean to do what the Royal Engineers do?

5866. Yes, in regard to barracks only, relegating the Royal Engineers to fortifications?—There are stations all over the world and in every part of the world, and among the duties of the stations there are a great many duties the Royal Engineers do; they do all sorts of duties quite apart from the barrack duty. There are Fortification Works, and Submarine Mining and Telegraph and Surveying Works, a great many duties that they do at all stations besides being on Boards and Committees, and I do not know how many things. If you had a Civil Department, I presume they could not do all these other duties too, therefore you would have to have some Engineers at all the stations besides, so that it would be a very great loss of power.

5867. It is not suggested that the Civil agency who would deal with barracks should in any way encroach upon the military functions of the Royal Engineers?—And you would have to have very nearly as big a Civil department as you have of the Royal Engineers now.

5868. Could you not avoid that to some extent by using the actual Civil architects who existed in the localities?—Are you thinking of abroad?

5869. Abroad and at home?—I suppose Civil architects could be employed; I do not know that you could get them, I suppose there are some abroad too. I have not thought how to work out a Civil department. There is no doubt it could be done, but it always seems to me it would be a great loss of power. You have a certain number of Royal Engineer officers and men as well, all these foremen of works and so on, and they must exist for war and for other duties; and it seems to me that it is a good thing for the State, and a cheap thing for the State to employ them on this barrack work; and also I cannot help thinking that it is good for officers themselves, because it gives them work, and makes them think and use their brains, which perhaps they would not do quite as much if they had not this work to do.

5870. Then you regard the present establishment of the Royal Engineers as not susceptible of any reduction?—If all the barracks are taken over, do you mean?

5871. Yes?—I suppose there would be some reduction, but I do not think it would be anything like proportionate to what would be expected; it would have to be worked out. At present you have an officer, stationed in Bermuda or anywhere else, and if he had not got the barracks to do he would have a certain amount of duty; he would not have anything like so much to do, but he would have to be there just the same.

5872. (*Mr. Gibb.*) Apparently you do not think that an Engineer Officer is unprofitably employing his time by looking after the drains of an ordinary barrack?—No; it is not very agreeable, but I think it is the best thing for him. A very good man, who was our head for a long time, Sir John Burgoyne, who was Inspector-General of Fortifications, said we ought never to drop the barracks, that it was a very good thing to keep your mind and body always employed.

5873. (*Mr. Mather.*) You would regard, I suppose, sanitary and ventilation work with regard to barracks as of as much importance as any other kind of work that an engineer has to do?—I am not going to say that quite.

5874. But so far as barracks are concerned?—It is important for the barracks.

5875. It involves the question of the health of the troops, and it is quite proverbial that ordinary civil architects do not devote as much time to ventilation as is at all necessary in the ordinary dwelling-house; it is properly engineers' work, sanitation and engineering?—Yes, it is a branch of engineering.

5876. It is a very difficult problem always?—We are always having difficult problems to solve.

5877. (*Mr. Gibb.*) I suppose the point of the suggestion was, not that the officers did not do the sanitation and ventilation well, but that they would be better employed on military duties and that they were rather

wasting their time. You do not agree with that?—We do the military duties too, and I think pretty well, considering how the railways are done out in South Africa now, and the telegraphs too.

5878. (*Mr. Mather.*) They become all-round men by having these various duties to perform?—Yes.

5879. (*Chairman.*) Do you think barrack work could be done better and more economically by civil agents?—Certainly not so economically. I should say it would cost a great deal more, because you have to keep your engineers anyhow.

5880. Then, assuming your number of Royal Engineers is excessive, should they not be diminished?—Yes, if you could reduce the number, but I do not think you could reduce the number without the State having great trouble. We have had to do double work since this war broke out. It more or less dislocates the work for a time to lose a number of officers, non-commissioned officers and clerks.

5881. (*Sir Charles Welby.*) It dislocates what you would call the more civilian part of the Royal Engineers' work. A large part of your staff had to go to South Africa, and there was no means of replacing them at once by civilian staff?—Yes, we have had to do it gradually we could not do it all at once. A great many people are in favour of having a distinct Branch. Personally I am not; that is a mere matter of opinion. I always like to see what a new scheme is before I give an opinion. I have never seen any complete scheme on paper yet; I have heard a great deal of talking about it.

5882. (*Mr. Gibb.*) You have said that there is a great deal of correspondence between departments?—Yes.

5883. Can you broadly let us know what kind of subjects that correspondence deals with?—One of those subjects is contracts.

5884. But as regards contracts that would merely be as to the placing of tenders, nothing else?—No; all the details connected with the contracts.

5885. But Colonel Watson in the evidence he gave us in answer to Question 1061 said, "We practically now do everything, except actually accept the Contracts"?—Yes.

5886. If the Inspector-General of Fortifications' Department does everything except accept the contracts, it is difficult to see that the correspondence for that particular thing could be very large?—I think he was talking then about the broad duty connected with it, but I do not think he was telling you how often the details had to go backwards and forwards between his office and the office of the Director of Army Contracts.

5887. Do you mean the details after the contract has been accepted?—Every time a contractor wants to say anything he writes to the Director of Army Contracts and then the Director of Army Contracts sends over and wants to know what we have to say; and so it goes backwards and forwards. Colonel Watson would tell you better because all that correspondence would not come through me, it goes direct from Colonel Watson. I do not know that it would go to the Director of Army Contracts, it would go to one of his staff; it might go direct, but I am not quite sure whether it would go direct to him. It does not matter, it makes correspondence.

5888. You mean the correspondence that arises from the fact that at present communications of all kinds between contractors and the War Office pass through the Director of Contracts?—Yes, they always go to him as their friend, all the contractors do.

5889. Is there any other class of correspondence that you would like to speak about, correspondence which in your opinion is excessive?—It is rather difficult to say; I could have collected some cases if I had known I should be asked these questions.

5890. I was only rather wanting to see whether the large correspondence that you have spoken of was a necessary correspondence or an unnecessary correspondence?—Quite so. I wish I could have collected some. There are a great many heavy bundles of papers in the office that it might be worth while to look at which would really give you a better answer than I could.

5891. Perhaps on thinking it over you might send us a memorandum indicating what in your view is the unnecessary correspondence which goes on in your department?—Oh, I meant generally in the War Office.

5892. But your department, I presume, is connected with the correspondence to which you refer?—We are one of the links of the chain; the chain goes all round the building from one department to another.

5893. Therefore it would be from the point of view of your department that one would like to see any criticisms of unnecessary correspondence?—Yes, I might produce two or three files to show you that the correspondence is more diffuse than it need be.

5894. (*Mr. Mather.*) I should like to recall for a moment the remarks that you made about the Consultative Board within the War Office, comprised of the Heads of departments, of which one would be your own department, the Inspector-General of Fortifications?—Yes.

5895. Are we to understand that in your opinion such a Board would offer a remedy for a great deal of the present undue correspondence and delay and trouble of all kinds in consequence of the failure at present of these Heads of departments to consult together?—Yes, I think a Board would be most useful if it had power.

5896. And by a Board you mean that it must be composed of Military branches alone?—No, I did not say that.

5897. I ask you is it to be composed of Military branches alone?—No, I meant a powerful Board that could really deal with initial questions.

5898. Apart from the Military branches—that is your own branch, the Inspector-General of Fortifications, and the Adjutant-Generals', and the Director-General of Ordnance's—what other Heads would you put upon that Board?—I personally would put the Secretary of State in the chair; but I do not know whether it is for me to say that.

5899. You have not thought out a scheme by which such a Board should be constituted to be an effective Board dealing with the current business of the War Office?—I did not mean that sort of Board at all; I meant a Board that should settle important questions.

5900. Large questions?—Yes, say a new distribution of troops in England.

5901. That would scarcely meet the various troubles to which you have alluded, the delays that take place in the War Office in consequence of some responsible authority not being present to decide?—When I have sent over some of these files of correspondence, you will see that everybody is writing without sufficient knowledge.

5902. Of the general policy?—Yes, you may write quantities, you may go on writing, writing, and writing—and then suddenly at last it gets to a higher authority and he says, "All this is wasted; we have long ago decided that such a thing shall never be done at all." Therefore, this paper might as well never have been started—it might be put in the fire.

5903. In your opinion this Board would only have to meet occasionally?—It would be better if it met regularly.

5904. What do you mean by regularly—do you mean once a month?—Personally, I should like a Board about once a fortnight through the season; and once a month or six weeks in the winter.

5905. It would be rather a large order for the Secretary of State to preside over that Board?—The First Lord of the Admiralty does.

5906. Then you have in your mind a similar Board to that which obtains at the Admiralty?—Yes.

5907. And you made a remark concerning such a Board, I think, that you considered that it was too good to hope for; you had no expectation that such a Board could be established; I mean that you spoke rather in a tone of despair, as if you thought such a thing would not be possible?—I do not know why.

5908. You believe that was a practical scheme?—Certainly, I do not see why it should not go on at once.

5909. In regard to your surveyors in your branch, are they military men or civilians?—Civilians; they have what is called relative rank now.

5910. I suppose if a civilian surveyor were to examine the bills and accounts for extras and all the work connected with building operations in a district, it would answer the same purpose as the work done here in the

surveyor's branch; if in each district there had been a surveyor's check on the bills and getting out the quantities and amounts, that would effect the same purpose as the examination carried on here at the present time?—Yes, they are the same men; there are only a few picked men who come up here.

5911. And if in every district there was eventually an audit made by the agent of the Accountant-General, that would be a completed scheme in the district, and the accounts could be finally settled there? If you had your own surveyor, if there was a surveyor in the district checking the bills and the amount of work done, and if the Accountant-General had a deputy there finally to carry out the same audit there as is carried out here, the whole work could be completed in the district, and the matter settled, and no further audit would be required?—I do not quite gather what you mean, I am afraid.

5912. I understand that here the audit consists of the Accountant-General looking over the results of the work done in your own department, first of all by your own officers, and then by your surveyor's branch; that then the papers are handed over to the Accountant-General's office?—The Accountant-General's clerks are over in my office.

5913. They come to you?—They come and work there in order to check our books.

5914. And the audit is finished in your office?—They have separate rooms in my office over at the Horse Guards; they are not under me; they are under the Accountant-General: they do that for convenience, so that they can get hold of the ledgers and the various books; it would not do to send our books all over to the War Office, because they are constantly in use, so they go over there in order to do the work there.

5915. If the Accountant-General sent his representative down to the district where the check had been made by the surveyor it would be pretty much the same process as that now carried out by sending his representative over into your rooms from his department?—Yes, then they would want the expert assistance from the surveyors, and I do not know that the local surveyors would have time to give it to them. They must have the expert assistance; they have not got the expert knowledge. They could go and look at the books.

5916. You mean to say that your surveyors are properly trained men to look over your own accounts?—Yes.

5917. And they have technical knowledge of the work done?—Yes.

5918. (*Sir George Clarke.*) The Committee has had before it a Memorandum on a certain contract question. On that Memorandum it appears that the Director of Contracts overruled your opinions and that of two General Officers, and that the contract was given in an irregular way to an unsatisfactory contractor. Do you not think that this action destroys the responsibility of the Inspector General of Fortifications and the General Officer Commanding?—It takes it away entirely I think.

5919. Then you think that no system can be sound which enables contractors of whom you and General Officers Commanding disapprove, and who have done bad work within your experience, to be forced upon you by the Director of Contracts?—Of course that is wrong.

5920. And therefore you consider that to complete your responsibility and that of the General Officers Commanding you should have the deciding voice as regards works contracts?—Certainly, I think so. That is what I have said.

5921. At the present time I understand that you have power of purchase only up to 50*l.*, and you would like to have this power extended up to 500*l.*, and that you think it might be convenient in carrying out works if you had that purchasing power?—Yes, for stores.

5922. Now as regards Parts I, II., and III., do you regard the division of services there as satisfactory; do not you think it might be improved, and that we might have perhaps only two items, one being capital charges, new buildings, and the other being maintenance charges?—Yes, I think it would be more symmetrical, but it is hardly worth changing. I would rather not change anything unless it was really going to give a big improvement; and I think there is a convenience

in leaving Parts I. and II. separate; leaving them in because they are more or less understood.

5923. But, of course, it would give more elasticity, would it not, if Parts I. and II. were rolled up together?—I do not think it would make much difference. I think it would be more symmetrical. Personally, I think it would be better to have Parts I. and II. simply to take new services and improvements and Part III. all repairs and maintenance.

5924. It would give you a little more financial elasticity?—I think so; it is more systematic, certainly. That is really what I am trying to work at now, and have been for the last year and a half.

5925. I understand that you think it would be more convenient to make it a regular practice to do new works under loans?—Big works.

5926. Leaving maintenance to the annual Estimates?—Yes.

5927. I take it from your Memorandum that there are delays in the conduct of the public business of your office which are due to long discussions in Minutes?—Certainly.

5928. And that you consider that questions affecting more than one department should always be brought to a head by a conference?—Yes.

5929. So that what you wish to see established is, first of all, some superior Board sitting with the Secretary of State in the chair to decide great questions?—That is it.

5930. But that below that there would be a smaller body which would discuss questions and practically agree before submitting them to the Secretary of State's authority for decision?—Yes, I think a sub-committee of that big committee would do that—something of that sort.

5931. Then in your experience you do find that your work is hampered and delayed by what is called financial criticism which frequently takes up a great deal of the time of your officers?—I do not think the financial criticism is excessive, lately certainly I have not noticed it. I think the great difficulty is that we are talking about things when we are really not sufficiently enlightened to begin to discuss the question at all. Very often we are all writing about something or other which has been settled in some other branch; we are not working together.

5932. (*Secretary.*) You only refer to discussions between the Military Departments, not between the Military and the Finance Departments?

(*Witness.*) I think what Sir George asked me was whether owing to financial criticism there was too much correspondence.

5933. (*Sir George Clarke.*) Yes?—Personally, I must tell you that I have not found that the financial criticism was excessive. I would rather that each one gave his own evidence, but I have not found it so, because it is necessary that there should be financial control as long as we are under our present system of Government, and all the minutes that I have ever read, I think, are very fair.

5934. But you do consider that the criticism and the correspondence which comes from the Director of Contracts' Branch is excessive?—Yes; I think it is unnecessary. It may not be excessive from his point of view, but the whole thing seems to me to be absolutely unnecessary.

5935. May I sum up your views generally in this way, that the principle of administration which you advocate is to delegate adequate power to individuals and to make their responsibilities complete and real instead of imposing checks upon them which are practically valueless, and which destroy responsibility?—Yes; I agree with that.

5936. (*Sir Charles Welby.*) I should like to take you back for one moment to the question of the relations between the Inspector-General of Fortifications and the Quartermaster-General, as you have held both offices, in respect of barracks and land questions generally. In regard to barracks, I suppose we may take it that the Quartermaster-General, as responsible for the housing of the Army, is practically the requisitioning department which makes requisitions to the Inspector-General of Fortifications for the necessary works to be carried out. That is rather the position, is it not?—I think that is the theoretical position.

Gen. Sir R.
Harrison,
K.C.B.,
C.M.G., R.E.
26 Feb. 1901.

Gen. Sir R.
Harrison,
K.C.B.,
C.M.G., R.E.

26 Feb. 1901.

5937. Therefore at every stage when any difficulty or awkward question arises with regard to the erection of barracks, or the site of barracks, and so on, you are bound to consult the Quartermaster-General?—Yes.

5938. And that leads to a good deal of correspondence and communication backwards and forwards between those two departments?—Yes.

5939. Which is inevitable?—Yes, so long as that responsibility is divided we must need to consult.

5940. I will now take you from the question of barracks to the question of the provision of ranges, whether rifle ranges or artillery ranges, and training grounds for the Army generally. Is it not the fact that in regard to those services the Adjutant-General, who is responsible for the training of the troops, and for their musketry and artillery instruction, is the requisitioning department really?—I suppose he may be.

5941. It is for him to say what are the requirements of the Army in respect of ranges and training grounds?—Yes, he is concerned with the barrack questions, too, you know.

5942. But very much more directly into those questions?—Yes.

5943. Then, as I understand, the procedure is that when the Adjutant-General considers that further facilities for training or shooting are necessary he does not come direct to you, but makes his requisitions to the Quartermaster-General?—Yes; you mean theoretically, he would.

5944. I want to know in practice what the procedure is. As I understand it, after looking through a great many papers on the subject, practically in the first instance the Quartermaster-General is moved by the person responsible for the supply of these things, that is the Adjutant-General, to provide further shooting or training accommodation?—Yes, I think so.

5945. The Quartermaster-General then, as I understand it, considers the question from his point of view, and when the Quartermaster-General and the Adjutant-General are agreed they then come to the Inspector-General of Fortifications, and ask him to take the necessary steps, say in the case of a range, to acquire the land and construct the range upon it?—Yes; to survey it and so on.

5946. Then at every subsequent stage in the negotiations the Inspector-General of Fortifications has to consult not only one other department at the War Office but two; that is to say, he has to take both the Adjutant-General and the Quartermaster-General with him in any question that may arise in the course of carrying out that work?—Yes.

5947. That is to say, in regard to this class of cases, three-cornered correspondence ensues between these three departments?—Yes, and for this reason we appointed a small Committee as representative of all three branches to work out all these questions. We found that the correspondence, and so on, was so involved that we appointed this small Committee, who now go into all these questions.

5948. Has that Committee, as a matter of fact, succeeded in accelerating the business generally, should you say?—I am hardly prepared to say.

5949. But you do hold the view that the Committee is useful in the way of accelerating business?—Yes. I look upon a committee as useful in getting big decisions—decisions on important matters such as, shall we have a range at all? Let us settle that. And the next thing, Whereabouts shall we have the range, and so on. It is a means of settling the big questions and passing them on to someone to do the work.

5950. My point is rather with regard to procedure in making provision for something which, in the abstract, has been already agreed upon?—If I may say so, it has not yet been agreed upon very often. We go on arguing and talking for a long time, and then eventually the whole thing collapses because there is no money for it.

5951. I was assuming that in this particular case the Adjutant-General, who is responsible for training and instructing the troops, has succeeded in convincing the Secretary of State that the money is required, and has obtained the money; I am asking with regard to the procedure after the preliminaries have been cleared

away. My real point is that in a case of that sort does not the Quartermaster-General become practically little more than a post office between the Inspector-General of Fortifications and the Adjutant-General, and would it not be better, so long as the Adjutant-General remained responsible for the training and instruction of the troops, in regard to this very large class of range cases and training-ground cases, that he should deal direct with the Inspector-General of Fortifications, and not with the Quartermaster-General?—I am not sure that a range might not be done in that way direct—I do not know what the Quartermaster-General would say.

5952. You have been Quartermaster-General, and I thought you would be a good person to ask?—When I was Quartermaster-General I do not remember any questions arising as to ranges more than in a general way. A question of a range is very much involved. A range is very often a training ground as well, and a training ground the Quartermaster-General would be concerned in.

5953. In what respect would the Quartermaster-General be concerned in the training ground? I understand he has charge of it once created, but in what respect is he concerned with its creation?—He gives a military opinion as to whether it is a good or bad one.

5954. (Colonel Miles.) In the provision of a range or a training ground, the transport of troops is very much affected, is it not; where the training is may be a cause of great disturbance of the Quartermaster-General's supplies and arrangements, and that is a reason, I think, why he is consulted with regard to the site?—Quite so.

(Sir Charles Welby.) Once the site is settled, do you agree his intervention is unnecessary?

5955. (Colonel Miles.) When the site has been settled I think it passes away to the Inspector-General of Fortifications; it is chiefly as to the site, and as to its convenience for the movement of troops, that questions regarding ranges are referred to the Quartermaster-General?—Unless you alter the whole system I do not think you could exclude any of those three heads. The Adjutant-General is concerned in the way of instruction and training of troops; the Quartermaster-General is concerned with all lands and provision of lands and houses and so on; and the Inspector-General of Fortifications has to build and construct and provide the money. Very often these three officers thresh a thing out; then you begin to buy the ground, and you find it costs a good deal more than you originally anticipated, so that all the work up to that point is more or less not exactly wasted, but it takes up a great deal of time and trouble, and you have to start the whole business over again, either at another place, or by trying to work out another scheme which will be a little cheaper. Everything depends on the question of money from the first.

5956. (Sir Charles Welby.) Apart from the actual relations between the different departments of this Office in connection with ranges, I suppose if it were possible to delegate much larger powers to Generals Commanding Districts in regard to the local acquisition of land for rifle ranges and training grounds and such-like purposes, that would in itself simplify the procedure very much, would it not?—Do you mean to buy the land?

5957. I mean if you could combine in the person of the General Officer Commanding a District all the different points of view from which the subject now has to be looked at by the Inspector-General of Fortifications, the Quartermaster-General, and the Adjutant-General, and perhaps other people at Headquarters?—We try and get the Generals to do it all; having settled the preliminaries we write to the General and tell him he is to select a site and do so and so, and tell him what the conditions are, and he immediately begins to set to work to do it.

5958. But he has no power, has he?—He had not the actual money power until the Decentralisation Committee delegated to him a certain power in the way of purchase, and it has been found to be more troublesome than before. Now, as I have said before, it is drifting back again to the Inspector-General of Fortifications, who deals more directly with the Treasury Solicitor and the Surveyor—Mr. Elwell, the War Department Valuer.

5959. It is a fact, is it not, though it may be inevitable, that under present conditions the range or training ground can only be acquired by a very long process of intercommunication between three departments at headquarters, the General Officer Commanding the District, and very likely the War Department Surveyor as well, and that such a complicated system must inevitably lead to very great delay in carrying out the services?—Yes. This range question is one of the

most troublesome questions we have; not only as to the land, but questions crop up as to rights, zones of danger, and all that sort of thing. We have to acquire very large pieces of ground, and you cannot always get them; it is a very complicated question.

5960. The more complicated the more advisable it should be managed locally, is it not?—Yes, they would do it better locally if it could be done.

The witness withdrew.

Mr. JOHN MAJOR BULL examined.

Gen. Sir R.
Harrison,
K.C.B.,
C.M.G., R.E.

26 Feb. 1901.

Mr. J. M.
Bull.

5961. (Chairman.) You are a principal clerk in the War Office, are you not?—I am.

5962. What is your actual duty now?—Supplies and Transport F 5.

5963. You were before, I think, in F 11?—Yes.

5964. Which deals with works and buildings?—Yes.

5965. The Committee have had a Memorandum from you, received through Mr. Marzials. Your general point is, I think, you consider that the existing audit of the Works Branch is practically illusory?—Yes.

5966. What happens? In the first place, when a work is executed in a district the certificate of the Commanding Royal Engineer comes up, I believe, before the Inspector-General of Fortifications?—Yes.

5967. How far are those checked by the Inspector-General of Fortifications' Department?—You refer to the bill?

5968. Yes?—He looks to see that the rate is correct, that it is in accordance with the contract and that kind of thing.

5969. Does he go into the measurements?—No, I think not.

5970. (Mr. Gibb.) Were you ever in his department?—No, that is why I am not certain.

5971. (Chairman.) You were not in his department?—No, but I should say he never went into the measurements. I should say it would be under present conditions almost impossible for him to go into the measurements.

5972. But these bills are checked, or supposed to be checked, to some extent, are they not, with the assistance of the surveyors who are at the disposal of the Inspector-General of Fortifications?—Yes.

5973. Can you tell us what actually happens?—The surveyor takes the bill, he looks to see what the item is and he sees that the rate charged for that item is correct, and he checks that item.

5974. That is to say there is a certain rate assigned to a certain work?—Yes; say yards excavated and so on at 9d. per cubic yard.

5975. And he sees that 9d. is the proper figure for that kind of work?—Yes.

5976. (Sir Charles Welby.) Do you mean the correct rate according to the contract?—Yes.

5977. Not according to rates laid down by the department, but according to the contract for that particular service?—It may be for a particular service or it may be what is called the triennial contract schedule.

5978. (Mr. Mather.) Under a schedule?—Under a schedule.

5979. (Chairman.) What does he do; he sees, say, there are 50 cubic yards at 9d. per yard?—Yes.

5980. And he checks that, does he?—Yes.

5981. And does he say that 50 times 9 makes 450?—That is done in another branch.

5982. (Mr. Gibb.) You mean done twice over?—No; take the bill I have before me, 329 cubic yards at 9d. equals 12l. 6s. 9d. That is done in another Branch which is called the Computing Branch.

(The Secretary.) And that is the only Branch which does it. We have a branch which does all the work of computation.

5983. (Mr. Gibb.) Then the Surveyor of the Inspector-General of Fortifications' Department would not check that calculation?—No.

5984. You mean that, do you?—I mean that.

5985. Do they only see that the 9d. is correct?—Yes.

5986. (Chairman.) And that the right rate is charged?—And that the right rate is charged.

5987. Would there be any check or control over the other side of the statement, i.e., of 50 yards of work?—I should say not.

5988. Is there any possibility of checking or controlling those 50 yards?—I believe that there is. That quantity will be based on the quantities in the measurement book, and it is possible, I believe, to form some general idea. I do not know whether you could do it for 50 yards, because that is a small item, but if you have different measurement books you can see that the service is consistent in itself. For instance, take a roof; a roof of a certain size would have so many slates and would have so much woodwork in it. Of course, I am not an expert on the matter, so that it is difficult for me to give an exact explanation, but an expert would, I think, see if there is a roof consisting of so many joists and that kind of thing, and so many slates, whether it would hang together. If the slates are largely in excess of the amount of the roof surface, of course, he would say, "This is rather funny." In that way, simply from the bill, you can go to a certain extent into the reasonableness of the charge.

5989. By comparison with other bills?—By comparison with other items in the measurement of the particular part of the work.

5990. But does the surveyor look into the measurement book now, do you happen to know?—No, not the Headquarters Surveyor.

5991. Who then does—anybody?—It is done in the district. All the measurement books are taken, and they are abstracted into what is called an abstract; thus you get your figure and from the abstracts you enter it into the bill.

5992. Who does that?—That is done in the district.

5993. There is no surveyor in the district, is there?—Oh, yes. The surveyor looks into the measurement book, and I think the actual abstracting is done by a clerk: the surveyor would look into it to see that it is reasonable.

5994. Under whose orders is the surveyor of a district?—Under the sub-district engineer.

5995. (Mr. Mather.) Is the surveyor a member of the Staff of the Inspector-General of Fortifications here?—Yes.

5996. The local surveyor is a member of the Head Staff here?—There are so many surveyors for the Engineer Department, and one man would be assigned to the Home district, another to Colchester, and another would be on the Headquarters Staff.

5997. (Chairman.) And he is under the orders of the Commanding Royal Engineer in the district, is he?—Yes; the sub-district Commanding Engineer.

5998. It is the sub-district Commanding Royal Engineer who gives the final certificate, is it not?—Yes.

5999. And does he give it on the measurements made by the surveyor?—Yes, usually the surveyor; it may be the foreman of works in small jobs.

(The Secretary.) Paragraph 806 deals with the matter.

6000. (Chairman.) After that the certificate is given by the sub-district Commanding Royal Engineer?—Yes. The bill is signed by the surveyor, and the foreman of the works, and the final thing is the certificate of the sub-district Commanding Royal Engineer.

Mr. J. M.
Bull.

26 Feb. 1901.

6001. Does the Commanding Royal Engineer satisfy himself that everything is right and correct?—He should.

6002. He would not append his signature to anything without satisfying himself the document is a correct one, would he?—Quite so. I have a certificate here: "I certify that this claim amounting to 256l. 19s. 1d. is correct and that the amounts charged against each item of the estimate represent the actual expenditure incurred thereupon and further that this claim does not include any amount which has been previously paid, nor does it involve an excess on the authorised expenditure."

6003. (Mr. Gibb.) Is that appended to a contractor's bill?—That is appended to a contractor's bill.

6004. (Chairman.) Then he would have satisfied himself as to the correctness of the item which he certifies?—Presumably.

6005. I mean everyone would consider it their duty—a reasonable and responsible man who is appending his signature to any document would satisfy himself as to the correctness of that document?—We have come across cases where it has not been quite correct.

6006. Of course everyone makes mistakes, or possibly there may be negligence, but nothing beyond that?—Of course I do not suggest anything fraudulent.

6007. (Sir Charles Welby.) But this certificate only certifies that the expenditure has been actually incurred; it does not certify that it has been properly incurred if you look.

(Chairman.) It is a certificate that the work has been performed and therefore the expenditure is correct.

(Mr. Gibb.) And also that the prices charged are in accordance with the contract.

(Sir Charles Welby.) But it is no safeguard against unnecessary work having been performed and included in it.

(Witness.) We do not go into that.

(The Secretary.) Part of the certificate says it is within the amount allowed for that particular service.

(Mr. Gibb.) Of course, there might be extra works?

(Witness.) Yes.

6008. And the order for the extra works would, I presume, be given by the sub-district Commanding Royal Engineer?—It would, and if it came within the estimate I do not know that any exception would be taken to it.

6009. I see; having given the order and certified the price, anybody would take that as final?—The price would be checked.

6010. Compared with the contract?—Yes, compared with the contract.

6011. (Sir Charles Welby.) I rather have in my mind a suggestion which you made that it would be possible for a much larger number of slates to be charged for in a bill than could possibly be put on a particular roof. Does this certificate cover in any way or safeguard that happening. Is the certificate of this officer of any value as a safeguard against that kind of occurrence? His certificate, as far as I understand it, simply says that all the slates which are charged in this account have been actually used on the works?—That is all.

6012. (Mr. Mather.) But that would only be possible in case the slates formed a particular item of purchase; if it is a roof comprised of so much timber and so much slate, a timber roof slated has a schedule price of its own, so many square yards of roofing of that construction. But the case put by Mr. Bull is an impossible case to arise, it is impracticable; it could not come up under any arrangements of building which can be conceived of, either under Civil management or Military management. It is an unfortunate example, I think, to have given, because roofing is practically a scheduled and thoroughly described work; roofing of a certain kind, slate or otherwise covered, is reduced to an absolute certainty per square yard or square foot superficial, and if a certified officer says this particular building is covered and it has a roof and is completed, that is all he can certify?—I was only giving an example which I thought of at the time.

6013. Will you give us a better example, please, because that does not throw any light on the question at all?—I have not got a district schedule here unfortunately.

6014. (Chairman.) But the sub-district Commanding Royal Engineer when he gives his certificate gives a certificate to the effect that a certain work has been executed and therefore certain expenditure has been incurred, and that that expenditure is right?—Yes, he gives a certificate.

6015. He certifies that something has been done and that the correct expenditure has been incurred in respect of that something which has been done?—Yes.

6016. (Mr. Gibb.) Surely it is impossible for any accountant to check a bill of this sort except as regards arithmetic, is it not?—I do not know; I should have thought that more might be done than is attempted at present. Of course, it all depends on the accountant.

6017. Of course you may have cases of fraud. A workman or a foreman may represent that certain work had been done which had not in fact been done; but if in the construction of a building you have certificates from the men in charge at the works that particular work was done, and it measures out according to the figures shown in the schedule, how can an accountant without local knowledge of the work check anything but the arithmetic of that bill? He has got to take the certificate of the man on the work for the facts certified, you know?—I do not know what the arithmetic of the bill is quite.

6018. I mean an accountant can see whether so many cube feet at 9d. comes to 9s. 6d.?—Of course one could see the measurement books and see that it works out to the right amount.

6019. But that would only show you that the work as it went along got to so many cube yards of masonry, for instance?—It would.

6020. And you could check that item in the measurement book, and see that was correctly carried over into the bill, but that again is arithmetic, is it not?—Yes.

6021. (Chairman.) The Commanding Royal Engineer who gives his certificate sees the building, I suppose, or ought to see it?—I should think he ought to see it. Of course the work is done largely by the Divisional Officer; I have not been into the districts and should not like to speak with certainty as to that.

6022. Then the certificate comes up to the Inspector General of Fortifications?—Yes.

6023. What happens to it then, how far is it checked?—The bill is computed, it is checked for the rates.

6024. (Mr. Gibb.) Do you know this from your own general knowledge?—As to the computing, I know. Of course it is always very difficult to say exactly what is done in another branch, but this is what I believe is done.

6025. Before you tell us it I want to know whether what you are going to tell us is based on personal knowledge, because, if not, I should suggest we had better have it from someone who knows it.

(The Secretary.) In page 2 of your memorandum you say, "The greater part of such examination as takes place is conducted by the Inspector-General of Fortifications, who checks the vouchers for prices, rates, contract, conditions, &c."

6026. (Chairman.) That is to say, in the Inspector-General of Fortifications there is a check to see that no errors have arisen in regard to the prices and rates in the contract?—Yes.

6027. After that is done is the bill passed to the Accountant-General's Department?—Yes.

6028. What does the Accountant-General's Department do then; you can speak to that from actual knowledge?—Yes; he looks at the bill and sees that there has been compliance with the various financial rules—that there are no excesses on the amount, and so on; he sees that the bill is properly receipted; he sees that the contractor receipting it is the correct person, and that the bill looks all right on the face of it, and so on. He has a general sort of survey.

6029. That does not amount to very much?—No, it does not amount to very much. When I was there I drew out for the men in the Branch a lot of work that they ought to do, running to about twenty items, but it is not of very great importance.

6030. Twenty items of instruction do you mean?—Yes, twenty items of instruction. That the bill has been completed, that it has been examined by the surveyor, and that therefore it has the right ticks on

it, that the full postal address of the contractor is there, that it bears his signature or someone's on his behalf, that the proper Army form is used, describing the class of work, that the certificates are duly completed and signed, that there is a contract authority, or in the absence of it, that the amount of the purchase does not exceed certain amounts.

6031. That is to say, before the bill is passed for payment you see that it is attested by all the proper signatures?—Yes, it comes to that, and that none of the signatures are given when they ought not to have been given. For instance, the amount of a purchase must not exceed 50*l.* in the case of a surveyor's bill, unless it has received the prior approval of the Director of Contracts.

6032. That the proper signatures are there, and that the proper regulations have been complied with?—Yes, and that there is money for it.

6033. In your view that is not sufficient, I understand, and you would like to reinforce the audit or examination of the Accountant-General before the bill is finally passed for payment?—Yes, that came upon me gradually, because we had various cases at different times which I thought occurred with more frequency than they ought, and I came to the conclusion that we ought to strengthen the test.

6034. Your recommendation is that the Surveyor, under the Inspector-General of Fortifications at Headquarters should be attached to you?—There are several surveyors at Headquarters now.

6035. At any rate some surveyors?—Some surveyors.

6036. And that these surveyors should assist the Accountant-General in his audit?—Yes.

6037. By doing what?—By doing the work that is now done in the Inspector-General of Fortifications' Department, that the rates and prices in the contract should be checked in the Accountant-General's Department rather than in the Inspector-General of Fortifications' Department, so that there should be one examination, and that it should not go to two branches.

6038. That you should take over, therefore, the Inspector-General of Fortifications' work?—In that particular; yes.

6039. Would the Inspector-General of Fortifications, do you think, be willing to forego that work altogether or would not you be running into the danger of a reduplication of work?—No, it tends to a reduplication now, because the Financial Officer always has to do it over again, not so far as the rates are concerned, but as to checking against the contract and that sort of thing. I think there is much less likely to be a reduplication if that is done.

6040. (*Mr. Gibb.*) Can you give us any list of detailed duties which are the duties which, according to the present practice, are reduplicated?—Of course it is difficult again to speak of another branch, but I should imagine that the Inspector-General of Fortifications looked to see that the amount of the purchases does not exceed 50*l.* in the case of a surveyor's bill; he ought to do so. He ought not to put forward a bill, for instance, of more than 50*l.* unless it has been properly approved by the Director of Contracts. I should think that would be a case of reduplication.

6041. Where would you prescribe that that should be done?—That is an examination we could do.

6042. (*Chairman.*) But if it is done once must it be done again now? There must be finality somewhere?—I consider we are responsible for those bills as far as we can be. The respective duties of the two branches are not laid down with too much exactness.

6043. Was it to find the men some work to do?—No, it was to enable us to pass the bills as being correct.

6044. The really important point is, is it not, the local certificate?—Certainly.

6045. If fraud or error has crept into the local certificate it is, is it not, almost impossible as a rule to detect the error, except by local inspection of the work?—An error as to quantity or the mere error as to price?

6046. An error as to quantity?—Certainly, with regard to an error as to quantity we must have local inspection if we are to be quite certain.

6047. Then if you were to carry your recommendation to a logical conclusion, besides having a surveyor here to assist you in doing that part of the examination which is now done by the Inspector-General of Fortifications, you ought to have inspectors to go down and examine the buildings from time to time just as you make inspection at the Pay Office, and so on?—Yes, and I have suggested in my memorandum that I think it would be a good thing that the Engineer should know he was liable for this—just to know that at any moment the work might be inspected.

6048. Then the officials who would be able to do that would have to be officers with technical knowledge, surveyors and such like?—Certainly.

6049. Then would not you be adding on to the Accountant-General's Department a technical or quasi technical branch?—Yes.

6050. Which would be, however, controlled by the Civil and non-technical officers at the top?—Yes.

6051. You would get really a hybrid department under such a regulation, would you not?—I should have thought not. I do not know, of course; that is a matter of opinion.

6052. (*Sir Charles Welby.*) In regard to this idea that it is impossible to go behind the certificates of the local responsible officer, I see from your memorandum No. 5, of the irregularities which you say have been brought to light, you quote an instance in which an opportunity occurred of going behind the certificates on the vouchers?—Yes.

6053. And you say it was noticed that in every district in England the practice had arisen of charging for a superior and expensive kind of pipe?—Yes.

6054. That certainly suggests that you went beyond what might be called the arithmetic view of your duties. What was the machinery by which an incident of that kind was brought to notice?—That was brought to notice by the surveyor.

6055. By the surveyor acting on the part of the Inspector-General of Fortifications?—Yes.

6056. You had no means apart from him of finding it out?—No, I should not have known it otherwise.

6057. Therefore, practically, he does act, does he not, as your technical adviser for these purposes, as your eyes and ears?—He is supposed to examine these things, of course.

6058. As far as I understand your memorandum, I thought you were quoting these cases as instances to show the value of an audit or examination of these bills independently of the Inspector-General of Fortifications' Department?—With the assistance of technical advisers.

6059. But it seems to me you have, under the existing system, the assistance of technical advisers?—Yes, but I think it would be better if those technical advisers were not under the orders of the Inspector-General of Fortifications.

(*Chairman.*) But the work is done.

6060. (*Sir Charles Welby.*) As a matter of fact, he is here under the Inspector-General of Fortifications, and yet he does bring to light irregularities?

(*Witness.*) Yes.

6061. But your position is that, owing to his want of complete independence, you cannot rely on him to bring every case to light as you could rely on an officer under the Accountant-General?—I think one could rely more on an officer under the Accountant-General.

6062. (*Chairman.*) I think, in your own words, you put it on the last page of your Memorandum: "The surveyors at present engaged on the work are under his orders, and may be moved at any moment from the War Office to an out station. They have clearly no inducement to increase the stringency of the examination." That is an argument really, is it not, that the surveyors, being under the Inspector-General of Fortifications, will not criticise the work as severely and as independently as if they were under the Accountant-General?—I think it is probable they would not.

6063. Why should not they criticise it as severely and independently. The Inspector-General of Fortifications is anxious to find out faults, is he not? Why should not his officers do their duty as well as officers under the Accountant-General? He has

Mr. J. M. Bull.

26 Feb. 1901.

Mr. J. M.
Bull.
26 Feb. 1901.

no interest, and no desire to smother up things, has he? I want to get at your reasons, you know?—I can only put it that I should have more confidence in the men under the Accountant-General than under the Inspector-General of Fortifications.

6064. (*Mr. Gibb.*) Do not you think you might put it concisely as a theory that nobody but an accountant is to be trusted?—Oh no, I do not say that, but the order in council of 7th March 1899, throws the duty of auditing the expenditure on the Financial Secretary, and not on the Inspector-General of Fortifications.

6065. (*Chairman.*) Why? I suppose these surveyors do their work, and I suppose the Inspector-General of Fortifications is concerned in seeing that everything runs well in his department, and that no error should be committed, the responsibility for which would fall upon him.

6066. (*Mr. Mather.*) The foundation on which you build this scheme appears, does it not, in your document at the bottom of page 3: "Instances in which the certificates are demonstrated to be worthless are frequent enough to throw grave suspicion on the value of the whole system"?—Yes.

6067. Can you give us in concrete any instance of this kind which has come before your notice, or the Accountant-General's notice?—Yes.

6068. (*Chairman.*) I think we might take Mr. Bull through the instances which he gives us on the next page; for instance, you say in No. 1: "A bill had been put forward for work as completed which in reality had scarcely been begun"?—Yes, there was such a case.

6069. Can you give us the date and the details?—May I read the engineer's letter?

6070. What engineer, the Commanding Royal Engineer?—No; this is a letter written by the General Officer Commanding the Cork District, which copies the memorandum of the Royal Engineer.

6071. (*Sir Charles Welby.*) Is it in reply to a challenge on some particular bill?—It was in reply to a challenge. The history of this was that a bill was put forward for payment in March 1897. The bill was duly paid because it was supported by certificates. Later on there was a row between the Engineer and the contractor, and the contractor said he ought to have more money. Finally he wrote to this office. It was wondered why there could possibly be a complaint about a bill which had been settled long ago; inquiry was made, and this is the reply.

6072. (*Chairman.*) Who was the inquiry made by?—The Inspector-General of Fortifications. "The abstract referred to by Messrs. Dwan was a second one taken from a second set of measurements made at their request. The service which had been noted as particularly urgent by the Field Marshal Commanding in Ireland at his inspection in September 1896, was finally sanctioned on the 22nd of March 1897, and the authority reached me on the 23rd of March 1897. As it was impossible to get the work completed before the end of the year, and as work on Incidentals in excess of the amount that could be billed had been done by the T.C's, I considered myself justified in putting forward a bill before the work had been actually completed. I knew the urgency of the case, and how important it was that the Part 2 money obtained with so much difficulty should not lapse. The Assistant Surveyor and I were fully employed on checking bills, &c. until late at night for the last week of March. I therefore ordered Sergeant-Major Chimes to prepare an abstract for this service in anticipation of completion, which he did, and the bill was made out and passed."

6073. Does that mean that the money was actually paid before the work was done?—Yes, an arrangement was made with the contractor in this way. "You have this order, it is impossible for you to complete it; I will pay you the money; you finish the job at your convenience later on"; and the certificates were put in and the Accountant-General passed them.

6074. Was that to get over the difficulty of surrendering money?—It was to get over the difficulty of surrendering money.

6075. What action was taken?—A letter was written to the Field Marshal Commanding in Ireland that it was unnecessary to point out that the action of the General Officer Commanding at Cork was exceedingly

irregular, and that it would have been better to make a payment on account to Mr. Dwan.

6076. It was done on the authority of the General Officer Commanding, was it?—No, I should think not. Of course the General Officer Commanding is responsible for everything, but I should assume the General Officer Commanding never saw it.

6077. (*Mr. Mather.*) The mistake was the sending of the bill in, as if the work had been done instead of asking for something on account?—I should think practically nothing had been done.

6078. You do not know that of your own knowledge?—No, but the work was not begun until very late in March, so that I think I can be fairly certain.

6079. (*Sir Charles Welby.*) Was this irregularity passed by the Inspector-General of Fortifications' Branch and detected by the Accountant-General's Branch?—No, it came out afterwards by accident. The contractor, I think, said he ought to have 11. more and the engineer said no, on the contrary he had been overpaid 11., and as they came to loggerheads he wrote to this office.

6080. (*Chairman.*) Was any action beyond that taken; did the Commanding Royal Engineer or anybody suffer?—No, I think not—I have no knowledge.

6081. (*Sir Charles Welby.*) If it had not been for the contractor writing to the War Office and a row ensuing at a later stage, the ordinary machinery failed to detect any irregularity of that kind?—Utterly.

6082. (*Chairman.*) The machinery of the Accountant-General's Office?—And the machinery of the Inspector-General of Fortifications' Office.

6083. Would any machinery have detected it?—None at headquarters. Of course it is difficult to detect it.

6084. (*Mr. Mather.*) Under the circumstances?—Yes; but if the District were liable to local inspection the irregularity might have come to light.

6085. (*Chairman.*) That is another point, but my point is that no machinery at Headquarters, either of the Inspector-General of Fortifications or the Accountant-General's, would have revealed that?—Quite impossible.

6086. Possibly a local auditor would if travelling round?—It would perhaps make the Commanding Royal Engineer be more careful in giving a certificate.

6087. (*Mr. Gibb.*) Assuming that the local officer was of opinion that it was exceedingly desirable that this work should be carried out promptly, that the contractor should be paid in advance, and be trusted to carry out the work in discharge of that payment, was there any regular procedure that the officer could have adopted to get such a transaction carried through? He appears to have done it irregularly, and my question is, would it have been possible to do it regularly?—No, we do not make advances in such circumstances.

6088. Could not he have got authority to pay in advance?—No. We make advances as the work goes on; we measure up and see how much of a work has been done, and pay as the work goes along. We finance the man as the work goes on.

6089. Is there an absolute rule which prevents your paying before completion of the work?—I should think so; I have never heard of a case in which it has come forward, and I should be very surprised to hear it.

6090. (*Chairman.*) Now let us go to the second point?—There is another small case of the kind; I do not know whether I should mention it.

6091. I think we can take that as a typical case. How many other cases are there of that kind within your knowledge without going into them?—One other, not quite so glaring as this one.

6092. And the amount involved was small, was it?—Yes, about 301. I think: I do not know the exact amount.

6093. Now let us come to No. 2: "An unauthorised building has been erected by labour which has been described on the voucher as expended on repairs." Can you give us some explanation of that, with the date?—Yes. This was a building built a long time ago.

6094. How long ago—let us hear what the date is?—This was found out recently, but it occurred some time ago.

6095. It occurred when?—I think eleven years ago from this date. I think eleven years before 1897, but it was found out quite recently.

6096. How was it found out?—A conservatory was put up in the quarters of the General Officer Commanding at Devonport. It fell into disrepair, and he put forward an application for it to be repaired. The question was, how was it put up originally, and it then appeared that it had been unauthorised, and the explanation was that it was built out of timber lying in the Royal Engineer yard for which there was no special use, the cost of the erection (it was said to be very small) being charged to savings on the incidental item, which is an item meant for small repairs, so that the voucher must have come forward showing incidentals, while really it was an actual work, though I do not say it was big.

6097. (*Mr. Mather.*) It was an addition to the residence of the General Officer Commanding?—Yes, unauthorised.

6098. The point being that it was unauthorised?—Yes, and deliberately hid in the vouchers.

6099. (*Chairman.*) I suppose the General Officer Commanding would have been party to that?—I do not know, I should not like to say; he wanted the conservatory put up, no doubt, but whether he was a party to it, I do not know.

6100. Then in No. 3 you say: "Pay lists for extra pay to soldiers have been put forward showing that the men have worked so many hours a day for a definite period, whereas no attempt had actually been made to keep a record of the hours worked, because the men had really been working for so much a month or by piece-work; in one case an officer, in reply to a War Office inquiry as to the correct hourly rate of pay, ingenuously stated that the rate was immaterial, as if we altered the rate he should alter the number of hours actually worked, so as to arrive at the same total payment to the man." Who did that War Office inquiry proceed from, the Inspector-General of Fortifications or the Accountant-General?—That was from the Accountant-General.

6101. (*Sir Charles Welby.*) The charge having been previously passed by the Inspector-General of Fortifications?—Yes.

6102. (*Chairman.*) What led the Accountant-General to start that inquiry? Was there anything in the bill which led to it?—It was the description of the work. Under the Pay Warrant we considered that the rate ought not to have been so high; the charge was 2d. an hour, and ought to have been 1d. an hour.

6103. What was the date of this?—September 1896.

6104. What action was taken as the result?—It was referred to the Inspector-General of Fortifications, who concurred in the Accountant-General's view, and there the matter dropped, I think. I believe afterwards a general circular letter was issued, because there were several cases like it, saying the officers must be more careful.

6105. Have you any other instances of this kind, besides the one in 1896?—Yes, there were several like that.

6106. Of a more modern date?—Yes, there was one in 1897, but I have left that branch a year now—September 1896 really is not finished with by us until about January 1897.

6107. Then you say: "Soldiers have been described on vouchers as civilians"?—Yes, there were a few cases which we have found of that.

6108. Have you found them out, or has the Inspector-General of Fortifications found them out?—We have found that.

6109. How did it come about?—They will say, "So many labourers," and we asked at one time, "what were these labourers actually employed upon?" Then on putting the question it comes out: "This man is so-and-so; he is employed in such-and-such a work."

6110. And he was not a labourer, but a soldier?—Yes; it would come out incidentally.

6111. Would they give you his name?—I forget how it would come out exactly, but something would occur and we should grasp the fact. An assistant carpenter on the civilian pay list, for instance, was a soldier in one case.

6112. Does this refer to buildings in which both soldiers and civilians are employed?—Most likely they would be men employed on odd jobs or incidental items such as repairs.

6113. If you had a work upon which a dozen civilians and half a dozen soldiers were employed, would it be possible for a man to send up vouchers that 13 civilians were employed and five soldiers, so that one soldier, at any rate, would get civilian pay?—No, I do not think there would be anything like that; it would be on the incidental items such as repairs. Of course, it would be all on one voucher; the pretended civilian and the real civilians might be together on the same voucher.

6114. Is that one instance or have you had more than one?—We have had more than one instance.

6115. (*Sir Charles Welby.*) Under these circumstances these charges have previously been passed by the Inspector-Generals of Fortifications, have they?—Yes, he would probably pass them; he would not look at the pay list so much, if the charges were at the schedule rate he would pass them.

6116. He would leave that to the Accountant-General's Department, I suppose?—Yes.

6117. (*Mr. Beckett.*) You said in your reference of case No. 3 that the Inspector-General of Fortifications concurred with the view taken by the Accountant-General. When these cases come up, of which there do not seem to be a great number, do you generally find the Inspector-General of Fortifications concurs with the view taken by the Accountant-General?—Yes, I think so.

6118. He does not attempt to defend any irregularity in any way?—This is what he said on one: "I quite agree with you that theoretically the action taken cannot be defended, but as I endeavoured to show you in our conversation yesterday this wrong action arises not from any wish to hoodwink the War Office, but from inability to show the charges properly." Of course if he had shown the circumstances we are never so red-tape in the office as to say, "Oh no it must be done on this particular form"; we should say "this particular form does not meet the case fully but show the facts accurately on it," and it would be passed at once. We do not like charges put forward which apparently look quite right, but are really not in accordance with fact.

6119. The impression that reading your memorandum leaves on one's mind is that you in your department feel no confidence in the correctness of the accounts as a whole that are submitted to you?—That is a criticism to be made. I think as we found out a certain number of irregularities and it is so difficult to find them out, one was justified in assuming that there were others not found out. I think that is a fair assumption.

6120. And therefore you do not feel such confidence as you would like, at all events, in the correctness of these accounts?—You may put it in that way.

6121. As to one matter you go further and say, "The whole of the information on the voucher as to locality, date, &c., was afterwards admitted by the officer to be false"?—Yes.

6122. Now why was this information falsely inserted?—These are the facts:—"The Division Officer, R.E., reports that some time after he came here he found there was a grievance among the gunners at the Castle because they had never received any pay for whitewashing the buildings there in 1892. The sergeant in charge satisfied him that the work had been done, and he found that the lime had been supplied and used. The sergeant knew the amount due in hours, and it corresponded with the amount paid in 1894. He therefore ordered the amount to be billed. As, however, there was no requisition (A.F.O., 1778), one was made out and sent to the Officer Commanding to sign, explaining that the work had long since been done. The requisition ought to have been marked 'covering,' and the dates should have been shown correctly instead of being shown as if the work was going to be done in 1896." It was a bill for whitewashing which gives certain particulars, the place where it was done, and so on.

6123. Only for a small amount, I suppose?—Only for a small amount. We found out that the work was not done at the particular place stated.

6124. But the mistake might have been inadvertently made, might it not?—I do not think so.

Mr. J. M. Bull.

26 Feb. 1901.

Mr. J. M.
Bull.
26 Feb. 1901.

6125. Then you say, "Only very general explanations" are, as a rule, given by the Inspector-General of "Fortifications." Does that imply he is reluctant to give minute explanations?—I do not mean that. I mean simply that the Accountant-General does not go into that matter, and only a general explanation is given.

6126. You say when you come across mistakes, the check you apply is effective to a certain extent?—Yes. Might I draw attention to case just referred to, which I remember particularly—the guard room at Scarborough Castle. There was a charge of 200 hours for whitewashing. The examiner showed it to me, and said, "Do you think men would spend 200 hours whitewashing a guard room?" I said "No, I do not think so; I really think 200 hours is a great deal." Then we queried the matter, and after one or two queries it came out that it was not done at the guard room; it was done somewhere else at Scarborough on a different date; but if it had not been for the fact of the man noticing "guard room" and "200 hours," it would have gone through, so that it was only by the greatest chance that that case was ever queried.

6127. (Mr. Mather.) These are simply mis-descriptions; there is no attempt at defalcation, I suppose?—We can only be certain that there is mis-description.

6128. (Mr. Gibb.) The word "etc." had been left out, I suppose?—No. The guard room had not been done at all, in fact; it was married quarters, the Royal artillery wash-house, and other places.

6129. (Mr. Mather.) It was a false description?—It was a wrong description.

6130. (Mr. Beckett.) Do you think on the whole that these mis-descriptions are of such a character and of such frequency as to throw discredit on the whole system?—I think it throws discredit on the whole system when you remember how difficult it is to find anything out. Will you allow me to read one or two of the answers about the pipes, because we asked the Engineer Officer about them, and he replied, "Quite right, they are what we described them"; but when we pushed it further it was found afterwards that they were wrong descriptions?

6131. (Chairman.) In certain cases?—Yes, in certain cases.

6132. (Sir Charles Welby.) Speaking generally, when you urge that the examination of these charges should take place entirely in the Accountant-General's Department, rather than partly in the Inspector-General of Fortifications' Department and partly in the Accountant-General's Department, what you wish to guard against, I understand, is what you describe in your memorandum here as a tendency on the part of the officers responsible for expenditure to think that if the expenditure is in their individual hands for the good of the service it is of little importance whether the vouchers are in accordance with the facts so long as they will pass the examination?—Yes, I think it would make officers more careful in signing certificates if they knew that an attempt was sometimes made to go behind the certificate.

6133. That is really the ground of your objection to the existing system?—Yes; I am not suggesting fraud at all.

6134. (Mr. Mather.) Have you any knowledge of defalcations at all in connexion with this class of work?—Yes, some have occurred.

6135. (Sir George Clarke.) When was your memorandum written?—It is founded on an older one, but it was written a week or so ago.

6136. When was the older one written?—In 1899, I think.

6137. Was it sent to the Inspector-General of Fortifications when it was written?—It went to the Inspector-General of Fortifications.

The witness withdrew.

6138. Was it answered in any way, or did it remain unanswered?—It went to him, I believe, unofficially; at least, I do not think it was meant to go to him, but he has seen it, I know.

6139. When did you leave F. 11?—In March 1900.

6140. In your memorandum you say you do not know how the estimated cost of any particular building is arrived at, is that so?—Yes.

6141. Is the estimated cost of a building a question of audit?—No, I do not know that it is, but the Order in Council of 7th March 1899 says that the Financial Secretary is charged "with financially reviewing the expenditure proposed to be provided in the annual estimates for army services."

6142. Then you think it is a question for the Accountant-General to satisfy himself on, that the estimated cost of all works all over the world is correct?—Yes. I think it would be an advantage if he sometimes looked into an estimate.

6143. Then you would require, would you not, a very large and expert estimating branch to enable you to carry out that work?—No, I do not think I should require a large branch.

6144. But the annual estimate for works is very considerable, is it not, and that you wish to do yourself in your own branch?—Yes.

6145. So that it would mean a large staff, would it not?—It would mean an addition to the staff.

6146. And as the Inspector-General of Fortifications would have to frame his own estimates as well, the estimating work for the whole of the British Empire would have to be duplicated?—No, we should simply review it; the Inspector-General of Fortifications would deal with the estimate and pass it to us.

6147. But the review of an estimate would be a very considerable job if done thoroughly, would it not?

6148. (Chairman.) If it was done thoroughly it would be practically a reduplication?—Quite so.

6149. (Sir George Clarke.) Then you say that the estimates, which purport to show the cost of buildings, do not show it, is that the case?—That only means that various things are left out which I think in civil life would be included—that is to say, under our system of dividing up the estimates into transport works and so on, charges which would in civil life go against the work do not go against it.

6150. It does not mean generally, then, that you have not a fair knowledge of the total cost of a building; you would not go as far as to say generally that you have not the means of arriving at a fair knowledge of the total cost of any building erected?—Yes, I think I should not be able to arrive at most of them because of these various other items coming in.

6151. Then I gather your point is, that because the local surveyor is not under you his figures are subject to doubt, and that if he were under you you would accept them?—No, not the local surveyor.

6152. I thought you referred to the local surveyor?—No, I never suggested the local surveyor should be under us.

6153. Then you think only the surveyor at headquarters should be under you, do you?—That is all.

6154. As the knowledge you require is only knowledge which can be locally acquired, that is to say, knowledge of measurements taken on the spot, how would it help you if the surveyor at headquarters was under you only?—It would help me in this way, that I should examine all these bills for rates, for prices, &c., and, if necessary I should check any local work by sending a man down.

Col. C. M.
Watson,
C.M.G., R.E.

Colonel CHARLES MOORE WATSON, C.M.G., R.E., further examined.

6155. (Chairman.) Sir Richard Harrison asked us to address to you one or two questions which we put to him, as he thought you might be more familiar with the details. One question we asked him was whether he could give the Committee any explanation of the delay of two years which is said to have occurred over

the new barracks at Pembroke in Malta?—As I thought I might be asked that question I have prepared a short note stating exactly what happened. I am puzzled to know how General Grenfell has arrived at two years, because there has been no delay, but I should like to read this short note: "When it was

"decided to build a new barrack for an infantry battalion at Malta, the late General Officer Commanding"—that was Sir Arthur Lyon-Fremantle—

6156. (*Sir Charles Welby.*) Might we know the starting-point—when the decision was made?—It was in the year 1898. It was the late General Officer Commanding, Sir Arthur Lyon-Fremantle, who "strongly recommended that it should be built near Tarsien, east of Valetta. The site plan was discussed and the purchase of the land was approved on the 25th February 1899." That is two years ago to-day. The purchase of the land was commenced. Then Sir Arthur Fremantle left Malta and Sir Francis Grenfell went to Malta about that date. "On the 30th April 1899 the General Officer Commanding recommended that the barracks should not be built at Tarsien but at Pembroke Camp, west of Valetta. Naturally, there was considerable discussion as to the complete change of plan, but on the 21st August 1899 the General Officer Commanding was informed that his proposal was approved and was asked to suggest a site. The General Officer Commanding forwarded a site plan which was not altogether satisfactory, and there was a good deal of discussion before the plan was finally settled. "It was approved by the Army Sanitary Committee on the 18th June 1900." That I look upon as the date when the site plan of the barracks was settled—that is just eight months ago. "In the meantime the plans of the buildings were being proceeded with." I thought it better not to wait until the site plan was approved, but to proceed with the plans of the buildings. "Plans of the soldiers' barrack blocks, the first buildings to be constructed, were forwarded by the General Officer Commanding on the 10th February 1900, and were returned to him approved on the 29th March 1900," so that our examination took a little over a month, which was not too long as there were a great many details to go into. "There has been no delay in this office, and I believe the local officers are getting on as fast as they can. I do not understand how the General Officer Commanding considers that there has been two years delay." That is the case of Pembroke Barracks. Then there is the case of the Floriana Barracks. "As regards Floriana the case stands thus. On the 1st May 1900 the General Officer Commanding forwarded his proposal as to the accommodation to be provided. This had to be discussed with the Quartermaster-General, and was returned for correction on the 6th June 1900. "The General Officer Commanding forwarded a site plan of the proposed buildings on the 2nd August 1900, and this was approved on the 17th August 1900, and pencil plans of the buildings asked for. "The General Officer Commanding forwarded these on the 9th January 1901, but as they differed materially from those already drawn for Pembroke Camp, and were not so good as the latter, they were returned to him to ask whether much time would not be saved by adopting the Pembroke plans. It is difficult therefore to see that there has been any avoidable delay."

6157. I will not say "delay," but the lapse of time in the first case seems to have arisen from Sir Francis Grenfell having taken a totally different view as to the site of the barracks?—That is so.

6158. And you accepted that view as a better view than that of his predecessor?—His view was accepted in August 1899.

6159. (*Sir George Clarke.*) So that a completely fresh decision had to be taken on the policy of where these barracks ought to be built?—Yes, and I think two or three letters had to be sent for explanation as to the reason of the change of the site. There was a good deal to be said in favour of both sites; I think the advantages were about equally balanced.

6160. (*Sir Charles Welby.*) That is to say, from the time Sir Francis Grenfell notified his difference of opinion to that of his predecessor to the time when the War Office adopted those views four months elapsed, from April to August?—Four months elapsed, from April to August.

6161. That was the time the War Office took to decide that the General Officer Commanding was taking the right view as to those rival schemes?—Yes, and if I mistake not, after two or three letters had been addressed to him.

6162. From the time the War Office decided to adopt Sir Francis Grenfell's view as against that of his pre-

decessor, 10 months elapsed before the matter was finally settled, that is to say, from August 1899 to June 1900?—Yes.

6163. Is it quite correct to say, in the face of that, that there was no delay?—I do not think any of that delay was in the least unnecessary. When it is decided to build a new barrack it is necessary to come to a good conclusion. If we adopted the plan which is sent from the station, in some cases it would not be the best plan. We get experience of sites for barracks all over the world, and we always consider that we ought to give the good ideas we get from other stations to each particular station, the result being, I think, that a year is not too long to consider carefully how you are going to build a barrack before you commence.

6164. (*Sir George Clarke.*) Did the new decision involve a re-opening of the whole question as to the land?—It involved not only a re-opening of the whole question, but involved, too, purchase of land.

6165. Therefore the land had to be surveyed and all the arrangements for the purchase to be made within this time, which may seem to be a delay?—Yes.

6166. (*Chairman.*) Then I gather from what you have said that you would not be in favour of delegating any large powers to General Officers Commanding with regard to the plans of barracks; that you think ought to be done by a Centralised Department here which gathers experience from all over the world?—We decentralise as much as we can. We always bear in mind that it is better to leave as much power as possible in the General Officers Commanding, but on the other hand we get ideas from all the different stations, and by having them centralised in the office we are able to send the best plans out to the different stations.

6167. And you would not leave a General Officer Commanding to deal with such an important matter as that?—I think it might lead to waste of money. When it is remembered that the barracks now building will have to last at least 100 years, I think we should be very careful to make sure that they are properly designed and properly sited. One barrack that has recently been re-constructed—the Royal Barracks, Dublin—was built in the year 1708, that is nearly 200 years ago; but as a rule we may take it that the life of a barrack is about 100 years.

6168. (*Sir Charles Welby.*) I suppose you agree that the delegation of this work to General Officers Commanding would be a saving of time, but you hold that that advantage would be counterbalanced by loss of efficiency?—I am quite sure it would not result in saving of time; I believe they would come to us in the end.

6169. (*Mr. Gibb.*) The General Officer Commanding supplies, as it were, a local knowledge, but you supply general knowledge?—Which we have gained from a number of stations.

6170. From comprehensive professional experience?—Yes, but we do our best to delegate as much as possible to the General Officer Commanding. There is another point. There is always a personal equation for each General Officer Commanding and each Commanding Engineer, and more power can be delegated in some cases than in others. There are some generals to whom you would be justified in giving the whole of the money to spend and I am sure they would spend it rightly.

6171. (*Chairman.*) But as a general rule you would not accept plans for a barracks where put forward by a General Officer Commanding, without very carefully testing them and criticising them; you would not accept them on the responsibility of a General Officer Commanding, would you?—We try to do so, and only ask in many cases for simple outline plans of what he is going to do. Then we approve those plans and say, "Proceed"—that frequently happens.

6172. (*Sir Charles Welby.*) Then in practice you vary the degree of centralisation in accordance with the idiosyncrasies of the various Generals, do you?—And the nature of the station. At the present moment I may say I am revising the instructions. When we started the Military Works Loan in 1897 I found it necessary to issue a set of instructions to the General Officers Commanding showing the principles on which the Loan Works were conducted, because I found some of them wanted information as regards their responsibility. We are now revising these instructions, showing exactly the principles upon which we work.

Col. C. M.
Watson.
C.M.G., R.E.

26 Feb. 1901.

Col. C. M.
Watson,
C.M.G., R.E.
26 Feb. 1901.

I will read a few of them if the Committee will allow me. "General Instructions as regards Finance.—The Act of Parliament lays down in broad outline where and for what purposes the funds provided under the Loan are to be spent. On this as a basis a schedule is prepared at the War Office showing the distribution in fuller detail and fixing definitely the allotment under each Head and Sub-head for each station. These allotments cannot under ordinary circumstances be increased. But so far as the exigencies of the public service will admit, the allotments to stations for Barrack Services will not be reduced, and General Officers Commanding may therefore assume, unless informed to the contrary, that savings on any item of Barrack Services at a station will be credited to the allotment of that station under the particular Subhead, and will be available for reauthorisation by the War Office for further Barrack Services under the same Subhead at that station." That met a question General Grenfell raised; he seemed to think he had not the power of redistributing his money. "When settled the amount of the allotment is notified to the station, and a comprehensive statement called for showing the whole of the services required which come fairly within the scope of the Act, and giving a full approximate estimate of the cost of each. It thus becomes convenient and in most cases necessary to have, so to speak, a 'waiting' list as well as an 'approved' list." And what we have prepared for each station is a list in that form. (Showing Form.) That list you will see has four headings showing 1st the works completed, and their cost; 2nd, the works in progress and the amount authorised; 3rd, the works for which plans are being prepared; and 4th, a further list of services which the General Officer Commanding considers necessary, but which we cannot say at the moment whether there will be money to execute or not. That list goes backwards and forwards between us and the station, so that it is known exactly how we stand. But it is important that no transfer of savings from one item can be made to meet excess on another. In each case the General has to tell us what saving he will have; we put it, as it were, back into the total allotment for the station and that becomes available for transfer to any other service it is wanted for. I do not agree with General Grenfell's proposal that he should have the power to move money from one service to another, because it would lead to confusion. Then as regards the estimates, there is an important item. I believe it has been stated that we do not take sufficient care in making the estimate to include the whole cost of a building; but that is a point we are very particular about and if I might read the paragraph about estimates it will be clear. "Experience shows that it is a matter of very common occurrence for later and more detailed estimates to be greatly in excess of the original approximate estimate for the service, and it not infrequently happens, especially in the case of reconstruction services, that the former is much greater than the latter. Errors of this nature not only tend to discredit the station estimates, but they often upset most carefully prepared programmes of work and not infrequently give rise to serious financial difficulties. It is, therefore, of the utmost importance that estimates, and especially the earlier approximate ones, should allow a really ample margin for possible contingencies and be in no cases understated. As some check on this, the data upon which the amount has been arrived at should be stated (see paragraphs 431 and 432, Regulations for Engineer Services, 1900). In order that the total expenditure entailed (and how it is made up) may be known at the War Office, careful approximate estimates of any contingent works involved in the service should also be prepared, and a statement of the funds required furnished in the following form"—for example, showing buildings, drainage, roads, fences, &c. "The above should show the whole of the estimated expenditure chargeable to the item of the Military Works Loan. But, in addition to this, an approximate estimate should in the case of stations abroad, be furnished"—that is for local transport, the value of the ordnance stores, and the value of military labour. I am anxious always that we should know the true total cost of each building. Then at the end we get a statement for each building, which shows the absolute total cost as shown by Table A on this form. (Showing Form.) Of course, in some cases some of those items may not be chargeable against the building; then it is left blank, and

Table B shows the exact cost at per foot cube and at per unit in the case of a barrack building.

6173. What would be included under stores—cement and such things?—No; under the head of stores, we include grates, gas fittings, and articles of that kind that the War Office supplies and not the contractor.

6174. (Mr. Mather.) Not movable furniture, but fixtures?—Yes; such as stoves, fireplaces, mantelpieces,—they all come under the head of stores.

6175. As a rule is that kind of work excluded from the contract?—It varies.

6176. Sometimes it is included, and sometimes not, is it?—Sometimes it is included, and sometimes not; it varies according to the service. For certain things, such as watercloset fittings and lavatory fittings, we have a general contractor, who supplies the same style of fittings for every place. Therefore, of course, in the bills of quantities we deduct those fittings from the contract, and supply them to the contractor, who only puts in his quantities the prices for fixing.

6177. The main plumbing work would always be included, I suppose?—Yes, that is always done by the contractor, but it is desirable to have the same pattern of stores in various barracks. Then, of course, for stations abroad, where we do not work with a contractor, it is necessary to send those stores.

6178. (Sir George Clarke.) Then in every case in the Loan Works you can say that the total cost of that work is shown?—We know the absolute total cost.

6179. Of course you have seen Mr. Bull's statement, in which he says he cannot make it out in all cases?—He is wrong so far as Barrack Loan works are concerned. The actual total cost of a building is given on this form. (Showing Form.)

6180. (The Secretary.) Mr. Bull was referring to services provided for on annual Estimates, because all the charges for a service done on Loan are brought under one head.

(Witness.) Quite so.

6181. (Mr. Mather.) Have you Forms showing the comparison between the estimated cost and the actual cost on the completion of the building? These heads are estimated authorised expenditure during present quarter, during last quarter?—When the building is finished there is the total amount given in the A. portion of the Form.

6182. But have you any Form which will give the Committee an example of how the final cost comes out as compared with the estimated cost?—I have not brought one with me.

6183. Is there a very large discrepancy, as a rule?—Not with our services. The cases where the largest discrepancies appear are in cases of reconstructing a building; that is to say, if you have an old barrack, and are bringing that barrack up to modern date, I would not wonder if sometimes it comes to three times the estimate; that is to say, an examination of a block is made and it is considered it can be put in order for a certain sum, but when the work is taken in hand it is found that much more extensive repairs are necessary than was at first supposed.

6184. I am referring to new works. Do you approximate very closely to the estimate as a rule?—Yes, we have not much difficulty about that; but probably that is due to the fact that we are always impressing on the General Officers Commanding that they must make their estimate sufficient to cover the work. I think in some Annual Estimate services there is a tendency to under-estimate in order to get the amount in the Vote for the year, but in Loan Services it is not so. In our case the real estimate is made after we have got out the plans, and then we know exactly.

6185. Of course it means examination into every detail of the building before you begin; for instance, the fittings you have just mentioned may be a very important item in a large building?—They are.

6186. And unless you have carefully gone through the whole thing room by room, you might be very much out in your estimate?—But still an approximate estimate based on a number of buildings of a similar character works out very nearly. Supposing, for instance, a class of building has worked out at 8d. a foot cube, we may be pretty sure that the next building will work out at the same cost, and, of course we always make an approximate estimate on the cube.

6187. (*Chairman.*) You state that you show the true cost of these buildings done under the Loan; do you also show the true and total cost of the buildings done under the Annual Estimates?—I have nothing to say to the execution of the work under the Estimates, so I am not sure of the form they adopt in the Estimate work. I should think they did. Then I may say at the conclusion of each year we send in a report showing exactly what all the buildings have cost, and perhaps it might interest the Committee to see it.

6188. You are chiefly concerned, I gather, with works done under Loan?—Entirely.

6189. Have you remarked another suggestion of General Grenfell's, that in all cases only pencil sketches or line drawing should be submitted to the War Office with sufficient detail to show that there is no considerable deviation from the approved design, and that when these are approved the preparation of working drawings should be seen to at the stations without the necessity of further reference?—That is the course we almost invariably adopt in the case of foreign stations, such as Malta. So I do not understand why he raised that objection if he referred to Loan Services.

6190. If that is the practice which is adopted, can you explain why Sir Francis Grenfell should put it forward as a suggested improvement?—I am rather puzzled; it is what we invariably do when possible in the case of stations abroad; you cannot have exactly the same procedure for every building. Take, for instance, the case of a hospital, say a small hospital at Malta: we get a preliminary plan worked out. We then have to show it to the Army Sanitary Committee at home to see if they approve of it; so there we must get the drawing home; but as a rule we try not to get the drawings back from a foreign station after they have been approved in a preliminary stage.

6191. But there must be an exception in the case of hospitals?—Yes, and in other cases; suppose it is a building of a new class, we must treat each building on its merits, but our rule is not to get them back after they have been approved in their preliminary stage.

6192. (*Sir George Clarke.*) But of course you send to all foreign stations type drawings?—Yes.

6193. It would be impossible to expect you to maintain at every foreign station anyone who is qualified to design out of his own head a large hospital, for instance?—Quite impossible. The principle I always try to work upon with the foreign stations is to insist that the local officers should be really responsible, and that we are only in the position of helping them. We always try to assist them, and I find that when I go round they all fully realise that that is the position. I find they are very glad to see me, and we talk things over and settle a good deal without having to refer to the War Office at all.

6194. As a matter of fact you do a great deal of outside inspection, I believe?—Whenever I can possibly get away.

6195. Even extending to the Mediterranean?—I have been twice to the Mediterranean during the last three years; the year before last I was at the Cape and St. Helena; the year before that at Bermuda and Halifax; and in 1896 at Jamaica and St. Lucia. I find much work can be done by going to the stations and talking it over with the local officers.

6196. There is a general impression in some quarters—I do not say whether it is founded or not—that there are a great many delays in the department of the Inspector-General of Fortifications. Are the delays, assuming that they occur, in your opinion unavoidable, and due to the inherent qualities and conditions of the works with which you deal, or are those delays at all attributable to the inter-departmental correspondence and references which take place owing to the fact that in most of your buildings the Quartermaster-General, and very often the Adjutant-General, and sometimes also the Director-General of Ordnance has to be consulted?—I have no doubt that there is some delay due to that; there is a delay also due, I think, to some causes that might be avoided. For instance, in the case of our dealings with the Finance Branch, the chief of the Finance Branch deals with us (F 11 is in our building) and I wish he would come up oftener to my room and discuss things with me. But at present the way the thing is worked is this: I refer to the Finance Branch, which is at Pall Mall; it first goes to their subordinate branch at the

Horse Guards; it then comes to Pall Mall; it then goes in some cases from F B. to the Accountant-General; and sometimes it is referred back to me for further explanation.

6197. How would you avoid that?—I think in many cases it could be avoided if the head of F 11 would come and talk to us.

6198. (*Mr. Gibb.*) Have you told him so?—Yes, but naturally he likes to refer to his own chief. Now, we had a curious case last week where we had a certain amount of dispute with a contractor. We had come to an arrangement with him and I had recommended the Director of Army Contracts to pay a certain amount to settle the matter; it may have been a few pounds more than he was actually entitled to. The Director of Contracts referred it to the Finance Branch to know if it ought to go to the Treasury. Really I think it was a case not worth referring to the Treasury, but the Finance Branch decided we must go to the Treasury. The paper went back to F 11 over in the Horse Guards who put a minute on it, and wrote a draft letter to the Treasury, which came back to Pall Mall, then it came to me to know if I agreed with the letter to the Treasury. The letter did not quite express what was required, so I redrafted the letter and sent to know if my draft was agreed to. I do not want to blame anybody, but the system.

6199. Is there any practical way which you can suggest to cure that?—I should say we should be held responsible for our own finance.

6200-2. (*Chairman.*) But the money must be spent according to the regulations?—According to the regulations.

6203. But when you wanted to depart from the regulations, what then?—Then we must go to the Accountant-General.

6204. You would still have to refer to someone?—Yes.

6205. (*Mr. Gibb.*) What would happen in the particular case you refer to?—I think the Accountant-General in that case might have said "All right, pay the contractor."

6206. (*Chairman.*) But he might not have had sufficient power to deal with the point?—Quite possibly; I only instance the way the papers go backwards and forwards.

6207. (*Sir George Clarke.*) In any case it might be laid down, might it not, that the head of F 11 should not write to the Head Office until it had been settled with you personally?—That is what I would like.

6208. (*Chairman.*) Could not you put that right?—I was talking to the Accountant-General yesterday about it, and he said he would give instructions. Then there is another thing which causes delay and that is the question of printing. We have a great deal of printing to do in the way of specifications and bills of quantities, lithographic plans and so on. If I want a thing printed I have to send it from the Horse Guards to this Office; this Office has to send it to the Stationery Office in Westminster, and the Stationery Office sends it to the printer, so that it generally takes from a week to a fortnight to get done what, if I was a private individual, I would get done in an afternoon.

6209. (*Mr. Gibb.*) Can you explain why you have to take these various steps; you say you first have to send it home?—Yes, because we do not communicate with the Stationery Office as regards printing. This has lately been partly remedied as regards plans.

6210. (*Mr. Mather.*) Why not?—I do not quite know.

6211. Have you tried?—We have tried it several times; and some improvement has been made.

6212. But have you sent what you required to have printed to the printer?—No, they would not receive it from us without an order from the Central Office, and the printer would not receive it from the Central Office here without its going through the Stationery Office. Often we have delays of weeks on the printing question.

6213. (*Mr. Gibb.*) Who could explain to us why you cannot send a document you want printed directly to the printer?—I think it would rest with C 2.

6214. (*Mr. Mather.*) Is this supposed to be a financial check on printing?—Yes, it is supposed to be a financial check on printing.

6215. (*Chairman.*) There is a great tendency, I believe, in a Government Department to do unnecessary printing, therefore it has been a matter of much discussion, and it has been laid down that one particular branch of a department should be the channel through which all printing should pass to the Stationery Department.

(*Mr. Mather.*) But might not the head of a department be trusted to keep that printing within reasonable limits?

(*Witness.*) I should think so. We never get anything printed which is not absolutely necessary.

6216. Would you suggest to simplify all this by suggesting that each head of a department should have the right to send to the printers what he requires?—Yes; to deal direct with the printers in all cases.

6217. (*Chairman.*) I think there once was a Parliamentary Committee which inquired into printing generally, and found out, in those days at any rate, that the waste of public money which was going on in the opinion of the Committee on unnecessary printing was very large?—Well, of course in our office the main printing which is done consists of specifications and bills of quantities, and those are all absolutely necessary. Then there is another cause of delay, and that is, I believe, the printing is taken at a low rate, and the result is it is slowly done—that is another question.

6218. (*Mr. Mather.*) Do the proofs come to you?—Yes.

6219. Through the same channel?—That I will not be positive about. I do not know whether they do not come straight to us from the Stationery Office.

6220. (*Chairman.*) The Central Department would know that, I suppose?—Yes, they would know all about it. That is one of the causes of delay. Another cause of delay is the Central Registry, which is a Branch which is not under the Inspector-General of Fortifications.

6221. (*Sir George Clarke.*) The Committee have had contrary opinions upon that from high officials. We have been told by one that it is a scandal, and by another that it is satisfactory. Can you give me your opinion about that?—I have no doubt it is not conducted altogether in the way it should be. I am sure of that. I have a paper here which shows the causes of delay. I sent it in a good while ago. I worked out the whole question very carefully as to what was wanted and what the causes of delay were. The first reason, I think, of the difficulties is that the Central Registry cannot always know what to mark a paper up to, and they mark them up sometimes in such a way that it makes it very difficult to find a paper.

6222. (*Mr. Gibb.*) Are you now speaking of a new matter coming in for the first time?—Or a letter coming in from a General.

6223. Had you not better distinguish in your answer between the two?

(*Chairman.*) Take a letter which comes in from outside to the War Office, it comes to the Central Registry; the Central Registry opens it and then sends it to that department with which it thinks the letter is concerned. You mean to say, do you, when it does that it often makes a mistake and sends it to a department which is not the proper department?—No, I mean it marks it up to a bundle which is not the right bundle.

6224. How do you mean?—This is what we call a bundle (*exhibiting bundle*). A new paper comes in, it is put by the Central Registry in a jacket, they guess what paper it belongs to but sometimes put it into the wrong bundle.

6225. You mean they attach papers to a bundle on the wrong subject, do you?—Yes, and sometimes they do not attach the papers when they should attach them. I do not know what time the post comes in in the morning, but my theory is that when a letter comes in by the morning post the Branch concerned ought to have that letter by 11 o'clock, at all events.

6226. What time do you get it?—Sometimes not for two or three days.

6227. We have been told, I think, that when a letter comes in, within two hours or so it has been sent to the Branch concerned?—That is not my experience. I find that is not always so.

6228. Can you give us any instance in which a letter has been delayed for two days?—I can easily show you that. Here in this particular file is a letter posted by the General Officer in Ireland on the 18th January. It is marked as having been registered on the 23rd January. I do not think it could have taken from the 18th to the 23rd January to get to London. We did not get it till the 24th. Therefore in that case, the first case I happened to take up, it took a day after it was stamped in the Registry to reach us.

6229. (*The Secretary.*) I think the complaint was, was it not, that the back papers were all kept in the Central Registry?

(*Witness.*) Yes.

6230. (*The Secretary.*) So that there ought to be less difficulty with regard to your papers, because they are now kept in the same building in which you work?

(*Witness.*) Yes; but I know it is a long time before we get them. I do not think the system of registering is satisfactory, because when we send to them for a paper, over and over again they cannot find it; papers seem to get lost in the Central Registry.

6231. (*Sir George Clarke.*) Can you give us a specimen of the contents of a file?—Yes. I have here an instance with reference to what I was saying about the Central Registry not being able to discriminate. There was a paper I sent in on the subject some time ago and I attached a specimen I happened to take up of a file to show how the subjects were mixed up. The first paper on this file was a report of a contractor's change in his manager; the next paper was as to the relative advantages of night urinals and urine tubs; the next was tenders for stables. Then it went on to the acceptance of the contract for stabling and paving, and then to an application for extension of time on quite a different contract. Then it came to the handing over and completion of three soldiers' blocks, and then it went back to the question of night urinals and urine tubs—this is the file (*showing précis*). Therefore, my theory is that the papers ought to be so registered that there is only one subject in the file.

6232. (*Sir Charles Welby.*) That is surely a question of an alternative, but, rightly or wrongly, the system of registration is right, is it not? That is, registering as to Belfast, say, one set of papers—grouping it into districts?—I do not think that meets the case, because one branch will be dealing with one view of the subject, and another branch will be dealing with another view of the subject, and while the Quartermaster-General has got hold of the bundle about the accommodation part of the question we cannot get hold of the bundle to deal with the designing part of the question.

6233. (*Col. Miles.*) This is a most difficult question, is it not, to deal with?—Yes.

6234. Therefore you do want a very skilled official to be at the head of the Branch which attends to this attachment of papers, do you not?—Yes, I think it is absolutely necessary.

6235. Not only in your Branch, but they are quite as complicated, are they not, in the other Military Branches?—I can only speak of my own, but I am sure they are complicated.

6236. (*Sir George Clarke.*) In addition to a qualified head, you also want a sound system, and I gather from you that you think the system is wrong?—It should be improved. At present papers are registered, as you may say, by the individual paper. I think the basis of registration should be the file—the bundle. That is the principle I have adopted. I have no right to do it, but all our papers I now mark on the file system. This is a complete file (*producing and explaining same*).

6237. (*Mr. Gibb.*) These are all papers relating to one particular barrack, are they?—Yes.

6238. (*Mr. Mather.*) If you had a register of your own, would you have all these different papers in your own register?—Yes.

6239. But some of them would refer to the Quartermaster-General, would they not?—But all our papers should start with us and come back to us.

6240. If the Quartermaster-General started a paper, how would he know how to apply for that paper afterwards?—If the paper has come to him, no doubt he would have a note of it on his local register.

6241. That is to say, he would know where the paper had gone to?—Yes.

6242. Does your recommendation amount to this, that every department should have its own register?—I will not say anything about the others.

6243. But would you like to have one in your own department?—I should like to have the register at the Horse Guards put under the Inspector-General of Fortifications, and he could then make his own regulations. I think the main thing is that there ought to be a better class of clerks than there are; at present a good deal is in the hands of boys who really cannot be expected to know the work.

6244. (*Chairman.*) In fact the work of attaching is not done with sufficient knowledge and skill you think?—That is so, and that being so, I would rather we were allowed to do the work ourselves.

6245. Is not another cause of delay the great amount of correspondence which necessarily takes place between your department, the Quartermaster-General and the Adjutant-General, you all being interested more or less or to some extent in the same question. If there is a question of barracks you have to consult the Quartermaster-General?—That is necessary. The principle is this, that when it is decided to build a new barrack, the first thing we do is to write to the General and ask him to tell us who he proposes should be accommodated in those barracks, and he sends me a return on a particular form which shows exactly all the people who are to be put up in the barracks. Then when that comes in from the General we send it to the Quartermaster-General and say, "Is that right?" and if he says "That is right, that is the accommodation I want provided," we go on, but we always look upon it that we are bound to provide the accommodation the Quartermaster-General wants.

6246. (*Sir Charles Welby.*) Could not the Quartermaster-General square that up with the General Officer Commanding before you intervene in the matter at all?—No, because it is our business to provide barracks.

6247. But the Quartermaster-General is the requisitioning Department, is he not?—I think it is done better in this way. Very often I will come over and see the Branch of the Quartermaster-General respecting it, and we settle it. I do not think there is any delay due to that.

6248. (*Chairman.*) There is no delay due to the correspondence between you and the Quartermaster-General, you think?—None at all practically. Where the delay does come in is when it has been decided to build a barrack and it has not been decided who is going to live in it; then there is delay. Then the Adjutant-General comes in. For instance, supposing we are going to build a barrack and all the arrangements have been made to build a barrack for British troops, but in the meantime there has been a disoussion, and it has been decided to put a black battalion into that barrack, it is often a long time before we get a decision as to the accommodation required.

6249. Could not those questions be expedited if there was some machinery by which the Departments concerned could meet together at regular intervals and settle the questions which concern them?—I do not think so, not as between us and the Quartermaster-General. We have no delay.

6250. (*Mr. Mather.*) His department is always near to you?—It is here.

6251. And you discuss that, I suppose, first of all personally?—Very often it happens that we discuss the question, then I write my minute on the paper, and he puts his answer when we are both together, the object being to have the decision on record.

6252. Does that start you making the plans?—The next step is to get the General to suggest a site plan of the barracks, showing where the officers' mess is to be, where the barrack blocks are to be, and so on.

6253. Is that submitted in the form of a plan?—In the form of a plan. That is reported upon by a board of officers at the station, and in nine cases out of ten there is very little delay in getting that approved, except in the case of a large barrack, when we have to send it to the Army Sanitary Committee.

6254. (*Mr. Mather.*) Are the building plans made by your office?—They are made at the station. We send them a set of plans for similar buildings, and say, "would you like to adopt these, or have you any alterations you would like to suggest?" and in many

cases they say, "we will adopt the plans you have sent," and the thing goes on.

6255. And of course they are completed, I suppose, by their own draughtsmen?—By their own draughtsmen.

6256. (*Colonel Miles.*) The work of the Quartermaster-General's Branch, and the Inspector-General of Fortifications' both in the War Office and in the districts, is necessarily very much interlinked, is it not?—It is very much connected.

6257. And it would not be practicable to separate them?—I do not think it would be advisable; I think we get on much better as we are now. The only other solution would be that the Inspector-General of Fortifications should be entirely in charge of the barracks, but I do not know that that would be advisable.

6258. You mean taking the barracks away from the Quartermaster-General?—Yes, but I do not know that that would be advisable; that of course would stop all reference, but I would not recommend it.

6259. (*Mr. Gibb.*) Does the Inspector-General of Fortifications come in on the question of whether there should be a new barrack building?—Yes, he does. Supposing, for instance, it was decided by the Army Board that a regiment was to be added to a particular station. Then we would inform the General Officer Commanding that it was proposed to build a new barrack at that station. He would send his proposals; which would be considered by the Inspector-General of Fortifications and the Quartermaster-General jointly.

6260. But the question of site, the question of plan, and the question of accommodation, all arise after it has been decided that a new barrack is to be built?—Yes, but the first proposition comes from the General of the district; he is informed a new barrack is wanted.

6261. (*The Secretary.*) It is the Secretary of State who decides whether additional battalions are to be raised?—Yes.

6262. The Inspector-General of Fortifications has nothing to do with the question whether more troops are required?—We have nothing to do with deciding how many troops are wanted at a station.

6263. (*Mr. Gibb.*) You come in after it has been decided a new barrack is wanted?—Yes.

6264. Have you anything to do with the amount of accommodation to be provided?—That is the Quartermaster-General's business.

6265. I do not quite see in that case why the matter does not come to you as the order for a new building would go to an ordinary architect. "We want this accommodation, we want the building on this site; will you prepare plans and estimates"?—I think the present way works more quickly.

6266. (*Chairman.*) But what is the present way?—The present way is that it is decided that there shall be a barrack in a certain station.

6267. For so many men?—We will say for a battalion.

6268. (*Mr. Mather.*) Are you informed of that decision?—Yes.

6269. You are not a party to that decision?—No.

6270. The information comes to you?—Yes; and of course in some cases a decision is changed; that is a cause of delay. There was a case as regards that which occurred as to a barrack at Colchester. Some years ago there was a barrack at Portsmouth which the Admiralty wished to turn into a sailors' barrack, and the War Office agreed that the Admiralty should have the Portsmouth barrack, if they paid for reprovinding the accommodation. The Admiralty agreed to pay for reprovinding the accommodation. Then the General proceeded to look for a site for a new barrack somewhere near Portsmouth, but after about a year I think the Adjutant-General decided it would be better that the regiment should be quartered at Aldershot. Then the General Officer Commanding Aldershot began to look for a site, and for about eighteen months they were looking for the site at Aldershot, but they could not find a satisfactory one.

6271. (*Colonel Miles.*) We could not agree on a satisfactory one?—You could not provide it, at all events. Then it was decided to move the battalion to Colchester. The General there was asked where he proposed to put it, and he said "I have no place to put it; I must buy

Col. C. M.
Watson,
C.M.G., R.E.

26 Feb. 1901.

"some land"; so we had to buy land at Colchester in order to put up this barrack, and I instance this particular case because the Engineers were supposed to have caused delay in providing this barrack. I had to explain that it was because we had not been informed where it was to be built; you must settle where it is going to be before you begin to build it. When it is settled we are to build a barrack, we write to the General and ask him to fill up a form saying what troops he proposes to put in it.

6272. (*Mr. Mather.*) Are you the first to inform the General?—Yes.

6273. He knows nothing of it?—He has been informed by the Adjutant-General of the number of battalions he is to have at his station.

6274. Then you approach him, he does not approach you?—We write to him and ask him to fill up the form. He fills it up, we send it to the Quartermaster-General; he criticises it and sometimes does not quite agree with it, but in the end the Quartermaster-General and the Inspector-General of Fortifications and the General of the district are satisfied as to the accommodation to be provided.

6275. Do you confer personally at a station?—Very frequently, and in some cases I have gone down to the Station Office with an officer of the Quartermaster-General's Branch and talked it over there.

6276. (*Mr. Gibb.*) Do not you think the delay is caused by the Inspector-General of Fortifications coming into the business, as it were, prematurely?—I do not think so, and I do not agree there is delay, when once the general policy is decided upon.

6277. Following your description of the matter, one would have thought that the amount of accommodation required and all questions of that sort would have been settled before any request was made to the Inspector-General of Fortifications?—But still it would have to be settled.

6278. Yes, but not by the Inspector-General of Fortifications. I suppose the Inspector-General of Fortifications as a constructor would say, "I will make any barrack you like; tell me what accommodation you want and I will prepare a plan"?—I think we get on quicker in the present way, because we are very interested in getting the question settled.

6279. But it does not matter to you whether you build a barrack for 1,000 men or 1,500 men, does it?—No.

6280. Why should you come into the transaction before the building is wanted?—It has to be settled, and it makes no difference who originates the question.

6281. Settled by the officer whose duty it is to settle these things?—But I do not think in some cases the Quartermaster-General would realise we had the funds to build the barrack until we told him.

6282. Then I confess I fail to see how the Inspector-General of Fortifications, as the person responsible simply for constructing and completion, can tell other people whether or not a barrack is wanted and what amount of accommodation is required?—We get the amount of accommodation from the Quartermaster-General. We do not state what accommodation is wanted.

6283. (*Mr. Mather.*) You are the builders?—We are the builders.

6284. You are only the builders?—We write to the General and say, "There is a barrack to be built in your district. Would you be kind enough to let us know what people are proposed to be put into it."

6285. (*Mr. Gibb.*) I should have thought the architect was the last person to write and say, "There is a barrack to be built in your district." I should have thought it was the Quartermaster-General, the person who wants the barrack, who would do that?—I have not thought of that point of view.

6286. (*Mr. Mather.*) The Quartermaster-General and the General Officer Commanding are going to be the occupiers of this building, you are only the builder?—Yes, but still we regard all in the War Office as one Branch. I do think we manage to push the thing along. For instance, here is a question in this file which I have here as to the reconstruction of Ballincollig Barracks. We drafted the letter and sent it to the Quartermaster-General, and asked did he concur in our writing, and he concurred; that is a very good instance.

6287. (*Sir Charles Welby.*) That reference to the Quartermaster-General consumed pretty well two days, did not it; one day in coming from your department and one day in coming back to you?—Yes.

6288. (*Mr. Gibb.*) Why should you take up that question at all?—Because we had got the money under the Loan to do the work.

6289. I mean why should a proposal to enlarge Ballincollig Barrack come to you first at all?—It emanated from the General Commanding in Ireland.

6290. Having emanated from him, why should it come to the Inspector-General of Fortifications until the other authorities concerned have fully made up their minds?—They all agreed it was to be done.

6291. As to what was wanted and where it was wanted, true?—I think there is a great deal to say in favour of that view, but I do not think we should get on so well as we do now.

6292. (*Mr. Mather.*) You push them along, do you?—It is our interest to push on and get the money spent in a reasonable time.

6293. When the barracks have been decided on, is the money then allocated to your department?—No; in the case of Ballincollig everyone allowed we had to spend the money. It was inserted in the Army Estimates and was struck out several years in succession, I think. Then when we got the Military Works Loan it was decided to reconstruct Ballincollig Barracks, and we put the sum the General had said was necessary for the reconstruction into the Loan.

6294. Then it comes to this, you are the spending department?—We are the spending department, and as soon as the Loan was passed by Parliament we at once wrote to the General, saying, "We have got the money now to reconstruct the barrack."

6295. (*Sir George Clarke.*) But, generally speaking, it is not a case of a barrack being suddenly decided on, is it?—No, it takes years.

6296. It has generally been part of some great scheme which has been worked out by the Inspector-General of Fortifications before?—Yes, conjointly with the Quartermaster-General.

6297. It is not a question of a barrack being suddenly required and the Inspector-General of Fortifications being asked to make it; it is something you have been working at before?—Yes, and working with the Quartermaster-General.

6298. (*Colonel Miles.*) As to the department which is most concerned in the work being pressed through the Quartermaster-General's Department is, at least, as much interested as your department, is it not?—I think so, if not more so.

6299. (*Mr. Bockell.*) Who decides the plans on which the barracks are built?—They are decided in the Inspector-General of Fortifications' Branch, after consulting the other Branches concerned.

6300. They are built more or less upon fixed plans, I suppose, are they not?—Yes, we have a number of what are called type plans.

6301. (*Sir Charles Welby.*) I suppose it is with regard to Rifle Ranges the greatest delay arises. Have not you experienced the greatest difficulty in pushing them along?—The reason of delay is because it involves the purchase of land, and one of the subjects which causes most delay of all is the purchase of land. Even when we have power to buy compulsorily it always takes a long time to purchase. I should say the purchase of land causes more delay than anything else in our work.

6302. And do you think the delays arise more from that cause than from any circumlocution?—Certainly, and whenever we have the land the Ranges have been finished speedily.

6303. One of the delays in regard to purchase of land, I suppose, is that, not only has the Commanding Officer of a district to be suited as to a site, but also three departments in this office?—Oh, no; it is generally agreed soon if the General Officer Commanding is satisfied.

6304. Then assuming the site and the cost of the site suggested by the General Officer Commanding to be agreed, there is no delay?—If the General Officer Commanding suggested a site which there is not sufficient money to buy, then of course we have to ask him to look elsewhere.

6305. I was speaking rather of the arrangements which were provided for under the Loan of 1897. Is it not a fact that a good deal of that money has not been expended yet?—We are buying a large tract of land at Plymouth, but there we cannot get on because there are a number of commoners to deal with; it is a very slow business; but there will be no delay in the construction of the Rifle Range; the delay is due to the questions arising on the land purchase.

6306. I suppose you cannot tell us what proportion of that half a million which was allotted to ranges in 1897 has been spent up to now, can you?—Yes, I can tell you exactly, I think.

6307. (*Mr. Beckett.*) I suppose the public object to having Rifle Ranges in their neighbourhood as a rule,

do they not?—They do not like it, and we have had a good deal of trouble in buying the land in some cases. I find the figure expended up to 31st December on the Rifle Range and Manœuvring item is 816,594*l.* out of a total of 1,222,000*l.*

6308. (*Sir Charles Welby.*) That includes over half a million in a lump for Salisbury Plain, does it not?—Yes.

6309. If you put that on one side you have spent about 300,000*l.* out of about 600,000*l.*?—Yes.

6310. In nearly four years?—Quite so. If you like I can give you a statement showing exactly what has been spent up to date.

TWENTY-SECOND DAY'S MEETING.

SIXTEENTH DAY'S EVIDENCE.

At the War Office.

Wednesday, 27th February 1901.

PRESENT:

Mr. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE OLABKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary.*

Colonel CHARLES MOORE WATSON, C.M.G., R.E., further examined.

6311. (*Chairman.*) You left us under the impression that there is a great deal of correspondence and reference between the Quartermaster-General and the the Inspector General of Fortifications, when there is a question that arises of the selection of a site for barracks?—Yes.

6312. Could not possibly the selection of a site for barracks be wholly dealt with by the General Officer Commanding? He has got the Army Service Corps under him who represent the Quartermaster-General, and he has got the Commanding Royal Engineer under him representing the Inspector General of Fortifications, and he has medical officers under him?—I think when it is a question of a site for a new barrack it is better that there should be a little more discussion than that it should simply be left to the local officers, because they have not the same experience as the officers at the War Office who are receiving, as I said yesterday, information from all the stations.

6313. Does not that apply rather to building?—It applies to the site also, and in the end it must come to the War Office, because under the present regulations, very properly I think, the site has to be approved by the Army Sanitary Committee, who have to see that it is perfectly satisfactory as regards drainage, water supply, aspect of the buildings, and everything else that concerns the health of the troops.

6314. Then you would not trust the medical officer?—I do not think the Generals would wish it. My experience is that they are always very pleased with our suggestions, and ready to acknowledge the advantage of them and to apply them. It is very rarely that they wish to override a suggestion made from the War Office. I do not think that practically it gives any difficulty; it does not really cause much delay, and when you remember that the barrack has got to last at least a hundred years, I think it is very desirable that it should be carefully considered before the site is finally settled.

6315. But the General Officer Commanding would have all this technical assistance in the way of Royal Engineers and Army Service Corps. Would he not be strong enough working with them all together to settle such a thing?—I wrote a short memorandum on that subject, if I might read it; it is very short. "1. Permanent barrack buildings: (1) Have to last for several generations, say for at least 100 years; (2) Cost a great deal of money; (3) both as regards siting, scale of accommodation and design. They exercise an important direct influence on the troops as regards: (a.) health; (b.) comfort and contentment; (c.) discipline and training; (4) and indirectly on recruiting. 2. Moreover, as Establishments" (and this is a very important point) "are constantly changing, the standard of living in civil life constantly rising, and technical requirements and conditions constantly altering, it follows that in all schemes for permanent buildings it is essential to provide for inevitable—but to a large extent unknown—alterations and additions in the future. Therefore, in addition to a thorough knowledge of existing conditions, the possession of the power to intelligently anticipate events before they happen—in other words, an ordered development of the imaginative faculty—is also necessary to the best results." This we find by practical results, that in some of the old barracks that were designed without looking forward to the future, we have the greatest difficulty in making additions; therefore in all modern barracks we are always looking ahead to what may be wanted to do 50 years hence. "3. It follows from paragraphs 1 and 2 that, in the interests of the Public Service, the most careful consideration—by many different minds looking at the problem from different points of view—is required before commencing the building of permanent barracks and that any undue haste is much to be deprecated. 4. It is natural, no doubt, that those who feel daily the pinch caused by the want of the proposed buildings should give great

Watson.
C.M.G., R.E.
27 Feb. 1901.

"weight to the argument that speed in providing the accommodation is essential, but it is at least probable that this very feeling renders them less likely to give due weight to the other, and not less important, conditions of the problem. And experience of human nature makes it more than probable that those individuals who most vehemently complain of delay are mentally so constituted as not to be able to see fairly all sides of the question—in other words, they are not best fitted to be vested with the uncontrolled power of committing the War Department in regard to permanent barrack building schemes." That is my own view of it.

6316. Then you would not consider the General Officer Commanding, with this advice at his elbow, competent to settle such important questions?—We had the very case at Malta. We had one General Officer Commanding, with one Commanding Royal Engineer, absolutely certain that one site was the best, and their successors in favour of another.

6317. But in theory, you might have one Inspector-General of Fortifications taking one view, but his successor taking the opposite view?—I think not, because there is a continuity in the office more than there is at the Station. In the case of the Malta Barracks, and the one General Officer Commanding, and the one Commanding Royal Engineer, I went to the place, and the Commanding Royal Engineer, and every one was absolutely certain that it was the best site. Then another General Officer Commanding goes out, and within two months of arrival at the Station, he is absolutely certain that another place is the best site. I must say, that I do think it is advisable that the War Office should have the power of deciding on the merits of the case.

6318. You went out and took one view?—I still think that the first site was the best, but I am not responsible, of course, in any way.

6319. But your successor might not take the same view as you?—I do not think that troubles me, because we have all the arguments; but I say it is an open question; it is not my business.

(The Secretary.) As a matter of fact, you had to accept the second General's view; you had no influence.

(Witness.) No, I had no influence at all; I had nothing to say to it.

6320. (Mr. Gibb.) Wherever differences of opinion are possible, differences of opinion will occur?—Yes, and therefore I say in the case of selecting a site for a large Barrack, the more heads you get to bear upon it the better, because you get the different points of view.

6321. But I am merely meeting the point in that answer. Supposing that the General Officer Commanding selected the site, subject to its being found satisfactory in regard to the matters you name?—That is what happens; he selects the site subject to its being found satisfactory, and he sends it home to the War Office.

6322. If that be so, ought not the answer to be that, in point of fact, at the present time the General Officer Commanding does decide upon the site?—He selects the site; he has it reported upon by the Board, and decides upon the site, and all he sends it to the War Office for, is to know if the War Office will approve of it; and in many cases the site proposed by him is approved.

6323. But when he sends it to the War Office to know if they will approve, they may before approval go into the matter *de novo* from the very foundation; they may not confine themselves to seeing that the requirements you name are possessed by the site?—That is all that is done. All we want to see is that the requirements are properly carried out, and, as I say, in a very large number of cases, the sites proposed by the General are accepted without question; but I think it is advisable that the War Office should have the power of seeing what site the General has accepted, and agreeing to it, and if there is some definite reason against it, stating the reasons to the General.

6324. Would it be difficult for you, taking a period of say ten years, to put down the proposals for sites by General Officers Commanding, with the date of proposal and the date of ultimate approval by the War Office?—No. This could easily be done.

6325. But your evidence now apparently is that no appreciable delay does in fact take place in approving

the General Officer Commanding's suggestions in nine cases out of ten?—That is so.

6326. Can you give us some statistical evidence of the correctness of that?—I could give you many cases.

6327. Over a selected period?—Yes.

(The Secretary.) You might select the period of the loan.

(Witness.) It will be a very large number of cases; I do not think you realise how many cases it will be.

(The Secretary.) But there are not a large number of important cases, are there?

(Witness.) Yes, a great many.

6328. (Mr. Gibb.) Could you do it by taking the cases where delay over a certain period had occurred?—My argument is that there is very little delay.

6329. We want to see some proof as to the statement?—I could easily do it.

6330. Because we get an impression on the one side that there is a very great delay, and we get a statement on the other side that there is no delay, and the only way to test that is to get evidence of particular cases?—I might refer to the case that I spoke of yesterday, the Goojerat Barracks at Colchester. There the General Officer Commanding selected a site for the barracks near Gosport. That was considered for a certain time, and then the War Office, wholly independent of the General Officer Commanding, decided that the barracks were to go to Aldershot.

6331. But special cases in which there are differences of opinion and peculiarities do not help one to see the general working of the system; there will always be in any system special cases?—But I think I will be able to show that in the majority of cases there is little delay, and we only hear of special cases.

6332. (Chairman.) Do you happen to know about one case we have been told about, that in Hong Kong the question has been going on now for some 10 years or more?—As regards what point?

6333. As regards the construction of the hospital at Hong Kong?—The last delay was entirely due to the action of the local officers of the General. It is a very interesting case, that Hong Kong case. The site was proposed by the General and approved.

(The Secretary.) I have a memorandum about that case: "G.O.C., 13th March 1889, proposes two alternative sites, upper and lower, for hospital, lower most suitable.—I.G.F., 30th May, concurs, but valuation to be made.—C.-in-C., 28th June, requests G.O.C. to furnish plans, &c.—G.O.C., 9th October, furnishes skeleton plan.—C.-in-C., 5th December, asks for detailed plan, and requests G.O.C. to approach Colonial Government, who had already objected in letter of 25th January 1889.—G.O.C., 22nd January 1890, reports that Colonial Government has withdrawn its opposition, and that it prefers upper site, which G.O.C. now considers more suitable—it being understood that arrangements shall be made to prevent contamination of water-supply.—I.G.F., 7th April, states that site already approved should be adhered to" (that is a case where you apparently overruled the General Officer Commanding), "and that plans should be proceeded with.—G.O.C. (new man), 21st August, states that (1.) Plan of upper site (which is forwarded) was nearly completed on receipt of War Office letter of 7th April. (2.) Serious objections to lower site, owing to conformation of ground," and so it goes on.

(Sir George Clarke.) He had previously recommended the lower site?

(The Secretary.) Yes, he had previously recommended the lower site as most suitable.

(Sir George Clarke.) And then he took up the upper site, and then argued strongly against the lower site?

(Witness.) You will probably find that there was a change of the General Officer Commanding.

(The Secretary.) That is so: That brings you down to 1890.

(Witness.) Then you might come to the point when the money was voted. There was no money provided for the hospital till the loan of 1897; notwithstanding all the discussions we had nothing to build it with.

(The Secretary.) Finally: "G.O.C., 21st January 1899, points out delay of ten years, that plans have

"been in preparation at War Office since 11th April 1895—that those which have been received are unsuited in many ways to local conditions."

(*Witness.*) Might I make a comment upon that point, because that is the gist of the whole delay? The General Officer Commanding sent in a site plan, which was approved by the Army Sanitary Committee, and the General Officer Commanding asked that the plans for the hospital should be prepared at the War Office in accordance with that site plan. The plans were proceeded with and finished at the War Office. When they were sent out to the Station it was found that in the meantime the General Officer Commanding had cut down the whole site and completely altered it, so that the buildings in the plans sent out would not fit on it. We designed the hospital to suit the ground, and one idea was that it was a very good thing to keep the natural formation of the hill, and build the hospital buildings on the slope of the hill. The General Officer Commanding (I do not know really yet why) decided that to build a big building like this you must have a flat site. He cut down the whole of the hill, and then when the plans went out he complained that our plans would not fit his site. I cannot think that the War Office was to blame in that case.

6334. (*Sir George Clarke.*) I understand your point to be that all this preliminary procedure was of no account, because the money was not provided; so you can strike out everything until the money was provided?—Yes.

(*The Secretary.*) Was not the money taken from time to time in the Estimates?

(*Witness.*) No, it was struck out.

6335. (*Sir George Clarke.*) That is to say, the Inspector General of Fortifications had put it in his Estimates, and it was struck out?—Yes.

6336. (*Sir Charles Welby.*) Is it quite certain that if it had been known by the higher authorities that you were really ready to proceed with the building it would have been struck out; would it not, on your own admission, be struck out because you were not ready?—No, I think it was struck out for other services.

6336A. And for other Services in a more forward stage?—Because, as a rule, the Services do not get into a forward stage until the money is voted.

6337. (*Sir George Clarke.*) There is no question as to the state of preparation. You mean that when Services are put forward, it is a question of the relative importance of the Services?—Yes, it is the relative merits of the Services. I think the Secretary will agree.

(*The Secretary.*) Yes, that is so.

6338. (*Mr. Gibb.*) But surely you would not put into the Estimates a work that you know cannot be ready for commencement for say a twelvemonth?—In this case the plans were well advanced, of course.

6339. You say that the putting it in the Estimates had no reference to whether the plans were ready?—No.

6340. My question on that was: Do you mean that a work would be put into the Estimates, if the persons deciding the question knew that the plans were not ready, and that the work could not be commenced for, say, a period of twelvemonths?—Yes.

6341. Although no money could be spent upon it?—It must be so, because it is so uncertain what money will go into the Estimates.

(*The Secretary.*) What you probably do is, you put the Service in the Estimates, and take practically no money for it.

(*Witness.*) That is to say, the Service does not get in. I speak under correction, as I have nothing to say to the Estimates myself, but I believe that the insertion of a Service in the Estimates, depends on what is considered the relative merit of that Service, not on the question of whether the plans are ready.

6342. (*Mr. Gibb.*) Let us be clear whether we use the word Estimates in the same sense. I mean the Estimates finally submitted to Parliament to be voted; I do not mean the Estimates prepared for the Inspector-General of Fortifications?—But the Estimate submitted to Parliament, is always simply an approximate estimate made before the plans are drawn out. That is to say, in the case of a hospital for 100 beds, say, the estimate in ordinary cases that would be submitted

to Parliament, would be 30,000*l.*, because we know by experience that hospitals cost about 300*l.* a bed.

6343. But somebody proposes the estimate?—Yes.

6344. Who proposes the works to be included in the Estimate?—The General Officer Commanding proposes them.

6345. Somebody ultimately decides which works are to be included in the Estimate submitted to Parliament?—The Secretary of State.

6346. In deciding what works are to be ultimately included, do you mean that no consideration is given to the question whether a particular work can or cannot be commenced within the Parliamentary year?—I should hardly like to answer that question, because I have not sufficient experience.

6347. (*Sir George Clarke.*) It would be quite impossible to bring every Service proposed for the Estimates in an advanced state, ready for starting?—I think the proposals from the General Officers Commanding for the Estimates for the year, generally come to about ten times as much as is included by the Secretary of State; therefore, as a fact, the estimates and plans are never prepared until the Service has been voted.

6348. (*Sir Charles Welby.*) But, as a matter of fact, when the Inspector-General of Fortifications has been told the limit within which he must keep his estimates, he would naturally in choosing what he must weed out, weed out those services in respect of which you were not prepared to go on at once, and press those services that were ready for action?—Yes, I think so.

6349. And those that were not ready for action, would probably drop out year after year in that way?—Yes, but I think it is advisable to look at the papers; because I know nothing of what happened until it was included in the loan of 1897; then it was handed over to me, and we were told what was the site plan, and we were to finish the plans and get on with the work. But the real delay in that case was due to the fact that the local officer had altered the site, and did not seem to realise that we were preparing the plans for the site as originally approved.

6350. (*Chairman.*) Does not that show that there was some want of communication?—Yes, I think it does very strongly; but it shows strongly, to my mind, that you cannot always trust the local officers.

(*The Secretary.*) Might I go on with the story from 1899, because there seemed to be funds after that date?—I.G.F., 2nd March 1899, forwards site plan to suit changes reported by G.O.C., 8th October 1898.—G.O.C., 11th April, replies, generally concurring and forwarding Board proceedings—A.S.C., 13th June, approves generally.—W.O., 21st July, informs G.O.C. of approval, with modifications.—G.O.C., 26th August, replies to modifications, and urges original proposals.—W.O., 20th October, approves G.O.C.'s proposals, that is to say, gives up the modifications arranged for before.—G.O.C., 18th December, forwards plan with detailed arrangements for completion of site.—W.O., 27th April 1900, approves. There seems a lot of time spent backwards and forwards, giving really a formal approval.

(*Witness.*) But there was no delay; we were going on with the plans.

(*The Secretary.*) But it seems unnecessary to take up all this time sending communications backwards and forwards and finally getting approval.

(*Witness.*) But it was absolutely necessary that we should know what the General Officer Commanding recommended and we finally agreed to it.

(*The Secretary.*) "W.O., 8th December 1900, suggests modifications as to site of mortuary to be reported on by Board of Officers, involving rearrangement of 'Coolies' Block and Warrant Officer's quarters." So we are still in communication about it apparently.

(*Witness.*) And will be for some time to come. We have had the money now, and if it had not been for this unfortunate occurrence of the change of the nature of the site, I suppose the hospital would be nearly finished by this time.

6351. (*Chairman.*) But you still look forward to this going on for some time?—Yes. We are doing our best to get on with it.

6352. How long will it take before it gets forward?—I could not say; I should have to refer to the General,

Col. C. M.
Watson,
C.M.G., R.E.

27 Feb. 1901.

Col. C. M.
Watson,
C.M.G., R.E.
27 Feb. 1901.

he has got the plans now, and I believe is going on with it.

6353. (*Mr. Beckett.*) Who will ultimately decide in favour of this site?—It is settled now.

6354. In favour of which site, the upper or lower site?—We finally got the original site that the original General Officer Commanding recommended.

6355. It was brought back to the original site that was recommended 10 years ago?—Yes.

(*The Secretary.*) Practically, you always do accept the General Officer Commanding's recommendation, whether it changes or not?

(*Witness.*) Not always.

6356. (*Sir Charles Welby.*) But the main question being settled, could you not leave such subsidiary matters as the exact site of the Mortuary and the Coolies' Block to the General Officer Commanding?—We would have left it absolutely to him, as we would in most cases; but in this case we were making the plans and had to know what site was finally settled, or we could not make the plans.

6357. (*Mr. Gibb.*) You must have a survey?—Yes, especially in a place like Hong Kong, where there is very hilly ground. The General Officer Commanding had specially asked us to lighten the work of the Station by preparing the plans; we were not going against him; all we wanted was to find out what site he had decided upon.

6358. (*Chairman.*) You have had the money now since 1897?—Yes.

6359. To come to your own office, you never have any difficulty at any time in ascertaining how your expenditure stands with regard to the progress of your vote?—No, we can tell it every day; I keep it up every day.

6360. I understand you keep a ledger, on one side of which the Inspector General of Fortifications enters the authorisations to spend money?—Yes.

6361. And that money you consider is gone?—Yes, unless at the conclusion of the Service some saving is reported.

6362. And on the other side of the ledger, the Accountant-General's Branch, who absolutely give the last authority, write in the bills?—Yes, and if they find at any stage, of course, that the totals of the bills appear to come to more than the total of the authorisations, they at once bring it to our notice.

6363. But my point is that as regards the progress of your expenditure, by looking at the authorisations, which you enter yourselves, you can at once tell where you stand?—As a fact we do not get the way in which we stand from the ledger; we get it from what we call the Authorisation Book. I found that in order to be able to tell at any moment how we stood, it was advisable to introduce rather a new system, and that was a system of cheque books. We have a cheque book for each head of the loan with a counterfoil, and on the cheque, as it were, that goes to the General Officer Commanding is entered all the information about what is authorised for that service; then on the counterfoil is entered the duplicate of the information, of course. This is a copy of the form (*showing same*).

6364. You could get that from the ledger?—Yes.

6365. But this is a summary of the ledger?—Yes, a summary of the ledger, except that it is brought up to date daily.

6366. You always know where you stand as regards the progress of your vote?—Every morning I know exactly how much money has gone out.

6367. As regards the certificates that come up from the Commanding Royal Engineer, do you find that those are generally satisfactory?—I think so, so far as I know. There are two certificates: I thought I would bring them over to show you (*exhibiting the same*). That is the case of a bill, that is the final bill on a service that is not a very large service, of about 19,000*l.* The contract amount is given on the first page of the bill and anything that is due for additions. This makes the total amount due to the contractor 20,000*l.*; then these are the amounts paid to him, in accordance with the contract, on account from time to time.

6368. As the work is gradually completed?—Yes; and this is the final bill paying him the balance; in the final bill are entered all additions and subtractions.

6369. Where is the certificate?—It is at the end. These are all the additions and subtractions that occurred in the progress of the work. That is a summary of the additions; that is a summary of the deductions, which leaves the net cost of the additions.

6370. (*Mr. Beckett.*) Who checks all those additions and subtractions?—They are all measured by the Surveyor of the station; then the contractor on his final bill sends a certificate to say that he has no further claim. This certificate is signed by the Surveyor, the Foreman of Works, and the Engineer Officer in charge of that particular job. Then on the outside of the bill it is signed by the Commanding Royal Engineer. You see there are three sets of ticks here; the first tick is done at the station where the items, are checked after the Contractor has sent in his bill.

6371. Checked by whom?—A Surveyor. Then the bill comes to the Finance Branch and it is registered; there is a register number given to the bill in F. 8. Then F. 8 passes the bill to F. 3.

6372. (*Chairman.*) What does F. 8 do with the bill?—He simply at that stage registers it. Then they send it to F. 3, which is another branch of the Accountant-General's Department, which checks the multiplication to see that that is correct. Then it is passed to us and our Surveyors check it again to see that all the prices are rightly entered, and that the services are rightly performed.

6373. They check it?—They check it professionally.

6374. With the contract?—With the prices in the contract.

(*The Secretary.*) Would you call that a professional examination?

(*Witness.*) It is absolutely professional.

(*The Secretary.*) To see that it agrees with the contract price?

(*Witness.*) It is more than that; you have to see that the items are rightly described.

(*The Secretary.*) With regard to checking the price, the Accounts Branch do that in the case of every bill.

(*Witness.*) Yes, but not to see that the items are right. Sometimes it occurs that in a bill an item is wrongly described, and it is charged to one item in the Bills of Quantities when it ought to be charged to another item. In this particular case we passed the bill without remark. We pass it back to F. 11, and they pass it to F. 8.

(*The Secretary.*) To the branch that actually draws the cheque.

(*Witness.*) And there is the stamp to show that the cheque was actually issued and that is our stamp. That is a simple case of a bill, because there was no criticism.

6375. (*Chairman.*) Now, if there was a criticism?—Then we send it back with these forms (*handing in the same*).

6376. (*Mr. Gibb.*) What I would like to know is what the Surveyor in your office does when he checks the bills. He has before him the figures, which are the result of measurement certified by the local Surveyor?—Yes.

6377. Does he go behind those figures?—No, not as regards the measurements.

6378. He accepts them?—He must accept them, but he checks the items—that is to say, supposing you put in a certain kind of stone work at 2*s.* 6*d.* a foot, and our Surveyor goes to the contractor's bills of quantities and finds that the contractor has put it in at 2*s.* 3*d.*, he calls attention to this.

6379. That is merely comparing the price charged with the contract price?—Then sometimes they describe it incorrectly. There is an instance of where we sent it back, where nearly all the corrections were mistakes in computation. If there is anything that is wrong in the bill we send it back with these corrections.

6380. (*Mr. Mather.*) Do you send it back from your office because of the computations being wrong?—Yes.

6381. You check the computations?—The computations are checked by the Accountant-General's staff, and we check it professionally to see that the description of each item is correct, and to see that the price is correct.

Col. C. M.
Watson,
C.M.G., R.E.
27 Feb. 1901.

6382. And professionally you discovered that these computations were wrong?—No, that is the Accountant-General. We sent back all the observations together.

6383. (*Mr. Gibb.*) It is the professional check that I want to follow out a little?—Here, for instance, is the professional examination (*describing the same*).

6384. That is an exact case. The bill of quantities would have a different price for the brickwork in mortar and in Portland cement?—Yes.

6385. But supposing that you had a local certificate that you had so many yards of brickwork in Portland cement, would your Surveyor go behind that?—Yes, if he thought it might be a mistake. Very possibly, taking the brickwork in that situation, it might have been put in mortar.

6386. (*Chairman.*) That would be his professional knowledge?—His professional knowledge would show him that, and he asked, "Was it in Portland cement, or in mortar?" and the answer was, "It was in Portland cement."

6387. (*Mr. Gibb.*) Perhaps it had not been stated there whether it was in Portland cement or in mortar?—No.

6388. But if it had been stated you come to the bill?—Then probably he would have passed it without question. He would accept it. Here is another, an item for day-work. In that case we requested that the time sheets might be sent to the office, and that they might show the nature of the work more. The reply to that is that they send the time sheets and explain the nature of the work.

(*The Secretary.*) That query might have been raised by anybody.

6389. (*Mr. Mather.*) But surely there cannot be the remotest value in what you are now describing. This sheet comes to you from the local Surveyor. The local Surveyor is the only man who knows anything at all about it, plus the Commanding Royal Engineer and the Clerk of the Works. What can anybody in your office know about it?—I should be very pleased if the matter were to end at the station.

6390. You have already had three or four individuals on this matter checking all the way through since the work was done. First of all you have the contractor, who gives you the bill setting forth the items; then you have the Clerk of the Works looking at it and saying it is correct, the work executed. Then you have the Surveyor, who is a trained Surveyor, I understand, of course a competent man?—Yes, exactly the same as our Surveyors at the War Office.

6391. Yes, a member of the Institute, and so on, having his professional reputation to keep up?—Yes.

6392. And he goes through the bills then to see that the work has been charged out according to the schedules for brickwork in cement or mortar; he goes through the whole of it, and certifies to the Commanding Royal Engineer that the work is correct according to all those particulars; the Commanding Royal Engineer, from his local knowledge and from observing the work, again testifies to it, and finally the whole is endorsed by the General Officer Commanding, and then it comes to you. In any business arrangement that I am acquainted with, a check of that kind would be regarded as absolutely more than is required for the work to be right; and why you should in your office go through what appears to be a rather clumsy process I fail to see. I see no practical advantage in it in any shape or form.

6393. (*Chairman.*) I understand that you would be amply satisfied with the Commanding Royal Engineer's certificate?—Yes, I think so. My opinion is that I would leave it entirely to the station, and let them pass the bill.

6394. (*Mr. Mather.*) I may say that I have examined very carefully into the question down at Portsmouth, where so much fortification and barrack work has been done of late years, and have gone through the whole process there, and I cannot get beyond what they do; it seems to me absolutely final?—I might mention that in the case of Foreign Stations that is exactly what is done, and my feeling has always been that our Home Stations ought to be put on exactly the same footing as Foreign Stations.

6395. (*Chairman.*) That is to say, you would accept the Commanding Royal Engineer's certificate, plus the

possibility of inspections?—I should have inspections, and I should also take a certain number of bills now and then and have them checked.

6396. You would still do that?—I think it would be advisable.

6397. (*Mr. Mather.*) Take Gibraltar; four millions are being spent there now?—Yes.

6398. I suppose that has all gone through your department?—No, largely by the Admiralty.

6399. That is done on the spot?—I believe it is done on the spot. My own personal feeling is entirely in favour of doing it on the spot.

6400. (*Chairman.*) How many Surveyors do you employ doing this work which Mr. Mather thinks is wrong?—I think we have two, but I would like to be certain before I answer.

6401. It is not a large staff?—No, but personally I quite agree that it is a waste of time and money. That bill, I should say, might have been paid at the station without any one raising any questions, and the contractor would have got his money quicker.

6402. (*Mr. Beckett.*) Who appoints the local Surveyor?—He is a permanent man.

6403. Who appoints him?—He is appointed by competition through the Civil Service Commission.

6404. (*Chairman.*) Quite so, but we want your opinion?—My opinion is that it is entirely unnecessary.

6405. (*Mr. Mather.*) You have already told us that before the matter comes to you there are two Departments, two financial Departments I understand, that it goes through?—As I thought I might be asked that question I have got the exact course. I ought perhaps to show you that too. When the contract is finished that is what comes in to us (*handing in a document*), and when the bill is paid that is the total amount that comes to us. Of course the question whether it would be possible to pay the bills at the stations is a Paymaster's question.

6406. (*Chairman.*) That is quite another question?—That would save a great deal of delay to the contractor.

6407. (*Mr. Mather.*) You mean to say it would save him waiting?—Yes, it would save him waiting.

(*The Secretary.*) There is no proposal to pay bills for large amounts at the stations.

(*Witness.*) That of course is not our business at all, but they are paid at the stations abroad.

6408. (*Chairman.*) There is not much delay in paying the bill at the station or in London?—No, they get a cheque. In that bill I notice it was two days only from the time the bill was passed until the cheque was issued, but so far as we are concerned for our own work, that is what we always want at the end of a contract (*handing in a document*). That shows us how much has been paid; that is the final account.

(*The Secretary.*) But that is not with regard to the accuracy of the accounts, but only to know how you stand—how the money is expended.

6409. (*Chairman.*) As regards precipitate expenditure at the end of the year owing to the system of returning unexpended balances, I think you told me that that was a matter on which Colonel Bagot would speak with more advantage?—We have no end of the financial year in dealing with Loan Services, so we are quite absolved from that difficulty.

6410. Then we will not trouble you on that subject?—It is one of the greatest advantages of the loan system of working that there is no 31st of March.

6411. (*Mr. Mather.*) Does that cover also the expenditure for all items under the 2,000*l.* limit?—On loan.

6412. The loan goes down as far as that?—The loan goes down to anything that is charged to loan.

6413. On works?—On works. That return is of the works carried out under the Barracks Act, which shows that there are a great many under 2,000*l.*

6414. (*Sir George Clarke.*) To go back to the Registry for a moment, I understand that there is a special branch of the Central Registry in the Horse Guards, so that in the case of that Registry I suppose you can get the papers immediately?—I do not think you can get them as quickly as we should; I do not think they are always put away in a manner in which they can be

Col. C. M. Watson, C.M.G., R.E.
 27 Feb. 1901.

arrived at quickly. I am under the impression that they are not now arranged as they were formerly, by stations; it would save a great deal of delay in getting papers if they could be pigeon-holed by stations, and I am under the impression (I speak under correction) that they are now put away by the Registry number—I forget what they call the new number—and it sometimes takes three or four days before we can get a paper out of the Registry.

6415. Then I think you said that you had made proposals for a general reform of the Registry?—Yes.

6416. Now, what became of those proposals?—I should think it must be a year ago that I gave them to Sir Ralph Knox. I suggested that we should go into the question, and see if we could not hasten matters a little.

6417. And you never heard any more of the question?—No, I do not think he has had time to take it up.

6418. Is any time lost in getting your letters written?—Sometimes.

6419. Have you your own type-writers?—No, the type-writers at the Horse Guards belong to the Central Branch.

6420. Then you have to send your letters to the Central Branch?—Yes.

(*The Secretary.*) You have type-writers in your building?

(*Witness.*) Yes, but they are not under us.

6421. (*Mr. Gibb.*) Do you mean the machines or the boys?—The young ladies are under the Central Branch; I would prefer it if we had our own, and managed it ourselves.

6422. (*Chairman.*) If you sent up a letter to the young ladies, they would type it for you at once, would they not?—Sometimes we have delays, I know.

6423. (*Mr. Mather.*) Do you send it over from the Horse Guards?—No. There is a type-writer subdivision at the Horse Guards. I can tell you what does cause delay sometimes, and that is that work is sent over from Pall Mall to be type-written by our type-writers. I think it would be more business like that each branch should have its own type-writing arrangements.

6424. (*Chairman.*) Supposing you were at all slack in your branch, the young ladies might be unoccupied for the moment?—I have not known the time that we have been slack in the last 10 years. There would be no difficulty of that sort; we have plenty of work. I would not propose that each sub-branch at the Inspector-General of Fortifications' Office should have a type-writing branch, but that there should be a type-writing branch belonging to the Inspector-General of Fortifications' Office, and under the Inspector-General of Fortifications.

(*The Secretary.*) But there are practically no other branches in that building except those of the Inspector-General of Fortifications. Can the type-writers be used by anybody except the Inspector-General of Fortifications' staff?

(*Witness.*) Yes; sometimes papers are sent over from Pall Mall.

6425. (*Mr. Gibb.*) If you write a letter this morning which you want to go by to-night's post, have you got to send it to the Type-writing Branch to be written out?—I think the present system works all right as regards that, and generally we get them back quickly.

6426. You do send them to the Type-writing Branch?—All our letters go to the Type-writing Branch.

6427. (*Mr. Mather.*) Do you always write out in full a letter, and then send it to the Type-writing Branch?—Generally.

6428. Write it out by your clerks?—Yes.

6429. You do not have it taken down in shorthand?—No, it would be a great help to us if we could have it taken down in shorthand.

6430. But you do not dictate it?—No, we simply have to write the draft; either myself or my assistant as a rule writes the draft; and then we send it to the other department to type for us. It is much better at the stations that they should get the letter in type than ordinary writing.

6431. Where does the economy of time come in if you first write it out yourselves, and then send the

written copy up to be type-written?—Because we want three or four copies.

6432. But you save no time by dictating?—No.

6433. But as between yourselves and the type-writers, you save no time by dictation in shorthand?—No, except that it is rather shorter dictating than writing out at times.

6434. But you do not dictate, that is my point?—No, because as the type-writing is not done by our own clerks, it is necessary to send in long hand to the type-writers.

6435. (*Sir George Clarke.*) Mr. Gibb yesterday raised the point that the Inspector-General of Fortifications' functions should only come into play when the Quartermaster-General has put forward a definite statement of the accommodation required. I want to ask you whether you do not think that unless somebody pressed for definite answers to those questions, there would be long delay before the thing in complete form emanated from other departments of the War Office?—I think theoretically it ought to come from the Quartermaster-General, but I think practically, as we know when we have the money, it is quicker starting the thing in our branch. I think there is a saving of time.

6436. You think there is a positive saving of time in your starting a question and following it up, I suppose, until you get a definite answer?—I know that there is 100,000l. put in the loan for building a barrack; theoretically, I ought to write to the Quartermaster-General and say, "I have 100,000l. to build a barrack; who do you want to put in it?" and the Quartermaster-General would then have to write down to the General and get his ideas, and discuss the question with him, before replying. What actually happens is this: I save one stage, because I write direct to the General and ask him to make a suggestion, and then he sends in the suggestion in this form (S. 1) and I send it to the Quartermaster-General.

6437. (*Mr. Gibb.*) Surely a great deal of that might have been done before it got into the loan?—Oh, no, everything is constantly changing; if we propose a barrack this year, and do not get the money for five years, the accommodation would be different, and the type of barrack would be different.

6438. (*Sir George Clarke.*) And the organisation of the Army might be different?—The organisation of the Army might be different; the units of the Army are never remaining constant. I can give a good illustration to show the alteration caused by an alteration in the units; it is the same Colchester case. When it was finally settled to build the barracks at Colchester, we had just finished another Infantry Barracks at Colchester, and I was in hopes that we could use the same plans, and go on at once; but just as we were going to do that a new order came out to say that 80 men were to be added to every battalion in the British Service; and a barrack that will hold 720 men would not hold 800; and it would not do to simply build a new barrack block for 80 men, because then you would have the companies split up. So we at once re-designed the barrack block and arranged to take the new number of men. We had hardly finished those new plans for the new type of barrack block when a new order came out that all new barracks were to have dining-rooms. That necessitated a complete third re-drawing of the plans. We had to make it so as to take in the dining-rooms, and to make some other alterations that had been introduced in the organisation of the barracks; and the bills of quantities of course had to be taken out again. We had, as it were, to start quite afresh. The General Officer Commanding the District, if he had made the plans, would not have known of all these changes of organisation. I only instance that that as a case showing that we cannot start at once and say, we have to build a barrack and that is all about it.

6439. (*Mr. Gibb.*) Does not the story that you have just told us point to the desirability of the people responsible making up their minds what they wanted before time is expended by the Inspector-General of Fortifications on the details of the plans?—But we hurry it on by trying to press them to make up their minds; that is what it really comes to.

6440. (*Sir George Clarke.*) What you mean is that if a question is being threshed out between three Departments, with nobody trying to get an answer, the time

might be longer than now?—Yes, we have much interest in trying to get it settled.

6441. (*Colonel Miles.*) Not more than the Quartermaster-General, have you?—We have as much interest as he has.

6442. But he may have troops waiting to be housed?—Yes.

6443. (*Sir Charles Welby.*) So far as you are hampered by changes of policy, that is inevitable?—That is exactly the case that is going on about the barrack at Malta, the Pembroke Barrack there. I wrote the other day to know how many quarters for married soldiers we were to build. The Quartermaster-General put it to the Adjutant-General, who said it was quite impossible to say, and the Quartermaster-General wrote back to say it is quite impossible to say how many quarters for married soldiers are required. I thought it best under the circumstances to build some. We do not know whether it is the right number; I know, indeed, it is less than the right number.

6444. (*Colonel Miles.*) And the same at Aldershot; you over-built?—That is really due to changes.

6445. (*Sir Charles Welby.*) That is unavoidable?—Yes.

6446. You are affected by those questions of military policy respecting barracks, which are settled by the Army Board, that is to say?—Yes, and what we try always to do is to get the latest idea and live up to it; but I think it does save time that we press for a decision as to what is decided rather than wait to be told.

6447. (*Sir George Clarke.*) You have read Mr. Bull's paper, and you know his proposal to make a professional examination of bills in the Accounts Branch?—Yes.

6448. Short of having an independent person under the Accountant-General, an independent expert in every district, if you have a case, say, like that of Obereite, which may have to be put in to a greater extent than was originally anticipated and provided for, there is no possible check on that, is there, except by an expert, the inspection being on the spot when the thing is being done, because it gets covered up afterwards?—Absolutely none; our check is the signature of the Bill.

6449. Therefore, if the Accountant-General were to take over the work, he must have several experts in every district?—He would have to duplicate all our staff.

6450. It has been suggested to us that barrack buildings might be transferred to the Office of Works; is it the fact that barrack work is so technical as to require a specially trained staff, and that that staff must be in touch with the life of the Army?—Absolutely.

6451. Is it not the case that soldiers, from the General Officer Commanding downwards, are exceedingly particular with regard to barrack detail, and ready to complain of anything wrong?—Yes.

6452. As regards your works, have you had any complaints?—No; I have been very pleased with our work under the Barrack Act; I do not think I could mention a single case, and I am always going about asking for comments with a view of improving; but the troops seem, so far as I can gather, to be thoroughly well satisfied with the barracks that we have provided recently.

6453. Has there been any official inquiry into your works by a perfectly independent person or body?—There have been two official inquiries you may say. Before we had the Barrack Loan, 1890, Mr. Edward Stanhope, who was then Secretary of State for War, thought it would be advisable to get some civil architects to go down to Aldershot and examine our works and buildings; and he sent down, I think, Mr. Creed and Mr. Pilkington; they went down and made a report, and I rather think that their report was presented to Parliament. I know it was very satisfactory; they had practically no comments to make. I might mention that there was a second inquiry before the Loan of 1899. Lord Lansdowne asked Sir John Taylor, who was at the Office of Works, to go down and inspect. He went round to Aldershot, Colchester, and several other stations, and he gave us a most satisfactory report; in fact, he said we were economical, and the work was well carried out. He made some suggestions, but they were for the most part in favour of increased expense. They were suggestions we knew of quite well, but had not intro-

duced because it was doubtful whether we ought to spend the money. We are always trying to keep the money down.

6454. What is your staff for administering the Loan?—I have two Engineer Officers and twelve clerks.

6455. How many buildings have you erected?—A very large number. This return I have here under the Barracks Act shows the works completed under that Act. Under that Act we have erected 1,185 buildings, and reconstructed 153.

6456. How many troops have you accommodated?—We have provided accommodation for 867 officers, 268 warrant officers, 2,525 married non-commissioned officers and men, 24,878 single non-commissioned officers and men, 1,138 hospital beds, 83 nursing sisters' quarters, and 3,843 horses.

6457. (*Sir Charles Welby.*) Under which Act was that?—Under the Barracks Act, 1890.

6458. Over how many years was that expenditure spread?—Practically 10 years. As I explained in my former evidence, the expenditure is always, of course, least in the first year or two; then it goes up to the maximum, and then gradually works down, and now practically we have spent the whole of the Barracks Act Loan. On barracks, not counting lands, we have spent about 3,800,000*l.*, for which we have provided that accommodation. Under the Military Works Loan we shall provide a larger amount of accommodation, because we have more money; but we have not yet got to the stage at which I can tabulate the total amount of accommodation that will be provided, because some of the schemes are not yet settled.

6459. (*Sir George Clarke.*) In carrying out these services at stations, I suppose the Commanding Royal Engineer there is very important to the effective execution of your work?—He is. He is of course really responsible; the General is actually responsible, but he must hold the Commanding Royal Engineer responsible for all professional work.

6460. Does the Inspector-General of Fortifications, as the head of the Works Branch, appoint his own agents at the stations?—I think the Commanding Royal Engineers are appointed by the Adjutant-General, who is advised by the Deputy Adjutant-General; he consults the Inspector-General of Fortifications, but I do not think the Inspector-General of Fortifications appoints.

6461. Has there been a tendency of late to reduce the position of the Commanding Royal Engineer at stations, in regard to his status with respect to the General?—I think there has rather; the Commanding Royal Engineer was formerly on the Staff of the General, and according to the last regulations he is not on the Staff of the General; I do not quite understand his position.

6462. (*Colonel Miles.*) He is attached to the Staff?—He is attached to the Staff, but his position is not as important; it has been rather diminished, I think, in importance by the fact of his being taken off the General's Staff.

6463. (*Sir George Clarke.*) And you think that that will weaken his position at the stations?—Not having been a Commanding Royal Engineer myself, I cannot say, of course, but I do not quite know what his position is now.

6464. (*Colonel Miles.*) It goes back, does it not, to the position he was in before?—No, he was in a better position before, because originally the Commanding Royal Engineer was absolutely responsible for all the works.

6465. You mean immediately before?—Yes.

6466. But there was a change made before that again?—Perhaps I might say what I think was the history of the thing. Formerly the Commanding Royal Engineer was absolutely responsible to the Inspector-General of Fortifications for all questions of buildings, and he corresponded directly with him; his letters did not go through the General at all. That was thought—and I think advisedly—not to be a very good arrangement, and he was then placed on the Staff of the General, and all the correspondence went through the General Officer Commanding; but the Commanding Royal Engineer was really the responsible man. But now of late years the Commanding Royal Engineer has been taken off the Staff of the General, and is not in as good a position as he was before. Therefore the effect of each grade has been apparently to reduce the importance of the Commanding Royal Engineer.

Col. C. M.
Watson,
C.M.G., R.E.
27 Feb. 1901.

Col. C. M.
Watson,
C.M.G., R.E.
27 Feb. 1901.

6467. (*Mr. Mather.*) Is that the same in every district?—Yes, it is the same in every district; it is a matter for the King's Regulations. I daresay Colonel Miles knows better than I do the position in the districts.

6468. (*Colonel Miles.*) I really do not think it makes very much difference; but, as I take it, the present system of attaching him to the Staff, and not making him so fully on the Staff of the General, goes back to the system that was in vogue about 10 years ago, I think?—You mean after he was first put under the General.

6469. (*Sir George Clarke.*) There was a transition period that did not work well at all, I think?—No. If you take, for instance, an important station, say, Bermuda, there the Commanding Royal Engineer is really only a regimental officer, although he is entirely responsible for the whole of the engineer work, and spending thousands of pounds.

6470. And you think that any weakening of the position of the Commanding Royal Engineer as the responsible adviser on important questions of the General Officer Commanding must tend to delay and loss of economy?—I think he ought to be on the Staff of the General Officer Commanding. There is one paragraph in the King's Regulations that, I think, has rather made a difficulty in some stations; it says that the Commanding Royal Engineer is to communicate with the Chief Staff Officer. My own feeling is that, so far as engineer works are concerned, he should have nothing to say to the Chief Staff Officer—that he should be his own Chief Staff Officer.

6471. For engineer works?—For engineer works, and that if the General is away, the Commanding Royal Engineer should be absolutely responsible.

6472. (*Colonel Miles.*) Do you really think that the Commanding Royal Engineer should not be under the Chief Staff Officer?—Certainly; I think it is a mistake.

6473. (*Sir George Clarke.*) Only with regard to works services?—Quite so.

6474. (*Colonel Miles.*) You would separate out the works services from the remainder?—Yes, I would. I think it would be better if the works services were quite apart from what you call the discipline part; so far as that goes, he must, of course, be under the Chief Staff Officer. Perhaps I might explain a little more what I mean. I would say that in a case like Bermuda, supposing the General was not able to deal with any question, there should be no question of the Chief Staff Officer dealing with works, that the Commanding Royal Engineer should sign the letters.

6475. (*Colonel Miles.*) He does?—In some stations he does, but it varies.

6476. (*Sir George Clarke.*) The point being, of course, that you think the responsibility for answers to letters on engineer subjects should rest with the person who has professional knowledge of the matter?—Entirely.

6477. You have had, I believe, considerable experience of administrative work in Egypt?—I was sent out to Egypt when the Egyptian Army was first started, and I was put in charge of the job of reorganising the Egyptian War Office, and, practically, I had the whole of the War Office to organise, that is to say, I had to deal with all questions of buildings, pay, clothing, provisions, stores, and everything about the Army, except recruiting, training, and discipline. Sir Evelyn Wood, who was the Commander of the Egyptian Army, simply used to arrange with me personally what he wanted done, and I was then left to carry it out in my own way. On all questions that had to be discussed with the Minister of Finance—which corresponds to our Treasury—I went direct to the Minister of Finance; we had no intermediary in the War Office between my position and the Minister of Finance. The result was that we got along very quickly and satisfactorily.

6478. Then you have had considerable experience really in administrative work on a large scale, and is it not your opinion that the real defect of the War Office system, putting aside all details, is that no one is allowed to do his own work and to be held to be responsible for it without being checked and controlled by a large number of other people, and that the result is a great waste of time and no gain of economy; is not that your general broad view of the situation?—Yes, I think broadly that is quite correct. I think it would be better if the Inspector-General of Fortifications was

told, "You are given so much money by Parliament to provide barracks," and then the Inspector-General of Fortifications was allowed to provide barracks. All we want is to be in the same position as the Director of Works at the Admiralty.

6479. The Director of Works at the Admiralty is practically in that position?—Yes, he is.

6480. That is to say, he makes his own contracts?—Yes.

6481. And, as I understand, he even buys his own stationery?—I do not know whether he buys his own stationery; but I believe that he provides his own printing.

6482. Therefore you regard him in carrying out his duties as very much less hampered than the Inspector-General of Fortifications is?—There is no question of it.

6483. (*Sir Charles Welby.*) When you say that he has his own money to spend, he is not given a lump sum to spend, any more than the Works Department here is?—No, he has to show how the money is to be spent, of course; but once it is arranged how it is to be spent, he is not interfered with further.

6484. But he is under the constant control of the Financial Secretary to the Admiralty, I imagine, to secure that he spends the money on the services for which it is voted; he cannot spend the money as he likes, any more than the Inspector-General of Fortifications can?—No, that is the last thing in the world that I should advocate.

6485. (*Sir George Clarke.*) Your point is that during construction of a work you should be left alone, the thing having been decided, and a certain sum of money having been allotted to a specific work, the Inspector-General of Fortifications should have authority to spend it straight ahead, without any question?—Exactly.

6486. But you do not mean to resent the after audit which is in the interests of Parliament?—No, I think the more after audit there is, the better. Perhaps I should explain that on the Loans Works I am very much less hampered than on the Estimate Works.

6487. (*Mr. Gibb.*) Is not your answer to Sir George Clarke on the principle that he enunciated a little inconsistent with the previous part of your evidence, where you objected to the General Officer Commanding being given the responsibility in regard to the selection of sites, and wished that the Inspector-General of Fortifications should come in, to some extent, to review and control the General Officer Commanding?—But the Director of Works at the Admiralty is in the same position as the Inspector-General of Fortifications, and the Admiral at the station is in the same position as the General Officer Commanding.

6488. But the principle suggested to you was whether the vice of the War Office system was not that everybody was checked and controlled by somebody else, and you rather adopted that, having previously stated that you thought the Inspector-General of Fortifications should be free from control, but that the General Officer Commanding and other people should not?—No, I think the more freedom you can give to the General Officer Commanding the better. The only thing is that I think the Inspector-General of Fortifications should be the individual who should be responsible as to what freedom was to be given to the General Officer Commanding; the Inspector-General of Fortifications should be the official who should be held responsible, and be exactly in the same position as the Chief Surveyor of the Office of Works, who is the person held responsible; he makes his own contracts, buys his own stores, and engages his own staff; he is in the same position as the Director of Works at the Admiralty. There is no question that the Inspector-General of Fortifications is more in leading strings than either the corresponding official at the Office of Works, or the corresponding official at the Admiralty.

6489. Still it comes to this, that you rather reduce your answer to the proposition that the Inspector-General of Fortifications should be free from fetters, instead of its being a general principle that everybody connected with Army administration should be free from fetters?—You must have somebody responsible. I do not want him to be free from fetters at all. We are bound. After everyone has discussed the question we are told that we have to spend money on certain services. I have the list here (*producing the same*). That is what we are bound by to the Treasury.

We are given so much money for each station. I say that we are not much fettered except as regards the registry and printing, and we are fettered with regard to staff; we have always to go to the Finance Department, if a man has to get 6d. a day more pay we have to get the authority of the Accountant-General.

6490. I liked your principle, but not the result that when it came to application to the Inspector-General of Fortifications you did not carry it out —

6491. (*Sir George Clarke.*) I think you have forgotten the question of contracts, of which we have heard a great deal from you and others. Is not the controlling power exercised by the Director of Contracts a constant source of considerable difficulty and correspondence and delay?—Yes.

6492. Is not the Director of Works at the Admiralty completely free from such controlling power?—Yes. As I say, the things we should like to be freer in than we are at present are such things as contracts, printing, staff, and a few other small matters of that sort. Also that financial control should take the form of post audit.

6493. Going now to a matter of detail, you gave some evidence about the working of the Stationery Department with you. Do you think there is any real economy in dealing through the Stationery Department instead of dealing direct with the printers?—I am very diffident about giving an answer to that question. I suppose we could get it done as cheaply if we went direct to the printers; I have no reason to think that we should not.

6494. Some question arose, did it not, in the India Store Department about passing through the Stationery Department?—Yes, when I was in the India Store Department we used at first to get our stationery for India (of which there is a large quantity) all through the Stationery Office; but the Director-General of Stores agreed that we would do better to do it ourselves; so we put up our packing presses, and made the contracts direct with the paper manufacturers; and I think in the first year we saved 4,000*l.* or 5,000*l.*, and saved an infinite amount of correspondence.

6495. There is one more question that I want to ask you, and that is a question with regard to the Engineer Regulations. Do not you think that some simplification of those regulations is possible. They seem to me to go into details which are quite unnecessary?—I think they might be simplified in some ways; but still it is an advantage having all the information in one book, and when you get to know the book it is not quite as complicated as it seems at first. But possibly they might be improved and reduced in size.

6496. (*Colonel Miles.*) Going back to the sites for a moment, the procedure as to site plans is, I think, that for re-appropriations or for a new building a Board assembles?—Yes.

6497. This Board, I think, consists of four or five officers, does it not; a Field Officer, a Works Officer, a Departmental Officer, and an Engineer Officer?—A small Board would consist of three and a large Board of five. An important Board would be five.

6498. From three to five officers?—Yes.

6499. Some cases occur where these Boards assemble and re-assemble on the same question several times?—Yes, they do sometimes; but it is not very often, considering the total number of sites.

6500. But it does occur?—It does occur.

6501. The proceedings of these Boards are then sent to the Commanding Royal Engineer of the District, are they not?—Yes.

6502. Then to the General?—Yes.

6503. Then from the General to you?—Yes.

6504. Then, if necessary, a further reference is made back again, and, if necessary, the Board is re-assembled?—Yes, it goes back to the Commanding Royal Engineer, because he has to give an account of the financial aspect of the question.

6505. So that a considerable number of officers are drawn into this site question?—Yes.

6506. Although the correct selection of a site is a very important matter, do not you think, on the whole, that the proceeding is somewhat cumbrous?—I think it is cumbersome, and yet it is difficult to see how to avoid it, because the theory is that if you are going to build a barrack for a new unit you want to have an officer of that unit on the site so that he may be satisfied. You

want a Doctor and you want a Barrack Officer. Of course, if you were to leave it entirely to the Engineer Officer who draws out the site plan, they might complain afterwards.

6507. But, to sum it up, might it not be left to the General, he taking such steps to secure the attendance of such necessary officials as might be required?—In many cases we do leave it to the General, but I do not think I would like to lay it down as a general rule that it was to be left to the General. I speak from practical experience.

6508. Passing on to another subject, you have shown that the functions of the Quartermaster-General and the functions of the Inspector-General of Fortifications are closely interwoven?—Yes. very closely interwoven.

6509. Perhaps more closely than those of any other two Departments?—Yes.

6510. Do not you consider that it would be an advantage, as tending to secure responsibility and prevent delay, if the respective duties of each were more clearly defined?—I have often thought that it would.

6511. Do not you think that there is, in default of this definition, somewhat of a tendency in some cases, perhaps, for one to usurp the functions of the other?—I think that a great deal of the success of the work depends upon the two Departments getting on amicably together. Since my time at the War Office we have had several officers in the Quartermaster-General's Department, and I do not think we have ever had any friction; we have always settled the questions together.

6512. I did not mean so much on account of friction—I was not anticipating that that arose between the two Departments—but as tending really to ensure a proper responsibility and to prevent delay, that the same sort of question should be settled by the same Department?—Yes, I think that would be very advisable.

6513. Take the question of dining-rooms, which I think you said delayed a barrack?—It delayed the barrack because we had to alter the plans.

6514. Who decided that there were to be dining rooms?—The Secretary of State.

6515. On whose recommendation?—There was a long discussion between the Inspector-General of Fortifications, the Quartermaster-General, the Adjutant-General, and the Commander-in-Chief.

6516. Your branch was fully aware that the question of dining rooms was not only on the tapis, but was even approaching settlement?—We heard of it, but we could not alter our plans until we were told that there were to be dining-rooms.

6517. Would you say that that was an Inspector-General of Fortifications' question or Quartermaster-General's question?—It is an Inspector-General of Fortifications' question, because it means increased expense, and the Inspector-General of Fortifications has to ask for the money.

6518. But I mean as to the desirability of the service?—I think it is a question to be discussed by the Army Board; everyone ought to have a say on that.

6519. (*Sir Charles Welby.*) As a matter of fact it was discussed by the Army Board, was it not?—Yes.

6520. It is a question of military policy affecting recruiting and so on, and was so discussed?—Yes.

6521. (*Colonel Miles.*) Speaking generally, in the provision of barracks, certain well-defined functions should be the province of the Quartermaster-General and certain other well defined functions should be the province of the Inspector-General of Fortifications?—Yes.

6522. Turning to the duties of the Commanding Royal Engineer in the district who, as we have heard, is not quite in the same position now as before; he still remains directly under the General; he takes the papers in all districts direct to the General, I think?—Not always.

6523. Can you mention any case where he does not?—I would rather not mention a case, but I know of a case where the Chief Staff Officer did try to interfere. But it is a personal question.

Col. C. M.
Watson,
C.M.G., R.E.

27 Feb. 1901.

Col. C. M.
Watson,
C.M.G., R.E.
27 Feb. 1801.

6524. But in working out the details of re-appropriations or of new buildings, or of other matters in the district, he must come to the General?—He must come to the Deputy Adjutant-General for B. services.

6525. He must come to the Staff?—Yes; therefore I think that it would be better that he should be on the Staff, and recognised as such, as he is so intimately mixed up with the Staff.

6526. One disadvantage of placing him on the Staff may be said to be that he takes things too much into his own hands, and decides things too much without consulting the Chief Staff Officer?—No, I do not think so.

6527. Lastly, do you not think that advantage would result if the Generals Commanding Districts generally were kept as fully in touch as possible with the building policy of the War Office?—Yes; that we always try to do. The moment that we know of anything we write at once. We are very particular about it. It is most important to keep them as much up to date as possible, and whenever we make a new plan of barrack building we always have a number of copies made and send them to the Generals, so that they may know at once our very latest idea. That, I think, is most necessary; and when a General has to design a new barrack, even if there is a plan that has not got to the stage of issue, generally we send him a copy of it to show him what the very latest idea is.

6528. (Mr. Beckett.) I just want to ask you about the Hong Kong Hospital. I did not quite gather from your evidence whether you thought the delay that had occurred was due to the fault of individuals or to the fault of the system which at present prevails?—I do not know whether in that case it was not rather the fault of the General, and yet I am quite sure he was doing what he thought was the best. He thought, "Here is a very irregular hilly site." It was forgotten at the station that we were making plans to suit that site, and he said the first thing to do was to level it.

6529. (Chairman.) Whose business was it?—I suppose the Commanding Royal Engineer's; but the Commanding Royal Engineer died before he came back to England. I intended to ask him about it; but we never got a satisfactory explanation as to why this change of front was decided upon. Of course, if it was advisable to level the site the War Office ought to have been at once informed, in order that the drawings might be altered accordingly.

6530. (Mr. Beckett.) But I gathered from what you said that the site finally fixed upon was the site that was first favoured by the General?—Yes.

6531. He selected that site and he asked you to make plans and you made those plans?—Yes.

6532. Then where did the hitch occur?—Because he altered the site.

6533. Then when he altered his mind, what was your action; did you try to assimilate your ideas to his?—When we got the new site we set to work at once to make new plans, and those new plans went out to the station.

6534. (Mr. Gibb.) It was not a case of alteration of mind, but that he assumed that in building your hospital you would cut into the slope and provide a level?—He did more than that. He levelled the whole site.

6535. He assumed that you would make it a level foundation and then build; it was not a case of alteration of mind?—But the curious thing was that the plans sent to him showed an elevation of building suitable to the slope.

6536. (Mr. Beckett.) Anyhow the delay that arose was mainly due to the fault of an individual. You cannot say that the system works badly?—No, the system was not to blame.

6537. And you think that the system works with as little friction and delay as is possible?—I am really always trying to find out how we can do away with delay. Whenever we see any points where we think we can hasten matters, we do.

6538. You do not think there are any inter-communications or conferences that might be cut out?—Here at the War Office.

6539. Yes?—No, I think the more conference there is the better. Of course the Department we deal mostly with is the Quartermaster-General's, and I think our

conferences with his officers do facilitate the work very much.

6540. It tends to security?—Yes.

6541. But from your evidence it appears that the Department that you are the most dissatisfied with is the Registry Department?—The Registry is really hopeless, if I may use the expression.

6542. I gather that you have drawn up some recommendations with regard to the working of the Registry?—Yes; I drew them up some time ago. Would you like me to put them in?

(Chairman.) Yes, I think we might see them.

6543. (Mr. Mather.) Is that from the General Registry, or from your own Department?—It is viewing it specially from our point of view; it is showing how the Registry could be improved so as to facilitate our work; and that would apply no doubt generally. I did not like to speak for anyone except for my own branch.

6544. You qualify it to that extent, that it is a scheme drawn up to facilitate that work in your own Department?—Yes.

6545. (Mr. Beckett.) Your scheme is based, I take it, on certain principles?—Yes.

6546. And you think that those principles might be generally applicable?—Yes. I think the Memorandum is unnecessarily long, and I could easily cut down and condense it. I will do it, if I may.

(Chairman.) If you please.

6547. (Mr. Mather.) May I just put one supplementary question with regard to the barracks which you stated were proceeded with notwithstanding that you could not obtain from the Quartermaster-General or the Adjutant-General their decision as to the number of married men you were to provide for?—That was a small matter, it was only a question as to the exact number of married quarters that we were to provide. We asked whether we should provide 36 married quarters at these barracks, which is the number we would generally provide, and the Quartermaster-General told us he really could not tell us how many we would have to provide; so the Inspector-General of Fortifications thought it was safer to go on. I knew that the new scheme would mean a good many more married quarters, and I thought we would not be wrong in building the 36 and going ahead.

6548. Why would it be impossible at that time for the Quartermaster-General to tell you that?—I do not know; it rested with him.

6549. No further inquiries were made?—No.

6550. And he knew that you were going on with the small number?—Yes, and he was satisfied with it; but there was some scheme I had not heard of to provide for the circumstances of the Mediterranean Garrison.

6551. I thought you gave us that as an instance of want of instructions coming to you at the time you were compelled to go on with your work?—It was to illustrate that.

6552. But you settled the point by saying, "I shall proceed to build the usual number for 36 quarters," and the Inspector-General of Fortifications said "All right"?—Yes, and therefore it showed that the intention is to build more. But it was quite an exceptional case. That is the only case I know. You asked me whether it ever happened.

6553. (Sir Charles Welby.) We understood from you yesterday that very great difficulties were found in acquiring the land for rifle ranges and training grounds provided for under the loan of 1897.—In some cases, not in every case.

6554. But at all events your evidence went to show that at the end of three and a half years only half that money had so far been expended?—Yes.

6555. Do you think that that delay is in any degree due to unsuccessful negotiations on the part of Generals of Districts which were unsuccessful owing to their want of competent professional assistance in dealing with land agents and owners of land?—No, I think the delay is simply due to the fact that the owners do not want to sell.

6556. You think that the General Officer Commanding's staff, as at present constituted, is quite adequate and satisfactory for dealing with matters of lands?—The present system is that the General Officer Commanding proposes that we should buy a certain

piece of land. We then get the War Office Valuer, Mr. Elwell, to value it, and having got his valuation we go to the Treasury for authority to purchase it.

6557. (*Mr. Gibb.*) Have you got compulsory powers?—We invariably ask for compulsory powers now.

6558. If you have compulsory powers, you can get possession in a couple of months?—But we cannot under the Military Lands Act.

6559. But there is a procedure provided?—It does not apply to barrack lands, only to defence lands; it has always been done for fortifications. I do not know why, but the Act does not apply to barrack lands.

6560. Does not the right exist to deposit the estimated value of the land and then take it?—No, I do not think under the Military Lands Act we can do that.

6561. It may be that it is not applied?—We can do that under the Defence Act, but not under the Military Lands Act.

6562. You mean that the right does not exist?—No, I do not think so.

(*The Secretary.*) Yes, I think it does exist. You can always take compulsory powers.

(*Witness.*) But you cannot take the land; before you can put the compulsory powers in hand you must have an inquiry, and a Provisional Order signed by the Secretary of State, and you must have a Confirming Bill passed by Parliament before you can take the land. Under the Defence Act, on the contrary, as soon as the notices have been issued, the land can be taken when the terms of interest have been settled with the owner. We were anxious at one time to get the same powers applied to barrack and rifle range land, but it was not agreed to. I think it was thought that it would not be desirable from the public point of view.

The witness withdrew.

Colonel C. H. BAGOT, C.B., further examined.

6571. (*Chairman.*) We want to trouble you particularly about the question of unexpended balances. We understand from Colonel Watson that he is in, perhaps, rather a happier position than yourself, inasmuch as most of his expenditure is done under loans, and therefore he is not troubled by the 31st of March; but we have had several statements to the effect that work is hurried at the end of the year under the apprehension that if the money is not spent it would have to be surrendered; are you able to tell us whether that is the case to any extent?—It is very much so.

6572. Could you tell us what practical difficulties there are which lead to that course being taken?—When a sum of money has been voted for any particular service, we have of course to wait for authority before we actually begin to work out that service, and to get the final plans of procedure ready.

6573. By waiting for authority, do you mean that you have to wait until the money is voted?—Until the money is authorised. The result is that as there is a great deal to do in the districts, the local officers do not take up projects or services—they do not take up the final stage unless they know that the services are coming up to be done. We tell them as long as we can before. For instance, the General Officers Commanding have been told for next year the services that they may expect to have, and they have no doubt thought out to a certain extent those schemes; but the final stages have not been entered into. Then after the financial year begins there is a certain amount of discussion and arrangement about these things, and there are delays—unexpected delays—of all sorts. That very often puts the thing somewhat late towards actual execution, and the consequence is that we very often lose a great deal of the building time (there are only six months of really good building time in this country) in preliminaries and in working out things, and then we start to build under the contract towards the end of the year.

6574. That is because you are not ready?—That is one point of view.

6575. Is there any reason why you should not be ready?—It is the system that we do not have things fully worked out, pigeon-holed, and all ready to put into the estimates, to start on directly the estimates are proposed.

6576. Is there any reason why they should not be all ready?—The reason is that the ordinary staff is merely sufficient to go on with the ordinary routine, and they

6563. (*Sir Charles Welby.*) But to go back to my point, do not you think it might possibly conduce to more rapid and successful negotiations in these cases if the General Officer Commanding had at his elbow someone analogous to the skilled professional agent?—I think in some cases it would be very desirable, and there is an agent in the case of some districts. I think there is an agent at Portsmouth, and at Plymouth.

6564. What class of official is he?—A local land agent.

6565. Under whom?—Under the General Officer Commanding.

6566. (*Mr. Mather.*) There is one at Portsmouth?—Yes, I do not see why it should not apply to other districts; it is only a question of expense.

6567. (*Sir Charles Welby.*) And the General Officer Commanding conducts all his negotiations for the purchase and sale of land through this agent?—No; the agents are employed in looking after War Department lettings.

6568. He is not a military man?—No.

6569. And you think that that system might be extended with advantage to other districts?—Yes, I think so. I know in Ireland now, the Commanding Royal Engineer in Ireland is anxious to get that system extended to Ireland. He has a good land agent, a Militia Officer, working in his office, and he is anxious to keep him employed.

6570. Should you say that in the districts where such officers exist, on the whole negotiations with regard to the purchase of land have proceeded more smoothly and rapidly than in districts where they do not?—I could not say, I have no experience.

Col. C. M.
Watson,
C.M.G., R.E.
—
27 Feb. 1901.

Col. C. H.
Bagot, C.B.

have such an amount of work in hand for the current financial year, that they have not really the time to work out any extra projects.

6577. That is a question of staff?—That is a question of staff; but it is also a question of this: that a great many of the projects are really only in the initial stage; that is to say, they exist in the minds of the local staff, but we have not had them yet. The project has not been submitted.

6578. (*Mr. Mather.*) Could you give us one instance to illustrate your statement?—Of this present year?

6579. Of any year. Any work that was retarded in consequence of this system?—Yes, there was a case of some married quarters at Carlisle Barrack, at Cork Harbour. Those were in for this present financial year, and a certain amount will have to be spent in this financial year. The local staff set to work to work them out, and they got a certain distance and then they were suddenly pulled up with a round turn. These married quarters were in the fort, and it was considered by the fortifications side that the site was not a very good one from a fortifications point of view. There was a certain amount of talk and argument about it which delayed us, and there were other delays locally from the tremendous pressure that there has been on everybody during this present crisis; and the end of that was that they did not get the contract until quite the end of 1900, and instead of the whole sum being spent, only a certain proportion has been spent and can be spent in this year; the remainder lapses, and we have had to re-provide it in the following year.

6580. In the estimates now coming on?—Yes.

6581. The whole thing lapses?—Not the whole thing, a proportion.

6582. Are the works being continued?—Yes.

6583. There has been no stoppage, then, to the construction?—No.

6584. Where is the money coming from to pay the wages?—The money was provided for this year, but more was provided in this financial year than they can spend; and the consequence is that it lapses.

6585. More than they can spend within the period, you mean?—Yes, within the period up to the 31st of March. And there is another service in Egypt, the reconstruction of Kasr-el-Nil Barracks in Cairo. Owing to prolonged negotiations with the Egyptian Govern-

Col. C. H.
Bagot, C.B.

27 Feb. 1901.

ment the General Officer commanding is not able to undertake any work this year. That money lapses, and it would come as a burden on to 1901-2. As a matter of absolute fact, that service has been transferred to loan, but that would have been the effect.

6586. (*Chairman.*) To come back to this point about your being unable to begin work until late in the year, I understand that now three months before the close of the financial year the Secretary of State intimates what works are likely to be sanctioned in the estimates, and then you refer those to the districts, and plans are got out?—Scarcely so long as that. I think it is a couple of months before; at any rate, the General Officers Commanding have been now informed.

6587. Then it is a question of time. Supposing the Secretary of State gave you that information not three months but five months ahead, would not that give you time to get your plans ready before the 1st of April?—Yes, it ought.

6588. It would simply give you notice a little earlier?—It would give us more time. We should then begin building probably in decent weather.

6589. You do not, as a matter of fact, wait until the estimates are voted, when you get your information?—We do not wait in the case of any continuation services continued from the year before, but we have to wait for any other works unless we get special Treasury authority to go on.

6590. That special Treasury authority you can get almost as a matter of form?—We can. I do not know about every service, because, of course, that would be assuming that Parliament was going to vote the whole estimate *en bloc*, but certainly for any pressing service we should get authority.

6591. You would get Treasury sanction, which is equivalent to Parliamentary sanction?—Yes.

6592. Therefore, if you received this intimation of the rough estimate somewhat earlier, you would be able to begin your work earlier in the year?—Yes. But there is one thing to be said about that, which is, that when the General Officer Commanding puts forward a service he states the total estimate of the service and what he expects to spend in the year. The earlier in the year he has to send those estimates in, the worse pressed he is.

6593. Why, if he has to make that rough estimate in December instead of March?—As a matter of fact he sends it in July now, as it is. At any rate there is one thing to be remembered, and that is, that the amount of new services that will go into the estimates in any particular year is governed largely by the amount of continuation services from the year before, and to a considerable extent, of course, the ability or inability of the general to expend all the funds allotted to him would affect the amount of new services; so that we should have to be a little careful about it. However, we could get the Generals to go on, and get ready, undoubtedly.

6594. Supposing that you had that earlier notice and could begin your work earlier, would the difficulty of the 31st of March be alleviated to a great extent?—To a great extent; it would always exist.

6595. But what happens? Let us say that 5,000*l.* was allotted to a particular work, you begin the work and on the 31st of March you have only spent 3,000*l.*; what happens to the other 2,000*l.*?—The other 2,000*l.* lapses.

6596. You do not stop the work: you get that other 2,000*l.*?—We do not stop the work; we get the other 2,000*l.* to go on with in the next year.

6597. Therefore, there is no real difficulty in its lapsing, you do not stop the work?—Where it would hamper us would be that if the lapse was reported in time and we knew of it, we must re-provide it in the next year; we must go on; in other words we have the contract.

6598. The contract is made, and there is no stopping the contract?—No; but you see, when money is given for any particular year, we are most anxious to spend it in that year, because if we have to re-provide any of it the next year it stops our new services; it hampers our work; we get less work done in the year for which the money is voted, and less work in the following year, because we have to carry forward.

6599. (*Mr. Mather.*) Because they take your new demand as for new work?—Yes; they take it as part of the new money which they have to vote us. If we had run it close at the end of the year and it was not reported to us in time, it would not appear in the estimates for the next year, but we should have to go to the Treasury and ask for it as an extra, and the Treasury do not like that.

6600. The Treasury give you no credit for money unexpended, say, in the year 1900-01. When you come to present your estimates for 1901-02, they take no account of the fact that you had not spent what had been voted to you in the year before; they treat it as an entirely new demand, though it may be on the same work.

6601. (*Chairman.*) But if you know in time; if it is reported to you that this 2,000*l.* (which we will take for hypothesis) will not be spent, can you not make an arrangement by which that money is practically placed into a suspense account, owing to its not being actually paid away, but to its being what is called technically issued from the Exchequer?—There is no suspense account; there is no carrying over; it is a re-provision in the following year. But, of course, there is no stoppage of the work; the money must be re-provided.

6602. It has to be re-provided, but it leaves you less. But I thought there was a system by which the money in those cases could be considered as actually issued from the Exchequer, though it was not actually spent?—I have never had an instance of that in my experience.

6603. But the practical difficulty, as regards the 31st of March, is that if you carried over more than you thought likely, owing to certain works not having been included, you would be able to introduce fewer new services next year?—Yes.

6604. That is the chief difficulty?—That is the chief difficulty.

6605. Whereas if you spent more than you expected in the year, you would be able to introduce more new services the next year?—If we spent more than we expected in the year we should either have to defer payment to the following year, or get special Treasury authority for an increase.

6606. Or from a transfer?—Yes, or from a transfer.

6607. You can get authority for that?—Not for a transfer from one actual service to another, because the services remain as they are voted, but a transfer of the funds in the Vote generally.

6608. How far is it true that in order to spend the whole of the money for the year there is a rush to spend money at the end of the year?—There is a rush; everybody tries not to have lapses, because they are severely blamed for them if they are large lapses.

6609. They are really blamed more for not having made accurate estimates than for not having carried out the work?—Yes, they are severely blamed for having thrown money on the next year that they promised to spend this year.

6610. They would be blamed by you?—They would be blamed by the Inspector-General of Fortifications.

6611. Have you any suggestion to make yourself for meeting that difficulty, such as carrying the money over in a suspense account?—I think that is the only way to do it, to carry it over in a suspense account. If it can be done in that way that would ease matters a good deal.

6612. You think that under the present system there is actually waste owing to hurried expenditure at the end of the year?—I think there is very likely to be.

6613. Hurried expenditure very likely leads to more extravagance than carefully considered expenditure?—Yes; I would not say there is waste; there is likely to be waste, but I do not know that there is. I cannot say that there is waste, but there is considerable embarrassment, no doubt.

6614. (*Mr. Mather.*) On the other hand, may it not expedite the work from beginning to end to get it done within a certain number of months?—It does put pressure; it is not a good thing to be hustled.

6615. Apart from the scramble—that may be a contingency arising out of the system—if in the district they knew that the work ought to be completed in the financial year, and probably they would begin at the

Col. C. H.
Bagot, C.B.
27 Feb. 1901.

first start on the job to push it right away through so as to get it done in the year—it is an advantage to the service, is it not, to have the work completed in the very shortest time?—That would affect any work that we were carrying out by day work ourselves under our own supervision; but if it is a contract you cannot hustle the contractor; you must give him his full time.

6616. But hustling contractors is one of the most potent influences generally to get the work done within the time. One is always hustling the contractors?—But with very small success.

6617. Contractors will deal with you very carelessly, unless they are hustled on from time to time; they go from one job to another, just as it suits them?—Yes, but the contractor has before him the time for the end of the contract, and if that is in the next year you cannot do anything until the date comes.

6618. Would a contract taken on the understanding that it would go over to the next year probably be dealt with, financially, differently from any other contract?—No.

6619. (*Chairman.*) A statement has been made that there is a somewhat hurried, perhaps almost reckless, expenditure, at the end of the year on small items for barracks, and the explanation that has been given is that the Inspector-General of Fortifications thinks it is necessary to retain a certain sum in hand under Part III.; he retains about 5 per cent., I believe, of the money in Part III. in hand, and at the end of the year he sometimes finds that he has retained more than is necessary; then he sends round and practically issues a credit to the Commanding Royal Engineers in various parts, quite towards the end of the year, and says, "here, this is an additional amount of money you have not calculated upon, which you can spend"; and then they immediately run round and try and spend it in a hurry. Should you agree with that statement?—That certainly has not been the case during the last three years that I have been here.

6620. Have you ever heard that it has been the case before your time?—I have been told so. I do remember one case in which I was told there were Part III. funds available if I wanted them. But they must have kept a tight hand upon them in that year.

6621. Were you told at the end of the year?—No, in December, say, with the whole quarter before me; in November or December.

6622. You do not think that would be the cause?—I do not think there is much fear of that cause. As a matter of absolute fact, in the last two years Part III. has been in excess at the end of the year. There has been no saving, it has all been doled out. I think we must keep a reserve, because you suddenly get emergent demands, as for instance on account of storm damages from a place.

6623. It is a question of the amount rather?—I do not think the reserve is too much either, because we do not sit upon it and hatch it; we give it out when urgent services come in.

6624. But the general difficulty as regards the 31st of March and a suspense account has been very much got over by all the larger amounts being put into loan accounts?—Yes, certainly; that makes a very great difference.

6625. The tendency is rather to put more and more upon loan, is it not?—Yes, to put more upon loan.

6626. And less upon the Estimates?—And less upon the Estimates. I do not know that the Estimates will be less on that account though.

6627. About the continuation services, I suppose there is no trouble at all; it is only with regard to new works?—There is no trouble at all: we go on straight. Once a service is started it goes on to the finish.

6628. But the main difficulty is that you really do not get time to prepare your work. You do not get notice soon enough of what the Estimates are likely to be?—No. Personally I think that no service ought to come into the Estimates until it is in a pretty forward state, and recently the Inspector-General of Fortifications has sent round a circular to General Officers Commanding saying that the services must be well considered, and that costs of services should not be pitchforked into their statement for the Estimates, because, for one thing, the local staff would not be able to work them out if they got the whole lot granted.

6629. (*Mr. Mather.*) One hears with regard to the districts, that they have got into the habit of demanding ten times as much as they require or expect to have granted to them in the year—even twenty times as much?—Under what part?

6630. I mean that for the services that they require during the year, they would demand ten times as much money as they would expect to get?—You mean for insertion in the Annual Estimates?

6631. Yes?—Yes, in Part I. and Part II., and in fact every part.

6632. That seems a very wild sort of system?—The excess of demands over possibilities is tremendous.

6633. What has that arisen from?—It has arisen from the practice of entering every single service, putting forward for the Estimates every single service that the General Officer Commanding may think he requires in his district.

6634. Would it not be much more convenient if they were strictly to make a very careful selection of what was feasible, and not simply what was desirable?—Yes, exactly.

(*The Secretary.*) As a matter of fact, they do grade them into what they think urgent and what they think they will get.

(*Witness.*) They state against the services their order of urgency. It is done in order to get a list, and to put these things forward, so that we may see them; but I think it ought to be done in a different way. I think the services are rightly brought forward, but they should be brought forward in a different way; and we are now considering a system by which that shall be done, by which we shall get from every district a list of the services which the General Officer Commanding considers necessary, with as near an estimate as he can make of the cost, and by which he shall afterwards select from that list a certain number of the more pressing services to put forward for his annual estimates.

(*The Secretary.*) To put positively forward.

(*Witness.*) To put positively forward; that is the system which the Inspector-General of Fortifications desires to initiate.

6635. (*Mr. Mather.*) The positive services that he really required and he thought he might get, he would provide for largely in advance, so far as particulars are concerned, the plans of the scheme, and so on?—He might; I doubt very much whether there is much possibility of doing it. He has a great deal to do, and there are not too many people to do it.

6636. (*Sir Charles Welby.*) Your functions bring you into very constant communication with the Adjutant-General's Department, and still more with the Quartermaster-General's Department, do they not?—Yes.

6637. Do you find that the necessity for constant intercommunication between your department and those other two departments leads to much delay in the transaction of your business?—Of course it must lead to delay, and it does lead to delay; because when a thing is referred backwards and forwards and discussed it always takes time; and then we are in a different building—we are away from the rest—and so, undoubtedly, in our case it gives rise to delay. We are at the Horse Guards.

6638. That, of course, is a great drawback; but are you satisfied that the amount of intercommunication between these three departments which now takes place with regard to barrack questions is inevitable, or do you think it might be simplified and reduced?—In most cases it is inevitable. We get from the other departments a statement of their requirements, and we frequently have to refer back of course for further information. Things are discussed. We will say that a camp is asked for, or certain works for a camp; we have to find out how many men it is for, and so on; and then, if there are any permanent buildings or buildings of that class, we have to find out from the Quartermaster-General what his requirements are, and it may so happen that we may have to refer back several times as to size of fittings, and so on.

6639. One would naturally suppose that the process would be that the Quartermaster-General, as responsible for providing camps for the army, would make a statement to you of exactly what he required, and then,

Col. C. H.
Bagot, C.B.

27 Feb. 1901.

unless something very unforeseen arose, he would leave it entirely to your department to provide what he had requisitioned; but is it not rather the case that at every stage of the proceedings, when even the most trifling change arises, you feel bound to carry the Quartermaster-General, and in many cases the Adjutant-General, with you?—Yes.

6640. In every case that means a reference from the Horse Guards up to Pall Mall and back again, thereby involving constant delay and hindrance?—Yes.

6641. And you think that the more that could be reduced the more it would lead to the satisfactory carrying on of the business?—Yes.

6642. I should like to ask you with regard to the case of the provision of some huts which were required very urgently for South Africa last year. I understand that those huts were ordered, and sanction was obtained for them as a very urgent service sometime in the spring. I think you are aware of the case I refer to?—Yes.

6643. And that when the Secretary of State made enquiries as to the progress in obtaining those huts in the month of August it transpired that practically nothing had been done in the intervening time. Can you give the Committee any information with regard to that case?—I do not think that the case is exactly as you state it. We knew early in the year 1900 that we should have to provide huts for South Africa, and the designs were put in hand. We then were informed that we should have to provide first, and at once, for hutting a large body of troops at home. Eventually that was decided upon as chiefly and almost entirely field artillery. Therefore the drawings for huts for South Africa were laid aside, and the drawings for the huts of the home troops were put in hand. The patterns of the huts are different, because you give more space to people abroad than you do to those at home; and the Cape huts were laid on one side, because we saw that the war was going on, and we knew perfectly well that they could not be wanted until they got the country fairly settled; therefore it did not appear that the Cape huts were as urgent as the others.

6644. But I thought the service was authorised as a very urgent one, because it was absolutely necessary, in the first place, that the huts should be ready by the month of October. Is not that the case?—Oh no, not at all: that was not the case. Later on in the year, I think it must have been in July, Lord Roberts telegraphed home that he wanted hutting for a large number of men, 30,000 men. We then set to work at once to get ready the Cape huts. Then we referred to him certain questions as to requirements; there is a great deal to work out in these things; and the end of it was that at the end of July the Secretary of State asked about this, and he directed that a meeting should take place between the various departments to see about getting these huts, and to push it on at once. In the meantime the Commander-in-Chief at home had asked for some further huts for hutting at home, and we held this meeting and then set to work at once on the huts, got out the contracts, and so on.

6645. You said that after receiving the order for these huts, the designs were put in hand. Do you not keep what I may call stock designs for huts ready in case of such emergencies?—We had a stock design for emergency huts, but it was not suitable in this case. We could not work it, because since these designs were prepared, the Sanitary Committee have laid down certain floor spaces and cubical spaces, and so on, for huts abroad, and these huts we could not work in to those spaces; there would have been an extravagant waste of room and so on. Therefore we set to work to get out fresh designs for huts that would suit the requirements.

6646. Should not that have been done before the emergency arose? Would you not naturally revise the standard designs for huts in the light of any recommendation of that kind coming from that committee in anticipation of any emergency arising?—I think it should have been done.

6647. That is to say, you have standard designs, but in this instance they had not been kept up to date?—Exactly, there were standard designs, but they had not been kept up for so large an emergency—hutting for a long period these large numbers of men, of course in organised bodies. The hut that we had was just for small bodies of troops, for which it would do

now; but when you have to have organisation provided and a great many things that are not contemplated in ordinary circumstances of emergency, and also to provide for men living a considerable time in these huts, you have to have a better and larger class of huts, and we had not a type of that kind of hut ready.

6648. (Mr. Beckett.) Was the delay very considerable owing to this new design having to be prepared?—Yes, we were not ready till July.

6649. Supposing that you had had a design for a suitable hut in stock, would that have made any difference?—It would have made a difference; but of course our point was that, even so, we should not have proceeded to order the huts, because we waited for the demand from the Cape.

6650. (Sir Charles Welby.) Still the fact that the prolongation of the war has upset all the calculations does not affect the case that designs ought to have been ready and the huts supplied without delay?—No, but it affects the time prior to July, when we ordered them.

6651. At the time they were ordered they were considered to be a great emergency, were they not?—They were considered to be of great emergency then. We were practically ready then.

6652. Except for the designs?—The designs were ready at the time the huts were actually ordered, in July; but they were not actually ordered early in the year, although it was known that they would be wanted, and a sum was entered into estimates for them, but we were not ordered to get them until July.

6653. But what was it that took place early in February?—In January we were told by the Quartermaster-General that a large amount of hutting would be required at once, and also that probably a large amount of hutting would be required for South Africa. We set to work then. It was thought that probably the South African hutting would come first. We began on the designs and had hardly got well on to them when we were told that we must put a large force at home. Then we put aside the South African designs and took up the others and finished them off, worked them all off, and then took up the Cape ones again; and as a matter of fact they were practically ready when the pressure came on in July.

6654. Then did you put aside the South African huts with the knowledge and concurrence of the Quartermaster-General's Department?—That I do not remember; I cannot answer that offhand.

6655. (Sir George Clarke.) When you say that you put aside the huts, I understand that you had not authority to begin them at that time?—We had authority; they were in the estimates, and we could have gone on with them, once the money was voted; but, as a matter of fact, with a thing of that magnitude we should have written to the Finance Branch to ask if we were to start.

6656. Was it put to you as an urgent service that was required by a particular date?—Not at that time.

6657. And at the time when it became an urgent service, officially declared as such, were you ready to begin?—We were all but ready to begin; there was hardly any delay.

6658. Can you say what the delay was?—It was a fortnight after we received complete information from South Africa.

6659. I want to ask you one general question. As regards the operation of Parts I., II., and III. Services, do you think that is an ideal division; does it not add to the complication of things somewhat, and would it not be better to have two divisions merely, one being new services, and the other repairs and maintenance?—If you did that you would have to go down very low in value with the new services in the list for Part I.

6660. That is to say, you would have a larger Part I.?—Yes, you would have an enormous list.

6661. Would there not be a large amount of advantage in elasticity in your arrangements if there were two divisions instead of three?—I think it would give less trouble. I do not think there would be any more elasticity.

6662. In matters of transference, now, there are certain formalities that have to be complied with in transferring from Part I. to Part II. All that would

disappear if Part I. and Part II. were merged?—If Part I. and Part II. were merged and voted all in one sum that would be so.

6663. Would it be advisable to separate what might be called capital charges, that is to say, new buildings from maintenance charges?—Certainly.

6664. One being new capital and the other ordinary maintenance?—Yes.

6665. Only one other question. At the present moment you are allowed to purchase stores only up to the amount of 50*l.*?—Yes.

6666. Would it be a considerable convenience to you if that limit were extended?—Yes, I think so.

6667. How much do you think it could be extended to with advantage?—250*l.*

6668. (*Mr. Beckett.*) You said that projects were frequently delayed after the money had been voted for them, because they only existed in the minds of the local staff, and plans had to be prepared. Would it not assist you very materially if, when the local staff put forward a project, they also put forward a plan showing exactly what they wanted? I should just like you to explain your expression, "in the minds of the local staff." What do you mean by that?—I mean that nothing has been put forward to us except the mere name of the project and the amount estimated for its execution, that we have had no plans, no specification, and no detailed description of it.

6669. Then does it go into the Estimates upon such a slender foundation as that which you have described?—Yes, it does sometimes. Of course, in the case of a building which is anything near a type they can make a very good estimate, and we do not want anything very much more.

6670. Then I should have imagined that no great delay need arise in forming a plan?—Where a type exists no great delay need arise, because preliminaries are so far advanced; but requirements are constantly changed.

6671. But you said there might be delay of some months?—Yes; take a drainage scheme, for instance, there would be always a great deal of criticism and examination of a drainage scheme.

6672. Then, of course, the more important things are the buildings, are they not? They necessitate a larger sum of money, do they not?—Yes, on buildings, certainly.

6673. And I do not see why the delay need arise in the case of buildings, because it only exists in the minds of the local staff. If you know pretty well how those things are going to be translated into bricks and mortar, why should this long delay arise after the expenditure has been sanctioned and voted by Parliament?—A great deal, of course, depends on the service. Everything depends on the service; questions of delivery, and a great many other questions; but once the thing is discussed, and once the thing has been settled in outline, we should not interfere with it any more.

6674. It seems to me, when money is to be asked for from Parliament, the plan ought to be sufficiently advanced to enable you to get on with the work directly the money is voted?—I think it ought to be sufficiently

far advanced to enable us to give a perfectly trustworthy estimate, but I do not think the other thing could be worked always.

6675. (*Mr. Mather.*) If you are going to build on Government land, it would be possible, but if you had to acquire land it may not be?—That, of course, would be a different matter. Even assuming it is Government land, I do not think we could always be ready then to build directly the money was voted.

6676. (*Mr. Beckett.*) If a more definite idea was given to you when the money was asked for, would not you be in a position to begin building at once?—We should be in a position to begin very much sooner. Of course, decentralisation is all the thing now; but in a very great many instances the plans come to us for reproduction. We find, with the special knowledge we have here, that we have to make alterations even at that stage; so that of course we must see the plans.

6677. Of course you must; but my point is—would not delay be avoided if these projects, which exist in the minds of the local staff, were put down on paper in a definite shape?—I think they would have to work out a good many more. Of course, if they were ordered to put forward a project which would be for execution, it would be a different thing; but it often happens that a want suddenly arises, a thing is sprung upon them owing to sudden requirements not originated by them. And as regards other services, being perfectly certain that they are going to get the funds, they look upon it as waste of time to go into the matter thoroughly, and think that they may have to work up something else afterwards.

6678. It seems to me there must be something wrong in a system which obliges you to begin your building at the most unfavourable time of the year?—Yes.

6679. (*Mr. Mather.*) Would it be possible from the experience of years of expenditure in a district to vote an annual sum of so much, under which the General Officer Commanding, by the decentralisation plan, would anticipate his certain requirements of building construction, and therefore provide for it regularly, year by year?—I do not think so; because in one year one district might have a greater number of wants, and another in another year.

6680. Then is there no normal amount that can be gathered by experience as being the annual requirements to be spent on construction?—No.

6681. It varies immensely, I suppose?—Yes.

6682. In the same district?—In the same district. As a matter of fact we deal with Part II. and Part III. funds on an average; that is to say, the basis of our calculations for allotment is the average. If there are say special circumstances in one district which call for more funds on either Part II. or Part III., we serve out more than the average; but some other district has to suffer, and some General Officers grumble a great deal at the thing being worked on an average. But that is the only thing we can do.

6683. (*Sir George Clarke.*) Supposing every station had to put forward all its requisitions in a more or less matured form would not that operate as a check upon the number of proposals?—Yes, certainly. I certainly think they ought not to put them forward until they are worked out.

The witness withdrew.

Mr. B. B. CUBITT examined.

6684. (*Chairman.*) You are the principal in charge of C. 2, I believe?—Yes.

6685. As such you deal immediately with the question of stationery, I believe?—Yes.

6686. We have had it stated to us that great delays arise about printing; for instance, the Inspector-General of Fortifications has to send all matter which he requires to be printed over here, and then it has to pass through you to the Stationery Office?—Yes, that is so.

6687. Would it not save time if he were able to send his matter for printing straight to the Stationery Office?—No; on the contrary, it would be slower.

6688. Why?—Because we focus the whole matter in one centre in C 2 in the first place. Printing is roughly of two kinds, either the extremely urgent or the ordinary; that is to say, things like books of regulation

or forms which are not wanted in a great hurry, and things which come from the Engineers, like specifications or bills of quantities, which require urgent treatment, arrangements for which are made in 48 hours.

6689. Do you make those arrangements?—Yes, we do, we give the orders direct on the printers; in those cases we do not go through the Stationery Office at all; we do for the ordinary work, but for anything urgent we go to the printers themselves.

6690. Supposing the Inspector-General of Fortifications had the power to go direct to the printers?—He would not gain a minute by it, except that his messenger might go direct. We might possibly give him an order form, but the printers are not very wise people, and they get confused. At present they send the proofs direct to us and we forward them on, except in the case

Col. C. H. Bagot, C.B.

27 Feb. 1901.

Mr.
B. B. Cubitt,

Mr. B. B.
Cubitt.

27 Feb. 1901.

of the specifications and bills of quantities urgently demanded, the proofs of which are sent direct from the printers to the Chief Surveyor, who then deals direct with the printers in all further stages.

6691. Surely, although a printer may not be a very wise being, if he were told he would have to execute an order for printing received from the Inspector-General of Fortifications and return the proofs to him, he would be able to do it?—Then they would be taken up to the Inspector-General of Fortifications himself, who would not know what on earth to do with them. The difficulty would be to know what particular officer to take them to. We shall have to give a list of the various people to whom to take them; in that case the boy on going to the Engineer's Office would have to find out the particular room he ought to go to.

6692. But would not the Inspector-General of Fortifications be able to delegate his duties to certain officers who would use his name?—True, but honestly I do not think it would be expediting the thing. Naturally we would wish to get rid of the work, because it gives us extra trouble; but I do not think they would get their proofs so quickly. Printers take their instructions from us better than they do from others.

6693. They are in the habit of taking them from you?—They are in the habit of taking them from us.

6694. But they might be schooled into taking them from others, might they not?—I do not know, I am sure; they make such terrible mistakes now. It is not as if a man came with the stuff; it is a boy who comes with the stuff from the printers.

6695. The boy could go to the Inspector-General of Fortifications, could he not? I understand that now the Inspector-General of Fortifications sends to you from the Horse Guards, and you send to the printer. Who works the printing?—It may be Harrison's in St. Martin's Lane.

6696. So that he has to send across to you, going further at every step from St. Martin's Lane; whereas if the Inspector-General of Fortifications sent straight, he would save the time of coming up here and going back across to the Horse Guards?—He would save 10 minutes: it would not be worth more than 10 minutes. We send them on direct; we do not wait a minute with these urgent things. My clerks fill the demands in at once and send them on.

6697. It takes 10 minutes to come to you?—It takes five minutes to come to us and five minutes to go on to St. Martin's Lane; and it would take five minutes to go direct, perhaps. We have considered this matter because we have tried to meet the people of the Inspector-General of Fortifications' Department on the point.

6698. But still that 10 minutes would be saved, would it not?—Undoubtedly; but as a matter of fact the things take two days in printing at the very least.

6699. But I cannot see why the Inspector-General of Fortifications should not go direct to the printer?—We are perfectly willing to try it; we will try the experiment and see how it works.

6700. (Mr. Gibb.) You say you have tried to meet the Inspector-General of Fortifications. That means, I assume, that he has been complaining?—Undoubtedly; the complaint came about two years ago. There was undoubtedly delay about two years ago, and we made this arrangement with the Stationery Office, that we could give this 48 hours order. Hitherto when the specifications went, to get them urgently we had to send repeated requests for them.

6701. (Chairman.) That is to say, formerly they used to go through the Stationery Office, and you have suppressed that link in the chain?—Yes, and we also suppressed the time; that is to say, we gave them a limited period beyond which they were not to keep the stuff. We used to say, "as urgently as possible"; now we fix 48 hours, or three days, or so, as the case may be; then if the things do not come in we send up automatically for them, except in the case of those very urgent jobs where the proofs are ordered direct to the Chief Surveyor.

6702. I suppose the Inspector-General of Fortifications could send for them?—I think he would object very strongly if we asked him to send up a messenger from his limited staff; there would be trouble in sending up a man to do it.

6703. You might give him a man to do it?—We might, but that is the sort of difficulty we are confronted with.

6704. (Mr. Gibb.) Is there any advantage in sending up? If it is not ready you do not get it; if it is ready you would get it at once without sending?—I think that is true; but if a request comes in pressing us to get the proofs we are bound to take action on it, though probably the printers are working at their highest pressure.

6705. (Chairman.) Does all the urgent printing come through you for the other departments as well as that of the Inspector-General of Fortifications?—Yes.

6706. Are there complaints from the other departments also?—Oh, no. This complaint was only made two years ago. I do not think we get complaints now; I have not heard of any last year, since the 48 hours' arrangement has been brought into operation.

6707. I think the view prevails in the office of the Inspector-General of Fortifications that there is unnecessary delay?—It is the first I have heard of it during the last year. Certainly, since I have been in charge of the new arrangements, I certainly have not received any complaint in writing from any of the three officers in charge.

6708. (Mr. Gibb.) Or verbally?—No, not a word.

6709. (Chairman.) You do not yourself see any objection, do you, in principle to the Inspector-General of Fortifications, if any arrangement could be made, taking charge of the printing?—None at all; but I think every department thinks it is more convenient that it should be done through us.

6710. It seems to me quite possible that the Inspector-General of Fortifications might not really be aware of the necessary and inevitable delays which take place over the printing, and may attribute to you really what is a fault of the printer?—I would not like to say that against the Inspector-General of Fortifications, but I do know that they have attributed blame to us where it is not attributable to us at all.

6711. Possibly; but you would get rid of that possible cause of discontent?—Certainly.

6712. (Mr. Gibb.) There is a further advantage, perhaps, of such a system, that it secures all urgent work going to the printer's from the same office; whereas if each department sent its urgent work, each urgent order would, as it were, compete with the other?—Exactly.

6713. (Chairman.) As I understand, anything which comes to you marked as urgent, is passed on as a matter of course at once, but it still would be in competition with other orders. Supposing an urgent order comes from the Inspector-General of Fortifications, and an urgent order comes from the Quartermaster-General, you pass them on as quickly as you can?—Certainly.

6714. (The Secretary.) Would not you use a discretion as to which orders were the more urgent?—No; we might send them to another printer if we knew one was full up. We have the knowledge of what stuff exactly is placed out to the various printers, and in that way we can spread the work.

6715. (Chairman.) You are bound to go to a certain number of printers with whom you have a contract, are you not?—Yes, we have a certain list of printers.

6716. But you think you can possibly expedite the work; because if you know printer A was very busy you could send it on to printer B?—Yes.

6717. And that knowledge would not be possessed by the Inspector-General of Fortifications?—No, he could not know.

6718. And that is an argument in favour of the present system?—Certainly.

6719. How many printers have you got?—There is Harrison's, which is in two parts; there is the big office in St. Martin's Lane, and there is the large staff here under our immediate control downstairs; then there is Eyre and Spottiswoode; then Wyman; Waterlow; and Hazell.

6720. Would you know as regards these different printers, only so far as relates to the War Office, which of them happened to be choked with business for the moment; since, as I understand, they deal with departments other than the War Office?—Yes.

6721. So that if Eyre and Spottiswoode's were choked with War Office business, and you passed the thing on to Harrison's, that does not mean very much?—Not from that point of view.

6722. The particular printer whom you considered to be most free might be free as regards the War Office, but he might at the very same time be run to death by the Colonial Office or by the Foreign Office or by the Treasury, might he not?—Quite so; we have no check on that; and as a matter of fact, we know that the private work which is undertaken by these private firms is given precedence over the Government work.

6723-4. As regards drawings which might be got out, let us say at Woolwich, do they have to come up to you to be printed?—Yes. You refer to Sir George Clarke's lithographs, I presume?

6725. (*Sir George Clarke.*) My question was with regard to lithographs. Is the War Office bound by the Stationery Office to certain lithographers who have a monopoly of the work?—Yes, we are bound to send to certain people. If you send work up to us to lithograph for you, we are bound to send it to certain people.

6726. But we do our own lithography, and I have, in certain cases, offered to do the work, because I have the thing on the stones ready, and I have been told I cannot do that because it must go to the regular lithographers?—That is a matter for the Stationery Office to answer, because there is difficulty where stones have been used privately.

6727. Then you think the Stationery Office would not have power to utilise, for the purpose of the War Office, stones which are ready to print anything?—We have had the greatest possible trouble with them over that very point. May I give an instance in point? With regard to the dress regulations some most beautiful prints were printed from the blocks by the blockmaker himself by private arrangement through one of our clerks, but the Stationery Office objected to our using them, saying, "No, they must be re-done by the proper printers." We sent them, accordingly, to the printers to do, and the things that came up were most discreditable, and we rejected them. There was a long fight, a great deal of correspondence about it, and ultimately we carried our way.

6728. That makes it quite clear to me, I think?—And I should think the same trouble would arise with regard to your work; we fight your battle; in this case we have no voice at all.

6729. As a matter of fact the same thing happened with me as to my lithographs, which are a great deal better than those got from the contractors?—That is so; their work is scamped, no doubt, because it has to be done so cheaply.

6730. (*Chairman.*) Is it your impression that the Stationery Office has entered into such an arrangement that a Government Department, even if it has the means of doing its own lithography, cannot do it, but is bound to pass it on to the Stationery Department for them to place it with people with whom they have a contract?—That is so, if it is in the nature of a work which has to be published; if the lithographs form part and parcel of a book which is going to be published.

6731. They are tied up by a contract?—I think so.

(*Mr. Gibb.*) But if the stones are supplied to the printer, that on the face of it reduces the cost of production to the printer, does it not?

(*Sir George Clarke.*) It is not a question of supplying stones; I have the stones and I want to pull off a certain number of copies, but I cannot.

(*Mr. Gibb.*) Then I will put the question in another way. Supposing you supply the print made from the stone, to the printer, that reduces the printer's cost of the production of the work, does it not?

(*Witness.*) Then there would be the charge for the stones unless Sir George Clarke is going to supply them free.

6732. I understood the offer was to supply these prints without charging the printers for them?—I do not know that we have had a case like that before. I should think, if we put it to the Stationery Office that we had the stones free for their use, they would be only too glad to have them, because that would save the cost of new stones.

6733. That was the point of my question. I was trying to divine what motive the Stationery Office could have in refusing the use to printers of free stones already prepared?—Because they would have to pay for the present stones; and their argument would be

that these stones would cost more than the ones they could get under contract; that is the argument they always use.

6734. (*Mr. Mather.*) Has the case been put to the Stationery Office, that they could have all the prints necessary for the book supplied to them in any quantity, and those prints they could send on to the printers who bind the book; surely that objection could not arise then?—Certainly not.

6735. Have they ever objected in a case like that?—Certainly not; but I take it in Sir George Clarke's case the Stationery Office would be expected to pay for the value of the stones.

6736. (*Sir George Clarke.*) No, only for the copies?—I should not think they could have any objection then, if the copies so obtained were cheaper.

6737. I have represented that several times, and I have been always told the Stationery Office objected?—That has not come before me at all.

6738. (*Mr. Mather.*) Have you anything to do with the Stationery Office?—A great deal, by letter.

6739. But have you any control of the Stationery Office?—No, except by writing a very strong letter, which I do sometimes.

(*The Secretary.*) They control us.

6740. (*Mr. Mather.*) Is that owing to your excessive amiability, or have they a right to control?—They have a right to control.

6741. (*Chairman.*) As regards secret and confidential printing, does that all come to you?—Every bit.

6742. Where is that carried out?—Downstairs. Not all the confidential printing. The confidential printing is sometimes done by Eyre and Spottiswoode. During the war there has been an enormous amount of confidential matter, which is not absolutely secret, and that has been done by Eyre and Spottiswoode. We cannot do it here, although we have doubled the staff downstairs.

6743. But the printing in this building is chiefly confidential, is it not?—Yes, pretty well all, except the Army Orders, which are done by C 3.

6744. The printing which is not urgent goes to the Stationery Department in every case, does it?—Yes.

6745. Are there many delays about that?—Yes.

6746. Is it carried out very slowly?—We think so. The delay in many cases is due to difficulties such as where there are plates connected with a book, or plans, in getting the plates or plans; that is always a longer process than the actual letterpress.

6747. (*Mr. Mather.*) As far as your experience goes, have you any suggestions to offer for the expediting of the printing business?—No, I really think we have got it, I will not say absolute perfection; but I think we get it as quickly as we can get it. We have made several re-arrangements in a way I can hardly express, partly for instance in working the 48 hours' arrangement for specifications and bills of quantities, and partly by doubling the staff downstairs.

6748. Of course it is part of your duty to make suggestions, and think out any plan by which the various departments might be more satisfactorily worked than they are at the present time?—Yes.

6749. So far as you know, is there any other department complaining of this question beyond the Inspector-General of Fortifications?—I was not aware that the Inspector-General of Fortifications had complained recently; I knew he did a year and a half ago, and we made these new arrangements to meet these difficulties. I have been under the impression, certainly for the last year, that we had entirely met his objections. I must admit a request came in not so long ago for printing to be done within 12 hours, that was, I think, from the Chief Surveyor; but I do not know where the advantage came in as to that; because if you got an order here at 12 o'clock in the day it would be hardly much use its reaching the Engineer's Department at two o'clock in the morning.

6750. Supposing you had a quantity of printed matter demanded by all the departments here, would you then as a matter of arrangement find out which was most urgent, and place one order in priority over the other?—Yes, I do that.

6751. You use your own discretion?—Yes, I have to use my own discretion.

Mr. B. B. Cubitt.

27 Feb. 1901.

Mr. B. B.
Cubitt.

27 Feb. 1901.

6752. So as to accelerate the work most wanted?—Yes, that is especially the case with confidential and secret matter. Possibly the Secretary of State sends down an order for a very large thing to be printed, at the same time we have to print a very large body of despatches; and they have to be arranged and given priority so as to get the work done.

6753. Would any time be saved as between these three or four printers, if the list of printers was enlarged? No; because the great advantage is in having these big firms that we know, and who know our phraseology. It must be remembered that in printing there is a good deal in Army phraseology, and if the printers are acquainted with that they can set up the type more readily.

6754. These firms of printers are appointed year by year under contract, are they not, to do this work?—I could not answer for certain; the Stationery Office would do that.

6755. They make the contracts, do they?—Yes.

6756. For the work you give out?—Yes, for all Government printing.

6757. (*Sir George Clarke.*) The Stationery Office is quite an independent office, is it not?—Absolutely.

6758. And was established, I presume, for the purchase and supply of stationery, for which it makes contracts; and probably in addition to that it took over the printing business. Is there any advantage in dealing with printed matter through the Stationery Office; might not the whole thing be done by the War Office making its own arrangements direct with printers?—I never had the chance of thinking the thing out, but I should think it would be an enormous advantage.

6759. In other words, you can draw a line between the supply of articles of stationery and printing work which is urgently required?—Yes.

6760. And you would think it an advantage if the War Office could make its own arrangements?—Yes. It is possible that if the War Office made its own separate contracts with the printers, the price might be a little

larger than it is when the Stationery Office make them for all the departments, that is a possibility.

6761. You think there is a possibility of economy when all the contracts are together, do you?—Yes, I think so; I know that they do cut down the prices very largely, and Harrison's complain that the prices are cut down so low that they cannot do the stuff very well.

6762. Apart from the possibility of economy, do you think it would be a great advantage to get rid of the Stationery Office as an intermediary between you and the printer?—Certainly.

6763. As regards papers that come to you to be printed, I gather you do not exercise any censorship over them, as to whether they ought to be printed or not?—No, the only censorship I exercise is as to whether a thing should be type written or printed. There is a very large demand for type-writing now in the office, and on many occasions the type-writers are asked for a very large quantity of type written copies, which they cannot possibly supply in the time, so I have them printed. Conversely, if I have a demand for a small thing to be printed, I have it type written. If it appeared to me that any large printing job was unnecessary, I should refer the matter to the Permanent Under Secretary or Assistant Under Secretary. Further, of course, in my branch, we are in the habit of giving advice as to the form the printing should take.

6764. Then, I take it, your view is that there is no reason why any outside department should not, if it likes, deal with the printers directly, and that it, at all events, might deal direct with the printers, after the manuscript has gone to them, in the way of getting proofs?—Yes, that is done now. When the original order has been given, by arrangement, the manuscripts are often sent to and fro between the particular branch and the printers.

6765. You see no objection to that?—None at all; but I am regarding the question from the point of view of their own interest. I think they would find it more to their advantage to go through us, and that the orders should be given through us, than by themselves.

The witness withdrew.

Lieut.-Gen.
Sir C. M.
Clarke, Bart.,
G.C.B.

Lieut.-General Sir C. M. CLARKE, Bart., G.C.B., further examined.

6766. (*Chairman.*) As Quartermaster-General you are responsible for the housing of the troops and for their sanitary accommodation?—Yes.

6767. And the Inspector-General of Fortifications is responsible for the construction and maintenance of barracks?—Yes.

6768. Therefore it comes to this, does it not, that you practically have charge of the barracks *quâ* accommodation, and the Inspector-General of Fortifications *quâ* the property, and the maintenance of the barracks, and you are both advising the Secretary of State from time to time on very cognate subjects?—Yes, the work is very much interlaced.

6769. To a certain extent it may be said to overlap?—Yes.

6770. When it is determined to build new barracks the Inspector-General of Fortifications seems to come in at rather an early stage. Is there any reason why the General Commanding in a district should not settle the question as to the site entirely, he having the Army Service Corps' officer and the Commanding Royal Engineer and the Medical Officers all at his disposal to assist him?—I do not think the General Officer commanding a district could do that in the case of a large new site; I think that should be settled here.

6771. You think it is necessary, do you, to bring in the central authority?—Yes. Take, for instance, the sites for the barracks on Salisbury Plain; they were decided upon, I believe, practically by the Commander-in-Chief, the then Quartermaster-General, the then Inspector-General of Fortifications, and after that the sites were inspected by the Quartermaster-General, and the Sanitary Committee. I do not think in a large question of that sort it ought to be left to the General Officer commanding.

6772. It is too important a matter, you think?—Yes.

6773. (*Sir Charles Welby.*) That was an unusually large matter, was it not?—Yes, of course. There are questions as to certain sites which, I think, might very well be settled in the district; I mean as to quite small buildings.

6774. (*Chairman.*) Would you limit the authority of the General Officer Commanding to a fixed amount?—I think there would be no difficulty in doing that.

6775. A money limit, I mean. The amount, I suppose, would show the importance and magnitude of the building?—I think, perhaps, except for very small things, it would be advisable to have the site question sent up to headquarters, because the local man may have a fad about it whereas the question would be quite dispassionately treated here.

6776. Do you mean to say at headquarters there would never be a fad?—I do not think there would be the same risk of it.

6777. In such questions as the acquisition of ranges the Quartermaster-General and the Inspector-General of Fortifications come a great deal into contact, do they not?—Yes, and the Adjutant-General; we are all three mixed up in it.

6778. Would there be any possibility of centralising that work in any one of the three high offices; could the Quartermaster-General take charge of it entirely?—Well, he at present has got no expert officers with him to decide as to safety, for instance.

6779. He would want the Adjutant-General's assistance there, would he?—The Adjutant-General provides the musketry officers, who examine ranges carefully in that respect.

6780. (*The Secretary.*) Do not they do that under the General Officer Commanding—you would have power over the General Officer Commanding to order that inspection, would you not?—I think, if I recollect rightly, in some of those case experts are sent down

from the School of Musketry. I think that might be simplified.

6781. (*Chairman.*) You might call on the School of Musketry to give you expert advice, or ask the General Officer Commanding, might you not?—I think one Department or the other might be charged with it entirely.

6782. Where does the Inspector-General of Fortifications come in, particularly as regards ranges?—Construction and purchase of land.

6783. Then where does the Quartermaster-General come in if the Adjutant-General settles the question as to musketry?—The Quartermaster-General is concerned in all questions of acquisition of land.

6784. With regard to the distance from barracks, and all that kind of thing?—No, except that he is concerned as to all matters of acquisition of land.

6785. But how is he concerned?—He does not conduct the purchase, but he has a word as to whether it is suitable for the particular purpose, or not.

6786. (*Mr. Gibb.*) Who decides the foundation question of all about a rifle range, as to whether it is expedient that a rifle range should be provided in a particular place?—The Adjutant-General, because he has to say the range is required at such and such a place for the training of troops.

6787. (*Chairman.*) When the Adjutant-General has decided for the purpose of training troops that a range is necessary in such a locality, and when the Adjutant-General, the Quartermaster-General, and the Inspector-General of Fortifications all come in, how do they come to an agreement on the question by personal conference, or an exchange of minutes and correspondence?—I should say by both. A great deal is done here by personal conference.

6788. Would that personal conference take place from time to time, or is there any regular provision for meetings at stated intervals at which these officers concerned would discuss the question?—I think not.

6789. Would a matter of that kind be dealt with by the Army Board?—No.

6790. Would it have been dealt with in old days by the Adjutant-General's meetings?—I cannot call to mind a case. I have been to a good many Adjutant-General's meetings, but I do not remember such a case, there may have been.

6791. The Adjutant-General's meetings did get through a great deal of business, did they not?—Yes, they were held as often as the Adjutant-General considered necessary. If my memory serves me rightly, if he had a case on which he wished to have the opinions of other people, he put it on one side until he had enough subjects to call a meeting upon, those subjects were brought up seriatim and discussed verbally.

6792. The Adjutant-General's meetings have been superseded, have they not, by the meetings of the Army Board?—I do not speak from absolute knowledge, because it was before I came here; but I think that they were ordered to be discontinued because there was no representative of the War Office pure and simple on them.

6793. The War Office pure and simple, meaning what?—The civil side; that is my recollection of it.

6794. (*Sir Charles Welby.*) Was not the reason rather that the Adjutant-General under the arrangements of 1895 ceased to be Chief Staff Officer to the Commander-in-Chief, and therefore ceased to be responsible for the general management of the business on the military side of the office as he was formerly held to be?—I know the change was made.

6795. (*Chairman.*) In your opinion does the Army Board meet frequently enough; or would business be got through more quickly if it met more often?—I should like to see it meet regularly.

6796. You would like to see it meet regularly at stated intervals?—Yes, I think it would be very useful.

6797. It does not do so now, does it?—No, we have only had, I think, one or two meetings in the last two months, or something of the kind.

6798. Does the number of meetings depend now very much upon the disposition of certain people who may summon the Board?—It is at present adjourned until any member has some specific question to bring up.

6799. Do you think if it met like a Board of Directors once a week or once a fortnight, people would get together and discuss things, and work would go through more rapidly?—I think it would be very useful because it would enable the right hand to know what the left was doing, and *vice versa*.

6800. (*Mr. Mather.*) Whose duty is it now to call the Board together?—I say at present the Board stands adjourned until any individual member of it has any specific business to bring up.

6801. To whom would he mention this?—To the Secretary; he is the official known in this House as D, the officer in charge of the Mobilisation Branch, Colonel Lake.

6802. (*Sir Charles Welby.*) Constitutionally it would be the business of the Commander-in-Chief to call the Board together to discuss any question which had been referred to it by the Secretary of State, I presume?—Yes, it is all laid down.

6803. (*Mr. Mather.*) But you can move, can you not, that the Board meet by its own action, by giving notice of the fact that you have something you desire to consult the Board upon?—Yes.

6804. They would take note of that and call the Board together?—Yes.

6805. As a matter of fact, I suppose the heads of Departments do not often suggest measures they desire to have consultation upon. Have you a case in your own experience where you have moved the Board to meet?—No, because until lately, until this year, we used to sit from two to three times a week.

6806. Then it is the war, I suppose, which has put you off meeting?—No, on the contrary, the war made us meet so frequently.

6807. Then why do you say "until last year"?—Until the beginning of this year I say. Until the beginning of this year we were sitting certainly on an average twice a week.

6808. (*Chairman.*) That is, during the war period?—Yes.

6809. But before the war were the meetings infrequent?—I have no knowledge.

6810. Does it seem to you that there is a want at the present time of close co-operation between the various Supply Departments of the Army owing to their not having any Board at which they meet regularly together?—I think I have just said that I think it would be a most excellent thing that the Board should meet regularly.

6811. You know the Indian system well, I presume, as regards the meetings of the Board?—I am afraid I have no knowledge of the Indian practice.

6812. I thought, perhaps, you would be more or less familiar with it?—No, not *quâ* Board meetings.

6813. It was not as to Board meetings; but my point was that a Board meeting of three officers would supply, to some extent, the central direction which you get in India of all the Supply Departments working under one man?—The Accounts, Supply, the Director of Works, and the Ordnance?

6814. Yes, practically, the same Departments as here, plus the Accountant-General's?—Yes.

6815. (*Mr. Mather.*) The Accountant-General is represented on the Indian Board?—So he is on this Board.

6816. (*Chairman.*) My point was that the Army Board by bringing all these people together was, to a certain extent, a substitute for the unity of administration and co-operation between Departments which is given in India, after their being all put under one man—a military member of the Council. He does not call them together as a Board meeting, as far as I know, but he is responsible that they all work together, and that the work goes through quickly?—I think you may say that the Accountant-General is represented on the Army Board; he attends the meetings.

6817. As regards the Army Service Corps officers, I do not suppose they can be charged, can they, with the maintenance of barracks; they have a good deal to do with them as it is?—You mean with keeping them in repair?

6818. Yes?—I think not.

6819. Such a suggestion has been made?—I think not—they have plenty to do with their present work.

Lieut.-Gen.
Sir C. M.
Clarke, Bart.,
G.C.B.

27 Feb. 1961.

Lieut.-Gen.
Sir C. M.
Clarke, Bart.,
G.C.B.

27 Feb. 1901.

6820. In the event of a larger measure of decentralisation being carried out here, assuming that the present districts were grouped into larger districts, and the General in command of a district wanted someone at his elbow to give advice about making contracts and small leases and various matters of that kind, would the Army Service Corps officer be the proper person to help him in those ways?—I do not know that at present he is educated for it.

6821. Could he be educated?—He could be.

6822. We have heard a good deal about the necessity of generals having what is called a financial adviser at their elbow. It seems to me that what the General wants is a man who can help him in making contracts and leases, and a man who can give him advice as to what should be done according to the regulations?—I do not think the Army Service Corps man could do that; I do not know that he knows very much about contracts and leases.

6823. Your Army Service Corps officer when he goes abroad has to make contracts right and left, has he not?—Yes, for supplies.

6824. And the contracts in a district would be chiefly for supply, would they not?—Yes.

6825. And on that point a General might want assistance and help, and I suppose the Army Service Corps officer would give him that help?—Yes, in fact, he makes the contracts at present.

6826. And if a General has more financial powers generally as to purchases and leases and renting land would the Army Service Corps officer be the natural man to help him?—Yes, I think so.

6827. I think you have given us the opinion before, it I am not wrong, that in your view the Paymasters should be under the Quartermaster-General?—No, I have not given that view.

6828. Is that your view?—I think so. So long as you have an organised body of military officers—men who hold commissions, and clerks who are soldiers—I think it is desirable that they should be under a military head.

6829. You think, do you, that so long as the Paymasters are military men, they ought to be under a military officer?—I think so. I think it is wise, but I have not said anything about it before.

6830. Have you any views as regards the employment of military as against civilian clerks in your own Department?—Yes. In Q.M.G. 1, I think the employment of civilian clerks is desirable; I think we get greater continuity. We have to deal with questions as to barracks for instance, and I think we get better continuity.

6831. May I ask whether your remark applies to Higher Division clerks, or to Second Class clerks, or to both?—I am afraid I am talking of the clerk generally.

6832. You are not discriminating?—I am not discriminating. I mean the clerical establishment. As regards Q.M.G. 2, I think the civilian clerk is also desirable; and I will tell you why. If we employed soldiers in that Branch, I am afraid that all sorts of news about intended moves and information of that kind would be made public, and that there is greater safety and greater certainty of that information not getting out under the present clerical establishment.

6833. You mean that if you had military clerks they would have military friends?—Yes; they would write and say: "My dear Bill, the 2nd Yorkshire goes next year to so and so." That is human nature, and I am sure it would get out. As regards Q.M.G. 3, the Supply Branch, that is at present worked by military clerks, and is doing very well. Q.M.G. 4 also employs military clerks; there is no object in changing there.

6834. Q.M.G. 4 has three military clerks and one civilian clerk?—No, I think their head man is a Quartermaster, if I recollect. I think they are all military clerks. Q.M.G. 5, the Pay Department, in the same way is worked by military clerks, and they do very well. Q.M.G. 6 is also worked by military clerks; but the first two branches I should prefer to see remain as they are at present.

6835. For special reasons?—Yes.

6836. Then I gather from what you have said, that you would like your divisions to be either entirely

military or entirely civil, as the case might be?—I do not think a mixture is good.

6837. Do you think the military clerk is as good as the Second-Class Division civil clerk?—I am afraid I am not competent to give an opinion. I have looked upon a clerk as a clerk, and I am afraid I do not know much about the different Divisions. I think you want a head man to keep them in order.

6838. Are you in favour of military clerks moving backwards and forwards to districts, or is it your view that when once a clerk comes here he should remain here?—I would rather that he remain here; it is everything to preserve continuity.

6839. One argument we have heard in favour of military clerks is that in a district there is an insufficiency of good military clerks. Do I understand that you are in favour of a military clerk once coming here remaining here?—I should like him to remain here. According to my experience a man takes a considerable time to be in an office before he is of any real use.

6840-1. (Sir George Clarke.) May I take it that with the exception of Q.M.G. 1, and Q.M.G. 2, you think generally the work of military administration should be carried out by military men?—I think I have just said so.

6842. So that practically the civil work of the War Office as a whole would be limited to account and audit?—Yes, generally speaking, and as regards Q.M.G. branch, limited to Q.M.G. 1 and Q.M.G. 2.

6843. I am speaking of the War Office generally—taking it as a general principle?—Yes, as a broad principle.

6844. Practically, the civil work would be account and audit?—Yes, except as above stated.

6845. You have said, I think, in your memorandum, that the Departments should be as little as possible interfered with in the administration of expenditure under their votes. Does that mean that in your opinion there is now rather too much interference with the Heads of Departments in the administration of their votes?—No, I do not know that there is much, but I think it would be as well to have them left alone and not interfered with. I think I had in my mind some specific case when I wrote that.

6846. Is it your experience that questions arising which affect you and the Adjutant-General and the Inspector-General of Fortifications take a long time to settle now in correspondence?—Not as regards the Adjutant-General, for the simple reason that he is in a room close to mine, and if I have any question that I wish to consult him about, and to ask his opinion upon, I can go in with the paper in my hand, and we can talk it over together. But the Inspector-General of Fortifications is at some considerable distance, and therefore it is more convenient to write, we cannot always be running backwards and forwards.

6847. Then you think that correspondence between yourself and the Inspector-General of Fortifications does sometimes take a considerable amount of time?—It is bound to.

6848. And you think that the remedy for that is to bring such questions of mutual interest before the Army Board, do you?—There are many questions that could be settled between the Inspector-General of Fortifications and myself that are not of sufficient importance to bring before the Army Board, and ought not to be brought before the Army Board, but if the Inspector-General of Fortifications was in these buildings, there are numberless things that we should probably settle in a very much shorter time than it takes now—we are obliged to write really.

6849. (Mr. Mather.) You telephone frequently, I suppose?—Yes, but it is not the same thing as an interview.

6850. I am not speaking of the important matters, but of ordinary matters?—Yes, but it all means delay, the making of appointments, and so on.

6851. (Sir George Clarke.) As a broad principle of administration, do you think it would be an advantage to bring the Supply and Works Departments under a single head?—No, I prefer the present system. I might be allowed to say that if you want any really accurate detailed information as regards the relations between Q.M.G. 1, and the branches of the Inspector-General of Fortifications, you cannot do better than ask Colonel Skinner to give you evidence. He has

been Q.M.G. 1, for the last seven years, and has the most intimate and accurate knowledge of the work, and I think you can absolutely depend on any information he may give you.

6852. (*Colonel Miles.*) Your experience as Quartermaster-General has been throughout the war period, has it not?—Entirely. I never was in the branch before.

6853. The Committee have had it from the Adjutant-General that during the war you have had unlimited power with the Finance Branch. I will put it in another way—that increased power has been given to the Military than is given during ordinary times of peace, during the war?—I think any question of great expenditure was brought up at the meetings of the Army Board; I have never authorised personally any large expenditure without communicating with the Accountant-General.

6854. Generally speaking, is it not correct to say that this stress of war has imported a great difference into the relations between the Military and the Finance Departments?—Necessarily.

6855. With regard to Q.M.G. 2, you spoke of the importance of keeping the movements of troops secret?—Yes.

6856. Do you attach great importance to that?—Yes, I think it is a very good thing, and I can give you the reason. As nobody knows better than yourself, you have frequently to make changes, and if nothing has got out nobody is injured—you are not flooded with letters of complaint.

6857. On the other hand, the changes are the exceptions, and would it not be better that people should know a long time before they are changed?—I do not know that there is any necessity so long as reasonable time is given; I think sometimes unreasonable time is wanted.

The witness withdrew.

TWENTY-THIRD DAY'S MEETING.

SEVENTEENTH DAY'S EVIDENCE.

At the War Office.

Thursday, 28th February 1901.

PRESENT:

MR. OLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.O.M.G.
Mr. W. MATHER, M.P.

Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Major-General Sir COLERIDGE GROVE, K.C.B., examined.

6863. (*Chairman.*) You have been Military Secretary since 1896, and before that, I believe, you held a variety of appointments in the War Office, including the Private Secretaryship to the Secretary of State?—Yes.

6864. In your memorandum on page 1, paragraph 2, you caution the Committee by saying that your suggestions, though they will expedite the conduct of business at the War Office, yet will not give the country an army. Then you say, "I have no wish to travel beyond the reference to the Committee or to enter upon matters not placed before it. I therefore confine myself to saying that, in my opinion, the causes of the defects in our military system lie far deeper than in such questions as the distribution of work at the War Office." Of course, we are not considering here how to get a better Army, but we are considering the facilitating as far as we can of the business at the War Office?—I merely wrote that to guard against the possible misapprehension, that these changes would produce more effect than I anticipated from them.

6858. (*Sir George Clarke.*) Do not you think disciplinary measures would suffice to ensure the inviolability of news of that kind?—No, I do not.

6859. Is it not so with the department of the Director of Intelligence, where many secrets are entrusted to soldiers?—They are supposed to be secrets of an important nature, but I am afraid you would not get soldiers to look on the movement of a regiment as an important thing.

6860. (*Sir Charles Welby.*) I should like to ask about the relation of your department with other departments in regard, particularly, to the provision of ranges. I quite understand that the Adjutant-General, as responsible for the training of the Army, is the officer on whose requisition the range is required; and, I understand, when the requisition has been made it is the Inspector-General of Fortifications' business to acquire the land and to construct the range, and make such works as are necessary to use the land for firing purposes; but it is not clear to my mind where the Quartermaster-General comes in. What do you conceive to be your particular function in regard to this matter of the acquisition of ranges?—From time immemorial anything connected with the acquisition of land has been dealt with by the Quartermaster-General I believe.

6861. Do you think it is really more a matter of tradition than of sheer necessity?—Yes, I do not know why you should mix up three people in it.

6862. As a matter of fact, the Quartermaster-General is very much in the position of a post office between the Adjutant-General and the Inspector-General of Fortifications in regard to ranges, is he not?—Yes; but I think you would get very much better information on that point from Colonel Skinner, because he has been actually working the details and I have not.

6865. Your first positive recommendation after giving that caution is as to the transference of the Accountant-General's Department to the Military side of the War Office?—Yes.

6866. You give several reasons for that. You say, "The separation of finance from the Military Department does harm in two ways. In the first place, it leads the Military officials at Headquarters (and indeed the Army generally) to look upon finance as a matter with which they have no concern"?—Yes; I think it does.

6867. You further say, "They think of the advantages which will accrue if some particular proposal is carried out, but they do not think of the fact that its carrying out may mean the diversion to it of a certain amount of money which might be better spent on something else." Does that point in your opinion to having some centre and head of Military administration, involving expenditure, who would be able to keep before him all the various proposals coming

*Lieut.-Gen.
Sir C. M.
Clarke, Bart.,
G.C.B.*

27 Feb. 1901.

*Major-Gen.
Sir C. Grove,
K.C.B.*

28 Feb. 1901.

Major-Gen.
Sir C. Grove,
K.C.B.

23 Feb. 1901.

from different quarters involving expenditure. The thing which presses on some of us now is, that all sorts of proposals are put forward for Military expenditure, and it really to a certain extent is a chance which one is successful, because there is no one who correlates them altogether?—It is not sufficiently done; under the present system the proposals for estimates are submitted to the Army Board before the Estimates are decided upon; but that is not a properly constituted body, according to my mind, to deal with those detailed questions. Really the man to do that is the Commander-in-Chief; he is the only man who can properly say with regard to Army services of various sorts which are fighting with one another for precedence, which are the most important; and to enable him to do that he must of course have under him a proper staff of officers, who are capable of giving him accurate information with regard to the financial bearings of all these proposals. He already has a Branch which to certain extent can advise him on their relative Military merits, namely, the Mobilisation Branch, but the Military side of the War Office at present is not equipped with any power of accurately going into the financial aspect of these different things; and that is what I should like to see it furnished with. I think then that the Commander-in-Chief would be able to do what you have just indicated that it is desirable some one should do.

6868. Would not there be a danger in that case of throwing too much work upon the Commander-in-Chief and detaching him from his real work of Commanding and training the Army?—I should like to answer that, if I might, with a question. Is that his real work or his only real work? Is not his real work also to decide what sort of an Army we shall have? The executive work of training an Army is much more easily delegated to Generals in Command and to others than is the power of constructing an Army. The difficulties in our Military system arise very much from the fact that we have never clearly made up our minds what Army we want to have; and I venture to think that the most important part of a Commander-in-Chief's duties is advising the Secretary of State, and through him the Government, as to what is the best Army—putting it quite simply—that we can get for a given sum of money.

6869. Then there arises another question. The Commander-in-Chief having given that advice, would you place on the Commander-in-Chief the responsibility of keeping a general watch over Military expenditure and of supervising and causing to work together all the great Supply Branches?—Certainly I would.

6870. You would put all that upon the Commander-in-Chief?—Yes; and I go so far as to say that I do not think, until you do that, you will get real economy, by which I mean the best return for the money spent.

6871. You are aware, no doubt, though I do not think you have actually served in India, that, in India, the responsibility for the working of all the supply departments and keeping a general view over Military expenditure is placed on a Military member of Council, apart from the Commander-in-Chief?—I am. Of course, I cannot speak with knowledge, but I have generally heard that, although the Indian system produces considerable efficiency, it is not a very economical one. I may be wrong in this, and, as I cannot speak with knowledge, of course, I do not wish to lay any stress on the opinion.

6872. Assuming that the Indian system does not produce economy, would you attribute that to the fact that the whole responsibility is not centred in the Commander-in-Chief?—I think that what you want is not only that the responsibility should be centred in the Commander-in-Chief, but that he should have a somewhat wide latitude in utilising any savings that he makes. You want those two things to go together; you want to make it worth while for economy to be exercised in some directions in order that the money thus saved may produce something else which is very much wanted in others.

6873. You do have that incentive to economy in India, but the economy there is practised not by the Commander-in-Chief, though he is aware of it, but by the Military Member, who is responsible for the general expenditure of the Army, and for the conduct of the business by the various supply departments, and who is aware of all the military proposals coming forward?—Yes, the fact being that there the Commander-in-Chief rather holds the position of an executive Commander-in-Chief, and of being, of course, adviser to

the Government generally with regard to general military questions, but not the only adviser; he has side by side with him another adviser, the military member of Council.

6874. Who chiefly advises, does he not, on questions relating to Army expenditure, and to the work of the Supply Branches, more than on purely military questions?—I fail to see myself any advantage that arises from that separation, and I do see a disadvantage, that it must tend to make the Commander-in-Chief less careful as to the financial bearings of questions than he would be otherwise. If it is someone else's business to look after them, he naturally will not look after them so carefully himself as he would if it were his own duty.

6875. If he had to think out the financial consequence of every proposal, you mean?—Yes.

6876. In India he would confer with the military member on every proposal, and it would be for the military member to think out and explain to him, in the first instance, the financial consequences?—Yes; from this results the feeling which now exists so very strongly, not only in the Commander-in-Chief's offices, but all through the Army, that they have nothing whatever to do with the question of how the thing proposed is to be paid for.

6877. There is not the sort of prejudice which you remark upon in your memorandum, between the civilian and military in India as regards finance. The financial control of the Army there is mainly military, and I am under the impression that there is not the same disposition for soldiers to put forward anything, I will not say recklessly, but inconsiderately, because it is entirely the work of the civilian to criticise and to pick holes and to analyse proposals?—As I say, not having been in India, I cannot say. I have no wish, of course, to make out that my own profession is more wasteful or unwise than is really the case, but I do think that there is a very considerable tendency in soldiers to think only of what they want to get and not of what it will cost. As to one thing which you said, in order to guard against possible misapprehension, I should say that I do not at all ask or suggest that all the account keeping should necessarily be done by soldiers. Let the people who have to do it be civilians by all means, they will probably be able to do it better; but let them be in the Commander-in-Chief's office.

6878. Do not you then come to the difficulty, or the alleged difficulty, of civilians and military working together?—I do not think experience shows that there is any difficulty about it; they have worked together in the War Office for a great many years on very good terms indeed. The military officers in the War Office have principal and senior and other clerks, all of whom are civilians and who do most excellent work.

6879. To come back to the other question, as to putting all this responsibility of supervision on to the Commander-in-Chief, are not the general lines of the Indian system—that of having a Commander-in-Chief and a military administrator or minister, lines which have commended themselves in most continental countries?—The systems of the various continental countries, so far as I know them, are very various in that way. Take, for instance, Germany,—there, of course, the Emperor is the active executive and administrative Commander-in-Chief of the Army in every way.

6880. But there is a War Minister who is the administrator, is there not?—There are plenty of people under him, but he really actively takes into his own hands the decisions on all important questions, as far as I know.

6881. But does not he relegate the administration of such departments as the Supply Departments to the War Minister?—I do not know exactly how it works; but I should imagine that he did just the very thing you were speaking of just now, that is to say, that he viewed the proposals as a whole, took their financial aspects into consideration and then decided which of them should be most pressed forward.

6882. As things are now you do not regard the Army Board, I understand, as a sufficient machine for centralising all military proposals and keeping a general purview over the expenditure?—No, I do not.

6883. Is that partly because the Board meets at irregular intervals, or do you consider that, as it is constituted, that Board, even if it met more regularly, would not be a proper machine for doing that?—I do

not myself think that a Board is ever a good machine for going into questions of detail. I will not say that the Board might not, if it met more regularly and considered these things for a longer period and more at leisure, do this; but then you are, of course, taking away from their other duties for some considerable time the heads of all the important branches of the War Office. I will not say that it is not possible for the Board to do what you suggest, but I think it would be a very cumbrous way of working. The better plan is for the Commander-in-Chief—in the main—to decide these questions, summoning the Army Board into consultation when he considers a general discussion desirable.

6884. Then in your memorandum you go on to say that if this sort of financial responsibility (for it amounts to that) was placed on the Commander-in-Chief, then in that case he could delegate financial responsibility to the General Officer Commanding?—Yes.

6885. You say that you would make the General Officers Commanding absolutely responsible for the complete financial bearing of all the proposals they put forward?—Yes.

6886. And there must be no separate Accountant-General's Department to take this load off their backs. Would there not be a possible danger of rather taking away General Officers Commanding from other work, and somewhat turning them into financiers or clerks?—I think they would put forward fewer proposals very likely. I think they would be very careful indeed how they put forward things; and we should have to see that they did their other work. I do not think there would be much fear of their neglecting it, and the more they could decide for themselves and the less they had to refer, the less I think would their work become.

6887. Are not the Generals, as it is, given rather too much clerical work?—Yes, I think they are, certainly.

6888. And do you not think, then, that such a suggestion would add to the clerical work?—No, because I am in hopes if this were done it would diminish the clerical work all through. The decentralisation which would result would stop clerical work by enabling General Officers to settle things themselves instead of referring them up to us.

6889. (Sir George Clarke.) Then you think that a great deal of the General Officers' time is now consumed in correspondence with the War Office?—A very great deal.

6890. Much of which might be removed?—Much of which might be removed if we could delegate to them larger financial power.

6891. (Sir Charles Welby.) Is it quite clear that it is a quicker process to settle a case for yourself than to write a letter to someone else and ask that someone else to settle it?—I should say so, certainly.

6892. I mean, as regards your own particular work, or the amount of work which is entailed upon the individual. Would not the fact of the General having to decide these very knotty points himself mean that he would have to spend more hours in his office than he does under the present circumstances?—No, it might when he was beginning the work, just at first, but after that I do not think it would.

6893. (Chairman.) I suppose that would depend to some extent on the staff given him to assist him?—Yes, to some extent.

6894. (Sir Charles Welby.) But the staff, I take it, under existing circumstances write the letters asking for decisions; the General does not do that himself, does he?—This depends on the question concerned. Some letters are written for him, some he probably writes himself. Under any circumstances, the question goes up to him first of all, and he decides whether or not it shall be referred. I think you must take the General and his working staff as one; you cannot separate the two. I must say with reference to what Sir Charles Welby was saying, that my own personal experience is that whenever I can decide things myself, the work goes much more quickly than when I have to refer them.

(Sir Charles Welby.) I do not doubt for a moment that the work would go more quickly; I was only doubting as to whether it would save you and your staff labour.

6895. (Sir George Clarke.) Then you do not think that a greater delegation of duties to Generals commanding districts would in the least tend to withdraw them from their duties of training of troops?—No, I do not think it would.

6896. (Chairman.) To pursue your memorandum, you point to the disadvantage attending the separation of finance from the Commander-in-Chief's office, and you say that wherever one branch or department is constituted to check or review what is done by others, it grows to an enormous size, by some curious natural law?—I am not prepared, of course, with facts and figures to show anything of the kind historically, but I fancy it is a pretty constant experience.

6897. But you have given the Committee some figures, and you say that the War Office list shows that the whole of the Commander-in-Chief's Department employs 499 men, and that the finance Branch employs 470 officials of various classes. The inference from that is, is it not, that very nearly as many men are employed to review the work as are employed to do the work, namely, 470 as against 499?—I did not mean that they were all employed to review the work, because of course, a good many of them are doing the financial work—they have to deal with the questions of supplies and contracts and pay, and all the rest of it. What I did mean was that the people employed in managing the finances—or perhaps I should rather say the accounts—of the Army, bore a very large proportion to those managing the rest of its administration, and that this was partly due to the growth of the checking branches.

6898. But surely these 470 finance officials cannot be compared in any way, can they, with the 499 officials of the Military Departments, because the 470 finance officials, so far as they review the work, do not only review the work of the 490 men in the Military Departments, but they review and check the work of all the districts and stations all over the Empire?—They do; but then those stations and those districts have their own financial people as well; they have their paymaster, their supply people, a whole staff, in fact, of people to look after pay, supplies, and ordnance stores, in which these financial questions come in; therefore, if you were to add all the people who are employed on these duties in the districts to those up here, you would arrive at a very large total indeed.

6899. At a larger total, no doubt, but not at so large a total as to justify your ratio of 490 to 477, as the Finance Department here is not only checking the work of the clerical staff in the districts, but it is checking the financial work arising out of the Army as a whole, is it not?—No doubt that is so.

6900. It seems to me therefore that your comparison does not lead one very far?—I do not say that it does. I take it in this way. The Military branch at Headquarters has below it in districts a large staff, beginning with the General Officers and going down to the staff officers and their clerks, and so on, and it has to look over all their work and to deal with other things as well. Similarly the Finance Branch at Headquarters has out in districts a certain staff and it has to overlook their work, and to deal with other financial work as well; and I compare these two. But I make ready to admit that it is a very rough comparison.

6901. To refer again to the transfer of the department of the Accountant-General to that of the Commander-in-Chief, would it be your idea that the Accountant-General should still continue to be a civilian with a civilian staff under him?—I see no objection whatever to his being a civilian, and I think you are more likely to find a civilian properly fitted for it with the requisite training and capacity than you are to find a soldier. But I would take either soldier or civilian indiscriminately according to which offered the most suitable man.

6902. In India the Accountant-General is entirely a military man, is he not; and one of the arguments urged in his favour is that the service being entirely recruited from officers it has greater understanding as to the needs of the Army, and it gets on much better with them?—I think there is a great deal in that, and I should like to qualify what I said just now by saying that if you can get a soldier with the proper qualifications he would be preferable to a civilian.

6903. When you say "if you can get a soldier," does that imply a doubt in your mind as to whether you

28 Feb. 1901.

can?—You see the whole trend of what I have been saying is that unfortunately soldiers are not educated much in finance, their training does not go that way. I can think of a few men who have got what I call financial minds, but they are not common in the service.

6904. Finance is a rather vague word to use, is it not? It does not seem to me there is much finance in compiling estimates or seeing that expenditure goes along according to estimates or according to regulations?—That is quite true as regards the work of the Accountant-General; it is not, as you say, finance; it is more account keeping.

6905. I do not know if you saw the "Times" this morning?—Yes, I did.

6906. There is a long letter from Sir Ernest Cassell as to whether or not the Chancellor of the Exchequer was justified in raising the money for the war in the way he has done. That I should be inclined to call finance. And all the questions treated in that letter are entirely different from anything which would arise in connexion with the Army?—Yes. In speaking before you I have been using the word finance as more in the sense I refer to it in my minute, which is that of realising that however liberal the nation is there must be a limit to the amount it can spend on its Army, and of very carefully thinking out and arranging how with that money to get the most completely equipped and efficient army.

6907. For an Accountant-General who has to criticise and arrange estimates, and see that the expenditure is carried on according to regulations, finance in the strict sense of the word is not necessary, is it?—I quite agree.

6908. It is really a matter of common sense and of a good memory, is it not?—Yes, I agree. But in all work previous training is of advantage, and soldiers get little training in account keeping.

6909. It would seem to me that those qualities could be, if I may say so with all deference, found equally in soldiers as in civilians?—I hope so.

6910. May I take it that your view would be that, supposing the Accountant-General's Department was transferred to the Commander-in-Chief, it would be, more or less, immaterial whether it was Civilian or Military; but that, on the whole, you would prefer it to be Military?—Yes, that would exactly express my view.

6911. In paragraph 7 of your Memorandum you say: "The number of small matters which, under the Royal Warrant for pay, require the approval of the Secretary of State before action can be taken, have 'diminished of late years, but are still far too many.'" Is not this possible partly because the Commander-in-Chief is now charged with an unreal and impossible supervision and responsibility?—In what way do you mean?

6912. You say that the Commander-in-Chief should be charged directly with the whole administration of the Army under the general control of the Secretary of State. At present, so you argue, far too much of this direct administration is carried right up to the Secretary of State, with the result of overloading him with detailed work which could be better done by men with military training. A Commander-in-Chief really could not conceivably deal with all at this work, and as there is nobody at the War Office in the position of the Military member of Council in India, all that work necessarily goes to the Secretary of State, does it not?—But a great deal of the work which goes up to the Secretary of State is work that the Commander-in-Chief could deal with, and it is even work which he might delegate to some one below to deal with, but for the fact that under the warrant all these things require the approval of the Secretary of State. Take such a case as the appointing of a Military officer to be an instructor at Sandhurst or Woolwich, or of one to serve with the Egyptian army. The Commander-in-Chief could make such appointments perfectly well; indeed, in a good many cases he might leave the selection to General Officers Commanding Districts. But as matters stand now, the appointments I have named and many other trifles come right up to the Secretary of State. I ought, however, to add that a good deal has been done latterly towards reducing their numbers.

6913-4. I suppose the approval of the Secretary of State is formal, is it not?—Of late years there has been, of course, a change, and the tendency has been to allow more and more local appointments. Still, far too many things go up almost formally for the Secretary of State's approval, and come back equally formally and are promulgated. This all means extra work in this office, and it prevents the power of getting the thing away and sending it below.

6915. Is there any reason for that?—I think the reason is that these things have all an indirect or a direct effect on expenditure, and it is not considered safe to entrust the Commander-in-Chief with any control over expenditure.

6916. I suppose the estimates provide for a certain number of instructors, and really as regards expenditure it is immaterial whether it is Captain A or Captain B who is drawing the allowance?—That is so, but the submission goes on just the same.

6917. (*Sir Charles Welby.*) But should you not say that the reason why these cases are referred to the Secretary of State is not so much a financial reason as to enable the Secretary of State to be aware of what is going on, and that it is a simple machinery for letting him know of new appointments which are made, so that if he is questioned about them in Parliament or elsewhere he could have a knowledge of what is going on in the office, and that though it may lead to a few hours' delay it has practically no effect in hindering the work of the office?—I think it hinders it, because it increases it.

6918. But it just puts the Secretary of State in a position to exercise, if necessary, a power which constitutionally lies in him, but which as a matter of fact he does not want to exercise once in a thousand times.

(*Mr. Mather.*) As a matter of fact, the Secretary of State would never be expected by Parliament to take the slightest notice of, or know anything about such a case as General Grove has put. The only thing they want to know is whether the Army is efficient or not; but as to the inter-departmental arrangements or the rights of one captain or another to a post, I cannot see how the Secretary of State would have that in mind.

(*Sir Charles Welby.*) With regard to the appointments of lieutenants and captains I am very much surprised to hear they do go to the Secretary of State.

(*Witness.*) They do in a good many cases. With regard to what Mr. Mather was saying just now, may I say that some years ago I happened to be in the House of Commons on—if my memory is correct—two nights running. Lord Randolph Churchill got up the first night, and in the course of his speech about some Military question (I forget what it was) complained very much that we did not have in England the German system, which made the commander of a company responsible for its clothing and pay and everything of that sort, and that whereas in Germany this company commander was an autocrat in that way, here all such things had to be referred to the War Office. The House was entirely with him, and his speech was a good deal applauded. The next night, I think it was, I was again in the House of Commons, and the Secretary of State was asked to explain why it was that the General Officer Commanding at Aldershot had allotted a certain quarter to a volunteer officer and not another quarter; and the Secretary of State was called upon by the House of Commons to explain and practically to defend a minute matter of Military action.

6919. (*Mr. Mather.*) You mean by some individual, an eccentric member of the House of Commons, not by the House of Commons itself?—By a member certainly. Whether eccentric or not I cannot say; but I know that similarly minute questions on Military matters are asked daily when the House is sitting.

6920. (*Chairman.*) In your memorandum you also state that "There is a steady tendency at the War Office, due to outside causes, which it would be beyond the scope of the Committee's reference to enter upon, for the Secretary of State to do more and more of the Commander-in-Chief's work, a confusion of functions which cannot be attended with good results." Would one of those outside causes be increasing inquisitiveness on the part of the House of Commons?—That is the main cause. The Secretary of State has to defend, or to answer at all events, in Parliament, for the actions of Military

officials; and the consequence is that the tendency is more and more, independently of any individual character of the Secretary of State, for him to require that these sort of things should be submitted to him before action is taken, or, in other words, for him to be gradually forced, by conditions which he cannot control, into becoming more or less Commander-in-Chief. The result is injurious to the Army, which does not know who commands it, and is equally injurious to administration, for it causes over centralisation and useless work.

6921. (*Mr. Mather.*) May I suggest to you that no one, I think, in the House of Commons expects the Secretary of State to be answerable for all the events upon which they may put questions; but as there is no one in the House to answer questions of the kind but the Secretary of State, he is the channel through which such questions must go, and as they cannot question the departments by calling at the departments and asking questions privately, members naturally put questions on the paper in order to enable the Secretary of State to have them answered on another day. The House does not expect the Secretary of State to have all these things in his mind and give a reply at once?—No, but they expect him to control the actions which give rise to the questions. They hold him responsible, and they attack him if they are displeased. Take, for instance, this simple example. A Military order is given that a man is or is not to wear a particular decoration or ornament on a particular day. The Secretary of State is the man who has to defend that order.

6922. (*Chairman.*) He is a party to the order before it is given, is he not?—That is precisely it. He gradually gets to say: "Before General Officers give these orders they must let me know in order that I may decide whether they are right or not," and the Military direction of the Army passes from the Military officers to a civilian exposed to the political pressure of the parties in the House of Commons.

6923. (*Mr. Mather.*) Those are questions of a political bearing, and in matters of political bearing no doubt a discreet Commander-in-Chief would consider it his duty to inform the Secretary of State on such affairs?—But my experience is that all these matters tend to have—I do not know whether I should call it a political side, but they have this side—that the Opposition is anxious to show that what is being done by the Government for the time being is unsatisfactory.

6924. (*Chairman.*) Whatever the Government does?—Whatever the Government does.

6925. (*Mr. Mather.*) Or whatever the Government may be?—Or whatever the Government may be. I will give you an essentially non-political question—the question of what hours troops are ordered to march in the morning. If a man is overpowered by heat in the middle of the day, that at once becomes the subject of a question in the House of Commons as to why the General Officer did not issue orders to march earlier.

6926. (*Chairman.*) Whatever the Government for the time does must be wrong—that is what it comes to?—Yes. Further, quite independent of politics, when a member is dissatisfied with some act of Military administration, he asks a question in the House about it. You have only to look at the questions to see that four-fifths of them have no political side at all. They are about small matters of administration or command. The result, as I say, is to make the Secretary of State intervene in command, and to lead soldiers to think that the orders given them can be influenced by pressure in the House.

6927. (*Mr. Beckett.*) Is it not a fact, in regard to most things proposed by the Military department, that the Secretary of State wishes to have them submitted to him because he wishes to consider what bearing they will have on the House of Commons?—To a very great extent, that is so.

6928. Many things which from a Military point of view are absolutely advisable have to be whittled down or changed in some way because he might be called upon to defend them in the House of Commons?—Most distinctly.

6929. (*Sir Charles Welby.*) As a matter of fact these rules binding the Military authorities have as a rule arisen from cases in which the Military authorities have acted on their own initiative. In consequence of that action debates have arisen in Parliament, and the Secretary of State therefore has found it necessary to

lay down a rule that in future no such action should be taken without previous reference to him?—Yes, that is so.

6930. (*Mr. Beckett.*) You are quite of the opinion, are you not, which was expressed by the Adjutant-General, that this practice of asking questions in the House of Commons tends to centralisation?—It is one of the most leading causes of centralisation.

(*Mr. Mather.*) Let me draw attention to the first words of the paragraph of your memorandum in which you speak of the Army as being not the Army we ought to have. I suppose we must all agree that the Army organisation is not perfect, and perhaps is not anything like so complete as it might be, if, for instance, you had your own way; but may not we excuse the House of Commons on that account, owing to the great number of incidents which occur in connection with the Army which seem to be the result of very gross carelessness and mismanagement? Take, for instance, such a case as arose not long ago, where a company of Volunteers passed up from Manchester to Aldershot. They were informed by the War Office, or whatever place had to deal with the matter, that they were to come during the night and they were to have breakfast at Aldershot; but there was nothing whatever provided for them. They went through the whole of the manoeuvres on an extremely hot day and went back to Manchester, but with the exception of those who had some little money upon them, not one single member of that volunteer company had anything to eat that day, after all the arrangements had been made and were set forth in black and white. That is the kind of thing which brings up questions in the House of Commons, and it is asked what is the organisation of the Army worth that it brings about such a state of suffering on the part of men who volunteer to serve their country. Cognate questions such as those would always be a proper subject for comment in the House of Commons, and the Secretary of State must seek information upon them and give it. That you cannot object to. But if an Army was thoroughly organised all round like the German Army, for instance, these questions would not arise?

(*Colonel Miles.*) Surely in a case like that the persons who would be responsible are the regimental authorities, they have a proper staff. It is not a question of War Office organisation, is it?

(*Mr. Mather.*) Whatever the source might be from which the orders should emanate to make that matter go smoothly, whatever was promised to the volunteer officers was not carried out. I put that forward as a form of question which might be asked in the House of Commons?

(*Witness.*) I should like to say in answer to that, that I do not suppose any organisation could work so perfectly that there would not sometimes be hitches and mistakes, and the natural thing in a case like that is to bring it to the notice of the proper Military authorities, the General Officer Commanding at Aldershot in the first instance, who would certainly look into it; and you may be quite sure he would make it exceedingly hot for the people who had made such a blunder as you have described.

6931. But how could a thing like that come out except through a question to the Secretary of State in the House of Commons?—In the simplest way in the world. By the Officer Commanding reporting it.

6932. But the Member of Parliament could not get at the Officer Commanding; he must put the question to the Secretary of State?—What I mean is that the Officer Commanding that company should have reported to the military authorities this distinct breach of the arrangement, and you may be perfectly certain it would have been gone into, and gone into very thoroughly, and the proper amount of blame and everything else shared out.

6933. (*Chairman.*) Therefore that question in the House of Commons, in your opinion was scarcely worth putting, was it?—Certainly not, unless there had been a refusal to inquire. It is a question, however, which the military authorities would take cognisance of.

6934. I take it the ordinary member of Parliament would not wait, as a rule, to find out whether the military authorities were doing their duty, but he would be only too glad to say something unpleasant to the Government if he were of the Opposition or a free lance?—Probably.

Major-Gen.
Sir C. Grove,
K.C.B.

28 Feb. 1901.

Major-Gen.
Sir C. Grove,
K.C.B.

28 Feb. 1901.

(Mr. Beckett.) Do you suggest that the proper course to be pursued would have been for the member of Parliament to write to the General Officer Commanding?—The proper course would have been for the officer commanding the company to report the thing to his General, and when a member of Parliament then found the matter had not been thoroughly investigated it would be time enough for him to put a question.

6935. (Chairman.) Are the outside causes to which you attribute the growing tendency to centralisation, in your opinion, the pressure of the House of Commons?—That is so; and its tendency to intervene in matters of executive military detail.

6936. Then you go on to say: "This confusion has been increased by the system introduced in 1895, under which all letters written from the War Office are written in the name of the Secretary of State"?—Yes, I think it is curious how much effect that has.

6937. Why was that system introduced in 1895?—I cannot tell you except from hearsay.

6938. (Sir Charles Welby.) The position previous to 1895 was that all the Military departments were directly subordinate to the Commander-in-Chief. The change made after 1895 was to give the heads of the military departments some independent responsibility, subject only to the general supervision of the Commander-in-Chief; and it was to emphasise the change in the position of the heads of departments that this change was made in the method of conducting the correspondence?—But I would point out, that that being so, it rather emphasises what I have said as to the tendency for the Secretary of State to be driven into the position of doing the Commander-in-Chief's work.

6939. (Chairman.) At any rate, it seems to the public, does it not, as if he did the Commander-in-Chief's work, owing to the fact that letters emanating from the Military department go over the Secretary of State's signature, or by his direction?—Yes.

6940. Then would you be in favour of letters from the Military department being sent out in the name of the Commander-in-Chief?—Yes, certainly.

6941. In order to make that possible, the Commander-in-Chief would have to have much more direct supervision than he is now charged with over the other Military departments, would he not?—No; because now the name of the Commander-in-Chief is also used by the Military departments. We have arrived at a very cumbrous phraseology. To give an example, I will say I am answering the application of an officer about something. I begin by saying that I am directed by the Secretary of State to acknowledge the receipt of his letter representing so and so, and in reply I have to inform him that the Commander-in-Chief does not consider it desirable that his request shall be granted.

6942. (Sir Charles Welby.) To make this quite clear the Committee should realise that your department is not one of those which to some extent were removed from the immediate control of the Commander-in-Chief; your department is one which always has been and still remains immediately under the Commander-in-Chief?—That is quite true.

6943. (Chairman.) My point is this, that as regards all departments which would issue letters in the name of the Commander-in-Chief, closer supervision and responsibility, say for the Inspector-General of Fortifications and the Quartermaster-General, and others, would devolve upon the Commander-in-Chief than devolve now?—I think not; and I will explain why. Take the old system when those departments were directly under the Commander-in-Chief. Every department in the War Office does, and must do, a great many things in the Commander-in-Chief's name which never come under the Commander-in-Chief's notice at all. The heads of those departments would not be fit for their position otherwise. Every staff officer is really a sieve; he has got to stop a certain amount of work going up to the man above him; but he acts in the name of the man above him, and it is only the discretion of the person who holds the appointment which decides what questions he can deal with himself or what he must take to his superior officer. If these letters were written in the name of the Commander-in-Chief, there would not be the slightest necessity for the Adjutant-General, the Quartermaster-General, or the Inspector-General of Fortifications taking up one more question to the Commander-in-Chief than they do now. As it is now all these officers have to submit all important questions to the Commander-in-Chief, and we must

trust to their judgment to decide which questions are of sufficient importance to call for that submission, and which, on the other hand are not of sufficient importance, and which therefore they not only can, but which they ought to, deal with themselves. I always define the position of any staff officer as a man who is put in a place to take a certain amount of trouble off the shoulders of the man above him. That is his duty, and if he takes everything up to his chief, he gives him more trouble than if he were not there at all.

6944. As regards the substitution of officers and Military clerks for Civilian officials, you say in paragraph 11 of your memorandum that such a change would have great advantages for the Army, and indirectly would diminish work at the War Office. How would it diminish work at the War Office?—I have endeavoured to give my reasons for that further on. In this way—that a certain amount of work comes up to us in consequence of our regulations and our method of administering them not being well understood; and every man that you pass through the War Office who understands those regulations, and understands the general lines on which we handle them, and goes away again to a district, is able to decide for himself questions which he might otherwise refer up, because he would be uncertain about them.

6945. Then do I gather that in your opinion a Military officer employed up here should pass backwards and forwards to the Districts?—The more you can pass them back to the Army the better for the Army generally; but of course it is somewhat inconvenient at headquarters to change our officers quickly.

6946. It is a breach of continuity, you mean?—It is a breach of continuity, and each new man has something to learn; but I think the benefit of changing them quickly would outweigh the disadvantages to the work up here.

6947. Does that apply to Military officers who would take the places of Higher Division clerks?—Yes.

6948. Now, to come to Second Division clerks, whom you would also, I gather, replace by Military clerks, should those Military clerks, in your opinion, be equally transferable between the districts and the War Office?—Certainly; and they would be very useful in the districts.

6949. We have had it from one or two other Military officers here, that it is their opinion that when a Military clerk comes here he ought to stay here and be entered here?—Do you know what their reasons were for that?

6950. The reasons given are, I think, that it took a considerable time to train a man, and also the general reason of continuity?—That is one side of the question of course; but on the other hand I think the advantages to districts of getting men who have been trained up here are so great, that they would overbalance the advantage of continuity here. To my mind there are objections both ways, but the advantage on the whole consists in training men here for a certain time, and then sending them out into the districts.

6951. The Committee have been told that there are certain divisions of the Military departments where, for certain reasons, it would be always desirable to have civilians. The Quartermaster-General has told us that he would always like to have civilians, for instance, in Q.M.G. 2, because if he had Military clerks with Military connexions and Military friends, it would be much more likely that information as regards movements of troops would get out than if he had civilian clerks, who would probably not be in touch with military friends?—Possibly.

6952. Would that invalidate your general preference for Military clerks in Military offices?—No, speaking generally, it would not.

6953. That is to say, you would approve of Military officers in the places of Higher Division clerks, and Military clerks in the place of lower division clerks?—Yes.

6954. You say further, that it would be much easier to get rid of anyone who did his work indifferently; that is to say, if a Military staff officer turned out to be bad at the War Office, or a Military clerk turned out to be a bad clerk, you could relegate him back to his ordinary regimental duty?—Yes, I think that is a point of considerable importance. You can only get rid of a civilian clerk at the War Office by ruining him practically.

6955. (*Mr. Mather.*) There is an important paragraph, paragraph No. 3, in your memorandum, where you suggest that the Accountant-General's department should be transferred to the Military side. Is it not a fact that every department of the War Office on the Civil side, theoretically exists only for the purpose of serving the military organisation?—No doubt. It is part of that organisation in one sense.

6956. It is created for the purpose of serving the organisation and for the thorough efficiency of the Army, is it not?—Yes.

6957. The Accountant-General is one part, and an important part, of the War Office staff, dealing, as you have said, with finance only, the audit and examination of accounts, and certifying that expenditure has been conducted according to regulation. Is it not to-day the practice of the Commander-in-Chief or any of the Military Officials of the War Office, or the heads of Supply Departments, to consult the Accountant-General on matters of finance such as he has charge of, and receive his services without any difficulty whatever?—The Accountant-General is most kind, and so are all his branches, and they are always ready to assist one in any way in any financial calculation one wants to make; but any financial calculations which are officially submitted by a Military branch of the War Office would be equally officially submitted again to the Accountant-General's Branch to verify whether or not those things were right. Therefore naturally one does not trouble the Accountant-General more than one can help; to make calculations for one which one knows he will have to go over afterwards again in his official capacity.

6958. Then what you mean by this recommendation about finance is really not what it would appear to be, namely, that you would require the Accountant-General's Department to be transferred to the Military side, but that you would require a financial adviser, so to speak, in the Commander-in-Chief's Department, to deal with all these questions of finance policy which would affect the expenditure of the Army, and would therefore, naturally, affect the condition of the Army. You require the expenditure to be looked at side by side with the policy the Commander-in-Chief desires to carry out?—That is very much what I mean.

6959. That help would not be afforded, of course, by the Accountant-General, he does not exist for that purpose, does he? The Secretary of State exists for that purpose, and if some other financial adviser were required beyond the Financial Secretary or some deputy of the Secretary of State, there is no reason why the Commander-in-Chief and the Secretary of State should not arrange for some financial adviser to be within the department of the Commander-in-Chief, is there? That would be an efficient way of carrying out what I understand you mean. The Accountant-General, if you transferred him bodily from his present duties to the military side, could do you no good, could he?—The Financial Secretary really only receives his knowledge through the working of the Accountant-General's Branch. All questions of Estimates, all questions of what particular changes will cost, everything of that sort are worked out in the Accountant-General's Branch, which is also, of course, the Financial Secretary's Branch, because it is under the Financial Secretary; but for all working purposes it is the Accountant-General's Branch which does the work rather than the Financial Secretary's, which, apart from the Accountant-General's Branch, is a very small Branch.

6960. If the Accountant-General's Branch or Department already does the work which you want to have the benefit of, why do not you get the benefit of it directly from the Accountant-General? He exists only to serve the Army, does he not?—Yes.

(*Sir Charles Welby.*) I do not think that can be taken quite as being the only function of the Accountant-General.

(*Mr. Mather.*) I am not taking it that it is the only function. General Grove says that the Accountant-General gets estimates of all the expenditure which will be incurred by the Army in carrying out certain operations; and, if that is so, I merely ask, why should you require that Branch to be within the Military Department, when you have it close by you to serve you in that respect day by day.

(*Witness.*) Because I think it would work much quicker and better, and save a certain amount of work.

Let me put a case. Say a Military official, for some Military reasons, thinks it would be desirable to increase the establishment of battalions by, six non-commissioned officers and 50 privates, of whom 25 are to form a small Mounted Infantry section with horses. He recommends his proposal on Military grounds, and he elaborates it pretty carefully, sees how many men he will want, whether he will want them in the Colonies as well as at home, what their training and equipment will be, and so on. He does all that without considering the expense at all, or if at all, only very sketchily. It goes before the Secretary of State; the matter is then referred to the Financial Secretary, or really to the Accountant-General's Branch, to consider, and the estimate of the expense comes up. As not infrequently happens, when it is thoroughly gone into, the expense turns out to be very much heavier than was anticipated by the Military official. Then after all that time has been spent on this work on both sides, the proposal is possibly dropped or modified. Now, if in the Military officials' own office he had someone who could do that for him, and could do it at once on his first instructions, he would send to that man and say: "I am thinking of doing this; give me a pretty accurate idea of what it will cost before I go into my proposals in detail"—thus a great deal of work would be saved. As it is (although, theoretically, there is no reason whatever why the present system should not work well), by the separation of the two sides, there is practically a good deal of unnecessary work.

6961. In an ordinarily large business concern there are two sides, the commercial and financial and the manufacturing sides; the manufacturing side, of course, represents the duties of a number of technical men, just as the Military side here represents the duties of the Military authority with the knowledge to create and maintain an Army. It is the universal practice for the technical men who administer in the different departments, or create the departments, to conceive their improvements and developments, not only on the ground of their being more efficient for their purposes in the manufacturing, but they always take alongside that view of the case the view of the financial expenditure; and the commercial and financial side of a large concern, of course, serves the technical side by giving any information required at a moment's notice as regards the expenditure involved in a certain proposal. I do not see how the administration of the War Office could differ from the ordinary course followed in the administering of a large affair such as I suggest. If these Financial Departments exist in the War Office, surely they are at the service of the Military side to give it at any time calculations of roughly the amount of expenditure involved in any proposals they may make. Your suggestion in paragraph No. 3 appears to point to a new arrangement being made, whereas, as I take it, all the arrangements have already been made for the service which the Commander-in-Chief requires on the financial side?—Let me see if I follow you rightly first of all. I understand that what you are saying is that in any business or trade the technical side and the financial side are separate, but that they consult together, and that on the result of their deliberations the board, or the directors, or the proprietors, whoever they may be, decide what to do. But do not you see that that is the very thing I want to get at in the War Office? The only thing is I want the Board to be in the main the Commander-in-Chief. As it is now, the Board is the Secretary of State who, in the nature of things, is transitory, and who, in the nature of things, is unacquainted with the technical details of the business.

6962. I agree; and that brings me to the next question I want to lead you to, that is, as to the Army Board. You named the Army Board as being theoretically a sort of Clearing House in which all questions might be settled, both of finance and policy, on the part of the Commander-in-Chief. This Board, constituted as it is of the heads of the various Supply departments, and the Adjutant-General also, is not, I understand, effective. But I put it to you, would it not be the most effective means of accomplishing what you desire, and with which I very much sympathise, if the Board were made a reality, and the Commander-in-Chief, through that Board, settled the questions not only of policy, but also of the cost of that policy, and the finance which would be required to carry it out?—Yes, I think if you could make that Board a working reality, it would be a very good thing; but that Board

Major-Gen.
Sir C. Grove,
K.C.B.

Major-Gen.
Sir C. Grove,
K.C.B.

28 Feb. 1901.

can only become a working reality if its recommendations are carried out, not if they are put aside.

6963. Supposing the decision of that Board was entirely in favour of a Commander-in-Chief's scheme to make a great development in some Branch of the Army, and the cost of it had been through the Board determined—the Board could obtain all the information as to finance they required—then the Board would naturally submit the financial side as well as the Military to the Secretary of State, and ask whether the funds that might be obtained from Parliament would permit of such a scheme being carried out. That would be a proper function, would it not, for the Secretary of State to be asked to undertake and perform; you would soon come to a final decision in a financial and Military sense?—Yes, and for large general questions, there is much to be said for this. But it would be a cumbrous way of working for smaller matters. Further, you are at the present moment, if I may say so, looking at it solely from the point of view of the conduct of business in the War Office. I am looking at it to a certain extent a little beyond that, namely, from the very great advantage, I believe it would be, generally, if soldiers and officers and all people thought a little more about the money the things cost. I think that you cannot expect people to study economy very much if they do not have the handling of and dealing with money. I do not see how that is to come under present conditions; and that is one of the reasons why I am anxious to see this done.

6964. But the very Board we have spoken of is a Military Board?—Not wholly, but it is a Military Board.

6965. There would be, perhaps, the Accountant-General on it?—The Accountant-General and the Assistant Under Secretary of State for War.

6966. But it is a Military Board, and, therefore, it does bring the heads of Supply departments into direct contact with finance, does it not?—Yes; and so far as it goes, I am with you. I think more continuous action by the Board, and more weight being attached to the recommendations of the Board, which, after all, is the most important thing, would be a considerable advantage. You cannot expect Boards to take much trouble about things if their recommendations are frequently passed by.

6967. Then you spoke of the financial questions being dealt with more in the various districts by the General Officers Commanding?—Yes.

6968. You say they do not think much about finance and do not know much about it; but one finds, in going round districts, they apparently know a great deal about finance, and that finance is one of the most troublesome questions of their lives, and they are always thinking about it; that finance is a sort of skeleton in their cupboard which they can never get rid of. In order to allay and mitigate the perplexities of their work with regard to finance they, no doubt, would like to have powers of expenditure delegated to them from the War Office, which would enable them to know exactly what they would have to spend, and they would spend it in the best possible way. Would that form of decentralisation fully meet your view?—Yes.

6969. Under such a system, of course, each district would require to have some representative of the Accountant-General's Department, so that the final check and audit of what they spent might be dealt with in the district?—Yes; if that could be done that would mean considerable decentralisation.

6970. Would that bring the districts and the staff officers there pretty closely into connexion with finance?—Yes.

6971. And that would answer to some extent your purpose?—Yes, and I should be very glad to see that done.

6972. You say the conclusion at which you arrived in writing this minute was, that you desired to have the Military side in the War Office much more responsible for all that goes on here?—That is so, most certainly.

6973. That the Military appointments should all be made of the most capable men the Army and country can produce, and once being established in these positions, the country and Parliament and the Secretary of State and all concerned should exact from those Military chiefs the duties which are exacted from all

Civil chiefs in all business concerns throughout the world?—Quite so.

6974. Without the checks or hindrances now put forward in order to ascertain what becomes of every sixpence voted by Parliament?—Precisely.

6975. That is practically the conclusion you arrive at?—It is.

6976. (Sir George Clarke.) I gather from your memorandum that from a large experience of the War Office your opinion is that the Civil side is too much mixed up with pure administration, and that the responsibility of Military heads is thereby impaired?—That is my opinion.

6977. Lord Haliburton in a memorandum he has put before us says, "The extent to which the Secretary of State for War requires expert assistance of a Military and Civil character to enable him to secure the efficiency of the Army, while guarding and preserving the prerogatives of the Crown and the interests of the public, must be the measure of the division of duty between the Civil and the Military employees of the War Department." In putting that, is not the whole question, what is expert opinion, and whether a proper dividing line is drawn between what may be regarded as purely Civil expert opinion and what is absolutely Military opinion?—Yes. Lord Haliburton's language is to me rather confusing, because I should gather from it, that Lord Haliburton speaks of the Commander-in-Chief and the Military administration of the Army, as merely expert assistance to enable the Secretary of State to secure its efficiency. That is not exactly the language I should have used; that is all I can say.

6978. Then your view is that it is not a question of two people advising the Secretary of State, and their relative positions, as Lord Haliburton intimates, being settled by the amount of advice they give, but it is a question of the Military authorities at least being responsible to the country for producing an army?—Certainly.

6979. There seems to me to be a vital distinction between those two points of view?—Certainly.

6980. Then you consider that what is financial control in the War Office, and the concentration of that financial control in the Civil Branch, practically permits that Branch to spread itself over Military questions of all kinds?—I think it not only permits, but it almost inevitably drives it into it.

6981. The Adjutant-General in a memorandum which is before us, says, that a Civil official laid down, for the Secretary of State's guidance, precepts as to the allotment of time of officers to their duties, and criticised the relative efficiency of the training of officers and men. Is not that extremely undesirable?—I think it is an entire confusion of functions.

6982. Is it not a fact that members of the Civil Branch are continually expressing opinions upon what are purely military questions?—I do not want to go too far. Military questions are so mixed up with the relative value of different proposals, that it is rather difficult to say when and when not a member of the Civil Branch is trenching on what might be called absolutely Military questions, but I certainly will say that the tendency is undoubtedly for them to express opinions on Military subjects, and it is, certainly, to take away from the Military people the direct responsibility which ought to rest on them.

6983. If a principal clerk, for example, expresses an opinion on the reserve of small-arm ammunition for the Army, and if an Accountant-General expresses strong opinions upon the general principles as to the organisation of the British Army, you would consider that going a little bit outside the functions of those people?—Certainly.

6984. Do you think the idea which is prevalent throughout the Army that the War Office is largely managed by civilians, tends to create distrust on the part of the Army?—No doubt.

6985. May not that same idea also give rise to distrust on the part of the general public as to the way in which the Army is managed?—Very likely.

6986. As far as you know, is the civil element in the central administration of any great European Army as large and as powerful as it is in our own?—Certainly not as powerful—I believe it is very large in some of them, but only in the subordinate Branches.

6987. I gather from your evidence that you wish that every spending department should frame its own estimates and keep an account of its own expenditure?—Yes.

6988. And that it would meet your view if audit pure and simple remained on the Civil side under the Financial Secretary, and that if all the duties of accounting and estimating, whether performed by soldiers or civilians, were transferred to the Military departments?—That would quite be my view, with the exception of one thing which I should like to leave open, and that is, the question of whether the audit should be done in the War Office at all, or should be done outside. I do not wish to commit myself to the view that the audit should be done here, but in other respects what you have said exactly expresses my view.

6989. At present, as far as I can understand it, there is a considerable amount of jumbling up of the duties of account and finance. Would it not be possible to separate them and to place the duties of keeping public accounts and the estimating of the cost of proposals entirely under the Military authorities, leaving the after-check for the satisfaction of the public and the House of Commons on the Civil side?—Yes, that, of course, would have to be outside the people who framed the estimates and spent the money; the check must be outside them.

6990. That would be the after-check?—That would be the after-check.

6991. And that would not interfere with the administration of the Army?—No.

6992. So that every department would have within itself a Civil Branch responsible to the Military head who made the estimates and framed the costs of proposals before those proposals were submitted in a concrete form?—Yes.

6993. Do you consider that the settlement of questions is unduly delayed, and that there is too much correspondence and writing at present?—Oh dear, yes.

6994. Do you think the Army Board might supply some machinery for remedying that evil, if it met more frequently and if its recommendations were more seriously regarded?—The evil arises in the main on minute questions, which would hardly go before the Army Board; but the placing of the account keeping, and that sort of thing which you have just referred to, on the military side, would go enormously towards reducing things, because a man would be able to answer any question at once in his own department. The Army Board, I take it, would consider rather larger and higher questions, such as the collating of all the different proposals which were put forward, the relative value and urgency of various services required, and questions of that sort. But the things which give rise to an enormous amount of correspondence in the War Office are the interpretation of the regulations about trifles, about the question of whether someone is entitled to 7s. 6d. a day travelling allowance or 10s. That kind of thing goes sometimes backwards and forwards for a long while.

6995. As another means of possibly reducing correspondence and minute writing, do you think there might be a considerable simplification and codification of regulations?—I think there might; but I should add to that, that we have not at present the machinery for it. By this I mean that it would for a certain time mean a good deal of work, and our hands are too full just now for us to be able to take it up.

6996. Possibly it might be the work of two or three years?—Quite that.

6997. But you think the work could be accomplished, and that a great deal of simplification without any loss of money might be obtained?—A great deal.

6998. I think you said you would prefer to see what was really an older system reverted to, that is, throwing the entire Military responsibility on the Commander-in-Chief. Is there not some sort of danger that he would be over-burdened then, because there must be some limit to the amount of responsibility which a single individual could take, and if everything were thrown on him, would he not become a little over-burdened?—No, I do not think so. I think there is no limit to the amount of responsibility or work that any man can undertake; it is merely a question of the extent to which he will delegate it. I should like to point out that the present system practically throws all

that enormous amount of work on the shoulders of the Secretary of State, who, in addition to his duties as Secretary of State, has the large call on his time, which is caused by his being a member of the Cabinet and a member of the Legislature. The Commander-in-Chief would be responsible for no more than the Secretary of State is held responsible for now—in fact, for rather less, and he would be a man who would start with a technical knowledge of the business he has to administer, and he would be able to give his whole time to it independent of other calls.

6999. Then you would prefer to make the great division of departments below the Commander-in-Chief instead of below the Secretary of State?—Yes.

7000. So that you would have a pipe, as it were, of which the Commander-in-Chief would be the neck between the Secretary of State and the heads of the big divisions of the War Office?—Yes, I think that the direct Military adviser of the Secretary of State should be the Commander-in-Chief.

7001. (*Sir Charles Welby.*) That is practically the system which existed from 1888 till 1895, is it not?—Yes; but I may say at the same time that I do not attach so very much importance to the difference which was introduced in 1895, because the fact that the Commander-in-Chief is charged with the general supervision and control of the Military side, and that important questions must be submitted to him, places him in the position of being able to control those officers who are working under him. The fault of the 1895 arrangement to my mind is that it is absolutely contradictory in terms. How can a man be subject to general supervision on one side, and charged with the direct administration of his department on the other?

7002. (*Sir George Clarke.*) Then you regard the arrangement made in 1895 as illogical in working, and unsound in principle?—Yes.

7003. Unsound because it is illogical?—Absolutely illogical, and therefore unsound; and distinctly undesirable in principle in so far as it tends to lessen the general authority of the Commander-in-Chief and set up independent authorities under him. As between the two systems of having the heads of the various departments the direct advisers of the Secretary of State and having the Commander-in-Chief the one direct adviser, the second is preferable in every way.

7004. Has much more work been thrown on your office by the abolition of the Deputy-Adjutant-General, Royal Artillery?—No, not very much, because I was given another officer to take the work which became freed by the abolition of the Deputy-Adjutant-General, Royal Artillery; it was divided between my office and the Adjutant-General's Office; we each of us had an officer given us to do that work, and with that I have not been at all overburdened, nor, as far as I know, has the Adjutant-General.

7005. Do you think the present arrangement works satisfactorily?—Yes, I do. I think it is an improvement on the old one as far as the officers are concerned. I cannot speak as to how it acts with regard to the men.

7006. (*Colonel Miles.*) Under the present system, where a Military question leaves a Military Department, it passes, does it not, before reaching the highest authority, through the hands of a series of Civilian officials who act independently and record their opinions not only as to the financial merits but as to the Military exigencies of the case?—More or less.

7007. With regard to the larger questions, how far does the Army Board operate in bringing the Military more closely in touch with the Secretary of State? Do the decisions then go direct to the Secretary of State, or do they pass through the same channel?—The proceedings of the Army Board are printed, and then they go to the Secretary of State through the Permanent Under Secretary.

7008. Under the present system, you say that the general survey of our Military requirements as a whole and the detailed calculations of the cost of all individual proposals is done, not by the Military who have to initiate and carry them out, but by a non-Military Department which does neither?—As a matter of fact that is the case.

7009. And this not only produces cross references and discussions, and, in consequence, unnecessary work and delay, but it also prevents our officers being properly trained administratively, I presume?—Yes.

Major-Gen.
Sir C. Grove,
K.C.B.

28 Feb. 1901.

Major-Gen.
Sir C. Grove,
K.C.B.
28 Feb. 1901.

7010. Does not, in your opinion, such a system dissipate the responsibility over the office instead of allowing the responsibility to be at once allotted to the proper Military official?—Of course, that is one of its very great drawbacks.

7011. To obviate this in some degree, would you place the Finance Branches to work concurrently with the Military Branches?—Yes, I would fuse them.

7012. So that every question would be considered simultaneously from a Military and Financial point of view?—Yes.

7013. It has been said that this would throw too much financial work upon the officers, but is it not the fact that now in many of the Military Branches here, officers are charged with financial duties?—Yes, in the Inspector-General of Fortifications Branch, the Director-General of Ordnance, and the Quartermaster-General's Branches.

7014. And their labours, do not you think, might be assisted, and would not be increased, by a proper Financial Branch working with them?—Their labours would be diminished.

7015. It has been urged that the effect would be to make them as it were more financial officers?—No.

7016. Before you held the appointment of Military Secretary I believe you held that of Assistant Adjutant-General for mobilisation services?—Yes.

7017. Which was then known as A. G. 7, and is now known as D. 7?—Yes.

7018. I think yours was the first appointment to that office?—Sir John Ardagh had been there for a short time before me.

7019. It was created, I think, by Lord Wolseley, was it not, at the time he was Adjutant-General?—Yes, it was created by Lord Wolseley.

7020. It was then under the Adjutant-General and now it is directly under the Commander-in-Chief?—Yes.

7021. It has no executive functions, I think?—No; none at all.

7022. It was formed, was it not, for the purpose of watching over the mobilisation service and bringing into connection all the larger questions of Military organisation in the War Office?—Yes.

7023. I think the head of it is the Secretary to the Army Board?—Yes.

7024. Do not you think that in modern war the functions of command, of preparation for war, and last but not least, effective organisation, have assumed an increased importance? Of course, they were always important, but do not you think they are of greater importance than ever?—Yes, in this sense; that less time will be given to remedy any mistakes; therefore the antecedent perfection of organisation is more necessary now than it used to be.

7025. (Sir George Clarke.) And that mistakes may be more serious?—Yes.

7026. (Colonel Miles.) Do not you think if that is so, the functions of Section D require to be brought into greater prominence and to be increased in weight and responsibility?—Yes; I have always thought that.

7027. And that in that connexion a proper Military organisation of the Head Office is more important now than ever?—Certainly; that follows.

7028. (Sir Charles Welby.) I take it that your theory of the position of the Commander-in-Chief is, that subject of course to the control of Parliament as exercised through the Secretary of State, the Commander-in-Chief should have the entire Military responsibility for the efficiency of the Army?—It is; that is to say, that Parliament and the Government having settled the main lines on which the Army is to be conducted, and having their officer, so to say, the Secretary of State, to see that those main lines are carried out, the whole of the ordinary machinery should be carried out by the Commander-in-Chief.

7029. According to your view, therefore, any system which would remove from the control, or, to put it at its lowest, from the supervision of the Commander-in-Chief any Military Department, is radically unsound?—Yes.

7030. Therefore any system which seemed to split up and divide Military authority, and therefore Military responsibility, between two or more great Military

officers, is, you think, undesirable?—The words "radically unsound" are a very strong expression. You may work systems which are very far from perfect; but I would say that I think the system of having one Commander-in-Chief is infinitely the better one.

7031. That is to say in cases where no financial or political questions come in—questions of purely Military policy—the Secretary of State ought to be in the position to have the advice of one expert, and not to be in the position of having to judge between the advice given by perhaps differing experts?—Exactly. I want that collation of various views should be done by the Commander-in-Chief, who is the expert, and not by the Secretary of State, who is a non-expert.

7032. On the other hand, I rather gather that you agree that the machinery at present is somewhat defective for securing proper co-ordination between the Military Departments of the office, but particularly between the Supply Departments, that is to say, the Quartermaster-General, the Inspector-General of Fortifications, and the Director-General of Ordnance?—Yes, I think there is a want of unity and combination of action amongst them.

7033. Therefore as long as the Commander-in-Chief's Military supremacy under the Secretary of State in regard to Military policy was safeguarded, you would be in favour of the creation of an official or some machinery for co-ordinating the work of these great Supply Departments?—I think that the Commander-in-Chief's office ought to be the place where that work is co-ordinated and brought together. I have always thought the Commander-in-Chief requires a much larger bureau, to use a foreign phrase, under him than he has at present.

7034. In fact you would like to see the revival of the functions which the Adjutant-General used to exercise in his capacity as Chief of the Staff of the Commander-in-Chief, would you?—Very much.

7035. That is to say, that quite outside his own immediate duties as Adjutant-General he was also practically charged by the Commander-in-Chief with securing the harmonious and expeditious working of all the Military Departments?—Yes. There is certainly on the Military side of the War Office a want of some central office or officer whose business it should be to see that before questions come before the Commander-in-Chief they have gone to the various people who ought to give an opinion upon them, and that they do not come to him from one side alone; also that when questions go down after the Commander-in-Chief has given his decision, they are made known to all the people who have to deal with them. There is a want of that Central Office, as I may call it, now, and I think myself that it is a thing of very considerable importance for the proper transaction of business. The more the Commander-in-Chief's responsibilities are increased, the more it would be required. That want is to some extent met by entrusting these duties—as has recently been done—to the Assistant Military Secretary. This is a recent arrangement and has been attended with great advantage. But it wants carrying further.

7036. In any case I gather you hold strongly that such an office or officer, if created, should be fully subordinated to and in no degree independent of the Commander-in-Chief?—Certainly not.

7037. To turn to the question of the Finance Department, I rather understood you to say, in answer to Mr. Mather, that theoretically there was no reason why the present system should not work well, but that in practice the absence of sufficient concert between the Finance Department and the various Military Departments caused unnecessary waste of time and of labour?—Yes, and also, of course, this dissociation of Military action from account keeping and finance of any kind tended to make officers think very little of the money side of the question.

7038. I should like to call your attention to some evidence which General Brackenbury gave us the other day. In answer to a question as to whether he wished to make any recommendations with regard to changes in the internal organization in his department, he said that he did not see anything that he wanted to change at present, and he proceeded as follows: "The great step which has been of immense advantage to me was that which I got carried out last year of getting a branch of the Accountant-General's office put into my office, which has been a most immense

Major-Gen.
Sir C. Grove,
K.C.B.

28 Feb. 1901.

"assistance to me and a great advantage to me. When I say, 'put into my office,' they did not change their rooms at the War Office or anything of the kind, but the branch does the accounting work and keeps all the financial accounts and records and everything of my office, and its head is my financial adviser, and he keeps me straight and prevents my going wrong; whereas under the old system I was always being tripped up by the Accountant-General for having gone wrong." In reply to a further question from myself he said: "The Branch remains responsible to the Accountant-General, the Accountant-General keeps the accounts in the form that he likes, he does everything for my Branch, and it is an immense advantage." May the Committee take it that if some such system as that were extended to other Military Departments of this Office, it would practically meet what you consider to be the necessities of the case?—I think it would be a very great step; but it seems to me by the time it had been done for all the Military Departments of the War Office there would be very little left of the Accountant-General's Department, which would come very nearly to what I have been advocating.

7039. Do you advocate that not only this concurrent financial criticism and assistance should be transferred but also that the examination and audit of expenditure should be transferred?—No.

7040. You are aware that that constitutes the major portion of the work of the Finance Branch at present?—As I was saying just now in answer to another question, I have very great doubts that it is desirable that any audit should be done in the War Office at all. Anyway I do not wish to transfer the audit to the Military Departments; it is the daily accounting and checking I wish them to do.

7041. Of course, a system such as General Brackenbury mentions is a very much less recommendation than yours in your memorandum, that "The Accountant-General's Department ought to be transferred from the Civil to the Military side of the War Office, leaving with the Financial Secretary only a small staff of clerks." I rather gathered from your answers to Mr. Mather that you were inclined to think that something on the lines described by Sir Henry Brackenbury, though perhaps not so theoretically perfect as what you advocate, would, nevertheless, practically meet the case?—I think it would go a very long way towards it, but I prefer the complete transference.

7042. But, of course, it must be noted that when you say one of the objects of transferring the Accountant-General's Department to the Commander-in-Chief is to enable the Commander-in-Chief and his Military advisers to "look at Military expenditure as a whole," the mere placing of branches of the Accountant-General's Department in each of the great Military departments could not in itself produce that result, would it?—It would have a very strong effect in bringing them face to face at the beginning with the expenditure involved.

7043. As regards their own particular branch of the work—their own departments, but not as a whole?—Their own departments; and then the Commander-in-Chief would be able to collate their estimates, would know what they all amounted to, and would have the whole thing before him.

7044. (Sir George Clarke.) Do not you think it would be far better and a more logical and sound arrangement that these financial advising branches should be under the head of the branch and not under the Accountant-General, so that they should not have a dual allegiance?—I certainly do; I thought that while Sir Charles Welby was reading Sir Henry Brackenbury's evidence, I did not like to interrupt at the time. I do not exactly follow what the constitution would be when you have taken away, say, all the limbs from the Accountant-General and put them on the Military side, and left him sitting outside with these people who would be responsible to him.

7045. (Sir Charles Welby.) The system which Sir Henry describes does not consist in lopping the limbs off the Accountant-General's Branch, but is rather more a question of placing these Branches of the Finance department in close concert with the Military departments; it is in no way a transfer of allegiance or responsibility, but brings the two sides into closer

touch and concert?—He says, "Keep all the financial accounts in my office," and "its head is my financial adviser." As between the two systems I very much prefer that he should be responsible to me or to the head of the Branch.

7046. And that the Accountant-General should be responsible to the Commander-in-Chief?—The Accountant-General should be responsible to the Commander-in-Chief. But I think a great deal is gained by the step which Sir Henry Brackenbury has taken.

7047. (Sir George Clarke.) It would never do, would it, if advice given in that sort of way was afterwards disallowed by the head of the Branch—the Accountant-General?—No.

7048. That would mean that the whole question would have to be threshed out again?—Yes.

7049. It seems to me that that difficulty is always liable to arise unless the responsible financial man is under the head of the Military Branch with which he is concerned?—Yes, and the Military man may to a certain extent disclaim the responsibility.

7050. (Sir Charles Welby.) On the other hand the only Military head of a department who has tried the system, Sir Henry Brackenbury, has found it to work extremely well in practice and is apparently satisfied with it?—I think it is in such a good direction that I can understand his being pleased with it.

7051. (Mr. Beckett.) I do not quite gather what are the precise serious defects under the present system which your proposal would remove?—They are as regards the office inside. There is a very great deal of backwards and forwards correspondence. There is then what has been alluded to, the natural tendency for people to pass from the purely account side of the question to its military side, and the question of general policy; you get a certain confusion of functions in that respect. Then, thirdly, as I say—I may be wrong in attributing it to this cause—you get a kind of indifference on the part of Military officers as to what a thing costs.

7052. Do you think that that indifference runs to very serious extremes?—It runs to a very great deal of work, which costs a very great deal more than people have the slightest idea of.

7053. But in putting forward proposals, do not you think the General Officers consider at all the final cost of them?—They do now, and they consider them all more than they used to do; they do not consider them even now as fully as they might.

7054. I gather, supposing your proposal were carried out, that a Branch of the Accountant-General's Office which you propose to plant at the elbow of the Generals would merely amount to this; that he would be a financial adviser of the Generals in the preparation of the estimates and the cost of the proposals they wished to have carried out. That would meet the case, would it not?—As we delegate more financial powers to Generals he would be able to advise them on all those questions also.

7055. Delegate more financial powers such as, what?—Such as dealing with all these claims, which come up under the regulations, as to whether a man is entitled to such and such an allowance, to such and such pay, what class he comes under, and so on.

7056. And of course that would carry out the idea that a calculation of the cost of all individual proposals should be made; but it would not enable the General making the proposal to have that knowledge of the complete financial bearing of his proposal, would it?—That complete bearing would have to be considered up here.

7057. But I take it that the financial bearing of the proposals put forward by Generals is considered up here?—Yes, it is; but then it is considered in the Financial Secretary's Branch instead of the Commander-in-Chief's. That is my point.

7058. Does not the Commander-in-Chief consider the financial bearing at all until it has been submitted to the Financial Secretary?—He has not done it so fully—he is not charged with it by the Order in Council in any way; it is the Army Board. The Commander-in-Chief and the Army Board do it together, but really the details and the threshing out of the thing are done in the Accountant-General's office and not on the Military side for the reason that the Military side has no machinery with which to do it,

Major-Gen.
Sir C. Grove,
K.C.B.

28 Feb. 1901.

7059. Then what you would like to see done, I take it, is, that the Commander-in-Chief should have the amount of money allotted to him by Parliament, placed absolutely at his disposal without any other control from the Accountant-General than his providing by examination and audit, after the money is spent?—Of course that would be an ideal system as regards getting the best value for the money spent. How far it would tally with what is vaguely called "constitutional practice" I cannot say.

7060. That is what you are aiming at?—Yes; not only that, I should like to see that sum of money once settled voted for a certain term of years. I think if you did that you then would have a really economical system, because the Commander-in-Chief would make every officer save every farthing where it could be saved without detriment to efficiency in order to have the money to spend on things which he was very anxious to obtain.

7061. Would the Commander-in-Chief have time to give to all these considerations?—Yes.

7062. He would want a special financial adviser created, surely?—Well, as I say, send the Accountant-General to him.

7063. Then your proposal, not only in this, but in other matters, tends largely to the aggrandisement of the Commander-in-Chief and to the diminution of the authority and responsibility of the Secretary of State, does it not?—No. In speaking of the spending of the whole of the money, of course, the Commander-in-Chief would have to convince the Secretary of State that any large directions in which he was going to spend it were such as were considered desirable by the Secretary of State and by the Government of the day. What I should like him to have is this: supposing he has succeeded, or his officers have succeeded, in saving 100,000*l.* on a certain vote, that he and the Secretary of State between them should have the power of deciding how that 100,000*l.* should be spent.

7064. Practically have not they that power already?—No.

After a short adjournment—

Col. J. T.
Skinner, C.B.,
D.S.O.

Colonel J. T. SKINNER, C.B., D.S.O., examined.

7073. (*Chairman.*) You have been Assistant Quartermaster-General since 1893, I think?—Yes.

7074. Sir Mansfield Clarke told us that you would be able to enlighten the Committee, particularly with regard to the relations between the Quartermaster-General and the Inspector-General of Fortifications?—Yes.

7075. When the question arises of selecting a site for a barrack or a hospital, the selection is finally made, is it not, between the Quartermaster-General and the Inspector-General of Fortifications?—Yes, the General is first asked to put forward his proposals for a site, and then it comes to the Inspector-General of Fortifications branch, and he refers to the Quartermaster-General for his concurrence or otherwise.

7076. And it also goes to the Adjutant-General, does it not?—Not always, only in a few cases; it very rarely, in fact, goes to the Adjutant-General, unless it is a very large barracks. Supposing you were buying a place as a battalion barrack, a new site altogether, then it would go to the Adjutant-General, because it would affect the training. If it is merely a site for an inner barrack, it would not go to the Adjutant-General.

7077. The General Officer Commanding has officers of the Quartermaster-General's Department, and the Inspector-General of Fortifications Department, and has medical officers at his elbow; but still his selection of a site for a barrack or hospital would never be taken as final?—Not for a large thing, certainly. In fact, at present I do not think that they have even allowed him to choose minor sites; he has put forward his proposals.

7078. Yes, he puts forward his proposals; but even as regards a minor site his opinion is not final?—Not at present, although we generally concur with him in the minor sites. But there are many things that affect it that he may not know. For instance, at all these depôts there have been lately proposals to enlarge the depôts. The General knows nothing about that.

7065. With whom does it rest then?—With the Treasury. If it is saved at all it goes, I believe, to the unexpended balances.

7066. Would you leave it to the Commander-in-Chief to decide such minute details as unexpended balance, supposing one remains?—But they are not very minute.

7067. They are made up of minute items, are they not?—Yes; and I would let him settle how those should be spent.

7068. Do you suggest he might put it to a fund of his own, and spend it?—Yes, spend it on buying more guns, for instance. Supposing something had been saved in transport, and he very much wanted some more field artillery guns, I would let him buy those guns with the saved money.

7069. Then I gather your evidence comes to this, really, that more responsibility and more power should be given to the Commander-in-Chief in the administration of the funds which are voted to him by Parliament, and that he should not be liable to be overhauled so much by the financial department as at present that they should have no power of obstruction?—Yes.

7070. (*Mr. Mather.*) Do you mean the Treasury?—By both. The Accountant-General's Department has been described as an outpost of the Treasury.

7071. (*Chairman.*) Once or twice incidentally I understood you to say that you questioned whether the audit done at the War Office now should be done at all. May we understand from that, that you mean that the audit now done at the War Office should be done locally, or do you mean that the audit now done at the War Office should be dropped altogether, and that the audit should be done only by the Auditor-General?—That is what I meant.

7072. (*Sir George Clarke.*) In a memorandum that has been sent to us by a General Officer he says: "Is it absolutely necessary to have an Adjutant-General's department? Is it not this department which causes all the viciousness of the centralising system and the baneful overlapping at the War Office?" I suppose we may take it that that is not your view?—No.

For that reason it is desirable that we should see the proposal up here, so that we may see whether that site may not be wanted, say, for a block of married quarters, or for another block of single men's quarters, and so on.

7079. Why should he not know the general policy with regard to depôts?—He cannot, because those things are only in the air; they have not received the approval of the Secretary of State; they are only ideas in most cases. Take, for instance, the Report of the Barrack Committee. We who are on the Committee know all about it; but the Generals cannot be told anything about it, because it has not even been to the Secretary of State yet. I think it has gone before him now though.

7080. Then you would not consider it possible to depute the entire responsibility for the selecting of the site even for minor buildings to the General Officer Commanding?—I think many of the minor things might be delegated to him—such, for instance, as encroachments for telegraph posts; even those come up to us, and I have pointed out myself before now that I did not think it was necessary.

7081. Sites for telegraph posts?—Yes, on War Department lands.

7082. Do you mean to say that those cannot be settled locally?—No; they have to come up to the Inspector-General of Fortifications; that is I.G.F. 1.

7083. Is any useful object served by that?—I have never seen that there has been. But I know the Inspector-General of Fortifications opposed it being settled locally, and I think it was decided that it was necessary to continue having those sites sent up.

7084. (*Sir Charles Welby.*) By posts you mean poles to carry the wires, I suppose?—Yes, it might interfere with the drill, and so forth; but then the General ought to be able to settle that.

7085. (*Mr. Mather.*) What telegraph poles do you mean?—Supposing a line of wires from the telegraph at the barracks crossed a piece of drill ground, or the barrack square?

7086. Where posts require to be placed upon Government ground, you mean?—Yes.

7087. But that is the only authority you have over placing the posts, where it crosses Government ground?—Yes, certainly only within Government enclosures.

7088. And in the case of passing over public ground you would have no authority?—We should have nothing to say to that.

7089. Or the ground of the municipality: the General Officer Commanding arranges that?—He has nothing to say to that; he would have no control over it.

7090. You are speaking now of public telegraph posts?—Yes.

7091. Belonging to the Post Office?—Yes, or perhaps in former days to the Telephone Company; it might have been convenient to the military for the Telephone Company to lay on a wire to the mess, say.

7092. (*Chairman.*) And that has to come up here?—Yes.

7093. (*Sir George Clarke.*) The General Officer would be quite competent to say whether the position proposed for any posts would interfere with the training, would he not?—Certainly, I think so.

7094. (*Chairman.*) You say that the decision with regard to some of the minor buildings might be put upon the General Officer Commanding; could you suggest any limit, any definition of minor buildings by any limit or otherwise?—It would be a little difficult. For instance, to quote a case that happened quite recently, in which there were mobilization stores put up on certain sites in barracks. I think a committee went travelling round, deputed by the War Office, who conferred with the General Officer Commanding, and certain sites were agreed to, and the Royal Engineers went on building at once on these sites, because it was urgent to get the stores up. Subsequently it turned out, in one or two cases, that we should have liked to have reserved that site for a barrack block or married quarters, and that the mobilization stores might have been put somewhere else; but that is owing to our constant change of organisation.

7095. Then it would be very difficult to suggest a limit as to the minor buildings that could be settled by the General Officer Commanding?—Yes, I think so; I think one must risk things like that, and it would be better to reserve the necessity for sending up sites to headquarters for the larger buildings, such as a barrack block for instance, or accommodation for men, or certainly in the case of a new barrack; I think that in such a case it is essential to come to headquarters on a new site.

7096. Then, when a proposal comes up from the General Officer Commanding, it is settled by the Inspector-General of Fortifications and the Quartermaster General, and sometimes by the Adjutant-General also?—Yes.

7097. Do those departments come together and agree by means of personal conferences, or by means of written minutes interchanged between them?—As a rule, in the past, it has been by written minutes; because the great difficulty which I have found myself during my seven years in the office, and the great difficulty with the Horse Guards, is that if you go over there, you spend a couple of hours going to and fro and talking there, and meanwhile your work is getting in arrear here.

7098. That is owing to the fact of the two Departments being in separate buildings?—Yes, that is the great drawback. Otherwise many questions might have been settled between Colonel Watson and myself, say, in five minutes, which have taken at least five days; because it takes three days for a paper to get across very often, owing to our registry.

7099. Could that not be got over to some extent if there was a regular meeting at stated intervals at which representatives of the Inspector-General of Fortifications, the Quartermaster General, and Adjutant General should all attend?—I do not know that any periodical meeting would settle it.

7100. Whenever there was something to settle?—I think we have generally managed it, and certainly last year. I have often gone over to the Inspector-General of Fortifications, when we have had perhaps a little difference of opinion, and Colonel Watson has come over to see me, and so has Colonel Bagot. We have discussed the matter on the spot, and been able to settle it. But there are so many papers passing to and fro that it would be almost impossible to settle every paper in that way.

7101. When a proposal for a new barrack comes up, one can understand that the Inspector-General of Fortifications has to be consulted; but where does the Quartermaster-General come in particularly; what has he got to say upon the subject?—He has to say what accommodation is required and whether the barrack is required; he has to say what is necessary, and the Engineers have to build it.

7102. If he says, "I want accommodation for so many troops at such and such a place," would he be consulted as regards the site on which the accommodation for so many troops should be erected?—Yes, he would be consulted on the site plan, because there are many questions involved in a site plan which we do not think the Engineers alone are capable of settling; for instance there is the position of the canteen and recreation-room with regard to the other buildings. They might go and put them in an out-of-the-way place which would be suitable for a building from their building point of view, but utterly unsuitable for the benefit and convenience of the troops. We have to consult the convenience of the troops, not to look at it purely from a building point of view.

7103. Surely, if a man was erecting a block of buildings which had to have a billiard room, he would put the billiard room somewhere where it was accessible?—A billiard room would be a portion of the mess.

7104. He would put the mess where it was accessible?—He might not. Generally the mess is built in the same block as the officers' quarters; but, for instance, he might put the sergeants' mess in an inconvenient place, a long way from where the sergeants were located.

7105. I could understand it if it was a Civil Department altogether, which had no knowledge of Military requirements, but it seems rather difficult to suppose that a Military Department, knowing the Military requirements, should deviate from what is obviously required by Military necessities?—We have had several cases of that.

7106. You do find that the intervention of the Quartermaster-General at that stage is useful and necessary?—We have been able to point out things that we thought improvements, and when the site plan has been sent back to the General I think I may safely say that in nine cases out of ten he has agreed. If possible we agree with the General; but, if anything occurs to us, we merely make the suggestion to him for his consideration; and then, if he still adheres to his original opinion, we generally give in—unless there is some very strong reason against it.

7107. With regard to rifle ranges, those are settled also in concurrence between the Adjutant General, the Inspector-General of Fortifications, and the Quartermaster-General, are they not?—For the last three years, I think it is, we have had a Rifle Range Committee, and that Committee has settled nearly everything.

7108. Who form that Committee; is there a representative of each department upon it?—A representative of the Quartermaster-General, of the Inspector-General of Fortifications, the Adjutant-General, the Commandant of the School of Gunnery at Hythe, and one of the Finance Department, F 4, Mr. Brade.

7109. How does the Quartermaster-General's Department come in in settling a Rifle Range; what is his exact contribution to the settlement of that question?—He is affected in a good many ways. To begin with, we have a certain amount of money placed at our disposal, at least it is available; of course we have to get authority afterwards to spend each sum; the Secretary of State has to approve each sum being allotted; but there is a certain amount passed by Parliament under the Military Works Loan for Ranges for Volunteers and for Regulars, and Militia.

7110. As regards that money under the Military Works Loan, is the responsibility for the spending of

Col. J. T. Skinner, C.B., D.S.O.

28 Feb. 1901.

Col. J. T.
Skinner, C.B.,
D.S.O.

28 Feb. 1901.

it on the Quartermaster-General?—The Quartermaster-General is responsible for Rifle Ranges; the Engineers spend the money under the advice of the Quartermaster-General. It is the Quartermaster-General who has to state the requirements, and also he is affected in a great many cases with regard to leases; he makes the leases.

7111. The Quartermaster-General does?—Yes.

7112. I thought the Inspector-General of Fortifications made the leases?—Over 21 years; the Quartermaster-General under 21 years.

7113. But the Inspector-General of Fortifications generally deals with leases, does he not?—Not under 21 years.

7114. No leases under 21 years?—Not that I know of. I do not think any.

7115. Is there any reason why he should not deal with leases under 21 years as well as with leases over 21 years?—I think it would be a great inconvenience, if, for instance, the Adjutant-General at Aldershot had to refer to the Engineers for the hire of camp ground for a Militia Camp which probably becomes an annual tenancy, or when he has to make arrangements for the camping of troops. The Quartermaster-General is responsible for that, or his representative in the district; he hires the land and has done with it. He need not refer to the Engineers.

7116. But when you hire land for a rifle range, it is more permanent?—But you were talking about leases generally, I understood.

7117. But let us come back to leases for rifle ranges?—For rifle ranges we generally hire them for not less than seven years if we can help it, because you do not want to spend a large amount on construction on land held for a short tenure. You prefer, of course, to buy the land.

7118. I fail to comprehend exactly what the Quartermaster-General's contribution to the settlement of that question is. I understand that the Adjutant-General and the School of Musketry have to see whether the range is suitable for the purposes of musketry instruction, and the Inspector-General of Fortifications has to see whether it is a range suitable for the building of targets, and so on; but where does the Quartermaster-General come in?—The Quartermaster-General has to say whether the range is required in that locality, and for what corps it is wanted, for instance, for the Militia, and what would be the cost of sending that corps to another range at perhaps a greater distance. We always have to weigh the whole financial effect of acquiring a range in a certain locality, as compared with what would be the cost of sending the unit that would use that range to another place.

7119. That is the Quartermaster-General's duty?—Yes, the movement of troops, and the quartering of troops.

7120. (*Sir Charles Welby.*) As a matter of fact, at present there is a scheme in existence for creating and distributing ranges all over the United Kingdom, is there not? I mean to say the question as to the localities in which ranges are required is one that is now settled practically, and all that remains to be done now is to provide range accommodation in those districts?—Do you refer to the War Department ranges?

7121. Yes, entirely?—There are also the Volunteer ranges. One range might be used, if taken by the Volunteers, also for the Militia, and the more ranges we can get the better, I mean provided they are economical.

7122. (*Colonel Miles.*) On the range question, rifle ranges are frequently situated at a distance from the stations of the troops?—Yes.

7123. The questions that come into the Quartermaster-General's Branch with regard to the provision of ranges are, as you say, the moving of troops to and from that range, which is sometimes rather costly?—Yes.

7124. It frequently happens that a camp has to be formed at a range so that the troops may be on the spot to avoid transport?—Yes.

7125. Then you have to hire the ground for the camp at that range?—Yes.

7126. And with those camping questions, other allowances of a Quartermaster-General's nature are

more or less intimately concerned?—Yes, certainly; field allowances particularly, and rations.

7127. It may be better to send the troops to a range in existence instead of having a new range, or it may be better to have a new range instead of sending the troops to a range at a greater distance to which they previously went?—Yes.

7128. And those are Quartermaster-General's questions?—Yes; or the only range available may be congested, and then we have to consider the expense of sending these troops to another place, whether it would not be cheaper really to pay the cost of that range with the interest on the money than to send them to a greater distance.

7129. (*Sir Charles Welby.*) May we take it, then, that the interest of the Quartermaster-General in the question of ranges is confined to the question of the geographical position in which a range may be placed?—As to what corps it would be used by and the expense involved.

7130. That necessarily follows from the geographical position?—Yes, and as to its suitability for training.

7131. Is not that for the Adjutant-General?—That is for the Adjutant-General; but still, if the Adjutant-General is represented on the Committee, that would follow; but we are so intimately in touch that you may almost say that the training affects the Quartermaster-General.

7132. In fact, you think that the functions of the Quartermaster-General and the Adjutant-General, as regards provision for the training of troops, are not quite clearly defined, and do overlap to a certain extent?—They are perfectly defined, but one knows the wants. You have a member of the Adjutant-General's Department on the Committee, so that one knows their views. Still, one has a general knowledge of what those views are.

7133. But I think the Chairman's suggestion rather was that the splitting up of the responsibility on the question of ranges between three departments, even though it is assisted by a Standing Committee, is necessarily rather a complicated one, and one that leads to delay; and he was rather suggesting that it might be possible to dispense with the functions of one of the three departments which has to intervene in the question.

7133A. (*Chairman.*) If you could get the work done by the three departments done by one?—It is only done by one. You only consult the other two as to the need and benefit.

7134. (*Sir Charles Welby.*) But you consult them at every stage?—I think not; not after the first day. After you have once got their opinions that such place is a suitable place and it is worth while to spend the money, you do not consult them.

7135. Whom does it rest with after that?—The Inspector-General of Fortifications. It is practically left to the district. Then the Inspector-General of Fortifications has to lay the papers before the Secretary of State to obtain his sanction to spending the money already voted.

7136. But once the money is voted and the site fixed geographically, does the Quartermaster-General wash his hands of that range?—Until any subsequent question comes up with regard to lease, for instance, we have had one with regard to a lease at Whitechurch. Various questions may crop up on the lease after it gets into the hands of the lawyers; the other side may object to a certain clause, and then it will probably be referred to the Quartermaster-General as to whether it is desirable to give in or not.

7137. Would it not be a reasonable arrangement that all leases of land where it is contemplated to construct works of any kind, whether buildings or works for ranges, should be made by the Inspector-General of Fortifications Branch?—I personally should rather be in favour of going round the other way of transferring all leases to what I consider the business man, Assistant Adjutant-General for B.

7138. I mean with regard to work up here; I am not speaking of work in the district?—I think one would follow the other.

7139. But the present division, as I understand, is between leases of land under 21 years and leases over 21 years?—Yes.

Col. J. T.
Skinner, C.B.,
D.S.O.

28 Feb. 1901.

7140. I was putting to you that possibly the more businesslike division, if leases are to be divided into two classes, would be between leases where building and works were involved and leases where no buildings and works were involved?—Yes.

7141. That the former would naturally be the class that the Inspector-General of Fortifications is concerned with—and the latter not being concerned with works would not naturally come under him?—But I do not think that you would build anything other than a rifle range on land that was leased for less than 21 years, or less than 99 years.

7142. It was you yourself who introduced the question with regard to leases for rifle ranges?—It follows the general rule.

7143. (*Chairman.*) Rifle ranges are usually purchased, are they not?—If possible, but in many cases one is not able to purchase.

7144. And you get as long a lease as you can?—Yes.

7145. Would you build a rifle range on the land where you have a lease of not longer than seven years; does that ever happen?—Yes, certainly; the Volunteers do that. I do not remember the case of a War Department range being made on land being held for less than 21 years' lease, but the Volunteers constantly do it; in fact, they spend money on ranges which are held from year to year (in many cases they have in the past), but then they have a sort of understanding with their landlord that they are not likely to be disturbed. That is practically what it comes to, I think.

7146. (*Sir Charles Welby.*) I suppose so far as regards settling the question of geographical convenience of the site for a range, that could be decided by the General Officer Commanding quite as well as by the Quartermaster-General, could it not?—It ought to be, but I am afraid it would not.

7147. You would think so, but your experience is rather to the contrary?—Yes, I think so. And another point is that the range might be on the border of two districts, and the General of one district would never suggest a range just over his own border, although it might be very convenient to his station.

7148. That is rather an argument for making the General's district as large in geographical area as possible?—I think it is want of touch.

7149. That is rather the personal equation?—Yes.

7150. You could conceive of a General Officer to whom you might safely delegate it?—Yes, in fact we have suggested it to them in one or two cases. Take the vicinity of Lichfield for instance, before we got the Lichfield Range we asked the general to look in the vicinity over the border, and look to the division between the Western District and the North-Western. There is one of the Western District Stations (Welshpool) located not far from Chester.

7151. But you would not be prepared to accept their findings without further question and examination up here?—I think it is just as well that their recommendation should come up here in those cases, and it causes very little delay, that part of it. What we find is that in the districts they do not work sufficiently together, and you probably find a proposal come forward from the Commanding Royal Engineer signed by the General perhaps, but really from the Commanding Royal Engineer, without first having conferred with the other Staff Officers who are affected by Military training and expense of moves and so on.

7152. That is rather a reflection on the business procedure of the General Officer Commanding, that he does not keep his Staff together?—Well, I am afraid it happens in some districts.

7153. (*Chairman.*) Do you find generally that the functions of the Quartermaster-General and the Inspector-General of Fortifications tend to overlap?—They do overlap, I think, in some cases undoubtedly. We have to keep more or less duplicate records.

7154. Could you give us an instance of that?—For instance, as to the accommodation required in a barrack. The Inspector-General of Fortifications asks us what accommodation is required for various classes, Regimental Officers, Staff Officers, married people, single sergeants, and so on, and he has a record probably of what he thinks necessary; but he is generally guided by us; he sends a form, S. 1, for us

to fill in, and we, in many cases, have to refer to other branches as to the number of the various classes that are affected. For instance, the Artillery particularly, whose organisation changes very frequently; they, perhaps, have some higher class married men that we do not know anything about, or that it is contemplated bringing in. Those are only minor things. Then there is also a record of all this kept by the Inspector-General of Fortifications, so that really I think many of the records could be saved if we were both in adjoining rooms. The fault of it is being in separate buildings.

7155. That is the root of that evil?—That is the root of that evil. There is no doubt a great deal of that overlapping could be saved if you were in adjoining rooms. I was only going to say further that the Inspector-General of Fortifications and the Quartermaster-General being of equal rank, the Quartermaster-General has no power to refuse anything that the Inspector-General of Fortifications says; I mean to say that their opinions have equal weight.

7156. (*Mr. Mather.*) The Inspector-General of Fortifications can take no initiative in relation to the building of a barracks or doing any structural work, until the scheme has been finally decided between the Quartermaster-General and the General Officer Commanding?—The Inspector-General of Fortifications generally writes a letter to the General Officer Commanding on all these points.

7157. That is, informing him that he has so much money to be disposed of in that direction?—Yes.

7158. But after, I presume, he waits until the General Officer Commanding and the Quartermaster-General have conferred as to their requirements?—I think the Inspector-General of Fortifications also writes to the General Officer Commanding, and the whole correspondence on the subject goes from the Inspector-General of Fortifications' Branch, if he is dealing with it, but the Inspector-General of Fortifications really writes what the Quartermaster-General requires him to do, that is to say, he sends a form to be filled in of the requirements.

7159. But what does the Quartermaster-General or the Inspector-General of Fortifications know of the requirements until the General Officer commanding has been brought in?—They know perfectly well what is the establishment of a battalion and of the various classes that have to be provided for.

7160. That is, in a general way; but they do not know anything of the local circumstances, and it is the local circumstances that control your structure of the barracks from time to time; you cannot go always on the same plan in every district?—I think you can for main units, there is no alteration in the plan; it is only in the foundation, except perhaps the site.

7161. There is the question of water supply and drainage?—There are those questions, but I am talking of the plan of the barracks.

7162. But I do not mean the mere building, I mean from the beginning, the foundations that you require. Everything has to be tested on the spot?—Yes, that must all come from the Generals.

7163. That is what I mean?—I understand you to refer to the accommodation to be provided.

7164. And also as regards the accommodation; has the General Officer Commanding no right to suggest?—Yes, this form S. 1 is sent to him to fill up, which says exactly what is required for each unit in his command, or whatever the building is for.

7165. Is there any discretion left to the General Officer Commanding to enlarge, for instance, upon your suggestions; could he have larger recreation rooms for soldiers, or larger kitchens; could he suggest a mess for the men instead of their having the mess in their bedrooms?—He could suggest them, but a thing like that could not be agreed to for one district and not allowed for another. We should have to go to the Secretary of State on the general principle of giving extra accommodation. We have type designs which have been approved by all the Military authorities, and I believe also by the Secretary of State for all these institutes.

7166. Then you really work upon types to begin with?—Yes. Now, at last, we have reached a stage that we have never reached before, that the Inspector-General of Fortifications has types for each particular

Col. J. T.
Skinner, C.B.,
D.S.O.

28 Feb. 1901.

kind of building in the barracks, so that now all he has to do is to send the type plans out to a district and they can go on on those lines. I am not talking of numbers of married quarters, for instance, but the type of the canteen, recreation rooms, barrack block, dining room, kitchen, tailors' shops, and so on.

7167. And after this preliminary conference you drop out of the transaction altogether; the Inspector-General of Fortifications takes it up for construction?—Yes, directly the site plan is settled.

7168. You have nothing more to do with it?—We have nothing more to do with it until it is completed.

7169. (*Sir George Clarke.*) I gather from your evidence that you do not find much difficulty in settling questions up with the Inspector-General of Fortifications' Department, and not much undue delay or circumlocution except what arises from the separation of the two offices?—Yes, that is so; in fact I find that we work in the smoothest possible manner since I have been up here.

7170. Does your Branch come into the question of repairs and maintenance work?—No, that is all done in the districts by the engineer.

7171. Would your department be responsible for representing to the Secretary of State the need for any barrack expenditure, or would it be the duty of the Inspector-General of Fortifications?—All those questions come up in the Annual Estimates. You have your proposal on the Annual Estimates for all the necessities in the district, at least within moderate limits, of which each district is informed, and within that limit the General puts forward his proposals to the most necessary services. That is considered first of all by I.G.F.2 and Q.M.G.1, and then it is considered again by the Inspector-General of Fortifications and the Quartermaster-General, and they each strike out so many items on this list, and then it goes to the Adjutant-General and he strikes out a few more, and then it goes to the Commander-in-Chief and he strikes out a few more, and then it goes to the Secretary of State who strikes out most of the rest, except sanitary matters. There is very little left at the end of it. Out of some 500 demands I do not suppose there are 50 that stand in the Annual Estimates.

7172. Do you think that some better arrangement could be arrived at for dealing with proposed services than that, which seems to me, may be a survival of the unfittest?—Yes, that is what it comes to. What have to have preference in all these cases are the sanitary matters and continuation services, that is, services taken up in the previous year and not completed, which really swallow up the whole amount likely to be available on the year's Estimates. The only way to get at anything like a satisfactory method is to transfer all the bigger services to loan, and let things go on then from year to year as they are necessary, and, as new services come up, let them be included in a future loan.

7173. Then, in deciding what services should be included in a loan, who would hold the brief for the Barrack services; would you, or the Inspector-General of Fortifications?—We confer together on all those things, but they really make out the list on our representation. We say what is wanted, and then they make out the statement. That list is made out by the Inspector-General of Fortifications, and submitted to the Secretary of State.

7174. Do you consider that the duties of your department and those of the Inspector-General of Fortifications' Department are properly and sufficiently clearly defined?—I think there is a little duplication, as I say, owing in great measure to our being in separate buildings. I do not think there has been the very slightest difficulty at headquarters, but I do think there has been a great deal of difficulty in districts.

7175. And you think some clearer definition is, perhaps, possible, and might be advantageous?—Yes, I think so.

7176. I think you gave us a certain case in which you were able to correct what might be a mistake on the part of the Inspector-General of Fortifications' Department?—As regards sites.

7177. And from the illustration you gave, it seems to me that the mistakes would arise generally from want of sufficient local knowledge. Ought not the General Officers Commanding and your representatives in the stations and the others to be able to avoid such mistakes?—Yes, and that is why I think these mistakes

should never have happened; but still you will find that different people have different opinions. I remember a case at Winchester particularly, where we had all, more or less, agreed to the Winchester Barracks; then we consulted the Adjutant-General, then Sir Redvers Buller, and he entirely disagreed with every one; on the sites proposed for some of the buildings he was only consulted on that occasion with regard to the site because he was the Colonel of the Rifles.

7178. Not as Adjutant-General?—He was Adjutant-General, and also Colonel of the King's Royal Rifles, the two combined, and I think he was right, too; he drew attention to points that had been overlooked, and these questions were all sent to the General again; and nearly always, when we have referred back such questions to the Generals, they have agreed to them.

7179. You think, when these great delays that one sometimes reads about occur, they frequently arise through some change of policy on some great question arising after the matter is in a position almost to begin?—Yes, I have two or three cases here of that. For instance, Woking Barracks is one of the principal ones, and that summary (*handing in a paper*) will show you what has been the delay there, and in most cases it is due to change of policy. First of all, we agreed to put a Field Artillery Brigade division there. Then they said, "You must not have that; you had better put them at Aldershot, and move the Infantry battalion that was to be at Aldershot to Woking."

7179A. (*Colonel Miles.*) Is that the Female Prison?—Yes, I was on the original Board, I think, in 1892, and they have not turned a stone since.

7180. Is that the Alma Barracks?—The Inkerman.

7181. (*Sir Charles Welby.*) The decision as to what troops should be allotted to what particular proposed barrack rests with the Adjutant-General, not the Quartermaster-General?—I think distribution is now with the Commander-in-Chief, is it not? It has to go to D.; so many of these questions of distribution of troops affect Defence and Mobilisation, that we often have to consult D., and also the Adjutant-General.

7182. In this particular case of Woking was it on account of the mobilisation and distribution of troops that delay arose?—Yes, it was change of policy.

7183. (*Chairman.*) In 1891 it was decided (according to the summary) that the Female Prison should be taken over and made available for a battalion. In 1895 that dropped out, the money was wanted for something else; then at the end of 1895 it was taken up again, however, and this time the Female Prison was to be changed into barracks for three field batteries. In 1896 there were further modifications in the plan. In 1897 I think you got again to a battalion?—That was owing to the barrack being taken over at Portsmouth by the Admiralty, and it was desired to find a new site for that battalion, and they said, "Put it into Woking." Then after the Royal Engineers had drawn all the sites and plans and everything else for this Brigade Division at Woking the dining room question came up, and the whole plan had to be drawn out again.

7184. (*Sir Charles Welby.*) But such delays as that are due to changes in Military policy, which are inevitable under any system that you can devise?—They are owing to various things, not only to Military policy.

7185. (*Sir George Clarke.*) But it does sometimes arise, does it not, that the policy on which a barrack plan is based is still in a state of semi-solution; it has not quite crystallised itself out?—Yes.

7186. Do you think that there is any advantage in dealing with leases in two different departments?—I think it would be better to have them all in one department, except, I might say, for the short leases and the annual leases; all the rest should either be in the department of the Inspector-General of Fortifications or of the Quartermaster-General.

7187. And I understand that you would prefer them to be in the Quartermaster-General's Department?—Yes, I think so; but I think the Inspector-General of Fortifications would look upon it from the other point of view; it is not for me to say which is right.

7188. Do you employ the services of a land agent or solicitor in settling up your leases?—We have the War Department solicitor and Land Agent.

7189. And when you have leased land, does it remain in your charge, or does it go over to that of the Inspector-General of Fortifications?—That hangs again

upon whose lease it is, but the lease is really filed by the solicitor.

7190. But the actual charge of the maintenance, drainage, and so on?—That would naturally be Engineer's work—the up-keep of the land.

7191. Would the Engineers' Department be responsible for the charge of that?—Yes, if it is on lease, for keeping it in order and so on.

7192. But not for your leases?—Yes they would, if they were used for any such purpose as camps, and so on—any land held on any tenure at all more than an annual tenure.

7193. Do you see any advantage in calling your representative at every station Assistant-Adjutant-General for B.; would it not be better to call him Assistant-Quartermaster-General at once?—That is a point upon which I have not much opinion; and if I had, I think it is hardly a question for me to give an opinion upon. There are two Assistant-Adjutant-Generals in the district; one is the Assistant-Adjutant-General for A., who deals with the discipline and training of the troops, and the other is the Assistant-Adjutant-General for B., usually an Army Service Corps officer lately, who does the business part of it.

7194. (*Chairman.*) B. stands for "Business"?—And A. does not stand for training.

7195. (*Sir George Clarke.*) You do not see any particular reason why a certain class of duties should be called B. duties at the station, and called Quartermaster-General's duties at the War Office?—No. I see no reason why they should not be called the same thing at each place.

7196. As regards Civil and Military clerks, is there anything special in your department that requires the employment of Civil clerks?—I have tried both. I have had Military clerks; when I first came into the office I tried to introduce them, and I lost two very excellent clerks indeed directly the war broke out, but I think with an office of that description it is better to run it with Civil clerks. I was all in favour of Military clerks when I came here first, but I have changed my opinion. If you have Civil clerks you have permanent officials who learn up their work and stay in the Branch; but I would have Second Division clerks in those Branches.

7197. Then you would not have in your Branch any Higher Division clerks?—There were three when I came in.

7198. But you do not think they are required?—No, there is not one now. I am not in the Branch now, as I have handed over my office.

7199. Do you like the mixture of Second Division clerks and Military clerks in one office?—I think there is no objection to it whatever in that class of office. I will not speak about the discipline Branches, but Q.M.G., a Branch merely dealing with records, where there is no question of discipline affected, and in Branches where no discipline is affected I think the mixture does no harm at all, and it is a good thing to have one or two clerks in it who come in for a time and then go out to a district after they have acquired the habits of the War Office to a certain extent, and learnt their lines of working and so on, which may be very bad or may be very good.

7200. Then is your partial preference for Civil clerks based only upon their permanence?—Yes.

7201. Or is it based upon any idea of their qualification for your special work being better than that of such clerks as you get out of the Army?—I think it is based on their permanence more. I think the other men could do the work equally well if they were there long enough, but you cannot bring a young man into the office and keep him there—you cannot destroy his prospects.

7202. But there is no reason, is there, why arrangements should not be made by which specially good men should not get special increased pay and rank?—I think it would be a very bad thing for the soldier, if you brought him in with three years' service into the War Office and let him stop there altogether. I think it would be very bad for him.

7203. Then you think that the best plan would be that he should remain there for a short time, and then go out into the districts?—Yes, that he should remain

there a short time, then go out into the districts, and then come back, so that a certain number of the soldier clerks should learn the habits of the War Office and be in touch with it. I think the Civil clerks learn a good deal from the Military, in fact they admit that they do, and the Military learn a certain amount from the civilians, who have had a number of years' experience in that branch.

7204. (*Colonel Miles.*) As to buildings, buildings can be initiated by the General Officer Commanding the district, or as part of the building policy of the War Office?—Are you talking of larger buildings or minor buildings?

7205. Small buildings; their initiation would generally come from the district?—Yes.

7206. But the larger buildings—the building of a barrack as part of the building policy for units, would probably go from here to the district?—Yes, as a rule, although proposals might come from the district as they did the other day from the Duke of Connaught for the re-arrangement of the whole of his troops in the command; in the same way any General may make a proposal of that kind, which would simply be noted as a general principle, and not with a view to immediate action.

7207. But still such building proposals are initiated from either side, sometimes from the General in the district, sometimes by the War Office?—Yes.

7208. You think that the precise position of the Quartermaster-General and the Inspector-General of Fortifications might be more clearly defined with advantage?—Yes; my own opinion is that the Inspector-General of Fortifications has rather too much power at present.

7209. You might say that he rather in some ways touches upon the functions of the Quartermaster-General?—No, I would not say that. He never fails to consult the Quartermaster-General; he is only too glad to consult him, so as to be relieved of responsibility.

7210. But the duties of the two departments rather overlap?—I think they do overlap.

7211. The Quartermaster-General is responsible, broadly, for housing the troops?—Yes.

7212. And the Inspector-General of Fortifications is responsible for actual building?—Yes.

7213. But if you take a question such as sites, each department is perhaps equally concerned in it?—Yes, I think they would be equally concerned.

7214. For instance, it would be an advantage to put out the choice of sites entirely to the General Officers Commanding districts, and avoid the present cumbersome machinery of Site Boards?—Are you talking of a site of a particular building, or of a site on a new area altogether?

7215. I meant more particularly a site of a particular building?—You are suggesting that that should be left to the General instead of having a board?

7216. Yes?—I think the Board is waste paper.

7217. Of course the difficulty of giving it to the Generals is that they may use up sites on Government ground in some cases, which, in view of the building policy of the War Office, it might be desirable to retain for other buildings in future?—Quite so.

7218. That is the danger of giving them unrestricted power in that respect?—Yes.

7219. But if the Generals are made as fully as possible acquainted with the future building policy of the War Office, the selection of sites might perhaps be more largely decentralised into districts?—Yes, I think it might. The only thing is that the sites have to be reported to the War Office; they must know where they are, and then it is time enough to raise any objection, if necessary.

7220. We have dealt with the question of leases, but it may be desirable to go into some of the points owing to which I think the allotment of leases under 21 years was given to the Quartermaster-General, and the allotment of leases over 21 years to the Inspector-General of Fortifications. We frequently take up buildings, houses in certain towns and other places on short leases for married quarters, for headquarter offices, and matters of that kind?—Yes.

7221. And the necessity for that hiring is a question for the Quartermaster-General?—Yes.

Col. J. T. Skinner, C.B., D.S.O.

28 Feb. 1901.

Col. J. T.
Skinner, C.B.,
D.S.O.

28 Feb. 1901.

7222. The Quartermaster-General's is the branch that says, "Then I shall have to hire a building"?—Yes.

7223. If all those leases were handed over to the Inspector-General of Fortifications, or as it would be in the district, to the Commanding Royal Engineer, we should be introducing another branch through which it would be necessary to go in order to hire a building for the purpose for which the Quartermaster-General required it?—Yes, but unfortunately in all these hirings of buildings we have to go to the Inspector-General of Fortifications, because there has to be some sort of Board upon the building; it has to be passed by the medical officer, and then the Engineer has to pass it as to its habitable condition.

7224. Do you have a Board?—I do not think we have a Board; they merely inspect it, and then the Engineer says such and such things are wanted, and a certain amount of money is to be expended on the building, which comes out of the Engineer Vote for putting the building in order and keeping it up.

7225. Then, again, in regard to the process of hiring camps, that is sometimes done on short leases?—Yes, for a month or two.

7226. And there, again, it is the Quartermaster-General's Branch which first and immediately becomes aware of the necessity for that camp?—Yes, in fact, that is left almost entirely to the Generals; I think we interfere very little with that. Certainly last year we gave him absolute power to hire all the camps for the Volunteers, Yeomanry, and everything else.

7227. With good result?—Yes, I think so.

7228. Do not you think that that class of work generally could with advantage be pretty well put out to the districts?—Yes, I think so, certainly. It is only where we are bound by the Treasury that question arises. The Treasury have agreed now to our spending up to 500*l.* on a seven years' lease, but directly it is over seven years we have to get authority.

7229. With regard to Civil and Military clerks, there is one advantage in having Military clerks, is there not, in their being very technically acquainted with some of your work?—Yes.

7230. Take, for instance, re-appropriation forms and matters of that kind?—Yes, and for the general working of the office.

7231. On the other hand, do not you think with regard to what you said about deciding the plans of a building, that the Inspector-General of Fortifications might very properly be left free and made responsible for the proper position of, say, the mess or the canteen?—I have seen a good many things come forward that have passed through the Inspector-General of Fortifications, and we have noticed them, and they have gone back to the Generals, who have entirely agreed with us. It is only from my own experience I say that. I quite admit that in theory it ought not to be necessary.

7232. (Sir George Clarke.) Ought not the General Officer Commanding to have pointed them out?—Yes, that is it; the thing ought not to come up in that state.

7233. (Sir Charles Welby.) I think you said that the Inspector-General of Fortifications and the Quartermaster-General, being of equal power, when they disagree about a point, for instance a question of site, as they must sometimes do, it is rather difficult to settle such a question under existing conditions. That is what I rather understood you to say—that neither party had the power to impose his will on the other?—Then I think the matter would go to the Adjutant-General as the third party.

7234. The Adjutant-General being, as a matter of fact only very remotely concerned in the question of a site?—Yes.

7235. Do you think that it might help matters if there were some officers of higher status than either the Inspector-General of Fortifications or the Quartermaster-General who was in a position to settle such differences when they arose, and generally to secure the harmonious co-operation of those two Departments, and, perhaps, of other Military Departments?—But I think that would go to the Commander-in-Chief. You have always got the Commander-in-Chief to decide a dispute like that between two Military Departments.

7236. With regard to an important question of difference, no doubt; but with regard to any minor

question, for instance, whether the site for a barrack should be half a mile to the right or half a mile to the left, you would not trouble the Commander-in-Chief?—I think the Inspector-General of Fortifications and the Quartermaster-General would confer in a case of that sort, and I do not think they would ever disagree; after talking the matter over they would probably leave it to the General.

7237. Then we may take it that in your opinion there is no necessity for any other machinery than exists at present for securing the smooth working of the Departments?—No. I have never known any friction; there have been differences of opinion sometimes, but I do not think there has been any friction.

7238. Now as regards ranges: as a matter of fact there have been in many cases great delays, have there not, in providing ranges out of the funds provided by Parliament in 1897 under the loans?—That is the War Department ranges?

7239. Yes, the War Department ranges under loan?—Yes. As you know we have been looking for a range for a long time in the North-Eastern District, and not only have we not been able to get one, but we have only the General Officer Commanding to thank for it.

7240. (Mr. Mather.) What is the cost of a range?—Do you mean including the construction?

7241. Yes, including construction?—It depends upon the number of targets for one thing, but you may say from 3,000*l.* to 5,000*l.* for War Department ranges; it might go to 10,000*l.*

7242. (Sir Charles Welby.) It is the fact, is it not, that only about half the money voted by Parliament in 1897 has up to now been expended?—I could not say that without the figures; but there are many of those things in suspense, such as Willsworth, and that is entirely due to its being a very complicated thing directly you have to deal with Commoners. The money, I think, is allotted, nine-tenths of it.

7243. Allotted to a range?—Yes, and allotted to a definite range, and there is very little left. There was an additional grant a little time ago, but I think nearly all the money is spent under the 1897 loan, if not all; it is either spent or allotted to the particular range; and in some of those cases we do not actually know the final cost—you never can tell when you are dealing with Commoners.

7244. But there has been considerable delay in many of those cases, has there not?—Yes.

7245. To what do you ascribe that delay, speaking generally?—I should say it is the fault of the district when we have had the money.

7246. That is to say, since 1897 it has been the fault of the district authorities?—Yes; but before that it was for want of money; we could never get so large a sum.

7247. And in what is it particularly that the district authorities have failed?—They have not found a range—why, I cannot say; perhaps they are not to be got; they are always saying they are working for one, but nothing definite is forthcoming.

7248. Do you think that the General Officer Commanding's Staff for these purposes is not perhaps as satisfactory as it might be in its composition?—The District Inspector of Musketry has nothing else to do but to supervise musketry and ranges.

7249. And it is his business, is it, to search the country for suitable sites for rifle ranges?—Yes; but I think there is very often a want of touch between the Commanding Royal Engineer, who has the money allotted, and the Musketry Inspector.

7250. You think then that the failure does not arise so much from the unsatisfactory outcome of the actual negotiations between the General Officers Commanding and the owners of land, as from failure to find suitable sites?—I think as a rule it arises from failure to find suitable sites, I should have added, at a reasonable figure.

7251. But when it comes to the stage of negotiating for the acquisition of a site which has been discovered, and is regarded as satisfactory, what is the machinery of the General Officer Commanding for conducting such negotiations with the owner of the land?—For purchase, do you mean?

7252. Yes?—I think all purchases are done from headquarters, through Mr. Elwell.

7253. Are not the actual negotiations as to terms primarily carried out by the General Officer Commanding?—Only very little, I think, unless you refer to leases. I do not think so as to purchases; but I do not deal with that—that is I.G.F. 1.

7254. But do you think from your experience that very considerable delays and difficulties do arise at that stage?—Certainly, very great.

7255. Of course, Mr. Elwell is a man who has also a very large business apart from his War Office business?—Yes.

7256. And it is very difficult for him to give any large amount of his time to conducting perhaps a large number of separate negotiations, with separate owners of land in different parts of the country on behalf of the War Office?—Yes.

7257. And the necessity of waiting his convenience in itself must be a great cause of delay?—Yes; in fact we have raised that point several times, and I think there has been a recent decision upon it.

The Witness withdrew.

Mr. FRANK T. MARZIALS, further examined.

7261. (*Chairman.*) You have sent us in rather a long and full memorandum, and really it is so full that I do not think we have to ask you many questions arising out of it, as it explains itself; but we thought that you might like to say something in conclusion, or in further explanation of it?—I shall be most happy to explain any points that I have not made quite clear.

7262. I think it is so clear that there is really not very much to ask you upon it. It comes rather to be a question of difference of opinion. You have explained your opinions very fully, and they may or may not find acceptance with everybody?—Quite so.

7263. A proposal has been made to us, which goes really to the root of everything in your memorandum, to put the Accountant-General under the Commander-in-Chief?—Yes; that is, of course, the direct counter proposal to the suggestions I have made. The issue on one side or the other is plain. No distinction could be more complete.

7264. I think you have given us all your arguments in favour of not doing so, and we have had all the arguments on the other side in favour of doing so, but I think even the suggestion that we had of putting the Accountant-General under the Commander-in-Chief still admitted that as regards audit that could be done by the Finance Department outside the Commander-in-Chief?—That I did not understand. I do not know if I am proceeding outside of what I ought to know, but the Military Secretary's memorandum was shown to me, and I take it that the Military Secretary has emphasised, and more or less explained, the memorandum he put before you. Of course, I do not know what he has told you, but in the memorandum itself there was no reference to audit, and therefore I am in the dark as to what his suggestions on that point may be.

7265. I think his own suggestions with regard to audit are to do away with audit altogether at the War Office, and be content with the Comptroller and Auditor-General?—That unmistakably is a solution of the whole question. That solution has always been recognised, that the Audit Office might take upon itself the audit of the War Office. The objection to that has always been that any audit of another department must be of a purely mechanical character, and therefore that necessarily vast intercommunication and correspondence (the offices being different and not the same) would have to take place. In auditing the accounts of a different department, rules of an exact and definite character would have to be followed, and the power of exercising judgment would probably be restricted within a very much smaller limit; but unmistakably audit by the Audit Office is one of the systems that might be carried into effect.

7266. To come down from that rather large and general question to a particular question, you have given us your opinion that you do not think it desirable that clerks of the higher division should serve in military departments?—That is my opinion.

7267. Have you any view as regards the desirability of employing Second Division Clerks or Military Clerks in Military Departments?—I have no strong view of

7258. (*Mr. Beckett.*) Did I rightly understand you to say that in the North-Eastern District but for the General Officer Commanding you might have had a range?—I would not say that; but I say that the General Officer Commanding has not found one. We want a range near Grantham or Newark, and have asked the General to look for one, and he has put forward one or two proposals, and then he has said afterwards that he would sooner let it stand over until he looked for a better site—something had cropped up, and he did not recommend our going on with it.

7259. Several instances have come to our knowledge in which apparently the delay which has arisen is due to the fact that the General Officer Commanding could not make up his mind?—He has been hoping for better things, hoping that he would be able to find another site.

7260. (*Sir Charles Welby.*) Generals are apt to pursue the Will-o'-the-Wisp of ideal perfection rather too far and at a leisurely pace?—Yes.

Col. J. T.
Skinner, C.B.,
D.S.O.

28 Feb. 1901.

Mr. F. T.
Marzials.

my own; I may say, that even among the Military Departments there has always been a great difference of opinion on that subject; the Military men have not been entirely in favour of having Military clerks and of discharging Civilian clerks in their departments. If there had been any such absolute consensus of opinion, I do not see why we should not have agreed to it; I see no reason in principle why we should not have agreed to that. It is a matter on which, really, I should be very much guided by the opinion of the Military Branches themselves.

7268. You do not think it matters one way or the other?—I do not think so very much. I do not think, as a rule, the Military clerks are quite as good as the Second Division clerks. I do not think they have the same education, nor quite perhaps the same independence; but to that it is answered that if you gave greater facilities and advantages to Civilian clerks to enter the Army for the purpose of occupying clerical positions fairly well remunerated at the War Office, you might get a better stamp of men.

7269. That would be another way of getting clerks into the War Office, besides through the ordinary gate of the Civil Service examination?—That is so. So far as the Army itself is concerned at the present moment, I do not think it produces more competent clerks than it can itself absorb in its own offices.

7270. You mean in the district offices?—In the district offices.

7271. Supposing that Military clerks were introduced in the Military Branches, do you think it would be advisable that they should become fixtures, or that they should go backwards and forwards to and from the districts?—I think probably a rotation would be the better plan. I think that the tendency of the Military clerk if left here permanently, while the Officers' personnel necessarily changes so frequently, would be to place in the hands of the clerks an amount of power which I do not think, personally, it is desirable they should possess.

7272. In talking of the Central Branch you say, on the top of page 5 of your memorandum, that to their other functions are added the storage and distribution of stationery?—That is so.

7273. And on the top of the next page you say that the distribution of stationery is work that does not fall naturally within the attributions of the Central Branch, and is work from which that Branch might properly be relieved?—I think, myself, stationery ought to be regarded like any other store, and distributed by the Store Branch; that is my own view about it. I do not think it is naturally a function of what you would describe as a Secretariat, which the Central Branch here really is.

7274. We have had a great deal of difference of opinion as regards both the organisation of the Registry and the efficiency of the work which is performed by the Registry. I gather from your memorandum that you think there is some room for improvement, and that the Registry should be under a Higher Division clerk?—Yes, I do think so. I think

Mr F. T.
Marzials.

28 Feb. 1901.

that the work, a great deal of it, is of a purely routine character, but that owing to its central position, and the fact that every now and again it deals, as it were, at first hand with any letter of importance that comes here, there ought to be some functionary with power and discretion to deal with the letter received.

7275. As to how he should pass it on?—Yes.

7276. With what degree of urgency?—Not only as to how he should pass it on, but that he should see, if it is a matter of extreme urgency, that it goes straight to the person who has to deal with it, and that it is dealt with forthwith.

7277. But I suppose that every letter that reaches the Registry is served out to the Branch concerned with it in a short time?—Distinctly, on the same day.

7278. Within how many hours would letters that come in in the morning be served out to the Branch concerned with them?—They ought to be there by either the 11 o'clock box or the 1 o'clock box.

7279. You mean the box of each Branch?—I am using a technical term. There is a distribution that takes place about 10 minutes past 11 of papers from the Registry, another distribution at 1, and another at 3.

7280. Is the one at 11 the earliest?—The one at 11 is the earliest, but any specially urgent letter would not be sent through that ordinary routine, but taken straight away to the Branch to be dealt with forthwith. I think as regards such supervision, and the supervision of the Registry generally, there is fair room for a Higher Division clerk.

7281. We have had complaints that difficulties are particularly experienced in the rather haphazard way in which previous papers are attached to the paper going forward; that when a letter goes forward previous papers are attached to it which really have no reference to it?—I do not think, myself, that I have suffered in that way, or that any of my rooms have suffered in that particular form. The rule is, that whenever a letter is received, all the correspondence that ostensibly refers to the subject is annexed to it, and sent on to the Branch dealing with the special question.

7282. "Ostensibly" may mean a good deal. Do you mean anything that has ever come under that subject or anything that refers to that particular Sub-Division of the subject?—Every paper and previous letter referred to in the correspondence itself would automatically be annexed to the file of papers. That would be done automatically, as a matter of course. If the correspondence ramified into a larger subject, as it might very well do—if the questions raised were merely a sub-question of some large and important subject debated in previous times—then the Branch would have to send up to the Registry for whatever other papers it wanted to refer to. The Registry itself scarcely could perform that operation. I do not think it would be possible for the Registry Clerk who is not dealing with the subject itself, to know exactly what would be in the mind of the person who had to deal with it, and what the latter would consider the relative questions.

7283. Do you happen to know whether in other Public Departments in all cases there is a Central Registry?—Certainly there is at the Admiralty; but I think they have a Sub-Registry in the Accounts Branch as well. I think the Secretary of State offices have a Central Registry; the Colonial Office, and the Foreign Office, and the Treasury certainly have. There is a Central Registry in all the Military Districts.

7284. It has been put forward that the Registry might be broken up, and each Branch have its own Registry. I want to know whether you are against that, or not?—That does not commend itself to me. When a group of questions is dealt with always absolutely in one Sub-Division, then it is possible for that Sub-Division to have its Registry or its *quasi* Registry to itself; but directly the classes of papers are such that they have to be referred either to the Military Branch, to the Central Branch, or to the Accounts Branch, or *vice versa*, then one Central Registry becomes desirable. I may say, as an illustration of what I have said, that the Effects Branch, in which the questions are dealt with almost entirely in one Sub-Division, have a special branch of the Central Registry which registers for them only.

7285. Then, though you are strongly in favour, as I gather, of reinforcing the Central Branch by putting

it under a Higher Division clerk, at the same time you seem to have very little sympathy with the idea that the Central Registry should be a kind of school of criticism with regard to the drafting of letters?—I do not see myself how any Branch not absolutely dealing with the subject itself, can do that; or if they did they must do it with considerable delay.

7286. It was suggested to us that certain letters might actually go to the Registry to be drafted?—I think that would be a great mistake, because, quite obviously, that person drafts a letter best who knows most about the subject. If a letter of importance had to be drafted in the Registry, it would have to go back to the Branch dealing with the subject itself, to see that the draft embodied all the points in question.

7287. And you do not think the Registry could exercise any useful function in jogging up the Branches when papers were delayed?—I cannot say that I do.

7288. With regard to the action of the Central Branch on the Regulations, you think it is necessary that there should be some Central Department which would practically put the Regulations into official language in accordance with that used in other Regulations, and which should see that a new Regulation does not cut into any other Regulation?—Yes, I think that is necessary. It is not a mere question of language. The Regulations we issue are very varied, and relate to a considerable number of subjects, and it is desirable that they should be framed very much on the same lines, and, as you say, that one Regulation should not cut into and either repeat or contradict any other Regulation bearing on an analogous question. Some general principle should be observed throughout.

7289. Do you think that much could be done in your way of simplifying Regulations?—I do not think the can simplify Regulations until you simplify facts, and the worst of it is we cannot always simplify the facts. For instance, we have been issuing within the last week Regulations asking a number of old soldiers to come up, for this emergency, with certain privileges as to pension and gratuities. Every one of those men coming up, comes up with new and definite rates of a pension kind which it is almost impossible to simplify and engraft upon the old Regulations. In some cases these men are already in receipt of pensions, which will have to be supplemented under new conditions. That is a case in which the subject matter itself is not simple. I may say that as regards the desirability of simplifying facts, so far as one possibly can for the purpose of simplifying the Regulations afterwards, I am personally most keenly alive to it.

7290. As Accountant-General you attend the meetings of the Army Board?—That is so.

7291. Do you think the Army Board is a useful institution for bringing together the different departments who are interested in a question and for getting that question focussed?—In my opinion that is a very desirable arrangement.

7292. Do you think the Army Board performs useful work in that direction now?—The Army Board is a somewhat spasmodic body, one may say: at certain times it meets with extreme regularity, and at other times it scarcely meets at all. Under the régime existing four or five months ago, we used to meet twice and three times a week, but latterly we have only met about once or twice each month. But all during the early portions of the war we used to meet twice and three times a week, and any large question of importance was brought before us and considered, and, I think, with very good results; very often in that way things were done with an amount of rapidity which if they had simply been done in the ordinary way through the Office might have taken some four or five days.

7293. Then, in your opinion, would it be useful if the Army Board met more regularly, say, as a matter of course, at stated intervals?—I think it would be so, myself.

7294. I suppose the function of the Accountant-General on the Army Board is chiefly to explain the financial bearings of the question under discussion?—That is so, absolutely. There are two civilians on the Board, Mr. Fleetwood Wilson and myself, and I need not say that as regards any Military question that arose, we were absolutely silent, we expressed no opinion about it. Occasionally Lord Wolseley would ask our opinion upon some matter of a *quasi* Military kind having some relation to some Foreign Government, or

something of that kind, but on any purely Military question we perfectly recognised that it was not our function to express an opinion. But when a question arose as to expense, for instance, then, of course, I gave my opinion for what it was worth, as to what the cost was likely to be, and the bearing of it, and I also took note of anything that affected finance.

7295. You say that the Accounts Branch has to deal with what you call the central preparation of the Estimates; does that mean by way of throwing the Estimates together in a summarised form?—Yes.

7296. Or does it mean going through the Estimates as sent up by the other departments, and checking them?—It means both. It means, firstly, that some central body is required to bring all the Estimates into harmony and to centralise them and focus the amounts. The Estimates are really rather a difficult and intricate matter. Generally, we have some sort of total given us by the Chancellor of the Exchequer, and we have to work the various votes more or less down into those sums. The Secretary of State has to consider with his various Military Branches, and with us, how he can best allocate the money at his disposal; it is a combined function, as a matter of fact, is the allocation of the Estimates.

7297. But do the detailed Estimates that come up from the various departments require much checking, or are they as a rule fairly accurate?—It depends a little upon the Branches. The Quartermaster-General's Estimates we generally prepare in concert. I think that the Accounts Branch does, perhaps, most of the details of it, but we go through all of the details with the Quartermaster-General's people. With regard to Works Estimates, the Works Branch prepare statements of the new Services which they consider desirable; the Secretary of State then goes through the statements, and leaves in what he thinks must stand within the amount of money he has got, and rejects certain things he does not think must stand. From that point again the Estimate is very much prepared between us. The lists are put into Estimate form between the two Branches, and checked between the two Branches. In regard to the Director-General of Ordnance's Estimates, under the present régime, again the Estimate is prepared between the two Branches.

7298. I mean in the way of adding up the various items and seeing that the totals are correct?—The Estimates generally have to be brought into final form too much in a hurry at the last moment for any exact arrangement to be carried out; it generally has to be done the last day or two, as fast as you can, between the Branches all round.

7299. Now, as regards the Works Department, we have had some evidence on the subject of the audit there, and I think it has rather left upon us the impression that the real authority for expenditure must be the certificate of the Commanding Royal Engineer in the District, who actually sees the work, that the Audit or Examination is conducted by the Inspector-General of Fortifications himself does not amount to very much, and that the further audit or examination which is conducted by your Department cannot be anything more than a mere mathematical checking of figures?—That is true, no doubt. Whether it might not be desirable, and, indeed, I myself think it is desirable, that there should also be a check, I will not say constant or habitual, but a test check, upon the Commanding Royal Engineer himself, or I will not say upon the Commanding Royal Engineer himself so much, but upon the Commanding Royal Engineer's subordinates, who are in close touch with the contractors—this is, I think, a point to be at any rate borne in mind.

7300. But the Commanding Royal Engineer is supposed to control those himself, is he not?—Yes, but between the supposed and the fact there is occasionally a little windage.

7301. But if you say you consider some check or control upon the Commanding Royal Engineer's certificate to be necessary, that must be done, I suppose, by Surveyors or somebody having technical knowledge in order to make it really adequate?—I do not think it would be absolutely necessary. I think it would only be necessary to see that the proper books and returns have been kept at the Station—that the vouchers produced had supporting details in the records kept at the place itself. I have no doubt that an independent technical check would be the better check of the two

because it would not only combine a comparison of the supporting statement with the vouchers, but also might go behind the record and see to what extent there was a likelihood and reasonableness in the charge itself.

7302. It does not seem to me that you gain very much by going down and seeing that all the payments are made upon vouchers. If you want a real check you ought to have a professional check which should look at the work, and say whether this work which has been charged for is work of the description set down in the contract and in the vouchers. For instance, if there is a voucher for Public Work of a certain class of expensive brickwork, that examination should look at the actual brickwork and see whether it is of that class or not. That would necessitate professional requirements, and that seems to me the only check on the certificate of the Commanding Royal Engineer?—That, doubtless, would be a better check as regards a great deal of the expenditure; but as regards, for instance, the duration of the employment and the numbers of the men or the character of the small jobs that have been done, it would also be desirable to see that the actual records taken day by day corresponded with the bills that had been sent up to us, of which at the present moment we have no evidence. The voucher sent to us is a generalised voucher; so much work done, not in detail, that may stand supported by a fact at the back of it and probably does, but possibly may not.

7303. Would not the best system perhaps be to have surprise inspections of work carried out under the Commanding Royal Engineer by persons of technical knowledge, such as Surveyors, who could look into both the question of fact whether the brickwork was of such quality and also into the documents?—I agree, with the proviso that the Surveyor shall not be, or be likely to come under the Commanding Royal Engineer whose work he has got into look into.

7304. Precisely, he must be independent of him?—In that case I agree.

7305. But he might be under the Inspector-General of Fortifications?—There, I am afraid, I doubt.

7306. Why should you not arrange that the Inspector-General of Fortifications should have a small Staff of Inspectors for this purpose with professional qualifications?—Of course one enters there into the question of the independence of the audit, to what extent you consider that the criticising branch or individual should be absolutely independent not merely of the individual but of the body criticised.

7307. But I suppose the Inspector-General of Fortifications has as much interest as anybody else in finding out any irregularities that may be taking place in a District?—Generally, no doubt.

7308. Then if without doubt he is generally interested in detecting irregularities as much as anybody else, the Staff of Inspectors might be under him, and need not necessarily be under the Accountant-General?—I should prefer the absolute independence.

7309. That would mean that you would wish to have attached to the Accountant-General's Department professional Surveyors to act for you; as I think we have established that a real examination of these works can only be done by somebody of professional qualification, that the useful thing is to look and see that the work actually done is the thing that it purports to be, and not merely to look at the documents and vouchers?—Yes.

7310. Then that would be adding on to your Accountant-General's Department a professional element?—To that extent, yes.

7311. (*Sir George Clarke.*) In that case would it not possibly be necessary to have some other Surveyors to check your Surveyor? When it comes to a question whether one Surveyor is sufficient, or two, if your Surveyor is a thing apart altogether, he would only be one Surveyor, and that seems to me an argument for having another Surveyor on the top of him?—A check ad infinitum?

7312. Yes?—You must stop somewhere.

7313. In your memorandum you say: "When, for instance, the Army Board or War Office Council has to be 'seized of some important matter the Central Branch should prepare the brief.'" Supposing that important matter was the re-organisation of the British Army, why should the Central Branch prepare the brief?—I think I had rather in my mind then a

Mr. F. T. Marzials.

28 Feb. 1901.

Mr. F. T.
Marzials.

28 Feb. 1901.

question that has been elaborately debated, possibly between several of the Military branches, between the Adjutant-General, the Military Secretary, and, perhaps, the Inspector-General of Fortifications and the Quartermaster-General's Branch, and on which the Accountant-General possibly had had his say. In actual practice at the present moment all these opinions frequently go up to the Secretary of State uncoded and unclassified, and he has, or his Secretary for him, to wade through whatever opinions have been given before he comes to a conclusion; but I did not mean that every single question that went up to the Secretary of State should be codified in that way by that particular Branch. If the Commander-in-Chief wanted to re-organise the Army he would doubtless put forward his proposals as a general and large scheme. If I had said anything about the expense that statement of mine would have to be taken for what it was worth as an element in the transaction, but there there would be scarcely anything very much to codify or arrange, the explanation and statement of the case would probably have been made by the Commander-in-Chief himself. I do not mean that every question that goes before the Secretary of State should be re-arranged by the Central branch, merely that, in cases where there has been a considerable difference of opinion, possibly out of the office with other Departments, possibly in the office, that then the "focussing" should be effected by the Central branch. I do not mean that a précis would be necessary in every case that went before the Secretary of State.

7314. (*Chairman.*) If it is not done by the Central Branch it would have to be done by the Private Secretary of the Secretary of State?—That is so.

7315. (*Sir George Clarke.*) Are you not rather speaking on the questions submitted direct to the Secretary of State, without being submitted after consideration as Recommendations of the Army Board? I can conceive that when questions have been floating round the office and then brought direct to the Secretary of State, somebody must, as you say, codify them and focus them; but it would be a little different, would it not, when those questions are brought before the Army Board, which would be the focussing body, the final and independent recommending body, before they reached the Secretary of State?—My suggestion was that if there was any "focussing" to be done for the Secretary of State or the Army Board it should be done by the Central Branch, but that if the question was one that affected one particular branch that branch would make its own statement; for instance, suppose the Director-General of the Army Medical Department wanted so many more Doctors, or wanted to get a number of Civilian practitioners at a certain rate, he would make his own statement for himself and no précis would be really required.

7316. With regard to the three schools of opinion as to the independent powers of advice and criticism possessed by the Civil Accounts Branch of the War Office, which you enumerate, the second or intermediate school, you say, considers "that the financial adviser—a civilian, it may be—shall be part and parcel of the military branch, serving under the Military Chief, and responsible to him alone," then, later, you oppose to that view a statement that the military administrator has already too much work to do, that he has not time during his administrative business to spare for finance, and that his training generally is not that of the economist. May we not hope, in the first place, that we shall get generals who, having had financial responsibility thrown upon them in a district will take the view of economists?—I think their complaint rather is that they are at the present moment overburdened with matters of an administrative character, and that the training of their troops, to some extent, suffers. I have heard that.

7317. Then you do not hope that we shall ever have a General who is anything of an economist?—I will not say that; that is putting your statement in an extreme form, which, in its extreme form, I am scarcely ready to endorse. I will put it as an improbability.

7318. Then, again, you say, as against this intermediate and somewhat moderate proposal that this financial adviser, if placed under the Military chief, "would lose his independence, and his advice would grow to be worthless." Why should he lose his independence when he would be the repository of all financial knowledge and experience in that branch?—Because any subordinate serving under a chief must be taken broadly

to follow the desires of his chief; his independent opinion he may give, but it can be crushed in the bud; he can say: "For such and such reasons I consider such and such an expenditure not worth the money it would cost"; but his chief can say at once: "Yes, but I discard a consideration of that kind; I think it is worth anything, therefore your view of the money question connected with it must go by the board."

7319. Is not that rather assuming that Military opinion is a very stupid and short-sighted one?—No. I do not endorse that.

7320. Is it not most probable that the Military chief would be only too glad to get the financial view properly represented to him by his financial expert? It seems to me that one would learn to lean upon that financial expert if one was a Military chief, and his position, instead of losing independence, would become uncommonly strong?—We are looking at a beautiful idea, unrealized, I am afraid.

7321. But every Head of every Branch has to depend upon expert advisers, and surely your argument would mean that those expert advisers would lose their independence. I do not see why any one who advises on finance more than anyone who advises on guns, because they are under a chief, should lose their independence. I think the Chief must lean upon them for their expert advice. You do not take that view?—I am afraid in actual practice that is not the case. The desire of the chief in a case of that kind is, very naturally, a spending and not an economical desire. You say he might be taught to consider the economical side. As regards a great many men, unmistakably that is the case. I do not for a single second say that an Officer is always a spendthrift, and a Civilian clerk always a rigid economist; you have to take the various men, who differ both in Military and in Civil life; but, taken broadly, the Officers' desire will be for efficiency, which must be represented by money, and any consideration which hampers him in that view will undoubtedly be distasteful to him.

7322. But my point is rather that this Civil official will be the one person who can tell him what his proposal would really cost. Would not the head of the Department be an exceptionally wrong-headed and stupid person if he absolutely disregarded the advice of his expert estimator? It seems to me he would be almost too stupid to conceive?—I think he would probably take the course you suggest, I am not quite sure he would always do so, because he might possibly regard the result from his point of view as undesirable. And you have something further to consider. If you make the Military Branch the unchecked source of all the expenditure, with, as I think, cost as its secondary consideration, you will inevitably get behind your Military Branch some other Department of the State which would have to do the work that is done by the Accounts Branch here. I do not think the Treasury—and I am not using the expression here in the narrow or departmental sense—but I do not think the State behind the Treasury would say that the Military Branch unchecked as regards expenditure, must have the control of the purse strings.

7323. My view was not that it should ever have that power—that it should not control the purse—but that it should have the means of getting expert advice as to the financial effect of its proposal?—Unmistakably, but that at the present moment we are always prepared to give. If any Branch wants to know what a thing would cost we are always prepared to give them the information.

7324. And you think it would be better that that information should be given in that way than by the same people with the same experience acting under a Military head?—That is my view. But as regards the fact that information is given that is constantly done. The Adjutant-General, for instance, sends over and asks what a certain proposal will cost, and we always, as a matter of course, give him the information to the best of our power.

7325. And you attach extreme importance to that advice being given by an outside Department?—I attach extreme importance to it.

7326. (*Colonel Miles.*) With reference to your statement that there "is very great danger in Army and Navy Administration, that the Administrators should concentrate their energies on other questions than those of cost," the Military administrators will be

charged with the expenditure of only a certain sum of money, and surely it will be to their interest to see that it is expended with the greatest regard to economy?—It is not always a certain sum of money.

7327. It must be a limited sum; he will be given the money that he is to spend. The spending branches of the Military departments are allotted their funds?—Certain occasions arise where the funds, owing to some exigency, are not sufficient, and have to be supplemented in some form.

7328. Quite so?—You are speaking now, I suppose, not of exceptional cases to which I refer, but of the habitual expenditure?

7329. Yes?—That is to say, the Quartermaster-General has so much given to him for food, so much given him for travelling, and so much given him for one thing and another, and within those limits it is his interest to keep within the sum, and also to expend it to the very best advantage?

7330. Is not that so?—That is so as regards the normal and habitual expenditure, but that is not so as regards the innumerable questions that arise during the year as to additional expenditure, or additional grants, or as regards alterations in the programme of the year which might be carried on within the amount for the year, but yet might not be in accordance with the original programme.

7331. But the original programme would form the great bulk of the expenditure, would it not?—It would form the bulk of the expenditure, no doubt.

7332. The remainder would be small?—Where I consider that the check would come in is as regards alterations of rates, alterations of grants in kind, alterations of programme of conveyance; and in a case of that kind the Quartermaster-General's votes are of a rather normal kind, they do not really comport very much alteration of programme between the beginning of the year and the end of it; and I am perfectly prepared to admit that in the Quartermaster-General's Branch there have been great efforts made for the saving of money and doing things in cheaper ways; that has been done repeatedly. I am not, for a second, prepared, or wishing, to deny that economical efforts have been made by the Military Branches.

7333. Then you think, at any rate so far as the Quartermaster-General's Branch is concerned, that they do not concentrate their energies on questions other than those of cost; your fear is that they will do so?—I think that, even with regard to the Quartermaster-General's Branch, the efficiency rather than the cost would naturally be what he would look at.

7334. Rightly, no doubt. Would you not say that there were the same incentives to economy on the part of the Director-General of Ordnance, who has to provide stores and goods for the Army, and is given a limited amount of money to do it with?—I should scarcely say quite the same.

7335. (*Sir Charles Welby.*) In reference to the Chairman's suggestion that in order to carry out the kind of local supervision of works expenditure which you rather insist upon, it would be necessary to add to your staff some technical experts, is it not the fact that there are, at all events, a very large class of cases in which such supervision would be valuable, apart from any special technical knowledge. Perhaps I can make clearer what I mean if I refer to a case that I have before me as an instance, a case referred to in these papers, in which it appears that a contractor at Dublin on a close examination of his books found that he had received twice over from the War Department the sum of 337, in payment for a wood-block floor carried out at Portobello Barracks; that the error probably arose through a payment on account having been overlooked when the total cost of the work was claimed; that the contractor has voluntarily returned the amount; and that the General Officer Commanding stated that the evidence seemed to show that the over-payment was due to carelessness in not sufficiently checking the bills when they passed through the Division Office, and the error escaped notice under the system of the examination of accounts in the Inspector-General of Fortifications Department. I take it that that case under an efficient system of local supervision would have been detected, and required no special technical training for its detection?—No. In that case no doubt the overcharge would have been detected by a comparison of the

date and the totals. That is really the point that I tried to bring out in my reply to the Chairman's question: that the local check to a certain extent might be efficient if made by non-professional persons, but that a professional check would be more efficient than that of a non-professional; the professional check might combine the two.

7336. But such a system of establishing local audit offices, as has been suggested to you at an earlier stage of our proceedings, would of itself, you think, be valuable, would it not, in providing a closer and more immediate supervision of the local works expenditure?—In either case the check would have occurred in the office of the Commanding Royal Engineer himself, and that error might consequently have occurred just as much by the Pay Office or Audit Office checking at Dublin as here. Possibly, being at Dublin, the auditor might more frequently have gone into the office of the Inspector-General of Fortifications, and seen that his bills were in due form; but that would, of course, be equally met if anybody were sent down from here.

7337. Then, again, with regard to your particular Finance Department, I understand that the Actuary who has up till lately formed part of the Central Department of the Office, has been lately transferred to your department?—That is so.

7338. Is it not also the fact that he is at present, and always has been, dependent for the statistics on which his calculations have to be based on the Statistical Department which is under the Adjutant-General?—Oh, no.

7339. I mean with regard to all matters of the personnel of the Army?—Confining your question to Establishments, I agree with you; but, of course, the Actuary has a great number of questions to work out which relate to the personnel, in the sense that they affect persons in the shape of pensions and non-effective charges; a great deal of his work is connected with that, and that in no sense comes from the Adjutant-General. But if you confine your question to questions of establishments and drafts, then his data come from the Adjutant-General's Branch.

7340. And is there, so far as you are aware, any particular reason why the statistics with regard to personnel should be under the Adjutant-General's Department rather than any other Military Department; or, indeed, is their natural position not under the Central Office?—No, I am afraid I cannot say that. It seems to me that the question of establishments is essentially a question for the Adjutant-General to settle. It is essentially also a question for him to settle as to drafts, as to the number of drafts, and as to the recruiting of the Army, and its efficient state. Those are Adjutant-General's questions.

7341. I did not put it to you as a question of settling questions, but rather of keeping records, statistics pure and simple?—I cannot say that I see any immediate advantage in the transfer.

7342. However, you think it would be no advantage to your Actuary to have under his own hands the statistics with regard to personnel which form the basis of so many of his calculations?—No, I am afraid I do not, because those statistics are collected and organised in view of certain action, which action must be taken by the Adjutant-General, and not by the Central Branch. Therefore, it seems to me that the statistics should remain rather with the administering Military Branch than with the Central Branch. It is not as if those statistics were collected simply for information; they are collected really as the basis of action.

7343. I should have thought that the large mass of them were collected merely with a view of compiling the Annual General Return of the Army. However, it is not an important point?—It is not a question that has come specially before me, and therefore my opinion is not an expert opinion.

7344. (*Mr. Beckett.*) You say that the Heads of Departments have access to you for financial advice at any time?—Yes.

7345. In Sir Coleridge Grove's memorandum he makes reference to the General Officers and points out that it would be an advantage to them if in putting forward their proposals they could consult Financial advisers, presumably a branch of your office, to inform

Mr. F. T. Marzials.

28 Feb. 1901.

Mr. F. T.
Marzials.

28 Feb. 1901.

them in the same way as you inform the Heads of Departments as to the cost of any proposal that they wish to put forward. Do you not think it would be an advantage if they were provided with such a Financial adviser?—To that extent certainly there might be an advantage. The difficulty would be that if the proposal were one of any very large importance my local representative down at the station could scarcely commit me to any opinion upon it. He might work it out as regards the details of the cost so far as it was locally concerned; but if it were a large question affecting the Army generally he would naturally

hesitate to give an opinion about it without reference to me.

7346. But I gather that it would not be necessary for him to give an opinion, except as regards the cost?—As regards the cost, without question, to that extent I agree.

7347. Because Sir Coleridge Grove points out that it would be an advantage if, in making their respective proposals, the General Officers Commanding were fully aware of the cost of their proposals?—The scheme has that advantage.

The witness withdrew.

TWENTY-FOURTH DAY'S MEETING.

EIGHTEENTH DAY'S EVIDENCE.

At the War Office.

Tuesday, 12th March 1901.

PRESENT :

MR. OLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Major-Gen.
Sir F.
Maurice,
K.C.B.

12 March 1901.

Major-General Sir FREDERICK MAURICE, K.C.B., examined.

7348. (*Chairman.*) Since when have you commanded the Woolwich District?—I have been there just over five years, since 7th December 1895.

7349. Before that did you command any other district?—No, I came there from Colchester, where I had been the Officer Commanding the Royal Artillery. I was, however, for about two months, during the absence of the General Officer Commanding, in command of that district and became acquainted with its working.

7350. Have you at any time held any appointment within the War Office?—I have been employed in the Intelligence Department and I was Deputy Assistant Quartermaster General in that Department for a short time, giving it up to go as Assistant Adjutant-General to the Nile Campaign in 1884.

7351. I think we had better turn in the first place to the Memorandum which you have sent us under date the 7th March; have you a copy of it?—Yes, I have it before me.

7352. The general impression left upon me by your memorandum is that the result of recent measures taken after the report of the Decentralisation Committee has been to decrease the work which your Department has thrown on the War Office, whilst it has not increased the work of your district itself?—Exactly.

7353. You proceed to give us certain instances in which you think that this salutary work of decentralisation might proceed further?—I have mentioned just a very few here, and there is one which I have since seen my way to add which I will put on the paper, if you please, afterwards.

7354. We shall be glad if, after going through the Memorandum, you would supplement what you say in it by any further suggestion that you have to make. We must, of course, premise that it is rather difficult to institute a comparison between the work before the Decentralisation Committee reported, and the work since that Committee reported, when quite an abnormal

factor has been introduced owing to the war; and you point out yourself in your Memorandum the very fundamental differences owing to the conditions of foreign service that must obtain between England and Germany in respect of decentralisation. But is it your opinion that the proposal which was put before the House of Commons the other day for the creation of six Army Corps will to some extent allow us to approximate more closely to the German system in making these new Army districts more self-contained and autonomous?—My difficulty is, as regards correspondence, that I am afraid almost all the causes that force correspondence on the War Office will obtain nearly as much with the Army Corps as they do now with the districts. As I have said to you in my memorandum, my own experience is that the tendency of the War Office is to leave officers commanding districts very much to their own devices in regard to their own districts at the present time. I have done myself, in my own district, a good many things which I think afford pretty strong evidence of indisposition on the part of the War Office to interfere unduly with General Officers commanding districts. For instance, I think I may say that for almost as long as the British Army has existed there have always been garrison guards at every station in the Kingdom. The first thing I did when I went to Woolwich, believing very strongly in what the Secretary of State said himself the other day in the House, namely the advisability of reducing sentry-go as much as one could, was to abolish every garrison guard in Woolwich and substitute military policemen. My action was never objected to by the War Office, in the slightest degree, although I reported it of course in due course.

7355. Was there any regulation to the effect that garrison guards should be posted?—No, none; it was simply that they always had been posted. They had been reduced by my predecessors considerably, and I abolished every one.

7356. Then the question of garrison guards had been practically left to the discretion of the General in

Command of the district?—Entirely; but my point is that as a rule anything which can be dealt with in a district without interfering with another district is now, so far as the War Office is concerned, left to the discretion of the General Officer Commanding the district.

7357. But if this question of garrison guards was one which had been left to the discretion of the General Officer Commanding, why did you find it necessary to report it at all to the War Office?—I merely mentioned it, as a matter of fact, in the course of my Annual Report, because whatever you create in the way of Army Corps or anything else, the General Officers Commanding the Army Corps ought to let the Secretary of State know in their Annual Reports at the end of the year the general course of their procedure. But my point is that I did not ask any question about it; I did it myself, because I thought it right.

7358. You did not refer for authority?—Not in the least; I did it entirely off my own bat. Similarly, I had for nearly two years a long battle with the local authorities, which began by all Woolwich being against me, and ended by all Woolwich being absolutely on my side, to obtain possession of a certain piece of ground for the training of the troops. It was known as Bostall Heath. I had meetings with all the local authorities; I had to meet the London County Council; I had to fight out my own battle. I never asked a question of the War Office and they left me alone entirely.

7359. Was that with regard to getting authority?—It was no question of authority; it was simply a question of carrying out the rights of the Secretary of State for War in regard to certain Standing Orders under the County Council, which were in fact the product of an Act of Parliament which had given authority to the London County Council, with the counter-signatures of the Home Secretary and the Secretary of State for War, to make certain Standing Orders. I found myself in riding over the Heath one day that those Orders provided that Infantry Military Drill should always be allowed to take place on that ground; I thereupon claimed my rights and after a long battle I got them. But what I am pointing to is that I was left absolutely alone, I had nothing to do with the War Office about it; and those were largish questions in their way. Similarly, I had a third case just after I went to Woolwich as regards the Brooke Hospital, of which you will have heard because of the discussion that has taken place as to the great cost that it has been to the "Metropolitan Asylum's Board." They created out of the rates a very perfect infectious hospital quite close to our Herbert Hospital. It was a matter of most extreme inconvenience to us in the Herbert Hospital to deal with infectious patients, so much so that there was a huge wing that was absolutely closed because there were half a dozen infectious patients occupying what practically represented the accommodation for 120 patients. I was most anxious to clear those few infectious cases out, in order to make room for the proper accommodation at the Herbert Hospital. I arranged that with the local sanitary authorities. They now send for my infectious cases as they arise just as they do for any civilians. They take them to the Brooke Hospital, by which means I cleared the wards. The only communication which I had with the War Office about it was that I came up personally and saw them and said, "You had better let me wash my own linen at home," and they agreed and left me to carry out my own arrangements; and ever since the infectious cases of soldiers have been going to the Brooke Hospital. The only trouble I have had was that I could not for years get the sanitation carried out at the Herbert Hospital, because it required a certain sum of money, until the threatening of the war made it necessary to get all the accommodation possible. Then I was allowed money to have the whole ward properly sanitated, and have used it ever since.

7360. But for what purpose do you cite these instances?—I cite them as instances of which I could cite many more, merely to show that, so far as my experience goes, I think at the present moment the intention and working of the War Office is, so far as the conditions of our Constitution and our world-wide Empire, and so on, permit, to leave to General Officers Commanding absolute freedom within their own Districts,—that all the cases I refer to the War Office are Army cases on Army matters, and that Army matters

become more important and numerous in relation to our Army than they do in relation to the German Army. For instance, owing to our continual flux and reflux, I have no such thing, as I have described in my Memorandum, as a permanent body under my orders; the actual units are perpetually changing, and the individuals within the units are perpetually changing; and therefore they come not only, as I there say, under different commands,—different Generals, and so on, but under different Governments,—India, the Cape, Egypt; and those involve all sorts of questions which must be Army questions; and I do not think, so long as our Empire is what it is, that you will ever be able to free the War Office from correspondence in the sense that the Berlin Office is freed from correspondence.

7361. That is to say, there must be some Central Office to correspond with and settle all cases with India, the Colonies, and so on?—That is my point. Then there is another question of very great importance. You have had a long and anxious Committee, and perhaps I might just pass up these letters to you; they may amuse you (*handing in some letters*). Those letters are representative of hundreds that are written from women who give you no indication enabling you to trace particular men. These require references often to all sorts of different districts in order to trace the particular men about whom they ask. That is entirely involved in our conditions of enlistment as compared with those of a foreign Army, and you never will get rid of that. Here is a favourable specimen of the correspondence resulting (*handing in a letter with the correspondence attached*). It entailed much less correspondence than several of those letters I have already handed in. The woman gives her own address, and does show where she is, so that we can correspond with her. Very often you can get no address whatever.

7362. (*Mr. Gibb.*) That may give you anxiety of mind, but no trouble?—But then very likely she will write to a Member and the Member will ask the Secretary of State why this letter has not been attended to. I have had a case in which the correspondence involved was considerable. I had a letter sent down to me by the Private Secretary to the Under Secretary of State asking me to look into it, and I had to bring them up a large packet of correspondence which he sent to the Member of Parliament, and the only acknowledgment was, "I see I have given some people something to do." Evidently he took a different view from Sir William Butler, and thought that he was doing good service to the State by increasing our office work.

7363. (*Chairman.*) Here is a letter from a soldier's wife in which she gives no address whatever, but simply says,—“You have sent me one day's pay short this month, I remain, yours faithfully, Mrs. Ward.”?—That is a very fair specimen. I could have given you many more, but some of the most racy I brought up to the Private Secretary of the Under Secretary of State, and asked that they should be put up in the Lobby of the House. I do not know whether they were put there or not.

7364. But your point is really, I take it, that the letters from all these ladies inquiring about their pay have to be dealt with by somebody, and as the husband may be at one time in your district and the next time in India or in Egypt, there must be some Central Office which has the task of tracing out those men?—That is the point. And there is the further difficulty that the public always “like to take out of a big heap.” You know the way in which in an apple shop they have a narrow board over which they spread a great many apples in a thin layer to look like a heap, and if you ask why, the answer is “that the public like to take out of a big heap.” Exactly on that principle every one likes, if possible, to write to the Secretary of State and they never write to the actual person who has to deal with the matter; they write to the Secretary of State, and then it comes down to the different districts; and that applies whether you have an Army Corps or a small district.

7365. These letters are very variously addressed; one is addressed to “The Lieutenant of Woolwich Barracks” and another to “The Head Manager of the Soldiers at the War Office”?—You see all those are involved in our conditions of enlistment; they could not possibly arise in a German station where a man is never moved; he is in his own village. Half our people who enlist do not want their friends to know where they are.

Major-Gen.
Sir F.
Maurice,
K.C.B.

12 March 1901.

Major-Gen.
Sir F.
Maurice,
K.C.B.

12 March 1901.

7366. Yes, they generally go and enlist at a place to which they do not belong?—Exactly. So that my point is that you have an amount of correspondence there for which nobody is to be blamed exactly, but which is owing to the actual condition of things as they are. I think I ought *prima facie* to be called on to account, as a kind of erime, against good organisation, for the fact that I have 6,900 letters in one month and am only sending up 196 to the War Office; but it is that sort of thing which involves it.

7367. But as regards the constitution of these new Army Corps Districts. I suppose that one reason for the considerable correspondence between districts at present and the War Office is concerned with the question of drafts for foreign service?—Yes.

7368. The War Office practically selects the drafts?—My district is rather peculiar in that way; so far as the artillery is concerned, there has been a change and re-change about that two or three times, but very largely in that matter the Commanding Officer of the Royal Artillery at Woolwich carries out that detail in regard to drafts, as does also the Commanding Officer, that is, the Colonel who happens to be locally commanding at Woolwich the Army Ordnance Corps. He carries out all questions of the personnel of the non-commissioned officers and men of the Army Ordnance Corps throughout the Kingdom. In those respects my district is a little peculiar perhaps, and it would not be quite fair to take it as a specimen, because Woolwich, in addition to its being a garrison, is an outpost of the War Office. There is a good deal of War Office work done in the office of the Colonel Commanding the Royal Artillery there, and the Army Ordnance Corps Office does the same. And then there is the great Remount establishment, which is under me only for discipline, but for all organisation purposes under the Director-General of Remounts. And I have also a large Veterinary establishment which supplies, for instance, for this campaign all the veterinary stores and so on, and has all that work upon it. And the Herbert Hospital is a general hospital for the whole Army just like Netley. So that in various ways of that kind the district is special in the sense that there are all these different things. There is a Record Office at Woolwich for the whole of the Artillery. This is really a sort of offshoot of the War Office. All these things are under me for discipline, but they are really concerned with all parts of the Army outside Woolwich; so that in some respects that question of correspondence affects me differently from the way in which it would other people, and it is only fair to warn you not to take Woolwich quite as a specimen in those respects.

7369. But, in your opinion, would it be possible, looking to the future Army Corps districts, for each district to be responsible for furnishing so many drafts in every year, and for settling everything as regards those drafts, and for being responsible for sending them out itself or making arrangements for it?—That depends a great deal upon how far certain other changes are made. I expressly mentioned in my Memorandum that one difficulty is that all over the country at present you have, for each series of special purposes, special places of instruction, like Hythe for musketry, like Lydd for garrison artillery, like Okehampton for training the field artillery, and like Woolwich for various courses that officers, non-commissioned officers, and men, come to for artificers' work in connection with the Arsenal, and so on; each of those different places presents certain exceptional facilities greater than any others existing in the Kingdom, and as long as you want to have those special courses for officers, non-commissioned officers, and men, going down to those places, and as long as you have Aldershot for your great training school, you will still have the flux and reflux of units and of parties of officers, non-commissioned officers, and men, between corps as you now have them between districts. If you set up in each district a locality which you treat as a great training school independently of Aldershot, you will not have the necessity of moving units at all events from the one district to the training school at Aldershot; but if you are going to keep Aldershot as your great central school for uniformity and purposes of that kind, and are going to move the battalions periodically to Aldershot for a certain number of years, then in order to keep up any equality of training between the different units, all the units will have to go there periodically, and, therefore, you will have the same movements perpetually going on as now. A

regiment coming back from India may, perhaps, come to Colchester in the first instance, but unless there is a training-school like Aldershot in the district it would after a year or two move to Aldershot for training.

7370. A regiment coming back from India might require certain special training?—Yes, but as a rule it is not sent actually to Aldershot at once; it is allowed to get into order again to a certain extent. The result of a regiment coming back from India is that it has left a good many men behind it; it takes up a good many fresh men as it comes home, and it takes it some little time to shake into order again; and, therefore, as a rule what has been done is this: it has been allowed to shake itself somewhat together at another station and then is sent to Aldershot after a year or two years at home.

7371. I take it, that your point is that if these Army Corps districts are to be really self-contained and autonomous, each should be furnished with complete facilities for these various courses of instruction and drill?—Yes.

7372. That a regiment, say, coming home from India to a Scotch district should have a place corresponding to Colchester to go to, where it could shake itself together, and a place in Scotland corresponding to Aldershot?—Yes, you will be involved in all that if you are to prevent these perpetual changes. And, further, the number of places in England which are suitable for these various purposes is exceedingly limited. Okehampton, being on Dartmoor, is obviously a very much more available place for training the field artillery, with their present ranges, than any place you could get near Colchester.

7373. (Sir George Clarke.) It probably would not be possible to get an equivalent range for the Colchester district?—So I should say.

7374. (Chairman.) And if that is the case for that particular training, which can be found at Okehampton, and cannot be found in the Eastern District, your Army Corps district could not be autonomous?—I do not see how it could.

7375. (Colonel Miles.) It would be, up to that limit?—Granted. There is this to be said as regards that point, that now batteries go down to Okehampton for a certain time, and come back to their own district; so that, so far as that goes, it would not involve you in any great difficulty; they would only be sent down there for a time. But there is the same thing again as regards Woolwich. You see the thing that gives the facilities at Woolwich is, to a very great extent, the Arsenal, of which we have only the one, as regards the training and many of the courses that officers come down for, and they represent officers of all arms in the Service. I should think it might be done locally in the sense that you could set up different training schools for the artificers locally, without great difficulty; but it would all involve large fresh expense.

7376. (Sir George Clarke.) And you could hardly give artificers anything like the same training that you could by putting them by the side of the best Civilian artificers?—I should have thought not.

7377. (Mr. Gibb.) I do not quite follow what are the evils or the difficulties in your mind consequent upon the necessity for sending certain soldiers or officers from the Army Corps districts to a central training place for a temporary purpose?—There are two points; one is the moving of the units, and the other is the moving of individuals; but all I say is that if you get that perpetual movement of the units, on the one hand, for the purposes of a training school like Aldershot, and you get the movement for the purpose of courses, then it will become a question of reference to the War Office how that is to be arranged. As I have said in my Memorandum, all districts are encouraged as far as possible to correspond with one another for what can be settled between district and district; but very often it is a matter of general arrangement how the succession shall take place.

7378. (Chairman.) How would that bear upon the question of each Army Corps district supplying on its own responsibility the drafts which it was required to supply to India? Some of those men might be at Okehampton, some at Woolwich and elsewhere for special training, but you would know where they were and that would still be under the hand of the General Commanding the Army Corps in the district and he would make his arrangements to supply his drafts

if necessary having certain men detached for training in each of these foreign districts?—I do not think there would be any difficulty providing that there is a certain corps which feeds a certain particular district abroad, India or the Colonies, or whatever it may be, having the same kind of relation to that district in India, say, which at present a battalion has to its linked battalion abroad; but if you do not link them together, I do not see how you could carry it out.

7379. (*Sir Charles Welby.*) You mean that you would link the First Army Corps at home to some Army Corps in India?—Yes.

7380. (*Chairman.*) Would it not be possible to make the Army Corps district responsible for sending out so many men every year?—Yes, but it has to be filled up again; you get the men coming back. It is a question whether any particular Army Corps represents the same battalions, the same batteries, the same regiments of cavalry in succession year after year or not; if it does not, then so far as regards the question that you are raising of correspondence, you will have the same difficulty, that a central body must deal with this perpetual shifting between one command and another.

7381. (*Sir George Clarke.*) You mean that it would be very difficult so to arrange that these groups of Army Corps districts will supply certain units always abroad?—Yes.

7382. Because regiments change and may have to pass to other Army Corps when they come home?—Yes.

7383. And therefore it would be exceedingly difficult under this system to say to a group: you have charge of so many units abroad, you must supply them?—Yes, that is my point of view entirely. It is not that I object to the Army Corps system, quite the contrary; I am only presenting the absolute difficulties which I think you will have to tackle if it is introduced.

7384. (*Mr. Mather.*) But there would be in India a corresponding Army Corps to this in England?—My view is that if you carry out the proposal you ought to have Army Corps fitting to Army Corps abroad, as you have now battalions here fitting to battalions abroad.

6385. There would be no practical objection to that, would there?—I know of none, except that in any case it will be a matter to be settled with the Indian Government, for instance, and by the Quartermaster-General with the Admiralty as to sea transport.

7386. (*Sir Charles Welby.*) Would there not be great practical objection in that you would have one Army Corps the units of which would put in all their foreign service at a popular place like South Africa, while the units of another corps would put in all their foreign service at horrible places like Singapore?—Yes, that is quite true.

7387. (*Sir George Clarke.*) And it would not follow, would it, that the Government of India would accept your Army Corps organisation as being suitable to its conditions?—No, it would not follow.

7388. (*Colonel Miles.*) But the difficulty would come in more with linked batteries than with linked battalions of line regiments, would it not?—Providing you have a linked battalion at home, but if your Army Corps is to be fixed, that the Leinster Regiment, for instance, should always be in the Colchester District—

7389. I did not quite mean that; I mean that the draft of the 1st Leinsters, whatever district it is in, has to find the draft for the 2nd Leinsters in India; that could be arranged between the Army Corps and the Foreign Station?—Provided you come across no Government objection, which is a thing that does arise, as to the question of expense between the Indian Government and the Home Government.

7390. But as regards the numerical furnishing, equipping, and forming up of the drafts, that could be done between district and district?—Certainly.

7391. But it is more complicated in the case of Artillery, because you have to send out men for various requirements—drivers, gunners, and so on?—Yes.

7392. Whereas in the Infantry we send out 180 men of certain categories?—Yes.

7393. And I think no draft would be more difficult to manage than Artillery?—In many respects; but I am not looking at it specially from an Artillery point of view.

7394. (*Sir Charles Welby.*) But referring to the Report of Mr. Brodrick's Committee in 1898, I see there it is recommended that the General Officer should select drafts?—Yes.

7395. Are we to understand that that recommendation was not carried out?—So far as my own district is concerned, it has been with me almost an Artillery and Army Service Corps question. The Army Ordnance Corps, which is the other great corps that I have in the district, regularly arranges its own drafts from the Central Office in Woolwich all over the country as may be desirable; the Army Service Corps also is administered here in London entirely. The Artillery has been changing during the five years I have been there perpetually backwards and forwards between my Commanding Royal Artillery Officer in the District there and the War Office. There have been various experiments about it, largely in connection with the making up of detachments. You had much better take the evidence of somebody else about it with regard to Infantry drafts. As it happens, the two battalions that I had there before the war, the 2nd Lincolns and the 2nd Middlesex, had each come back from India, and been only there for a short time making up, and now I have two battalions, the 3rd and 4th Middlesex, practically consisting chiefly of recruits.

7396. They have not begun sending drafts yet?—They have not begun sending drafts at all.

7397. (*Chairman.*) To turn to another point, do you think that correspondence and reference to the War Office could be saved if a local representative of the Accountant-General was established at the headquarters of the command, in order to conduct the audit locally and to be at the elbow of the General in case the General wished to ask whether such and such a proposal that he had in his mind was in accordance with the Regulations, or could be brought into accordance with the Regulations, by turning it another way round?—So far as any question of Regulations is concerned, it seems to me that already the Paymaster is quite a sufficient adviser. I always send for him just as I should for any other Staff Officer, and consult him on a question of regulations. If it became a question of larger financial responsibility in the district, probably somebody of larger financial knowledge than the Paymaster, might be desirable, but so far as regulations are concerned, I do not think I have ever been put wrong by my Paymaster, whom I have always consulted on such matters.

7398. But it is conceivable that the Paymaster might put you wrong and correspondence might result?—I mean that practically I do not think it has been so.

7399. Whereas if your local Assistant Accountant-General had power delegated to him to deal with the question finally, there would be no question then of further correspondence?—Whoever you put at the head of the Account Office, if he could deal with it finally, it would very much simplify correspondence.

7400. That would, in your opinion, get rid of correspondence?—Of a good deal certainly, but as I have said in the Memorandum, it seems to me that relatively to the correspondence of the whole Army, so far as my experience goes, the correspondence with the War Office is a bagatelle. I only send up one paper in 35 that go through my Office.

7401. (*Sir Charles Welby.*) But that is in abnormal times; in time of war?—Yes, but I think practically the effect of the Decentralisation Committee has been to reduce it to a third of what it was both for normal and abnormal times.

7402. (*Chairman.*) Then you do not yourself complain of unnecessary correspondence and reference to the War Office?—No I do not. I say exactly as I said before that Committee, that it seems to me on most of these questions any excess of correspondence that is involved from questions with the War Office is a bagatelle; I do not see that they can avoid most of the questions that come to them. As long as explanations have to be given in Parliament (it comes to that really), there must be information in London available, and I think it is mostly for that purpose that any question is raised.

7403. It is owing to the curiosity of Parliament that centralisation is necessary?—Yes, mainly, though the other points I have named, which may be summarised by the words "the flux and reflux," affect it almost as

much. We have a world-wide empire and a popular Constitution. It is the inter-action of these two factors that produce it.

7404. (*Sir George Clarke.*) But every question in Parliament almost entails a reference to the station, does it not?—Yes.

7405. It cannot be answered by the War Office without the assistance of the station?—No, but still there are a good many questions that we can provide for by sending up information beforehand to the War Office.

7406. (*Chairman.*) In some of the papers that we have seen there has been some rather loose writing about the necessity of Generals having what is called a financial adviser; I suppose really this term "financial adviser," includes two things; that, on the one hand, it might be useful to the General to have a local auditor whose decision on any question should be final and who should assist the General in any question of interpretation of financial rules, and that, on the other hand, the General might find the assistance useful of a sort of business manager, a man not concerned with audit, but a man who would make his contracts and do his business for him?—At present the contract system is a tolerably simple one. As a matter of fact, mine and Aldershot are the only two districts that purchase their own forage. Woolwich is a considerable horse station, both because I have a good many batteries of field and horse artillery and because the remount establishment is there, and we purchase for all those our own forage in the open market.

7407. Who purchases the forage for you?—My Army Service Corps Officers, generally one or more, usually with the assistance of selected regimental officers of other branches.

7408. They come up to London and buy it?—Yes, as to oats. Hay and straw are mostly purchased from the farmers direct.

7409. Do they act under the authority of the officer called Assistant Adjutant-General B.?—Yes.

7410. He is practically your officer?—Yes, the contract comes before me for actual signature, but practically the work of opening contracts and so on is done by a committee, and the actual purchasing is done by my Army Service Corps Officers.

7411. And the Assistant Adjutant-General B. presides over it?—Yes.

7412. You practically take his advice?—Yes.

7413. He is your business manager?—Yes, as a matter of fact it has so happened that one of the great difficulties that we have had during the war has been that we have been so very short of officers that my Deputy Assistant Adjutant-General for B. has been doing three men's work, but that is a detail.

7414. The system works well as a rule?—Yes, I think so.

7415. Why is he called Assistant Adjutant-General B.?—Because they wanted to distinguish the two; they called the officer of the Adjutant-General's Department A., and the former Quartermaster-General's officer B.

7416. But he is much more a Quartermaster-General's man?—Yes; it was really in order to bring the Army Service Corps officer into that part of the staff, but "A." and "B." were merely just like "one" and "two."

7417. But he is really a Quartermaster-General's officer?—Yes he has been actually doing all the ordinary work of my local Quartermaster-General, that is to say, doing all the embarkation and disembarkation and all the purchase of forage and food and looking after contracts.

7418. Would it not rather clear up his title and functions if his name began with Q. rather than A.?—It is merely that the title has been changed; we go backwards and forwards very often in these things, and I am rather inclined to leave things alone as they have once been settled.

7419. Not because it is the best title?—No.

7420. Nor because it describes his functions?—No, but because his functions get gradually by practice to be known, and if you change the title people begin to think that you have changed his functions. After

all the mere title "Quartermaster"-General has very little relation to buying forage.

7421. (*Sir George Clarke.*) But it is a good old historical title?—No doubt. If I may recur to the whole question that you have been raising, it seems to me that the recommendation of Mr. Brodrick's Committee which is based largely upon Mr. Ismay's evidence of the all importance of bringing personally into contact the people who have to settle questions, is the most vital question of the whole. You see all the evidence of the great commercial firms tends to show the good result that they find produced by bringing people actually into touch with one another, and that when they want to get anything done they send somebody down to the spot to talk it over with those locally responsible and to settle it with them. That is the one thing I have been craving for all the time I have been at Woolwich, and that is the one thing which, from everybody up here being overworked, I have not been able to get. My point is that I think it is vitally necessary that the officers at the War Office should have their time sufficiently free to be able to come down and see for themselves what is going on in the different districts. I do not know whether you will wish me to give the evidence—it is a little personal—but my own experience is simply this: Almost all the men who have been at the War Office have been men whom I knew extremely well personally. From the very beginning I asked them, and I kept on pressing them all for two or three years, to come down to my district and spend some time there. I asked Lord Wolseley, I asked the Adjutant-General, I asked the then Quartermaster-General, I asked General Clery, and I asked Sir Coleridge Grove. They all agreed as to the importance of it, they all agreed that they would like to come, and they all promised that they would, but not one of them has found time to do it. Absolutely, the whole time that I have been at Woolwich, the only inspection that I have had (except that Sir Richard Harrison has been down just on his own particular business about once a year) has been one by the Commander-in-Chief. His private secretary first of all wrote to say that he wanted to see not a formal march past but a field-day. I replied that I should be delighted to give him a field-day but that I must take him some miles away from Woolwich because a field-day on Woolwich Common would be a farce. The secretary answered that, that being so, the C.-in-C. would not have time to see such a field-day, but must see a march past. In the middle of the march past he was called off by a message from the War Office. I have twice got for particular purposes—but once it took me nearly three months to get him—the Adjutant-General. I once wanted him to see Bostall Heath, as he had been talking about the ground not being very satisfactory, and he came down for that purpose. When I wanted for particular reasons to show him the Record Office his secretary and I were for nearly three months having perpetual interviews in order to fix a date which he was constantly obliged to postpone. I know that Sir Richard Harrison has often, in consequence of his visits, had to sit up working till 2 a.m. to pick up arrears. Moreover, even in his own special department he is not able to decide anything. Therefore, I think that if you want really to shorten correspondence on the principle laid down by Mr. Brodrick's Committee, that you must bring men into personal contact in order to get things right, you must have a certain number of men free enough to be able to come down and do it. There are all sorts of things that I want to get settled, and have not been able to get settled, simply because it was no use writing papers that did not get through.

7422. (*Sir Charles Welby.*) Would you like a system under which the Commander-in-Chief should have under him a regular Inspection Staff, divided off from all executive duties and existing for the purpose of inspection duties, or do you think that such inspection as you wish for should be carried out by the executive officers at Headquarters themselves?—Of course, that just raises the question of how far you can give them time. I think that somebody who can give decisive answers on questions, like those referred to in Mr. Ismay's evidence, and all that commercial evidence that you have had brought before you, should come down himself and talk it over.

7423. You would not be content with some one who can come down and talk it over with you and report it

to Headquarters?—No, I mean some one who can come down and give a decisive answer himself.

7424. (*Sir George Clarke.*) You think that a decision formed on the spot from personal knowledge is one that is much more likely to be right?—Yes.

7425. (*Mr. Mather.*) And the reverse process, of the General Officer Commanding going to the War Office and seeing the head of the department, would not, in your opinion, serve the same purpose?—Not quite; I want both; but, as I have said expressly in my Memorandum, I think it is very important that the General Officer Commanding the District should come up whenever there is some question really affecting his district for decision by the Army Board, by the Secretary of State, or by whoever it may be; that he should be called for and personally interviewed, cross-questioned, bullied, as much as you like, but that he should be heard, and that he should come to the War Office. I do that now as far as I can on points of detail that want talking over, but that is quite a different matter. I came up myself yesterday. I was up in six or seven different offices settling different papers that I wanted to settle *vis à vis*; but I always feel that it is very cruel; I am taking up men's time who are completely overworked, and to whom one is a great nuisance. I never do it until I have got a crux which I think will be much more easily settled by a few words of conversation.

7426. (*Chairman.*) It would always be in the power of the Commander-in-Chief to summon you or any General Officer to a meeting of the Army Board?—Certainly; but it is not the practice. My point is, that the tendency is always with all of us for the absent to be wrong and to be considered of no importance. I have made a rather curious note on the report of the Decentralisation Committee of a case where the particular thing I mean comes out very funnily. There is a piece of evidence here of Sir Richard Harrison (who is a great friend of mine, and about the last man in the world to say anything unfair of anybody behind his back) in which he simply represents the sort of impression we all of us get of people who are doing something about which we do not know. He says here, on page 3 of the Decentralisation Committee: "Though not directly a question of personnel, this opportunity is a good one to bring to notice that as a general rule it is very doubtful if the services of the District Paymaster are sufficiently utilised by General Officers." It so happens that before that Committee itself, if you turn to pages 4, 6, 23, 29 and 47, there is positive evidence of seven districts (and there are only 12 in the Kingdom) in which the General Officer Commanding does habitually consult his Paymaster; and I can answer for it that I do—that makes eight. When I read that evidence I thought it simply involved the assumption that every General Officer in the Kingdom must be an incomparable fool, and those who appointed him traitors. It took for granted that having a Staff Officer specially up in these regulations he did not consult him. I have since heard positively of another who does, which makes nine. As I say, there are only 12 in the Kingdom; and, therefore, there are only three about whom one does not know; but they are all men whom I know, and I am as certain as I can be of my own existence that they are not such fools as seems to be suggested in that evidence. To run through the case as it presents itself in the Report. You have the evidence on page 4, that Sir R. Harrison did himself consult his Paymaster: (Q. 7.) "Have you any suggestions in regard to that that have occurred to you in the course of your experience?"—(A.) "Personally, I used to consult my own Chief Paymaster." Immediately below, see paragraph 11. If you compare that with paragraph 517 a little later, you will see that Sir William Butler's questions imply that he does consult the Paymaster; he knows what the Paymaster is though he does not commit himself to any expression of opinion. Then, if you will look at paragraph 67, you will see that General Swaine consults his Paymaster (that is at Chester), and on page 23 you will see that General Burnett (that is at Colchester) expressly states that he consults his Paymaster. Then if you look at page 49, you will see that Sir Evelyn Wood, speaking for three districts of which he has been personally in command, says: "When I had a District Paymaster I made him my Finance officer, and if all Generals do that I think they will be saved a great deal of trouble." I happen to know that his habit has been carried on in those districts, and only yesterday I

happened to hear that General Chapman habitually does the same thing. There are certainly only three districts left about which we do not know, and against those there is no evidence whatever. Then you have on page 28, Colonel Kitson, who is a most excellent man, at paragraph 701, giving this evidence: "(Q.) As a matter of fact, the General has never up to the present asked the Paymaster for any financial advice at all?"—(A.) "I do not think that is the case; I think possibly a great many Generals do not, but some certainly do." So that you have there an element of guess on both sides, which was what I meant by saying that all that tends to generate a government by gossip. On any question Sir Richard Harrison is a perfectly fair representative; there is no fairer minded man who could act on an Army Board.

7427. If you made a request to the Commander-in-Chief to be allowed to attend the Army Board on any particular point which concerned you, would not that request be granted as a matter of course?—I have repeatedly drawn attention to it; I have for years said that it was an absolute necessity, and they have agreed that in principle it ought to be so; but I never know when any particular question which I want to be discussed is going to be brought up before the Army Board.

7428. Because you do not know the class of question?—I have no means of knowing what the procedure of the Army Board is going to be.

7429. I daresay you originate questions?—Quite so, but I never know when they are coming before the Army Board.

7430. Or whether they are ever coming before the Army Board?—No, I do not know whether they have come or will come before them.

7431. You do not know when certain classes of questions come before the Army Board?—I know that questions which I have thought of the most vital importance, that I have reported on again and again to the War Office, have simply stuck.

7432. (*Sir Charles Welby.*) Since the war?—No, since I went to Woolwich. In my first Confidential Report at Woolwich I pressed attention to the utter destruction which had fallen on the Depot of the Royal Artillery and the injury it would do to the whole force. It was largely connected with the special creation of artillery batteries out of the depôts. I reported it each year in succession. Fortunately just before the war, but too late to be of any use, a paper came over from Ireland from Lord Roberts which necessarily fell into the hands of the Adjutant-General. In that Lord Roberts said he was very much impressed with the much greater development which was secured in depôts by the recruits for the infantry than those of the artillery. Thereupon the Adjutant-General sent to inquire how it was the General Officer Commanding at Woolwich had never reported on the subject, and he immediately received the answer that he had been persistently reporting on the subject.

7433. Why are those reports never dealt with?—I do not know—simply from congestion—I suppose. There never had been any action taken on them.

7434. To what department do those reports go?—I do not know—that is my difficulty—I never know where a paper does go to—to some portion of the Adjutant-General's Department.

7435. (*Colonel Miles.*) In those days did the Deputy Adjutant-General, Royal Artillery, exist?—Part of the time and part not. I was so anxious about the subject that I took rather strong steps. It happened that I sat next to Mr. Wyndham at a Lord Mayor's dinner and as he asked me a variety of questions about Army matters, I asked him to come down to Woolwich and see for himself. I pressed the question of the depôt on him. Soon afterwards, when Colonel Hay was coming to the War Office to take up the duties of Assistant Adjutant-General, I persuaded him to come down to Woolwich, and I pressed the depôt question on him so that when it at length reached the Adjutant-General, Colonel Hay was familiar with the facts. He had not been able to bring it up till then. It does not matter how you get a personal conference, but you must have a personal conference, otherwise you cannot get through, and things stick in the most awful manner.

7436. (*Chairman.*) But if you mark the thing important, would it not go through?—No; that is the very

Major-Gen.
Sir F.
Maurice,
K.C.B.

12 March 1901.

Major-Gen.
Sir F.
Maurice,
K.C.B.

12 March 1901.

point I have tried to raise. I think it would be the most invaluable privilege a General Officer Commanding a district could have, that once or twice a month the General Officer, should be able to have certain questions put before the deciding authority.

7437. (*Mr. Mather.*) Has it not been the custom at times for General Officers to be invited here to confer with heads of departments?—I never once was.

7438. But if they were invited from time to time throughout the year to a personal conference, would not that be the means through which you would be able to communicate the most pressing matters?—That is precisely what I think there ought to be. I think there ought to be a particular time when a General Officer Commanding a district should be able to bring up the most important questions connected with his district.

7439. It seems conceivable that the head of a department should be so much occupied as not to be able to give audience to General Officers Commanding Districts, but could they not write?—If I write a private letter to Sir Evelyn Wood, and say I want to see him, of course I can always do it, but it does not follow that he is able to bring it in as an executive question. As regards the questions of the dépôt, I reported the thing to the place where it ought to go, but it never occurred to me, I confess, that the Report had not reached him.

7440. (*Mr. Gibb.*) Do you know now that it had not reached him?—I absolutely know that he wrote to inquire why the General Officer Commanding at Woolwich did not report on these subjects.

7441. May not that have been forgetfulness?

(*Chairman.*) He wrote and asked why there were not reports received which had been sent.

7442. (*Mr. Mather.*) If you had a conference here fixed at certain periods to meet heads of departments to which Officers Commanding Districts could come up specially, that would enable you to solve a great number of the difficulties, would it not, which at present you do not even affect to deal with by correspondence?—Certainly.

7443. (*Mr. Gibb.*) Assuming that the omission to deal with these important questions has been due to want of time on the part of the head officers, I do not see how you can cure that by saying they shall have meetings at which they might be dealt with?—Certainly, but my point was this: I do not think it increases the time if, supposing the Army Board is going to deal with a certain question on a certain day, and that concerns a certain district, the Officer Commanding that district should be summoned before the Board.

7444. But you may accumulate on one pair of shoulders so much work, that it is impossible for any human being to get through it?—Quite so. As I have said here in this paper, I think the abolition of officers who can deal with certain questions practically finally, so that they can use a good deal of executive authority, has been a very great disaster.

7445. Is not that a better remedy than the provision that there should be a meeting attended by General Officers, not that I am saying anything against that proposal?—Certainly.

7446. Would it not be better to give General Officers more definite authority at first?—But I do not see how that question of the dépôt, which is clearly an Army question, could be dealt with in that way. I could not possibly touch that. I made very definite recommendations, and one of them was that the dépôt should be broken up, and that there should be four or five different dépôts over the country; but that could not be possibly carried out at Woolwich.

7447. But if you relieve the heads of work and things which are now decided by them, but which might easily be decided by General Officers Commanding, you leave more of the time of the heads for the more important matters which must come to them?—I agree; but the point of my evidence is that you will find the greatest difficulty in relieving the War Office from a great number of these questions, because I never refer, if I can help it, any questions relating to my district to the War Office at all. I have taken some pretty strong steps myself, and no one has objected. For instance, as to the nature of cases of reference, a question which troubles me is this: there is a very valuable piece of property, looking at it as a question of estate management, which in fee simple is going to fall into the hands of the War Office in the year 1903. Ever since I have been at Woolwich, I have been

pressing for that question to be taken up, as any large landowner would take it up if he was coming into possession of a number of tenancies, and dealt with on some principle. I put forward a scheme of my own which may or may not be the most desirable; but at any rate the fact should be faced that the Government is coming into this very valuable property, just between the two barracks, which at present consists chiefly of horrible slums with a few good shops. I have been to the Inspector-General of Fortifications, who has been over it with me. Everybody has agreed with me as to the importance of the question, and as far as I can see the day of the lapse of all those tenancies will come, and nothing will be settled as to what shall be done with them.

7448. (*Mr. Mather.*) And whom does that depend upon as to the final decision?—I suppose the Secretary of State for War, but it is in the Department of the Inspector-General of Fortifications, who has absolutely agreed with me as to the importance of dealing with it.

7449. And it has stuck in his department?—No, I do not think it has stuck in his department, because he has continually pressed it.

7450. On whom has he pressed it?—I suppose on the Army Board, and certainly regularly in his report on the district.

7451. (*Sir George Clarke.*) It probably has been struck out of Estimates, has it not?—But it is not a question of Estimate; it is a question of putting money into the hands of the Government.

7452. (*Mr. Mather.*) It is property which belongs to the Government now?—It is at present let out on 99 years' leases, which lapse in 1903. It is a property of two acres and a half of building land in the middle of a most congested and valuable district. The Government now receives a ground rent of 125*l.* for it.

7453. (*Mr. Gibb.*) And a scheme, you say, ought to be ready for dealing with it?—A scheme ought to be ready for dealing with it. No large land proprietor who had that sort of property coming into his hands would wait until the leases actually fell in before formulating some scheme.

7454. Is not that in consequence of overwork?—I think it is. I think there is only one way to relieve the War Office, and that is by making as many as possible independent Heads, who can settle questions. You cannot congest everything in the hands of the Adjutant-General. All the policy, of late years, has been to reduce the number of the higher officers who could settle questions. The Director-General of Military Education has been done away with. Educational questions constantly come up, and I see Colonel Delavoye, who is most anxious to help me and do everything he can, but he cannot get any settlement, because of the general congestion.

7455. Would you multiply the Heads of the War Office, instead of increasing the powers of the Heads of the districts?—I should be glad to increase the powers of the Heads of the districts as much as possible; but still, then, there would be such an amount of correspondence thrown on the War Office that you ought to relieve it as much as you can.

7456. (*Mr. Mather.*) Have your remarks been directed to cases which, in your opinion, could not be deputed for settlement absolutely to the Generals Commanding Districts, questions which must necessarily come to the War Office? Have you been speaking entirely of that class of question?—Certainly. I think it must be obvious that it would, for instance, be rather a large thing to give a very valuable property, such as will at Woolwich fall in in fee simple into the hands of the Crown, over to a General Officer to be dealt with. Much must depend on facts with which he is not acquainted.

7457. But, generally, in your evidence, are you speaking on points of such importance as you think could not be dealt with by the General Officers Commanding Districts?—Certainly; I do not think I have spoken of any other, because I do not know of any question which actually and exclusively falls within my district which I have not had absolute power to deal with, and never been interfered with. On any such questions as are likely to lead to discussion in the House of Commons, I am rather quick in sending up a report. Then, in addition, I have had to report a few cases where it has been necessary to get rid of officers.

Otherwise I have never reported on questions of discipline; I have dealt with them entirely myself. I do not know really what possible question I could have had more power over than I have if I had been in command of an Army Corps.

7458. Then the Committee may take it that you have no suggestion to make to them for an increase of your responsibility, and therefore of your own power, in your own district?—Honestly, I think I could do anything that practically you could give to anyone to do.

7459. In relation to works and all matters which have to be conducted in your district, you think you have all the power at the present time which could be usefully exercised by yourself and officers?—I think so; I do not think I have ever been cramped.

7460. But you do agree that an auditor to deal with accounts in your own district would be an advantage to you?—That must depend on the nature of the financial responsibility you are going to throw on him. If it is merely a question of the financial regulations as they exist, I think the Paymaster is quite adequate; if it becomes a question of spending money irrespective of regulations, then I think a financial adviser would be essential.

7461. You would see no objection, would you, to having power conferred upon you to expend such money as must be expended on your command in your district under your own direct authority?—It depends on the nature of the money. The money I want to spend, and have tried to get spent, has been usually for the purchase of land for manœuvring purposes. I have had the most favourable opportunities dropping into my hands for getting what, I think, would have saved the necessity of giving up Woolwich, which is getting cramped more and more; but you would never give to a General Officer power to spend more than a certain annual income, and that is not a question of income, but capital. I could have got, for instance, practically at agricultural rates, because of the bankruptcy of one of the tenants, who had been hunting with our drag a good deal—so that I knew of it directly—ground which has since become built over, and has become extremely valuable land; but you could not have given sufficient authority as to that to a General Officer Commanding a Corps.

7462. (*Chairman.*) Money would have to be voted for that particular object, would it not?—Yes. It is more important for me to be able to get someone to come and see it for themselves, and someone who can really decide, than it is to have the authority to spend money myself; you never would give to an Army Corps Commander any more than a certain income, while that is capital expenditure. There is a certain place at this moment which I am anxious to see with the Inspector-General of Fortifications; there is a certain piece of ground, which is now to be had, which should be obtained for the defence of the Arsenal at Woolwich.

7463. Approximately at what price?—I cannot tell you the price, but it is an exceptionally favourable price, because it is a bit of Shooter's Hill, where a very large institution on open ground has failed.

7464. Would it be a question of hundreds or thousands?—Thousands. Almost all financial questions which have come before me have been of a kind which I am sure you would never give to a General Officer Commanding an Army Corps to deal with. For all ordinary purposes I have a very large financial business; my Paymaster spends two millions a year, and there are all sorts of financial questions of that kind which come before me, but when it comes to the kind of things that I want the money for, I am sure it would not do to leave it to General Officers Commanding.

7465. You do not feel inconvenienced by such small matters as the writing off of stores and such like?—Not at all.

7466. You do not think it would matter whether your limit was 5*l.* or 1*l.*?—The shoe does not pinch that way, I am sure. My recommendations have been so universally carried out that as a matter of fact, perhaps, it was hardly necessary I should have had any decision; but I think they were, most of them, cases in which it was natural enough that the decision should be in the hands of the financial authorities.

7467. (*Sir George Clarke.*) You have spoken of the drawbacks of the present system of conducting corre-

spondence. Do you think the defect is that the papers when they arrive at the War Office get on to wrong lines?—Yes, I am sure it is so. I think it was said somewhere the other day, that sending up to the Under Secretary of State is simply sending to the War Office—of course it is. It goes to the central registry, but the central registry has 3,500 letters a day, as Mr. Brodrick mentioned the other day in the House, and each of those letters has been previously read by the General Officer and his Staff Officer, who is sending them up; they know all the circumstances connected with them.

7468. But all those letters do not come from General Officers, do they?—No, but still there are a very large number. My letter comes in among a mass of 3,500 that have to be dealt with. Now, obviously, my letter is read over a second time, and uselessly, if the distribution of the War Office was sufficiently clear for me to know to which department I ought to send it.

7469. I suppose they would open your letter at the registry?—They would, but they can only read it cursorily. The point of the matter is it is only addressed to the Under Secretary of State.

7470. But do not you write direct to the Director-General of Ordnance on his special business?—No.

7471. There is no indication of which department it ought to go to?—No, it is left to the Registry clerk.

7472. But could not such a thing be done?—Certainly, that is all we want.

(*Colonel Miles.*) That is the old system which was discarded.

7473. (*The Secretary.*) It is laid down in the Regulations that inside you are to put the subject of the letter on the top, is it not?—Yes, but that does not indicate anything to the clerk.

7474. (*Chairman.*) If you wrote up on a question connected with guns, you would write to the Under Secretary, and head your letter "Guns"?—Yes.

7475. Then the clerk would not need to read your letter; he would at once pass it on to the Director-General of Ordnance, would he not?—Quite so, but it might possibly be that "Guns" really meant "Discipline," which ought to go to another department, and the clerk would send it to the Director-General of Ordnance, whereas it ought to go to the Adjutant-General.

7476. Then you would write, not only "Guns," but "Adjutant-General," I suppose?—It would be much simpler for me to put the subject, and then say, "Adjutant-General," or whoever it might be, as the practice used to be.

7477. Is there any reason why that should not be done?—I know of no objection whatever.

7478. (*Colonel Miles.*) Was it not under that system that officers did sometimes send papers, say, to the Quartermaster-General, and afterwards found the papers had been dealt with by another Branch?—Yes, but incomparably less frequently than is the case now.

7479. And it was not necessarily an error; it was something which had been properly addressed to a certain Branch, and had become transferred to another Branch?—No doubt mistakes will be made under any system, but our present method tends to cause mistakes.

7480. (*Chairman.*) When was the system discarded, and why was it discarded?—It was discarded between two people, to my certain knowledge—Sir Redvers Buller and Lord Haliburton—and both of them have personally told me that the other was responsible for it, and have been extremely indignant with the other.

7481. (*Mr. Gibb.*) And they are both ashamed of it?—They are both ashamed of it.

7482. (*Sir Charles Welby.*) The system which has been displaced was not one of addressing communications to heads of departments, but to the Commander-in-Chief, was it not?—No, we used to address the Adjutant-General, Quartermaster-General, and so on. I never saw any letter addressed to the Commander-in-Chief; all letters for the Commander-in-Chief were addressed to the Military Secretary.

7483. But the answers were all written in the name of the Commander-in-Chief?—Yes, but that is quite a different question. I am not talking, in the least, about any question between the Commander-in-Chief and the Secretary of State; I am merely talking about

Major-Gen.
Sir F.
Maurice,
K.C.B.

12 March 1901.

Major-Gen.
Sir F.
Maurice,
K.C.B.

12 March 1901.

the way in which letters reach the man who has to deal with them, whether under the authority of the Commander-in-Chief or of the Secretary of State.

7484. (*Sir George Clarke.*) You have said you have received conflicting decisions in some cases. Is that due to papers getting into the wrong office, or is it due to the definition of the duties at the War Office being insufficiently clear?—I think it is due to confusion in the Central Registry, of which I can give you funny specimens of things being sent to the wrong people. I have here an instance: First of all, you see, I applied for a particular man to be allowed to take his discharge on payment of 18*l.* I am then told the man cannot be possibly allowed to take his discharge for 18*l.*, as he must be treated strictly in accordance with section 81 of the Army Act, and noted for discharge on demobilisation, if he wished, on payment of 10*l.* After that decision I got a letter asking me about this very man, and to recommend what was to be done with him in view of his discharge being sanctioned, as a very special case, on payment of 10*l.* They refused to allow it being done on payment of 18*l.* as too great a concession, and then, ignoring the previous decision, asked if he could not be discharged on payment of 10*l.*

7485. (*Mr. Gibb.*) Does that come from a different department?—I think it has got into a different hand. You will see that finally the discharge was approved as a very special case on payment of 10*l.*

7486. (*Sir George Clarke.*) Does not that instance rather, look as if several different people were dealing with the same subject?—That is so. Here is a case showing the successive signatures. It is a case about a master tailor. In the first paragraph the War Office approve of his temporary transfer to the 4th — whilst unfit for service abroad, he being on sick furlough from the 1st Battalion — in India. You will see this case has gone first to A.G. 1 and then A.G. 2, and then back to A.G. 1. Then they asked me the date on which he joined the 4th — for duty. Then the War Office stated the transfer could be carried out. Then they asked how the case had been disposed of with regard to the transfer to the 4th — and finally they asked whether he was now fit for military service in India. That is signed by the Adjutant-General, and that is the only one signed by him. That shows what I mean, that a paper is apt to pass out of hands which have previously known it.

7487. (*Colonel Miles.*) That is the point I referred to; they pass out of one hand into another?—That is it; the Central Registry has not time to look up all the back papers to know where the matter has been before. One man takes one view of it, and another another in the Central Registry, and a man sends it on to quite a different official to the one who has had it before him before, and when it is brought up to him as a paper to be dealt with, he probably does not know what the previous decision has been, and he gives a different reply.

7488. (*Mr. Gibb.*) Why was it necessary for you to consult the War Office at all about the discharge of a man, speaking of the first instance you mentioned?—It was a special case outside the Regulations.

7489. Apparently there was a discretionary power in somebody under the Regulations?—You see the point here is one which must be an Army question, I think, in this way, that it was a question of all discharges on payment being stopped for the sake of the war; and it became important in this way, that if you are going to do it in one case it would be a precedent throughout the Army, and it might lead to a reduction of the Army by many thousands of men. I do not think you could leave that to a General Officer for decision.

7490. (*Colonel Miles.*) Could not it be done by an instruction?—I mean if for the sake of keeping up your strength you put, as you have put, a very great number of people to the extreme hardship of not being able to take their discharge, even on payment of 18*l.*, it obviously becomes a precedent which may be extremely awkward if the Officer Commanding at Colchester, say, does it for one or two men, and the other General Officers do not think themselves at liberty to do it.

7491. (*Mr. Gibb.*) But that argument would lead you, in a very large business to the fact of such very great centralisation as to be appalling, would it not?—But

all you propose your General Officers Commanding Corps should do is to carry out the practical execution of certain regulations.

7492. I was only dealing with the principle; if you are not going to trust people of authority to give decisions lest there should be inconsistency between decisions, it seems to me that the principle leads to centralisation?—That is not my point in this instance; it turns on the strength of the Army required in South Africa. On that decision, if it is applied generally as a principle in such a way as to affect the whole question of people taking their discharge for 18*l.*, you may be reducing the strength of the Army in South Africa by many thousands.

7493. But suppose, as you say, the General at Colchester gives an awkward decision, it remains no doubt as an awkward decision, but you need not follow it unless it suits you, need you?—No doubt. But if a thing of that kind were done in Colchester and some much harder case were refused in another district the local member would be pressed on all sides with the contrast. The Secretary of State would be questioned in the House, and the result would not be to reduce correspondence.

7494. (*Mr. Mather.*) You have spoken in defence of this point in time of war; how would you act under those circumstances in time of peace?—The difficulty would not arise.

7495. Would you then send to the War Office?—No, this is merely a war rule. You will quite understand I did not raise the question on that point at all; it was merely as to the conflict of decisions, and the same with the other case; it is a conflict of decisions produced by a Registry which has in a great hurry to send out the papers. I have had much more inconvenient things in principle of which I have an illustration here, where an actual decision was given to me totally contrary to the Regulations as laid down before by the Inspector-General of Reserve Forces under the sanction of the Secretary of State. I knew what the Regulations were, and what the principle adopted was. I went and saw the man who acted for the Inspector-General of Reserve Forces, and got the decision reversed, and he was horrified to find it had got into the wrong office. It was a decision given contrary to the principles laid down by the Secretary of State, simply because it went to the wrong people.

7496. (*Sir George Clarke.*) Does not that clearly show there must be some doubt as to who is the proper authority for deciding it?—The doubt only lay in the Central Office. My point is that you get those mistakes because the Central Office, having to read in a great hurry the paper, sees something about money or something else, and sends it off to a different person—to the person to whom it ought not to have gone; it is a pure question of the Registry.

7497. (*Sir Charles Welby.*) I should have thought that a large assumption on your part; because does not the Registry, where they receive a letter in a case of that kind, attach the former papers on the question, and does not that serve as a guide?—I do not think they do that, I think the Registry, as soon as it receives a letter, minute it on to a particular department, A.G. 1, A.G. 2, and so on, and the officer to whom it goes calls for the previous papers.

7498. But the letter is attached to the former papers?—No, I do not think so, but on these matters of office routine I only speak of the result as I find it. I know the papers do get into the wrong hands. Those within the Office will be able better to tell you how it happens.

7499. (*Colonel Miles.*) But they mark it with a number?—Yes, but if a paper comes in as a single paper, the officer to whom it comes cannot know what the former papers have been so as to call for them. I may from my district send up a question, which, so far as I am concerned, originates the subject, but in principle the question may have been already decided from cases from other districts. If my paper gets into the wrong office, the officer there will not know that the principle has been previously dealt with in another office.

7500. (*Sir George Clarke.*) As regards letters going out of the War Office, do you think, as a matter of principle, letters on purely Military subjects should go out in the name of the Commander-in-Chief or in the name of the head of the department, which may have decided to send it?—I think it is extremely desirable, as far as it is at all possible, that one should deal, not

with an office, but with some person. What I mean is that up to the stage of the General Officer Commanding, the whole government of the Army is a personal one. It is an immense relief to a man, if he is not satisfied, to be able to go and see an actual man; but the moment you get up to the War Office, largely because of the address to the Under Secretary of State (that is, to the War Office as such), you are dealing with a sea or a morass.

7501. Then you do not like the present system, under which orders go under the authority of the Secretary of State?—That is hardly the point with which I have been dealing. I am only looking at it from the actual practical point of view of your dealing with someone, whoever is the authority adequate to deal with the question; it ought to be a man—one person—who signs the letter, one person who is competent to deal with it—that it does not slip from one person's hand into another, so that you do not know with whom you are dealing. Then if it becomes necessary to talk over a question, you come and talk it over with a man.

7502. You have told us that you regard inspection as extremely important?—I think inspection is all-important, especially provided it is understood in the sense represented by this evidence given by Mr. Ismay here. I do not mean by inspection a parade inspection, but what I think is wanted is that someone shall come down and get into personal contact with the man who is locally responsible, and that those two shall be brought into contact with one another, and talk out the question on its merits.

7503. Do you think there is not sufficient local knowledge of facts brought into the War Office?—I am quite certain, at this moment, there is only one person at the War Office who knows anything about Woolwich, and he happens to be Colonel Cowen, who is acting as secretary to Lord Roberts. There are many local questions with which even he has had nothing to do.

7504. You further think, I take it, that there is a general tendency on the part of the War Office to look at anybody outside the War Office as, on the whole, being of rather feeble intellect?—I do not think it is peculiar to the War Office; I think the Army reciprocates it quite fully and with equal injustice. It is the "leave 'arf a brick at 'is head" of Little Pedlington, and the Scottish peasant's feeling that men are "mostly fools." It is not an exceptional thing in the Army, it is ordinary human frailty. You cannot get at justice or right administration without taking it into account.

7505. We have had some evidence about the abolition of the office of the Deputy Adjutant-General, Royal Artillery, and that, on the whole, it has been favourably received, and much liked; is that your opinion?—No; I do not know a single Artillery Officer outside the War Office, of any rank, who does not think that the change has proved in practice to be a disastrous failure. From want of anyone else to go to, I have been approached by officers of every rank and from all parts of the country to assist them under the difficulties which it has entailed on them. I think that is for precisely the same reason I was speaking of. It has diminished the number of people who might deal with questions definitely, and to whom they can go to get questions settled.

7506. That is to say, there is no personal head now, and they are dealing with and expressing opinions upon things they know nothing about?—That is it. It would be difficult to have a more unanimous expression of feeling than was represented at the dinner, when Lord Roberts dined with us; there was an enormous gathering there, and the opinion was quite unanimous.

7507. You say in your Memorandum: "I can quote 'cases in which I have gone on pressing matters of 'the utmost importance, without getting a decision.'" Do not you think the fact that attention cannot be drawn to important questions, and that authoritative decisions cannot be obtained upon them is a very serious matter?—Most serious.

7508. Does not that point to the want of means of focussing such questions, and securing that they are adequately and properly dealt with?—Certainly.

7509. You have carefully studied the German Army system, I believe. If a German Officer Commanding an Army Corps were to have some question of national

defence arise under him, what would he do?—I imagine he would write to the Emperor at once.

7510. Here, do you think such questions of a large kind ought to go before an Army Board?—I do not quite know, because it is very difficult for me, not having been in the War Office to know what the best authority here is; but as looking up to the War Office from a district, all I want is, that in some way or other the local officers should be brought into touch with the authority here, whatever it is. I think, as to the authority in the War Office, you had better get evidence from other people.

7511. But your strong point, I take it, is that whenever a General Officer brings forward a question of real importance like this it is absolutely necessary that it should be considered and weighed, and some sort of decision arrived at upon it?—That is my view.

7512. And, at the present time, you have not had that experience?—Certainly not.

7513. And in the absence of any machinery for settling those great questions, do not you think our whole National policy may, in matters Military, come to be misdirected?—Certainly. Perhaps, in order to emphasise that, I think I shall not exaggerate if I say, that from every point of view, I have been more favourably situated than any General Officer in the Kingdom, because, in the first place, it so happens that almost all here are people whom I have been on campaigns with, and known personally, and very well, or, I have had a good many of them under me at the Staff College or have known them in some way or other; I think there is not anybody here I cannot have a private talk with. I am very close to London, so that I can always come up. I am sure, therefore, I only tell you of difficulties which must be felt in a very great degree by every General Officer in the Kingdom. So far as my district is concerned, they are only exceptional as being in my favour.

7514. (*Colonel Miles*). You have called attention to the increase in correspondence due to continual movements and changes. Do not you think that the disturbance caused by moves in our Army is hardly realised as compared with a foreign army?—Yes, I am sure of it.

7515. It has the most disturbing effect of any which we have to deal with, has it not?—I think, at the present moment, it would be of the greatest possible importance if those facts could be fairly brought out by authority to the public outside, because you get a very forcible wave of opinion, which must affect any action under our constitutional Government, and which is always crying for something that cannot be—crying for the moon. When I say crying for the moon, I mean, that they are asking that we shall deal with questions in England as they would deal with them in Germany, and find fault because we do not, when it is not in the nature of things possible.

7516. It affects every question, the selection of officers, barracks, correspondence, accounts; it comes into everything, does it not?—Yes, everything.

7517. Therefore, if they could be reduced or modified, within certain limits, it would, from an administrative point of view, be invaluable?—Invaluable.

7518. Speaking of the question of decentralisation, do you think, on the whole, that the preparation of drafts should be put out to districts?—I think so.

7519. As you know, it is not a simple matter?—It is not a simple matter.

7520. It is a complicated matter?—It is a complicated matter, but I think, in so far as you can do it, it is desirable it should be done, and, I think, to a great extent, it may be done; but it is not a simple measure.

7521. With regard to the decentralisation of the command of Army Corps and so on, the courses of instruction you spoke of would not affect the question; it would be quite possible, as in foreign armies, for units to go out of the Army Corps Districts to such courses?—Certainly.

7522. That would not affect the draft question?—No.

7523. With regard to the Registry, would you be in favour of going back to what I understand is the old system under which we fulfilled the functions of the Chief of the Registry, and addressed our correspondence to certain people?—Yes, I think the Registry ought merely to record the date of the reception of a letter, the person to whom it is addressed, and the subject,

Major-Gen.
Sir F.
Maurice,
K.C.B.

12 March 1901.

Major-Gen.
Sir F.
Maurice,
K.C.B.

12 March 1901.

7524. I think in districts you do not carry out that principle?—No.

7525. Every letter is addressed to the Chief Staff Officer, is it not?—No, there are a great many addressed to the Commanding Royal Engineer, for instance, though perhaps that is scarcely strictly speaking in his position as Staff Officer.

7526. But the regulation is to address the Chief Staff Officer?—Yes, they come to me from the War Office addressed General Officer Commanding. Then, in the Registry, they are marked off to the Commanding Royal Engineer, the A.A.G., the Deputy Assistant Adjutant-General, and so on.

7527. But any officer below you addressing you, addresses your Chief Staff Officer?—Yes, that is so, but then it is as a matter of general supervision, registry, and distribution.

7528. What I mean is, it centralises it; it is carrying out the same system?—Yes, no doubt.

7529. Letters are addressed to a central authority, at the War Office, by Generals Commanding Districts, and in the districts, they were so ordered to be addressed by subordinates to a central authority on the District Staff, viz., the chief staff officer, the system being the same in both cases?—Quite so.

7530. On the whole, do not you think the old separation of the Staffs had advantages?—Certainly. I think, however, that you will get one advantage from the larger staffs of Army Corps. As long as one officer combines the functions of Assistant Adjutant-General and of Chief of the Staff there is a tendency for the Assistant Adjutant-General Officers and Clerks to work the Registry too much as an Assistant Adjutant-General matter. If there were a Chief of the Staff superintending all departments and preparing daily a schedule for the General Officer Commanding, there would be much more regularity of working between the departments, and you might then well have letters addressed by Commanding Officers to the particular department, the Chief of Staff seeing that all had been properly dealt with and all the necessary people consulted. But in that case I think the envelope should be addressed to the Chief Staff Officer. Inside the particular department might be indicated. The same thing in principle might be applied to the correspondence with the War Office.

7531. The Assistant Adjutant-General and the Assistant Quartermaster-General?—Certainly, in many respects, but I think it does not much matter; we work much more by practice and habit and system than by name.

7532. You have had a great deal of experience lately working with the War Office, I think?—Certainly.

7533. Do not you consider the Military Branches at the War Office are overworked?—I cannot put that too strongly; almost all the people with whom I come in contact are working from nine o'clock in the morning till seven in the evening, and others now much later. In one case an officer here had been from pressure obliged to postpone a question of some importance for nearly a year, and he said to me: "Last night I managed to finish off work by 7 p.m. for the first time for weeks, so I thought I might tackle that question at last." It must have involved many hours' work after 7 p.m.

7534. From the highest to the lowest?—From the highest to the lowest.

7535. (Mr. Mather.) That is in consequence of the war pressure?—Yes, there is special pressure.

7536. Have you had experience of the War Office in times of peace?—Yes, I do not say the same thing obtains, but I still think, even in times of peace, the War Office is choked with work.

7537. Because your evidence should be directed to a normal state of things?—Certainly. Take my case I gave you at the beginning. I have been five and a-half years now nearly at Woolwich; of that time nearly a year and a half has been during the time of war. During the previous four years, or before the end of those four years, I had given up asking anybody to come down to me at Woolwich.

7538. (Chairman.) Was it because of overwork or disinclination?—I do not think it was disinclination, because they are all very active people. The Adjutant-General said to me once, "I have not been able to do that for any district."

7539. (Mr. Mather.) During that period had you the same difficulty in coming to the War Office that you have had during the last year?—I do not say the same; of course the pressure has lately been very much greater, and I had not the same feelings of anxiety to spare them before the War as I have had since; but I have always felt during the last year and a half it would be very cruel to come, whereas before I simply used to come as often as I found it would be useful. I think you will see that part of the evidence here, referring to the report of Mr. Brodrick's Committee, of Sir Redvers Buller is that it is a great nuisance to have people calling upon one when one is full of business.

7540. (Sir Charles Welby.) May we take it generally that your difficulties as General Officer Commanding arise, not so much from insufficient power as from difficulty in getting through the matters which, in your opinion, must inevitably be referred to the War Office?—Absolutely.

7541. Your further view is, I understand, that this difficulty of getting work through at the War Office is not so much due to the faults of system, as it is due to the fact that the individuals are entirely overworked?—I think so. I think that is the substantive question. I think the conditions of our service are such that you will not be able very materially to reduce the amount of work which is thrown on the War Office as a whole, and there are only two ways by which you can reduce the work of the individual, one is by reducing the total work to be done, the other is by a multiplication of people with sufficient individual authority to settle questions without referring to others. Under our conditions, I think you must adopt the second.

7542. Do you think a remedy is to be sought in that direction, rather than in any improved method of co-ordination among the departments of the War Office?—You always increase correspondence if you get confusion on the part of the people who deal with it. If I get contradictory decisions from two different people, I must refer it again, so that that increases correspondence.

7543. You speak of contradictory decisions; that of course is a different point from the question of congestion arising from overwork?—Yes, certainly, but it increases the work.

7544. An increase of work results from it?—Yes.

7545. What, in your opinion, is the cause of this mischief which results in two people giving you contradictory decisions on the same subject?—Chiefly the registry, I think; the addressing of the letters to the War Office instead of to the individual. What I mean is, if you address simply the War Office, it must depend on the man who has to look over the whole 3,500 letters to whom the letter goes, whereas if the person who writes the letter has to send it up, naturally he tries to get it into the hands of the same person who has dealt with it before, and who he knows knows about it.

7546. (Sir George Clarke.) Then must there not be only one Branch which has the right of deciding the question and that that one Branch ought not to issue conflicting decisions?—Clearly. That, of course, goes to that distribution of the work of which I have spoken; if we get it all congested in one hand, the work is too much.

7547. (Sir Charles Welby.) Of course I accept that as your view as the cause of these evils, but I find it extremely difficult to believe that so much mischief does arise from the action of the Registry, from my own experience; because, as I understand the system, as soon as a letter comes to the Registry from a district or anywhere else, the Registry immediately proceed to look up the former correspondence on the same subject, and they are guided in referring that paper to a division of the War Office by seeing what part of the War Office has dealt with that subject on previous papers. I find it very difficult to understand how with such a guide as that, unless the case is a new one arising for the first time, it is possible for them to go so far astray as to send papers, except in very rare instances, to entirely wrong Branches, thus causing duplication of work?—I do not say it is the only cause; on the contrary, I have a case here which was not due to that cause, and I attribute that again to the fact that overwork makes overwork. I think in many cases departments have not time for that mutual conference that has been declared to be so very desirable by this Committee, and that they do not

know what the other departments are doing. Here I have a case clearly under that head and nothing to do with the Central Registry. It is with regard to the movements of Strathcona's Horse the other day. I got the funniest contradictory orders about that from the Adjutant-General's Department and the Quartermaster-General's Department. There were certain changes made in the arrangements which were inevitable. I was told originally to send up two bands from Woolwich for Strathcona's Horse and in consequence of the conflicting orders from the Quartermaster-General's and the Adjutant-General's Departments, Strathcona's Horse had a number of brakes provided for them to go away from the railway station at which they arrived in London, and there were no brakes for the bands because the Quartermaster-General was not aware they had been ordered by the Adjutant-General's Department. The bands therefore could not reach the place where they were wanted.

7548. In a case of that sort such a thing is due to a want of co-ordination, is it not?—Quite so.

7549. But apart from the pressure due to these exceptional times, do you think the necessary co-ordination is sufficiently provided for by the office arrangements, as far as you can judge as a General Officer Commanding?—I think that always there is a tendency for different departments not to know what the department next door is doing.

7550. Reference has been made to the Army Board as a means of providing this co-ordination; but I suppose you will agree that under no condition would it be possible for the Army Board, which consists of all the great Military officials of the War Office, to see that the Quartermaster-General was aware that the Adjutant-General was sending a band to London, for instance?—Oh, no.

7551. So that if co-ordination is wanted it must be provided by other means than an Army Board?—Certainly.

7552. Do you imagine that that means could be found in what I might call a minor Board, or in some individual whose business it would be to keep these different departments in touch?—It is a little difficult for anyone outside an office to judge of that, and I doubt whether my evidence would be of much value to you, but I should have thought the great convenience would be in the first place to have a new War Office. It is very largely a mechanical question. You want the facilities for people going into one another's rooms, and you cannot get them in this rambling rabbit-warren with outcrops in at least four or five distant houses.

7553. (*Mr. Beckett.*) You say that you think overwork is at the bottom of the faults you complain of. The only remedy for overwork is delegation, is it not?—But my point is, it is extremely difficult to delegate outside the War Office.

7554. That is the point I was coming to?—If you have a certain burden of work to be done, either you may delegate it or you may distribute it by an increase of responsible people in the Office.

7555. In a sort of way that is delegation, is it not?—Yes, only that I thought you were thinking of delegation from the War Office to districts.

7556. No, I was going on to say this, that supposing you delegate work to travelling inspectors, could you confer upon them sufficient authority to enable them to settle questions off-hand with the General Officer Commanding, or would not those questions have again to be referred back to the War Office?—I doubt your being able to do it in that way.

7557. Therefore, it does not seem to me that the appointment of travelling inspectors would reduce the work?—I doubt it; I think the great point is, that, as far as possible, the heads of departments should be relieved of work which, so far as the dealing with regulations, and so on, is concerned, may be perfectly well left to subordinates, and that they themselves should have, as their most important work, the getting into connection with the Army itself (not the War Office), and the great questions which affect the Army—the larger questions.

7558. Those larger questions of Army administration must be discussed with the General Officers Commanding?—Of course, the very large questions of Army administration are very often questions which would affect all districts alike, and do not immediately affect a particular General Officer Commanding.

7559. That would not involve a reference to the General Officer Commanding, but would be settled here?—No doubt.

7560. As regards the General Officer Commanding, you say you never referred a question to the War Office which you could settle yourself, except where money was involved; you hardly had occasion to refer anything. Do you think that is the general experience?—I should think so. You might ask the same question of General Swaine, but I put my paper into his hands as he happened to be in London in order to attend your Committee, to see whether he had had the same experience, and he absolutely agreed with it.

7561. I do not understand how that squares with what you were saying about the difficulty of getting correspondence through?—Because when I send a question up, for instance, the question as to the dépôt, which I could not deal with myself, my complaint is that the questions I want to get through, which are beyond my powers, are very often the most important of all, and what I want is to make sure that I am able to draw attention to those questions, so that those who can actually decide them have them before them.

7562. Do you think under the present system there is not sufficient machinery provided to enable you to draw attention to those things which you want decided?—I think that is the point.

7563. You say the source of all centralisation and of all congested correspondence is practically to be attributed to the principle of "continual check and revision" to avoid insignificant mistakes?—That is so, no doubt, but that I think has been very much diminished to begin with, and further it is a thing which is fixed by higher powers than the War Office.

7564. Since the recommendation?—Yes. It is quite true; I should say that, but I did not remember that I had said it. I do not think that conflicts with what I have now said.

7565. You attribute much importance to it apparently when you say "the source of all centralisation"?—So it is. As a matter of principle I should repeat that now, but in speaking of "centralisation" there, I am speaking of it as a vice and a defect. A great deal of what is called centralisation in the War Office is inevitable—that is the point. It is a defect, a misfortune, but much of it is the price we pay for those two blessings, our great Empire and our free constitution.

7566. Is not the remedy to put further power into the hands of the General Officers Commanding, so that any insignificant mistakes might be corrected and remedied by them without reference to the War Office?—Certainly, I think the further you can carry that the better.

7567. Can you indicate any direction in which that might be done?—I have indicated certain things, but I will add one thing, and that is a decision on the questions which have come up very much this year as to the over-payment of separation allowance and allowances of all kinds; because the question really which comes before one is this: that in many of those cases the over-payments involve fraud on the part of the woman who has been getting the money; she has perfectly well known she has got money she was not entitled to; but in other cases it has been simply due to the want of reception of proper information early enough from South Africa. In other cases some mistake has been made that ought not to be made. There are cases of that class which one has to decide, and as to which, practically, at all events, I have never had any of my decisions reversed by the War Office. I should think in nine cases out of ten it is a thing as to which everybody would take the same view.

7568. Would it not be very much better, when the General Officer Commanding had given his decision, that there should be no further reference to the War Office at all?—Certainly, I think it would be very much better. But you see there are two sides to every question of that kind: one is represented by Milton's phrase: "Suspicion must watch at the gates of Wisdom" lest if Simplicity take her place the robber should "enter in," which has a very important bearing; and there is the other side which Darwin raises, that the strength of an army against a mob is its mutual confidence; if you replace that mutual confidence by disintegrating mistrust you are breaking up an army. There are the two sides, the Scylla and Charybdis of the question, and it becomes a question as to the extent

to which you are going to trust people, and to train them for trust.

7569. But certainly you think they might be trusted very much further than they are at present, I take it?—In those instances I have named, but you see we have been speaking of two entirely distinct questions. What you originally put to me was correspondence; and I said I thought, as regards correspondence, there were a great number of questions which must be referred to the War Office.

7570. I saw a case in the paper this morning as to a man breaking a window and the charge for repair being ninepence while four shillings was spent in correspondence. That is the class of case that was in my mind?—Those things should be left to the General Officer Commanding, in my opinion. I found a case the other day where a matter of tenpence would have involved correspondence with South Africa, and I gave instructions to write it off at once. I think we ought to go for the common sense side of the question.

7571. (*Chairman.*) You have some powers of writing off?—Yes, we have.

7572. (*Sir Charles Welby.*) And as a matter of fact, when you do go outside your limits in dealing with the common sense side of the question, you do not get hauled over the coals for it, I understand?—I have never been except, as I said in my memorandum, in a single instance. In that case I had perhaps been a little premature. I thought it very necessary that those who used pistols on service should have the opportunity of practising with them. I managed for 40*l.* to set up a shooting gallery for officers. As long as it was a question of officers, I did not trouble about its cost, but when I used it for the courses of men who had been served out with pistols I thought the War Office might pay for it. I was refused; but, as in order not to lose eighteen months' practice I had not waited to get it into the estimates, I had not much reason to grumble.

7573. (*Mr. Beckett.*) Am I correct in supposing, for the reasons you have stated generally, that under this new Army Corps system which is to be established you gather that the probability of there being any considerable reduction of correspondence with the War Office is rather small?—Yes, I am afraid so. I think perhaps I might say one thing more, as we are on the subject, and that is that many of the Regulations bind everybody much too tightly for the public advantage, but that very often practically everybody up here is as much tied as the General Officers Commanding are. Very often I come here and ask, why is not this or that settled, and they tell me that it has been referred to the Law Officers of the Crown, because it is a question of Acts. I had a case the other day in which it would have been very much simpler to have stopped pay for a certain time, but it could not be done, the man could not surrender it, because you are not allowed to let a man make a bargain to his own disadvantage.

7574. (*Chairman.*) You could not let a man surrender a certain amount of pay?—You could not allow him to surrender any. For instance, there are a great many non-commissioned officers who want to go practically on permanent leave, who would be very glad to retain their rank and sacrifice their pay, but the Law Officers advise that it is impossible—that they must be paid if they retain their rank, and the only way is for them to surrender their rank, which the men do not want to do.

7575. (*Mr. Beckett.*) Supposing you had a Financial Adviser, and the question of the interpretation of Regulations came up, and one person considered a payment ought to be referred to the War Office, and he thought it might be settled on the spot, and a power was given to you to settle it on the spot in your own discretion, do you think that would lead to diminution of correspondence with the War Office?—Very slightly.

7576. Do you think the General Officers Commanding would largely avail themselves of power of over-riding the Financial Adviser in that case?—I do not think there has been any difficulty of that kind. I have generally found that my Paymaster has taken very much the same view of the question as I have done.

7577. And supposing you differ, do you think it better that it should be referred to the War Office?—No, at the present moment I can always over-ride him if I like; my hands are not tied, except by my own sense of what is right, by the fact of my having taken my Paymaster's advice.

7578. (*Sir Charles Welby.*) His advice to you in no way prejudices the decision of the War Office if the matter gets to them?—Not in the least. I do not think those sort of ties exist at all; everyone takes it on his own responsibility. For instance, if you over-ride a medical man, you do so at your own peril. But the other day I had a case where a woman had written to the War Office that she had been distributing bread and butter in the Herbert Hospital against the intentions of the medical officers. I knew that we had typhoid patients in the hospital who would be very hungry, might gladly take the food and would certainly be killed at once if they did. I did not wait to take the advice of the medical officer in that case, but ordered him at once not to admit her again into the hospital. It was a question of saving the men's lives, and I did not need the medical officer's advice. Similarly, in most cases I should trust my Paymaster's advice, but a case might arise in which, when he had fully explained the matter to me, I might think the interest of the service required me to override him. I could always do it, but it would be probably only in some case of sudden emergency that it would be necessary, and I should take my chance with, I think, the certainty of being fairly dealt with. My experience is that it is often badly written letters that produce what seem to me bad decisions in such matters.

7579. I gather from your evidence that you would not attach any very great importance to having all your accounts audited locally at your elbow instead of having them all sent up here to be audited?—I do not think it is a question that has ever very much affected me. I do not think really that my evidence is of much value about that. I think you would get better evidence from other people, though I do not see any difficulty about it. I have had the most awful mess during the course of the year as to that very question of the Depot. An audit was sent from the War Office, and they wrote off everything, because it was a case in which an impossible task had been thrown on the officer. There was a certain Officer Commanding the Field Artillery Depot who was practically with a Staff for a company dealing with 3,000 men and more, with continual transfers and changes. He had an enormous financial business to deal with, and got into all sorts of difficulties about it, and I then strongly recommended that an auditor should be sent down to audit it locally, and that was accepted by the War Office. My experience rather concerns the higher questions of the finance of a district, such as the provision of adequate riding schools, the purchase of land, and so on. It is a long time since I have been myself a sub-accountant of the War Office and I only judge of those matters from outside.

7580. You do not at present find the audit exercised by the War Office irritating or unreasonable in regard to small disallowances, do you?—Certainly not.

7581. (*Mr. Mather.*) As a matter of fact, you do not seem to be very much controlled by regulations?—I think, on the contrary, there are many regulations, which unfortunately hamper not me only but much higher people than I am. What I have been chiefly speaking of has been the practice of the War Office to allow within the regulations, which bind it as well as me, as much freedom of action as it can to General Officers. For instance, here is a case where I should like to see much greater latitude, but then I find the authorities here are as much controlled as I am. There is a letter of mine here in which it so happened that the Colonel of the — Battalion — Regiment appealed to me under these circumstances. He says: "In November 1898 I was appointed Second in Command of the — Battalion — Regiment stationed in India. I was myself then stationed at the Regimental Depot at —. Not being entitled to a passage to India for my wife and family, I had to pay at Government rates for my wife and two children. In February last I was promoted Lieutenant-Colonel, and in March was ordered home to take command of the new 3rd Battalion — Regiment. I endeavoured to obtain a passage for my wife and family on a transport, but was refused as being not entitled, and I again had to pay passages for my wife and family. I have thus in 17 months had to pay in passage money alone about 170*l.* for taking my wife and family to India and back. I am not well off and the above expenses, which are, of course, quite in addition to the very considerable expenses always entailed on a man between this country and India, have quite crippled

" my resources. I would request that my case may be taken into consideration by the Secretary of State." I sent that up with this letter: "I trust that the personal attention of the Under Secretary of State may be directed to this case. It is quite obvious that where officers are exposed to sudden expenses thrown upon them in this way, and to such large amounts, the effect is to make the service impossible for any but wealthy officers. All others are liable to find themselves, because of their being selected as specially qualified to command battalions (as in this instance), placed in situations of sudden difficulty if not of actual dishonour. All the popular talk about Subalterns being the particular people who suffer from pecuniary treatment is mere ignorance. It is in the rank of a Command of a Battalion that the cruelty really comes. If any adequate selection of good officers for the service of the State is to be made, such penalties as this inflicted on officers for lacking some thousands of ready cash must be stopped. No private company could afford so to punish its best officers for being selected to do it better service. It would be ruined in a year." I think that is a commercial view which would probably be taken by anybody having to do with much business. The reply to that was this: "Lord Lansdowne desires me to state that it is regretted that this application cannot be complied with. The circumstances in which passages are admissible at the public expense for officers' families are laid down in paragraphs 425 to 430,

" Allowance Regulations, and no concession can be granted beyond the provisions of those Regulations." Seeing that the avowed policy of the Secretary of State is to make the Army possible as a career for men without large means, I am sure that, had it been within his power to avoid it, he would not have practically deprived an officer of his whole pay for a year because he had been twice selected as specially qualified—once as second in command of a battalion in India, once for the command of a newly raised battalion at home. I take it that those Regulations have been drawn up, like all ours are, with the attempt to do what is impossible. That is, to foresee every emergency that may arise. I think it is a representative case of the fact that we are continually hamstrung by regulations which have been drawn up under that idea and which do not meet all the circumstances of human life; that is the thing which is really red tape. People use the term "red tape" now as a sort of mode of swearing; anything a man does not like he calls "red tape"; but the real point of red tape is that you are so tied by regulations that you cannot do an act of justice. I am certain there is no commercial company in the Kingdom which would allow an officer in one year (or little more) to be exposed to the sudden expense of a double journey to India and back as a reward for being twice selected for two most important positions. That is not the work of the War Office. It is the result of much more complex elements in our political system.

Major-Gen.
Sir F.
Maurice.
K.C.B.

12 March 1901.

Adjourned to to-morrow at 11 o'clock.

TWENTY-FIFTH DAY'S MEETING.

NINETEENTH DAY'S EVIDENCE.

At the War Office.

Wednesday, 13th March 1901.

PRESENT:

MR. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. G. S. GIBB.

Mr. W. MATHER, M.P.
Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, Secretary.

Major-General L. V. SWAINE, C.B., C.M.G., examined.

Major-Gen.
L. V. Swaine,
C.B., C.M.G.

13 March 1901.

7582. (Chairman.) Since when have you been in command of the North-Western District?—About four years and a half; I was six months at Aldershot beforehand, so that makes up my five years. My time has just been extended to the end of June.

7583. Previously to that were you Military Attaché at Berlin?—Yes.

7584. How long were you at Berlin?—Ten years altogether. I was there twice; the first time six years, then I came home and commanded a battalion, and then went out again for another four years.

7585. Have you been Military Attaché at any other foreign capital?—Yes; I was for a short time at St. Petersburg—six months—and I was three years at Constantinople.

7586. You have never served in India, have you?—Never.

7587. The Committee want to ask you some questions in order to elicit your views about decentralisation, and also some questions with regard to the German system. I think the best way to proceed would be to go through the Memorandum, under date 31st January, which you

have sent the Committee. You begin your Memorandum by saying that, in your opinion, "the alterations made by the Decentralisation Committee have produced excellent results, but that the work would be still further expedited as between the districts and the War Office, if each department at the War Office had a registry office of its own in place of one huge central registry office only." Do you mean that the letters addressed by a district to Pall Mall should be addressed to the heads of the various departments who have to deal with them, or should be addressed as they now are to the Under Secretary, but also that the name of the department with which they are going to deal be on them?—Yes. That remark you must continue in order to get my whole idea, because I am suggesting rather a radical change when I suggest doing away with the Adjutant-General, and to have each department under an Inspector-General—say an Inspector-General of Infantry, one of Cavalry, one of Field and Horse Artillery, and one of Garrison Artillery, Engineers, and so forth; then the letters could be addressed to the Under Secretary of State with the word "Infantry," for instance, in the corner, as I propose.

Major-Gen.
L. V. Swaine,
C.B., C.M.G.

18 March 1901.

7588. Are your recommendations with regard to registry conditional on these other changes being carried out?—Not necessarily; unless you can divide the War Office into compartments similar to what it is, we will say, in the German War Office. Although in the German War Office it is all administration, there they have an Infantry section, they have a Cavalry section, they have an Engineer section, and so forth.

7589. Do you complain of the action of the registry here, because within your own experience your letters take a long time in getting through and getting answered?—Yes.

7590. Is that necessarily a fault of the registry?—It is the fault of there being only one huge registry, and the enormous number of letters that go there daily; the clerks cannot work through them. Every letter that comes to the Central Office has to be opened; the subject has to be read and digested by the clerk, and I have heard, though this is hearsay, that letters have taken three and four days before reaching the individual who has to deal with them.

7591. I do not think there is much digestion; he merely glances at the letter to see what department it is to be sent to. We have been told that the whole of the letters received at the War Office get distributed within a day, so that if there is any serious delay I imagine it is no fault of the registry, except in so far as it may send the letters to the wrong department. I do not wish you to be under the impression from that that we think there never is such a thing as a mistake. But your remark about the registry is only preliminary to your suggestion that the Adjutant-General's Department should be done away with as at present constituted?—Yes.

7592. And that a system of inspectors should be established?—Yes.

7593. That would mean rather, would it not, modifying the constitution of the great officers, the Inspector-General of Fortifications, the Adjutant-General, and so on, as laid down by the existing Order in Council?—That, of course, is not a matter I can deal with.

7594. Nor can we; it is outside our reference, and therefore I am afraid we are rather precluded from discussing the question whether it is necessary to have an Adjutant-General's Department?—An Adjutant-General's Department is, of course, a tremendous centraliser in the War Office, and if you want to decentralise you must either reduce his powers or do away with him.

7595. I suppose in old days he was a still greater centraliser, was he not, before these other departments were made semi-independent?—Yes, it is to a certain extent less centralised, but still there are very few things that the Adjutant-General cannot have some say in.

7596. I gather, for instance, from Lord Wolseley's proposals, as sketched the other night, that everything that had to go through the Commander-in-Chief would go through the Adjutant-General, which would be still more centralisation, would it not?—But if you had inspectors of these different arms you would do away with a good deal of that centralisation, and the heads of these departments would not be officers of major's or lieutenant-colonel's rank but of major-general's, or perhaps even lieutenant-general's rank, and would be all men of experience and knowledge, who would not require to go and ask a third person what they should do before the matter went before the Commander-in-Chief.

7597. You mean to say there should be an Inspector-General of Cavalry, Artillery, Infantry, and so on?—Yes, you may call them what you like. I merely suggested the word "Inspector-General" because you have an Inspector-General of Cavalry now.

7598. (Sir George Clarke.) Would it not be the essence of carrying out that arrangement that the Inspector-General should be taken out of the War Office?—I should make them go round looking at their particular branch of the Service. Let them go and see how the Infantry are being trained at Aldershot or let them come into a District like mine and see how the training of any regiments I have quartered in my District is conducted.

7599. But you introduced the German analogy, did you not?—I did, but I said at the time they were only administrators, they were not really commanding troops.

7600. And the people you would propose to establish at the War Office would be administrators rather than commanders?—Up to a certain point they would administer as well. I mean all the regulations concerning Infantry would be worked out by the Inspector-General of Infantry, and so forth.

7601. And they would be under the Commander-in-Chief?—All under the Commander-in-Chief direct.

7602. Therefore the work of the Adjutant-General's Office would be divided among the other arms, as it were?—Amongst all the Inspectors-General, of whatever arm they might be.

7603. (Chairman.) To refer once more to the Adjutant-General you say: "Is it not this department which causes all the baneful overlapping at the War Office"?—Yes.

7604. Overlapping between whom?—I give an instance in my memo. of 31st January 1901, of my wish to place an officer of regular Cavalry in command of a Yeomanry Brigade. This question which I thought would be dealt with by the Inspector-General of Cavalry, or at any rate by the Inspector-General of the Auxiliary Forces, was dealt with by the Adjutant-General, and I got a most extraordinary letter back as I mention, and then, on writing privately to the Inspector-General of Cavalry, at that time, General Luck he wrote back and said, "I have settled this matter a long time since"—although the Adjutant-General had said it was a monstrous proposal of mine. That is what I mean by the word "overlapping." Have I made myself clear?

7605. (Mr. Gibb.) That appears to be just a case of muddle in the Adjutant-General's Office?—Quite so.

7606. (Chairman.) Not wholly a muddle, because both the Adjutant-General and the Inspector-General of Cavalry had to be consulted?—Yes, the Inspector-General of Cavalry should have been consulted or the letter should have originally gone to him and then, as it is a matter of command, the Adjutant-General puts in his oar.

7607. (Mr. Gibb.) I call that muddle?—That goes under the head of discipline; command goes under the head of discipline; that is why I talk of the undefined word "discipline." You may look into any dictionary and none will tell you exactly what it means.

7608. (Sir George Clarke.) Your point is that it was a matter purely relating to auxiliary Cavalry?—Yes.

7609. And as such would naturally be dealt with by the Inspector-General of Cavalry?—Quite so, because he is the one who inspects the Yeomanry regiments.

7610. Therefore you think it points to want of definition of the duties of Inspector-General of Cavalry as separate from the duties of Adjutant-General?—Yes; but the letter went to the Adjutant-General and never went to the Inspector-General of Cavalry. The Adjutant-General's Department never referred to the Inspector-General of Cavalry, and the result was I got a ridiculous letter back from the Adjutant-General.

7611. If the definition of duties had been complete and satisfactory, I presume the Adjutant-General's Office would have at once turned the letter over to the Inspector-General of Cavalry if it got to him by mistake?—That is possible, but I will not give a definite opinion.

7612. (Chairman.) Under this general word "discipline," according to you, the Adjutant-General stretches his power into all kinds of unexpected quarters?—Into every loop and corner he can get at. I do not want, of course, to say anything personal. His duties, as defined to-day, give him that power.

7613. Like an octopus?—Yes.

7614. (Sir Charles Welby.) According to your view the Inspector-General of Cavalry holds the theoretically sound position not only as to inspection but as to the training and discipline of the Cavalry?—Not discipline, because there the Adjutant-General comes in again.

7615. But theoretically you hold as regards the Cavalry that the Inspector-General of Cavalry should control the discipline of the Cavalry?—Absolutely.

7616. And carrying that same principle to the other branches, there should be Inspectors-General of Infantry, Artillery, and so on, who should not only inspect but control the discipline of those branches?—Certainly.

7617. And by such an arrangement the need for a great central bureau for the discipline of the whole Army would to a great extent disappear?—Yes.

7618. That is your opinion?—Yes.

7619. (*Sir George Clarke.*) You do not regard this as a question of discipline, do you, but of administration?—It comes under discipline. For instance, the other day when my term of command was extended for three months I did not get the letter from the Military Secretary, who had brought the matter before the Army Board, or whatever Board these things go before, but from Sir Evelyn Wood, the Adjutant-General, by whom it was signed.

7620. (*Chairman.*) Then you think the word "discipline" wants a very precise definition?—Very much so.

7621. (*Mr. Gibb.*) Was that when the Adjutant-General was acting as Commander-in-Chief?—No, it was only last week.

7622. (*Sir Charles Welby.*) The functions of the Adjutant-General at present are not confined to discipline, are they?—No, but discipline covers such a large area.

7623. (*Chairman.*) But if the Adjutant-General were placed under the Commander-in-Chief, would not some of those difficulties disappear?—No; you see my point always is that if there is to be decentralisation the Adjutant-General as he is to-day has too much power.

7624. That is because he is independent of the Commander-in-Chief?—He is absolutely independent of the Commander-in-Chief, in fact he is the bigger man.

7625. If he had a smaller man under him would not those difficulties disappear?—Before answering that I should like to know what the smaller position would be. I should not like to say yes, because I should like to see what would devolve on him and what would be taken away from him.

7626. (*Mr. Gibb.*) You mean so long as his powers are practically undefined he is able unduly to extend their practical application?—Yes, that is quite so.

7627. That, whether he is under the Commander-in-Chief, or not under the Commander-in-Chief, his powers must be limited and defined?—Yes.

7628. (*Chairman.*) I suppose if he were under the Commander-in-Chief he would occupy very much this position, that is to say, comparing a Commander-in-Chief to a clerk of the works, the Adjutant-General would be his foreman?—Yes; that really would be the position of every inspector as I propose now, they would be the foremen of the clerk of the works.

7629. Now we have two clerks of the works instead of one clerk of works, and a foreman?—Yes.

7630. (*Sir Charles Welby.*) Placing the Adjutant-General under the Commander-in-Chief would not necessarily affect his centralising tendency in itself, would it?—Not a bit.

7631. He would be simply doing on the Commander-in-Chief's behalf what he is doing now on his own behalf?—Yes.

7632. (*Sir George Clarke.*) Under the Order in Council of 1888 I suppose the centralisation of the Adjutant-General must have been much more marked than it is at present?—I cannot answer that because I was not a General then, and I had not the opportunity of gauging that.

7633. It was not then a question of discipline only, but a question of every single thing?—Yes.

(*Sir Charles Welby.*) It was not a simple question of the Adjutant-General's function, because in those days he held two entirely separate functions, that of Adjutant-General and that of Chief of the Staff to the Commander-in-Chief, and it was as Chief of the Staff of the Commander-in-Chief that he had the dealing with every Military question.

7634. (*Colonel Miles.*) The order of 1888 did not make him a greater centraliser; all it did was to give him supervision of other matters, was it not?—Quite so.

7635. (*Chairman.*) A little further on in your Memorandum you say, "Unless very considerable improvements can be introduced into the barrack branch of the Inspector-General of Fortifications Department, and into the Director of Contracts Branch, I am strongly of opinion that some of their work should be deputed to the General Officers Commanding Dis-

tricts." Then you proceed to give an account of what took place in the case of the Lichfield huts, as to which I should be inclined to borrow a word from Mr. Gibb, and say there was apparently a good deal of muddle?—It was muddled to that extent, that we never knew from one day to another what we were expected to do, from the fact that we did not receive the absolute contract that was made by the Director of Contracts with the contractors, we did not know what they were to provide. The result has been a great deal of wrangling and an ultimate climbing down on the part of the War Office, because they had to pay the contractors what they wanted.

7636. (*Sir George Clarke.*) As far as the Inspector-General of Fortifications Department is concerned, of course he was really in the hands of the Director of Contracts, was he not?—Quite so.

7637. Who makes all these contracts, and who decides practically who shall be on the list of contractors?—Yes.

7638. (*Mr. Gibb.*) I do not know that that is quite so, because the origin of the difficulty was this, was it not, that there was an ambiguity as to the point of delivery?—Yes, that was one thing.

7639. Now that ambiguity was the fault, was it not, not of the Director of Contracts, but of the Requisitioning Department, because it was their duty to say "we want them delivered at Lichfield Station," or "we want them delivered at the site," and if they did not say that, no one making the contract could know where the things were to be delivered?—But it is known perfectly well in the War Office that the Lichfield barracks are three miles away from the station.

7640. Yes, but when you make a contract it is not known whether you want delivery at the site, or delivery at the station; it is sometimes advisable to arrange for one and sometimes for the other, is it not?—Quite so: then the Director of Contracts should have been more explicit.

7641. But I venture to suggest it is the person who is seeking the contract to be made, whose duty it is to define the point of delivery for the articles contracted for?—But that very individual is the Director of Contracts.

7642. (*Sir George Clarke.*) The terms of the contract ultimately got to you, I suppose?—Yes.

7643. And your interpretation of the terms of the contract was that the contractor ought to have delivered on the site?—Yes.

7644. The contract, I suppose, according to the specification, ought to have said furnish or not furnish glass and other things, which the contractor declined to do?—Yes.

7645. So that it was not entirely a wrong drawing up of the specification, but there were other affairs which entered into the matter, were there not?—That I cannot say, but the impression I got was that the contract had been started verbally, and that there was no clear and definite specification. The contractors probably never had a specification. In the Inspector-General of Fortifications Department there are specifications for huts of every description and kind, and I do not doubt for a moment that the contractors never saw that specification; therefore they concluded they had only to provide the wood for the huts and nothing beyond.

7646. Your point is of course that it is a kind of contract which you as a General Officer Commanding the district could have much better made for yourself?—I will not say that I am certain of it, but I am as near as possible certain of it, because I could have got the whole thing from Warwick, which is next door to Lichfield.

7647. (*Chairman.*) But originally you were asked to try and obtain offers locally, were not you, and as those offers were not forthcoming the War Office made the contract?—I do not quite recollect that detail.

7648. You say yourself in your memorandum, "We were asked to try and obtain offers locally for supply and equipment"?—Quite so; then almost the next morning we got a wire from the War Office to say that a certain firm had been selected as contractors.

7649. Before you had time to look for a local man?—Yes; so there is confusion at once. They tell me to look round for the means of building these huts and

find a contractor who will take it on, but at the same time the War Office are doing exactly the same thing, and beat us at once, and telegraph down and say, "We have engaged — to do it."

7650. It has been stated to us by one General that the power to make contracts up to 2,000*l.* is merely an illusion in so far as the Generals have no power at all in determining what contractors should be placed on the list of contractors from whom tenders are called. They can with great difficulty get a man removed, but they cannot apparently place a man on the list, while the Director of Contracts places men on the list without their knowing it, so that they practically have no voice in the preparation of the list?—That is absolutely true.

7651. The list being formed, all these men on the list are then considered *ex hypothesi* to be equally good men and true?—Yes.

7652. And the natural result is, when all men on a list are equally good and true, they take the lowest tender without any further thought?—Yes.

7653. Therefore, as a General you have absolutely no voice under that system, have you, of determining in what quarter the contract shall be placed?—No, but there is something worse than that; I have the greatest difficulty in getting a contractor scratched out and put on the black list.

7654. Would not a great many of your difficulties be obviated if you had a very large voice in the composition of the lists of approved contractors, so that the contractors should not be put on the list without your knowledge and assent, and that the list should be formed not, as it is now, by the Director of Contracts practically, but formed between you and the Director of Contracts, and that if you objected to anybody your objection, subject to the decision of the Secretary of State, should be final?—Yes, I certainly approve of that.

7655. Some change like that would make the power of giving contracts up to 2,000*l.* reality instead of illusion, would it not?—Quite so.

7656. (Sir George Clarke.) But have you been actually overridden in your district as has happened in other districts; that is to say, has a contractor been forced upon you whom you have reported to be incapable of doing the job?—I am under the impression that there is a meat contractor at — with whom I have had some trouble. I will not be certain, but I believe he is not struck off now.

7657. (Chairman.) Have you made representations as to that case?—Yes.

7658. (Mr. Gibb.) Recommending that he should be struck off?—Yes. As I say, I am not quite certain whether he has been struck off, but I kicked up a bother at last about it.

7659. (Chairman.) Perhaps as you are not quite certain about the point, you might kindly, when you get back, look it up?—Directly I get back I will enquire and let Mr. Gibson know. He was a meat contractor. He gave bad meat, but he was vouched for as being a highly respectable man by the Superintendent of Police.

7660. If in addition to your being given a voice in the determination of the names of the contractors to be put on the list, you were also given authority to accept any tender on your own judgment without reference to the Director of Contracts up to a certain amount, would that also help you?—Yes, certainly.

7661. Those two provisions, you think, would remedy the evils of which you complain to a great extent?—Yes, certainly.

7662. Would those two provisions place you in a satisfactory position?—I think so. It certainly would be a great gain. With reference to contracts generally, I think General Officers of Districts might have a fuller hand. Take, for instance, the question of a contract for soap. The contract for soap is made in the War Office, and all the soap goes to Woolwich. It so happens that in my district I have a Sunlight soap manufactory, only half an hour by train from Chester. Now, if the Director of Contracts gets Sunlight soap from that place it goes all the way to Woolwich, and then when I want it in my district it has to come all the way back again. I do not know whether it is like Madeira supposed to improve by going round the world, and I do not know whether Sunlight soap is used in the Army; but there is a manufactory in my district

which could make any soap I wanted, so that it is perfectly ridiculous, it seems to me, to let this soap wander all over the Kingdom. That is one instance.

7663. I suppose if you have to buy soap for the British Army you would buy a very large quantity wholesale, and you would get each individual piece of soap cheaper than if you bought it in a particular district in small quantities from retailers?—Yes, but would not the travelling add to the expense of it?

7664. Yes; I cannot see why, supposing a contract was made for soap with a soap manufacturer near you, it could not be delivered to the troops in that district direct instead of being sent to Woolwich. I should have thought that was a matter of common sense?—Yes, but I do not think it is done.

7665. (Mr. Gibb.) You would prefer a general contract specifying different points of delivery?—Yes.

7666. (Chairman.) That could be taken into consideration, could it not, in the terms of a contract?—Yes.

(Sir Charles Welby.) There would be a difficulty in giving a monopoly in the supply of Sunlight soap, would there not?

7667. (Chairman.) If the General Officer had the power to purchase such things in his district, as, say, soap, brushes, and articles of that kind, it might result possibly, might it not, in the long run that those articles would become more dear to the country than if they were brought in large masses and then distributed?—Possibly; my Adjutant-General "B" wrote me a short memorandum about contracts. He says: "The making of contracts for supplies is now to a certain extent in the hands of Generals Commanding Districts, but they have, after accepting them, for the Secretary of State for War, to send them to the War Office to be considered by the Director of Contracts."

7668. That is to say, the tenders are referred to the War Office?—Yes.

7669. And opened here?—No, after we have accepted them. This does not appear necessary. It is no doubt necessary for the purpose of estimate and finance, and a statement should be rendered showing the prices of the contracts when completed, but the responsibility of making these contracts could well be entirely vested in the General Officer Commanding, who would be responsible through the Quartermaster-General to the Under Secretary of State.

7670. (Colonel Miles.) But so he is responsible, is he not?—You make them absolutely, and you merely send them up to be registered and let the Director of Contracts supervise them if necessary, but the contracts are absolutely finished in the districts, are they not?—Yes, but we are sometimes told we ought to have taken a cheaper tender.

7671. (Chairman.) That is a matter of revision and instruction to you afterwards, for your future counsel. They do not upset your contract, do they?—No, they do not upset our contract.

7672. They say, for instance, "We think the beef should have been a penny a pound cheaper," and that kind of thing?—Yes.

7673. Which does not really hinder you?—Quite so. He goes on to say that "the Quartermaster-General should manage all contracts as to the supply of food, fuel, light, and clothing for the Army." The General Officer of a District, when he accepts a tender, accepts not necessarily the lowest price, but he takes into consideration the respectability of the firm, which, I think, is a very important thing; and the General Officer in the district, or his subordinate who advises him, must know better than the people here at the War Office. Therefore, if they complain that we do not take the lowest tender which is quoted it is irritating, to say the least of it.

7674. (Mr. Gibb.) It does not upset the contract, but it upsets your equanimity?—Quite so.

7675. (Chairman.) To pass to another question. Following your Memorandum, you say that you really think something might be done to make certificates given by officers a reality. At present, I understand, if an officer travels, the colonel, or whoever he is, certifies that his travelling claim is correct, but it is understood that that certificate, although solemnly attested, is absolutely of no value, and that he has not

taken the least trouble to inform himself whether the claim is correct or not. Then the Paymaster takes the claim and works it out, and examines it to see whether it is correct or not?—Yes.

7676. So that the signature of the Commanding Officer really is absolutely useless except as to the authority for the journey?—Quite useless.

7677. It is otherwise waste paper?—Yes.

7678. And it merely accustoms him to the vicious habit of signing documents without looking at their contents?—Yes. But the worst system of all is where an officer, and I think that happens a good deal with the Engineers as to working parties, has to sign that he has paid men before he has ever received the money.

7679. (Mr. Gibb.) I see you mention that in your memorandum?—Yes.

7680. Can you tell the Committee by whom he is asked to sign, before he receives the money?—There is the form, you see—the form goes in. I think it is Form O. 1779.

7681. By the Accountant-General, is it sent?—By the Pay Office. The Station Paymaster, the Local Paymaster, will not give that money until he has the certificate from the officer.

(The Secretary.) That is not in accordance with the War Office Regulations—it is opposed to them.

(Sir George Clarke.) Your point is if money has to be drawn, perhaps before the work is accomplished, the officer in order to draw the money has to certify the work has been done.

(The Secretary.) No, the witness's point is that the officer has to certify that the man has been paid by him before the officer has had the money, therefore he has to pay it out of his own pocket.

(The Witness.) Yes.

(The Secretary.) That is absolutely wrong.

(The Witness.) But is not that certificate on the form?

(The Secretary.) The certificate is there, but that is no reason why he should not have had the money. What I mean is, the Paymaster cannot insist on this form being sent him duly receipted before he has issued the money.

7682. (Mr. Gibb.) It may be that the form of receipt should be separated from the rest of the form. Probably the Paymaster requires the proof before he pays the money?—Yes, but after all he might give an advance; because when I travel about my district my aide-de-camp draws 10l. or whatever it may be in advance; then he has to account for that money to the Paymaster. It is simple to do that.

7683. (Chairman.) In the case of your aide-de-camp he would have to certify the travelling claim as correct, I suppose?—He certifies that the form is correct, and I have to sign it in three places.

7684. To show that you have carefully examined it?—First, that I have received the money, when I have not; secondly, that I have carefully examined it, which I have not, because I have left it to my aide-de-camp; and thirdly, that the aide-de-camp is an honest man, or words to that effect.

7685. From what you say we gather that the certificate as regards travelling claims, which is signed by a commanding officer, either is absolutely useless, except as regards the authority for the journey, in which case it ought to be abolished, or if it is to be of any use it should be made with care and be accepted as final?—Yes; as the Paymaster audits it in every case.

7686. But if it was made with care, and was really a formal and serious document, payment would be made upon it, and the Paymaster need not audit it?—No.

7687. It seems to me quite conceivable that by far the better system, as the Paymaster is the real professor on these subjects, would be to continue to let the Paymaster examine into travelling claims and make the payments on them, and in that case the intermediate certificate of the commanding officer ought to disappear altogether, except as regards the authority?—Yes.

7688. (Mr. Gibb.) Except as regards the fact of the payment having been made?—No, because the payment has not been made.

7689. What I mean is this: supposing your aide-de-camp is making a claim, I assume he has disbursed certain money?—Yes.

7690. You must have, before it goes to the Paymaster for examination, a certificate by the officer that that money has in fact been disbursed?—Quite so.

7691. (Sir George Clarke.) But no one can give that certificate except the actual disbursing party, the aide-de-camp?—Quite so.

7692. (Chairman.) As the rule is the man does not get the money in advance, but pays money out of his own pocket and then sends in a claim to the Paymaster to allow him the money: then his claim passes through Colonel So-and-so, who solemnly attests it is right in all details without looking at it in the least, to the Paymaster?—That is so.

7693. (Mr. Gibb.) Do you think the practice of laying down very precise regulations of what can be claimed as expenses is better than simply giving a discretion to someone to allow a reasonable sum for disbursements and expenses?—There is a very good system, I think, in Ireland. I have only been quartered in Ireland a very short time, and I confess I know nothing about it; but I believe it works very well, and that is the distances are laid down. I believe there is a regular system there of laying down zones or something of the sort, so that when an officer has to go, say, from Belfast to Cork, the whole thing is cut and dried and printed. If we had something of the sort in England it would be a great saving of labour.

(Colonel Miles.) I had heard it was proposed, but the difficulty, I understood, was in the mileage rates.

7694. (Mr. Gibb.) If we are to be too precise in regard to the amount allowed that system might not work, but the very advantage of the system is that you should fix the mileage rate so that it would reasonably cover every reasonable man's expenses?—Quite so.

7695. And if sometimes rather more than ought to be paid was paid it would not matter?—Certainly. I think that would be a great help. Supposing, for instance, an officer is sent from London to Woolwich on a court-martial, at the end of that court-martial he would claim his lump sum instead of 1s. for a cab and so much railway fare.

7696. (Chairman.) Does not he get his fare plus something else?—Yes, he gets 3s. 6d. a day unless he stays out at night, and then he gets paid according to his rank.

7697. (Mr. Gibb.) The difficulty of a system of that sort, is it not, is that you must base the figure on what you may call an average?—Yes.

7698. Then if an officer travels and actually and properly pays more than the allowance and more than the average he thinks he is badly treated if he cannot get it back again?—Yes.

7699. (Sir Charles Welby.) Why cannot a man send in an account of what he has actually expended and certify that he has expended it and then let it be looked through by the Paymaster or whoever it may be?—Well we know exactly what the railway fares are, and that the paymaster settles, but it is these little annoying things like cabs, where a man claims a cab when he goes on a court-martial from the station at Wrexham, we will say, to the barracks. The fare, I think, is 1s. 6d., and he feels aggrieved he cannot have cab fare back again.

7700. (Mr. Gibb.) He ought to have it back. Do not you think a General Officer Commanding should have absolute power to authorise and pass payments of that sort?—I certainly think so.

7701. If it is a reasonable thing, would not the General pass it, but if he thought it unreasonable he would not pass it?—You must remember one thing. The British Army is full of faddists, of which, perhaps, I am the worst. There may be a General, an athletic man, who would say, "Cab! not a bit of it, let him walk." and the man has to walk both ways, if you leave it entirely to the discretion of that General.

7702. (Chairman.) Talking of certificates, are you aware of a system under which officers commanding units make requisitions for ordnance stores during the year, without any sense of responsibility or reference to the question whether they have or have not exceeded their annual allowances, and simply go on sending in requisition after requisition. The Ordnance officer is supposed to control the requisition when it comes in, although it is rather doubtful whether he can do so very accurately, and to disallow it when an officer has

Major-Gen.

18 March 1901.

Major-Gen.
L. V. Swaine,
C.B., C.M.G.

13 March 1901.

exceeded his prescribed amount,—is not that rather an unsatisfactory system?—Yes, it is.

7703. Ought not the officer of the unit to keep an account of what he is getting, and what is allowed him?—Yes. That is a very unsatisfactory process. A similar thing happened in my district, and I merely told the officer if this happened again I should have to take very serious notice of it and break him.

7704. The Ordnance officer having discovered he had sent in orders for too much?—Yes.

7705. But as a matter of fact these officers have no conscience in that regard, have they?—Well it is not so much that as it is the supervision over the men who make away with these things; it is the want of proper supervision in a unit.

7706. If the commanding officer had the responsibility upon him of keeping the run of his things and of only making requisitions within the prescribed allowance, and was held responsible for anything which he had outside that allowance, would not he look more to see that those things were not wasted?—I am sure he would.

7707. And it would be very good training for him?—Yes, and it would be quite the proper thing.

7708. And it would do away with this check by the Ordnance officer?—Yes, and it is the fact that these careless gentlemen throw an immense amount of additional work on to the staff. The staff have quite enough to do and think about without having to try and keep others in order; they ought to have to look after things themselves and not have things found out by the Staff. It always looks very bad, and it has always impressed itself upon my mind, that there is nothing which speaks so much against the discipline of a unit if the Staff find out anything wrong going on in that way. A unit should be in such a condition that no Staff officer could ever find serious fault with it.

7709. I suppose, to revert for a moment to Germany, where the commander of the unit has that responsibility on him?—Yes. Colonel Miles has been much more on the Staff than I have, but what does he think about it? I say it shows a very bad condition of affairs in a unit if the Staff Officer has to find out either discrepancy or serious error.

7710. (Colonel Miles.) I quite agree—It should not be the Staff Officer who finds out that there is something wrong.

7711. (Sir George Clarke.) But the only way to get that happy state of things is to enforce the responsibility on the head of the unit, is it not?—Yes; quite so—ram it into him.

7712. (Colonel Miles.) And have inspection?—And have inspection.

7713. (Chairman.) There appears to be a system by which, say again in the case of a battery, the commander of a unit is entitled to so many actual items by way of repairs during the course of the year. He is entitled to so many brushes, so much leather, so many buckles, and so many other things, without reference to the question whether in one year owing to peculiar circumstances the wear and tear should have come most heavily upon the buckles or upon the brushes?—Yes.

7714. In civil life, I think, such a system would be considered rather absurd. Would not you rather have a money limit and say, "You have to keep your battery in proper order; instead of giving you so many buckles and brushes, there is the money equivalent, based on an average for years; if you want more brushes in one year than buckles, you can use your own discretion and buy what you want"?—That would be a very good thing, because there the responsibility of the commanding officer of the unit would come in again. That would be much better.

7715. (Chairman.) Give the man a credit on the Ordnance officer for so much, which would be equivalent to giving him money?—Quite so.

7716. (Mr. Gibb.) It was in my mind that it would have to be done by some money equivalent?—Yes.

7717. (Chairman.) He would have an imprest for so much, but the actual items could be varied according to his discretion?—Yes.

7718. To go back to your memorandum where you speak as to the B. Branch. You say that as regards re-appropriation the powers granted to general officers

commanding, as defined in King's Regulations, paragraph 862, are very restricted; and that a freer hand should be given in this matter. Will you explain that to the Committee a little further?—For instance, if I go into a barrack, and I should like to turn two married quarters into a sergeant-major's quarter or into a quartermaster's quarter, I cannot do it.

7719. (Mr. Gibb.) Who controls you?—The Quartermaster-General.

7720. (Chairman.) It has to come up to the Quartermaster-General?—Yes. For instance, in all the barracks the barrack warden has the best quarters of all.

7721. Who is the barrack warden?—The barrack warden is the man under the Barrack Department, who has brooms and fenders and all sorts of barrack utensils of that kind under his special care.

7722. He is in charge of the general up-keep of the supplies, is he?—The general up-keep of utensils and things. This man has the best quarters in barracks, while in some places—take Carlisle, for instance—the sergeant-major, who above all non-commissioned officers should live in barracks, has to live out of barracks. There is no reason why the barrack warden should not live out of barracks; he has nothing whatever to do; he looks up his place at night, and turns into his quarters in barracks, whereas the poor sergeant-major, who has to look after the discipline of the barracks, has to trudge home every night to his lodging or quarters out of barracks. Now, I cannot turn that barrack warden out, and if I attempted to write about it and recommended it, and suggested it, I am told I had better mind my own business—that the warden has been there 20 years, and he is going to remain there.

7723. (Sir Charles Welby.) I have the paragraph of the King's Regulations, to which you refer in your Memorandum before me, and I cannot see how, under that paragraph, you are prevented from taking a step of that kind?—Yes, I am.

7724. Will you look at the paragraph and tell me why. I understand if you simply turn the barrack warden out it involves increased lodging allowance?—No, because the sergeant-major has got that.

7725. Then I cannot see under that regulation that you are precluded from taking such a step?

(Chairman.) Have you ever tested the matter?

(Witness.) Yes, and I have been refused. I have now read the paragraph; it does not prevent me, I should say, but I can say I have tried it and without success.

7726. (Sir Charles Welby.) There are such things known to have happened as the War Office exceeding its own rights of interference?—Yes, quite so.

7727. (Chairman.) Is there any other instance under "appropriation" which you would like to give us?—Those are the only two points that have come under my notice. Where barracks have been increased, where extra battalions have been added on, of course it means another sergeant-major, and quartermaster-sergeant, and so forth. I have had great difficulty in the matter; in fact, I cannot do it without sanction, and as for the barrack warden, I have never been able to turn one out yet.

7728. (Mr. Gibb.) I suppose your point is that, as regards the appropriation of rooms, that should be absolutely in the discretion of the General Officer Commanding?—Yes, it is a minor point, if you like, but still there it is; one's hands are tied.

7729. (Sir Charles Welby.) I am inclined to suggest to you that you should carry out the step and see what would happen, merely reporting to the War Office that you had done so under your powers laid down in No. 362, and see what the result was?—I will make a note of that.

7730. (Chairman.) To continue your Memorandum, you go on to deal with the Pay Department and recommend that Station Paymasters should be allowed to pay charges which are now paid by the District Paymasters, and you give a list of them?—Yes.

7731. Pay on account of troops, acting, clergyman, church orderlies, gymnastic instructors, and so on, have all those got to be paid at the district office as opposed to the station office?—Yes.

7732. Is there any reason for that?—I do not know of any.

(*The Secretary.*) I may say that in the South-Eastern District that course has been tried as an experiment, and has been found to work well.

7733. (*Chairman.*) If you have a Station Paymaster what does he do if he does not do this kind of thing?—He has the payments to the troops to make.

7734. But he would have sufficient time and authority to make these payments, would he not, without it going up to the district Paymaster?

(*The Secretary.*) I think so; it has been carried out, as I say, in the South-eastern District, and no doubt it will be done more generally?—I do not see why the Station Paymaster should not have the dealing with these things, as he has all the knowledge.

7735. (*Chairman.*) Then you go on to say that all station pay accounts should be sent to the headquarters of the district, so that they might there undergo the test audit now carried out at the War Office, or be embodied in a district general state. You seem to have in that a possibility of the audit now carried out at the War Office being carried out at the headquarters of the district?—I see no difficulty about it at all.

7736. Do you see any advantages in it?—It would make us more self-contained, as it were.

7737. Would it not also have the effect that if there is a question of interpretation of a financial regulation, a General would be very likely to consult his Paymaster?—I always do; I have never heard of any General not doing it; I cannot fancy any General not doing it. I should be very sorry to give any opinion off my own bat in matters of finance without consulting the Paymaster.

7738. He is the expert on that matter?—Absolutely.

7739. But let us go a little further. Supposing the Paymaster gives you an opinion and there is no absolute reason why he should be right. You may act on the opinion and yet have trouble with the War Office, whereas if you had a local officer, a sort of head of a local accountant-general's branch, with power delegated to him from here, whose decision is final, when you have consulted him who has said, "Yes, that is a matter within my delegated powers, and so and so is the interpretation," that would be final, and it would be accepted by the War Office, and no trouble with the War Office would ensue afterwards?—Yes.

7740. Would not that save you a lot of trouble and correspondence with the War Office?—Yes.

7741. There is now, is there not, a lot of trouble and correspondence?—Yes; but that is caused by the fact that the regulations are so badly worded. If they were to enter less into detail and use more general language I am sure it would save trouble; but they try to legislate for every possible case that may happen.

7742. I suppose every possible case that arises immediately has a regulation made upon it?—Yes.

7743. (*Mr. Gibb.*) I suppose it also arises from the desire to get uniformity in all the districts?—That is possible.

7744. If you send out regulations general in expression you must be prepared for a large amount of want of uniformity, must you not?—But what a good thing that would be, because you would suck the brain of the individual who runs the show at that station.

7745. I am not suggesting it is a bad thing; I think it is a good thing, and I agree with you, but the tendency, as embodied in the War Office regulations, is just the reverse it seems to me?—Just the reverse.

7746. That everything must be in all the districts absolutely uniform?—Yes, I think we know that from Aldershot too, every brigade must be drilled exactly the same as the other is; there is no imagination left to anybody.

7747. (*Chairman.*) Then you go on to suggest that contractor's bills of 100*l.* and upwards now sent to the War Office for payment should be paid by the District Paymaster, which would ensure all the charges appearing in one district account. I should have thought even if these payments were paid at the War Office they could still appear in the district accounts irrespective of the fact that the actual payments are made here. I understand the payments of sums over 100*l.* are made here in order to avoid the inconvenience, and to a certain extent the expense of keeping depôts all over the country for paying these things?—Yes,

but what is the result of this? The result is when a contractor sends in his bill he knows he will only get a cheque which has to go up to the War Office, and that rather bores him; so when his bill is 106*l.* he sends in an account only for 90*l.*, and as soon as he has got that money he sends in a charge for 16*l.*

7748. Why should it bore him?—Those are things that have happened; I cannot put myself into the position of the butcher, but I know these things have taken place.

7749. Would you consider that a very serious matter?—No, but they must have some reason for doing it.

7750. (*Mr. Gibb.*) Do you think a bill is paid locally more promptly than a bill is paid by the War Office?—That I should not like to say because I really have had no experience of it.

7751. If that were so it might explain the matter, might it not?—It might explain it.

7752. (*Chairman.*) I will now pass from your experience as a General in command of a district to your experience in your previous capacity as a Military Attaché?—Before doing that would you allow me to say one thing. I put nothing into my report about returns and my reason for that is this, we really do not know in the districts for what use the different returns we have to furnish are applied in the War Office, whatever the returns may be, whether monthly, yearly, or half-yearly returns we do not know for what purpose they are called for and therefore I did not like to give an opinion in favour of knocking this or that return off, but I can only say that if it is wanted to see whether it is possible to reduce the number of these returns that go from districts to headquarters, it should be done not by evidence but by personally following the life of a return—see its birth, when it arrives at the War Office, see what departments it goes through, who looks into it, what subjects the returns contain, and then go to its death and see what happens to it, whether extracts are made from it, and whether it is ever referred to again.

7753. Are you acquainted with the evidence that Sir William Butler gave before the Decentralisation Committee?—No.

7754. He gave some very remarkable evidence. He had both experience of the War Office and a district, and he said that masses of returns were sent up from districts to the War Office. When the War Office, however, wanted to ask a question in Parliament or to deal with the matter in a hurry which was contained in those returns, the War Office as a matter of fact never looked at those returns, which had got lodged in pigeon-holes on the road to the proper officer, but immediately communicated by telegram or by letter with the district for the information which was in many cases actually contained in those returns which were placed on one side in the War Office?—That is absolutely true and within the last three days I have had a proof of that. I got a return from the Inspector-General of Fortifications Department which I had to fill in, and one of the questions was what is the present strength of the depot at Lichfield, and what number of men could you put up in Lichfield with the addition of the hut encampments. They have the whole thing here; he has only to go into the next room and he gets them. That letter actually came on Saturday morning.

7755. That return has actually reached the War Office, has never been read by anyone who is capable of reading it intelligently, but it is docketed and put away in a pigeon-hole and left there?—Yes, there are a lot of ridiculous things which have to be sent in. For instance, a classification of the different height of the men in a battalion. Of what interest is that?

7756. (*Colonel Miles.*) It is called for by Parliament?—But do they ever look into these things? Do they care how many men have three good-conduct badges and two good-conduct badges and one good-conduct badge?

(*Sir Charles Welby.*) I think you must have statistics as to the physique of the Army for general purposes.

7757. (*Chairman to the Witness.*) Has there been any diminution in the number of these returns since the Decentralisation Committee sat?—Yes.

7758. And you think there is still room for more?—Yes.

*Major-Gen.
L. V. Swaine,
C.B., C.M.G.,*
13 March 1901.

Major-Gen.
L. V. Swaine,
C.B., C.M.G.

18 March 1901.

7759. Would not a real practical way to deal with that be to have a Committee sitting at the War Office on which the districts which sent in the returns should be represented, and the War Office, which is supposed to use the returns, should be represented, say once a year or at stated intervals to go through all these returns and see whether or not some of them had become obsolete?—Yes, I think so.

7760. (Mr. Gibb.) The only way to test that is to dispense with them for a year and see what happens?—I will tell you a quicker way than that: reduce the clerks in this office by one-half and then see how many returns would be called for.

7761. Do you think the clerks call for the returns?—I am sure they do.

7762. Off their own bat, so to say?—I will not say off their own bat, but they go to their chiefs and say, "Do not you think we ought to have a return like this; Parliament is sure to want it sooner or later?"

(Colonel Miles.) It was recommended by the Decentralisation Committee that a small Committee should sit to check the tendency to re-introduce reports and returns.

(Chairman.) Has such a Committee been appointed?

(The Secretary.) No.

(Sir Charles Welby.) This subject was very fully gone into by the Decentralisation Committee three years ago, and if there was one question which they went into thoroughly it was this question as to returns. General Swaine tells us he can only look at the question from one point of view, because he does not know the purpose for which these returns are called.

(Witness.) Quite so; that is why I do not want to give any opinion about it, because I do not know to what use some of these returns are put.

7763. (Chairman.) But if that recommendation of the Decentralisation Committee were acted upon you think it would be better?—Undoubtedly, it would.

7764. To deal with Germany, I suppose under the conditions under which the British Army work, especially with reference to having to supply foreign stations, it is idle to think that we could approximate very closely to the decentralisation system in Germany, but perhaps we might approximate more closely than we do at present to it, especially with regard to the proposed constitution of six great Army Corps Divisions. Could you give us any indication as to how far and in what direction you think the German system of decentralisation could be introduced with reference to those six Army Corps Divisions?—That is very difficult to say off-hand. I think there is no reason why the audit should not be done, which is what we were talking about before.

7765. That is one suggestion?—Yes, that is one.

7766. How is the audit done in Germany?—The audit is done by the Corps Intendant.

7767. The Corps Intendant also makes the purchases and contracts, does he not?—Yes, the Corps Intendant is the representative of the War Office in an Army Corps, and he is more a servant of the War Minister than he is of the Corps Commander. The Corps Commander can overrule the Intendant, but then he must make a report to the Emperor on the subject.

7768. But keeping strictly to the question of an audit, the Intendant, I understand, is a sort of general business manager for the Corps Commander and makes purchases and contracts for him?—Yes.

7769. Does he also audit the expenditure connected with those things?—Yes, with the assistance of his Paymasters.

7770. Has he under him two sets of men—a set of men who make purchases and so on, and a set of men who audit; are they distinct from each other, or do the same men make the purchases and do the audit?—No.

7771. (Colonel Miles.) There is, I think, a Corps Auditor separate from the Intendant?—Yes, but under him or in his office, is he not?

7772. He is shown separately under the General Commander with a distinct headquarter clerk?—I cannot find, but the number of officers must be in this book somewhere.

(Chairman.) Perhaps Colonel Miles could tell us whether the auditor is apart from the Intendant.

(Colonel Miles.) I understood myself that the Corps Auditor was really apart from the Intendant; he is not the Chief Intendant, and he is not shown in the Intendant's Department generally. I will find that out for certain.

7772A. (Chairman to the Witness.) If that is the case we should approximate very closely to the German system, it seems to me, if we placed a local auditor at every Army Corps Headquarters, while at the same time we gave the General an officer corresponding more or less to the Intendant as general business manager. Would not that be so?—Yes.

7773. (Mr. Beckett.) I see that in this report they say the Intendant is responsible for the auditing of the accounts?—Yes, I am sure he is responsible. The corps makes its own audit, but annually the head of the Corps Intendantur sends his accounts to the Finance Section of the Army Administration Department of the War Office. This Department collects the accounts, and submits them to a final audit committee, which is a section of the Imperial Treasury.

7774. (Sir George Clarke.) The Intendant is really the local financial secretary?—The Intendant has under him the Finance Section, the Corps Clothing Office, the Supply Section, Administration of Barracks and Lands Offices and Building Works, so that he has the Finance Section of the Corps under him, and it is this Finance Section which, of course, would audit the accounts.

7775. (Chairman.) He would be like the Financial Secretary here, who has under him both the Director of Contracts and the Accountant-General's Department?—Quite.

7776. (Colonel Miles.) I should like to ask a question as to the general formation of the Staff and the differences between the main organisation of the German Army as compared with ours?—You will find at the head of an Army Corps there is first the Commanding General, then there is his Chief of the Staff; then you have a certain number of officers who are staff officers, that is to say, they have qualified at the Staff College. Then, in addition to that, you have what they call Adjutanten, Army Corps Adjutants or Divisional Adjutants. They may be men who have not done particularly well at the Staff College, who are not as brilliant as their comrades; they are either old regimental Adjutants or men of great regimental experience but no Staff experience. Let me make myself clear. On leaving the Staff College students are classified as, (1) Fit for General Staff (includes any staff appointments; (2) Fit for the higher Adjutantur (does not include the General Staff). The Adjutanten on the Staff of an Army Corps are generally men of Class 2, but may be men who have not been through the Staff College.

7777. There are the four divisions?—Yes.

7778. They are the military divisions of the Staff?—Yes.

7779. Then there are two administrative divisions?—The Army Corps Staff is broadly divided into (A) The General Staff, sub-divided into four sections, of which two are administrative, i.e., the Military Judicial Officials, and sub-sections b, c, d, of section IV. Corps Surgeons, Corps Chaplains, Corps Veterinary Surgeons. (B) The Intendantur, which is sub-divided into five sections.

7780. Then the General Staff is a small body of highly selected men who are engaged entirely on the war problems of training troops, schemes for manœuvring operations in peace and war, and all the larger questions of military administration?—Yes.

7781. That is the Staff which was worked and trained and selected by Von Moltke?—Yes.

7782. And the ordinary duties of the Staff, which occupy so much of our time, are performed by officers who are called the Adjutanten?—Yes; there is no such thing as a personal staff in Germany, except with princes. Princes are the only ones who have a personal staff.

7783. The Adjutants partly perform their duties, I suppose?—The Brigadier, for instance, has no aide-de-camp at all; he has an Adjutant, but that Adjutant is the Brigade Major, and in time of manœuvres he gets officers attached to him as gallopers.

7784. Of the duties which we call Adjutant-General's duties, is a large part performed by Adjutanten?—Yes.

7785. In comparing their Staff with ours it might be thought that our Staff appears large in comparison with the German Staff, because we call officers performing these and Intendants' duties Staff, and they do not?—No.

7786. For instance, they would not call a Brigade Major a Staff Officer?—No, he is Adjutant of the Brigade, which is the same thing, but, as a rule, has not been through the Staff College.

7787. An Army Service Corps Officer performing B. duties we call a Staff Officer, but they would call him as belonging to the Intendantur?—Yes.

7788. They have, I think, three General Staff Officers to an Army Corps?—Yes.

7789. They would have one to a Division?—Yes.

7790. They would have none to a Brigade of six battalions?—No; there is only one, the Brigade Adjutant.

7791. It is correct to say, is it not, that we have no distinct branch in our service analogous to the German General Staff?—No.

7792. Certainly not in a district?—No.

7793. Coming to Intendantur, they perform all the administrative duties?—Yes.

7794. Duties in regard to buildings?—Yes, but they have nothing to do with the building of fortifications; they build barracks or stores, but have nothing to do with fortifications. I forget when, but I think the Barrack Department in the German Engineer Office was taken away before the 1870 War. It did not exist when I went to Berlin in 1882.

7795. Supply?—Yes.

7796. Clothing?—Yes.

7797. And the clothing, I think, was centralised?—The clothing was very much centralised, but now every headquarters has a clothing manufactory—every Army headquarters.

7798. These Intendantur are officers—that is to say, they are officers of the Reserve or retired officers, or they have served in some way in the Army, have they not?—Yes, they have all served more or less.

7799. Are ever civilians given Military rank?—Never.

7800. They wear uniforms?—Yes.

7801. They would act on all the rules of Military etiquette and salute a General as other officers do?—Yes.

7802. They would perform their duties direct through the Chief Intendant, I suppose?—They do not see the General themselves, the Intendant does.

7803. He sees the General, and very likely the Chief of the General's Staff would be present?—Yes.

7804. The Chief of the Staff remains there while all these different officers are performing their business?—I believe that is the case generally, but I cannot say for certain.

7805. Carrying it on to the War Office; there again you have a Chief of the General Staff?—No, not at the War Office. At the War Office there is no Chief of the Staff at all.

7806. What do you call him then?—There is an official who is a sort of Under Secretary of State for War.

7807. What was, then, Von Moltke's position?—He was not at the War Office.

7808. I know he was not. I mean at the Central Office at Berlin?—He lived and worked at the General Staff Office.

7809. He was the Head of the General Staff?—Yes.

7810. Which was distinct from the War Office?—Absolutely.

7811. Do you not call that official the Chief of the Staff?—Yes.

7812. And the Chief of the Staff has nothing to do with discipline?—Nothing.

7813. He is entirely employed on the various sections of the General Staff?—Yes.

7814. One section, I think, is called the three sections, is it not, the A. sections?—There are different sections—the railway section, the geographical section, the typographical section, and the Intelligence Branch.

E 15090.

7815. There is nothing equivalent to the title of Adjutant in those sections, is there?—Yes; there are men of the Adjutanten class who work there. They are not called Adjutanten, they do not belong to the Adjutantur, but they are the same class of officers, and you will find them principally in the Railway Department, and in the Typographical Department.

7816. The War Minister is quite separate?—Yes.

7817. He, for instance, would not be charged at all with plans on mobilisation?—No; not at all.

7818. Then there is a third branch—the Militär-Kabinet?—That is quite separate. When I first went to Berlin, the Militär-Kabinet was under the War Minister, but they found that it did not work, because sometimes the Chief of the Militär-Kabinet was senior to the War Minister, and that produced friction. I forget what year it was, but I should think in about 1883 it was separated.

7819. This Militär-Kabinet deals with all the questions of selections of arms, I believe, except, perhaps, for the General Staff, which is done by the Chief of the General Staff?—Yes; I think so. The Military Cabinet has two sections, (1) which issues gazettes, receives reports of Army Inspectors, Corps Commanders, Technical Inspectors; (2) Personal section deals with appointments, commands, transfers, exchanges, retirements, decorations, and rewards, posting of all officers except staff officers.

7820. Everything is done by the Cabinet?—Yes.

7821. The question of your extension of time would have been done by the Emperor through the Cabinet?—Yes.

7822. Then in addition to these great divisions, they have inspections—inspections of artillery and so on?—Yes, they have got Cavalry Inspectors, Garrison Artillery Inspectors, Field Artillery Inspectors, Engineer Inspectors, Army Corps Inspectors, and Rifle Inspectors.

7823. Under such a system as this there is really no room for an official of such a high status as Adjutant-General as we understand it, is there? There is no position in the German Army with which you can compare our Adjutant-General?—There is no such thing in the War Office at all; in the War Office everything is administrative pure and simple.

7824. There are 90 or 100 officers, I suppose, on the General Staff?—Yes, more. There are about 250, of which 100 are attached officers.

7825. And those 90 or 100 officers are engaged on these higher administrative questions and higher problems of war, and the training of troops and so on?—Yes, I believe they have every year to remodel their mobilisation system; new railways are built, and the result is that one corps or one regiment may have a shorter way to get to the frontier; the consequence is that everything has to be remodelled every year, gone through and corrected every year.

7826. Then going back to the Intendantur in the army districts their accounts are in some form or other dealt with practically entirely in the districts, I believe?—The Corps Commander is allowed to spend as much as 1,500*l.* on a single building, if he requires it. If he wanted to spend more money he must apply for it, but he can spend 1,500*l.* on one single building.

7827. (*Mr. Beckett.*) How many times a year?—That is only given him once a year.

7828. (*Chairman.*) Can he spend it on one single building, or spend it on various building?—He can do as he likes.

7829. That is to say, he has 1,500*l.* put at his disposal to spend on buildings at his absolute discretion?—Yes, and that, of course, is for the upkeep of all the barracks, but he may spend the lot on one. If he does not want to do anything to other buildings he may spend the lot on one. He can do just as he likes.

7830. (*Colonel Miles.*) Generally speaking, with regard to their regulations, do not you think on the whole they are simpler than ours; there are fewer allowances, and it is more in the form of consolidated pay?—The German officers' pay is quite as complicated a matter as ours. It is made up of a variety of allowances. Of course the men, as it is an army of conscription, get a very small pittance. They are paid three times a month—every 10th day, and then they get whatever there is to come to them.

Major-Gen.
L. V. Swaine,
C.B., C.M.G.
18 March 1901.

Major-Gen.
L. V. Swaine,
C.B., C.M.G.

18 March 1901.

7831. So that the accounts are all dealt with in the district and then sent up and finally revised, I suppose, at the War Ministry?—Yes. The paymaster is the man who looks after the food of the men of the regiment. The men are paid in the presence of an officer but not by an officer.

7832. (Sir George Clarke.) The German principle, as you have enunciated it, is shortly, is it not, to take all executive command out of a Central Office?—Yes.

7833. The executive command in Germany is decentralised in time of peace and vested in the Army Corps Commanders?—Yes.

7834. There is no one in Germany, is there, who performs all the functions which are performed by a Commander-in-Chief in this country?—No, except the Emperor.

7835. But the Emperor being also Commander-in-Chief of the Navy and other things could not perform the duties as they are done here?—No, the way it is done in Germany is this, that once a week the different Military heads come to him and report. It is generally on a Saturday that he sees the Chief of the Cabinet, the Chief of the Staff, and the War Minister, and they report anything that is worthy of report or that is necessary to report.

7836. Then the reports of the Inspecting Officers are seen by the Emperor?—Yes, they go to the Militär-Kabinet, and the Militär-Kabinet lays them before the Emperor.

7837. The Militär-Kabinet being his bureau?—Yes.

7838. And the Army Corps Commanders report direct to the Emperor, do they not?—They report direct to the Emperor through the Militär-Kabinet in the same way.

7839. If we talk about decentralisation here on the German plan, it is quite clear that decentralisation does not in the least mean throwing so many forms of return off from a district or giving little additional powers to Generals, it is a far bigger thing, going to the root of the whole thing?—Yes.

7840. Therefore, if these six districts are to be effective they must be treated very much on the German plan, must they not, and they must do their own administrative functions within themselves?—Yes.

7841. With their own bureaux practically, and be self-contained?—Yes.

7842. Taking away, therefore, much power from the War Office?—Yes.

7843. In fact, a great part of the present War Office would disappear if the German system were carried out?—Certainly.

7844. Sir Frederick Maurice told us yesterday that when he raised important questions of policy or questions affecting national defence he never could get an answer to them. Is that your experience in questions of that kind?—No. I have never had occasion to submit any. I do not recollect that there has been anything particular put forward by me.

7845. When a question of that kind is raised by the General Commanding an Army Corps in Germany, how would it be dealt with?—That would come under the Chief of the Staff. The Moltke of to-day would have a say in that.

7846. In our system is there anybody here, or any individual, who would be able to give sufficient attention to great strategical questions of that kind?—That, of course, should come under the Commander-in-Chief.

(Mr. Gibb.) I thought General Maurice's evidence went a little further than you are going. He told Sir George Clarke that it was not only large questions of Military policy that he found difficulty in getting decisions upon, but smaller questions, as regards the provision of a rifle range, and so on.

(Mr. Mather.) He spoke of one particular case of land.

(Mr. Gibb.) I understood him to say he had great difficulty in getting prompt decisions from the War Office on practically any question.

(Sir George Clarke.) That is so, but he particularly referred to questions of a Military nature affecting his command, as to which he said he had not been able to get any reply at all.

(Mr. Gibb.) I was not quite sure whether General Swaine was not confining his answer to large questions of policy.

(Witness.) Yes, I was. I do not know whether General Maurice has much to do with the defence of the Thames; he may have something to say there, but the only large question that, perhaps, I have raised as all is the defence of the Mersey.

7847. (Sir George Clarke.) When you raised a question as to the Mersey defences did you get any reply?—The reply was that the guns were coming, and they are coming still.

7848. (Chairman.) You found no difficulty in getting a reply?—No, I got a reply.

7849. (Mr. Beckett.) How long ago was it that it was said the guns were coming?—I asked the question when I first went there, 4½ years ago; there were some guns still coming, one quick-firer has come for each fort and there we are at present.

7850. (Mr. Gibb.) Do you find generally that you have difficulty in getting decisions from the War Office within reasonable time on questions that you have to refer to them?—No, the only thing perhaps is as to rifle ranges. With rifle ranges it always means buying land; it means getting landowners and tenants to let a range be built, and come to terms.

7851. (Mr. Mather.) Would you contrast the position of a Commander of an Army Corps in Germany with the position, for instance, of yourself in England as the Commander of a District in rank and training?—No, not in rank.

7852. Are they higher rank?—Yes, they are all full Generals.

7853. Would you take their training as a whole as being more thorough and complete than that of a General Commanding a Division in England?—Yes, and I will tell you why—because the training is continuous. There are no inspections as we have them. The Inspectors of certain Army Corps go round now and again, but it is not an inspection as we have it; it is more like an inspection of a Brigade at Aldershot on a small scale. The Inspector of an Army Corps to begin with is the Army Corps Commander. He inspects the Divisions, he inspects the Brigades, and he sees regiments out manœuvring; he is always riding about. The inspection of a regiment is a sort of continuous thing and never ceases; even when recruits are being drilled the Generals look on.

7854. Therefore this constant exercise he has over all the ramifications of his command in course of time endue him, I suppose, with a certain intelligence beyond that which you think general officers in England require to possess for their commands?—I did not quite understand that to be your question.

7855. My point is whether a Commander of an Army Corps in Germany is a superior soldier or a superior administrator, first of all by reason of his training and education, and secondly by the amount of work he has to do and the inspection he has to exercise over the whole of his command from year to year?—If I were to give an adverse opinion on that point I might find myself in the black hole of Calcutta as soon as this report comes out.

7856. From what you know of your colleagues, General Officers Commanding in England; supposing they were to undertake such responsibilities as those exercised by Commanders of Army Corps in Germany, do you think them quite capable of undertaking the same responsibilities?—I think so; I do not see why they should not be.

7857. Their training and their experience would fit them for the same responsibilities as those exercised by the German Commanding Officers, you think?—If you are going to begin a new system to-morrow it will take some time before the individuals who have the management of that system get into the trend of it; but when that system has gone on for some time as the German system has gone on for nearly 100 years now, I do not see why there should be any question or any doubt at all about the British General being able to carry out the duties every bit as well as his colleague abroad.

7858. Quâ soldier and cultivated man all round, no doubt we have in our country just as capable men as they have in Germany; but assuming that a General Commanding here were to have, say next year, entrusted to him, on the same principle as the German

Commanders of Army Corps have, the whole of the responsibility connected with his command, could our Generals undertake that responsibility under the conditions at present existing? Could they undertake the whole administration of their commands at the present time?—I think they could. I do not see why they should not.

7859. Of course you know their powers are extremely limited at the present time?—I think the greater the responsibility the more interest the individual would take and the quicker he would master the details which were suddenly thrust upon him.

7860. The German system involves the control of the General Officer Commanding over every small article of supply necessary for his Army Corps, I take it from what you say. I understand the amount of money once placed at his disposal through the Corps Intendant, he has to bestow that money as he thinks best, without question or control from the War Office, for the benefit of his whole command?—Quite so, but he does not get any money for other purposes than building purposes.

7861. But there is clothing bought and utensils bought, are there not?—Yes, but that is done again in the regiments. The regiments draw the clothing in material and it is made up in the regiment. Every Captain has his own Quartermaster's stores and you will find that although every year a new tunic is made for each man (which is more or less cut in the same shape and size) he wears the tunic of two years before that as his best, and the first and second tunics, that is to say, the newest tunic and the newest but one are kept for war purposes.

7862. Then there is no such system prevailing there as we have in our districts here, where a soldier receives a certain amount of compensation for not having used a tunic when he was entitled to use it?—I do not think there is.

7863. They merely give out the tunics there as they are worn out?—As they are worn out. Of course if a soldier goes and messes himself about, he has to pay for a tunic, but I fancy that those sort of crimes, if you like to call them so, happen very seldom in Germany. You see, every soldier has his character at stake in Germany so much more than he has in England. In the first place, no man is allowed to have the honour of wearing the Emperor's uniform if he has ever got himself into serious trouble and into gaol, and if a soldier commits an offence of a serious nature, like desertion and so on, that man's name is placarded up on the church door of his village or town where he belongs to. Therefore a man has his character at stake, so that when he comes back from soldiering he wants to go back into Civil life with the character of having been a good soldier and a true one.

7864. Would you ascribe the general intelligence that that condition of things would indicate, to the superior education all round of the German soldier?—Unquestionably the German soldier is a better educated man than the English soldier.

7865. And therefore more easily controlled under certain circumstances than an English soldier?—Well, he controls himself. You see there is not the same amount of drunkenness in Germany as here. They drink a lot, but the stuff is so weak that they would have to drink a barrellful of stuff before getting drunk.

7866. Apart from the quality and strength of the drink, has not the German soldier greater power of control as regards self-indulgence?—I think he has from this point of view, that he has got really something to lose—he has got a stake in the country which our soldier has not.

7867. Speaking of Corps Commanders again. I presume, notwithstanding that in regiments Captains have to take charge of certain duties, in questions arising requiring an authoritative decision, that decision must be given by the Corps Commander on any subject that is referred to the War Office, I understand?—No, not unless it is something new.

7868. Any question arising out of the administration of his Army Corps is settled locally?—Yes.

7869. And no question of that sort is ever referred to the War Office?—No.

7870. The Army Corps Commander, therefore, in himself is a complete despot or a complete administrator, and he is bound to take upon himself the

responsibility of every question requiring settlement?—Yes.

7871. And in case of anything going wrong, which the War Minister might eventually discover and have reason to make any comments upon, the Army Corps Commander would have to be responsible?—Yes; the whole of the discipline also is under him, and if it is necessary to bring an officer before a general court-martial he can do all that, but he cannot confirm the sentence. The Emperor alone confirms the sentence on an officer.

7872. In relation to travelling from time to time, I suppose officers have to move about from one district to another on business, and the expenses for such movements would be allowed by the Corps Intendant?—Yes.

7873. And no return of that would ever be given to the War Office?—It would have to be in the accounts, I suppose.

7874. But the General Officer's position as to what should be allowed for such and such a journey would never be questioned?—No. You see the German officers are continually moving about, because they are transferred from one regiment to another.

7875. Therefore these various Corps Commanders control what the expenses shall be?—Yes.

7876. And after that there is no question arising in any way?—No.

7877. It simply appears in the accounts as travelling expenses, and there is an end to it?—Yes, there is an end to it.

7878. Then the financial control, such as we have in this country, is exercised entirely by the Corps Intendant?—Yes.

7879. Are they from time to time controlled in any way? Are they inspected, or do they make reports, and are they called upon to give an account of the way in which they perform their services of scrutiny and check?—Whether they are actually inspected or not I do not know, but the very fact of their accounts going on to the War Office proves the scrutiny; or if they find a man is dilatory they would naturally say, "This Intendant is not worth keeping," and he is simply discharged.

7880. (Chairman.) Then the Intendant in turn has to send his accounts up to the War Office?—Yes.

(The Secretary.) They have also an Audit Department there too?

(Witness.) Yes, but the fact is as soon as these returns go away from the Army Corps they very seldom hear anything more about them.

7881. (Mr. Mather.) From your experience in regard to military matters, do you think they carry on the same strict and careful investigation as in an ordinary business concern?—Yes.

7882. They do it scientifically, and cannot help doing it from the very nature of the training of their minds?—Quite so.

7883. Therefore would you conclude from your own observation, and also from what you know of the system of control, that in all respects where money is involved, it would be perfectly satisfactory to accept their system as the most perfect that could be devised to keep a check and control over the Army which they have to serve?—Yes.

7884. And that the money is spent to the best advantage?—Yes.

7885. And no other control could be devised which would be better than that which they have at work—outlay, under the direction, so to speak, of the Army Corps Commander?—Quite so.

7886. (Mr. Gibb.) Going back to the first part of your evidence, you described the Adjutant-General as a great centraliser?—Yes.

7887. And you said something about having inspectors of different arms?—Yes.

7888. I want to know whether you were suggesting a new principle of the classification of the duties that now fall to the Adjutant-General?—As to everything that the Adjutant-General does now, I see no reason why these duties should not be divided or delegated to the inspectors, or to the heads, of the branches of the Army as suggested in my memorandum. Let the Infantry man run the whole show—discipline, and everything else in connexion with Infantry.

Major-Gen.
L. V. Swaine,
C.B., C.M.G.

13 March 1901.

Major-Gen. L. V. Souaine, C.D., C.M.G. 7889. (*Chairman.*) Involving the abolition of the Adjutant-General?—Yes, involving the abolition of the Adjutant-General.

13 March 1901.

7890. (*Mr. Gibb.*) But also involving the separation of the discipline, training, &c. of the Cavalry from the discipline, training, &c. of the Infantry?—Quite so, I do not see any danger or any harm in every Branch running its own discipline. But as you have mentioned cavalry I would not have an Inspector-General of Remounts separate from the Inspector-General of Cavalry. The former's duty should be purely administrative.

7891. I was not going so much into the detail as trying to get it clear that you practically would take away all the duties which are now performed by the Adjutant-General, and would introduce a new principle of classification?—Quite so.

7892. You say that all these duties as regards Infantry could be performed by one officer, and all the duties as regards Cavalry could be performed by another officer, and so on?—Yes; but, of course, with a small staff and clerks.

7893. Would that apply to such things as the settlement of patterns of clothing?—Why should not the Infantry man settle that for his body? I do not see any reason why he should not.

7894. Then you would carry your principle right through?—Yes.

7895. So that all duties which are charged on the Adjutant-General might without regard to uniformity be split up?—Yes. Now, as to matters of clothing, we have a Clothing Department, and I do not see why that Clothing Department should not be a separate department altogether.

7896. (*Sir Charles Welby.*) There is no essential connexion between the Adjutant-General and clothing?—Quite so, the clothing is really more Quartermaster-General's work than Adjutant-General's work.

7897. You would retain an Inspector-General of Recruiting, I suppose, as now?—Yes, but I would make the Inspector-General of Remounts a senior staff officer for that branch under the Inspector-General of Cavalry.

7898. (*Mr. Gibb.*) You mean you would divide the whole work into two arms?—No, I should have Infantry, I should have Cavalry, foot Artillery and the mounted branch of the Artillery, with an Inspector-General for each; and then with reference to the Inspector-General of Fortifications he would want assistants under him, but I should take the Barrack branch away from him and put it under the Quartermaster-General absolutely. The Quartermaster-General says we are going to have huts at Lichfield, and he writes down to me and says, "Choose a site." I choose a site and send him up a map showing how and where we are going to build the huts. He then goes to the Barrack Department or the Building Department, or whatever you like to call it, and says, "Now, you carry out this."

7899. (*Mr. Gibb.*) Describing what ought to be rather than what is?—Yes. I think the Engineers have quite enough to do without messing about barracks. The Engineer Department is a very hard-worked Department, and I do not think there are a sufficient number of officers in it to-day in order to carry out the work efficiently.

7900. (*Mr. Gibb.*) You would not remove, would you, from the Inspector-General of Fortifications the Architect's duty of preparing plans of buildings and supervising building?—Yes. We used to have a Barrack Master's Department which was under the Quartermaster-General, and I should have that again and make them build.

(*Sir George Clarke.*) That was not a constructive corps.

7901. (*Mr. Gibb.*) Are there ever any meetings of General Officers Commanding all over the kingdom?—No.

7902. Would not it be a good thing to have periodical meetings between them?—That would lead rather to uniformity, and you are rather trying to break out of the uniformity system so as to let every man run his own show in the best way he can, and let the authorities be able to judge by the results.

7903. Mutual conference by people who are dealing with the same problems is an advantage, is it not?—

I do not know that it would be of any particular advantage, because, after all, whenever we are in a difficulty or anything of the sort, and we want to hear what they are doing in another District, I always write and ask how do you act in your District in such and such a case.

7904. But personal discussion is so much better than correspondence, is it not?—Yes, but it may so often happen that there is nothing to tell or nothing to ask. It might do good.

7905. (*Mr. Beckett.*) I see that in the German system there are five inspectors, and you recommend the same thing here. I gather from your answers you do not quite understand what the exact functions of these inspectors are; have they executive functions?—Which inspectors do you mean—Army Corps Commanders?

7906. No, the inspectors generally?—I think in order to see how regiments are trained they should go and have a look at their recruits, and so on.

7907. In what relation would they stand with the Army Corps Commander. They announce their intention of visiting each district, I suppose?—No doubt.

7908. And they would have to do what they wish, I take it?—I suppose that would be it. I do not know whether the Army Corps Commander would inform the troops or whether the inspector would.

7909. Then according to the German system they report direct to the Emperor?—Direct to the Emperor.

7910. And, of course, here reports would be made to the Commander-in-Chief?—And the Secretary of State, I suppose?

7911. I suppose these inspectors are of very high rank in Germany?—Yes, from Lieutenant-Generals upwards. It has been known for a Major-General to be an Inspector-General, but he must be a very senior one.

7912. And you think that does more to promote the general efficiency of the Army than our present system, do you? Do you think if these Inspectors-General were created instead of the Adjutant-General the result would be a great improvement in the efficiency of the Army?—Yes, because I think it would do away with the overlapping.

7913. And it would keep the Army Corps Commanders up to the mark, too, I take it?—Yes, I think it would.

7914. I see in Germany the Army Corps Commander is absolutely independent in his own command?—Yes.

7915. And if he objects to an Army Order issued he has a right to appeal to the Emperor?—Yes.

7916. Could any system analogous to that be established in England?—I think it could.

7917. Under the new system now proposed, would the Army Corps Commander have the same independence, do you think, as he has in Germany?—I do not know whether that is the intention; I have not the least idea.

7918. I gather your idea is the more independence he has the better?—Undoubtedly.

7919. And the less he is liable to interference from the War Office the better?—Undoubtedly.

7920. Then as regards the expense, I see that there is a Committee formed in each Army Corps to draw up a budget of expenditure for the year?—Yes.

7921. And that is sent into the Corps Intendant?—Yes.

7922. Who passes it on?—Yes.

7923. Do you think that would be a system which it would be advisable for us to follow in England. Do you think each Army Corps should draw up a small budget of the probable expense during the year, and submit it to the local auditor or to the Army Corps Commander and have it sent in to the War Office?—If you could get it done, I am sure it would be a good thing, but all these points are new, and there is a great deal of difficulty to persuade people to agree to let Army Corps Commanders have a free hand.

7924. But in that way they would not have exactly a free hand; at all events, they would make it clear to the War Office what their requirements were, which, I think, would be a very good thing?—I think very good.

7925. I see that in Germany each Army Corps provides its own clothing and has its own stores?—Yes.

7926. I was very much struck by the figures Mr. Brodrick quoted in his speech, in which he showed that the expenditure on clothing was very much less, or that the same things cost very much less in Germany than in England?—That is so.

7927. Is not that rather an answer to the contention that if the clothing were ordered locally it would be very much more expensive here than if it were got from a general store?—Yes, I do not think that would answer. When we established our Army and Navy Stores here the first department established was the grocery department. When the Germans started their Co-operative Store in Berlin the first department they introduced was the tailoring department. These are things you cannot compare.

7928. Then I gather as regards the clothing stores you would leave things as they are?—Yes, I would.

7929. How do the Germans manage to keep down their regimental expenses, because there is a great contrast between their system and ours in that respect?—In the first place, they do not care so much about their stomachs. We like eating well; and things are cheaper there.

7930. There are no absolute regulations, are there, as to the amount of money which may be spent in a regiment on a mess?—No. The officers as a body are not so well off as ours and their wants are less. Small means necessitate small expenses.

7931. That is left to discretion?—Yes.

7932. I find this passage in a letter written in 1898 by Major-General Gossett on page 152 of the Report of the Committee on Decentralisation: "When once a post or an appointment is sanctioned, the choice, nomination or change by the occupant should be left to the General Officer Commanding the District. At present names of men proposed for posts remunerated at 6d. per diem have to be submitted to the War Office." Is that the system now, or has that been done away with?—No, I have greater powers than I had.

(Colonel Miles.) You have greater powers, but I think they are subject to review at the War Office. Sir Redvers Buller in his evidence, I think, spoke on that point.

7933. (Mr. Beckett.) Yes, he did; but do not you think those powers may be extended to advantage?—Certainly, it seems ridiculous that anyone for 6d. a day, or whatever it may be, should have to write up here.

7934. (Sir Charles Welby.) With regard to this proposal of yours as to the Adjutant-General's Department, one objection which naturally occurred to me with regard to it was that the splitting of responsibility for discipline amongst a number of inspectors attached to different branches of the Army might lead to considerable variation in discipline, that is to say, what might be considered a very serious offence in the Infantry, might be looked upon as a trifling misdemeanour in the Cavalry, that struck me as being a disadvantage, but I gather from you you would think it a sign of healthy life?—I do not think you would suffer from that, because if you would suffer from it then you are suffering from it to-day, because discipline in one unit may be different to discipline in another.

7935. But it is kept more or less on broad lines laid down by the Adjutant-General's Department, is it not?—The King's Regulations remain, and the Commander-in-Chief can change them as he thinks fit.

7936. (Sir George Clarke.) And they are promulgated to everybody?—Yes.

7937. (Sir Charles Welby.) Another consideration which occurs to me is this: I understand from you you propose that these inspectors shall combine the functions of inspectors of the various arms with the functions of training and discipline which are now performed by the Adjutant-General?—I do not want any misinterpretation of the word "inspector," because I do not care what they are called; you may call them by any other name, but I merely mention inspectors because we have an Inspector-General of Cavalry to-day; that is the only reason why I gave them that title.

7938. Then you do not set any particular store on the particular function of inspection?—None at all,

but I think they should have the power of going about the country.

7939. The essence of the proposal is really, is it not, to break up the Adjutant-General's Department into small bureaux, each attached to a certain Branch of the Service?—Yes.

7940. I understood you to say that, in your opinion, such a system would conduce to decentralisation; did you mean decentralisation in the War Office or decentralisation of work now done here out to Districts?—Principally in the War Office.

7941. A break up of this gigantic office here?—Yes.

7942. I want to ask you a little further about the German system, which I have not altogether grasped yet?—You will pardon me for interrupting you, you must remember I have been away from Germany five years, and it may be that many things have happened since I have left.

7943. They are very broad questions I am going to put to you. I take it that an Army Corps does make its own estimates in Germany—the Army Corps Commander submits an estimate for the expenditure in connection with the maintenance of his corps for the year?—That is so.

7944. And those estimates are sent up, I suppose, to the War Office in Berlin?—Yes.

7945. Are those estimates presented to the German Parliament by Army Corps—that is to say, is there a vote for the First Army Corps and a vote for the Second Army Corps?—No, the whole thing is presented to Parliament by the War Minister.

7946. In what form is it presented to Parliament? Our estimates are presented, not by arms of the Service or Districts, but by subjects—that is to say, there is a works vote, a stores vote, a vote for pay, and so on. What is the system in Germany?—I think the system is something similar to our system, but you can easily get at that from the Intelligence Department.

7947. Then the Army Corps budget is broken up at the War Office into subjects there?—Yes.

7948. Passing from that, how does the Army Corps Commander obtain what he requires for the up-keep of his corps; take, for instance, stores. What is the process in obtaining the stores he wants. Does he buy them for himself?—The Intendant does all that.

7949. Let us take the case of rifles and ammunition. How does he obtain them?—They would have their mobilisation stores; every unit has its mobilisation stores.

7950. But that store requires to be replenished, what is the process?—They get an annual grant of so much, so many saddles, so many stirrup leathers, and so many of whatever is required.

7951. It does not get a grant of money but of articles?—Yes, they are furnished.

7952. Therefore the estimates for the year that he submits to Parliament do not include such things as those which are supplied to him in kind?—No.

7953. Therefore the estimate he submits does not in any true sense represent the true cost of running that Army Corps for the year?—No; the War Minister steps in and makes the addition for stores.

7954. Therefore his estimate only includes those things for which he and his Staff actually pays in cash, is that so?—I take that to be so.

7955. For small buildings and local supplies and matters of that kind?—Yes.

7956. The only other point I want to ask about is, with regard to the suggestion of putting the barracks under the Quartermaster-General. You do not suggest, do you, that the Quartermaster-General should have handed over to him a large part of the staff which is now under the Inspector-General of Fortifications, the whole of that part of the staff which deals with barracks, do you?—It is really a question which sounds rather as if one wanted to upset the whole ship, but that is not at all what I want to do. I was corrected by Sir George Clarke about the number of officers in the Engineer Department; I thought they were overworked, but as there seems to be in time of peace, at any rate, an ample number of officers, the Engineers might retain the building branch—I should not like to call it the barrack branch, although the engineers themselves do not build the barracks; it is done by

Major-Gen.
L. V. Swaine,
C.B., C.M.G.

18 March 1901.

Major Gen.
L. V. Swaine,
C.B., C.M.G.

13 March 1901.

contract. I see no reason against if it was thought advisable transferring the whole bag and baggage to the Quartermaster-General's Department in a separate branch called the Barrack Building Branch.

7957. Would it not be a more advantageous system that the Quartermaster-General, having approved the sites and plans which are suggested locally, should then leave it entirely to the officer commanding a local Army Corps to carry out the work?—Certainly.

7958. And so get rid altogether, not only from the Inspector-General of Fortifications but, from the Quartermaster-General of a great deal of the work in connexion with barrack building?—Yes; that I should prefer, but you must have somebody who should draw the designs. There must be somebody who does that; but whether that is done in the Engineer Department or whether it is done in the Quartermaster-General's Department is open to question.

7959. Then you will allow that there ought to be some uniformity about it, I take it?—Is that your point? I think you want some technical man to draw you a picture of a hut, and to settle upon dimensions, because it would not do for me to build huts with seven windows to hold so many men, and my neighbour to build a hut with only five windows.

7960. I do not see myself that it very much matters?—But a hut with seven windows is bound to be colder than a hut with five, the length of the two being the same.

7961. Then you think the discretion as to the temperature which should be aimed at in the building of huts is not a question which can be left to Army Corps Commanders, but must be left to Headquarters?—I think as to buildings, you must have a uniform plan, because otherwise you would have huts built of totally different types in different districts caused by the fads of individuals.

7962. I am afraid that the drawback to all decentralisation is that one man may differ from his neighbour?—Yes, but that is advantageous as you gauge the usefulness of individuals.

7963. (Chairman.) If these new Army Corps Districts become as self-contained and as self-sufficing as possible how could they deal with questions of drafts for foreign service?—That would be for the department in the War Office; the Infantry would settle the drafts for the Infantry.

7964. It would have to be settled at the War Office, would it?—It would have to be settled here because that is to a certain extent administration.

7965. Then the War Office here would call upon an Army Corps to furnish so many Infantry for a draft to India at such and such a time?—Yes.

7966. Which is very much what is done now?—Yes.

7967. You could not say to your Army Corps District you must annually supply at certain times so many men?—No, that would not do with us because we have not got always the regiment of the locality in our districts.

7968. Precisely; that would only do if you could tie your Army Corps to a district—say out in India?—Quite so.

Adjourned for a short time.

7969. Which would be an impossibility probably?—Yes, because the troops shift; you see they go from a good station to an indifferent one and *vice versa*.

7970. It would be impossible?—It would be quite impossible. There would be no difficulty about the drafts because, of course, the Cavalry Department or the Infantry Department in this house would write out and say, "You must send a draft of 200 men of the Lancashire Fusiliers by such and such a time out to India."

7971. (Colonel Miles.) But the drafts for the Infantry could be arranged in districts if thought desirable, could they not? They could write to the affiliated battalions and find out the number of the draft required without reference to this place?—Of course you could.

7972. Or being tied to a district in India?—That, of course, you could do.

7973. (Sir George Clarke.) All that would be necessary would be for each district to have the charge of supplying their own units?—Drafts of their own units, Warwick or Manchester, or whatever it is.

7974. (Mr. Mather.) Do you mean if we were to adopt in England the German system, pure and simple, and concentrate in the districts the command in the hands of Army Corps Commanders, there would be no difficulty in our supplying our outlying portions of the Empire with the necessary troops that from time to time may be required as we have to do now, and receiving those troops again in England and apportioning them to their territorial divisions as the Germans do?—I see no practical difficulty about it.

7975. I am glad to have that admission, because I thought there was a great difficulty in our adapting it to the requirements of the British Empire?—I see no difficulty.

7976. You are painfully aware, of course, of the regulations called King's Regulations in the British Army?—Yes.

7977. The enormous variety of them and the versatility of invention in their compilation from time to time. Is there anything analogous in the German Army to the small and minute regulations invented or provided for the guidance of a soldier or an officer such as we have in the British Army?—Their regulations are very similar in that way to ours. But whereas they have only one set of Regulations we have four: Regulations for the Regulars, for the Militia, for the Yeomanry, and for the Volunteers.

7978. In volume and extent?—Yes, nearly so.

7979. Finally, in relation to the matter of regulations, you think, do you, we have nothing to learn from the Germans, and they cannot improve our system?—No, not in regulations, because I think they are very involved.

7980. (Colonel Miles.) Surely their regulations about allowances are not so involved as ours?—Yes, much the same, but I was thinking more of the King's Regulations and those sort of works.

General the Right Hon. Sir REDVERS HENRY BULLER, G.C.B., G.C.M.G., V.C., examined.

Gen. Right
Hon. Sir
R. H. Buller,
G.C.B.,
G.C.M.G.,
V.C.

7981. (Chairman.) You are now commanding at Aldershot?—Yes.

7982. Previously, I think, at one time or another, you occupied the positions of Quartermaster-General and Adjutant-General at the War Office, roughly speaking, for about 10 years altogether?—Yes, I did.

7983. So that we can hardly come to any greater authority than yourself as regards the relations between the War Office and the Districts. Is it your opinion that, as a consequence of the new proposals for constituting six large army corps districts, larger powers might be given to the generals in command of such army corps?—I do not think as a consequence. I have always objected to the relations between Generals commanding districts at home and the War Office, and I do not see that the constitution of army corps makes the slightest difference.

7984. The larger the charge under the generals as it would be then, the more those difficulties would be

accentuated, would they not, and the discrepancies, if there are any?—Possibly, but the effect of the larger charge will really be to create fewer charges, and that may be a reason, of course, for giving more power to generals; but, speaking broadly, I do not think the relations between generals commanding at home and the War Office have, during the 25 years I have known them, been satisfactory.

7985. Would you give the Committee, who are seeking for enlightenment and information, your opinion on any particular points in which those relations are susceptible of improvement, and ought to be improved?—I think I might sum up my opinion by saying that the War Office have never tried to make the distinction which, in my opinion, should be made between the military policy of the country and the military government of the Army. From my point of view, the two duties are really, and should be, perfectly distinct; and as a rule—in fact, as a matter of history—

they have been confused. And then I think that the great blot in the military administration of the Army has been that there has never been any attempt to place any financial responsibility upon the Commander-in-Chief, and through him, by means of the generals, upon the officers who administer in the districts.

7986. When you say financial responsibility upon the officer who administers in the district, what would that consist in—power to interpret regulations, or to make contracts?—I should like it to be power over a certain sum of money; power to administer his district, so to speak—administer it in the sense of being responsible for the money that is spent in it. At present, no General Officer of a District at home has financial responsibility.

7987. Then would you like the General of a District to be given a certain sum of money, which he would be able to spend entirely at his own discretion?—Well, not entirely at his own discretion. I consider that the General of the District should be responsible for the money that is spent within the district—that he should be the accountant to the War Office for that money, and that the accounts should be, in the first place, subject to his supervision before they go to the War Office; and that, in fact, the accuracy of those accounts should be enforced, not as now, as a matter of disallowance, but as a matter of discipline.

7988. That is to say, if he or anyone under him had spent money erroneously, instead of that money being recovered, he should be reprimanded?—I would not say instead of that money being recovered, because it might be possibly the duty of the War Office to recover it from him or somebody else; but over and beyond the fact of the man who had received the money being made to repay it (and it might be not advisable to make him repay it), the General or the officer who is proved to have been responsible for that money being wrongly spent, should be made responsible from a discipline point of view; and it should be held that he was responsible. That is what you would do in civil life. If you found that one of your men kept on spending funds you did not allow him to spend, and that he was not by his position authorised to spend, you would get rid of him; and I think that is the way we ought to work the finance of the Army.

7989. But all the finance of the Army is controlled by regulations?—It is over-controlled by regulations, because there has been an attempt, which has never succeeded, to control it from the War Office. The War Office write these regulations and are continually altering them; on every new phase that arises in the life of the Army they change a regulation to attempt to meet it, in order that the whole of the intelligent people under them shall be kept in very strict leading strings; to my mind that is impossible, the attempt, I think, has always more or less failed. It works in a manner, but with immense friction. I have never gone into what the saving effected by the War Office is, what the amount of disallowances is, but to speak quite roughly I should doubt its being 1*l.* per 1,000. Taking our War Office Estimates at about seventeen millions, I should doubt if the War Office, by what they call audit—but what I should rather call computation—has ever saved 15,000*l.* a year; that would be something under 1*l.* per 1,000. I have never seen any statistics of that kind; it is a guess of mine; it may be much greater, but I doubt its being so.

7990. Then in order to give this larger financial responsibility to the General you would have in the first place to very much reduce the regulations?—I should make them more elastic, but when you do that of course you would have to keep the General up to the mark by a live audit. You would have to send an auditor into the district who would audit the General's expenditure very much as is done now with the school boards and local boards in England.

7991. Then that would only be to see that there were proper vouchers for the things that he sanctioned?—But it must be an intelligent audit to see if there was any extraordinary expenditure, anything outside the letter of the regulations or outside the rates laid down, anything outside those he would have to be responsible for, and he would have to give on the papers his reason for allowing those extraordinary payments.

7992. But his reason would be final?—Yes and no. It would be subject to the audit and to disallowance, and as I said he would be held disciplinarily responsible that his reason was sufficient.

7993. Then would you allow the inspecting local auditor if he went down to Aldershot and found that you had granted extra duty pay to judge of whether the reasons that induced you to grant the extra duty pay were sufficient or not?—He would do exactly what the district auditor does now in the school board accounts, enquire into the General's reasons for allowing the expenditure, and, if necessary, simply disallow it. The School Board for London have been spending money that the auditor has considered they had no power to spend, he disallows the money and they have to go to the House of Lords, I understand, for an interpretation of their powers. The General would have to go to the War Office, and he would there be judged; he would have to show his cause and the War Office would be the judge whether his action was justifiable or not.

7994. Then the auditor would query it and the War Office would decide whether the reasons were sufficient?—Yes.

7995. (*Mr. Gibb.*) That implies not only the reasonableness of the expenditure, but some written document by which the expenditure can be checked?—Those are all in the district. My complaint against the War Office audit is that it is a dead audit; it is not an audit at all, it is a computation.

7996. But the school board auditor can say: "There is the Act of Parliament, this expenditure is not authorised by the Act"; and the whole question for the deciding authority is not whether the reasons for the expenditure were good, but whether or not the Act of Parliament authorised it?—That is so in the simile I used, which so far is not on all fours with the case, but the same thing exists with our regulations. The auditor would say: "There is a thing that I do not consider is empowered by the regulations." The same thing happened in the War Office. I am old enough in the War Office to remember when the Comptroller and Auditor-General claimed as of right to see the War Office papers, and the whole financial branch objected that he had no right; but they were defeated by Parliament, and the Comptroller and Auditor-General now in his comments upon the War Office accounts quotes frequently the minutes and War Office papers which give the reasons for which certain expenditure that he takes exception to was incurred.

7997. Then under your proposal the query would arise upon any expenditure authorised by the General outside the strict letter of the regulations?—Yes.

7998. Do you see any advantage in the suggestion that the General should have at his disposal a certain sum which he should spend entirely at his discretion, and as to the expenditure of which his signature should be sufficient, that the auditor should not be able to raise any query on it, excepting on the point that the vouchers might not be forthcoming for the payment?—He has got it already to a certain extent; he has got in Part III. of his Engineer Services, which would be most likely the subject in which an immediate expenditure was required, certain powers to apply the lump sum that he gets under it to various services.

7999. But that is only as regards works?—Well, but what else is he going to spend much money on?

8000. Say the Commander-in-Chief in India?—But I am talking of districts at home.

8001. The Commander of any one of the Indian Army Corps in command of a district has a certain sum of money at his disposal which he can spend at his absolute discretion as long as it is for military purposes?—I believe he has, and we do the same at home with our Generals with regard to manœuvres; we give the General so much money and he spends it as he likes. That is a system that I invented myself and started myself and it has worked, though I am the author of it I think I can say, extremely well. But that is not a sum of money that is for any purpose, that is a sum of money for a specific purpose. I cannot at this moment think of any particular thing for which I specially want loose money, if I may call it so, at Aldershot. If there were a sudden demand on, say, a sanitary item, I should apply the money I have for works for the time being for doing it on my own responsibility and put the place in a sanitary condition, and either trust to a saving at the end of the year or report that I had had to spend the money.

8002. Did you not have a little difficulty a short time ago about an Officer attached to the Yeomanry, in which case you sanctioned an allowance for him which might or might not be authorised by the regulations?

*Gen. Right

13 March 1901.

—It was a question of the interpretation of the regulations, and that would be a question for the auditor. Whether I was right or whether I was wrong I was acting as I believed then within my powers, within the regulations.

8003. That is to say, you believed in your interpretation of the regulations?—Yes, and that would be a question for the auditor. Then I say there discipline would come in. If I give a reasonable excuse for misunderstanding the regulation I think that should end it. There would be a ruling upon my action, and it would be communicated to everybody, and nobody else would be able to make the same mistake.

8004. But you do not see any objects for which a sum of money placed at your discretion could be usefully used?—No, speaking suddenly, none occurs to me at this moment. I do not think you ought to give a large sum of money to any General to be spent off his own bat, so to speak, because he goes by his estimate; he asks for all he wants and theoretically he is allowed as much as the country wishes him to spend in the year; and if you give him over and above that a loose sum, except for training purposes (which is a specific purpose), I do not quite see what he is to spend it on.

8005. When you talk of an audit being a dead audit, do you think the audit would become more real if it was carried on locally?—Yes, I think so; I should like it to be local. I should like to be cross-examined into my expenditure on the spot. They would say, "You have spent this and you have no right to spend it," and I should like to be able to give my reason why I spent it. What happens now is that it comes up here and they disallow a sum of money that has been spent and I may or may not justify my expenditure. Possibly the man who has received the money may have gone in the meanwhile to South Africa and if I really do not care much I pass it out there and ask him to repay. Then he protests, and very likely there is a fair means of manufacturing a correspondence that may last one or two years. It seems to me that it is not quick enough; it is not the way to do it; it ought to be a discipline matter, in my opinion.

8006. But if, instead of this disallowance coming from the War Office after the money is spent, you had a local auditor with powers delegated to him from the War Office of settling matters within those powers, and whose certificate should be accepted by the War Office as final, you could say to him, "My reasons for such and such an expenditure were so and so," and if he accepted them as sufficient and gave a certificate the matter would end there?—Yes. What I mean is this: I do not think that the money that we recover in a year is worth the tremendous friction or worth the great distrust that it teaches officers stationed in the districts to feel of the War Office. I do not think you gain anything like an equivalent for the friction that you create. Whereas under the system that I should like to see, it would be made a matter of discipline. The General Officer and all the officers of his staff ought to be gradually trained into business habits, and this would provide the machinery for doing it. Their work would be looked up every quarter, or half year say, by a high class auditor, who would point out to them where they had misinterpreted or misunderstood the regulations or exceeded their powers; then the question as to whether the General was justified in committing either of those three slips would be at once reported to the War Office, and they would decide, and any General who went on doing what he had not the right to do would be removed from his command as a matter of discipline. Of course the men are ignorant now; they have not been allowed to touch finance; but in that way you will gradually educate them, and I am certain that you would find that you would create a lot of business men of good business habits.

8007. Would your local auditor also possibly be any use to the General Officer as regards the interpretation of regulations before he took action; would it ever be useful for him to consult this man as some Generals now consult their Paymaster?—Well, I always make my Paymaster responsible. He has to write me a minute to say I have power to do a thing before I do it. I should not myself like to make the auditor also an assessor or an umpire; I should like him to be detached from that. He should be a War Office man, I recommend.

8008. But it might be useful to consult him. Supposing that you wanted a thing done he might possibly be able to indicate the way?—They do that now, I believe,

with the Local Government Board auditors; it is the habit of clerks to local authorities to write to the Local Government Board auditor to know if he can allow such or such an expenditure, and if the man says no, he stops it.

8009. Then if the auditor said it was impossible, if the General chose to assume the responsibility he would say, "Never mind, I will go to the higher tribunal"?—Yes, but he would realise the fact that he did it at his peril.

8010. But if the auditor agreed with him and gave him a certificate, as is well within his power, there would be no question then of trouble afterwards with the War Office; but if you were to consult the Paymaster, however excellent an opinion he may give you, there is always the possibility that the War Office may not accept his opinion?—Yes.

8011. They are not bound by his opinion in any way?—No, they are not, but I have always contended that they ought to be.

8012. I think with regard to contracts that it is not clear that the larger power now given to Generals is more than illusory in so far that the General has very little voice in determining the contractors who are to be put upon an approved list of firms from whom tenders shall be invited. I believe you can get a contractor removed with some trouble, but it is still more difficult for a General to get a contractor put upon the list; while sometimes the Director of Contracts, without conferring with him at all, can, and does, add contractors to that list, and when the list is made up from all those contractors who are all, by being put on the list, considered equally good and satisfactory, naturally the lowest tender is accepted?—Yes, it is a difficult question, that contract question. Personally, in anything I say, I should be very sorry to allow the slightest idea to prevail that I am against a separate contract department. I am tremendously in favour of it. I believe it is our greatest safeguard in every way. In times of pressure you will find that there is generally a great complaint on the part of any of the spending branches against the Director of Contracts. I should imagine that probably if you asked the Ordnance Department for last year they would be dead against the Director of Contracts.

8013. I think we have no doubt upon that score?—I imagine so. I do not know; I have not asked a soul, but I was sure, from my experience, that you would find it so, and the reason is, that when they have pressure they try to scamp the preliminary of contracts.

8014. That is to say, that ordinary formalities which do not trouble you in time of peace, seem in time of pressure extremely irksome?—Yes; but those formalities in time of pressure are more necessary than ever—I think so, at least—therefore, in anything that I say I do not want it to be supposed for a moment that I think the Director of Contracts' Branch could be abolished. But I do think that the Director of Contracts' Branch suffers from the same fault that all the War Office Branches suffer from, that is to say, they are too much detached from the Army, and they do not work enough with the men they are working with. The tendency throughout the War Office is to get every branch into a sort of water-tight compartment, and in this I think there is room for improvement. And just in that very case of contractors, I do think the War Office work is not as good as it ought to be, and the real reason is, that we are not particular enough with our contractors; that we let men on the list who are probably very doubtful, and that when on the list we are too easy with them; we keep them on very often when we ought not to, and I think we also often let men tender for larger jobs than they are capable of executing.

8015. Then if the Generals had a large voice in the formation of those lists, and if those lists were revised, say annually, in conjunction with the Generals, a good deal of this difficulty would disappear?—I wish I could say that I agree with you. I am not so sure about that. You must remember that there are few Generals, perhaps 1 in 20, who are thoroughly acquainted with either manufacture or building.

8016. Or estate management?—Or estate management; but 19 out of 20 very possibly know nothing, and they are absolutely in the hands of their Commanding Royal Engineer or their Ordnance Officer. If you have a good Commanding Royal Engineer, my

experience always has been that you have no trouble with contractors; he tells you the right men, and now and again the War Office force a bad man upon you, but not often. But if you have an indifferent Commanding Royal Engineer, not very well up in building work, then you begin to get into trouble, assuming that you have a General who knows nothing.

8017. If you have a General who knew nothing, and if he was consulted in the revision of the contractors' list, he would naturally consult his Commanding Royal Engineer?—His Commanding Royal Engineer is his right-hand man for that work. The Commanding Royal Engineer to a certain extent consults the General, but he is practically responsible.

8018. And if the Commanding Royal Engineer was not a good man, he might get into difficulties?—Yes. I watched the very heavy building operations while I was Adjutant General. In the seven years that I was Adjutant General a very large loan was being spent, and I am bound to say that my view was that for large expenditure we did not centralise enough. Large expenditure, anything exceptional, anything over a 2,000*l.* contract, I think, would be better if left in the hands of a central office.

8019. Do you consider that the department of the Director of Contracts, the retention of which you advocate, results in work being done better and more cheaply for the Army; or is also one of the arguments in favour of its retention in your mind that if it was not there the soldiers might get involved in a great many awkward questions with contractors, and find themselves living in an atmosphere of criticism and suspicion?—I think that the tendency all through the Army is that we put men to work which they have no special training for. There is nothing that I know of that requires more care really than dealing with contractors, especially under our system. The contractor knows perfectly well that our payments stop on the 1st of April. In the last month, if we really want to get a job finished, it is almost impossible to keep up the standard of the work. He says at once: "If these are bad bricks I will write up and change them; it will take me another month." Or, if the wood is too sappy, or the joinery is wrong, or whatever it may be, the work deteriorates, because he takes advantage of our position. Building on loans, as we are doing now, I do not think the matter so much matters; of course, there is no finishing by the end of the year; but I think the more particular we are with our contractors, in the long run the better we shall get the work done. And in order to be particular with our contractors I advocate the retention of the Director of Contracts and his office.

8020. I gather, as regards buildings which are done under the Vote, the difficulty really arises from the system of unexpended balances having to be surrendered?—Yes, re-voted—a difficulty arises.

8021. A difficulty arises?—Yes. With regard to buildings, of course I think every building should be a lump sum vote. That would be the first reform. I am told that it is contrary to the British Constitution, but I think in that case the British Constitution ought to be altered. It is impossible to keep up the continuity of responsibility and supervision if you are going to have your building operations financially broken off on the 1st of April, and then to begin again.

8022. Are they, as a matter of fact, actually broken off?—Well, the money is.

8023. But the contract, once made, goes on?—Yes, but the money has to be re-voted. I am not sure, but I think there is a disposition to limit contracts to the period of the financial year.

8024. You get it back again?—Yes; but there is a great tendency to try and shove that contract through in the last month to get as much done as possible.

8025. And that leads to extravagance?—Yes, and I believe to poor work. I must say I am very fond of building in private life, and I find that in the public work that I see very much more has to be pulled down and re-erected than I ever find necessary in private work.

8026. Is that, perhaps, because in private life you do not always employ the cheapest man, but employ the man you trust?—You employ the man you trust. That, perhaps, we cannot do; it is difficult to do it in the Army. I think we might do it a little more than we do.

8027. But if in the case of work the system of surrendering unexpended balances were given up, and the balances could be carried over to next year, would not that be an advantage?—I think so, an immense advantage. It is a mere matter after all of account. They might be automatically re-voted; it might be understood that the payment went on. You might close the account on that day and that would not hurt at all. I think there should be a lump sum vote for each thing; whatever the man says a thing should cost that lump sum should be voted at once by Parliament, and let the Treasury distribute it over as many years as they like, but there should be a definite understanding that the building is to be erected for that sum of money.

8028. And a good many troubles in districts arise, do they not, in connection with works; it is one of the most troublesome things that a General has to deal with?—Yes, they do. I do not approve, myself, of the distribution of work in the Works Branch as between the Headquarter Office and the district.

8029. Is there too much centralisation?—Well, there is a want of system. At one time it is all thrown at the district's head and at another time it is all done in the Headquarter Branch. Then sometimes you will find that the contractor comes up to the War Office and gets an order, of which, the district knows nothing. I have at the present moment a trouble with a contractor, in which he comes up and claims to have been allowed to alter the plans.

8030. By the Inspector-General of Fortifications?—By somebody in that office.

8031. Whereas you might have objected to the alteration of that plan?—We know nothing of it. He sends in a claim then for an extra on his contract, and we say, it is all nonsense, you ought to have followed the plans; and he says: "Oh, I had authority from the Headquarters Office;" and then and there begins a long correspondence and then the contractor is out of his money and it is nobody's business particularly to finish that squabble quickly, and generally the contractor suffers; he is kept out of his money a long time.

8032. How does that happen? Does the Commanding Royal Engineer refuse to give a certificate because of the alteration of the plan?—Yes. In this particular case I think it is about 570*l.*—so many extras at 12*l.*—in my district, and the Commanding Royal Engineer said: "No, we cannot pay for this—we did not authorise you to alter this plan and incur these expenditures of 12*l.*," and he said that he had authority to do it from the Headquarters Office; then we wrote up and they replied with rather a vague letter, and eventually I threw the whole papers at their heads, and when the contractor came in the other day and asked for the money I said I did not know anything more about it. But there has been delay.

8033. Was it proved that he had authority?—I do not know; it is not settled; I sent it up to them and asked them to pay the contractor if they thought it right.

8034. But their letter seemed to evade the point whether the contractor had or had not authority?—It was not clear. It may turn out to be perfectly right, but, as a matter of fact, once having committed us to the contractor's plans, I think it would have been better, if they had wanted to do anything, if they had done it through my office instead of outside.

8035. At any rate they ought to have notified you?—I think they ought, but sometimes they forget, you know; they are busy, no doubt. This is where I think they want a more perfectly defined system.

8036. You have not much trouble as regards stores, have you?—No, I think we are very well done as regards stores. I do not like the store accounts or the principle on which the store accounts are kept, and I did about two months ago make proposals for a very crucial change; but we have no difficulty—we practically are getting everything we want from Woolwich or else we get authority to purchase locally.

8037. But I think there is a system, is there not, by which the Commanding Officer of a unit sends in requisitions for Ordnance stores without any reference to the question whether by so doing he will or will not exceed his annual provision, and then that requisition has to be checked by the local Ordnance officer before he gives the order to the storekeeper to deliver the

13 March 1901.

article?—Yes. There again in that, as in all the War Office accounts, there is room for the introduction of what I should call discipline. I consider that the Commanding Officer should be held responsible absolutely that he does not exceed the regulations, but, as a matter of fact, he never has been. The Ordnance people, who were until quite lately a department, that is to say, purely a civil branch—they have latterly been made a military branch, but used to be a civil branch—like all the civil branches, have not done anything by discipline, but do it all entirely by disallowance, and if the Commanding Officer spends more than he ought to, they charge him for it, and then he objects, and then there comes a correspondence.

8038. I gather, then, that it would be better in your opinion to make the Commander of the unit absolutely responsible for only putting forward those requisitions which are within his prescribed allowance?—Yes; my panacea all through for the simplification of account is a more direct responsibility for expenditure.

8039. That would be more direct?—It would, of course. Stores are money, of course, and I should make it a financial responsibility. The question is a simple one: should you check the head of the using, or spending department, or the Storekeeper?

8040. Then you would get rid of the check of the Ordnance officer, would you not?—The Ordnance officer would be the man through whom I should keep a check on the Commanding Officer. At the present time the check rests on the Ordnance Officer—the Storekeeper.

8041. But he would not have to check every requisition before he sent it forward?—No, he would check the ledger.

8042. But as it is now he has a rather elaborate and rather fictitious check on every requisition as it comes forward?—Yes; as a matter of fact, he is supposed to look through these requisitions, and he has not before him the knowledge which would enable him to do so satisfactorily.

8043. And that check might be got rid of?—I think so. At least, I would get rid of that by making it a matter of discipline. I would say to the Commanding Officer, "You must do this; you must not ask for more than you are entitled to."

8044. That would make him think?—Yes, and that is what we want to teach the whole Army.

8045. Then, I think, on that point of stores there is another question, is there not; that is to say, in the case of the commander of a battery; he has allowed to him every year so many buckles, so many straps, so many brushes, and so on, for meeting his wear and tear—so many actual items without any reference to the question whether that particular year the wear and tear may have come more heavily upon brushes or buckles or whatever it may be?—Yes, every officer commanding a unit is allowed a percentage of his equipment to meet wear and tear.

8046. But in actual items?—Yes, in kind; and everything is given a life by the War Office, and a percentage on that life in kind is allowed every year, so that the whole thing may be kept going and kept up to date all through. He asks for this amount every year. You saw some of those requisitions at Aldershot. I did not think it was my business to criticise anything which was said to you by the officer in charge, but I thought that in what he said to you he was a little hard in saying that the officer pretended that everything had gone when it had not gone. Those requisitions were merely for his annual proportion. He showed that the whole of the list was expended because theoretically it is expended; he is entitled every year to so much. Where I think they are wrong is that they give a fixed proportion of everything, and very often all those proportions are not wanted, and I would much prefer myself to credit the man the value in money, and let him draw upon the store itself for the stores that are wanted up to that value.

8047. That is to say, you would give him credit on the Army stores for so much?—Yes.

8048. And within that credit he would himself select the particular stores that he required?—Yes, and he would have the account kept by the Ordnance officer and draw on the credit. It would be the same cost to the public precisely, but it would give the man a more intelligent training in his up-keep.

8049. And also make him look more carefully after waste?—Yes, I think it would. It would make him look more carefully into things; in fact it would make him think.

8050. Then again, while we are talking of signing requisitions and so on without due consideration of them, is it not the case that there are a lot of forms in the Army which are signed by officers without any consideration of the matters to which they append their signatures?—Yes, I should say there were a good many.

8051. For instance, in the case of travelling claims, when a captain, let us say, sends in a travelling claim the colonel of his regiment signs a certificate to the effect that he has carefully examined all parts of the claim and found it correct, when, as a rule, he has done nothing of the kind?—Yes, perhaps some of them do. Travelling claims are about the most difficult thing to deal with. I do not know why it is, but I believe in all branches of the public service, and out of the public service, in private life, it has been found that people look upon travelling claims to a certain degree as a source of income.

8052. They get a little something?—Yes, they want a pull. I myself have often considered the subject, and I do not know that I could very much improve on the system that the War Office has acquired by using historical knowledge; our system has been worked out by that really; but I think the system would work better if it was a trifle more liberally treated. There are all sorts of tiny and petty disallowances which in my opinion had much better not be made; they annoy people and create friction to a certain degree, and I cannot help thinking that they defeat their own end, because they set the officers against the central authority.

8053. My particular point as regards the signature was that when the Commanding Officer has signed to the effect that he has carefully examined all parts of the claim and found it correct, which he does not generally do, the Paymaster looks into the travelling claim put forward by the captain really without taking into consideration in the least the certificate of the Commanding Officer; he simply looks into the captain's claim and sees if it is all right?—Speaking off-hand I do not think the Commanding Officer certifies to the claim being right; he certifies that the journey was necessary.

(The Secretary.) He has to certify to the claim being correct.

8054. (Chairman.) He certifies that he has carefully examined all parts of the claim?—Yes, that the several items are in accordance with the regulations, but it does not say in the way they are moneyed out, at least I have not read it in that way. I signed a great many travelling claims some years ago, and I never looked at the question of the manner or the amounts charged; but if a man charged what I did not think he had any right to do, say that he stayed two days at a place instead of one, I said, "You cannot have that."

8055. But is not the language that he has "carefully examined all parts of the claim and found it correct"?—"I have carefully examined the several items of the above claim, and they are in accordance with the allowance regulations." It does not say that they are moneyed out right, merely that they are in accordance with regulations. No colonel that I know thinks he can do that or ought to do that. That is done by the Paymaster.

8056. Then all you want from the colonel is that he has given authority for the particular journey to be made?—Yes, that the particular journey has been made in the right way; that is what you want really, and that is the way that certificate is understood. Of course, for years there has been a habit in the War Office of what they call stiffening up certificates, which I think is ridiculous. I do not believe you get a better certificate by making it a stiffer one. The man you want to pin is the man whose business it is to look after the thing, and the man who has to look after this travelling claim is the paymaster; he allows it, and when he allows it, so far as the officer is concerned, I think that ought to be a complete discharge. Then if the War Office find that a paymaster allows claims which he ought not to allow, they ought to get rid of the paymaster.

8057. (*Mr. Gibb.*) Do not you think you could go a little further and say, that if money has been actually *bond fide* spent by an officer on travelling expenses, he should be reimbursed; if he has spent too much, perhaps he ought to be disciplined and warned not to be so extravagant on a future occasion?—Personally, I agree with you; but that is not a view that has ever been allowed to obtain in this office. For example, the War Office have made a contract with the railway companies under which an officer travelling receives a cheaper ticket; in order to get that cheaper ticket he has to produce a yellow paper and show an order; he produces this yellow paper, and then the clerk gives him a ticket at two-thirds the ordinary fare; if he neglects to take the paper he cannot get the two-thirds fare, and on small journeys he habitually does neglect it. For example, I myself have come up here, and I paid 8s. to come here; the War Office will allow me, I think it is, 7s. 1½d., but if I charged the 8s. the difference would be disallowed. I always put down the 8s., and I expect the paymaster to alter it to 7s. 1½d., and that I think every officer does; but whether it ought to be said that I should have the right to charge the 8s. or not, I cannot tell you—that is the dispute, and that is the sort of point that is constantly arising upon these travelling claims.

8058. Is not that just where too great niggardliness and precision in the examination leads ultimately, not to the saving of money, but to the wasting of money?—That is so.

8059. Because if it is taken out of the officers in one direction they will retaliate by being perhaps rather loose in other directions?—Yes, undoubtedly the War Office administration has fixed upon the minds of the officers whom they administer the opinion that the War Office robs them whenever it can, and that it is a fair thing for them to rob the War Office whenever they can. That has been the result, and I believe that it is due to the sort of niggardliness that you mention.

8060. (*Chairman.*) That is the same feeling that the general public have towards railway companies?—Much the same feeling that the general public have towards the tax collector.

8061. There is no question of the tax collector being niggardly, but you do not like him?—Perhaps he is too liberal in his views and interpretations of what he can claim.

8062. There is a disposition in fact to play it rather low down on any great corporation?—Yes; and it is very difficult for the War Office really to know what to do; I do not blame them at all; I think with regard to travelling claims it is a difficult thing to know what is the right way to get them. I do know that if you are travelling for any other department than the War Office you are much more liberally treated than you are by the War Office.

8063. (*Colonel Miles.*) And the total amount in question is really quite small comparatively, 50,000l., 60,000l., or 70,000l.?—Yes.

8064. (*Mr. Mather.*) Are not those questions that could be left absolutely to the discretion of the Commanding Officer?—That is exactly the sort of thing that I should leave to the General. If the Paymaster brings a claim to the General and says: "This claim is too much, I think it should be 4d. less," the General should say to the officer: "You must not do this again," and there it would be ended, and let the War Office see that.

8065. (*Mr. Beckett.*) I see that in your evidence before the Decentralisation Committee you proposed to give the General a maximum allowance?—Yes, I did for travelling, as I have already said.

8066. You think that that would work well?—Yes, and let him cut it down if he likes.

8067. (*Sir Charles Welby.*) For himself do you mean, or for his district?—For each journey. I would have three qualities of journeys.

8068. (*Mr. Mather.*) Do you mean that he should keep a cash account himself, and have the money paid for the journeys?—No; the most that could be spent on a particular journey, might, under the most liberal interpretation, be, say, 1l.; the General would decide whether the man going should spend 5s., 10s., or 1l.

8069. (*Mr. Beckett.*) And then you say that on a basis of two or three years' experience you might give him a maximum allowance for the whole district?—Yes.

8070. And that that would save an enormous amount of trouble?—Yes, I think so.

8071. (*Mr. Gibb.*) I do not like maximum powers?—Neither do I, but that would only be with regard to the General. He ought to have a proper audit.

8072. The General ought to have the power to pass any reasonable bill in his opinion?—Yes, but to do that you must have a proper audit, and that we have not got.

8073. (*Mr. Mather.*) The General is the most capable person really to perform an act of discipline, if necessary, upon an officer or non-commissioned officer who has disbursed more money than he should do on a journey; the General only can deal with the sort of disciplinary control that you should exert over that individual?—Yes, he and his Staff can do it, and will do it. I am perfectly satisfied that anybody who looks back through this office will find that since the allowances practically passed into military administration they have been much more sharply looked after, and disallowances have been greater than they used to be in the old civil days. The General will do it and he will save money.

8074. (*Colonel Miles.*) If anything, in some ways we have been almost too strict?—Yes, I think we are, because they have turned the soldier on to the civil regulations, and he has taken the letter of the law and stuck to it.

8075. (*Sir George Clarke.*) You would not admit for a moment that the soldier cannot be an economical person?—I think he is extraordinarily economical; he is much more economical than the civilian in civil administration. When I was engaged in arranging for the transfer of the whole of the money that was voted for the services of supply and transport for the year, to me as a military officer from the civil branches, one of the most capable men that I certainly ever met who was at that time an officer on the civil side of this office, the late Sir George Lawson, said to me: "You will be able to do it; we have never been able to keep these men in order; they will obey you, and they will not obey us"; and that is the truth.

8076. But it has been rather a tradition of this office that all soldiers are spendthrifts, and can only be kept in order by civilians?—That reminds me of the good old ancient story that I have heard trotted out hundreds of times, that in the old days, when the colonels of regiments were allowed so much money to keep their regiments up, they kept the regiments down and the money in their pockets. I daresay they did, but that was the fashion of the country at that time; it is not the fashion of the country now; that was in the good old days when the Paymaster-General's was supposed to be a very profitable office.

8077. (*Chairman.*) So far as the General Officer Commanding has anybody whom he can call a business manager in his district, it is the Assistant Adjutant-General for B, is it not?—No, I think not; practically he does his duty through his staff, and he has under him a man called his Chief Staff Officer; he would be the officer who would have to pull together the different functions of the staff.

8078. (*Sir Charles Welby.*) Is that the Deputy-Adjutant-General?—A big General would have a Deputy-Adjutant-General; a small General would have an Assistant Adjutant-General.

8079. (*Chairman.*) Who is the officer who makes the purchases for your district of hay and oats and things of that kind?—That is done by a man who is called my officer commanding the Army Service Corps.

8080. And what does the Assistant Adjutant-General for B do?—The Assistant Adjutant-General for B represents the head of the old Supply and Transport Department of the War Office, and all things the soldier gets are within the functions of the Assistant Adjutant-General for B. To put it very broadly, the Assistant Adjutant-General for A superintends all the soldier does, and the Assistant Adjutant-General for B superintends all the soldier has to do it with. The individual is under the Assistant-Adjutant-General for A, and the material under the Assistant Adjutant-General for B.

8081. The Assistant Adjutant-General for B is more the representative of the Quartermaster-General?—He is the Quartermaster-General. The late Commander-in-Chief objected to the word Quartermaster-General,

Gen. Right

13 March 1901.

and the Assistant Adjutant-General for B was coined as a sufficient equivalent.

8082. Is it a good one?—It is by way of being the same thing. You must not take me as assenting to it; I have always objected to it; I have always been in favour of re-introducing the time-honoured appellation of Quartermaster-General, but the late Commander-in-Chief was against it, and he had strong reasons on his side at the time that he abolished it; I think its abolition was an unmixed blessing.

8083. (*Colonel Miles.*) Was it with a view to amalgamate the two branches more?—Yes, to get the two departments out of their grooves.

8084. That is to say we were in rather water-tight compartments, the old Quartermaster-General and the old Adjutant-General?—Yes, when I became Quartermaster-General at Aldershot in 1881, the Commanding Royal Engineer of the period walked into my room and said, "I am Commanding Royal Engineer, I suppose as usual we shall quarrel." We did not, we became very good friends. But that is what was going on in those days.

8085. (*Chairman.*) You did not allow him to quarrel?—Well, we were friends.

8086. Could you indicate any other directions besides those of financial responsibility in which decentralisation might be extended further?—It seems to me that really all the duties you have to do are summed up under three categories. One would be numbers, one would be time, and the other would be money. I do not well see how you can decentralise numbers, because after all they fix the expenditure and they come under what I should define as the military policy of the country, which I think ought to be entirely controlled by the War Office. And time is also a question of policy, so that beyond the expenditure of money I do not see that you can very usefully decentralise so long as you have voluntary enlistment.

8087. Are there any unnecessary references to the Adjutant-General's Department?—There are many fewer than there used to be; it is a very difficult thing to say. You can go through the Queen's Regulations; I did myself three years ago, I re-wrote the Queen's Regulations, and cut out everything I thought I could cut out. In that last Committee, two years ago, several Generals came up and recommended small details, what I might call odd jobs, which they said could be better done in the districts than at the War Office; but I think if you look into a great many of them, they affect principles which the War Office alone is cognisant of; it has the power to take a very much larger view of things than the officer in the district can, so that it is difficult to put some of them out. Take such things as whether or not it is desirable to allow men who have been passed to the Reserve to re-enlist, or whether you should re-engage men for further service. This sort of question must depend in a great degree upon the flow of recruits into the Army, of which the man in the district knows nothing. I think one of the necessities that are put upon us by voluntary enlistment is the centralising of our machinery for enlistment, and all the things connected with it. But I think we might do much more than we have done in the way of decentralising responsibility.

8088. And foreign service also, I suppose, leads to centralisation, to have an office which can deal with all the questions arising out of foreign service with the Indian Government, the Colonies, and so on?—Yes, I think there are many more than there need be. And, of course, a General Officer abroad has more power a great deal than a General Officer at home. I never can conceive why that should be. A General Officer abroad is allowed to do a great many things which are refused to a General Officer at home. It has always seemed to me, in theory, that the opposite ought to be the case. That has grown out of the case that in old days communications were slow and difficult, and the General Officer had to do the things; but that shows how very curiously the Army system has grown up, that such a thing could be; that where you have a man under your hand and can stop him at once, you hold him much tighter than a man who is a long way off.

8089. But what things can the General Officer Commanding at Malta do, for instance, that the General Officer at Aldershot cannot?—He has more power with regard to discharges; and more power with regard to money generally, I think.

8090. (*Sir George Clarke.*) And he can make any contract he likes; he has no two thousand pounds' limit?—No. All round he has more power. Of course when a General goes on service he represents the Secretary of State for War, and he can do anything; and that is what the General at home ought to do. Instead of which a General goes on service now, and gets a staff who have not the slightest idea of money at all. They do not understand the system of the Army; they have never been allowed to see it, and they know nothing about it.

8091. (*Mr. Gibb.*) But when you contrast the power of the General abroad with the power of the General at home, pointing out that the former has more power, apparently you hesitate to give the Generals at home more power?—No, I would give the General at home more power; but I say I do not think you can give the General at home more power with regard to numbers. The General abroad has got fixed numbers; he has nothing to do with that.

8092. Would you give them as great power as the Generals abroad have?—I would give them as great power financially, and in certain other ways also. I should like to see the military government of the War Office (not the military policy side) organised exactly like an army in the field. All our staff training should be on the same principle, and every district the same, and then, when you moved into the field, everything would go on as per usual, instead of as now, when it is an entirely new departure.

8093. (*Chairman.*) You have one system in peace and an entirely new system when war breaks out?—Yes, entirely, a lot of new duties which have never been allowed to be touched in peace time.

8094. Such duties as making contracts and purchases?—Making contracts and keeping up supplies and looking after your stores and equipping hospitals, and every sort of thing, and the power to build and to buy and do anything you choose, and for that the men are absolutely untrained.

8095. Was that experienced in this present war? When you went out did you find that you had some difficulty owing to their not having been trained to do any of these things?—One of your members was my chief staff officer; perhaps he would like to explain to you what he felt. I did find certainly that I had some staff officers sent to me who knew nothing of what I wanted them to know. They learned them very quickly, and now, no doubt, they know a good deal. But they had had no previous experience; they did not understand the incidents and duties consequent upon the freedom they were given by being at war.

8096. (*Sir Charles Welby.*) And the same would be true of commanders of units?—Yes, take that point. The commanding officer of a unit in the field is absolutely responsible to the General to keep that unit clothed. Practically in peace time he has nothing to do with the clothing, except to see them at kit inspection.

8097. He would not worry himself in peace time to know whether they had boots or not?—He has not got it on his mind as a duty that he has to perform.

8098. In time of war he would have to judge how long the boots would last?—Yes, it is his business to keep up the store, to keep his men equipped; whereas in peace time he lives from hand to mouth. He writes to the War Office, and down comes what is asked for.

8099. He writes a requisition for boots without any reference to the fact whether he has exceeded his allowance of boots or not?—Yes, in war he should.

8100. In the German Army has not the commander of the German unit to take much more thought and care for the clothing and supplies of his unit?—I do not know that I am a great authority upon the German Army; I have never studied it in these details, on the ground that its system would not be applicable to our Army. The German Army Corps is absolutely localised, and never leaves its barracks. They keep as many, I believe, as four suits of clothes for every man, and they enlist through the whole population, and at the time of their annual drafts they get all their recruits in on the same day; their recruits go through then a perfect system throughout the year of training which can all be laid down beforehand; it is all an absolute certainty, and they get a considerable number of tradesmen, whom they employ, so that their army corps are practically self-supporting. Whatever their machinery is it never moves. But our regiments go all over the world; our

recruits come in every day of the year, and we have to be in a continual state of casual training. It is a very much more difficult machine to run.

8101. The demands upon it are much more complicated and varying?—Much more.

8102. (*Mr. Gibb.*) Before you pass from what you said about the commander of the unit being responsible for clothing, is not the commander of the unit responsible for clothing of troops in peace practically to some extent as well as in war?—Not to the same extent. He practically has no trouble at all with it. He is responsible that the regiments are clothed, but it is all done for him, and the correspondence practically is carried on for him by his quartermaster, and it is done without any action on the part of the Commanding Officer. He never carries about with him any particularly large store, nor has he to make any provision for special emergencies.

8103. But does that arise simply from his delegating the responsibility that he has to the quartermaster, when he perhaps might keep the responsibility more in his own hands and on his own mind?—It is the system. I do not defend it.

8104. (*Colonel Miles.*) He did not exercise perhaps sufficient forethought in forecasting the requirements and wants with regard to clothing and boots. He told us at the last moment sometimes he was short of boots and expected them to be supplied?—That is so. He has in peace no anxiety whatever about clothing; it is a mechanical thing and is done for him by the quartermaster. But in war he has to keep his regiment clothed up.

8105. (*Mr. Gibb.*) He need not leave it to his quartermaster in peace time, need he?—Yes, practically he has to do it.

8106. But the responsibility is his?—Only theoretically. The work is done by the quartermaster.

8107. (*Mr. Mather.*) He has the quartermaster with him in time of war also?—Yes. But the duties of the quartermaster are different. In peace time he is trained simply to follow regulations, in war time he ought to exercise forethought and make provision for possible future requirements.

8108. And then does he leave it to the quartermaster to obtain supplies?—I do not want to find fault with the Commanding Officer and say he does not do his duty in peace, but under our system I do not think the Commanding Officer receives training in peace for the responsibilities that fall upon him in war, and I think he could very easily be made to do so, and that to do so you should put more responsibility upon the Commanding Officer than you now do.

8109. And from him upon all the people under him?—Upon all the people under him. Throughout the Army I want to see more responsibility placed upon individuals and that can only be done by delegating financial powers (it comes to be financial powers) in the expenditure upon stores.

8110. (*Mr. Gibb.*) You have said that you want to see greater financial responsibility vested in the Generals. I want to follow it out just a little. As regards buildings I presume that a proposal for building has to be made, it has to be decided that the building has to be built, and then money has to be got from Parliament for it; do you suggest that as regards buildings the Generals could have more power than they have now?—I think so. The General makes a great many proposals, and those are out down at the War Office practically without any reference to him. He is not given a sum of money and told, "We only give you this much and your building this year should be limited to that;" in the end he is told, "You will build such and such things and here is the money for it."

8111. But would you give the General a sum of money and allow him to spend it as he pleased without any estimate?—No, every building that is proposed is accompanied when the proposition comes to the War Office by an estimate of its cost. The General Officer commanding a district proposes a certain expenditure on what is called Part I. Services, New Buildings. When it comes to the War Office and it is added together it is generally about five times as much or more than five times as much as what the Secretary of State is prepared to allow for Part I. expenditure, and therefore these proposals have to be cut down. I think that it would be better to make the General cut

them down, to say to him, "No, you have asked for so many thousand pounds and the very most you are likely to get is so much less; cut down your proposals for buildings to meet that sum."

8112. Supposing that the General in his proposals includes ten proposals, and we will assume that five of them are going to be put into the estimates; is he not consulted as to which of the ten he would prefer?—Practically he is not, I think he ought to be.

(*The Secretary.*) The General does grade them in categories according to what he considers the degree of urgency.

(*Witness.*) Yes, under categories No. I., No. II., and No. III., and so on.

8113. (*Mr. Gibb.*) Therefore when you say he should have power over a certain sum of money you do not mean to say that he should be given a certain sum that he may spend it as he pleases, but that he should have the selection of the works which are to be submitted to Parliament for the annual estimate?—He should be consulted in their selection.

8114. Now as regards payments in the nature of pay, extra pay, and allowances and so on, to what extent would you give the Generals responsibility? You have and always must have, I suppose, certain regulations, then I presume that there always will be and always must be a number of doubtful points arising on regulations, would you give the General practically the final power to decide in doubtful cases the interpretation of regulations?—Yes, I would. I think I should have to do it gradually, because the General at present has not been trained to it at all, or few of them have. But that is what I should aim at, that he should be responsible for a proper and economical distribution of public money within his command and he should be made responsible through a good and rapid audit.

8115. That is to say that there should not be a power in the Accountant's Office at the War Office to disallow what the General has allowed, but simply a power to call attention to the case for future guidance?—I think there ought not to be. I think that one of our great difficulties is caused by the system that now prevails, which ensures economy by disallowances, and I believe it to be a bad system myself. I have always been against it, and I have always said that if you want to secure economy you should do it as a matter of discipline. If you find you have a man to whom you give powers and that man deliberately and frequently or very excessively exceeds those powers, you should say, "You are no good to me, come out of it;" that is the way to hit it.

8116. But that involves a constant revision of every authority by some other authority?—That is what goes on now. I wish to substitute supervision for revision.

8117. Give the General who has the final authority the final power of deciding certain questions of interpretation and take his decision for better or for worse?—That is what I should like to see; watch him, and if you think he is going wrong, stop him and warn him, and if you find that has no effect, get rid of him; but to do that you must have the machinery of course for watching him, and I do not think our present so-called audit of the War Office is a good-enough machine.

8118. But you would not watch him, would you, more than to this extent, that he ought not to pass a payment which is clearly prohibited by regulation?—He ought not to do so, but at the same time there are a great many things that are not prohibited, that are permissible—extra pay and what we call extra duty pay—which are given for certain things. I would allow a General to grant them, but if I found that he was habitually giving extra duty pay in circumstances which I thought it was not intended for I should warn him, and if he went on doing it I should get rid of him.

8119. Do you not come back there to the evils of the system that you are condemning, that whether or not the extra duty pay should be allowed must be always a matter for discretion?—Scarcely I think; my view is that you should fix the point at which the discretion is given lower down.

8120. And do not you think that the discretion of the General on the spot is more to be trusted than the view of an Accountant Department in the War Office?—But I do not want it to be an Accountant Department, I want it to be an Audit Department, whose decisions would be enforced through a Military Department; the discipline is to come in there. If they think more

*Gen. Right

13 March 1901.

money is being spent by this General than they think ought to be spent they ought to caution him. Every big trader has to do that.

8121. To caution him against general extravagance?—Yes. What they do now is, they stop the wretched man who got the extra 4d. or 6d. a day, and recover the money from the man. That has no effect on the General or on the policy of the army; but if they pull up the General and say, "You ought not to have given those fourpences, and you must not do it in these cases," there would be no more given, and that is the way I should like to see what I call economical administration introduced.

8122. But I want to be quite clear, that where the question is a question of discretion, you would allow the General's discretion to practically be final?—It would be final as against that particular payment; but I should say that if the military hierarchy of the Army, in watching the expenditure of the Army, found that one particular General was much more liberal than another, it would be their duty to check him.

8123. Or perhaps to suggest to other Generals that they were not quite liberal enough?—Yes, that might be so too.

8124. Now as regards works; you said that there ought to be a lump sum voted for each building?—Yes.

8125. I want to see if I can follow it clearly. We will assume a building is to cost 10,000*l*. You suggest that that building should be authorised by Parliament, that a sum of 10,000*l*. should be authorised; and then, supposing it were estimated that 3,000*l*. is to be spent the first year, 6,000*l*. the second, and 1,000*l*. the third, then these respective payments can or cannot be included in the Annual Estimates just as the Treasury authorities, I suppose—the financial authorities—decide?—Yes.

8126. But as regards the authority for the 10,000*l*. required for the completion of the building that should be given when the building is passed?—Well, to a certain degree, it is given now. So far as I understand, and I do not know that I do quite thoroughly understand the financial system under which that Works Vote is administered, if we want a new building to cost 10,000*l*., in order to be able to spend 10,000*l*. on that building you have got to get Parliamentary sanction for that building. That is done by putting it down in the Estimates, saying that when completed it will cost 10,000*l*., and taking a Vote that year for perhaps 100*l*.; sometimes they take for more and sometimes for less, but a common sum to take to get a building on the estimates is 100*l*., and then the Treasury can never refuse to pass any sum up to 10,000*l*. for that building.

8127. (Sir Charles Welby.) That is for a continuation service?—Yes, the building may not be commenced for five or six years. Every year there would be 100*l*. again voted for this building. There is no particular reason that it should be begun perhaps, and, very likely after two or three years, some several sums of money having been voted towards it, the building is never begun at all. I have seen it happen, I think I am describing the system rightly. I think that is all wrong, it creates a laxness of responsibility. I think that no building should be begun until it is really absolutely necessary, and it should be begun with the understanding that it would be finished and completed right off; the money should be voted for it, and once Parliament has said this building should be built at the cost of 10,000*l*. there should be some means of manipulating the money in the Treasury so that that building should be begun and should go on regularly until completed, and that it should not be dependent, as it is now, upon the whim of successive Secretaries of State for War as to the amount of money to be spent upon it each year.

8128. (Mr. Gibb.) The case you mention must probably have been a case where there was a change of mind on the part of somebody; nobody would put a building into the estimate until they had definitely decided that the building was to be constructed, would they?—Well, they do; they get them in to get the authority. I do not quite know what advantage that authority is myself. Mr. Gibson can tell you, but I know it is done. To my mind that relieves the building branch of the responsibility that they ought to have.

8129. It seems a bad system?—I think it is a bad system.

(The Secretary.) I do not think such cases are of frequent occurrence.

8130. (Mr. Mather.) Those sort of things necessarily happen owing to different circumstances prevailing after a few months from those that prevailed at the time. We all have to do that with regard to our own expenditure?—We do, but what I mean is I do not think there is sufficient weight of responsibility upon the initiation of the new work.

8131. You mean before it is advised?—Yes.

8132. It is too loosely entered upon as a matter of advice and demand?—Yes.

8133. Speaking of the Contract Department, I understood you to say that there was considerable looseness in the authority or authorities of the Contract Department in giving out contracts to firms or persons whose work was apt to be scamped?—I do not think I said looseness. I said that I do not think the Contract Department are always quite enough in touch with the executive departments for whom they make contracts and for whom they select contractors.

8134. And in consequence of that, I think you said that some contract work was turned out in a manner which you considered unfit for its purpose?—Yes, in consequence of that, I think, and the consequence of that is, that sometimes contractors who are perhaps hardly the best for the particular job in hand, get the job.

8135. Would that remark have reference more to stores than to buildings and works of construction; have you in your mind certain stores, for instance, that were sent out to the war or supplied to the district here from time to time, which were not of the quality that you think was required for that purpose?—Since we have had the Inspection Branch I think the quality of our stores has certainly very much improved. I do not know what difficulties they have had, I left office now some years ago; but in old days undoubtedly we did get from certain contractors inferior goods; I do not know that we do to the same extent now—I do not think we do—but I was thinking at the time I spoke more of the works contracts and building contracts.

8136. But you had had considerable experience down at Aldershot before the war, I suppose, in seeing works carried out there under your staff?—I was not then long at Aldershot, but I had had a good deal of experience. I am very fond of building, and there had been very large expenditure while I was Adjutant-General, and I did look into the buildings a great deal, and I saw a great deal of what was going on.

8137. You seem to favour the delegation of making contracts and carrying out works to the General Officers Commanding Districts up to 2,000*l*., but for a larger sum you thought it ought to come to the central office here and be dealt with; I mean throughout from first to last by the central authority?—I should be inclined to. I have always wished to make the central office the designer; to do all the larger designs in one office.

8138. In that case, would it not require the services of your Commanding Royal Engineer in the district to supervise that work, or would you still employ him to see that the contract was properly carried out?—He would have to supervise the work in execution. He would be the clerk of the works.

8139. Would he have power to reject bad material or workmanship if he saw it going on?—Yes, he would be responsible for seeing that good work was done.

8140. In that case the General Officer Commanding would after all become responsible for the work being carried out properly?—Yes.

8141. Though the War Office had made the contract?—Yes, but that is all I want them to do.

8142. Then since the General Officer Commanding the District had no power over the selection of the contractor, and the Commanding Royal Engineer only acted as clerk of the works, do you think he could come in sufficiently close responsible relations with the contractor to reject work and workmanship?—I think he would be just like a clerk of the works under an architect; his would be absolutely an analogous position.

8143. But the architect has full power to reject the whole work, and require the builder to do it over again—the General Officer Commanding or Commanding Royal Engineer on his staff would not have power to do that?—I say he would be in the position of clerk of the works. That is to say, he would object to the

timber, or brickwork, or construction, and if the contractor did not admit that objection he would at once refer it to the central office. But he might be more that this, he might be introduced into the contract as the authority.

8144. That is what I wanted to get at. A complaint has been made to us that such references lead to great delay and loss of time, and the contractor makes out a case for himself, so to speak, behind the back of the clerk of the works, or the one you describe as the clerk of the works, the Commanding Royal Engineer?—But I would make the central office do exactly what the architect does; they should come down and decide the matter off-hand.

8145. That would be a staff officer from here?—Yes; he would come down from here at once and decide the question on the spot, *sic volo sic jubeo*.

8146. There seems to be much difficulty to get a responsible officer to go down from the central authority—to go down to the spot?—Yes, because they have not at the present moment the particular officer I have in my mind. I am proposing to create a department for this work alone, or a branch of a department.

8147. That would be a new departure that you would recommend?—Yes. I am not quite sure that I have made myself clear. What I recommend is that for lesser works all responsibility should be centralised in the district, for larger works in a central office.

8148. Turning to finance, you say that finance is after all the whole root of administration in the districts, and of course finance, that is to say the power over certain sums to be spent in the district, or the whole sum settled to be spent in the district for all purposes, you would place entirely in the hands of the General Officer Commanding?—I would entirely.

8149. Parliament, no doubt, as men of common sense largely imbued with the business faculty, at least the House of Commons, would, no doubt, be pleased to sanction a system of that kind, provided finance, in their estimation, was not after all the chief matter they had to deal with, but to control the expenditure within limits so as to get the very best value they could for the money. Your financial control over the General Officer Commanding, I understand you, would be a local auditor sent down from the War Office and representing the War Office?—The original control, the first control, would be arrived at by the Military policy of the country fixing the numbers and drawing up the regulations under which they were to be paid. It is not exactly control, but to ensure that those regulations are obeyed, you follow with the audit.

8150. You have given us the sum of 10,000*l.* being sanctioned by Parliament to be spent on certain works in the district as an example, and you say it must be a lump sum, and the work must cost not more than that sum of money?—Yes.

8151. You know, of course, that you have considerable extras?—As a rule you will find that we always over-estimate. We are obliged to. I believe all public departments are obliged to, because it is so much easier to let the Treasury have the money back than to get extra money out of the Treasury.

8152. You mean the 10,000*l.* lump sum would be an over-estimate to begin with?—Yes, a comprehensive estimate.

8153. And include any contingencies that always do arise on buildings beyond the prime cost?—Yes, as a rule it is so generally.

8154. That, of course, would be a very safe plan. After that, of course, the check would be simply comparing the building done and the work put into it with the specification, and seeing that the quality is satisfactory to the authority that had to pass the work finally. That would be the financial control that you would be satisfied with?—Yes.

8155. That you really got good value for your money?—Yes, that is it.

8156. In relation to the general questions that arise from time to time involving money, small expenditure of every kind, as a matter of fact which Mr. Gibb has brought before us, you would give the General in Command full power to decide everything, taking the responsibility that he might some day or other be called to account for being too liberal and having

sanctioned things not quite in accordance with the regulations?—Everything within the regulations. At the present moment, I do not think the regulations (if Generals were given full power up to them) would want extending. As you got your Generals and staffs trained, I think you might give them higher financial limits than you do now. But, I think, in all cases you would have a limit to the General's expenditure like a private man has to his income.

8157. Naturally. Do you think it would be possible to institute such a change of system, namely, putting this power and responsibility into the hands of the General Officer Commanding by a sudden removal of all the obstacles at the present time, or would it have to be progressively done over several years?—I think that within the present regulations you could do it at once. As I said just now with regard to disallowances, I have no idea myself what the sum of money is that the War Office consider is wrongfully expended.

(*The Secretary.*) We have worked it out; it does not come to the 1*l.* per thousand which you mentioned.

(*Witness.*) I do not know where I got that figure from; that is not a very large sum.

8158. (*Mr. Mather.*) It has come before us from some quarters that the General Officers Commanding, and their staffs also, would to-day, for instance, not be very willing to accept all the responsibilities involved in doing that which you have described as being necessary for proper Military administration. Is that your experience? We have had it come up from time to time that it would take some time and experience before they could do it?—I think if you were carefully to select the Paymasters for the several districts you might make a combination of the staff that we have at present in the Army under which you could introduce such a change at once.

8159. In all the districts?—In all the districts; at least, I cannot conceive that it is not so.

8160. And assuming that the new suggested six Army Corps were to be established in a year or so, it would be quite within the power of the staff already existing to appoint Generals capable of administering a large Army Corps with the full administrative responsibility which you have described to-day?—Yes, I think certainly: within the regulations.

8161. The whole of the work of a large Army Corps?—It is no more work than a small district really; there is a larger staff.

8162. You think the capable Generals to-day in the districts would also be Generals capable of taking charge of Army Corps and having the full responsible administration?—I think so, and I am fairly confident it would be found to be so.

8163. (*Sir George Clarke.*) May I assume that you think it should be rendered impossible that the Director of Contracts should force a contractor upon the General Officer Commanding to whom he has objected?—Yes; I do not think he ought to make the General Officer Commanding take a contractor whom he does not want.

8164. We have had such cases?—Yes, I know there have been such cases. I have personally always opposed it.

8165. In your memorandum you say that decentralisation up to the present time is not based upon any system. I take it that you have a much wider view of what decentralisation means than the mere stopping of a certain amount of reference, and that sort of thing?—Yes. In my original letter which I wrote to Mr. Dawkins, I said that I preferred to use the word "responsibility" rather than the word "business." I do not see how you can transfer business unless with it you transfer the responsibility for completing it. My contention is, that although they have thrown out a good many odd jobs upon the Generals, yet when any question arises upon them the General finds that he has no power at all, therefore he has no responsibility, and cannot complete it.

8166. And you think that if these districts were made much larger, much larger changes would have to be made than were contemplated by the Decentralisation Committee?—I did not find that the Decentralisation Committee contemplated very much change.

8167. May I take it that the point you wish to impress upon the Committee more than any other is the delegation of responsibility, financial and other,

*Gen. Right
Hon. Sir
R. H. Buller,
G.C.B.,
G.C.M.G.,
V.C.*

13 March 1901.

Gen. Right
Hon. Sir
R. H. Buller,
G.C.B.,
G.C.M.G.,
V.C.

18 March 1901.

in peace, in order that officers may acquire the habit of taking it in war?—Yes; and the point that there is an absolutely strict line to be drawn between what I describe as the Military policy of the country, and what I describe as the Military Government of the Army—that the two things are absolutely distinct—and that where we have hitherto always gone wrong, in my opinion, has been that we have never made them distinct; and the whole thing hinges upon that as to the relative positions of the Secretary of State for War and the Commander-in-Chief. We soldiers are always accused of claiming all sorts of imaginary powers for the Commander-in-Chief; that he is to be such a great man, and is to do this, that, and the other, and overawe the Military policy of the country. But we have never proposed that. All we have claimed is, that, given the Army, and given that we are told what the Army is to cost, the Commander-in-Chief should be left to administer it.

8168. You spoke of the Auditor making disallowances in a district, and referring to London. When that happens, should the final arbiter, whether the General did right in his expenditure or not, be the Financial Secretary, who would be the master of the Auditor, or the Commander-in-Chief?—The Commander-in-Chief. I say, make it a discipline point. Let me not be misunderstood. The Financial Secretary would, of course, have his views and if necessary present them to the Commander-in-Chief and to the Secretary of State, but when the decision is arrived at it will be conveyed to the General as a matter of discipline by the Commander-in-Chief or Adjutant-General, and not as now in a letter signed by someone no soldier knows.

8169. We have had some evidence before us to the effect that a good deal of trouble and complication have been caused by making the increase of pay to the soldier a messing allowance instead of an increased rate of pay?—An infinity. I do not believe myself that the War Office will ever succeed in getting that allowance right in the accounts from what I hear in the districts.

8170. You think that from every point of view it would be better to make it a *bona fide* addition to the soldiers' pay, and not to call it an allowance?—Certainly. All these dribs and drabs of payments give trouble out of all measure to their value. I do not believe there is a single gentleman in a high position on the Civil side of the War Office who has the slightest idea of the trouble he puts us to in the districts by the regulations and methods of payments of pay in force.

8171. I see that you said in your evidence before the Decentralisation Committee that the Civil branch of the War Office grasps at power and obtains it by making highly detailed regulations. Do not you think it is very important to simplify the regulations and make them more elastic?—That is what I have always wanted to do.

8172. Then you said something about the War Office being in water-tight compartments. That, I suppose, means that there is too great centralisation of subjects in the War Office. Do you think that that leads to too much minute writing and, that there is not enough conference to replace minute writing?—Yes, I do. The real fact of the matter is that there is no subject that you can mention in the Army, no question that can arise, that does not affect always more than one, and very often several of the branches into which the finance of the Army is divided, and that consequently whatever occurs, whatever is done, in one branch, some other branch, or more than one other branch, ought to be consulted before expenditure is incurred or underwritten. And that is where (I do not know whether the Committee will think I am justified in saying this) I object to the Order in Council of 1895. Up to 1895 all the Military Heads of Departments, if they had any proposal that they were considering, used to meet and consider it in concert, and each member of the Military organisation had his say and decided how it would affect his branch, and then it went as a considered proposal, with its expenditure (so far as we were concerned) thought out in all its details, to the Secretary of State. In 1895 those meetings were ordered to cease, and the Army Board, composed of the same men, was created; but they were limited to the consideration of any question that was sent down to them from the Secretary of State. So that the Secretary of State expressly provided that individuals should go to him, that every question that he got submitted to him was not to be considered

until after he had considered whether it should be considered at all; but he did not in this way get information upon which he could found a judgment as to whether it should go to the Army Board. I think I am justified in saying this, because to my mind it is at the bottom of the whole thing. Unless you can bring the Army together and let the different branches of the Army, as we do in the district, and as we ought to do at the War Office, consider in concert all Military proposals, you will fail to get proper co-ordination.

8173. Then your opinion is that any fresh Military proposal should go up to the Secretary of State from this consulting body, instead of being sent down to it to consider?—Yes, that they who create should consider it before it goes up to the Military policy of the country.

8174. Is it your view, as a general principle, that the Military heads of the spending departments should administer their own Votes without let or hindrance, and subject only to subsequent audit?—Subject to the directions that they receive from the Military policy of the country, which would be administered by the Secretary of State. I do not think that the head of any of the spending departments should go and spend what he likes on what he chooses; that must be settled for him as a question of policy.

8175. I mean the policy having been settled, and that policy determining the Votes of each of the Military Heads, do not you then think that they should be held responsible for their expenditure with nothing but the audit afterwards, to see that it is spent according to the regulations?—Yes, I think so. When I took over the executive part of the Supply and Transport Department of this Office from the Civil side, I begged and prayed them to allow me to have the accounts, and they absolutely refused. I said "The thing is ridiculous," but they said "The account is in this house, and you can have any papers you like to send for." I said, "That is not what I want; I want to be able to tell my examiners what to look for." They said, "Anything you tell them to do they will do;" but they do not, and I was not allowed to have the accounts. There is a long correspondence about it—it is an old paper now, I daresay it is in the archives somewhere, but I think Mr. Gibson will recollect that is what happened. Now, I maintain that that is absolutely wrong; I was given this Vote nominally to administer, but the only way in which I could check the administration was by constant and careful supervision of the expenditure, and as the officials who were doing that work were not under me, I was precluded from doing it; I gave it up—I could not do it.

8176. Then you would absolutely divide accounts from Audit; you would place the Accounts under the Military Heads and leave the Audit to the Civil Branch?—Yes; in my opinion, I never met an Accounts' Branch gentleman who knew what auditing meant. They call accounting, audit; I do not.

8177. You draw that distinction that the accounting should be under the Military Head, and the auditing on the Civil side?—Yes, I do.

8178. (Colonel Miles.) In regard to what you said to Sir George Clarke, you are very much in favour of simplifying the Regulations, are you not?—I am.

8179. Do not you think it would have a far-reaching effect if we could both revise and draw up the Regulations in better form as regards simplifying the accounts generally and reducing the difficulties of audit?—I think it would have; I have myself in this house simplified two sections of the Regulations, and I believe there has never been a question since. Everybody has admitted that they have worked extremely well; that is to say, changes were made in the whole of the fuel and light arrangements, and changes were made with regard to Barrack Accountants. In each of those cases we proceeded on the principle that I advocate for the whole Army, that is to say, that local accounts should be locally audited.

8180. And, generally, while you were Quartermaster-General, the Allowance Regulations were simplified with advantage?—They were practically re-written, but not so much simplified as I should like.

8181. Going back to the question of the Messing Allowance which was given, I daresay you know the conditions are that the man must be 19, he must have six months' service, and those six months must not

include any day in hospital or on furlough. Those conditions you do not think were put in by the Military Department?—I am sure they were not; in fact, I know they were opposed at the time.

8182. By the Military Department?—Yes; some of the Military may have agreed, but I know some who did not.

8183. Do not you think it would very much assist matters if we went further towards consolidated pay instead of as we now have it, Pay and Allowances?—Yes, so far as we could go, but that is rather a large question, and it is a difficult question. Bearing in mind that we serve in such a vast number of different climates, and so on, it is a very difficult thing to lay down fixed rules for Pay and Allowances, but I should be inclined to consolidate more than is now done, if it were possible. I think you might consolidate more, but it is a very difficult question.

8184. The late Sir George Lawson was rather opposed to that, and saw great difficulties in going any further in that direction?—I think so.

8185. Was the subject taken up while you were Quartermaster-General?—I took it up at one time, but Sir George Lawson did not want it, and whatever he objected to I always dropped.

8186. Could it not be done, at any rate, as regards men to a certain degree—I mean to say with regard to the Extra Duty pays and Extra pays which are now given, could they be consolidated with advantage?—Some of them might, I suppose; it is not a matter that I really can say I have very fully considered. I know that Sir George Lawson thought it was very difficult, and I followed him. You see, in the old days, the War Office and the Horse Guards were in opposition, and whenever the War Office wanted a soldier to do anything they gave him extra pay. Now that we have got into one house, a good deal of that could be done away with, but it wants a biggish man to do it.

8187. I understand that you would define the responsibility of the General Officers Commanding broadly, rather than, as you say, putting odd jobs upon them?—Yes.

8188. Would you effect that by broadly-drawn regulations and financial decentralisation, or how would you effect it?—The Military policy of the country, that is to say, the main lines upon which expenditure should proceed, and by which it would be limited, would be fixed by regulations which should be drawn up by the Secretary of State, and, subject to this, the General Officer Commanding should administer them, and he should have the right of allowing or disallowing the marginal expenditure that there is. It is not a very large sum of money. There is somewhere in this house (it might amuse the members of the Committee) a minute of mine on that very question. I wrote very fully at the time because I was very angry. The Treasury allowed us 500*l.* to meet mistakes not exceeding half-a-sovereign each, and the War Office at once proposed to divide the 500*l.*, which came out at about a halfpenny a man in the Army, in that proportion, and everybody was to be tied down; the General Officer Commanding was to report every payment that he allowed or disallowed, and he was not to exceed a certain fixed sum. Of course, that really doubled his trouble without giving him any responsibility at all. I should say let the General Officer Commanding settle everything. I am bound to say that of late years we have been moving on those lines, but I would let him settle everything and hold him disciplinarily responsible. If he knows that he has to pay in his own blessed person for doing wrong, nine times out of ten he will do right, and that is the way we ought to manage it, I think.

8189. You would make the Military bear the responsibility for the expenditure on the Votes; is that correct?—Yes, whatever the money is allowed for they should be responsible for its being properly expended, subject to audit.

8190. They would have the accounts with them and the audit would be separate?—Yes.

8191. When you were Quartermaster-General we could only see the accounts, I will not say on sufferance, but by going down to look at them?—Yes, as an act of grace.

8192. And we did on several occasions find things which had been passed, and properly passed, but which we were able administratively to economise?—Yes.

E 15090.

8193. Such as hirings?—By supervision of the account you can review your expenditure as a whole. I know there was a large economy effected both at Bermuda and Malta, I think at Malta over 1,500*l.*, by changes in the distribution of boat transport. That was able to be done by that sort of review, but to do it you must have your accountants under your own direction.

8194. Then the Accountant-General's Department would remain, so to speak, as the Audit Department?—Yes.

8195. At present we have no real financial responsibility?—Not a ha'porth.

8196. (*Sir Charles Welby*.) Whom do you mean by "we"?—The Military.

8197. To take you back for one moment to that system which we spoke of when you first came in, which was suggested to Mr. Dawkins and me when we were at Aldershot with you the other day, by your Principal Ordnance Officer, I think, under which the Commanding Officer of the unit should receive an annual credit of a certain sum for keeping up the equipment of his unit, may we take it that in your view that suggestion contains the germ of the principle that ought to be applied higher up and all through?—Yes, it does. I would give every man that I could as much responsibility as I could, and where you give him an annual percentage of material, I would give it in moneyed value. I would let him draw what stores he wants against that annual credit.

8198. Let us try and apply that higher up. Would you, for instance, credit the Commanding Officer of a unit with a certain sum for clothing, and make him responsible for clothing his battalion within the limits of that sum?—No, I should not do that. I would follow out in that case the proposal which is already in this house of Lord Brownlow's Committee which I advocated for years. I would credit the men with so much money, and let them buy all their clothing as they wanted it; the money would go to the individual men, and the officer would not be responsible; he would not have the money at all, but if a saving was made by saving the clothing, the men would get the advantage of that. The officer would be responsible, of course, that the men were kept efficiently and properly clothed.

8199. (*Mr. Beckett*.) Might the men buy their clothing where they pleased?—No, only at the Store.

8200. (*Chairman*.) Would you give the men the money or a credit on the Store?—A credit.

8201. And any unexpended balance would go to them?—Yes, that has all been threshed out before Lord Brownlow's Committee, the report of which was suppressed for some reason. It was a child of mine.

8202. (*Sir Charles Welby*.) Then, in effect, taking the question of Supplies, would you advocate a system under which the General received a credit for a certain sum for all the Supplies required in his command, and was allowed to purchase Supplies within that amount at his discretion?—I think you could do so in time, not immediately. I think in time we could go very much further on those lines than we have gone at present. As you know, I was fortunate enough some years ago to persuade the powers that were to allow the General at Aldershot to buy all his forage, and undoubtedly we have improved the quality of our forage very much by that, by eliminating contractors and buying direct; and we trained our Army Service Corps for Military purchases with very good effect. I think very soon we shall be able to say that a Regiment will cost so much a year, and the General Officer Commanding might very easily be expected to purchase up to this amount the forage either from Government or from contractors, and so administer the money himself. He is allowed now to do it to some extent.

8203. I do not really quite understand what the system is now with regard to Supplies; do you make purchases from time to time whenever you require them?—Whenever we require them I send up and buy a ship load of oats, say.

8204. But how does that affect the Vote that has been passed by Parliament for forage?—I pass that bill to the War Office and they pay there from the Vote.

8205. (*Mr. Beckett*.) Do they let you know beforehand how much you have to spend on forage?—No, what limits me is the quantity of forage I give to each horse. That is fixed by regulation.

Gen. Right Hon. Sir R. H. Buller, G.C.B., G.C.M.G., V.C.

13 March 1901.

Gen. Right
Hon. Sir
R. H. Buller,
G.C.B.,
G.C.M.G.,
V.C.

13 March 1901.

8206. (Sir Charles Welby.) Then you are tied by regulation?—Yes.

8207. Therefore you are in the same position as the commanding officer of the unit we were speaking of just now; you have no incentive whatever, either you or your staff, to any economy if any were possible?—Every one must be tied to some extent by regulation; my objection is, that our regulations are too wooden.

8208. If you could economise by turning a certain number of horses out to grass for a certain time at Aldershot when they were not wanted, you would gain nothing by having saved oats?—There is not enough power to give and take. I am quite certain that if you could make men take an interest in what they are doing by their getting a little pull in their own way every now and then, they would think more, and eventually you would find that you would get a more economical administration.

8209. Then you see no reason why, taking this case of forage for example, you should not be given an annual credit based on the number of horses in your command, within which it would be your duty to maintain those horses?—No, I should like that.

8210. And account for the expenditure?—Yes.

8211. And in the same way, I suppose, still more with regard to the Ordnance Stores for which your staff indents on Woolwich; if it is a good thing for a commanding officer of a unit to be able to draw on an annual sum, it would similarly be a good thing for you, and for your staff, to be able to draw on Woolwich against a creditor for all they want?—For all the ordinary stores I should like them to be moneyed out and represented against a cash credit.

8212. That you should have a balance to your credit against which you should draw?—Yes.

8213. And for the expenditure of which you should account?—Yes.

8214. And you would see no practical reason why that should not be carried out?—No, I think it could be carried out very well.

8215. Is it not your view that the War Office does not really give General Officers its confidence even in regard to those matters which it professes to delegate to them?—That is so; there is no matter in which I, as a General Officer can say to the War Office, "This is my business and not yours."

8216. That is to say, you are allowed to do what you describe as odd jobs so long as you do them exactly in the way the War Office thinks right?—Or so long as you are not found out.

8217. But directly you do things not in the ordinary way or in a way that does not commend itself to the *prima facie* view of the War Office your action is at once criticised and challenged, and that destroys your sense of responsibility?—Yes, that is what I feel. I feel that just within my own little Bailiwick I can do it because I am not found out, but if I have to go outside and write about one of my officers in some other district, I at once learn that what I am doing is not entirely in unison with the spirit of the powers that be. That is to say, they usually show me by the questions they ask that they do not trust my judgment.

8218. But within your own Bailiwick you consider that you have a fairly free hand?—Yes; as I say, of late years Generals have been allowed much more discretion than they used to be.

8219. Then I was only going to ask you one or two questions with regard to the remarks you made as regards the Adjutant-General's meetings. To begin with, let me say at once that I am inclined to agree with you that that co-ordination which was produced by the Adjutant-General's meetings has not been replaced by anything else, and is very much wanted; but is it not the fact that the reason why the Adjutant-General's meetings were abolished was not because the necessity of the Departments working closely together was not recognised, but rather that for good or for evil the system under which the Adjutant-General was responsible for the whole business on the Military side of the Office was done away with?—No, that is not the fact; that is an entire mistake. It is a fact that the Adjutant-General's meetings, as meetings, would have ceased to have been called Adjutant-General's meetings; but they would have continued as Commander-in-Chief's meetings and under the Commander-in-Chief the general supervision that had been exercised by the Adjutant-

General would have been maintained; and it is a fact that every single officer who was a member of those meetings was most anxious that they should be continued; and it is also a fact that they were discontinued by definite order. We did continue them for a while, and were told it was wrong.

8220. Adjutant-General's meetings?—No, as Commander-in-Chief's meetings.

8221. But they continued to be referred to in the Office Papers as Adjutant-General's meetings?—Because they had got the old name. But the reason that was made clear to me was this: they were stopped because they were contrary to the regulation. It was said, "Those officers are members of the Army Board, and they are not to consider a thing until it is referred to them by the Secretary of State." The consequence was that everything that came to the Army Board was never considered at all.

8222. With reference to that I should like to refer you to a paragraph in the "Details of Office Procedure"?—What date is that? I am talking of 1895.

8223. But this was laid down in 1895: "(1.) The Head of each principal Military Department will be responsible for questions belonging to his Department, and for submitting them (when higher authority is necessary) to the Secretary of State in a complete form, showing fully all the considerations involved. (2.) When the question affects more than one of the Military Departments, the head of the Department dealing with it will refer the Papers to the other Department, or Departments, concerned, in order that the question may be considered in all its bearings before submission to the Secretary of State. (3.) All important questions will be referred to the Commander-in-Chief before submission to the Secretary of State. Questions which do not require the Secretary of State's decision, but which affect more than one of the Military Departments, will be referred to the Commander-in-Chief for decision"?—Quite so; in place of consultation and concert a system was introduced of sending papers all round the house in Minutes, which cause endless delays, and when a man writes a Minute it is not the same thing as conversation round a table; that is what was done, everything had to be by Minute, and that made the labour so great that, as a matter of fact, nobody ever wrote his opinion on those papers; you cannot do it. In this War Office a man in the upper offices is very hard-worked indeed, and however good he may be (and I think that anybody who knows me will say that at any rate I get through papers quick) he does not care about slaving all day long answering Minutes that have often nothing whatever to do with the main question at issue. Besides, it is not the same thing; when you write a minute you record your private opinion at the moment; where you have concert your opinion undergoes constant modification by the opinions expressed by your conferees.

8224. But I do not think you would contend that you were ever prevented by any rules laid down in the office from practically settling any question with the Heads of other Departments by personal conference, if you wished to do so?—I was ordered not to have those meetings—ordered—and that ended our power of consultation. And with the Adjutant-General's meetings disappeared the Quartermaster-General's meetings too, to the great loss of the Works Branch.

8225. I never heard of the Quartermaster-General's meetings. I am quite sure the Secretary of State never abolished them?—They disappeared at the same time. There were meetings once a fortnight at the Works Branch where the Quartermaster-General and the Inspector-General of Fortifications considered all questions from the point of view of the soldier as well as from the point of view of the Engineer. All that went with the Order of 1895, which really laid down that the only means by which these different Heads of Departments were to communicate was by minuting to one another; and that, in this house, to my mind, is insufficient, not to say impossible.

8226. (Chairman.) You minuted to the man in the next room?—Yes, you minuted to the man in the next street sometimes.

8227. (Sir Charles Welby.) All I wish to make clear (and I think you will agree with me so far) is that the motive in doing away with the Adjutant-General's meetings as such was to break down the system under which the Adjutant-General not only did the work of

his own Department, but practically controlled the detailed administration of the whole Military side of the War Office. That control centred in him, acting on behalf of the Commander-in-Chief, and that was held to be undue centralisation. The point that appears to be of practical importance now is in what form you would propose to revive that function of co-ordination, the loss of which you think has been so detrimental to the work of the War Office; do you think that all that is required would be provided by the Army Board being freed from all limitations on its meetings, and on the subjects referred to it?—I never understood what the motive was. The Adjutant-General was at the moment Chief of the Military Staff; his duties were not centralisation, but co-ordination; he was refused opportunity to exercise his duties, and, as you justly observed just now, co-ordination disappeared. I consider that no question of fresh expenditure, of increase of numbers, or of change of policy should be submitted to the Secretary of State until it has been discussed by a meeting of military members under the presidency of the Commander-in-Chief or any representative whom he may appoint.

8228. Do you think that such a Board, apart from the question of considering new proposals, could really undertake the function of keeping the different Departments up to the mark and in touch with each other in the ordinary current routine business of the Departments; is not the Army Board, with the Commander-in-Chief at the head of it, rather too big a hammer for cracking these innumerable small nuts which turn up?—I do not want to quote myself as an authority, but I have tried it, and the principle upon which I worked worked extremely well; at least, that certainly was the general opinion. We had a secretary of the Adjutant-General's meetings, and there was a day fixed upon which those meetings were held if wanted, and it was open to any member of the meeting to go to the Secretary and to ask to have a meeting on that day, specifying what members he wished to come, and what subject he wished to bring forward, and the Secretary exercised his discretion as to whether he would add others, and nobody was called up unless wanted. There were a great many questions that did not affect one member, perhaps, and he was not bothered to come, but I found that every month that those meetings were in existence there was more and more demand for them, and more and more work was done at them.

8229. Then you would make the meetings of the Army Board very elastic, that is to say, that only such members of it should meet as were really concerned with the business in hand; that there should not necessarily be a full Board on every occasion?—The meetings should have no executive functions at all; the Adjutant-General's meetings never relieved the departmental chief of one iota of responsibility, and neither should the Army Board; it should be merely a consultative meeting to get a thing considered in all its bearings by those officials who have a knowledge of all the bearings and can look at it in its different lights. The different members know what they are going to talk about, and the business is done in five minutes generally. In short, co-ordination is secured by co-operation and concert.

8230. I had in my mind such cases as we have heard a good deal about in evidence, cases where the Inspector-General of Fortifications and the Quartermaster-General, for instance, carry on a long discussion with regard to the site of a barrack or the geographical position of a rifle range?—Those used to be settled at the Adjutant-General's meetings, and settled at once.

8231. But the Army Board would be rather too big and cumbersome a machine to refer those questions to, which are very numerous, would it not?—I do not know how matters are regulated now; when I was in this house the Army Board was a farce; one never had the papers circulated beforehand. A paper used to be sent round saying that the Army Board would meet on such and such a day, probably within two days, and would consider such and such a subject; there were many members who had never seen the papers. You sent for the papers and were told they were in the Secretary of State's room or somebody's room; anyhow you could not get them; you went to the Army Board without having seen the papers at all, and it is impossible with a mass of War Office papers for four or five men sitting round a table to pick out the inside of

them and decide at once. Therefore, whoever it was said, "I want so and so," and everybody else agreed, and we treated it as a farce. The difference between the Army Board and the Adjutant-General's meetings was that the latter considered proposals of the head of a department, the former considered propositions formally submitted by the Secretary of State.

8232. That was a matter that rested with the Chairman of the Board, the Commander-in-Chief, and the Secretary of it?—No, I beg your pardon; we several times made representations about the necessity of circulating the papers. And the same with the meetings of the bigger Board, the War Office Council. I have been scores of times into the Secretary of State's room, never having seen a single line of the papers I had to give an opinion upon.

8233. My recollection is that the papers for the War Office Council were always circulated two or three days beforehand with the greatest regularity?—Perhaps the first man who got them kept them.

8234. No, circulated to every member of the Council?—No, I assure you it was not so.

(The Secretary.) That is a very excellent custom recently introduced.

8235. (Mr. Beckett.) Apparently, then, you do not consider that there is any necessity for having both Adjutant-General's meetings and the Army Board; that the one was concerned with practical business, and the other is concerned with discussions that have been more or less empty of result?—I do not. I should like to drop the name Adjutant-General's meetings, because it was a false name to begin with. They were called Adjutant-General's meetings, because we had nothing else to call them. But I am of opinion that every subject should be considered twice; it should be considered first of all as a Military subject by the Military members in all its bearings as it affects the different Branches, and then if they agree upon its importance it should go to the Secretary of State, where it would be considered as a matter of military policy.

8236. And should it be discussed by the Military members in the Army Board, or where? How would they meet together to begin with?—That would be at a meeting of the Military members—the Army Board if you like to call it so—with, if you like, financial help. We used to ask Sir Ralph Knox to come sometimes. But a question should be considered first of all purely in its Military bearings, and when they had made up their minds that it was a sufficiently useful Military thing to submit for consideration, then they should submit it to the Secretary of State, and he would consider it in its bearings on the Military policy of the country.

8237. He would consider it in the War Office Council, I suppose?—In the War Office Council?

8238. Not necessarily?—No, he would do what he liked with it; he might send for all the individual members and argue with them. I quite think he should, and he always has done so. Long before 1895, everybody went into the Secretary of State's room who was sent for and gave his opinion absolutely independently.

8239. And you think it is essential for the efficient working of the Army that the Army Board should be set up again somewhat on the lines of the Adjutant-General's meetings, and should hold its meetings at fixed periods?—Yes, I do. I consider it essential that there should be a Military conference upon the subjects that cause expenditure or affect the policy, as a first step towards their introduction to the Secretary of State. In fact, that there should be co-ordination at an early stage.

8240. The next point I gather that you think is of great importance is the simplification of Regulations; how is that best to be done; would you do it by appointing a Committee to consider the Regulations?—No, I would not. I should do it by throwing work upon the Generals, and as you find they take it up, I should give them more and more power by opening the Regulations.

8241. If they found any Regulation worked badly, they could write to the Secretary of State and ask him to revise it?—Yes, if they complained; if they found their hands tied, and thought they could do better if a change was made.

Gen. Right
Hon. Sir
R. H. Butler,
G.C.B.,
G.C.M.G.,
V.C.

13 March 1901.

8242. Do you think that their complaints would be attended to?—Yes, I think they would be. The War Office are very fair, they try to do their best. They have a system that is almost impossible, and I think it is astonishing how well they work under it.

8243. Do not you think it would be a good thing, now that these new Army Corps are being constituted, for representatives from all the Army Corps to meet together and consider the whole body of Regulations, with a view to their simplification?—You want something to go on, you know. These Army Corps at present are only on paper, and when they are coming off paper I cannot tell you; but even when they do come off paper it will be some years before they will have enough experience, I think, to be able to re-write Regulations. I would much rather go on tentatively; let the present Regulations stand and give the Generals power to administer them, and then if you find they are taking up the work and doing it well, open the Regulations and make them more elastic.

8244. And lastly, you seem to think that the essence of decentralisation lies in conferring larger financial authority upon the General Officers commanding?—The essence of decentralisation lies in the distribution of power, I think. You may call that power financial authority, I quite agree, that is one fair way to put it, but I would let the General be able to give decisions, and those decisions, so far as the subject they are given on, should be final. Hold him personally responsible that they are good and wise and proper, but they should be final; he should be responsible for them.

8245. And, speaking generally, would you not say that all matters which involve no principles of Military policy, and could be dealt with locally, should go before the General Officer Commanding for decision, without reference to the War Office?—Yes, I think so.

8246. I have before me a whole list of proposals dealing with quite small matters, such as nominations to posts or change in the occupants of posts, which have to be referred to the War Office; all that sort of thing might be settled locally?—Some locally, and some not. There again, with our scattered Army, and constantly changing units, you cannot lay down a hard and fast rule; there may be some that ought to be settled locally, perhaps a proportion of them ought not to be. At Aldershot, for instance, I have a numerous command, and more men leaving the Army want quasi-civil positions than Aldershot itself, which is a very small area, would provide, and it would be fair that

some of them should go to another, say the Northern District, which is a very large one. Therefore, I do not know that I should be prepared in this room to lay down any general rule, but, speaking broadly, I agree.

8247. But if you wished at Aldershot to change a man from some small post to another, surely it would be absurd to refer that to the War Office?—I do not think I should do that now.

8248. In some cases you would?—In very few.

8249. And with regard to giving the Generals larger financial powers, it is stated that the power given to General Officers Commanding to deal with contracts for work not exceeding 2,000*l.* is merely nominal; do you find that is so?—I think that is so.

8250. That ought to be made real, surely, instead of nominal, that he should have absolute power of dealing with contracts for work not exceeding 2,000*l.*?—Yes, there is not a proper definition of the responsibility. The General has got no responsibility; that is what it comes to, and that comes out in every one of those points. I cannot say at Aldershot "This is my business; I decide that." I do, I believe, now decide a good many more things than some of my predecessors did. But I do not know, I have no actual point to guide me, as to whether it is my duty or whether it is not, and I have no means of finding out except by referring to the War Office.

8251. (Mr. Gibb.) There is a want of written definition of the General's power?—There is a want of a definition, perhaps I should say of a system—

8252. (Mr. Bockett.) You consider that all powers that can be exercised by the General Officer Commanding, without reference to the War Office, should be really laid down so that he may know where he is?—I want some plan to make the General Officer's decision final, and to arrange for hauling him over the coals if he is wrong. He can ask the War Office before he does a thing if he likes.

8253. And that is not laid down?—No such plan is in existence.

8254. And you think that it is very essential that it should be if you are going to try this new experiment of these new Army Corps?—I do not base any demand upon the new Army Corps; whether they come or not I should like to change the distribution of responsibility in the direction of throwing more responsibility on Generals by giving them more power.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

TWENTY-SIXTH DAY'S MEETING.

TWENTIETH DAY'S EVIDENCE.

At the War Office.

Thursday, 14th March 1901.

PRESENT:

MR. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. W. MATHER, M.P.

Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, Secretary.

Lieutenant-General Sir WILLIAM F. BUTLER, K.C.B., examined.

8255. (Chairman.) You have served in the War Office for some time besides having held District commands, have you not?—Many years ago I was here for about five or six years, I have often been on what one might call odd jobs since in the War

Office, but for a connected period I was here from 1875 to 1880, I think it was.

8256. In what capacity?—In the Quartermaster-General's Department of that day.

Lieut.-Gen.
Sir W. F.
Butler,
K.C.B.

14 March 1901.

8257. But you have been in and out of the War Office a great deal since then, have you not?—Yes, very much.

8258. And, therefore, you are familiar with its working?—Yes, I was a member of a Committee which sat here about three years ago, of which Colonel Miles was Secretary, called the Decentralisation Committee.

8259. In your letter to us of the 8th of February you have told us in general terms that a district should resemble the organ of a healthy body and you also referred us to an answer which was given to you before the Decentralisation Committee by the Duke of Connaught, to the effect that Reports should only be made from the Districts when matters were unsatisfactory. Has much change resulted in the Districts in the direction of Reports since the Decentralisation Committee sat?—I cannot say that a very large change has resulted. I should say not. I can account for that as we go on unless you would like to have the reason now.

8260. I think if you could give us the reason now we should like to have it?—A certain number of detail matters were decentralised, and no doubt they have all worked well, but they were not of a radical nature, not of a large nature, and in many instances they have resulted in causing correspondence; that is to say, a General is often called upon to say why he did so and so. I would compare decentralisation of that kind very much to sweeping a walk in November, you have to do it again and again. In any mere decentralisation of papers they are found to come back again, in five years they will all be back as they were. I allude merely to transferring the business to another place. I do not think that you will ever arrive at any very important result unless the foundations of the work are changed.

8261. You gave some rather striking evidence before the Decentralisation Committee to the effect that masses of reports were sent up from the Districts, but they seemed to get into pigeon holes here and never to reach the responsible officials to whom they were directed, and that when the War Office ever wanted to know of anything—ever wanted any information in a hurry—it did not refer to those reports, but at once communicated with the District?—That was my impression then, and it is my impression still. I think that the telegraph has practically superseded the necessity for this mass of writing. I think anyone in an ordinary transaction of business must find that, and still more so in a large business.

8262. Then your impression is that these reports which reach the War Office are so little digested that when information is wanted from the District it is not to the undigested and unread report that people turn, but that they rather consult the District by means of the telegraph?—Yes; I should be inclined to go back to the foundation of things to trace it. The Districts were originally established for quite another purpose. They were established, I believe, by Oliver Cromwell for the suppression of the Royalists; that was the *raison d'être* of the Military Districts; he put a Major-general at the head of some eight or nine Districts in England. All that, of course, has passed away, but the Districts have gone on. Then they eventually came to be sub-districts of the War Office, we will say, at a time when a letter took two, three, or four days to reach them; one sees the *raison d'être* for them there. But when you have practically centralised everything, transport, communications, telegraphs, and the rest of it, the necessity of all that written report seems to me to have gone.

8263. A certain number of these reports and returns, I understand, are asked for by Parliament?—A large number, but that information is invariably collected by telegraph.

8264. But Parliament also orders a certain number of actual returns and reports?—Yes; but I mean so far as relates to the information coming to the War Office from the District that is telegraphed for:—“Can you say so-and-so?” or “When will such and such a ship go?” Anything wanted for a Parliamentary answer is nine times out of ten got by telegraph.

8265. But returns such as those to do with the physical qualities of the troops, the height and measurement of the troops, which are made up in the district and sent to the War Office are prescribed for annual returns by Parliament, and I suppose are necessary for statistical and other purposes?—I am

scarcely competent to give an opinion upon that because it is a matter between the War Office and Parliament, but I do not see that these elaborate reports ought to be necessary. I think it might be done in a much more simple way. Take, for instance, the Army Service Corps returns. They have to give an anticipatory estimate of what their expense will be for the coming year. They are absolutely in the dark about it, and their figures are taken, I will not say at random, but they are of no use. Take, for instance, such a station as Pembroke Dock; we have to estimate for that station for the coming year. Who is to fix the garrison of that station? It may change in a month. It has changed in a month, and will again change in a month. So that all that, which is a most elaborate and extensive calculation, really amounts to nothing. It is not a reliable return and it cannot be. I have brought some of them to show you what they were. If you take any sub-district in a District, the Army Service Corps officer has to estimate what his expenses will be for the number of troops and the number of horses for the ensuing year, he has to go into fractions, of an immense number of items, but it is all guess work. It would be much better for him to say, “My District has cost so much for the last five years, eight years or ten years, and I do not see any reason why it should cost more next year, and I do not see any reason why it should cost less,” unless he should see that reason.

8266. But are those figures prepared for the purposes of the estimates?—They are prepared first of all in the sub-districts for the information of the General Officer at the headquarters of the district, to be sent by him here in order that estimates may be made out.

8267. That is to say, for the purpose of the estimates to be presented to Parliament?—Yes; but I hold that it is not necessary to go into those voluminous calculations; the garrison may change and the whole thing go wrong. You are estimating upon impossible data. Take last year; three times the estimate would not have covered it—four times, five times.

8268. But that is, I suppose, an objection to which the whole system of estimating is open?—I cannot see that this amount of clerical work is necessary. As I say, it would be better to take a lump sum. “I spent so much last year at Pembroke Dock, at Bristol, at Taunton, at Exeter, so much in this Western District.” “I expect I will spend that again.”

8269. (*Mr. Beckett.*) That is in maintenance?—No; for the purpose of forage, food, horses, transport by water and by land—all those matters.

8270. (*Chairman.*) I suppose the estimate is made for what is considered the nominal number of troops at these places?—Yes.

8271. Although it may be changed?—Yes, they may all go away—or the garrison may be very much increased. I admit, of course, that the preparation of an estimate is necessary—of a sum—but I cannot see that this amount of clerical work is necessary in producing a thing which is eminently unreliable when produced.

8272. You mean that the estimate then is done at too great detail?—It is not only done in too great detail, but it is unreliable after the detail has been gone through and the work done. It is guess work, elaborately set out in figures and words.

8273. Because of the changes that may supervene?—Yes.

8274. The troops may be taken away for other purposes?—Yes; the man who is making the estimate is only going by the gross total. He is not going by these little things that he has to write and copy and send in in triplicate.

8275. Do you mean to say that the Army Service Corps has to estimate so much forage for each small unit?—Yes, for everything. His assistant officers have to send him in on a large printed form, I cannot remember the letter of it now, Colonel Miles will probably know, this estimate, which is prepared in sub-districts and all out stations, and sent to the Assistant Adjutant-General B. Then he has to collate it, get it down into his own estimate, and forward his own estimate up.

8276. He summarises it?—He scarcely summarises it.

*Lieut.-Gen.
Sir W. F.
Butler,
K.C.B.*

14 March 1901.

Lieut.-Gen
Sir W. F.
Butler,
K.C.B.

14 March 1901.

8277. (*Sir Charles Welby.*) He embodies it?—He embodies it. I should not say he summarises it because he has also a vast amount of work to do, and so have his clerks.

8278. (*Mr. Mather.*) What does the General Officer Commanding do?—The General Officer has of course, to take the *ipse dixit* of these officers in the out stations that it is all right. He looks at it, he sends it up.

8279. He is the medium, he signs it?—He signs it; that is to say, he signs the covering letter with which it is forwarded.

8280. (*Chairman.*) Then I understand you to say that something more radical is needed than doing away with the mere overlapping of reports here and there that was done under the decentralisation Committee; but in an answer you gave when you appeared before the Decentralisation Committee as a witness, I think you rather rejected the idea that the Generals should be given very large powers of administration and authority in matters of expenditure?—Did I object?

8281. Perhaps I misunderstand your answer? The question put to you was, "To what extent would you give 'Generals in districts uncontrolled powers of administration and authority in matters of expenditure'?" and you said, "By no means. Nor can I see how this 'state of freehand action could ever arise. We have 'the most close and exact codes of regulation and 'orders upon every branch of Army administration. 'There is no difficulty whatever in following the 'uniform system therein laid down. It ought to be 'the easiest system possible, and reference to a central 'body, upon the work of a district should be a rare 'occurrence, instead of being as it now is a matter of 'great volume and constant occurrence.' I may have misunderstood you, but I rather read that to convey the opinion that you did not see the necessity of giving the Generals very large powers of administration and authority in matters of expenditure?—I did not quite mean it in that way. What I meant was this. We must take all these questions in the relation, I think, in which they stand at the moment they are put. The tendency was to think that the General might launch out into the most extraordinary expense if he were given this free-hand action, and it was that that I was combatting.

8282. (*Colonel Miles.*) It was the word "uncontrolled" at the time, I think, that you took objection to?—Yes; there had been a good deal of evidence taken, as the Report will show previously, and there had been a tendency to object on the part of some high officials here to giving Generals uncontrolled action. Certainly I took the word "uncontrolled" to mean something very big. It is said that once a General Officer in the South-Eastern District drove the coach from Calais to Paris for three months. That would be "uncontrolled" action. He horsed the coach and he drove it; he was a distinguished officer and a great friend of the Duke of Wellington, but that was the sort of thing that I meant when I said uncontrolled action. I did not mean action that referred to buildings or barracks, or camps of exercise, or things of that sort.

8283. (*Sir Charles Welby.*) Your position would be that he should have as far as possible a free hand within the Regulations?—Within the Regulations, within what would be the case in any great commercial or industrial undertaking. I think at that time Mr. Ismay, if I recollect aright, said that they covered their Captains to the extent of 30,000*l.* in the Pacific. That seemed a very big order: I did not think it necessary to go so far as that. But I could answer the Chairman's question at once in this way: I see no reason why the General Officer Commanding, being a proper General Officer and fit for his post, should not sanction all the expenditure that is now sanctioned, with the exception of the construction of a new barrack or any new work of that sort. I make a broad difference between maintenance or ordinary expenditure that would be merely required for the year and what would be necessary for a period of years.

8284. (*Chairman.*) You are referring now principally to works?—Yes. I think if it was a matter that would necessitate an expenditure say for many years to come, such a matter as that ought to be controlled; but if it is merely a question of maintenance, if the roof of a barrack has to be kept on, or the floors preserved

from falling down, or the fences repaired, or anything even of a much larger nature than that, I think the General and his staff should have the power of doing that.

8285. Then do I correctly understand that under Parts II. and III. of Works, you would give the General authority up to, at any rate, a certain sum?—I would.

8286. To settle what works should be done, to make the estimates and see to their execution, without reference to the Inspector-General of Fortification, who is the great centraliser, I gather, in your opinion?—I think his is the department in which the authority of the General Officer is more, I will not say hindered, restrained, perhaps, would be the best word, than anything you can mention, and Parts I., II., and III. are purely imaginary parts. We put I., II., or III. down, but what do they differentiate—that is the point? I do not see that they differentiate anything that is very important that the General should not do. If he can do Part I. he ought to do Part II. and III. I think a sum of money would be perhaps the better way to differentiate than to say Part I., Part II., and Part III.

8287. (*Sir George Clarke.*) Is not that the case now? Is not the differentiation a question of money?—Not in all the parts. I never can see the meaning of Parts I., II., and III., except that they are bulkheads, to prevent expenditure.

8288. Would you rather see a distinction merely drawn between Maintenance Services and New Services?—Yes.

8289. That would be simpler from the District point of view?—Yes, it would be simpler.

8290. (*Chairman.*) Then would you give the General authority over New Services and Maintenance Services or over Maintenance Services and New Services up to a certain amount?—I would give him authority over Maintenance Services, being on the spot and knowing what should be maintained and seeing it with his eyes, or with the eyes of his Staff, and as to New Services I should draw the line in the matter of expense. If they were small things that were necessary, guard-houses, cook-houses, and so forth, construction of Warrant Officers' quarters, improvement of an existing barrack. I think there is no reason why, with the excellent Staff at his disposal, he should not do them all.

8291. Could you give us some idea of what that limit would be in your opinion?—Is it not 2,000*l.* now?

8292. That is for contracts?—I do not see why it should not be 5,000*l.* I will take it in an easier way. I see no reason why he should not be allotted the amount of money which his District costs over an average of five, six, or seven years, and why that should not be given him each year. It would simplify matters to maintain his District and to improve his District so far as he could improve it.

8293. You would give him a Works Vcte for his District, fixed upon the average, say, of the last five or seven years?—Quite.

8294. And you would give him absolutely free power to deal with that, subject, of course, to audit?—Subject, of course, to audit, and subject to inspection; I think inspection hits off the check in the most desirable way.

8295. In regard to such small things as guard houses and married quarters, there are type plans here, are there not, with the Inspector-General of Fortifications?—Yes.

8296. Would you give him freedom with regard to plans, or should he get type plans for anything for which type plans existed, from the Inspector-General of Fortifications' Department?—I should be in favour of giving him the type plan, the uniform or accepted plan, because it is, no doubt, one that has been tested and found to work well.

8297. But as to things for which a type plan would not do?—I should give him freedom. Very often his Commanding Royal Engineer is a man who has filled a position at headquarters, others have been in quarters over the world, and he must be able to evolve out of his own head anything that was not laid down.

8298. Then if you gave the General his authority, that brings you on next to the question of contracts. A General Officer has now power to make contracts up to 2,000*l.*?—Yes.

8299. But it has been told us by one or two General Officers that the power is really practically an illusion, for this reason, that tenders are always invited from an approved list of contractors, that a General Officer can with great difficulty—he can, but with great difficulty—get a man removed from that list, and he can theoretically get a man put on that list, but at the same time the Director of Contracts here puts other men on that list without his knowledge and without consulting him; so that when tenders are called for from the approved list of contractors with whose placing on the list he has had very little to do, naturally the lowest tender is accepted, as all the men on the list *ex hypothesi* are equally good and capable; therefore the General Officer really has no power of throwing that contract into one or another quarter as he may desire?—Quite so. You would like my views on that subject of contracts?

8300. I should like your views on that subject?—I think that all contracts ought to be thrown open to the general public in the matter of advertisement, in the matter of notice. I think that is the first step to take to give as wide a constituency as possible to the contract.

8301. (*Mr. Mather.*) Do you mean to the public in your district or all over the country?—Everywhere in the country. If a man in London could supply the thing cheaper and better than a man in the Western District I think he should do it.

8302. (*Chairman.*) But it is a very usual thing even in private business to give out contracts to men of whose capacity you have satisfied yourself, to an approved list of contractors?—That is the working of the present system with regard to certain contracts. It is not with regard to coal, for instance.

8303. But with regard to works contracts?—With regard to works contracts it is. But I suppose what you really want to come to is whether it would work to the economy and efficiency of the Service.

8304. The point in my mind was whether you could not give the General a real influence upon contracts if he had a voice in the formation of this list of approved Contractors, if he had to be consulted whenever a man was put on the list—if he could put men on the list himself, or if he could take men off the list readily?—I think the principle that the General Officer should have a leading part in the decision of the contract is good. I can give you a case in point which occurs to my memory now. About 12 years ago I was commanding the troops at Alexandria, where we suffered very much from enteric fever. After examining the water supply and the rest of it, I came to the conclusion that the barracks was in fault, radically in fault.

8305. Was that the Kasr-el-Nil Barrack?—It was the Kasr-el-Tin Barrack, which was an old Egyptian barrack, and which we found afterwards had been built on the site of a plague graveyard. I came to the conclusion that our troops would never be right so long as they were there, and the next thing was to get them somewhere else. Accordingly, I proposed to hut them on the sea-shore at a place called Ramleh, three or four miles out. The Engineers were called on for an estimate; at this distance of time I would not be quite sure to 100% or even 1,000% what the estimate was, but I know it was over 30,000% and under 40,000%. That came home to England, and the answer came back that in view of such a very heavy expenditure as 35,000% or 36,000% or 37,000% the matter could not be entertained; it was a Foreign Office question, and they could not see their way to get the money. We lost some men the next year by enteric fever, and had the usual 50, 60, or 100 cases, and I went at it the second year and again came the estimate 36,000%; I do not think I am far wrong when I say that. In the meantime I had taken the precaution of getting in the town of Alexandria an estimate in a rough sort of way. I got a Maltese timber merchant who was there to give me an estimate of what he would build one hut for, which would hold 50 men, say, I am not sure whether that was the number, about that, and he gave me that estimate. I multiplied that by the number of companies, and I came to the conclusion that I could do this particular job for 12,000%.

8306. A good deal less than half; nearly a third?—So when the paper came to me again with this 36,000% I wrote on it, "I will do this for 15,000%," as I wanted to

have a margin, I did not want to be run in afterwards; and this went back and there was a good deal of excitement to know what I meant. I was asked what I meant. I said, "I mean what I have written, I will do it for 15,000%." "Do you wish that to go home to the War Office?" I said, "Yes, I wish it to go home to the War Office." So it went to the War Office, and in course of time, being on leave, I was told to come to the Adjutant-General's Office. I came, and he said, "What is the meaning of this thing you have written here?" "Well," I said, "if you want particularly to know, sir, it means that I will hut the regiment on that site for 15,000%, what I have said; and I think if you do not watch me very closely I will have 2,000% of it in hand." He thought a bit and said, "Well, will you hut half the regiment for half the money?" "I think so," I said; so he said, "We will give you 6,000%." Then I went to work, and we hutted half the regiment for the 6,000% and very excellently well it was done. I had the assistance of a most admirable officer, Major Heath of the Engineers; he threw himself thoroughly into it and we hutted them and we reported it, and then they gave the other 6,000% or 7,000%, and I left the place before the whole thing was finished, but I think I am right in saying that the battalion was hutted for a sum considerably under the 15,000%, something about 13,000% to 14,000%, and the fever was, to use the words of the Adjutant-General, "stamped out."

8307. (*Sir George Clarke.*) Was the original estimate for the 30,000% or 40,000% made by the Commanding Royal Engineer at Alexandria?—Yes, it was by the officer; 30,000% something was sent in as the price; it came through in the regular course.

8308. Might not the War Office think that that estimate came through with your imprimatur?—No. Of course it had been to me. I had started the hare in asking about the matter, but I cannot say what the War Office thought.

8309. But, technically, would it not be thought to come from you as your own estimate?—No, I was not commanding in Egypt; I was commanding in Alexandria. It all went up to headquarters, Cairo, and was dealt with there.

8310. (*Chairman.*) But it was a question of excessive estimate made by the Commanding Royal Engineer?—I think he went on a sort of sealed pattern idea. I merely instance that to show that very frequently the local man can do it, I will not say better, because that is a matter of opinion, but quite as well and much cheaper than some great central body.

8311. It seems to me that we were extremely fortunate to have you in command at Alexandria at that time, but supposing that there had been another General there, he might very possibly have said, "The Commanding Royal Engineer, who is my expert and professional man in these cases, says 36,000% is necessary, and, therefore, 36,000% is necessary." And if you gave this power of doing work in the district to the General, would not the General, as a rule, be very much guided by, and indeed almost follow, his Royal Engineer Officer?—I think that is largely because the Royal Engineer Officer has himself to work in a groove.

8312. He has to work in a groove in so far as he has to follow patterns?—No, I do not mean that, but he has himself to work in a groove in the sense that he himself has not got independent action.

8313. (*Sir George Clarke.*) In this case I suppose he might have taken the cast-iron pattern of hut and estimated on the cost of that hut being sent out from England probably?—The Royal Engineers in Egypt? I should think it very probable he would.

8314. (*Chairman.*) Was the hut when finally built practically the same hut as the hut for which the Commanding Royal Engineer had estimated?—That I could not say, because I did not see the detail plans, or at least if I did see them they have not made any impression on my mind. But what I did was this: We had a force of 25 or 30 Military policemen in an existing hut, and I made that the basis of my question to the timber merchant. I said, Let him go and look at that hut, double it in size; instead of holding 25 let it hold 50 and tell me what he would put up one of them for, and then put a further question to him and ask him, supposing that we give him an order for one what it would cost, and suppose we give him an order for a dozen what the dozen would cost; because of course

there would be a reduction relatively, one of the 12 would cost less than one I mean. That is the way we worked it.

8315. The impression left upon my mind by your account of what happened rather is that the Commanding Royal Engineer made a very large and extravagant estimate?—I think he worked according to what is called the scale of prices. I think you can often do on the spot with very much less than you could if you went to some central body.

8316. (*Sir George Clarke.*) In drawing out a type of hut for a hot climate, that type before it was approved at the Inspector-General of Fortifications office, would have to be *vised* by the Sanitary Board here, and that Sanitary Board would probably put in a lot of things not perhaps necessary, but which they thought desirable, and the things they put in would largely affect the price of that hut?—Yes.

8317. So that you probably built the hut there perhaps cheaper and quite as good for all practical purposes?—Yes.

8318. But which very likely the Sanitary Board here would not have passed?—I would not say that they would not have passed them, because I think they were most excellent sanitary huts, but I will not say there were not matters of finish and other things that would be different if you put them side by side. It is like a gun from Purdey's, for which you pay, say, 200 guineas a pair and a gun from a small man, which will knock the pheasants down quite as far, for which you pay 100*l.* You pay for the name in these cases.

8319. (*Mr. Mather.*) But are we to understand that the formal method by which you have to obtain your huts in the case you have quoted was for you to communicate with the War Office in England with an estimate from your Royal Engineer Officer as to what those huts would cost, based upon English prices of the construction of huts in England. Would he take the schedule of prices in making up this specification and estimate which generally obtains in a district in England?—It is possible, but I could not tell you that because I was not in the position of commanding officer.

8320. The point that I wanted to find out is why you had not the power to begin with to get them constructed by a local builder?—Because the matter of a barrack is a matter that had to be referred home.

8321. (*Chairman.*) Having got the authority for the money, supposing that this 36,000*l.* had been given you, then you would have asked for contracts on the spot?—Yes. In any case I would not have got the permission, it would have come to the General Officer in Egypt, who would have directed the Royal Engineer to proceed, and I would simply have seen to the construction of the huts.

8322. But supposing the Government here said, "Here is 36,000*l.* for building those huts according to your estimate and specification," the General Officer Commanding in Egypt would have put out tenders in Egypt for contracts, virtually offering 36,000*l.* in exchange for the buildings in accordance with those plans and specifications?—I do not think it would have been done in that way. I think he would have called for contracts. I fancy it would have been known that that sum was in some way or other available.

8323. No, of course he would not have said, "Here is 36,000*l.*," but the contractors would have found it at once and would have based their tender upon it?—Very possibly.

(*Sir George Clarke.*) It was open, was it not, to the General Officer Commanding in Egypt to say, "This is excessive. I should like to get some local opinion?—Absolutely. I think he was quite of the opinion that it was a very high estimate, so far as I remember; it is 11 or 12 years ago.

8324. (*Chairman.*) To come back to general principles, your contention is that if the General Officer had this power of doing works subject to a certain limit, that would result probably on the whole in the direction of economy and certainly in expediting business by obviating unnecessary references and correspondence?—Yes, decidedly.

8325. And also if the General had power and was largely consulted on the question of the list of approved contractors from whom tenders were called for assuming that the system of calling for tenders from an approved list of contractors is one that was maintained,

the fact of the General having that power would make the authority which he now has of dealing with contracts up to 2,000*l.* more of a reality and less of an illusion?—I think so.

8326. With regard to other expenditure in districts, you gave an instance before the Decentralisation Committee which I should think is likely to become historical, of the way in which a General is cramped; I refer to the question of the straw hats. Supposing that a General had a certain sum at his disposal for spending at his absolute discretion on matters outside the regulations, so long as they were matters of Military expenditure, such as straw hats for the troops would be, would that get over the difficulty you experienced at that time to a great extent?—I might say at once that that difficulty has been greatly obviated and got over in the years that have elapsed since. I do not think such a case could occur now, or anything approaching it, but I still think that an extension might be made much more than it is, with good results, and that a sum might be placed at the disposal of the General with advantage to meet the current exigencies, such as they might be, of his District.

8327. That the General should be allowed to spend whatever sum it was absolutely at his discretion, reporting it, and subject to audit, of course?—Yes.

8328. And giving vouchers in support of it?—Yes, I think he ought not to have to refer the trivial things that he still has,—not as many as he had, but he still has a number of trivial orders to refer to, and they are injurious to him and to his staff, much more than the mere value of the money. It gives him the idea that he has to be referring everything,—that he has got no free action; it cramps him.

8329. And, therefore, that he has no responsibility?—And, therefore, that he has no responsibility. And then I would add to that that it is almost as bad if you give him the responsibility of spending these few pounds, to be always asking him why he spent them. It comes in the end in some cases to be shorter to refer the matter at the beginning and to obviate reference afterwards.

8330. But if the General's signature was a warrant for the expenditure of the money, all that could be done afterwards would be to see (and no General would object to that) proper vouchers for receipts and payments, the receipts of the tradesmen, for instance, who supplied the straw hats. That would satisfy you?—Yes, I think so, very largely. It would work unquestionably to the good of the Service.

8331. Are you aware that in India that system does obtain, that the Commander-in-Chief in India has so much money per month that he may apply?—I was aware of that at the previous Committee. I think Lord Roberts's evidence, if I recollect rightly, altogether tended in that direction. I remember his saying that he had more power as commanding in Bombay than he had as commanding in Ireland. That would show, and other evidence, too, would show, that there was that liberty given in India which did not exist here.

8332. I do not know whether you are also aware that at the present moment the Secretary of State himself has no money at his disposal for dealing with small casual expenditure of that kind. He has not got a penny?—No.

8333. I think an idea finds favour with the Committee here of proposing that the Secretary of State should have a sum, say of 5,000*l.* a year, placed at his absolute discretion. Supposing that the Secretary of State had a sum of 5,000*l.* a year, what would you think, with some idea of proportion, would be the sum that ought to be allotted to the General in the District?—For small trifling charges of the nature you have described?

8334. Yes?—Well, if it was to be relatively to the Secretary of State's, I would have to put it at a very small sum.

8335. You must remember now that instead of so many districts we are in the presence of six larger units?—I suppose still keeping within the proper bounds.

8336. When I said proportion I meant something that was not altogether out of proportion to the 5,000*l.* of the Secretary of State?—I suppose that if he had a sum of 500*l.* that ought to meet it. I should much prefer seeing it done on the principle I have mentioned before, that the average cost of his District should be

taken and that he should be allotted that sum, and that he had to show cause for not having spent that sum, and that if he wanted to increase that sum he should have of course to show still further cause.

8337. The Commander-in-Chief in India, I think, gets about 2,000*l.* a year?—And how is it spent?

8338. On any small matter at his discretion so long as he is satisfied that it is a fair item of Military expenditure?—But would it be of the nature of construction or payment of funeral expenses or things of that sort?

8339. I think it is left entirely in his discretion in India; nobody ever asks?—I do not know.

(*Mr. Malher.*) Some small store it might be.

(*The Secretary.*) Provided it does not involve permanent expenditure—anything not of a recurrent nature.

(*Witness.*) He might have 300*l.* a year; I should think that would do.

8340. (*Chairman.*) It would be some sum—not a very large sum?—Yes, they are all small things that these correspondences arise out of.

8341. You say that “We have the most close and exact codes of regulation and orders upon every Branch of Army administration. There is no difficulty whatever in following the uniform system laid down,” and therefore references to the War Office ought to be very infrequent, but as a matter of fact there are a considerable number of references, are there not, in connexion with the interpretation of the financial regulations?—There are. I think that many questions are asked on doubtful matters, because of course no set of regulations can cover the cases that will occur; and that the General is more prone perhaps to refer a matter if it does not come under the a b c of his regulations than he ought to be. But I think it very much arises from the idea of his being queried or questioned if he does give a decision, or if he gives a decision that might possibly be wrong, because no two people will look at the matter in the same light exactly. I take questions of disputed payments, questions of responsibility for accident, whether it is to come on the public or whether it is to come on the man. A man injures a boat or is run into, and the question is who is to pay for it. I think the General ought to be able to settle those himself.

8342. But when there was a question of the interpretation of financial regulations, would you ever think of consulting your Paymaster as an expert on that matter?—Always. I would indeed suggest that he should be made of greater importance than he is. I think he is of the very greatest importance on all matters, such important matters as finance. They are most worthy men that I have met, most conscientious, thoroughly imbued with the responsibilities of their position, anxious to do the right thing; that is my experience of them after a considerable number of years, and I think they ought to be Staff Officers, precisely on the same basis as the others are. I make my own so; I refer every question that is any matter of finance to him, because he is naturally the financial adviser; but then of course he says, “You must refer this; this is a matter that must be referred according to the Regulations.”

8343. Even if he says it is a matter which need not be referred, and it is a matter on which he gives you his opinion, although no doubt his opinion is generally excellent and very often right, still it is not final; you have no certainty that if you accept his opinion the matter may not be questioned afterwards by the War Office; his opinion is not binding in any way?—In no way; it is merely an opinion: but it would be a very strong opinion of course, because he is dealing with that and with no other question. He would look at it. Is it one side of the line, or is it the other?

8344. There is a suggestion now that in every Headquarters of each of these new Army Corps there should be established a local section of the Accountant-General's Department under a local auditor, who should conduct the audit there locally, instead of its being conducted at the War Office; and it is suggested that in a case of interpretation of the Financial Regulations the General would be able to refer to such a local auditor, and that if he gave an opinion within the powers delegated to him from the Accountant-General at the War Office that would be final; that if the

General acted upon it there would be no question of references or trouble thereafter arising, because the ruling of the local auditor would be binding upon the War Office. Do you think that that would be an improvement and facilitate matters?—Undoubtedly it would; but I think that the machinery for this is at present existing, or to a considerable extent, in the Districts.

8345. In the Paymaster?—Yes, the Chief Paymaster of the District.

8346. But the Paymaster's opinion is not binding on the War Office in any way?—No, it is not binding; but so far as its being the opinion of an expert and of a man who is on the spot and who is anxious to do the best he can goes, I think it is as good an opinion as is necessary.

8347. You do not think that it would really improve matters very much if instead of a Paymaster whose opinion, if he gives it, is not a binding opinion, you could take the opinion of a man whose opinion would be binding?—I cannot say what effect that would have between the War Office and the Treasury, of course, that is another matter, or within the War Office itself. But so far as the question relates to the matter of which we are speaking and to the efficiency of the public service through that matter, I do not see why the Paymaster of the District should not do it. He is a man of large experience; he has served at the Cape of Good Hope, he has served at Halifax, he has served in Districts; he has nothing else to trouble his mind with. I always think that the local bank is a good guide to that, say the London and County Bank or any other big London bank; it puts a manager at the place and gives that manager power. And remember they have far more responsibility than we can have, because they take in money as well as give it out: we only give out money. Of course it is a very important difference, but the local manager of the London and County Bank, or whatever branch bank it may be, is subject to inspection; he is subject to audit, but his hand is very free.

8348. (*Mr. Beckett.*) I may say it is a very easy matter for the local manager to take in money; he takes in all he can get?—Yes, that is the fact; but what I mean to say is that he is given greater responsibility, greater power.

8349. The power of lending it out?—And there is the power of lending it out too. What I want to come at is this. The audit of the War Office necessitates an enormous number of duplicates, an immense amount of checking and correspondence, and so forth. Now, in the last year, my Paymaster paid out all but 300,000*l.*; the War Office audit improved on that to the extent of 100*l.*; that did not come for six months. I do not see why the Paymaster should not audit his own claims. It goes up in the pay sheets; it goes up in the receipted bills.

8350. (*Chairman.*) Do you mean his own payments that he makes?—The pay of his district, subject to inspection.

8351. Then you would get the same man spending the money and auditing his own expenditure. The whole theory of audit is that the disbursing officer should be audited by somebody independent?—That is so. I quite admit that, and I quite admit that although there is only 100*l.* wrong in his audit for the year on the 290,000*l.*, still it is the case of the policeman in the street. If you had no audit there might be 100,000*l.* wrong.

8352. It does not seem to me, if I may be allowed to say so, that the fact that only 100*l.* was wrong, really proves very much; it is the fact of his being subject to this audit that keeps him up to the mark?—The question is whether he would not be kept up to the mark equally well, and the check upon him be equally good by inspection.

8353. (*Sir George Clarke.*) The question really is, in those cases, how much inspection will suffice to produce the necessary caution in Districts, and beyond that amount of inspection it is not worth while to spend money on audit; is not that it?—Yes.

8354. (*Chairman.*) But assuming that the audit, as now conducted by the War Office, which is after all only a test audit (and a test audit is almost the same thing as an inspection audit), is kept up, do you see any advantages in its being done in the District by a

Lieut.-Gen.
Sir W. F.
Butler,

14 March 1901.

*Lieut.-Gen.
Sir W. F.
Butler,
K.C.B.*

14 March 1901.

local section of the Accountant-General's Department rather than in its being done up here. I think it is a question, of course, that one has to test before we can say. I think it might well be tried.

8355. It seems possible that on the one hand it would give the General a man at his elbow whom he could consult and whose opinion would be final, and on the other hand it would put the Accountant-General and the Auditing Department more closely in contact with the actual difficulties and necessities of the soldier, and promote harmony between them?—That is one of those cases which I had in my mind when we began, that you will not get much difference in decentralisation or anything else by any mere shifting of the matter of papers. I take the pay question. I think there is probably no Department of our Army that could be altered to such advantage as that. The whole question of pay is so needlessly involved and made difficult. It is a simple matter; as somebody said the paying out of money is simple; we make it as complex as possible. One has only got to make his own house the supposed scene of the operation and you will see how it would work. Suppose you paid your servants every day and said that you charged them so much for their breakfasts and their teas, and so much for all the rest of it, you would involve yourself in a series of complications.

8356. Say you allow them so much for pay and so much for tea, and so on?—Yes. Why not instead of all that difference between messing and pay (messing being an admirable word in another sense) make it one sum? What is the use of all this hair-splitting which only makes the soldier discontented, because he is in the position of a man that the more you jumble figures before him the more he thinks you are robbing him, as he invariably does and will to the end of the chapter. He exonerates the Captain and the Lieutenant, but always thinks that the Pay Sergeant is robbing him, and does that largely from the series of accounts that he sees.

8357. Which he cannot understand?—Which he cannot understand. If you said, "You are enlisted at so much a day and there are 30 or 31 days in the month, and I will pay you a series of advances of pay, if you want them, 4s. a week, and at the end we will settle up and I give you 2l." as you would with your own servants if they were permanently employed. I think you would knock the bottom out of half the difficulties.

8358. You refer, do you not, particularly to the question of 3d.?—Yes, of the messing, but there are some other little things that go in.

8359. (*Colonel Miles.*) Extra duty pay?—Extra duty pay, and all sorts of things. Could they not say, "I will give you 24l., 30l., or 40l. a year and divide it by 12 into months," and say, "There is your pay?"

8360. But the 3d. was used, was it not, to forward certain military purposes?—The idea of the 3d. dates down like the districts from Oliver Cromwell, I dare say. It is supposed that his pay is not enough for him, and that he cannot get the grocery ration, that is the *raison d'être* of the thing, and you give him the 3d. for this grocery ration, but what is the use of making two bites at the thing.

8361. (*Sir George Clarke.*) He does not want the grocery ration more after he is 19 than before?—Not a bit more. He wants it more before he is 19. My experience of growing boys is that you have to give them nearly double the food of a man if you want them to grow up well.

8362. There is no logical basis for it?—Nothing at all. It is the most extraordinary delusion that has ever taken possession of the human mind.

8363. (*Chairman.*) What is the origin of the delusion?—I cannot tell you.

8364. (*Sir Charles Welby.*) Was not the origin that it was considered unwise to pay an untrained boy the same rate of pay as you paid the full trained efficient soldier?—Yes, but I think it would be better if they would only take the plan of making it a monthly payment, and pay him as you do your servants. You must have different rates of pay, but that we should go through this work each day, so much messing and so much this and that, this complicated system of accounts seems to me absolutely unnecessary and uncalled for, and that is what really necessitates all this work of figures and all this Staff.

8365. (*Sir George Clarke.*) You think it would be very much better to do away with all these small reductions and lump them all and let the soldier know what he is going to get?—Let him know what he is going to get, and at the end of the month he cannot be under a delusion that he is being juggled. It is very much like, if one may come down to that, the three thimbles and the pea.

8366. (*Mr. Mather.*) And this does not exist in any other Army in the world?—I do not know, but there is no reason for it whatever. Then again, take the Clothing Account, which is a terribly involved thing, as I daresay you have had some evidence about.

8367. (*Chairman.*) Yes?—I have thought about it a great deal, and had the advantage of hearing Mr. Fleetwood Wilson's evidence three years ago, when he was Director of Clothing, which is in that book. I cannot but think, having considered the matter since, that if the man were to get a credit, a paper transaction of a credit at the beginning of the year, it would be to the advantage of the simplicity of the matter, against which he would charge his clothing, whatever he wanted.

8368. (*Sir Charles Welby.*) And pay him the balance at the end of the year?—And pay him the balance at the end of the year. I think what we ought to aim at is simplicity in all these things.

8369. As regards the pay matter, as we are on that subject now, I would say that officers' pay ought to be consolidated. It is consolidated for an officer serving in Pall Mall; I do not see why it should not be consolidated for an officer serving at Aldershot.

8370. You mean allowances?—An officer in this house gets what is called consolidated pay. I do not mean to say that an officer at Aldershot should get the same pay, that would be absurd, of course; but that there should not be such a difference in the way his pay is calculated. Here he has consolidated pay, 800l. a year for an Assistant Adjutant-General, I think it is; in a district the same man holding the same appointment has his pay cut up into innumerable little items, just as the messing and the men's pay is paid. He has fuel and light, he has horse, servants, and forage allowance; and they give rise to an amount of return and correspondence and signature that is altogether needless.

8371. (*Colonel Miles.*) Those allowances Returns are very much signed, are they not?—There are five or six signatures on each of them.

8372. (*Chairman.*) They have been held up to us as the most admirable regulations that exist?—They do not look at it from the District point of view, I think. I could bring you up a sheaf of those things, and instance how the Staff of a District draw their horse allowance, forage, fuel, and light, and lodging allowance, if they are entitled to that.

8373. (*Sir George Clarke.*) And all that produces a vast amount of clerical labour?—Immense, and an immense amount of reference here; because they all come up here or to Cox's.

8374. (*Colonel Miles.*) Monthly?—Monthly. I would say, give them so much and consolidate it, make it one sum. I have some notes here for my guidance. "In Civil life a servant permanently employed is usually paid by the month or year, and not by the day. It would not be difficult to arrange a simple method of dealing with broken periods. The present Company Pay List seems very complicated." Any one that knows the Pay List must know that. I think we might make it a very simple matter instead of its being an involved, difficult matter.

8375. (*Chairman.*) Would you give us any other instances you have got there?—Pay and clothing are, I think, capable of greater simplification; daily pay, or weekly pay, or monthly pay; and if a man wants it you give him 5s. or 4s. in advance, and at the end of the month settle up with him on the basis of his 2l. 10s. or whatever it might be. I do not think that we can improve the method by which payment is done. In the Navy the Purser pays the ship's company. The Navy draw an exact line between combatant duties and non-combatant duties, and that works well in the Navy: the Purser pays the ship's company. I think it is well that the young officer—the Captain or Subaltern—should pay the company, because the officers of the Navy are thrown into connection with their men at every turn of the deck; we are not. The men live in

barracks and the officers live in quarters; and therefore it is good that the officers should have to pay the men twice a week or whatever it may be; it is once a week now; it used to be daily. I think that is a good plan and ought to be kept to, but I would make the pay system very much simpler than it is now.

8376. (*Colonel Miles.*) But though you think it necessary for the officer to pay the men, do you think it necessary that he should be charged with the accounts?—I do, but I would qualify that by saying that every young officer ought to be put through a school of book-keeping at whatever college, academy, or school he is in; he begins by knowing nothing about it and has to learn his business by losing money.

8377. (*Chairman.*) Do you ever send the young company officers to the Paymaster that he may instruct them in the elements of keeping accounts?—Yes, that has been done; I do not know that it is a regular habit, but I know some officers do it. In the Militia, for instance, where they did not know it, they have been shown how to do it by the Paymaster this last year; I know that has occurred frequently.

8378. Some suggestions have been made in certain quarters to the effect that the General in the District should have a financial adviser?—I think his Chief Paymaster ought to be that. That is what I came to before, that I think he ought to be much more recognised.

8379. As regards regulations?—As regards regulations and all matters of finance in his district.

8380. As regards the transaction of the ordinary business of making contracts, purchasing supplies, and so on, I suppose his business manager is the Assistant Adjutant-General for B?—Yes, whose work might be much simplified. I have got a very active minded Assistant Adjutant-General for B now (and a well-known one, too), and although I do not go so far as he does in every thing, still, I think his ideas are well worthy of consideration. That is Colonel Richardson.

8381. In what directions do his ideas go?—Well, they cover a great deal. They cover contracts, simplicity of returns, as I have already stated, not having to give this detailed estimate from every little station in the place—which I began by—and they cover also his ideas about stores—ordnance stores. Now everything is delivered at Woolwich and sent from Woolwich to the districts. We will suppose a matter of cloth; it is made in Belfast; it is sent to Woolwich and goes back to Belfast again, such portion of it as might be wanted there. His idea is (and I think it has sound sense in it), that there should be independent deliveries of ordnance stores to the districts.

8382. Have they got accommodation for taking in these stores?—They have to take them in the end. It is nothing new. They get the stores now, but they get them from Woolwich. They may have gone twice over a track.

8383. Would not it be a very simple matter, supposing you made a contract with a man for cloth, to say that so much of the cloth shall be deliverable at Woolwich, so much in this district, and so much in that?—It would be very simple; but you must look all round at it; there are objections to it. The first objection that would present itself would be that of inspection. Can you guarantee that the article you get at Devonport would be as good as the article that had been rendered before at Woolwich. I see no reason to think that it should not be as good.

8384. Could it not be inspected at Devonport?—It could be inspected by a travelling inspector from Woolwich, and you could have the samples at the districts as well as at Woolwich.

8385. In fact, you would make your districts self-contained?—Self-contained.

8386. With regard to most stores; not, I suppose, ammunition?—Certainly ammunition has to be drawn all from Woolwich. You could have that delivered at the districts; you must get it through the body that has taken it in in the first instance and had it tested; that is one of the things that you must have centralisation in. But there are innumerable things, barrack furniture, bedsteads, hospital equipment, camp equipment and clothing and all that. I do not see why they should go all into Woolwich to be sent out of Woolwich again. I think the contractor might deliver them at the other places just as well.

8387. Is there any reason why this sort of business manager that you have should be called the Assistant Adjutant-General for B?—No.

8388. Has the letter B got any particular meaning with regard to his functions?—None whatever. The Assistant Adjutant-General for A and the Assistant Adjutant-General for B are distinctive. We have got so into the habit of them now that we do not think about them. At first it appeared very ridiculous, but one does not attach any peculiar meaning to it now; it differentiates if a thing is marked B—it is like S. and S.W. in the London postal district. The Assistant Adjutant-General for A is what is called the Chief Staff Officer, but practically I do not think it makes any difference, because they do not work it so. For instance, B does not communicate through A to me; B communicates direct, and, so far as I know, always has.

8389. (*Chairman.*) I think you said just now something about there being a good deal of signing of forms in the Army; is there not the fact that there is a great deal of signing of forms by officers without their looking very carefully into what they do sign, for instance, in the case of travelling claims?—I think there is; I think there always has been and I fancy there always will be. When you say looking into them very carefully, you presuppose that the matter is a simple one; but when it is so mixed up with what I say are unnecessary figures and unnecessary matters; if a man had got to look into them all he would have nothing else to do. If you refer to my evidence before, what I based it all on was that the General and his staff were taken from their proper functions, which ought to be the training of the troops, and put to an amount of clerical work quite out of proportion either to the importance of the work itself or to the necessity of it; in fact, that is what ran through my mind at the time, if I did not bring it out sufficiently in the evidence; and I exemplified it by the Tirah campaign and by some little wars we had at the time. I think, looking back upon the years that have passed since, they have still further proved that that view is not incorrect.

8390. But you could not relieve the General and his staff more for the work of commanding and training the troops unless you enormously reduced this mass of returns and reports?—Which I maintain can only be reduced by changing the very foundations of the work; that is what I meant. I did not put it clearly to you at the beginning, but I thought the mere reduction of this report and that and the other report did not matter much because they would all be back there in five years again. I know they will. A man will call for a report, "Why do we not get so and so?" and then out goes the order and it goes back—it all begins again. But if the Committee saw its way to change the foundations of the work, the structure itself upon which the work is built, then I think all this mass of paperage would be automatically destroyed without the necessity of any Committee going into it and saying this Report ought not to come in and that Report ought not to go out, I think if you simplified the execution of the work, the administrative part of it would, of itself, die.

8391. Could you give us any indication of the best way in which to tackle the problem?—I have tried in these instances of the pay and the clothing, but I could go on for hours and take up your time too much.

8392. I think if you take up a little more of it we shall be very grateful to you?—It is very good of you to say so. First of all there ought to be a radical difference between the Field Army and the Garrison Army; you are mixing up two things that ought not to be mixed and ought to be separated. It gives rise to an amount of unnecessary and harmful work; I do not see why there should be this connection between the two; they are for different purposes, and the minute war begins you then separate them. I think the Field Army ought always to be kept distinct from the Garrison Army. I take a place like the garrison at Portsmouth, the garrison at Devonport, or the garrison at Dover. As soon as you put a part of the Field Army into that garrison it begins to deteriorate, it must,—it is down amongst the pothouses and you have no ground to drill it in, and all the rest of it. I suppose it is intended that they will be separated now; at least I read the new proposals in that light; but it seems to me that as long as we maintain a mixed-up Garrison Army with a Field Army so long will we have inefficiency and confusion. But then perhaps I am

*Lieut.-Gen.

14 March 1901.

travelling outside the matters of reference, so that I must be careful.

8393. Yes, I think that rather goes outside the War Office?—Yes, and yet I mean to say that it ultimately affects the other question; there is the difficulty, that is what I meant to say when I sat down first. We hammered away very hard, Colonel Miles and I, three years ago, and I do not know that we arrived at anything; the shot was not at all in proportion to the powder.

8394. (Colonel Miles.) We touched the fringe of the subject?—We did not get much out of the gun although we put in a tremendous charge of powder.

8395. We dealt too much with details?—Yes. I do not well see (I come again to the point) how any effective decentralisation of work can be arrived at without a fundamental reorganisation of the forces with which we are dealing, and I would make that immense difference between, as I say, the army that is administered in a garrison and the army that is to take the field. I am only looking at it in a paper light now.

8396. (Sir George Clarke.) And as regards these three big new districts, do you think the establishment of them will facilitate the decentralisation of administration?—Yes, I certainly think so. Take Aldershot, where I have recently been in temporary command for a few months last year. The amount of office work there is very great, it does not differ from a district one iota—that is what I want to come to. The office work at Devonport is not more than at Aldershot, yet Aldershot is a place theoretically given over to the training of troops. But if a man has to be out with the troops in the morning up to 1 o'clock, he would have to sit late to get his office work done.

8397. (Colonel Miles.) May I say that Aldershot, in some ways, is fortunately situated as regards works, as it has no regimental depots and no auxiliary forces territorialised?—There is nothing outside it; it is self-contained in a ring fence.

8398. Yet the correspondence there is very heavy?—Yes.

8399. (Sir George Clarke.) And the correspondence would be much more severe if the army corps district of the future army embraced a large territorial area with a number of fortified ports in it?—Yes.

8400. (Sir Charles Welby.) But the remedy for that is to supply the army corps with an efficient staff?—That would be the general idea, the Navy idea. The Navy knock the thing into two parts, as I said before. They have their combatant officers training the sailors, gunners, mining and all the rest of it. The whole of the clothing pay and all the administration of the Navy is done by a civil branch. The Germans do the same. We had most excellent evidence from Colonel Grierson on that point which you will see in the Report of the previous committee, and the difficulty with us is that you take your General, who is theoretically supposed to be looking after the training of the troops, you put him down and make him responsible for every return. You ask me now if these returns are all examined, I must say for myself they are not. I could not be running through all the figures; I must take the *ipse dixit* of my staff officer and say that this is right. I generally run through them, but at a place like Aldershot if the general were to do that then good-bye to the training of the men; he ought not to have to do it, and yet he is made responsible for the exactitude of every paper that leaves his place, and he could be, as a matter of fact, held responsible for everything. He may himself come down on his Assistant Adjutant-General for B and his Chief Paymaster and the rest of them, but he is the man, it is in his name it is all done.

8401. (Sir George Clarke.) Yet the Aldershot command is theoretically that of a field army?—Yes, the only one that was.

8402. (Sir Charles Welby.) What the General requires, apparently, is a staff officer of business capacity and experience, who shall have definitely assigned functions and authority, which he shall exercise in the name of the General Commanding the District, or the Army Corps, as the case may be?—I think so, but of course under the general direction of the General.

8403. Under his authority?—Under his authority.

8404. But that he should have power to act on behalf of the General without reference to him and without

obtaining his signature in every routine case that arises?—Quite so. I think that would certainly free the hands of the General officer very much.

8405. (Mr. Mather.) Coming to first principles again, to which I think you are more attached than you are to pointing out these details of difficulties, you sat upon this Decentralisation Committee three years ago, and you are familiar with the conclusions arrived at and the general recommendations made?—Yes.

8406. Do you consider that those recommendations, summed up, go as far as you this morning have put the case before us as to decentralisation of Districts under the command of the General officers?—I cannot say that I do.

8407. May I just read one paragraph, No. 3, in the recommendations: "The General officer should have real control within his District, subject to general regulations, and the audit of his accounts. He should be encouraged to act for himself and not to refer to the War Office for decisions; he should in all cases settle the allotment of quarters to troops assigned to each station; he should, in communication with the officer commanding the unit, select drafts, the numbers of which have been designated to him by the War Office; he should appoint adjutants and depot officers, and settle all minor questions affecting the auxiliary forces; he should correspond direct with the General Officers Commanding other Districts, instead of through the War Office." That is a summary in a paragraph of the conclusions at which you have arrived, and would you go beyond that conclusion now?—I am absolutely in accord with that still; I think every word of that is truth.

8408. You do not call this going to the root of the thing?—No, it may go to the root of the thing in theory, but it does not in practice.

8409. I am not now speaking of the instructions given to the General officer arising out of these recommendations, because of course they are very feeble, and only touch a few points, rounding off some acute corner; dotting the i's and crossing the t's, &c.; but there is no fundamental change made in any of the districts of the country?—No.

8410. But yet it would appear, if one interprets this language in the ordinary sense, that this paragraph, No. 3, practically covered all you have brought before us to-day, carried out, I mean, to its fullest extent?—Yes.

8411. Because it is "The General Officer should have real control within his District, subject to general regulations, and the audit of his accounts"?—Yes.

8412. Let us take, if you please, a concrete case; imagine a concrete case. Supposing you, as General Officer of the Devonport Division, were allowed tomorrow to do what you have put before us to-day as a recommendation and suggestion, namely, to have full control of the expenditure of all the money that was estimated to be sufficient to run your District for a whole year, would you be quite willing, with the staff you have, to administer your district, judging from your experience, with a definite sum made up of course from past experience? Would you be able to run it on your own lines so as to satisfy your instincts and to satisfy yourself as a General Officer, to train your troops, to alter the pay of your soldiers, to make it simple in the manner you have just described; and assuming that no regulations existed to bind you to those tortuous courses which involve so much correspondence with the War Office, would you from your experience declare to the Committee that you could run your district in a manner quite as efficiently from a military point of view, and quite as safely from a financial point of view, and with less labour really for your own officers and for yourself, than you do under the present system?—Quite as efficiently and economically from a finance point of view; I think even more so. With regard to training, I am doubtful about that, provided that there happened to be in my district grounds sufficient to train troops; for it is evident the more you put the civil administration of a district under a General, the more you must take from his purely military duties. I think perhaps that was not quite in the mind of the Committee at the time that sentence was framed.

8413. But I am taking it now with your present experience since the Decentralisation Committee sat. Assuming that to-day you were to be asked the question

by the War Office whether, as an example to all the other General Officers in the country, your district should be, as it were, delegated to make this trial for the system of the Army that might eventually prevail through the whole Army, would you be prepared to take up those duties I have just specified and report at the end of the year, and only at the end of the year, financially, and as to military efficiency, as to the competency of the staff, and upon every point, that you could prove that you had fully and completely carried out all that was necessary for proper administration?—I should be quite willing to make the attempt.

8414. But could you from experience give an assurance that you would satisfy all that was required?—I think so.

8415. Without making any drastic change in the staff?—It would necessitate a certain extra amount of clerical assistance.

8416. That goes without saying; and we also might assume, what the Chairman has told you that it is possible that the Committee would recommend to place with you, as a future officer, the local auditor, who should have the power practically of a local Accountant-General in your district. Assuming that to be the case, with such a staff as might be involved in those changes, can you assure the Committee, from your experience, which is of course large and varied, that your command would be run in the best possible manner from all points of view, financially, military, and so on?—I have no reason to doubt for a moment that it could be done, but I should not like to set myself up as a pattern to the rest of the world and say: "Look here, here you see the correct thing," because I would instantly have the whole of the world against me, and they would say: "We will do our best to knock that man over," they would not say that, perhaps, but there would be an amount of invidiousness introduced into it that I should deprecate. But I should be very willing in a minor key to try the experiment, and not to be put up as a sort of model example.

8417. I do not want to make it personal. I say anyone: General Smith, General Robinson, not General Sir William Butler—any General Officer you are acquainted with. Could a General Officer *quâ* General Officer take such duties as I have described, and, in your opinion, efficiently carry them out?—I can only say that, if he cannot he ought to; I cannot say what he would do. I think any General Officer, given a staff, say, like the Aldershot Staff or the District Staff, all of which, so far as I know them, are good, with such clerical assistance as he might require for extra duties, ought to be able to do the entire thing in his own district.

8418. You have put in detail before us this morning that you, for instance, or any General Officer, could alter with great advantage the system on which pay is made; and you have described a system by which the clothing could be dealt with; you have described how carrying out the works under a certain definite sum could be better done than at the present time; you have told us how stores could be regulated with great facilities; you have said how new barrack accommodation, and maintenance here and there, and certain buildings, could be better done without reference, if you had the power to do it under a certain sum of money allotted to you?—Yes.

8419. In detail, you have really described to us every duty that would be involved under this general question that I have put?—A good many of them; I have not touched them all. There are some that I have not mentioned yet that I could state to the Committee if they like.

8420. Is there any one you would exclude?—The principle would be the same in every instance. There is nothing I would exclude.

8421. Therefore, from top to bottom, you consider that the General Officer might take the responsibility in all respects, financially and from a military point of view, if he had the power, without reference to the War Office, excepting in one annual report, which would deal with his finance, and deal with the state of his command, subject, of course, to periodical inspection of an able officer from the War Office to see that his military condition was right throughout the year?—Yes, I think so.

8422. If that is the conclusion at which you have arrived from your own experience, it puts the Committee, it appears to me, in a position to assume that

you would be of opinion that every General Officer now in command of each district might be capable of carrying out that responsibility?—I come back to that letter that I wrote to the Committee. I thought the district should only make itself known when there was something wrong in it. That answer is good.

8423. That is what I wanted to get at; whether, supposing that the Committee recommended to the War Office and Parliament all the conclusions arrived at from Committees and Commissions that have gone before, and especially those recommendations of this particular Committee on Decentralisation to which you have referred, if we were to take the stand that it would be most important for the service of the country, and financially safe to do that, you are in a position to assure us that the General Officers throughout the country would be willing to accept the responsibility?—Yes. I can of course only speak for myself.

8424. And for your own sake you would accept it?—Yes, for my own sake I should very willingly say yes to the proposal, with the reservation only as to whatever clerical staff and assistance might be necessary under the changed conditions.

8425. Do you think that the change would require a considerable amount of alteration in the regulations?—No, I do not know that it would, because, as I said before the Committee, the regulations are there existing. It would require, of course, certain changes to meet such things as new-clothing regulations and new systems of pay, and new other matters I have touched upon in what I have said this morning. But I doubt if they would amount to very much in the long run.

8426. And you would not require under this system to communicate with the War Office or report to the War Office on any subject whatever in the course of the year until your general report came in, except on some very grave matter that arose incidentally; but in the ordinary course of your duties, you would not require to communicate at all with the War Office?—I would not go as far as to say that I would be as the inhabitant of another world to the War Office, because I should be in daily touch with them on every point, answering their daily telegrams, answering any questions they might want to know, or reporting any outbreak of disease, or the arrival of any vessels.

8427. Those I call incidental?—We would be in constant and daily touch with the central body, but in the matters you have spoken to, administrative and executive matters, I answer quite in the affirmative, your question.

8428. (*Sir Charles Welby.*) Let us get this quite clear. You do not suggest, I understand, that it would be possible for you, as Commander of a District or of an Army Corps, to alter the conditions under which the soldier is paid or is compensated for his clothing unless all the other Commanders of Districts or Army Corps made the same alteration at the same time?—No, it would have to be by authority, of course, or else the officers might refuse, and the men complain.

8429. (*Sir George Clarke.*) You have had experience of a district command both at home and abroad; have you found that you had considerably more independence when you were abroad than you have at home?—The further you are off, the more independence you have, that is clear; but still that does not quite cover the question, because even in the most remote part you are still considerably hampered in what you think necessary on the spot.

8430. Then the independence you would get only arises from the accident of your being a long way off, not from any concessions made to you as being a General in an isolated part of the world?—Absolutely.

8431. Then, I take it, you think that the decentralisation effected by the Committee of that name is a sham, and that there could be nothing like a real decentralisation without a real reconstruction of the organisation of the British Army?—I should not like to use the word "sham," but, with the exception of that, I should agree to everything you say.

8431a. We will say "not real." As regards the question of the Staff which you have touched upon a good deal, in Germany, as we know, the German Staff Officer has nothing to do with administrative services which devolve upon the Intendantur; but on the other hand, with us is not the time of the District Staff of the General considerably taken up with these duties and promiscuous correspondence relating to them?—To a very great degree.

*Lieut.-Gen.
Sir W. F.
Butler,
K.C.B.*

14 March 1901.

Lieut.-Gen.
Sir W. F.
Butler,
K.C.B.

14 March 1901.

8432. And I think you told us that those duties perhaps lead to neglect of staff duties in relation to preparation for war, and that experience has proved that that is the case?—The word "neglect" hardly meets what I mean, although I am perfectly of opinion that the result is the same, but the man cannot do it; it is impossible with his time taken up as it now is in his office that he can be attending to his men out of doors. But I would not use the word "neglect," although the result is precisely the same as if he had neglected it.

8433. But apart from the question of time, must there not be a natural warping of the mind of the Staff Officer away from those important duties which he would have to perform in war and a concentration of his mind upon these purely business transactions?—Yes, I tried to meet that in the previous Committee (in one paragraph there), by even thinking that the General Officer's mind was better employed in hunting than it would be in doing what I called oakum picking in his office, "mental oakum picking," because if you give him a course of it for any length of time it must come that you injure his moral and intellectual fibre.

8434. And you look upon that sort of process, which must be continually going on in all the districts and commands in the Empire in time of peace, as a somewhat serious one in the interests of the Empire?—Most serious.

8435. And do you think, to remedy that, that some dividing line should be drawn between military staff duties, such as those performed by the General and the General Staff, and purely administrative matters of business merely so that a certain portion of the staff should have nothing to do with the purely military staff duties?—Yes, I am quite of that opinion; but of course you include questions of discipline in the military duties.

8436. In your district I understand you have a good many fortified places, and it must often be necessary for you to draw attention to questions which are intimately connected with the defence of the country on broad lines. We have been told that such questions very often wait a long time at the War Office before they are considered. Is that your experience?—Yes. Questions of construction not so long and questions of armament very long.

8437. And questions of general defence matters?—Of course they would be general defence. Do you mean mobilisation or works?

8438. Such questions as the management of channels approach in war, and all those questions that must enter into your district?—They enter very largely into my district, but of course they have to be considered in relation to the Navy and then the joint committee work comes in; they do keep a long time on the *tapis* and without settlement, but I am not sure if they had to be settled for an imminence of war they could not all be settled in a week without the enormous amount of deliberation which now goes on between chambers of commerce, naval authorities, and military authorities. There are three people to be considered in many of these cases. When you speak of channels, for instance, there is commerce, there is the Navy, there are the Artillery and Engineers; they all require a great deal of consultation. But I think if a war were declared, whoever you put there as garrison commandant would say, "Come, I will have none of this." I think they could be stopped in a week, those in the Western District. That would be by the word of the man in command who would have that authority.

8439. That means in time of war that the complete responsibility for the port would have to be thrown on the Port Commandant and he would have to do what he thought right?—Yes.

8440. But generally it takes a good deal of time to get decisions?—Very long, and the correspondence mounts up to an immense size.

8441. Then I think you said that you were not satisfied with your powers as regards contracts, and you would like to have the limit extended from 2,000*l.* to 5,000*l.*?—Yes.

8442. And as regards what you said about works in the district, the works Vote must of course depend to a considerable extent upon matters of general policy. If you give dining rooms to soldiers as a matter of policy; if you start some new scheme of organisation for the British Army, which runs into bricks and mortar, that must run into

centralisation and can only be dealt with then in central office?—I absolutely agree with you. In my own mind is to be read in the same answer gave before: that the essence of decentralisation centralisation, which appears a paradox, but it is I cannot better instance it than by the fact of driving 14 horses. A man who is put in the circus to drive 14 horses does not have 28 reins. Nor could he. He could not drive if he had; his hand would not be big enough to hold them. But while all the matters, information, general policy and organisation are centralised and come out from a centralised source, the whole of the administration of these ideas, the whole executive part of it, the whole of the action of it, should be decentralised, meaning that I do not think the question is letting everybody hammer away on his own lines. As I said before there is exact direction from the central body, but the direction is so applied now and has been for years that it comes down to most minute interference, which hampers us; so that practically, if you come to it, think it would be better to abolish the districts than to go on with the present system, I do not see why it should not all be run from here on these lines of minute centralisation. Instead of 3,500 letters a day, I think you would reduce them to not more than 1,500 letters. I do not suppose there is necessity for half the number. But the centralisation is so minute and the reference is so constant, the idea of check is so present in the General Officer's mind and in the mind generally of the whole lot, that it is centralisation of the very worst description instead of being of the very best. I wanted to point out before how the Great Northern Railway Company or the Great Western Railway Company centralised, I thought that was the very essence of what centralisation ought to be, although it is not on all fours with the Army. I meant that the initial thought should come from the centre and that the execution of that thought in multifarious shapes and forms should be the work of the district, and only when that thought was working right then the General should refer to the central body and say "This has gone wrong, this piece of machinery wants something new"; but as long as the wheel is spinning, as long as the work is going, I cannot see why there should be this constant report of work. There is one thing I have not touched upon at all—I do not know whether it is in the substance of the committee. That is the confidential nature of the work. I say, with bated breath, of all absurdities that is the greatest. If a Field Marshal had to be reported on, he would be reported on in exactly the same number of items, the exact sentences, that a junior Lieutenant would be reported on. A Major-General is reported on as to Tact, Temper, Experience, Judgment—perhaps as a young officer just entering is reported on. The amount of clerical work that system gives a General is large. I had two districts this year, I shot and my own, to report upon. I think the sheet of paper ought to do a regiment instead of 30 things—upon tact, temper and so on. You only get the report to see what it is, young officers, old officers, middle-aged officers, all the same.

8443. (Mr. Mather.) Whom do these reports go to? All to the Military Secretary.

8444. (Sir Charles Welby.) The Commander-in-Chief?—Yes.

8445. (Mr. Mather.) Are they ever looked at? Perhaps they are the most scanned of any, but it is of a nature that defeats itself.

8446. (Sir George Clarke.) I gather that your idea is that decentralisation is not a question of throwing many more duties upon the districts, but it is a question of delegation of authority right through the fabric of the army?—Quite.

8447. And that we shall not attain it simply by a measure of allotting duties, administrative duties, we have to make a change in the habit of mind?—Yes.

8448. We have to accustom people in all ranks to exercise responsibility?—Yes.

8449. And it is only in that way that decentralisation can be effected?—Quite so.

8450. (Colonel Miles.) Your definition of decentralisation is "Decentralised details in defined areas, and well-practised duties and in separated responsibilities"?—Yes.

8451. You referred in 1898 in several pregnant passages to the want of training in the army?—I did.

8452. That was before the war?—Yes.

8453. And you showed then how the work of the staff was occupied in administrative details?—Yes.

8454. In your experience at Aldershot that largely continues at present?—Absolutely.

8455. In spite of the decentralisation?—Yes.

8456. What is thought is, that there is a danger of further decentralisation of financial work because it may still further hamper Generals and take up time away from their military duties. That is the danger of it?—That is the danger of it.

8457. Do not you think that if we had a proper system of decentralisation and a proper expert financial staff such as we have heard exists in some foreign armies, with that proper staff and with that proper system we should really lessen the paper work and the administrative work of the General in proportion to what it is now?—I do, for the simple reason that he would not have two sets of people to be thinking of, the man about whom he is deciding and the person to whom he refers.

8458. He should think and decide?—Yes.

8459. And those decisions would remain as a record to guide the lower staff for future decisions?—Yes.

8460. The lower staff would know their General that they are dealing with, and would get into the run of his decisions?—Yes.

8461. Do you think that under the present system the work of the different branches of the staff, as they are now existing, is satisfactorily co-ordinated,—the Assistant Adjutant-General for A, the Assistant Adjutant-General for B, the Commanding Royal Engineer, the Ordnance Officer, and so on—I mean to say do you find a tendency for the work of the branches to overlap or conflict?—No, I think if they are properly understood by their respective holders of office there is no reason why they should overlap or conflict.

8462. You mentioned in 1898 that several branches of the administration were largely centralised; do you think that that centralisation still exists?—Which were they?

8463. The school section?—That has been decentralised immensely.

8464. The Ordnance Store section?—The Ordnance has been considerably decentralised.

8465. The Adjutant-General Section?—The Adjutant-General's Section has been decentralised, but I should think it might be still more decentralised.

8466. And the works section?—The works section is capable of any amount of further decentralisation.

8467. That is the one, perhaps, most capable of further decentralisation?—Yes, I find that the Medical Department is the least centralised so far as the General is concerned. Reference is constant to the General,—very frequent from the principal medical officer,—but it does not require passing on. I find that the Adjutant-General's branch might be decentralised very much in a wider application of power in discipline and by the doing away of a great many returns and reports that still go in. I find that Assistant Adjutant-General for B might be decentralised much more in the matter of returns, above all in the freedom of acquiring land, lettings, hirings. That, of course, is partly Engineer, but the Assistant Adjutant-General for B. has much to say to it too, the construction of rifle ranges, the hiring of rifle ranges, belongs to the B.; and there is a very large amount of correspondence which goes to the War Office, plans, letters, proposals, all of which, if a freer hand had been left to the General, might have been settled by him in half or a quarter of the time, and I believe without increased cost. There is no part of Assistant Adjutant-General for B.'s duties requiring more constant reference than that of rifle ranges.

8468. Do you think it would be a good plan to take it out of the hands of B. altogether and let it rest between A. and the Commanding Royal Engineer?—For myself, I have established a little committee on which the Engineer officer and the B. officer go round, and I have put the Assistant Adjutant-General for A.—the musketry man, rather—on to it. These three go

and look at the proposed ranges, and they report that it is desirable to carry on musketry there—that there is camping ground, water, and the rest of it. Then begins the necessity of reference. Everything has to come up, plans, specifications, sites, showing where the thing is, how it is proposed to get it, who the leading man is, who has to sell, and the tenants, and so forth. This goes on sometimes for a year without much result.

8469. Do you think on the whole the present system of the Assistant Adjutant General for A. and the Assistant Adjutant General for B. is an improvement on the old Adjutant General and Quarter Master General system?—I think it is the same thing with another name.

8470. There are some important differences?—There are differences, but I think it works very well, and on the whole I think it is an improvement.

8471. (*Sir Charles Welby.*) I should like to ask you a little more about works, in regard to which you said just now you thought, perhaps, more decentralisation was possible than in any other respect. Do I rightly understand that your view is that instead of the present differentiation between Part I. and Part II. (New Works) and Part III. (Maintenance), you would give the General Officer a credit for a lump sum annually to carry out all works, both new works and maintenance, excepting, I think, that you did put some limit to the size of work in respect of which you would give discretion to the General. Might I put your view by saying that you would exclude only from the General Officer's entire control works of such magnitude as to be included, not in the Army Annual Estimates, but in the loans under which great works are now carried out?—No, I do not see, once a loan is given for a work specifically to be done, why exterior reference is so necessary. Once the work is decided upon, and the money is loaned, then I think it is one of those points which the General and his engineer should carry out.

8472. That is the carrying out of works?—Yes.

8473. But my question referred rather to a previous stage in the matter. It is a question of the allocation of funds to the various works, with whom the discretion of that allocation should rest, and where the discretion of the General Officer should end?—That must be for the central body; the big questions of defence, the larger questions, where you are going to put troops and build great works, must be for the central body and the result of the decision of a central body, a mixed body, sitting here in London. That is another matter. I would not for a moment wish that my remarks should in any way tend against that fact otherwise you would have confusion beyond confusion.

8474. But the present distinction, where the line at present is drawn, as I understand, between large works and small works, is the line drawn between Part I. and Part II., which separates works under 1,000*l.* in expenditure from works over 1,000*l.*?—Yes.

8475. May we take it that you think the limit within which the General Officer should have full control should be raised from 1,000*l.* to a higher sum?—If the work were of a nature already sanctioned he would not be making a new departure. I do not see where you should limit it. If he is fit for the thousand pounder he is fit for 2,000*l.*, or 5,000*l.*

8476. What I have not got quite clear is this: Would you give him a lump sum annually, based on the experience of the wants of the district for a certain past period, or would you give him a lump sum which represents the amount which he thinks he can spend within the year on services already specifically authorised by the War Office?—You might adopt either plan; you might either say: "There is that sum allotted to you for this year, which is based upon a calculation of the five preceding years, and you are expected to proceed with such and such and such work for it"; or you might adopt the other plan that you speak of. In either case you arrive, I think, at very much the same result.

8477. But in neither case do you give him full discretion?—Yes, full discretion.

8478. But, pardon me, did I not rightly understand you to say that you would give him discretion to spend the money, but only on certain services to which the money had been already allocated?—Certainly, but if he had money over on any one thing then you would give him a right of choice in the matter; I would not allow

*Lieut.-Gen.

14 March 1901

him in any way to go on his own line spending money indiscriminately. He is to carry out fixed and set services, and the only question is, whether you give him the amount or whether you check him constantly in his expenditure of it.

8479. My point is where the discretion as to what services should be taken in the district should lie?—Practically when he sends in his estimate now he puts what he thinks should claim a place in his expenses; it is not always followed, but still he is given the opportunity of stating his opinion. What you mean is, if it was a barrack question he would say whether he would construct the barracks at Taunton or Exeter.

8480. That is what I was coming to, with a system that really delegated responsibility to the General, whether theoretically the proper system should not be to give him a lump sum based on experience, not based on any particular set of services placed in the schedule and leave to him the discretion of expending that money on works to the best advantage?—He ought to be able to do that and say how the money should best be spent, and no one could say it so well.

8481. You do go as far as that?—I certainly do.

8482. And does the same principle apply, would you suggest, with regard to the other services, such as stores and supplies? With regard to supplies, for instance, of forage, you told us that you considered the detailed estimates that had to be made were largely fictitious and led to a large amount of waste of time and unnecessary writing, and I understood you to say that you thought in that case the General's Staff should submit a broad estimate based on experience of the wants of his district for the year; that he should be allotted a sum corresponding to those wants, and that he should then have full discretion to buy all that was needed for the district within that amount, accounting for it afterwards?—Yes, I think the advantages of such a system would be in the direction of at once getting the thing and training the staff to the duties they would have to perform abroad in other spheres of action, and there would be no increased expense. I think you would get rapidity of construction by it—quickness; and although (because nothing is infallible), he might make mistakes here and there, I do not think the sum total of the matter would show anything but advantage to the Service.

8483. And the same principle would, I presume, apply with regard to stores—warlike stores and equipment of all kinds required for the command?—You touch there another matter. For the command, yes; for the stores that he would want in his district, I see no reason against it; but the general provision of stores, of course, becomes a matter of policy.

8484. But the stores estimated to be required by the district during the coming year you would apply the same principle to?—Yes.

8485. Take the case of ammunition for the troops within the command; would it be a sound system that the General should make an estimate of the amount of ammunition required for practice services, and so on?—He does that now; and that is one of the systems that might be upset, like it was last year, when they cleared out all the ammunition in the district; but, as a matter of fact, the reserve in the district is a settled matter; it works upon fixed lines of supposed or regulated reserves.

8486. May we take it that at present the General Officer estimates his requirements in ammunition for his command for the year, and that he is then credited with a sum of money?—No. I see now what you mean. I would not make the supply of ammunition a matter of money at all, because, as I said before, that has got to pass certain standards and proofs and so forth, and it must be received in a central place and then sent out.

8487. I was going to suggest, as against this credit that you would have for ammunition, that you would make imposts or demands upon Woolwich or the central body, whatever the issuing body of ammunition was?—I do not see that the present system with regard to ammunition and the supply of ammunition, is faulty; it is only faulty through the thing not being there if it is asked for. At present, if I wanted ammunition, I am quite sure the central body in Woolwich would send it to me with all possible speed. I meant the supply of the troops in barracks—barrack furniture, utensils, camp equipment, clothing, and other things, of which I thought there might be a separate supply

from the supply to Woolwich, sent direct by the contractors to the Ordnance Stores Departments in the district. With regard to ammunition, I think it should be supplied from the central body.

8488. I only took ammunition, as an example, quite at random, of stores, but may I take it generally that you think the same principle might and should apply as regards stores as with regard to other forms of supply required for the command, that is to say, that the General should be given a lump sum, the amount of which should be arrived at, either by experience, or in whatever way is thought best, and that he should have full discretion for expending that sum, or for obtaining materials against that sum, accounting for it afterwards?—Yes; but you do not introduce ammunition into that question.

8489. If ammunition is an exceptional matter, perhaps we had better leave it out of account?—I do not see how the expenditure question would touch many of the items of which we have spoken, such as the supply of camp equipment, the supply of barrack furniture, hospital equipment, and so forth. If you like to make a money value of it you can.

8490. I am not speaking of absolute expenditure of the money, but of a credit?—Yes, a paper transaction. I see no reason against it.

8491. The money's worth should be at your disposal to use at your discretion, and account for?—Yes.

8492. You understand that I am only trying to get in some tangible form what your idea of real decentralisation is?—Exactly.

8493. To pass from that to the question of staff; may I take it that your view is, that in the event of any really large system of decentralisation being carried out you hold that it would be necessary that the staff of the General commanding a great district such as those proposed, should be divided distinctly into two parts, at the head of each of which there should be a staff officer of high position, who should have clearly-defined responsibility to the Army Corps Commander, one being what I may call the head of the Executive Staff, who would deal with training, discipline, postings, and the purely military work, and the other, the head of the administrative staff, dealing with supplies and transport, stores, works, lands, and pay?—I think so, on the German system.

8494. And do you think that the staff officer dealing with these what I may call administrative services should be an officer of high military rank necessarily, or that on the German system there should be either a military or civilian head as the case may be?—I should not make any rule as to his high military rank or anything of that sort. If he were a good man to work it, and had previous experience and showed that he possessed that experience, I should put him in. I would not let the question of rank come into the matter much; I am sure that in the higher ranks you would find officers who would fill the post, but I would not make the rank the determining factor in the matter.

8495. But you could hardly put the Commanding Royal Engineer, the Army Service Corps Officer, and so on, under any one but a staff officer of considerable rank?—Not in his fighting capacity as Commanding Royal Engineer, but in his constructive capacity, of course, you would have to have an officer of experience; but, as a matter of fact, he may be now, in a staff sense, under a junior officer, as what is called the Chief of the Staff may be of junior rank to those working with him.

8496. And I suppose it would be one difficulty in regard to this complete separation of what one may call the executive staff from the administrative staff, that an officer like the Commanding Royal Engineer has dual functions; he is executive as well as administrative?—Take Aldershot, there the Engineers are one of the most important field items, and they are, if I may say so, the best drilled and the best turned out for their work that I have seen; certainly second to none. The position of the Commanding Royal Engineer in the Field Army is of the greatest importance.

8497. You understand that I am only trying to feel my way towards the kind of staff that would be necessary to enable an Army Corps Commander to carry on this gigantic business, which it practically would be, under him without interference with his more direct duties of training and commanding his troops?—I do not see that the difficulty would arise in a tangible

shape. There might be difficulties of course, but then there is the General over all to settle those cases.

8498. With regard to rifle ranges, to which you referred just now, have you experienced very much difficulty in your dealings with the War Office with regard to rifle ranges?—I have not found what I call difficulty in the sense of obstruction or anything like that; on the contrary, they have always been most anxious to go into the matter in full; but there is an outside influence which comes into force which is not apparent on the papers, and that is the legal influence. The legal adviser of the estate and the legal adviser of the War Office have to be consulted, and an immense amount of correspondence goes on sometimes as to title, sometimes as to rate, and that delays matters immensely. It does not rest alone with the Quartermaster-General's Department here; he cannot answer me back. I can send to him, but then it has to be referred to the legal gentlemen; it becomes a legal question, and there comes in the delay.

8499. Have you, as a matter of fact, experienced difficulty or disadvantage from the fact that three branches of this office are concerned with the question of providing rifle ranges; that is to say, the Adjutant-General is responsible for musketry training, the Quartermaster-General is responsible for I do not quite know what, but mainly responsible with regard to rifle ranges, and the Inspector-General of Fortifications is responsible for works and purchase of land?—Yes; I can only say that the delay is very great, and I only wonder that more than three departments have not got to do with it.

8500. Have you a land agent in your district?—We have not a land agent, but we have a legal man. We used to have a land agent, but he was discontinued, and I think it would be an advantage to have a land agent.

8501. And that would be still more so in the case of the much larger districts with the larger geographical areas now proposed?—Absolutely. I think there would be a great saving of money and of time in having a local land agent.

8502. A highly qualified, trained man?—A man of good reputation in the place; one of the head houses of the place. We had him in olden times, but he was taken away, and I know we worked quicker through his agency, and I do not think more expensively than we do now.

8503. In fact, such an agent is as necessary to you as controlling the local War Department lands as to any other great landowner?—Yes, quite. The War Department is the largest landed proprietor in the place as a rule, and certainly the most important.

8504. And necessarily a large number of questions must constantly be arising with regard to boundaries, roads, and every sort of question that naturally arises on an estate?—Yes, as to rights of way and other questions that are constantly coming up; and we have to refer them up here always.

8505. (*Mr. Mather.*) And encroachments?—Yes.

8506. (*Sir Charles Welby.*) And the institution of such a land agent would make it easier for you to take on your own shoulders more of the conduct of these negotiations with which the War Office at present thinks it necessary to concern itself very closely?—Yes, I think we should get on much quicker.

8507. (*Mr. Beckett.*) Your views on decentralisation are very clear and I am reluctant to trouble you further on the subject?—Not at all, I am quite at your service.

8508. But in this Report of the Decentralisation Committee there are various suggestions made by different Generals dealing with matters which they say might with advantage be left to the discretion of the General Officer Commanding. I have compiled a brief summary of the things which they say might be so dealt with, and I should be much obliged if you would just cast your eye over it, so that we might know where we are in the matter. I fancy some of them have been decentralised, such as the question of schools (*handing a sheet of paper to the Witness*)?—Your first is, "Questions connected with Militia and "Yeomanry and Volunteers training, such as appointments of non-commissioned officers of camps, permanent staff, batteries, &c." Those absolutely could all be done in the district, or if not all, to a very great extent and the centralisation is very close still in the

matter of Yeomanry. And now if you will allow me to say so, out of that question there arises this. I would make the local sub-districts, that is to say what is called the Regimental District, deal with all that class of work itself. You put a full Colonel at a place like Bodmin. Exeter, or Taunton, a delightful little country place; you give him a barracks which holds on an average 250 men; you put a staff there of a major, a couple of captains, three or four subalterns, a paymaster, a doctor, and the rest of it; and when all is done the man has hardly anything to do. I would not like that perhaps to go on the notes, but he has not got at all to do what the district if properly decentralised would give him to do. The whole of that class of questions there I shall give to that man. I should say. There is your district, you extend up to the Bristol Channel on the one side and down to the English Channel on the other, and you must off your own hook run your Volunteers, your Yeomanry, your so forth and so forth, subject to my inspection; and as to this constant class of question that is coming up here as to the Yeomanry I would not let it come.

8509. It leads to an enormous amount of correspondence?—Yes, immense; I see it passing through.

8510. (*Sir Charles Welby.*) The Auxiliary Forces are a subject that Parliament takes a very special interest in?—Yes; and all I can say is I think we have the machinery there for it existing if we only turned it on to the Colonel commanding the Regimental District. He is a Senior Officer and he ought to be fit to take hold of that district. He has the inspection of these men and the looking after them, and I would give him the whole; I would not differentiate, as is now the case, as between the Engineers and the Artillery in his district, all of which come out of his district and come to a given man at Headquarters. I do not see why he should not take the whole of it.

8511. (*Mr. Beckett.*) Then the next is "Transfers to Army Reserve"; could not that be done without reference to the War Office?—Absolutely, there ought to be no reference whatever—that ought to work automatically: the man is there to be transferred and he ought to be transferred; there is no necessity for reference in these things.

8512. (*Mr. Mather.*) That is provided for somewhat in the amount of decentralisation already?—Yes, I think it is. Then there is "Release of prisoners to proceed with drafts"; that we all do absolutely—I have power to release any prisoners I like now. For instance, when I left Aldershot the other day I released about 50; I thought they were in for trifling things, and on the whole they had all behaved exceedingly well; so I released the whole lot by one Order, and I do not think discipline has suffered in the least; I think on the contrary it was improved. All those matters ought to be left to the General, every one of them; it goes without saying. Then the next is, "Transfer of men between Corps of every nature." Yes, absolutely.

8513. (*Colonel Miles.*) Are not these matters now decentralised?

(*Mr. Beckett.*) That is what I want to find out.

(*Witness.*) That transfer of Corps we do from one General to another. Then the next is: "Power to grant leave to Officers who go abroad," and "Expenses of funerals." We do that, but not altogether. As a matter of fact, the funeral references still exist when over a certain sum.

8514. (*Colonel Miles.*) Two pounds it used to be?—I have to refer, I think if it goes beyond 10s. more, or something of that kind. Then, "Contracts for fuel and forage," we do all that; "Field and Camp Allowances," "Transfer of Remounts." The Remounts Department manages that without any reference. "Casting and destruction of horses," that I do, only reporting it. I cast and destroy if necessary, and report. Then, "Appropriation of barracks," that I do. "All questions connected with schools," yes, there is no undue reference on them.

8515. (*Mr. Beckett.*) Then I gather that the recommendations made before the Decentralisation Committee have to a very large extent been carried out?—Only in specific details, not in the general principle.

8516. There is one more question. I want to ask you about voting a lump sum for the district, how would you deal with the balances?—I should think the General Officer must at once report his balance and

*Lieut.-Gen.

14 March 1901.

await orders about it, or carry it on to the credit of next year.

8517. (*Sir Charles Welby.*) If he had sufficient authority to transfer between items he probably would not have much balance?—Yes, of course he would show how he had spent it, and the inspection must be absolute.

8518. (*Mr. Beckett.*) I see it is recommended that the limitation to 100L. should be abolished, and that the General Officer commanding should have discretionary power to allot all savings under Parts II. and III. to the benefit of any other parts respectively. That you have carried out?—That is so. You do not touch upon the recruiting system at all, do you?

8519. One more question about travelling claims; could any simplification be made in dealing with them?—At present I do not find that they are working badly; they are working well, I think. There was a considerable decentralisation in the travelling claims, and I do not see anything against them.

8520. (*Sir Charles Welby.*) I should just like to ask you whether you have any views that you wish to give us on the subject of recruiting as affecting decentralisation?—It is the most important of all the questions, of course, and everything hinges upon it, just as when you are giving water to a town, you must think of the reservoir first; but at the same time I do not suppose it comes in much into your matter.

8521. Only as affecting decentralisation—how far it could be taken out of the Adjutant-General's Department in this Office—both the question of recruiting and the

The witness withdrew.

question of selecting drafts for foreign service?—That is a very difficult question to decentralise, because you are obliged to think first of the amount of the draft, and secondly of the means of carrying the draft. I do not see how you are to get away from centralisation in that, because first of all you must know the ship; you have to make up the draft from different detachments, and who is to be the deciding authority? All they do now is to send down and say, "You must have 50 men."

8522. (*Chairman.*) At a given place on a given day, and men of a given regiment?—Yes.

8523. (*Mr. Mather.*) Are you allowed discretion to choose your own men?—Within certain limits.

8524. And those are not vexatious limits?—On the contrary, I think they are very wise. There is a limitation made.

8525. They are the proper limits?—They are the only ones that there can be. You have to think of demand and supply.

8526. (*Sir Charles Welby.*) But with regard to recruiting, you do not see that any large measure of decentralisation is possible in regard to that?—No, I do not see that you can have any large measure, seeing that half the recruits, or such an enormous proportion of them, come from London. I have very wide views on the recruiting question, but as a recruiting question only, not as regards administration.

8527. Perhaps, if there are any further points that occur to you on the subject of decentralisation which you think would be useful to the Committee, you would kindly send them in to us?—Thank you, I will do so.

*Major-Gen.
Sir T. Fraser,
K.C.B.,
C.M.G.*

Major-General SIR THOMAS FRASER, K.C.B., C.M.G., examined.

8528. (*Chairman.*) You have been commanding the Thames District since 1898, I think?—Yes.

8529. And you have had a good deal of experience abroad and at home in commands?—Some.

8530. But I am not sure whether you have had any service in the War Office?—13 years.

8531. In the Inspector-General of Fortifications' Department?—Yes, but associated also with the mobilisation branch.

8532. I gather from the letter that you have sent us that you approve generally of what has been done in the direction of decentralisation, as the result of Mr. Brodrick's Committee, but that you think the work of decentralisation could, with advantage, be carried further?—That is the sense of my minute.

8533-4. You have given us several recommendations as to cases in which you say that larger powers might be given, which I think we will go through with you. But incidentally, upon one of them, while referring to the Royal Warrant for Pay, you say that the Final Audit should be made in the district?—It seems to me that that would be a very great advantage if it could be done, for this reason: that the changes in the troops, and in the personnel, are so rapid in the Army at present, that traces of transactions are lost at a very early stage.

8535. You mean that the audit would be got through more quickly?—The materials for judging of the rights of the case are on the spot if it could be done at once in the district, that is my point.

8536. Would it also be of assistance to you, as the General, if there were a local section of the Accountant-General's Department under a local auditor at your headquarters whom you could consult, if necessary, with regard to the interpretation of a financial regulation?—That is exactly what has been done, with, in my opinion, great benefit to at least one of the offices that I am familiar with at the War Office. The Finance Branch has a representative in the Inspector-General of Fortifications' office, for instance, who acts as his adviser, and helps him in that very way. Speaking from personal knowledge I can say that instead of being at enmity with the Finance side, the Inspector-General of Fortifications has got their help and advice; and I think that it would be an advantage to have a local section of the War Office Finance Branch in the district, to help the General Officer Commanding. The work would be intermittent and there might not be enough at times.

8537. And that Finance Branch, from being in the district, would probably have a better understanding of the difficulties of the soldier?—Yes. I may say that when I took up command of the district I found it was very difficult in battalions, companies, batteries, and so on, to keep systematically to one plan, and the task of a General who has to make annual inspections and to check the accounts of the units is rendered very difficult by the departure from system in units. The result was that I felt I must do something, and I took hold of the Paymaster of the district and made him, for the purpose, my Staff Officer. I do not know that it was done before, but I arranged that that officer should act as my Staff Officer, just as an Adjutant-General might do, for the special purposes of his particular branch. The result is that at each inspection I get a specialist to advise me on the conduct of the account keeping of the unit, and that has had a most admirable result. I personally could not pretend to have the technical knowledge of detail that a Paymaster has.

8538. But as things are now, supposing you consulted the Paymaster as regards the interpretation of any financial regulation he might give you an excellent opinion, but if you acted on his opinion, it is still quite conceivable that that opinion which he gave you might not be endorsed by the War Office?—Perfectly, and I do not act upon it for that reason; in every case of doubt I refer it.

8539. Then you would get over a number of those references if you had a local auditor with certain large powers delegated to him by the Accountant-General, whose ruling on the matter would be final?—That, on the face of it, appears to me an admirable suggestion, and one that would meet a difficulty that I have tried to meet in another way, but it would meet other difficulties. I would like, if I may, to add one word on that subject as bearing on your remark. I am convinced, as a General, that we are injuring the military efficiency of our officers by the task we impose upon them of account keeping and office routine.

8540. What officers?—The regimental officers.

8541. And the Company Officers?—I refer to the Company Officers.

8542. Does the Company Officer spend many hours over it?—He is responsible for loss if he does not, and he has to give time to it. You cannot get officers to give their whole minds to the military duty of troop leading and teaching, because their time is taken up otherwise.

8543. But does that financial strain consist entirely in keeping the company's account?—Looking after the company's account and other office work. It is all very well if the Company Commander has a good Pay Sergeant; he will take a good deal off him, and enable him to go and drill his troops and teach them outposting, but if the Pay Sergeant is constantly changing, as is often the case, the Company Officer has again to take the whole thing in his own hands, and again to look after the new man and teach him. The task is an onerous one, and it is injuring the efficiency of the army in this way, that it is taking up a deal of the time of the Regimental Officer, because he is obliged himself to look after the account keeping to an extent which I do not think he ought. In the navy there are experts on board.

8544. Does it take up more time than it used to. The Company Officer has had this duty for a long time?—I will not say that it takes up more time than it used to, but it has always been a duty on the officer, and I think it was a duty that was neglected in former days. Officers took their chance of loss in the old days; now we will not let them take their chance. We insist upon their personal supervision.

8545. What amount of time in a week or a month do you think it takes them in their offices?—The duty is more a weekly one, and then at the monthly making up of the accounts the work is laborious. The whole business is a harassing duty that diminishes an officer's efficiency.

8546. (*Mr. Mather.*) Can you give us an idea as to the amount of work they have to do month by month or week by week in making up all these accounts?—My impression is, that there would be one or two hours of office work nearly every day, but in normal times it might be less.

8547. (*Chairman.*) On the other hand it brings the Company Officer into a knowledge of and into contact with his men, does it not?—It does.

8548. That is an advantage on the other side?—Yes.

8549. (*Sir Charles Welby.*) Is this labour, which is imposed on the Company Officers, due to the complication of the accounts caused by the Pay Regulations and Allowance Regulations?—Yes, the complication of the accounts, owing to the number of regulations under which different payments are made to the men, is very trying.

8550. (*Chairman.*) For instance, are the accounts complicated by the 3d., of which we have heard so much, not being lumped on to pay as a matter of fact, but being assigned to some men and not to other men?—Yes. I may say that it fell to my lot, under Sir Evelyn Wood, to help to make the Egyptian Army, and there we had the financial question at once on our hands. We simplified the accounts by having a single payment to make. We never allowed it to be carried out except in the presence of an officer, and nothing made the Egyptian Army so good as that, because they came to rely on the English officer, whom they felt that they could trust. I have been present when payments were going on, and have seen fellaheen turn round and argue and appeal to the officers with the most entire confidence, and I think it would be a deplorable thing if the payment of Englishmen were not in the hands of the Company Officers. But I think that matters ought to be simplified, so as not to take up the time of Company Officers, who ought to be out drilling and manœuvring, and so on, and not breaking their hearts with the labour of figures, which is really, after all, only a means to an end. As matters stand, too, we have to choose the clerical soldiers for non-commissioned officers, not the natural leaders for war.

8551. That is because the Company accounts are so complicated?—So complicated.

8552. Owing to questions like those of the 3d.?—Yes, and all sorts of things.

8553. (*Sir Charles Welby.*) And clothing compensation?—Yes.

8554. (*Chairman.*) All these various complications have arisen I suppose in consequence of reforms which have been introduced at one time or another. At one time it struck people that it would be an admirable thing to give good conduct pay to improve the Army, and each separate complication of that kind has been kept up and they have never been consolidated in any way?—What has happened is this: the administration

of the Army has always met a temporary difficulty by a temporary expedient; that has been the spirit in which we have carried on very well, but it has had the result that we have a heritage of complication that is crushing to the operators. And those temporary expedients have accumulated in course of years to such an extent that the labour of carrying out the business is great.

8555. And they have become permanent?—Yes.

8556. And if your company accounts were simplified a good deal there would not be more work than the Company Officers could carry out?—At all events they would be in a much better position to do their primary duties of training troops to fight if the simplification were such that less time would be taken. I may say that I think the Paymasters of the district must in future give a very great deal more assistance—that they must help officers to supervise difficult questions and that the officers must look for assistance from the Paymaster's office more than they do.

8557. When a young officer is floundering about in accounts, not having had previous experience of keeping accounts, would you, as the General, send him to the Paymaster and tell the Paymaster to teach him?—That is done now to a certain extent; and I think it will have to be extended.

8558. (*Mr. Mather.*) The difficulty then would appear to arise largely from the fact that your Company Officers have not been accustomed to the ordinary routine knowledge of book-keeping?—At one time they were not; but, as a matter of fact, at the military schools now we do give them a certain amount of training in that respect.

8559. (*Sir George Clarke.*) Do you think that the duty of advising and instructing young officers in accounts should be formally placed on the Paymaster of the district?—I think the Paymaster ought to do it.

8560. (*Chairman.*) If the General told him to do it he would?—I tell him to do it and he does. But I want to bring the Paymaster more into actual touch with the conduct of business in the company. He ought to take it off my back, and he ought to take it, to a certain extent, off the backs of the Company Officers; he ought to give them the help that would shorten the labour of dealing with it.

8561. Before we go through the detailed recommendations that you have made with regard to certain regulations, there is just one other point in your covering letter that I should like to ask you about. You say that there is a good deal of delay as regards works because works are not begun till June?—I think I said as late as June.

8562. You say: "Under the present system, which renders it difficult to get works commenced till June very often"?—May, perhaps, would more truly represent the mean, but till June and July and even later I occasionally have difficulties.

8563. But the point is that works can be begun in April even although the Works Estimate is not voted?—No.

8564. If you get the sanction of the Treasury?—If I do, but I do not get it soon enough to begin on the 1st of April.

8565. Does the Treasury refuse sanction?—No, I do not say that they refuse sanction, but the course is that until Parliament votes the money we do not put the machinery of the Engineer Office into motion to make the estimates for contracts that go out to tender; that is the delay. I do not mean to say that Parliament does not give us the money before June, but the proceedings that have to follow parliamentary decision as to giving the funds, are so slow and laborious that we cannot actually get the contractor under way until May and June, sometimes considerably later.

8566. Are you not told as a rule in February or January what works are likely to be put into the Estimates so that you may get ready the plans and forms of contract to be able to begin on the 1st of April?—Yes, we do get a certain sort of admonition of the probable amounts that will be assigned to the district, but this is not an authority to prepare for contract.

8567. You do not get that admonition early enough?—Not nearly early enough. I want it in November or December, with a specific statement of those works which will be done in any case.

Major-Gen.
Sir T. Fraser,
K.C.B.,
C.M.G.

14 March 1901.

Major-Gen.
Sir T. Fraser,
K.C.B.,
C.M.G.

14 March 1901.

8568. Supposing that you got that admonition as early as October?—Then I should be all right, because I could then work my people in the winter, in preparing the estimates and designs on which we could go to contract and begin about the 1st of April.

8569. So far as you are concerned there would be no difficulty in your saying in October what you would consider the most necessary works?—I should have no difficulty whatever. I could readily make up my mind as to what works unquestionably should be done.

8570. Then if the War Office could tell you in October that you might consider it a probability that certain works would be in the Estimates, and that they would do their best to get them put in the Estimates, you would begin to get your plans ready and be able to start?—That is what I proposed, but the probability should be a certainty so as not to incur the heavy expense of preparing plans and detailed estimates.

8571. (*Chairman.*) It is scarcely a question for Parliament; it would be a matter to be done at the War Office. It is a matter which is done now in India. Those services are told in October that if possible certain works will be included in the estimate; it is a provisional promise?—I did not know that it is done in India. It is a thing that occurs to my own mind as a solution.

8572. We might, perhaps, turn now to the list of instances that you have given us with regard to detailed regulations in which you think the authority of the General Officer Commanding might be extended, but I should like to ask you first, whether you sent in these proposals to the Decentralisation Committee or any of them?—I do not think so, but that is a question I cannot answer without having an opportunity of consulting the Staff records.

8573. You would probably have made suggestions to the General who was commanding at the time?—No, I was not consulted except to a very limited and technical extent.

8574. Then we may take it that it is quite possible that there is some overlapping: they may have been made by other people, but they have not been considered as coming from you?—From me personally not.

8575. To turn to the King's Regulations, by No. 158 Generals are not allowed to vary the authorised scale of issue for the troops at the home stations without the sanction of the Secretary of State?—They are allowed to do so abroad and I only want to give them the same power at home.

8576. It is laid down in the Regulations that you must send telegrams on these subjects when the matter is of sufficient importance?—Yes.

8577. Do you think the authority could be safely entrusted to the General?—I think it could myself, but I recognise that the modern system, if I may say so, of some 18 months old, of getting answers and dealing with business by telegraph, which is an admirable one, meets to a great extent my objection. I am not very keen about it, but I think on the whole there are cases where it would be an advantage to let a General Officer use his discretion, but where he is practically within an hour or two's communication with the War Office it is not of the urgency of the other questions that I have put out, as far as the General Officer Commanding is concerned, though I think it is important for the War Office to save being worried.

8578. Next, I think you say that, as regards writing off over-payments as losses a limit of 1*l.* is exiguous; you prefer a limit of 10*l.*?—I think so. One exercises discretion in many other directions to an amount of 10*l.*, and it seems to me that if you exercise a discretion in one direction to 10*l.*, it seems reasonable you should do the same in others.

8579. Would you be satisfied with 5*l.*?—I think it is a very unimportant question, but I think in view of the fact that the General deals up to 10*l.* in certain cases, if any change is made, one amount had better be applied to all the different cases.

8580. I next come to your suggestion as regards the tenants of canteens. I think you want to make a reservation there?—Yes, if I may correct my memorandum, "The General Officer Commanding to have the power to sanction the tenant system himself except in the case of the Canteen Branch."

8581. What difference would that make?—The difference is this, that undoubtedly drunkenness is admirably controlled by the military system under which liquor is issued. The control of drunkenness and the control of drink is better, I think, than it can possibly be under any tenant system, where the object of the individual is to get as much liquor drunk as possible. I was under the impression that I had made that correction myself, but it is one that I desire to make. I do not propose that the General Officer should have the right of sanctioning the tenant system in the case of what we call the wet bar. The object of bringing in the tenant system as regards groceries is this, that at present, just as it is with payments, certain officers in the regiment have to give much of their time to supervise canteen work, which is not the business of an officer; it is taking him away from training his men and preparation for fighting.

8582. Making a grocer of him?—Making a grocer of him; very much to the interest of the men, because they got an extremely well-conducted business, at which they get things at the cheapest price; but you spoil our officer—who is generally one of the majors of the battalion.

8583. (*Mr. Mather.*) What are his functions?—He is engaged in supervising all these accounts and looking after the interests of the canteen, watching the things and doing all the work that really means the running of a great business. Where I am living at this moment one of the regimental institutes represents consumers numbering, I should say, at times up to 1,800 men, many of them married and their families having the right of getting groceries there too. The result is, it is a very large transaction indeed, and although I am not allowed to have an officer, I am obliged in self-defence to use an officer as a rule for that business, because it could not be carried on in any other way, and that officer's services are lost in part to me for regimental purposes, and because he has to do the grocery and liquor business, which is so serious financially that I cannot risk it.

8584. (*Chairman.*) What is the remedy for that?—The remedy for that is that some Civil Manager should be supplied to do the work that the officer does now.

8585. (*Mr. Mather.*) That is so in some parts?—It is so.

8586. Down at Portsmouth it is.—I dare say it is. I have been to Portsmouth, but I cannot at this moment recall the fact; but no doubt you are right.

8587. (*Sir George Clarke.*) Would it be the sort of post that you could put a retired officer to?—It would be an excellent and very suitable place for a retired officer; he would be much more in touch with the troops than a civilian.

8588. (*Sir Charles Welby.*) You would want one for each unit, would you not?—You would want one for every big unit, or in a garrison with one, two, or more units you might get him to manage all.

8589. (*Mr. Mather.*) I think in Portsmouth they bring in an assistant from one of the large grocery establishments in the town, and he controls the whole affair, subject to the inspection of the officer now and again, and with a tariff posted up in a conspicuous place on the wall?—Yes, we have that everywhere, but I understand that elsewhere, and certainly in my own command, we have to get the things looked after by the officer at present.

8590. The daily work of the officer?—The daily work of the officer; the officer has to attend there for one or two or more hours daily.

8591. (*Chairman.*) The next question I think is that you say that the General Officer Commanding ought to have power to extend the period of the tour of non-commissioned officers at depôts under special circumstances. What is this tour for?—They are detached from their battalions; they have to go to the depôt of their regiments, where they are supposed to train the recruits.

8592. And if it is necessary to extend the tour, have you got to refer to the War Office?—Yes, even if you want to extend a man for three months to meet some emergency, owing to the fact that somebody is sick, or is coming home in two or three months. For short periods I think the General Officer Commanding should have the power of extending the time.

8593. Then to pass to the Royal Warrant for Pay. By paragraph 123: An officer appointed temporarily to

act as Provost Marshal, Assistant Provost Marshal, or Staff or Garrison Quartermaster may be granted extra duty pay at the rate of 2s. a day, but subject to the approval of the Secretary of State. You think that the General Officer ought to be able to authorise that?—I think he ought to be competent to judge of the necessity; the Secretary of State usually acts on his advice, and I think in so trivial a matter he might fairly be left to act on his own judgment.

8594. And also he might exercise his own judgment in the case of Regimental Officers temporarily employed on special duty?—I think so.

8595. Also in the case of Warrant Officers?—Yes.

8596-8. Then we come to the point as regards forage. You think that the General Officer might give forage allowances. What does that mean?—What I mean is that in certain cases not covered by regulations, and for special and temporary reasons, General Officer Commanding might, I think, be allowed to authorise forage for officers who have to be mounted.

8599. And you also would like to have authority to allow an officer to take a servant with him on special occasions on a journey?—Yes, I think in certain cases, as in sickness, it is necessary for him; at present only certain officers can take a personal servant with them.

8600. Could you give us a typical instance?—A Colonel inspecting may require a personal servant to go with him; that is the kind of case in my mind.

8601. Is it, really and truly, the fact that if an officer's charger is found unfit for use owing to disease, permission must be obtained from the War Office for the officer to replace the animal from the remounts at a price which is already settled by the Regulations?—I think even since I wrote this we have had a notice on that subject which has met that case. I think, actually within the last few days, certainly after the date of my minute—at all events it was not in my mind when I wrote it—officers are now empowered to get horses at the rate of 10l. a year from the remounts.

8602. So that my question has been really anticipated by the War Office?—Yes, I think so.

8603. (*Mr. Mather.*) How is this question of remounts dealt with altogether for your mounted forces. When horses are cast, by your permission I presume, how do you obtain fresh remounts?—I demand, through the War Office, on the remount depôts, on the officer charged with the supply of horses. It is a branch of the War Office. The branch keeps a number of remounts at certain places, and the demands of all the services are sent in, and they simply supply what is required.

8604. You get what you require?—We get what they think we require, and as good as we can get.

8605. That works satisfactorily, does it?—I think on the whole it does; I think the service is well done.

8606. May you dispose of the cast horses?—The General personally sees them. I have to have an interview with the cast horse myself and decide it is not fit to be retained.

8607. And that is disposed of locally?—Yes.

8608. (*Chairman.*) To come to the Army Ordnance services, as regards the local purchase of stores, this you say can be done up to a limit of 10l. Is the local purchase of stores up to 10l. really done on the authority of the General Officer Commanding or on the authority of the Principal Ordnance Officer at Woolwich?—At present the General Officer Commanding, or his Staff Officer of Ordnance for him, has the right up to the limit of 10l. of buying locally then and there.

8609. The Regulation is rather obscure, I take it?—For stores authorised to be purchased by the Principal Ordnance Officer upon annual and intermediate demands the purchase will be carried out locally when the stores are required, unless the expenditure exceeds 10l. in value, when application should be made, in the case of home stations, on A.F.G. 1041 to the War Office for authority to purchase.

(*The Secretary.*) What happens is that your local officer sends a demand up to Woolwich for stores and the Principal Ordnance Officer will then say, I will supply so much, or you must buy certain things locally; but although the Principal Ordnance Officer says that, if the value of the stores to be locally purchased is over 10l. your officer has still to refer to the War Office for sanction, which appears to be unnecessary.

(*Witness.*) Yes.

(*Chairman.*) Then, who really gives the authority?

(*The Secretary.*) The Principal Ordnance Officer gives the original authority which the General Officer Commanding can then carry out if the value is under 10l., if it is over 10l. he has to apply to the War Office.

(*Chairman.*) Then the General Officer Commanding has no authority at all?

(*The Secretary.*) Except under the following paragraph 45, in an emergency.

(*Chairman.*) But not as an ordinary matter?

(*Witness.*) No, but that is quite right as regards the War Office action, because the Principal Ordnance Officer must have an opportunity of saying that he cannot supply what you want.

(*The Secretary.*) But when he says he cannot supply, that authority ought to be final as regards you.

(*Witness.*) Yes, and that ought to be up to 50l.

8610. (*Mr. Mather.*) Do occasions arise when applications are not promptly responded to?—If necessary I take the responsibility and buy at once. I should never hesitate, but I think it ought to be legalised. During the last two years whatever had to be done was done, and one is always backed by the War Office I find in such cases.

8611. How do you deal with the other limitation, which is restricting you to 10l. when some damage is done to any property? Supposing it to be 15l., what happens then?—I have to refer to the War Office.

8612. Does that involve a considerable amount of correspondence?—No, I do not much complain of that. It has this advantage, that the War Office, which collates, so to speak, questions of a certain class, is dealing with the whole country. They know how they deal with certain questions, and beyond the 10l. limit I personally do not object to having to refer those questions. I advise upon it, and my advice is as a rule followed; an increase may become necessary with the future development of local hiring of ground for manœuvring.

8613. Sometimes you may recover a certain portion of the loss, when an officer or soldier has damaged any property or clothing, or lost it, on the spot?—Yes.

8614. Could the War Office recover if it once passes out of the hands of the General Officer Commanding?—The General Officer Commanding will recover locally what he can, and then adjust the matter locally.

8615. Even above 10l.?—No. What I mean is this: that taking a case where the loss is above 10l., I have to submit it to the War Office for sanction. During the submission, or after getting the sanction, it is true that some of these things may be found. Then I should take the necessary steps, of course, to adjust the account.

8616. But there was a concrete case put to me at Portsmouth of this character, which seems to open up room for improvement—that an amount of clothing sent from Ireland to Portsmouth had gone astray and was lost, to the value of 45l. That was at once sent up to the War Office, whereas, if the matter had been decided on the spot by the General Officer Commanding and his staff, who would hold a little court of inquiry in case of any loss or damage of a serious amount, they might have recovered it; but it came up here and was lost altogether?—But that could have been dealt with otherwise.

8617. That was want of local management down there?—Perhaps so. I never hesitate to write to any General or his Staff Officer, to investigate any questions.

8618. Before you send up?—Yes, before I send up.

8619. You settle the case then practically between yourselves?—Yes, I communicate with the General Office Commanding in Ireland, or whatever district it is, and get the question thrashed out between ourselves without troubling the War Office.

8620. The point made to me was that they had no right to deal with that at all?—I think I have a right; at any rate I exercise it, and I am sure the War Office would wish me to do so.

8621. You take the initiative yourself, and present the matter before the War Office in a comparatively finished state?—Yes. Unless you do that you would kill the War Office with trouble.

Major-Gen.
Sir T. Fraser.
K.C.B.,
C.M.G.

14 March 1911

Major-Gen.
Sir T. Fraser,
K.C.B.,
C.M.G.

14 March 1901.

8622. (*Chairman.*) Under paragraph 145 you recommend the abolition of the returns enumerated there, because the major part of the returns appear in the Monthly Casualty Report. Do you mean to say that these returns are really returned twice over?—It is a reduplication of work that I think unnecessary.

8623. Have you any knowledge or any theory how this reduplication arose?—Different departments or sub-departments guard their own interests by the multiplication of returns; they do not think of the labour they put on the back of the unfortunate outsider, but simply look at it from their own narrow point of view of getting certain information; and other people do the same in other directions.

8624. There being so many masters in the War Office that each might ask for information without consulting the other?—Yes.

8625. Then you take us to the powers with regard to maintenance of boats and vessels. You say that repairs up to 100l. should be arranged for by local tenders?—I think that 100l. would be a limit that might very fairly be permitted the General Officer. It is a great thing to employ the local people; you carry on the business of life more agreeably, and you can look after the thing yourself, or your subordinates can. You can go down to the shipyard in your own town or place, and the thing is better looked after in some respects, I think.

8626. As regards making slight structural alterations the rule being against any structural alterations, would you not run up against the difficulty of defining what is a slight structural alteration?—I should not have any hesitation in deciding which was and which was not, myself, but I recognise that there is a possible element of doubt about it.

8627. Does it cause much reference and inconvenience in referring these points?—It is not the individual group of cases, it is the aggregate. That is the real thing that kills one.

8628. That is your answer. Then to come to the Militia Regulations. If a non-commissioned Militia Officer desires to accept a municipal office, at present, the Secretary of State has to give permission. What kind of municipal office would fall to a non-commissioned Militia Officer?—Ushers, mace-bearers, clerks, fire brigade work.

8629. I ask you the question because you put it yourself?—I may say that the point about it as regards the General Officer Commanding is that he is the best judge, being on the spot, as to what will hamper a man's performance of duty and what will not. That is the whole point.

8630. With regard to the complaints at Militia Inspections, you think these could be dealt with finally by the General Officer Commanding without going to the Secretary of State?—I think generally the arbitration of the General in these cases is quite sufficient, and may generally be looked upon as the best final decision you can get. I inspect a battalion of Militia. I make it a point, as everyone else does, to ask every man in the battalion if he has any complaint. A man falls out straight on parade, I see the commander; his Pay Sergeant, the Sergeant Major, the Commanding Officer of the battalion are all there. I hear the whole story, the man says his say, and they say theirs, all in my presence, and I administer patriarchal justice on the spot.

8631. You are like the Cadi under his palm tree?—Yes, without the palm tree.

8632. And you also think that the General Officer might have power to settle whether a court-martial should be held without reference to the Secretary of State?—Courts of enquiry and regimental court-martials which involve expense, say in moving members or witnesses, cannot be held without War Office authority, so that if there is a hurry, you may have to have a district court-martial instead of a regimental court-martial, because you can then cover the expenses. I think General Officers Commanding should be free to decide.

8633. And you would give some power to the General Officer to decide questions of extra leave and sick leave of Militia Officers and Militia Adjutants?—Yes.

8634. And also as regards their forage?—Yes, I think those are questions that the General Officer Commanding can be very fairly trusted to deal with on the spot without having to refer to the War Office, which

gives it a great deal of trouble; it practically can hardly go against the advice of the General in any case, in these trifling matters.

8635. Similarly you would grant the General power to settle what pay should be given to men on leave for any period in excess of three days?—Yes, I would. I really think that is a matter for local consideration entirely.

8636. And also the forage allowance for Submarine Miners; how does a Submarine Miner come to want forage allowance?—I have a concrete case which will perhaps give you the best idea. Shornemead Fort, near Gravesend, is a very inaccessible place, and it can only be got at by some miles of circuitous route clear of the range, and the men can only get round a certain way. There the Captain of the company of Submarine Miners has to get backwards and forwards constantly from the fort and to the fort in order to visit the company and do the work in connexion with the district, and the only way of getting about is a horse. He cannot bicycle because there are no roads to bicycle on. I raised this very case, and it was of course at once acceded to. See my answer to 8596.

8637. The whole point is that you refer a great many things which are acceded to as a matter of course, which give both you and the War Office a great deal of trouble?—Yes.

8638. There are further questions, I see, of the same kind, I suppose, on the question of gratuities to be given within limits already authorised to militiamen when injured on duty; you might very well settle that?—The Regulation is that a sum of 3s. 6d. a day for six months may be given to a militiaman injured in the performance of military duty and rendered incapable of resuming his Civil calling thereby, on an application forwarded to the War Office through the General Officer, supported by certain documents. Yes, I think that is just one of the analogous cases, a case where all the facts are before the General, and he ought to be capable of coming, I think, to a right decision.

8639. Likewise the vexed questions of travelling expenses in excess of the authorised annual visits, and also of the travelling expenses of officers visiting the Schools of Instruction. You would give the General power to settle all those questions?—Yes, I think so. If you choose the proper man to do your business, and hold him responsible if he makes a fool of himself, you ought to have the business done by him. Practically all these cases are audited; they arise in the accounts, and ultimately the audit is the point for raising questions upon them; and if the General Officer does not know how to carry on his business, it becomes known, and you must get another, that is all.

8640. (*Mr. Mather.*) Your point is that most of these cases are already carried out according to your discretion, and you think it better to have the Regulations altered?—No, not quite that; I am bound by the Regulations to refer them.

8641. But you act sometimes without reference?—Yes, sometimes in an emergency, such as the pressure of sending troops out to South Africa, but not in these ordinary every-day cases.

8642. But in this very trifling matter, paragraph 507: General Officer Commanding to have power to grant forage allowance when necessary to officers of Submarine Miners without reference to War Office?—I had to refer that to the War Office. I should have been reminded if I had not, and quite rightly under the Regulation. I am bound to obey the War Office Regulations, except where the emergency is such that I take the responsibility, which I am willing to do. But that is not an emergency case; it had been going on for some time. The man had a horse and used it, but it was a question of getting forage for it.

8643. (*Chairman.*) Then there is the question of shortening the period for which certain articles have to last—shortening the life of a boot—paragraph 1026: "The minimum periods for which greatcoats, capes, haversacks, helmets and leggings will be required to last before they will be exchanged are as follows," and so on?—That arose in this way. I had been inspecting a certain number of units in the Militia, Volunteers, and Regulars, and I found battalions coming into my command who were not in an efficient condition for fighting. Their haversacks would not hold food, and their water bottles had not plugs fitted properly. My contention is that the General who

is responsible to see that the troops are fit for fighting ought to have the power of making them fit then and there, without further reference.

8644. Then you give us a list of very parallel and similar instances under the Volunteer Regulations where you have to refer. To come down as far as No. 682, there is one that is not parallel to anything we have had under the Militia Regulations. There it is a question of returning arms into the Government Store. Has not that rather got to do with the public security and tranquillity generally?—You mean that it may be a question of State policy?

8645. Precisely; I do not know, but I ask myself the question?—I think myself that if a question of that kind has to be settled the best adviser would be the General.

8646. The best adviser, yes; but would he be the best ultimate authority?—I think the Secretary of State or whoever exercises the function would have to follow the advice of the General in a matter of that kind, who knows the local circumstances.

8647. But there might be other advisers, magistrates, chief constables, &c., as regards those local circumstances who, in view of the general security and tranquillity, might take a different view from the General?—That is quite possible, but what I have in my mind was the saving of arms from accidental injury—not a question of tranquillity.

8648. And at No. 691 there is another question different from any that we have had before, in regard to the testing of weapons. I suppose the reference there is because it is desirable to get a uniform testing of weapons?—Yes, it is more convenient. Many things interfere with the testing of weapons. I want men to shoot their musketry course and to do certain manoeuvres, and the time that is to be taken, and so on, is a matter that ought to be arranged locally. I would propose to do it myself at a time that suits me rather than take orders from the War Office as to the time that may suit them. Perhaps we ought both to be consulted in a matter of that kind. At present I have orders to do tests and repairs at a certain time and I have had to stop them in certain cases.

8649. Is that referring to the quality of the testing, the particular nature of it?—No, not the particular nature of it; it is the circumstances under which it is to be carried out.

8650. Then we come to a question about Rifles Associations: "The first application from a Rifle Association" (this is paragraph 784) "will be submitted by the General Officer Commanding the district to the War Office for authority to issue the ammunition." Once that authority is given then the General Officer authorises the issues of ammunition according to the Regulations?—Yes.

8651. Is that because the War Office wishes to keep a general survey and control of all the Rifle Associations of the country?—I really do not know the grounds on which that was done.

8652. Would your recommendation be accepted as a matter of course?—I am not sure of that. I really do not know the policy of the War Office; they may have excellent reasons, but I do not know them, and therefore I made that suggestion. I should, perhaps, say that in the limited time at my disposal, for I have been very busy over many other things, I have only called attention to these six different sets of Regulations. I do not wish the Committee to suppose from that that there are not many other Regulations which I could criticise very much in the same way if I had had the leisure to give to the task.

8653. *Chairman.* Possibly these are not exhaustive, but I think they give the Committee a very excellent idea as to the kind of references which are exacted from officers which you think might be dispensed with?—Exactly.

8654. *(Mr. Mather.)* You do not profess to have gone through the whole of the Regulations?—By no means, but these are the salient specimens which in consultation with my Staff occurred to me in the time which I could devote to them. I may say that I think the War Office supervision and check is an immensely valuable one, because they have to deal with people who know one section of their duties very well, but many others they do not know so well, and then they are in the hands of their subordinates to a certain extent. But I think the War Office supervision of the General's

functions as it exists now is a very valuable factor. It collates the system of looking at things from a broad point of view.

8655. What particular example are you referring to?—To take the first thing that occurs to my mind, the principles that guide people in making concessions about rates of pay, or concessions with regard to the sale of lands, or anything of that kind. There I think the War Office and the Treasury do exercise a most admirable safeguard in the public interest. I look upon the Treasury as the best safeguard of those interests in certain directions, and I say that after many years' experience. They have the broad principles on which these transactions have been conducted so thoroughly at their fingers' ends, that they keep people straight, and they safeguard in certain directions the interests of the public very much, with regard to State lands, &c.

8656. They preserve their interests in regard to the rights of way. Do you mean public rights?—That is hardly a Treasury question; that is a question for the War Office.

8657. With regard to parliamentary control?—Yes, I think that is so. The Treasury has the merit of being the least squeezable of departments, but they should not be allowed to stand in the way of great Imperial needs. Like others, they must do what is wanted.

8658. *(Chairman.)* To come to your last letter, you have given us a very interesting analysis of what the real situation of the General Officer is with regard to contracts for works under the 2,000*l.* limit. I suppose that what happens really now is this. Tenders for these contracts of works are called for from a list of contractors which is practically settled without reference to the Generals, because contractors are put on it without your being consulted, when you know nothing about, so that once a contractor is placed on the list, all contractors are considered equally good and efficient, and therefore the lowest tender is accepted as a matter of course?—Yes, but I should say in fairness to the War Office that if the General has certain grounds, and those grounds are well-defined, for saying that a certain contractor should be removed from the list, he can, in course of time, get him removed.

8659. With considerable trouble?—With considerable trouble. Occasionally he cannot get him removed at all, but that is the theory of the thing, and as a rule the War Office act on it.

8660. But at the other end of the list—let us say you can get a man removed with trouble from the bottom of the list, but men are put on at the top of the list by the Director of Contracts without your being consulted and without your knowing anything about them?—No contractor is put on the list approved by the War Office unless recommended by some General Officer Commanding, and I do not recollect any having been put on the list in my district without my being informed. The real difficulty is that one may find a contractor so impossible to deal with that no private body would think of continuing to employ him, and yet if his work be generally good I cannot get him taken off, even though I report he is recouping himself by litigious claims for a low rate of contract.

8661-2. But I suppose the difficulty would be met to a great extent if you had a large voice in determining that list of contractors, if it was revised from time to time, and no one was kept on the list without your assent?—I think so.

8663. Then there would be no difficulty in accepting the lowest tender?—There would be no difficulty in accepting the lowest tender, providing that the General Officer's recommendations have been accepted with regard to exclusions.

8664. And also with regard to additions?—And additions of course; but there is just one point that I tried to bring out in my letter, and that is that from the nature of each work, different men are better fitted—both from their localisation, from the place they live in, from the nature of the work that we know they do best, and from the nature of the work we know they do worst—some men are better fitted for one thing and some for another.

8665. That would lead you to object to such a man being put on the list for a certain class of work?—Yes. We do do that to a certain extent.

Major Gen.
Sir T. Fraser,
K.C.B.,
C.M.G.

14 March 1901.

Major-Gvn.
Sir T. Fraser,
K.C.B.,
C.M.G.
14 March 1901.

8666. As it is now you have a list of men good for works of 5,000*l.* and over 5,000*l.*?—Yes, but it is not a question of money, it is a question of capacity for certain duties. Some men will do some class of work better than others; some are better at concrete work and some are better at sea work.

8667. Could you not object to a man being put on your list of contractors for iron work when he might be put on your contractors' list for cement work?—No, because they are mixed up so much; all these works are mixed up together, and it is only the local man who can say on balance who is the fittest man for the particular work.

8668. (Mr. Mather.) If you had two contractors, one capable of doing barrack work and one capable of doing fortifications work, solid concrete; in case of specifications being sent out, and tenders sent in, if one of those men should be slightly higher than the other, if the man you preferred to do fortifications work, (if that was the object in view) should tender slightly higher than the other man whom you might desire for barrack work, you would like to have the decision in your own hands to say, give that man that work because he is more accustomed to fortifications work than the other, and therefore we will pay more?—What I suggest here is what takes place in India. The executive engineer has the final voice in the selection of the men that come in. I know the personal equation; I know how overworked a firm is; they may have a dozen things to do, and I know that their personnel are not capable of running 13 things. If there is a slight difference in price, and I am satisfied that because they are an overworked firm, or I know that they have not the financial resources or other for the particular job, I should recommend the acceptance of the contract that was not the lowest. There are good reasons for that; if you know the whole case from end to end, the decision within certain narrow limits ought to rest with the General Officer Commanding. He ought not to be tied down to accept a contract where the difference between two men is very trifling, and where the sums involved are very large.

8669. That would not be a proper decision, would it? The decision in your case ought to be given on the ground that though the difference might be more than sixpence, might be 100*l.* or 1,000*l.* on a large contract, you must have the decision in your own hands, because you know the work done by A. instead of B. will be more than the 100*l.* or 1,000*l.* value to you?—Yes. Besides I may say that I know contractors who will cost the State more in the long run by other methods. A man is litigious, and that may lead to his making the contract pay by methods which are not anticipated in the contract. That is what it comes to.

8670. (Chairman.) Would it be possible to give the General in command of the district a certain sum for the maintenance of buildings in the district, and allow him to expend it entirely at his own discretion, subject of course to inspection to see that the buildings are all right?—I think it would be well sometimes.

8671. But the General would always have a highly trained man in his Commanding Royal Engineer at his elbow?—Yes, if you mean for keeping up works, that is so.

8672. And for repairs?—Yes.

8673. But not for minor works?—Yes.

8674. Could you give him a sum of money and authority to deal with all works up to that money limit?—Are you speaking now of new contracts?

8675. I am speaking of large works, new and old, Part II. works?—I think, as a rule, it is a discretion which might be delegated to the General Officer, subject to certain War Office control.

8676. Then you say with regard to the rejection of bad material that in civil life the architect who gives the final certificate really has the power of rejection?—I believe that to be the practice in civil life.

8677. Yes, subject of course to an appeal to the courts?—Yes.

8678. (Sir George Clarke.) Does not every contract give the contracting party, the War Office, the power of rejection of bad material?—Yes, the Superintending Officer has that power for the Secretary of State for War.

8679. (Chairman.) But your point is that the rejection of the Commanding Royal Engineer locally is not

final, that the contractor appeals to the Secretary of State?—Yes, through the Director of Contracts.

8680. (Sir George Clarke.) But on whose inspection can it be but that of the Commanding Royal Engineer?—If you have a contractor who is not satisfied with the decision of the Commanding Royal Engineer he at once appeals to the Director of Contracts to complain. I quite recognise that the Director of Contracts is bound to see justice done to the contractor, but the War Office contractors are practically safe with the Commanding Royal Engineer who, unlike a private individual, has no personal interest except to get the work done on the terms of the contract and in good time and most of them give no trouble to us.

8681. But no good contractor would do that?—But I am dealing with contractors who do it. It is upset over and over again, and then the Commanding Royal Engineer ceases to feel that he is a responsible being.

8682. Does that mean that the Director of Contracts takes upon himself the responsibility of saying that certain things that the contractor is doing are good enough?—No.

8683. And has an independent inspector been sent down?—Yes, an independent inspector comes down.

8684. Whose independent inspector is he?—Somebody from the War Office.

(The Secretary.) From the Inspector of Fortifications' Branch?

(Witness.) Yes.

8685. (Chairman.) Not from the Director of Contracts' Branch?—No.

8686. (Sir George Clarke.) Then it would be a decision, on appeal, from the Inspector-General of Fortifications' office overriding that of the Commanding Royal Engineer?—Yes.

8687. It would not be a decision from the Director of Contracts' office overriding that of the Commanding Royal Engineer?—No, it would not, but the reversal of the Commanding Royal Engineer's decision is brought about by appeal to the Director of Contracts who refers the question to the Inspector-General of Fortifications, who sends, perhaps, a surveyor down to deal with the thing on its merits. The result is that the decision of the Commanding Royal Engineer may be upset by the surveyor, and in any case is liable to be called in question, and his authority is thereby weakened.

8688. (Chairman.) That is to say the Inspector-General of Fortifications really acts as if he were a civil court. In civil life if your contractor says that through malice or for some other reason the architect has withheld the certificate, he appeals to the civil court, and an expert opinion is taken?—That is so, I believe.

8689. But I gather from you that the question is (if I am not attributing anything to you that is not in your mind) that as a matter of fact and as a rule the Inspector-General of Fortifications is so prone to take the side of the contractor against the Commanding Royal Engineer that the Commanding Royal Engineer feels his responsibility diminished?—No, that is not the case. The Inspector-General of Fortifications is called upon to investigate by the Director of Contracts. The Inspector-General of Fortifications and the Commanding Royal Engineer are alike interested in getting good work quickly done.

8690. You have given us a letter from your Commanding Royal Engineer who says that the system plays into the hands of the contractor; those are not your own words?—No, those are not my words; that was the typical way in which a typical case had been expressed by my Commanding Royal Engineer from his point of view. He considered the contractor should have first appealed to him, not to the Director of Contracts, in accordance with the terms of contract.

8691. But there would be no possibility of a change of that system; the contractor must have an appeal to somebody; in civil life he would have an appeal to the courts?—The contractor evidently must have an appeal, but the effect of that appeal is that the decision of the Commanding Royal Engineer is so uncertain in its finality that the Commanding Royal Engineer feels that he does not care to exercise the power, as every appeal seriously delays the work. That is why a litigious contractor should not be re-employed. The Naval Director of Works has all the powers of an arbitrator under the Arbitration Act of 1889.

8692. That either may be because the court as a rule leans unduly to the one side, or because the condemnation of the Commanding Royal Engineer is too capricious?—That may be so.

8693. (*Sir George Clarke.*) I suppose no case has arisen of work which has been rejected by the Commanding Royal Engineer being accepted without this independent inspection having taken place?—It could not, because the Commanding Royal Engineer has to get orders to reverse his action, and that could only take place through me under the orders of the War Office.

8694. But my point is that those orders would not be given except after an independent inspection on the spot?—Certainly.

8695. (*Chairman.*) Purchases and sales of land, you say, are invariably carried out direct by the War Office, and you do not wish to reverse that procedure?—Very far from it; I think it is far the best arrangement that there could be.

8696. But you say, as a matter of fact, the War Department's Land Agents for the Thames District reside at Dover?—That is another question. They are the local land agents, not the experts employed at the War Office. They are paid solely by percentages on lettings.

8697. Your point is that you ought to have a local Land Agent?—Yes, for rent collection, not for land purchases. I have an agent at Dover for the Thames district, what I want is one in each sub-district of the district near his work, and knowing local conditions. The point that I was dealing with is this: there is a consulting land agent in the Inspector-General of Fortifications' branch, who is an expert in the matter of purchase and dealing with land, and he has access to the Treasury Solicitor, who is an expert on legal questions. That combination is the best that can be made for the conduct of purchases. I have had to deal with them for many years myself; but I feel that the War Office is armed with means which I do not now possess, and which certainly no General that I know of does possess.

8698. (*Mr. Mather.*) I suppose we may take it from the many observations you have placed before us in writing and by word of mouth, that the decentralisation, so far as it would affect materially the position of the General Officer Commanding, ought to go to the extent of giving him full powers over his district in every particular within the Vote, within the Estimates of his requirements year by year?—Full powers of disposing of the money subject to my previous remarks.

8699. Full power of disposing of all the money voted for him for his requirements during the year?—That is not the case at present, you know.

8700. That is what you consider should be the case. You have remarked both verbally, and I think in one of your letters, that decentralisation ought to be largely extended; that, so far as it has gone under the new regulations, it has been good?—Yes.

8701. You would like to see it largely extended?—Yes.

8702. And that large extension, judging from the remarks and suggestions that you have made, seems to point directly to going the whole distance of placing on the General Officer Commanding in a district the entire power and responsibility of dealing with everything arising under his command, without reference to the War Office, excepting on unforeseen and largely important questions?—Parliament must vote the money; authority for the money must be given to the General Officer, of course.

8703. Quite so.—But having been informed what money is at his disposal in the district, it is for him, I think, to make the best use of it.

8704. That would be the ultimate position that you would like to arrive at?—Yes, but there is this to be said, that questions of fortifications are Imperial questions; they are decided by a Joint Naval and Military Committee, and they are questions in which certain things must be done under the decision and advice of the Navy and the Army; and it would not, I think, be right for the General Officer to depart from the recommendations of the most competent Military and Naval authority without authority, nor should he be deprived of the technical help and experience of the fortification experts in the Inspector-General of Fortifications' office.

E 15090.

8705. But then fortifications are not local works, really; they are built locally, but they are works for the defence of the whole country?—Yes, they are Imperial works.

8706. But as regards barracks and drill and manoeuvre grounds, and arranging with Volunteers and Militia, and Reserves changing from one regiment to another—everything that the General Officer has to do now with the sanction of the War Office, so to speak, going into such extraordinary details—you think it would be the ultimate perfection of decentralisation to place that control in the hands of the General Officer commanding?—Yes.

8707. And you think that a General Officer with your experience would be quite willing to take that responsibility?—I should myself be prepared to do so.

8708. And would give ample guarantees for a proper financial check?—I should myself. I happen to have had some experience.

8709. You spoke of your officers, your Captains of Companies, having so much clerical work to do; does that arise from the fact that the pay system is extremely complicated?—Yes.

8710. If it were made perfectly simple, so that you might probably make it one sum to cover all sorts of things, with an occasional allowance given in your discretion for some exemplary conduct or for some special service rendered, your officers would not have the same trouble as they have now?—If you could simplify the details of account keeping the officers would be in a position to pay their men, which, as I say, is a most desirable function, and at the same time not be so hampered with financial considerations as to be really more or less unfit for their fighting duties.

8711. So that there is room for great improvement in that respect without any damage to the Service?—I think so. I think the simplification of payments ought to be carried to the utmost limit that is practicable.

8712. And all that concerns the new regulations which would arise out of an amended scheme should be put into the hands of the General Officers everywhere, giving them full control of their own districts, apart from the great works that you have spoken of?—Yes.

8713. (*Sir George Clarke.*) In regard to what you have said about the time of regimental officers being largely consumed in matters of accounts, to the detriment of their attention to their military duties, do you think that that to some extent also applies to the Staff, whose time must be largely taken up with matters of routine?—Of course. The whole trend of my recommendation has been to do away with correspondence as far as possible, and let officers get out into the field.

8714. And you think that as regards the training of the Army it is serious matter that so many officers should have their time occupied by, and their attention concentrated upon, all sorts of formal and routine matters?—It is quite fatal.

8715. As regards the contracts questions, you think that your present limit of 2,000*l.* should be increased; would 5,000*l.* meet your requirements as a limit?—There is no principle in the thing.

8716. You did not give anything in particular, you merely proposed an increase: would 5,000*l.* meet your view?—I cannot say that there is anything magical about 5,000*l.*; I think an increase is desirable; I cannot say that 5,000*l.* particularly commends itself to me.

8717. You think 5,000*l.* would be better than 2,000*l.*?—Yes, that is exactly the attitude I take.

8718. As regards the working of contracts under the General Officers Commanding, I understand you consider that the objection of a General Officer to a particular contractor as unfit for a particular work ought to be accepted as final?—I think so.

8719. So that in the case of any particular work the list of persons tendering would be a list of which you approved?—Yes.

8720. Therefore in all such cases the lowest tender would be automatically taken?—No, the difficulty I saw when I discussed that question before was this: You must have a list of contractors; the General may approve of that list in general terms, but according to the nature of each contract, and the nature of the work in each contract, and the nature of the local circumstances connected with the contract he, with a full knowledge of the local circumstances, is best able to

judge whether one individual or another, both of them being in general terms acceptable, would be the best man for the particular job.

8721. But I was rather hoping that the list of tenderers, of persons to whom tenders could be sent, having been submitted to you, and you having expurgated that list of all names of people that you thought could not carry out the works for some reason or other, then the lowest tender would be accepted?—With a list where each name has been selected by the General Officer Commanding, with a view to the particular work, the lowest tender could always be accepted. What I should like to do would be to select the contractor that I think best for each work. I know that cannot be done, but that is what I think would be the best plan. In every case you have several men on the list, and the particular circumstances of the case being thoroughly known to the local authority, he is the best judge as to which of the three or five or seven would be the best to do that particular work, having regard also to the prices at which they tender.

8722. In your district have you ever had a contract given out for a work to a contractor to whom you objected?—Yes; there was a contractor who did good work, on the whole, though his materials were sometimes bad, but his ways of carrying on work were intolerable so far as the engineers went.

8723. (Chairman) But his work was good?—His work was, on the whole, good; therefore I was debarred in that particular case from asking that he might be struck off the list, though I reported in the strongest terms, and often, that in my opinion and apart from the quality of his work he should not be re-employed.

8724. In what way was he objectionable?—He took contracts on such low rates, in my opinion, that he could not make money out of them on the terms of his contract, and he kept out better men.

8725. But if his work was good what did that matter?—I will tell you why; because then he endeavoured to recoup himself by continually raising disputes and claims on side issues, and the amount of fighting over every item of every piece of work in the district was such, that the Engineer's staff could not cope with it. I had to represent that really the work was more the work of a solicitor than the work of an Engineer officer, and that the whole energy of the Commanding Royal Engineers branch was taken up in dealing legally more or less with disputes rather than with supervising the general business of building; no private individuals would have re-employed such a man, I think.

8726. Was this arising on the plans and specifications?—I do not think so. I think occasionally if we could have foreseen we might have made the terms of the contract so tight that the question would not arise, but substantially the plans and specifications are good enough under ordinary circumstances to carry on business amicably with a good contractor; that is to say, with a contractor who deals with it purely in a business way, apart from taking advantage of any chance that he had of recouping himself for a low tender.

8727-8. (Sir George Clarke.) Have you not had to report very adversely upon some work done in one of your sub-districts?—Yes.

8729. Was not that the same contractor?—Yes.

8730. Had you not in that case to renew a considerable amount of work?—Yes.

8731. And even now, I suppose, you cannot feel quite confident of the state of the work below ground?—No, I have ripped it up and I am satisfied now that the work is safe.

8732. But it might be a rather serious thing, might it not, that a fortification of that kind should be delayed by having to cut out a great deal of work and put it in again?—In my annual report I represented that I thought it a very serious danger to the State: that the battery where it arose was the most powerful battery in the place, and that any delay that might arise might under certain contingencies be a supreme danger to the State.

8733. And that risk would not have been run if the contractor to whom you objected to for that particular work, among others, had been struck off the list?—I believe the probability of its arising would have been very small from other contractors. Mind, I express no opinion as to the contractor's personal knowledge of the defects that were going on. I have carefully

guarded myself against that, but *quod facit per alios* of course applies.

8734. (Sir Charles Welby.) I should like to get a little more clearly from you if possible what is the degree or kind of decentralisation which you think possible and desirable, because I rather gathered from your answers to Mr. Mather just now that you went so far as to express the view that the proper system would be to give practically to the General Officer Commanding a District a lump sum based on experience of his requirements in past years, or some other basis of that kind, and that he should then have a free hand to run the district for the year with that sum, accounting for it at the end?—Subject to the limitation that I made to Mr. Mather with regard to the Imperial nature of fortifications and new barracks, &c.

8735. But from previous answers that you gave in the earlier part of your evidence with regard to works, I rather gathered that you did not altogether think it possible or desirable for the War Office to give the General Officer Commanding a District a lump sum and a free hand to spend that lump sum on works in his district?—It is quite clear to me that the War Office must control the action of the General Officer Commanding to a certain extent, because they alone are competent to direct the policy of disposition of troops, and what new barracks have to be built. Those are questions that have to be settled in the first instance of course, but when the Secretary of State, under the advice of his experts, decides to build barracks in a certain place and the general plans and arrangements for such new departures as are thought desirable for building barracks have been indicated, then the General Officer Commanding should have as free a hand as he possibly can. When policy comes in (that is my point) either defensive policy or Army policy of distribution, it is quite clear that it is the function of the Commander-in-Chief not the General Officer, and that the General Officer in that case must not say, I think I had better have barracks for A instead of B. That is impossible; but within the limits of the decision of the highest authority the General Officer Commanding ought to have the freest hand that he can, I think, in the expenditure of the money that is allotted to his district.

8736. That is to say that he should have a lump sum annually, which he could spend at his discretion on services which have been approved by the higher authority?—Yes.

8737. And that he should have perfect freedom to divide the money among those services, or to postpone one such service and hasten on others, whether they were services of maintenance or new works on a moderate scale, at his absolute discretion?—He ought to have a discretion in the disposition of the money under the conditions that have been laid down for him by the Secretary of State as advised by his experts; I think that is the best way I can put it.

8738. I am not very clear how that differs from the existing system; it is all a question of what is the amount of control and discretion which is reserved to the Secretary of State and his advisers, is it not?—It is, but I think that the terms I suggest to you would give a wider scope to the General Officer than is given to him at present.

8739. In fact that Part I. services should be treated very much as Part II. are now treated?—I do not ask for authority to execute services which have not been submitted to the War Office. You see, where policy comes in, either in regard to the distribution of the troops of the Army in England or Ireland or Scotland, or in regard to the defence of the ports and so on of the country, the questions must be decided by the highest authority. The lines of that policy are laid down, and within those lines of policy when the money is voted the General Officer ought to have as much discretion as possible in order to carry out locally the intentions of the Secretary of State for War.

8740. (Mr. Mather.) And my questions, of course, assumed those limits.—Yes, I think I understood that. I have endeavoured rather to give the broad lines on which I am working in my own mind about it.

8741. (Sir Charles Welby.) Is it your experience as a General Officer Commanding that your relations with the Inspector-General of Fortifications in regard to works generally lead to a good deal of delay and unnecessary cross reference?—There is a good deal of correspondence, but my relations with the Inspector-General of

Fortifications are always extremely friendly, and I find that my views are given every reasonable attention, the advice I receive is valuable and essential.

8742. It is a fact, is it not, that it is not merely concerned with the Inspector-General of Fortifications alone, but the Quartermaster-General also comes into all questions of providing accommodation to the troops?—I do not see how in the War Office such a question could be touched without consulting jointly the Inspector-General of Fortifications, the Director-General of Ordnance in defensive questions, and the Quartermaster-General.

8743. And that intercommunication with departments is in your opinion inevitable under any conceivable system?—It must be under the present system. I think a better one might be devised, but, as matters stand, any attempt of a department to deal with a Military question by itself is a very dangerous one. If, for instance, the Director-General of Ordnance wanted to take ammunition out of a district in a moment of emergency to meet a want elsewhere, without consulting the highest military authority in the War Office charged with defence, that in itself would be a very dangerous course, however wisely exercised. That is a very good typical case of the risk of one department attempting to deal with questions affecting general Military efficiency; their want is very great, and they think on the whole it will be best to take ammunition from a district where they think nothing is going to happen, in order to meet an emergency elsewhere; and no doubt they are generally right, but the danger is that they are not looking at it from the point of view of the defensive character of the district. I quote it to show that any one department, were it to attempt to deal with a question affecting defence, for instance, without consulting the ruling authority would be on dangerous ground.

8744. Have you had any experience since you have commanded the Thames District of acquiring land for the creation of a rifle range or artillery range?—Yes, as regards hiring lands I have had a little; I have had certain cases in which I have failed egregiously, I may say.

8745. To what has that egregious failure been due; to the difficulty in dealing with private owners?—I endeavoured to get field firing carried out at Milton Ranges; I dealt personally with about 40 tenants on an adjoining property, and I found it practically impossible to come to anything like terms.

8746. You are aware, are you not, from your experience at the War Office, that in a matter of rifle ranges, not two, but three departments of the War Office are concerned, the Adjutant-General, the Quartermaster-General, and the Inspector-General of Fortifications?—Yes.

8747. Do not you think that that is a system that must necessarily conduce to delay and cross references, or do you think it is essential?—I think it is absolutely essential; you cannot separate these questions. The Adjutant-General has certain functions and interests, and represents them. The Quartermaster-General has

others, and the Inspector-General of Fortifications has others.

8748. Can you tell me what are the exact functions of the Quartermaster-General with regard to ranges, I mean with regard to the acquisition of the land for the creation of ranges?—He is the person who is supposed to decide what land is necessary for the ranges, but he must be advised as to what functions the ranges are to perform by the Adjutant-General. The purchase of land and the construction of the range and buildings is a matter that ultimately comes to the Inspector-General of Fortifications; he has a land branch in his office, assisted by the legal advisers of the Treasury, and his is the only competent office for dealing with the question of purchase of sites. I have had to do with these transactions in a variety of cases in Ireland and elsewhere when I was at the War Office.

8749. That is the reason I put the question to you; I was doubtful whether practically the Quartermaster-General did not fulfil a function somewhat in the nature of a post office between the Adjutant-General and Inspector-General of Fortifications with regard to ranges. I gather that that is not your view?—I think not, because he has to consider the getting to the places, the transport and housing of the troops, and every question that affects the Army in those cases. I do not see at all, I am afraid, how you could deal with the system otherwise than it is being dealt with at the present time in that respect, because you must consult everybody concerned.

8750. (*Sir George Clarke.*) But if a range has to be established in a district surely the best judge of the place is the General Officer Commanding the district?—That is another point. The question put to me was whether one branch of the War Office instead of three could deal with the question. I do not think it could; the General Officer Commanding is at the head of all his branches, and the Staff of the district never deal with questions on their own account; they simply prepare the evidence for the General, and the General gives the final decision, having heard everybody himself. Instead of writing letters as the branches do in the War Office, necessarily I admit, I assemble the officers concerned in my room and have it out on the spot without any writing at all. The result is that one can carry on one's staff work in a way that is extremely simple; everyone knows his share of the work, and when people differ they express their views on the spot. I go out and look at the ground if necessary. There the General has the advantage of being at the head of everything, and he collates all the information and advises the Secretary of State on it. The previous questions had reference to what happens when the General Officer Commanding's advice reaches the War Office, though in some cases the War Office initiates such questions.

8751. (*Sir Charles Welby.*) And what is under him is on a manageable scale?—Yes, that is true, but manageableness depends on organisation, not on the amount to be done; by proper delegation anyone near can cover any amount of work and keep it straight.

The witness withdrew.

Adjourned.

Major-Gen.
Sir T. Fraser
K.C.B.,
C.M.G.

14 March 1901.

TWENTY-SEVENTH DAY'S MEETING.

TWENTY-FIRST DAY'S EVIDENCE.

At the War Office.

Tuesday, 19th March 1901.

PRESENT:

MR. CLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. W. MATHER, M.P.

Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. J. GIBSON, *Secretary*.

Gen. H.R.H.
Duke of
Connaught
and
Strathearn,
K.G., &c., &c.
19 March 1901.

GENERAL H.R.H. the DUKE of CONNAUGHT and STRATHEARN, K.G. &c., &c., examined.

8752. (*Chairman*.) You have been commanding the Forces in Ireland, sir, since 1900, I think, and before that you had command of the Aldershot District, and the Southern District, and prior to that you were Commander-in-Chief in Bombay, and also commanded a Division in Bengal?—Two divisions, Rawal Pindi and Meerut.

8753. Have the measures carried out in consequence of the Decentralisation Committee's Report tended, in your opinion, to save references from the Districts to Pall Mall and to free the hands of the Generals?—To a slight extent in disciplinary questions, but not to any appreciable extent in any of the Royal Engineer questions.

8754. It is very difficult of course at this moment to compare the condition of things before and after the Decentralisation Committee's Report, because the War has introduced abnormal conditions, which I suppose made themselves felt in Ireland as much as elsewhere?—Probably more in Ireland even than elsewhere. Owing to the abnormal conditions everything is upset, and this is specially due to the incessant change of the Staff, both Army Staff and Royal Engineer Staff. (Military and Civil).

8755. I gather from your letter of the 28th of February that you are in favour of still further decentralisation; and perhaps it will be as well to go through the points you raise. With regard to works, you have raised the question, you tell us, on other papers, of employing a qualified War Department Land Agent in Ireland, to conduct locally the negotiations respecting land?—Yes, I am strongly in favour of this. That paper that I handed in to you refers to it; and here is another paper on the same subject (*handing in the same*) which sets out the reasons why I made the recommendation; it makes the reasons fuller than in letter of the 28th of February.

8756. There has been, I believe, a very varying practice as regards land at Bearhaven?—Yes, it has lasted seven years, and I am unable to hand the correspondence in yet; it is still in the hands of the Crown Solicitor in Ireland.

8757. Do you attribute that delay to the fact that there has been insufficient staff to conduct the negotiations?—Yes. At the present moment the Chief Engineer in Ireland has no staff officer; he ought to have an Assistant Adjutant-General, but since the war he has been without one.

8758. And whom does he conduct the negotiations with?—Principally through the Chief Crown Solicitor, and, as regards minor questions, through G.O.C.s of districts.

8759. And does he refer to the Government solicitor in Dublin?—Incessantly. Nearly all the business is done under the advice of the Crown Solicitor.

8760. Do the queries, as regards land, chiefly concern the purchase of land, or do they also concern the hiring and letting of land?—Purchase of land is the most important, owing to having to deal with the landlord as well as the tenant, but there are numerous questions affecting the hiring and letting of land.

8761. You have dual ownership?—Yes, that is it.

8762. Then your proposal, I take it, is to give the Commanding Royal Engineer in Ireland greater power and additional staff, and to enable him to settle all financial points about land, in conjunction with the Treasury representative in Dublin?—Yes, subject only to the personal inspection and supervision of the Inspector-General of Fortifications, or his deputy, and the advice of the Crown Solicitor on legal points.

8763. Would you fix any money limit to the questions with regard to land that he might deal with?—I think not; I do not think any limit is necessary.

8764. We have had it in evidence that at present sanction from the Treasury is necessary for the purchase, sale, or exchange of lands by the War Office up to a limit of 1,000l. We have been considering the advisability of recommending that this limit should be raised to 5,000l. in the case of the War Office. Do you think that if the limit was raised for the War Office, the War Office could, in their turn, delegate their power to the General Officer Commanding?—I think that anything that the War Office are allowed to do should be allowed to the Commander of the Forces in Ireland, and I would also suggest the same with regard to the General Officers Commanding the Army Corps when they are formed, or the one Army Corps that would be in Ireland.

8765. Under the heading of Works, you state that estimates for the execution of works under Parts II. and III. of the Works Vote should be entirely in the hands of the General Officers Commanding up to a limit of 100l.?—Yes, I think up to 100l. in Part II., and everything in Part III.—Part III. being the maintenance, Part II. being the small structural alterations.

8766. We have been considering the advantage of recommending that any excesses on Parts II. and III. may be met out of savings on the Works Vote generally in a district. Would you be in favour of giving General Officers Commanding power to deal with excesses in this way, so far as the Works Vote for their particular command is concerned?—I think they should have full power over all savings.

8767. Do you see any reason for the division of these works into Part I., Part II., and Part III.? Would it not be possible, perhaps, to have a simple division into two parts:—Part I. including everything over a certain money value, and Part II. including all smaller services, whether new works, repairs, maintenance, and so on. There seems to be too much classification?—I

suppose the classification is on account of the division in the Inspector-General of Fortifications' Department.

8768. Yes?—It is the system under which the division of the work is carried out.

8769. If the Votes could be simplified, I mean?—Yes, if the Votes could be simplified.

8770. No, it would involve the changing of the Votes. We want to get your opinion as to whether you saw any real reason for continuing the Votes in that form?—I cannot see any real reason myself for it.

8771. Then I gather that your general position is, as regards small works, that inspection from the War Office should take the place of the submission of details to the Inspector-General of Fortifications' Department, and that would mean a considerable saving in correspondence?—Yes, I think that should be so, as far as possible, in everything: an inspection previous to small works on their being asked for, and an inspection subsequently when they have been carried out.

8772. The inspection previous to small works to see if they were wanted?—Yes, and then afterwards to see if the money had been properly spent.

8773. But you would not leave it to the discretion of the General Officers Commanding to settle what small works were wanted absolutely, and confine the inspection of the Inspector-General of Fortifications' Department merely to seeing whether the work had been carried out properly?—I am afraid the Generals are not quite educated up to that yet. I would suggest beginning with having the inspection, and then, in time, I am certain that we could dispense with it, that is, the previous inspection; but I doubt it at the present time. I think there might be some loss to the country; perhaps some works might be carried out that were not necessary. I do not know whether I have made my answer clear or not. It would be the desirable way in the end.

8774. (Chairman.) Yes, I think I quite understand?—We ought to work up to that, but I am rather doubtful whether we are quite capable of it at the present moment.

8775. I think we have heard the story here of a conservatory having been considered a small work in one district; I do not know if you mean anything like that.

(Sir George Clarke.) That was in bygone days; there is nothing like it now.

8776. (Chairman.) You say that General Officers Commanding should have full power to deal with everything connected with contracts up to 2,000*l.*?—Yes, I think so.

8777. We have been told by one General Officer that the power now given to deal with contracts up to 2,000*l.* is really an illusion, because the General Officers are not consulted in the formation of the list of approved contractors from whom tenders are called; so that there being a list of approved contractors, and all by reason of their being on the list being considered equally good and capable, the lowest tender is naturally accepted?—That is the case.

8778. Then that does make the General's power an illusion?—Yes, it does to a great extent.

8779. And the General having no power to revise that list, having no voice in that list, cannot direct the contract to a particular man for a particular work?—Yes. I remember a case at Aldershot or Portsmouth where the contractor I knew was eminently unfit and we were ordered to employ him.

8780. Did you protest?—I did protest. I think Colonel Miles will remember that there was a case at Aldershot of a contractor who had done bad work and we were ordered to employ him.

8781. (Colonel Miles.) I do remember something about it, Sir, but I do not remember it very well?—I regret I can only speak from memory.

8782. (Chairman.) Then may I take it that if the General Officer had a deciding voice in the formation of this list of approved contractors, that difficulty would be got over?—I think so, distinctly.

8783. To come now to decentralisation of correspondence, you suggest that the copying of War Office letters at Headquarters might be avoided if the War Office (that is the Inspector-General of Fortifications' Department) sent three copies of their letters, two

press copies, I presume, and one other copy?—Yes, that would be a great convenience.

8784. Is it the fact now that a letter comes down to you, and that then it is copied two or three times over?—Yes, it has to be copied at least two or three times.

8785. No press copies are sent?—No.

8786. Has attention ever been called to that, it seems such a simple thing?—Yes, I wrote to ask that that should be done; I have a copy of my letter here.

(Secretary.) That was one of the recommendations of the Decentralisation Committee of 1898.

(Chairman.) Has it been carried out?

(Secretary.) I am afraid it has not.

(Duke of Connaught.) May I read from this letter:—“War Office Letters on Royal Engineer Subjects, the copying of them by General Officers Commanding . . . and Divisional Officers of Royal Engineers would be obviated if the War Office would either send three copies of each letter or use type-writing copying ink, so that press copies could be afterwards taken.” The first would be better: the three copies I think is the simplest.

8787. (Chairman.) It would seem so easy for the War Office, while copying its letters here, to take half a dozen press letters?—This has been recommended by me; it was recommended last month. I brought this copy of my letter in case you asked anything on the subject. It was also refused to Field Marshal Lord Roberts on his application in July 1898.

8788. But you have had no answer yet?—No. It seems an obvious thing, but it has never been raised before; perhaps I am partly to blame:—I have been in command a year and have not raised it; but the questions are so numerous that one is only gradually able to take in where one can make a reduction in correspondence.

8789. Coming to Ordnance, you recommend that the scope of the ordnance workshops in Ireland should be extended and that such simple articles as ladders should be manufactured in them?—Most certainly.

8790. Where are the ladders manufactured now?—It is at discretion of P.O.O. They are either made at Woolwich or purchased locally by his order.

8791. Do you mean to say an ordinary ladder has to go round from Woolwich?—Yes, sometimes.

8792. But in your opinion, they could be just as well inspected in Ireland?—Yes. They could be just as well inspected here.

8793. (Sir Charles Welby.) Or you could inspect them if you only purchased them?—Yes.

8794. (Chairman.) Are there any other articles like ladders which could be so easily manufactured in Ireland which are supplied in the same way from Woolwich?—Yes. Brooms and brushes, &c., and such barrack stores. This would encourage trade in Ireland.

8795. But it would be very desirable to do so, would it not?—Most desirable; and it is a great expense to the Government, because all these things have to be sent over to Ireland, and the freight on a large mass of things is considerable; whereas you could buy them on the spot or make them on the spot; if this were done, a contract could be made to include delivery to any station or barrack.

8796. What is an Ordnance workshop limited to doing, if you cannot make a ladder?—Repairs, really. That is the only thing they are doing.

8797. Surely you have plenty of officers in Ireland competent to inspect blankets and ladders?—Yes, any inspection that can be made by an artificer.

8798. (Sir George Clarke.) And, in some cases, might it not be cheaper to purchase locally?—Much cheaper. A list of the articles has been forwarded for your information.

8799. (Mr. Mather.) And it would be a matter of policy also to employ Irish labour to supply the Army?—Yes.

8800. (Mr. Beckett.) I was going to ask you whether you do not think that would be a good plan from every point of view?—Yes. Of course they must come up to the standard, and they must not be more expensive

Gen. H.R.H.
Duke of
Connaught
and
Strathearn,
K.G., &c., &c.

19 March 1901.

19 March 1901.

than they would be; but, as a matter of fact, they would be less expensive.

8801. (*Mr. Mather.*) And shipbuilding in Ireland is as cheap as it is in England, and all labour of course, is much cheaper there than it is here?—Yes.

8802. (*Chairman.*) Could your Ordnance officer send us a list of articles similar to ladders that he now gets from Woolwich, and which, he thinks, could be manufactured there?—Yes. I will hand a W.O. letter which contains all the information (*see Appendix VI. (f)*).

8803. (*Sir George Clarke.*) Your point is, sir, is it not, that your Ordnance workshops should be allowed to make anything that they can?—Yes.

8804. That there should be no restriction upon them, provided they have the time and the means?—Yes. Of course we might be very hard pressed,—we might be overworked, and then unable to comply with the demands; then we ought to be allowed to purchase locally.

8805. (*Chairman.*) But I think that if your Ordnance officer could give us a list of articles like those actually sent from Woolwich, the publication of such a list would have a striking effect?—Certainly.

8806. (*Sir Charles Welby.*) I suppose the theory is that it is worth obtaining everything at Woolwich, because as Woolwich is purchasing in bulk for the whole British Army, it does conduce to economy on the whole?—I suppose that is the idea. Also they have an idea that nobody can inspect but at Woolwich.

8807. There would be no essential difficulty in establishing a Branch of the Inspection Staff in Ireland or at any other great Military centre, would there?—No, but I would deprecate centralising inspection too much.

8808. (*Chairman.*) Purchasing in bulk applies to certain articles for getting them cheaper, but not to all articles; you have to consider the cost of freight, as to whether you should purchase ladders in bulk?—Exactly.

8809. (*Sir Charles Welby.*) The argument for local purchase and inspection, which would apply with great force in Ireland, would not apply with anything like so much force at Aldershot?—No, we are on a different footing; there is a long journey between Woolwich and Dublin, and, besides this, stores are sent from Woolwich to Aldershot chiefly by canal.

8810. And Woolwich and Edinburgh also?—Yes.

8811. You would not send a ladder from Woolwich to Edinburgh; it is rather a large undertaking?—No doubt.

8812. As regards the purchase of stores, the General Officer Commanding, I understand, can authorise local purchases, but not in excess of 10%, in the case of Ordnance Stores?—That is so.

8813. Would you desire to see that limit raised?—I think it might be raised to 100%, once the authority is given. At the present moment you get the authority, and having got the authority, you may not spend more than 10%.

8814. And under paragraph 45 of the Army Ordnance Regulations, what class of stores is referred to there?—To all barrack and hospital utensils for barracks, for the fittings of barrack rooms and wards, and for general stores.

8815. And that is limited?—Yes, and that is limited, but sufficient.

8816. Then you recommend that a larger stock of stores should be allowed to Dublin. I suppose that applies principally to Ordnance stores?—Yes, it would apply really to all Ordnance stores.

8817. Is there a store room?—There is a very large store there now; it has been very largely increased.

8818. The store accommodation?—Yes; it is very complete.

8819. What is the reason why so small a stock is kept?—The present regulations limit this to two years average annual issue.

8820. (*Sir Charles Welby.*) This paragraph did not refer to mobilisation of stores?—No, only to ordinary stores.

8821. (*Chairman.*) Your general recommendation, I take it, is in the direction of making Ireland a self-contained and self-supporting organisation as far as

the Forces go?—Yes, that is entirely my contention. I think it is the most practical plan.

8822. As we are on the subject of stores, it appears that there is a system under which Commanders of regiments and other units put forward demands for Ordnance Stores, without any reference to the question whether they have already exceeded their annual provision under any one head or not. The local Ordnance Officer is charged with seeing that the requisitions do not exceed what is allowed to the unit; a duty which is rather difficult to perform?—This is provided for in equipment regulations. There is a fixed allowance that the Chief Ordnance Officer may not exceed.

8823. No, they may not exceed that allowance, but we came by this information at Aldershot when we went round with Sir Redvers Buller; his Ordnance Officer assured us that the Commander of the unit went on making requisitions for such and such stores, without any reference to whether, if he got them, he would be exceeding his annual provision or not; it was left to the Ordnance Officer to check them and say: You will be exceeding what was allowed you under this head or that; that the officer himself commanding the unit kept no account?—Then the officer was very much to blame; it is quite contrary to the Regulations. If brought to the notice of the General, it would be his business to stop it.

8824. The Commander, then, of the unit ought to keep the run of what he is asking for?—Yes.

8825. And not throw the responsibility upon the Ordnance Officer?—No; but the Ordnance officer, on his part, has no right to advance it, because his regulations are very distinct as to what is the annual issue, and he has only the right to have that; if he wishes to have more, he should make some special request, under some exceptional circumstances, which he would have to prove to the satisfaction of the General.

8826. As it is the Ordnance officer does not only check the payment from the ledger, but makes what he calls a pre-audit, and keeps a very elaborate account; and we were told that they found it very difficult very often to check exactly what the Commanders of the units had got?—I have never heard of a case of that kind.

8827. (*Colonel Miles.*) If it is beyond the Regulations it comes to your Royal Highness, and you approve of the requisition or not?—Yes, and they would have to show me chapter and verse that it was necessary; if it was not, I should not allow it.

8828. (*Chairman.*) As regards repairs to equipment, for instance the equipment of a battery, we have been told that in the course of a year so much leather, so many straps, so many curry combs, and so many other items are issued to the battery, whereas it is just possible that in any particular year the wear and tear may have fallen more heavily on some items than on other items. Would it not give the officer more discretion and make him take more interest in the wear of his articles, if, instead of being supplied with so many buckles, brushes, combs, and so on, he were given a credit on the Ordnance Stores of so much, representing, let us say, the value of what he gets now, and then was allowed to draw out (provided he did not exceed the credit) exactly the items he wanted, one year perhaps more brushes, next year more leather, and so on?—I think the different items are not quite the same. On the question of buckles, I doubt whether the Commanding Officer could get the proper buckles except through the Ordnance people.

8829. But one year he might want more buckles, and fewer brushes, say, and then another year he might want more brushes and fewer buckles; whereas he gets the same amount of both articles in every year?—Yes, he certainly might.

(*Secretary.*) The intention is that he has to get them all from Army store.

(*Duke of Connaught.*) Oh, I thought he was to have the money, and go outside; and I was in doubt about that, because you might get a buckle that did not fit your equipment, or you might get some very bad leather.

8830. (*Chairman.*) No, he has to get it from the store, but instead of being bound to get so many buckles and so many straps from the Ordnance Store in the year, he could vary the amount; one year he could get more buckles and fewer brushes, and another year more brushes and fewer buckles?—I should doubt

whether he could do under the regulation amount of brushes. I think he requires them all.

8831. But in some articles perhaps the wear and tear would be more in the year than in others?—But, as you say, the question of buckles is rather a different thing. I think over some ground which is difficult ground your buckles may be constantly going; on other ground, where you have no difficult ground, probably not a single buckle is gone; in that way I do agree with you. But the present system has worked well. Personally that question has never been raised.

8832. (*Colonel Miles.*) The Ordnance Department, I think, Sir, have not often raised difficulties in the way of Artillery harness?—No.

8833. The issues are rather liberal?—Yes; if there has been some special wear and tear, they have generally at once made it good.

8834. (*Chairman.*) It has been suggested that it might tend to make the officers take more thought of the wear and tear of equipment and take more interest in it, if, instead of knowing that they got so many items of this class and so many of that in the course of the year, they got a credit allowed to them, and were given the responsibility of making requisitions within that credit. Would that not help them to keep the run of things and conduce to economy?—My experience is that the officers are particularly careful over that. The Artillery is probably the only branch of the Service where there is a little more responsibility. From the day a Subaltern joins he is responsible for two guns and two wagons, and the horses, harness, and the men in that sub-division. That does not exist in any other branch of the Service. So that I think the Artillery officers are accustomed to more responsibility than any others, and, therefore, I think their work is better done. I do not know whether I have made that quite clear. There is no sub-division of the command in a company of infantry or in a squadron of cavalry, but there is in a battery. The Subaltern is responsible from the day he joins for everything in his sub-division.

8835. (*Sir Charles Welby.*) The idea underlying the Chairman's suggestion is, I take it, that the more discretion you can give to the Commander of the unit to distribute a certain sum of money or a certain credit as he thinks the circumstances may require, the more inducement there will be to him to economise in certain directions in order to have more money to spend in other directions?—I think that is quite sound.

8836. At present he may economise carefully and successfully, say, on the buckles; I only take a particular article by way of illustration, but that does not give him a penny more to spend on such things as brushes, of which he may be specially in need at the moment?—No.

8837. And I think the suggestion was, that if he had such a power it would distinctly contribute to economy?—I should be all in favour of it. I think the principle is thoroughly sound.

8838. (*Chairman.*) Yes, that is the idea?—Yes, perhaps I did not quite understand it before.

8839. With regard to writing off of losses of stores or deficiencies in cash accounts, provided there is no proof or presumption of theft or fraud, do not you think the powers of Commanding Officers are rather small?—They are much too restricted, I think. I think the General Officer should have that power; of course, the General's inspection should be the check, and he ought to be able to check any irregularity.

8840. But if the General Officer was given power to write off up to the limit of 5*l.* in the case of cash and 50*l.* in the case of stores, would that meet the case? The limits are 1*l.* and 10*l.* now, I think?—I think that ought to do very well. You see the General finally approves of the Board, and that appears to me the check that it is correct.

8841. But as it is now, anything over 1*l.* and 10*l.* has to go up to the War Office?—Yes; I cannot see that there would be any objection to that limit being extended to the amount that you suggest, or that there would be any loss thereby.

8842. And that would minimise to some extent the correspondence?—Considerably.

8843. It is just upon those small and trifling matters that there is so much correspondence?—Yes.

8844. We have had it stated that difficulty occasionally arises in districts because there is nobody from whom the Headquarters Staff can get a final ruling as to the interpretation of a financial regulation. I suppose now a General would, if he felt any doubt, probably consult his Paymaster?—Yes, the District Paymaster; as a rule they are very good, and they are well up in all the Regulations.

8845. But, however excellent their opinion might be, there is no reason why it should be final and binding on the War Office. You might have an excellent opinion and yet the War Office might raise a query afterwards?—Yes. Am I to understand by that question that you propose to have the audit in the command?

8846. Precisely; we propose to transfer, say, to Dublin a section of the Accountant-General's Department from here, under a local auditor, to conduct the audit locally; and as regards the interpretation of regulations, if he was referred to and said, within the power delegated to him by the War Office, "This is the interpretation of the regulation," the General might count upon that as being final?—Yes, he would consider it final.

8847. And it would be final?—Yes. Whether you would have quite enough work for a permanent Accountant-General's Department, in my command for instance, I am not quite certain.

8848. (*Colonel Miles.*) But it is proposed, sir, that he should take over the pay lists and all the accountant's work of the command—the whole of the Accountant-General's work?—Then it is a much larger question than I thought.

(*Mr. Mather.*) And Ordnance stores also.

8849. (*Chairman.*) The proposal is a large one?—Yes. I did not understand the scope of it at first, from that particular point.

8850. You think that such a thing would be an assistance?—Yes, I think so.

8851. And we should like to have your opinion very much upon the proposal in its more general aspect. I think there would enough work, because we should be detaching from the War Office here a staff occupied all the year round with Irish accounts, only the work would be done in Dublin instead of here?—Yes, I think that would be very desirable.

8852. It would tend to make the audit more rapid?—Yes; there is great delay in the audit, no doubt.

8853. And it would put, I imagine, the officials of the Accountant-General's Department more in touch with the actual difficulties and necessities of the soldiers?—Yes, I think it would.

8854. And promote a good understanding between them?—Yes. I should be entirely in favour of that now I understand the scope of it. As a matter of fact, I put into my answer rather the reverse, because I did not quite appreciate the extent of the change proposed.

8855. I am afraid we did not make it quite clear. There appears to be a sort of feeling in some quarters now that the Accountant-General's Department and the soldiers practically occupy hostile camps, and that they should never come into contact; whereas we are rather inclined to believe that if they did come into contact, and knew each other's difficulties, things would go more smoothly?—Yes, I think some small reforms might be introduced which would be very valuable.

8856. One condition of the proposal is that the officers of the Accountant-General's Department transferred to Dublin should be interchangeable with the Central Staff here—that there should be a going backwards and forwards?—Yes, that would give them all a little experience of what the direct work in a command is; I think that would be valuable.

8857. They would bring up here a knowledge of the actual necessities of the Army, and, at the same time, men going down from here would refresh and reinforce the traditions of the Central Office?—Yes, I should say it would be specially valuable for the experience they would gain down there and bring back to the War Office; I quite appreciate that. I think it is a very good plan.

8858. In India, of course, you had your Accountant-General in close touch with you?—Yes.

Gen. H.R.H.
Duke of
Connaught
and
Strathearn,
K.G., &c., &c.

19 March 1901.

Gen. H.R.H.
Duke of
Connaught
and
Strathern,
K.G., &c., &c.

19 March 1901.

8859. And he was in close contact with the difficulties and needs of the Military?—Yes. The accounts, I cannot say, are similar in India; there is a great deal of red tape in India; but it is on the spot; it is done quicker.

8860. You had your Military Accountant-General on the spot?—Yes.

8861. And you could consult him before you took action, and occasionally he pointed out to you a way of getting round difficulties?—Yes, this was so.

8862. Under the scheme recently announced by the Secretary of State for grouping the districts into six large Army Corps, do you think it would be possible to transfer to the Commanders of the Army Corps any of the work now performed in the departments of the Adjutant-General and the Quartermaster-General at Headquarters?—I think the greatest possible power should be given to these Generals Commanding Army Corps in their own commands.

8863. Is there any special direction in which you would confer power upon them with regard to the Adjutant-General?—There are many minor points that are referred to here which might be dealt with on the spot by the individual General. Questions of moving—we cannot move an Army Service Corps man from Cork to Dublin or the Curragh, or *vice versa*, without reference to the War Office.

8864. What is the reason for that?—Because he is borne on on a different strength.

8865. (Colonel Miles.) Borne on the headquarters of the corps?—Yes, it is the headquarters of the corps centralised at the War Office. One would have thought it would be sufficient to state in the return that went in next month that one more Army Service Corps man should be at Cork and one less at the Curragh; it would appear that that was sufficient, but it is not, under the present organisation.

8866. The General having transferred him?—Yes, because he is a departmental man; his headquarters, as Colonel Miles points out, are at the War Office.

8867. (Sir George Clarke.) That means, does it not, sir, that you have not got full power over the distribution of officers in your own command?—Yes.

8868. (Sir Charles Welby.) Would not that be obviated if the Army Service Corps were constituted into six regiments or battalions corresponding with the six large Military Districts to be created, with headquarters in each district?—I think it might; but it is a large question. I should be sorry to give you an answer immediately without thinking it out a little further.

8869. It involves many considerations of foreign service which complicate it very much, of course?—Yes.

8870. (Chairman.) Are there other questions of transfer besides the Army Service Corps officers which you have to refer to Pall Mall?—There are Artillery questions and Engineer questions.

8871. (Colonel Miles.) Your Royal Highness gave rather full evidence upon that before the Decentralisation Committee?—Yes, and that has been acted on rather. There is the Army Ordnance Corps. It is the departmental corps that cause all this reference up to the War Office. I gave the instance of an inefficient groom to a bandsman's horse at Aldershot; his battery was within 10 yards of where he was, and it took three months to transfer him, and I forget how many times it was signed—it was signed, I think, 15 times by five different officers, and when the order ultimately arrived the order was carried out in a few minutes.

8872. I think that has been changed now?—Yes, it has been changed on the strength of the report of that Committee.

8873. (Chairman.) As regards decentralisation, there is one great difference between any system which would be possible here, and, let us say, the German system, in the fact that every district here has to furnish drafts for foreign service?—Yes.

8874. How far could the work, with regard to drafts for foreign service, be decentralised?—It is a little difficult to say, because, you see, the drafts are made up sometimes partly from the home battalion and partly from men from the dépôt. Of course, the dépôt may be in one place, and the district in another; therefore, in that district, you would not know what number of men they had available at the dépôt. At the War Office they know. And we should not know how

many men they would require, say, in India. We may take a case in point. Let us say the Fourth Rifle Brigade in Ireland has to furnish a draft of 200 men for the Third Battalion in India. We should not know in the Dublin district what number of men they wanted, but the War Office would know, because they get the Indian Returns; they would know what number of men are leaving India on the expiration of their service, and, therefore, they would know how many men would be required for that draft. And they would also have the return at the dépôt of the Rifle Brigade. If there were any men that came up to the regulation of the Service and standard of development to be sent out with the draft, we in the district should not know those points, that is a difficulty I foresee. I do not say it is insurmountable.

8875. Is the only way to surmount it, direct correspondence between the districts and India?—Yes, it would be; but there you would be dealing with another country, I think that is the reason it has been centralised at the War Office.

8876. Dealing with several other countries?—Yes; they get the returns from India at the War Office. In the districts, of course, we would not know.

8877. (Colonel Miles.) As you say, sir, at present it is administered from the War Office, because the Adjutant-General has the information as to the numbers required by the foreign battalion?—Yes.

8878. He has the state of the dépôt before him?—Yes.

8879. Which may not be in the command of the General in whose district the home battalion is serving?—No.

8880. But if all of that information was centred in the home battalion, then the district could administer the draft?—Yes.

8881. Of course, at present it is administered from here under the letter of instructions?—Yes.

8882. Which lays down minutely the terms and conditions of service of the men who have to go out?—Yes; and then that is sent to the home battalion, and they are told exactly how many men they have to furnish.

8883. And you have references between yourself and the War Office if there is any change necessary in that letter of instructions, if you take a man out or put another man in?—Yes, if the General, when he sees the draft sees a man whom he considers not fitted to go, he puts him back and takes a waiting man—we always have waiting men to meet casualties, and then that man would take his place, and he would immediately communicate the fact to the War Office. Take the third battalion of the Rifle Brigade at Rawal Pindi—that is, in the Rawal Pindi District—in the Punjab Command. I do not see why I should not in the Irish Command communicate with the Punjab Command on that question; and then when the third battalion of the Rifle Brigade go into another command, they should in the same way communicate through whoever is the General there.

8884. (Chairman.) And that would also mean a change in India, because the Punjab Command now communicates through the Commander-in-Chief at home?—Yes; but I do not see why they should not communicate direct. Reliefs go on in India the same as they do in the United Kingdom. I see no difficulty in it.

8885. If they were placed in communication?—Yes, if we were allowed to be, but we are not allowed, it is not the system.

8886. But you think it would be of advantage?—I think it would be of advantage. I think it would place more responsibility upon the General at home, which I think, is everything, and besides it would save time.

8887. And it would save the correspondence?—It would save a certain amount of reference between the War Office, the district and India, and the home battalion.

8888. (Colonel Miles.) Does your Royal Highness know the Monthly Rank and File Return kept at the War Office?—Yes.

8889. You would require to keep a similar sort of statement to that return in your command?—Yes, but that could be done easily, because as a matter of fact, it is compiled in the regiments before it comes up there.

8890. (Sir Charles Welby.) May we take it that as a matter of fact the General Officer Commanding the

district does now select the drafts?—Only within certain limits.

8891. Within certain conditions laid down he selects the individuals who comply with those regulations?—Yes.

8892. And their correspondence has to take place with the War Office?—Yes. Say 25 men are to be sent out to the 3rd Battalion, he sends to the Officer Commanding the 4th Battalion and says: "I have to furnish so many men, they must be 20 years of age, they must have over a year's service, and they must be passed by the medical officer as being medically fit."

8893. It is only quite the last year or two, is it not, that even that amount of discretion has been left to the General?—Yes.

8894. The Adjutant-General's Department used actually to earmark certain individual men to form part of a draft?—Yes, quite true. I think I gave an instance of that before the other Committees. They said a certain man, Private Smith, was to go out. Private Smith, I thought, was not fit, and I wanted Private Jones to go out; but as they had named Private Smith by name, he had to go.

8895. And that was changed by the Decentralisation Committee?—That was changed after that last Committee, and that is a great improvement.

8896. (Chairman.) Were actually the individual men named?—Yes, actually the individual men were named that were to go out.

8897. With what knowledge of them?—None, I think, they were probably in the Table.

8898. (Colonel Miles.) That was only the Army Service Corps, sir, who named butchers and bakers by name?—Yes, and I did not want a butcher when they named a butcher; I recommended a baker.

8899. (Sir Charles Welby.) I think the underlying idea was that the General Officer Commanding the District at home was so interested in the efficiency of his own command that the War Office could not trust him not to send out in drafts to India those soldiers he was most anxious to get rid of?—Yes, but I think we have got beyond that.

8900. (Chairman.) Have you any opinion, sir, as regards the abolition of the Deputy Adjutant-General for Royal Artillery?—I have always been in favour of the abolition of the Deputy Adjutant-General for Royal Artillery, and, personally, I am very glad that he is not there any more. Perhaps you will ask why? The reason is that, from my experience, having served both in the Royal Artillery and the Royal Engineers myself, I have noticed that the feeling is very exclusive in those two regiments. I think it is a disadvantage to them, as a regiment, and I also think it is a disadvantage to the country.

8901. And the existence of the Deputy Adjutant-General kept up that exclusive feeling, you think?—Yes; everything centred in him. I think every soldier in the Army should be under the Adjutant-General.

8902. (Sir George Clarke.) But I take it that the Deputy Adjutant-General for the Royal Artillery was directly under the Adjutant-General?—He was, and he was not. He was to a certain extent; but every Order had to go through him; he would issue every Order to the Royal Artillery, and it almost became a Regimental Order.

8903. But he was absolutely controlled, was he not, Sir, by the Adjutant-General?—He ought to have been; he was to a certain extent, but, as a matter of fact, he was not; he was officially, but not practically.

8904. Then, supposing that the Deputy Adjutant-General for the Royal Artillery was only a subordinate officer of the Adjutant-General for the Artillery regiment, and knowing more about his own regiment, being a special service, than officers of the Line would, or the Cavalry, you would not then see any objection to his being a sort of head of Artillery in the War Office, would you?—If I may say exactly what I think, I think there should be an Inspector-General of Artillery or two Inspectors-General, one for Horse and Field, one for Garrison and Mountain, and that he should have an Adjutant-General under him; but that is entirely for the purely technical part. I think the ordinary Military routine of the Artillery should be exactly the same as that of the Cavalry and Infantry and any other body. I do not think it is for the good

of the Army or for the good of those particular corps that they should be exclusive.

8905. (Chairman.) Referring to this question of the Deputy Adjutant-General for Royal Artillery, it has been stated to us that it would probably be very valuable, and conduce very much to the efficiency of the different branches of the troops, if a system of Inspectors-General of Cavalry, Infantry, and Artillery were introduced analogous to that now existing in India. I gather that you would be in favour of that?—I am strongly in favour of it. Of course, they have no Inspector-General of Infantry in India.

8906. And from your experience in India, to take an instance, you would think that the value of the Inspector-General of Cavalry has been amply proved?—Most distinctly. It was only a very few years before that there was an Inspector-General of Artillery appointed, and the value of Artillery in India was doubled; it was something extraordinarily marked. I remember, when I was Commander-in-Chief in Bombay, we were then a totally different Army from that of Bengal and Madras, and the Inspector-General of Artillery was merely for Bengal, and he had never come down before to inspect in Bombay. I was most anxious to get him down, because I saw that things were not up to the proper standard that they should be. He came down, and, naturally, he found fault—I was very anxious that he should; and the improvement during the four years that I was there, owing to the Inspector-General of Artillery coming down, and making a thorough technical examination of them, was most marked. Now he inspects everywhere all over India.

8907. Then the Committee may take it that you are a great believer in inspection?—Yes, I believe it is the great check—it keeps everybody up to the mark.

8908. And you think that if a system of inspection was applied from Headquarters to the different branches of the troops, it would promote efficiency and uniformity?—Yes, I hold this view very strongly.

8909. (Sir Charles Welby.) You do not intend to convey, I imagine, sir, that the appointment of such inspectors would in any way interfere with the functions of the Adjutant-General, who is responsible for the general discipline of the Army?—I think he has plenty to do without. I think that the Commander-in-Chief of the Army should go down and inspect; I think it is very important that he should go and inspect and see for himself.

8910. (Chairman.) But these Inspectors-General would be his trained eyes, as he could not see everybody himself?—Exactly.

8911. (Mr. Beckett.) And they should report direct to him?—Yes.

8912. (Sir George Clarke.) That is essential, is it not, that the Inspectors-General should report direct to the Commander-in-Chief without any intervention on the part of anybody?—Yes.

8913. That is the essence of the Inspector-General system?—Yes, distinctly.

8914. (Sir Charles Welby.) And their appointment would in no way affect the position of the Adjutant-General?—In no way; they would have merely the functions of an Inspector-in-Chief.

8915. (Chairman.) To come to, perhaps, a less elevated matter, we have had it stated to us by one General Officer Commanding, that many questions that are sent up by him to the War Office get hung up, and that he gets no decision; is that your experience?—Yes, it is so, especially if there is a financial side to the question which has gone up. When anything bearing on finance is connected with the question that has gone up, there is great delay.

8916. You get an answer eventually, but there is great delay?—Yes.

8917. Is there not so much delay with what are purely Military questions?—No; I think, considering the enormous number of questions that come up here, there is very little delay.

8918. But the delay on questions involving finance arises because you have to go to two sources?—Because you have to refer to the Treasury.

8919. Speaking generally, do you find that there is much delay in dealing with correspondence at the War Office?—I must say that I think, on the whole, there is very little delay; there is much less delay than

Gen. H.R.H.
Duke of
Connaught
and
Strathern,
K.G., &c., &c.

19 March 1901.

Gen. H.R.H.
Duke of
Connaught
and
Strathearn,
K.G., &c., &c.

19 March 1901.

there used to be, and that I attribute to the result of last Decentralisation Committee, because they did reduce correspondence, and, therefore, they have not quite that mass of correspondence here that they used to have, because a number of the returns have dropped out.

8920. Returns and useless references?—Yes.

8921. Then you are not dissatisfied with the speed of the correspondence on the whole?—It might be quicker, but considering the mass of correspondence that is centred here at the War Office, I do not think we have any right to complain.

8922. We have been told that there is a good deal of correspondence, because the powers of the General Officers as regards money are so limited. There was one famous instance given before the Decentralisation Committee, where Sir William Butler could not order straw hats, costing 1½d. each, for the men, on a hot day?—That would be so; you could not do that.

8923. And there are still questions of that kind which are obliged to be referred to Pall Mall?—Yes.

8924. You are aware, I suppose, of the system existing in India, by which so much money is placed at the disposal of the Commander-in-Chief, and also a lesser sum is placed at the disposal of the Commanders of Army Corps?—And also of Divisions.

8925. To be spent absolutely at their discretion, provided that it is spent in accordance with the purpose for which it is voted?—Yes. As a matter of fact, 20 years ago I was considered quite fitted to deal with large sums of money, but at the present moment I am not. That shows the difference in the systems at Home and in India.

8926. And you would prefer to be treated as you were in India?—I should, very much; and I am quite certain that the country was well served, because one knew exactly how the money was spent, and one was responsible for the proper spending of the money. It was money well spent. And then also one learnt the value of the money by seeing how it was spent. You were teaching yourself, and those under you, the value of money.

8927. Then you would like, sir, to see such a system introduced here, by which a certain sum should be placed at the disposal of the General Officer Commanding?—Distinctly. I think, at the present time, where General Officers are selected they ought to be fitted to manage for themselves; if they are not, they should go. I am speaking for everybody. I should consider that I ought to go if I did not look after the money. I never had any difficulty in India, and I never had any fault found with me in the administration of the money in India; and it was very closely supervised at Calcutta.

8928. I suppose that a comparatively small sum would be sufficient, say 300l. or 400l. a year?—For general purposes you mean, to meet any exceptional case?

8929. Yes, any small matters that might arise?—It is difficult to name a sum exactly.

8930. It would not need to be a very large sum?—No, I should think that 200l. or 300l. would be of great value.

8931. And it would save a lot of correspondence?—Yes.

8932. In your opinion should a General Officer Commanding be able to attend the Army Board when it deals with questions with which he is concerned?—Yes, I think he ought to be more consulted than he is on questions under his command, and that he should be ordered to attend the Army Board whenever any question connected with his command comes up.

8933. Does he ever ask now to attend the Board?—No, I have never known of any case. I think it would be considered rather irregular to ask; I should hardly like to write myself and say that I wished to attend the Board; I think it would be considered rather an impertinence on my part.

8934. But you think that on any important question you ought to be given the choice of coming up at your discretion?—Yes, I think that the Army Board should consider you, and refer to you on questions dealing with your command; and they should also send for you if they require it, or if you claim to come and explain the matter.

8935. They should give you the option of coming?—Yes.

8936. (Mr. Mather.) You are aware, sir, that part of our function as a Committee is to examine whether decentralisation can be carried out in all directions as indicated by the Committee before which you, I believe, gave evidence in 1898?—Yes.

8937. And that question naturally brings us closely into contact with the General Officers in command of districts, and in our inquiry we have repeatedly met with complaints of minor details interfering very much with the General Officer Commanding, such as you have given us this morning. Now in the German system—with which I presume, sir, you are quite familiar?—Yes.

8938. It appears on the face of it as if simplicity and decentralisation had been carried out to the utmost possible extent. You would agree with that, sir?—Yes.

8939. Is there, in your opinion, any reason why the same principle, taken in all its breadth, could not be applied to the districts in England, whether they be Army Corps districts such as are foreshadowed in the new system, or some fourteen Divisions as they are under the present existing system in the United Kingdom?—No, I see none. I suppose, when you speak of the present 14 Divisions, you mean Districts. There is no Divisional organisation at present in the United Kingdom.

8940. That is, there are no difficulties apart from those which have been mentioned by the Chairman this morning, in connexion with the selection of troops of various branches to go abroad, and the interchanging of troops throughout the Empire, which I think you have admitted this morning might be arranged and adjusted?—Yes.

8941. In the other aspect of this comparison between the German plan and our plan, is there any practical difficulty which would prevent it from being established at once if this Committee reported in favour of it?—I am not quite sure how far the Army Corps Commanders in Germany delegate to their Divisional Commanders; I do not quite know that part of it; I know the Army Corps Commanders themselves have great power.

8942. Quite so; the Army Corps Commander is, in a larger sense only, as to the number of troops, pretty much in the same position, is he not, sir, as a General Officer Commanding one of our districts?—I am rather in an exceptional position, you see. I am something between a Commander-in-Chief and a General Officer Commanding a district. My official title is Commander of the Forces in Ireland, and I have a larger staff.

8943. I am glad that you have called my attention to that, sir.—I suppose if these Army Corps are formed I shall be the Commander of the Army Corps in Ireland and of the Forces in Ireland; and why I say of the Forces in Ireland is because we have fortifications in Ireland; we have large fortifications where we have forces of garrison artillery, submarine miners, fortress companies of engineers, besides Depôts.

8944. (Colonel Miles.) And Militia?—And also Militia. We have a large force of Militia, but I am not responsible for their general training; as, as a rule, they train out of Ireland.

8945. (Mr. Mather.) But taking the condition of Ireland to-day, and your relation thereto as Commander-in-Chief of the Forces in Ireland, is there any reason why you, having the same authority, could not perform the same duties as those performed by the General Commanding an Army Corps in Germany, allowing, of course, for the difference between the two countries?—None whatever.

8946. You would, I presume, under those circumstances, take control of the Militia, the Reserves, the Volunteers, and the Yeomanry?—We have no Volunteers or Yeomanry, of course, you know.

8947. I beg your pardon, I had forgotten that; but in all respects you would be able to take entire control and responsibility in Ireland, without reference to the War Office, excepting by means of an annual report, or those communications which are essential for the regulation of the United Kingdom as a whole. So far as Ireland is concerned you would, to-day, be quite capable of undertaking everything?—Yes. I should wish, however, to be inspected.

8948. I will come to that. Subject to one or two other matters which may have to be provided for, you

would be able to undertake those duties and responsibilities now carried out by a General Commanding an Army Corps in Germany?—Perfectly.

8949. And is that system not, in your opinion, both very practical and very thorough, from the military point of view, and also very safe from the financial point of view?—I think so; I think it inculcates ideas of finance into peoples heads, and it also throws the responsibility of the training of the troops entirely on the Army Corps Commander.

8950. And the Army Corps Commander is on that account responsible for his troops, and his corps altogether passing the annual inspection of an expert in all its branches, when he is required to offer the force for inspection?—Yes.

8951. Of course, in England, we have always to consider the parliamentary position and the financial position from that point of view. In your opinion, supposing the whole of the money necessary under certain Votes and certain items were placed under your control, say in Ireland, to-day, would it be possible for you to guarantee and become responsible for the full financial administration attached to your service that Parliament would require?—To the Army Corps, do you mean?

8952. To the Army Corps.—Under what headings would it refer to in that matter?

8953. All the headings of expenditure in relation to your command.—You would mean the expenditure on supply?

8954. Supply.—Stores?

8955. Ordnance stores, buildings, and barracks.—Moves?

8956. Maintenance of all kinds.—Hire of ground for training.

8957. Food, of course, you have to-day; that is provided already by the General Officers Commanding the various districts. All that which is necessary to maintain an Army Corps or a large Division of the Army such as you command at present in Ireland, could be financially administered by you, sir, I presume, from what you say, at the same time satisfying, as to the results, the requirements of Parliament?—Perfectly.

8958. You have heard from the Chairman that the Committee has already considered the necessity or advisability of placing an expert, thoroughly trained and efficient, representative of the Accountant-General's Department, alongside the General Officer, to advise him and take entire control of the accounts, from the Paymaster, of the various sources of expenditure locally, and audit an account for the distribution of the money so thoroughly that the accounts could be accepted by the Accountant-General at the War Office as final?—Yes. Of course, as I was telling the Chairman before, we have not been brought up to these ideas, and that is why at first you require a little more help. You cannot suddenly take great responsibility on you when you have been brought up from the day when you joined as a subaltern on the principle that you were not on any account to take any responsibility. We have been brought up in a pernicious school, you see. I have served 33 years in the Army, and from the day I joined it has been inculcated into me that I must take care what I was about; I must not take any responsibility, because it was not mine, and I was sure to get into trouble if I did.

8959. Are you now speaking with reference to Military responsibility or financial responsibility?—Military and financial responsibility.

8960. Do you think that that arises from the fact that the War Office or the Heads of the British Army do not consider the training of the British officer to be equally good with that of the German officer?—It is better than it was; but it used to be very bad. We had no responsibility at all. We were brought up to consider ourselves bound merely to do what we were told.

8961. May I put the question in another way? Would it be necessary in order to carry out the responsibility which I have just described, and which you have replied to, to alter at the present time the training of the British officer, so as to make him capable, in course of time, of assuming such duties as those described, namely, the full responsibility of commanding a

district or an Army Corps with financial control as I have described?—Financial control will come gradually, when you have got up into the higher ranks.

8962. I am assuming that from his education and the ultimate practice of this profession, when he became promoted to be a General Officer, he then would be able to take such financial control as is allowed to General Officers Commanding Army Corps.—What I wanted to point out to you was, that from the training of the British officer, he has not the feeling of responsibility, because it is crushed out of him; he is not allowed to come to the front. If you are taught always to be responsible, I am not talking now of purely financial affairs, but to take responsibility on your own shoulders as to deciding questions that come before you; if you have been brought up with those ideas, you will soon get into the way of financial work.

8963. Would that require any difference in the training of young British officers, in the actual education?—No, I do not think so.

8964. Are the subjects of his education, to-day, sufficiently broad to enable him to understand how to use responsibility of this kind, with, of course, the additional practice he would obtain by passing from rank to rank in the Army? Is the training, *ab initio*, right?—It certainly was not right. It is better than it was, but I should like to see more responsibility included.

8965. Is it to-day equal in your opinion to the training of the German officer?—No, it is not, but it is not the officer's fault.

8966. Not so thorough?—No, it is not.

8967. And not so broad?—No, it is not; but that is owing to the system that exists from the highest down to the lowest. Once you loosen or give more scope to that system above, it will permeate down to the lower ranks. Everybody is taught to lean upon somebody else; you are taught, as it were, to expect support from somebody else, which is ultimately the War Office.

8968. And by that system, can Parliament ever be satisfied that there is a responsible head eventually in the British Army? and if no responsibility now is felt by the junior officers nor yet by the General Officers Commanding districts, upon whom does the responsibility for efficiency rest?—The Secretary of State and the Commander-in-Chief.

8969. But the Secretary of State is not a soldier?—Of course Parliament is ultimately responsible.

8970. But Parliament is not a soldier, either collectively or individually?—No, but Parliament votes the money for the Army, therefore it has a great voice in administering the Army on that account.

8971. The voting of the money is a very simple matter for Parliament to do; but Parliament wants, of course, for that money some value received. Who, under our present system, is responsible for assuring Parliament that value is received?—It is a difficult question, of course, to answer. Our system is very complicated.

8972. I do not ask you to solve the question; I merely wish to know so that we may have it on our minutes, since your experience is very varied and very large and one that naturally great importance is attached to by the country, whether there was or was not ultimate responsibility, and, if so, in what person did it reside?—I do not think I can answer that question.

(Chairman.) It is a question that is rather outside our reference.

8973. (Mr. Mather.) I will not press you on that point; I will come back to the one admission I understand you to have made, that you see no reason why the system so universally praised, which obtains in the German Army, might not be adopted in the British Army, subject only to such alterations and adjustments as are necessary to work our empire in place of their empire?—No, I see no objections to that.

8974. And, if so, it would simplify exceedingly, would it not, all those details which you have already called our attention to as interfering very much with the General Officer's efficient discharge of his duty to-day?—Certainly.

8975. (Sir George Clarke.) I suppose, sir, that in your large command in Ireland there are often a number of

important questions which arise involving Military considerations of a varied character?—There are.

8976. In such cases, when you put forward your views, do they receive early consideration at the hands of the War Office?—Yes, I think they are thoroughly gone into. I do not find that they always agree with me—I could hardly expect that; but, on the whole, I think that if there is no money question involved in it, they generally do support me.

8977. Then it is not your impression, as it has been the impression on the part of some Generals we have examined, that the means of considering the question of policy at the War Office are somewhat defective; that is not Your Royal Highness's experience?—No, I do not think so. Is not "policy" rather a large term?

8978. It is a very expansive term?—That is it. What have you in your mind in asking me that question?

8979. Say some proposed kind of mobilisation in Ireland which might originate with you and be sent by you to the War Office for consideration and decision. Would a question of that class be quickly considered and returned to you?—No, I do not think it would, because it would require a tremendous lot of going into. It might affect administration in other parts of the Army, and they might require to go into it very fully. In that case I should probably get an answer to say that the matter would receive full consideration.

8980. May we take it that your experience of the effects of the Decentralisation Committee is satisfactory, but that decentralisation on much broader and more direct lines is really required?—Yes; it has touched the fringe of things; but it has not gone deep enough.

8981. And comparing Your Royal Highness's experience of India and at home, on the whole, you prefer the Indian system?—Yes, I do, certainly, there is more responsibility given to you.

8982. Do you find that the time of Staff Officers is largely taken up with administrative work, which has no direct relation to the training of the Army for War?—Yes, very much.

8983. Do not you consider that to be rather a serious matter from a National and Imperial point of view?—Yes; I have always been in favour of the German plan, where they have a Garrison Staff Officer, if I may so translate it; that is to say, that the purely garrison routine should be done by a Garrison Officer, and that the Adjutant-General's Department or the Quartermaster-General's Department should not be worried with purely detail questions. I refer to guards, fatigues, pickets, working parties, guards of honour, small bodies of troops coming through and going out, to see that they are met and are fed on the way through, and all that sort of thing; it is a purely detail question. A Staff Captain has been appointed to Dublin, and he does that work; the time of a Staff Officer who has been trained at the Staff College should not be taken up with these petty details. That is, I think, really what you want me to give you my opinion on?

8984. Yes. The main feature of the German system is, is it not, to keep the Staff of the Army entirely clear of routine and supply duties?—Yes, on a small scale; if it was on a large scale, it would have to be referred. I make a difference between a garrison and a district.

8985. But in every command in Germany, there are officers who have time to consider the higher Military questions of the preparation of the command for war?—Yes; there the time exists, because it is not taken up with these rather trivial though necessary details of Army administration, and especially of the present Army correspondence.

8986. But with us, in our very special circumstances, we have an immense amount of routine work and paper work thrown upon us, which would not be thrown upon a German officer. All the mass of work, for instance, relating to reliefs and to drafts; and, because we have that amount of work thrown upon us, is it not all the more necessary that we should be careful to keep a certain amount of intellectual strength free to think on Military questions?—Certainly it is more unnecessary with us than it is with them.

8987. And with us it is a positive danger, is it not, that the minds of so many people have to be taken

up with details which, though necessary, do not help their training for war?—That is so.

8988. Then I take it that the point upon which you feel most strongly is, that we must strive to inculcate responsibility at the beginning of an officer's career?—Yes.

8989. And to build up a gradual development, step by step, of responsibility up to the highest ranks, which is the essence of anything like a real decentralisation?—Yes. Every officer is capable of taking responsibility upon his shoulders if he is trained to it. You see in other professions it is so.

8990. (Colonel Miles.) We get good material, sir, but do not make the best of it?—Yes. I have a paper here, if the Chairman will allow me just to refer to it, which was drawn up by my Commanding Royal Engineer. When he was a Major he commanded one of these telegraph battalions of the Post Office, and he had complete control over the rates of working pay of both the Military and Civil subordinates (*handing in a paper to the Committee*).

8991. (Chairman.) That is an instance in point?—Yes.

8992. (Sir George Clarke.) Then, to sum up, Your Royal Highness considers that one of our greatest defects is that we do not inculcate responsibility at an early age and drive it home right through an officer's career?—I do.

8993. (Colonel Miles.) I think, in your evidence before the Decentralisation Committee, you pointed out several directions in which decentralisation might be effected?—I did.

8994. Most of them have now been carried into effect, I think, of a minor type?—All the minor ones.

8995. Do not you think that if districts are grouped and the United Kingdom divided into, say, six Army Corps, we should be able to have a much larger measure of decentralisation than we have even now?—Much larger, I am certain of that.

8996. In Ireland all moves of units from station to station are carried out by your Royal Highness, are they not?—Yes, in Ireland, but not moves from Ireland to England or *vice versa*.

8997. You submit a programme of your moves for the year to the War Office and then carry them out?—Yes.

8998. Do not you think it would be possible to introduce a system in the Army Corps Commands under which changes of station of units in the Army Corps districts, the preparation of drafts for units abroad, and the moves of small parties on the route, might be entirely delegated to the Generals Commanding, who would, when necessary, communicate with one another under instructions from the War Office?—No doubt.

8999. And do you not think that such a measure of decentralisation in a matter which is one of the great points of difference between ours and a Foreign Army, namely, the constant moves of units, might have far reaching effects of a most beneficial kind?—In what direction do you mean that? I did not quite follow your question.

9000. I mean that if these moves were carried out from Army Corps to Army Corps, and so on, it would relieve this Office of a great mass of work?—You mean if each Army Corps carried out their own moves?

9001. Yes?—I thought you meant moves from one Army Corps to another.

9002. That might come in, too; but in that way this Central Office would be relieved, would it not, of a great mass of work?—Yes, very great; and we have the means of carrying out the moves perfectly simply now throughout.

9003. Do you think that in our past Military policy we have sufficiently recognised the advantages that would result from a real measure of organisation?—I think our organisation has been purely on paper. If I might answer that question a little more fully, in my command, now, I have 24,000 men under my command, and there is no sort of organisation; nobody is organised at all beyond the battery or the battalion, or the the regiment of Cavalry; they are scattered all over the place without the least Military reason, merely because the barracks are there.

9004. Taking Aldershot as an example, when your Royal Highness was Commander there, you had, I think, 15 battalions under you?—Yes, I had three brigades, two of five and one of three; and then I had practically a battalion by itself, and then I had three Cavalry Regiments and one brigade Division of Horse and two of Field Artillery, and the Engineer and Field Companies, a Telegraph Battalion, a Balloon Section, and so on.

9005. Then those 15 battalions were organised in three brigades?—Yes, two of five, and one of three.

9006. One of four, I think, sir, because you had Manndora?—Yes, I forgot that for the moment.

9007. There was no attempt at Divisional organisation?—No. I strongly recommended that there should be.

9008. I was going to say that you put that forward?—Yes; I pointed out that there was a great opportunity of having Divisional organisation there, and it was a pity not to use it; and I pointed out how it could be done. As a matter of fact, the last year I was there I did train two divisions, as divisions, by taking away a Brigade General and making him a Divisional General, and taking the Colonel of a regiment and making him Brigadier-General for the time being.

9009. But a reconstruction was not drawn out with a view to building up two Divisions?—No, and it was a great pity.

9010. You think that both Branches of the General Staff are unduly pressed with account work?—Yes, always.

9011. And I think I gather that you are of opinion that our Staff organisation should be improved?—Yes. I think the Peace organisation should be the same as is laid down in the Mobilisation Tables. I see no reason why you should require a different organisation for War from what you have in Peace time.

9012. (*Sir Charles Welby.*) I should like to ask your Royal Highness a little about the relations of the Commander of the Forces in Ireland with the General Officers Commanding Irish Districts, as I am not very clear upon the point. For instance, does the Commander of the Forces in Ireland revise the lists of Works Services put forward by the General Officers?—Yes, they go through him; he keeps them; they are in his office; but they put them forward.

9013. They put them forward to the War Office through him?—Yes, as a matter of facts, the Districts have to make out their lists, and the work is checked by the Chief Engineer in Ireland.

9014. On behalf of the Commander of the Forces?—Yes.

9015. Is it within his competence to strike out of the list?—No, he would send on to the War Office with a recommendation if approved of, and not recommended if disapproved of.

9016. To the War Office?—Yes.

9017. So that at present the Headquarters Office in Dublin acts as little more than a post office with regard to proposals put forward by General Officers Commanding?—Yes. Since I have been in command I have delegated as much as the Regulations will allow, to the General Officers Commanding districts. I will not accept anything that they send forward to me unless they give their own opinions to me upon it. I wish to throw the responsibility upon their shoulders, as I think they know more about their own districts than I do; they live in the country, and that ought to be the case.

9018. And as long as their proposals are reviewed by the War Office, you think it would be adding an unnecessary wheel to the coach to review them also in Dublin; that is what it comes to?—Some of these things that come forward through me, I should make my remarks on. I would make my remarks on a proposal so as to help the General Officer to get what he wants, by saying that I have gone carefully into his proposals, and am strongly of opinion that they are necessary, and if I happen to know the question in point, I would say, "I personally know this question, and have seen with my own eyes what this General recommends, and I can fully endorse it"; or I would say, "I send this on; I do not know sufficient of the question to speak personally, but I have confidence in General so-and so." I am really a sort of Army

Corps Commander, but I have no Army Corps, if I may so express it.

9019. What I am trying to arrive at from the analogy of Ireland is an ideal organisation for an Army Corps?—But it is not ideal at all, at present.

9020. I was going to suggest to you whether the ideal arrangement in your view would be that the War Office should inform the Commander of the Forces in Ireland, and of the Irish Army Corps, of the amount of money for all works, both new works and maintenance, except very exceptionally large sums, of course, that was at his disposal, and should then leave it to him to allot that money, he having before him the demands put forward by the Generals of the different districts?—Yes.

9021. That that responsibility should rest upon the Commander of the Army Corps, and should not be entirely performed at the War Office?—Yes, that is what it should be.

9022. That would be your Royal Highness's opinion?—Yes.

9023. And in the same way with regard to other matters, such as stores, I suppose, so far as it was practically possible?—We could safely keep five years' supply of ordinary stores in Dublin to meet the ordinary annual demands.

9024. That the Commander of the Forces should have certain limits within which he must keep his expenditure, and that within those limits he should have the distributing of the money?—Yes, and it would be very easy to arrive at those limits here, because they have only to look at the different years and take the average.

9025. Judging by experience?—Yes.

9026. And I suppose the same principle really applies with regard to supplies?—Yes, entirely.

9027. I suppose in regard to supplies it is based very much on the actual number of things?—Yes. The Army Service Corps Officers are very good in the way they look after supplies; they have much more responsibility and are accustomed to use much more responsibility, and I think, therefore, they are much more efficient.

9028. Do you know, as a matter of fact, on what system they base their estimates of their requirements; is it on experience, or is it on the detailed schedule of the numbers in the Command?—I think it is on the detailed schedule. I am not quite prepared to answer that.

(*Colonel Miles.*) It is framed on the schedule.

9029. (*Sir Charles Welby.*) But broadly speaking, may we take it that that principle which was suggested just now when we were speaking of the method under which the Commander of a Battery obtains the material required for the upkeep of his Battery, that is to say, that instead of his merely ordering each particular item which he is entitled to as he requires it, he should be credited with a certain sum of money to spend upon the upkeep of his battery at his discretion, should apply higher up,—first of all that the Commander of the Division on the General Officer Commanding should be put in an analogous position, and should also receive a certain sum of money to spend at his disposal within his competence?—Of course he must show chapter and verse how he spends it.

9030. Yes, he must account for it afterwards?—Exactly.

9031. And then the Commander of the Army Corps should in the same way have a larger sum that he should spend and account for in the same manner?—Yes.

9032. That is the true theory of decentralisation?—Yes, that is the true theory.

9033. If such powers as those were vested in the Army Corps Commander, would he be able to fulfil that responsibility with a staff of the nature he now has, or would it, in your Royal Highness's view, be necessary to institute an officer of the staff somewhat analogous to the Intendantur in the German Army?—I think my staff is perfectly sufficient in Ireland to carry out the ordinary work. Of course, we should require an Accountant Branch, which we have not got.

9034. But for the administrative work?—For the administrative work I consider it is ample, I do not believe in too big a staff, because you do not want to

Gen. H.R.H.

have a lot of writing. Those things should be settled between the different members of the staff by word of mouth.

9035. And you would not be afraid to undertake that amount of responsibility with your present staff?—No.

9036. With possibly a few extra clerks for the routine work?—Yes, we are very underclerked; but that is owing to the War, which has taken all the clerks away.

9037. (*Mr. Beckett.*) I understand from your Royal Highness that you quite approve of the suggestion that a lump sum should be voted annually to the Commander of the Army Corps, to cover the expense of running the Army Corps in his district?—Yes, certainly.

9038. That sum to be founded on an estimate made from what has been spent in previous years?—Yes; I think that probably after it is once started the Officer Commanding the Army Corps would, and ought to be, able to send in his estimate for the year, and then it would be overhauled here at the War Office.

9039. After one year's experience?—He should send in what he considers a fair estimate.

9040. And then he should have an absolutely free hand in the disposal of the money once voted to him?—Yes.

9041. That the War Office should have no further power of interference when the money was once voted?—No.

9042. Though, of course, he would be accountable to the War Office for the spending of it?—Yes, of course.

9043. Is it still the fact that after the report of the Decentralisation Committee there are several powers enjoyed by the Officer Commanding the Forces in Bombay which have not been conferred upon General Officers Commanding Districts in England?—Yes, those are purely money powers.

9044. Because you mentioned, in your evidence in your evidence before that Committee, other matters?—Perhaps it has escaped me.

9045. You mentioned as regards promotions, and so forth?—But that was purely native; that did not refer to English regiments. You see, when I was Commander-in-Chief there I had entire power over command, promotion, selection, and everything, of the native army in Bombay; but I had not that power over British regiments serving in the command. And I believe that power has been taken away now, because he is not Commander-in-Chief now; he is only a Lieutenant-General Commanding that Army Corps. I made a speech in the House of Lords on that very subject, saying I foresaw that there would be certain difficulties and that the Bombay troops would suffer, because they would be flooded with officers from Bengal and elsewhere who wished to have a change of climate.

9046. It is the fact, is it not, that in India, whether it is owing to the nature of the country, or whatever it may be, responsibility is much more diffused and exercised than it is by subordinate officers here in England?—Yes. You see the Commanding Officer of a native regiment there has the power of a District Court Martial.

9047. And you find that diffused responsibility leads to the best results?—The very best. You see, in Native regiments in Africa and China, and all sorts of places, they are not afraid of responsibility, they have been accustomed to it.

9048. I suppose it would be rather a difficult thing to confer responsibility to the same extent in England upon subordinate officers?—I think it might be tried. The responsibilities that the captain of a ship has are very great, and he is generally not found wanting. I do not see why an officer similarly placed in command of a cavalry regiment or an infantry battalion should not be considered to be equally capable of administering his command as the captain of a ship; I think it is merely the system, that they have not been trained to exercise responsibility.

9049. We have heard that undue demands are made upon the time of company officers in drawing up pay lists. Is that true?—It is perfectly true, and this year, when so large numbers of details have had to be dealt with at home, with no officers of their own regiments to look after them, with no proper Pay Sergeant, with no Quartermaster Sergeant, the amount of money that has been lost, and in some cases has

had to be paid up by the officers in temporary command, has been very great. You had a Second Lieutenant, perhaps, looking after 300 men, who has had to go over the pay sheets with, perhaps, a young non-commissioned officer helping him who did not know much more about it, and the whole account has gone wrong. It should not be left in their hands. You or I—probably you much better than I—understand wading through all these figures; I know that I personally consider I am very inefficient at making up accounts, and when you have one of these officers who probably has a lot of other work to do besides, either he slurs the other work or he slurs that work. I think it is not fair to saddle him with that responsibility, especially when he has not got the clerical assistance that it requires.

9050. Then what would you suggest as a remedy?—I should have it done by the Paymasters, as it is done in the Navy. The Naval and combatant Officers have nothing to do with accounts in the Navy.

9051. Then we have heard, sir, that the men like dealing with their officers direct in money matters?—I think that is rather sentimental, and I attach no value to it.

9052. You do not think that it amounts to a very serious objection to its being done by the Paymaster?—No, I do not.

9053. Then would you also suggest, sir, that a lump sum should be allowed to the men for clothing, so that if they spared their clothing they might draw the balance in money?—It is now allowed to a certain extent, I think, in the clothing; if a man's tunic is in good order, say it is to wear for two years, and after two years it is found in very good order, he is given the money value for that tunic instead of giving him the tunic.

9054. That might be extended, might it not?—It might be extended.

9055. And you think it would have good results?—Yes, and in India it had very good results. The tunics are done away with in India now; they have only serges; but that is a mere detail. Owing to khaki being so much worn, these red clothes last so much longer, and then the men draw compensation instead of getting new red serges.

9056. (*Mr. Mather.*) Mr. Beckett's question points to a simplification of the present plan?—Yes.

9057. But the present plan is very complicated?—Yes.

9058. It necessitates keeping a large mass of accounts here?—Yes, but the country makes a very good bargain and the soldier a very bad one.

9059. (*Mr. Beckett.*) Would it be advantageous if the system were reversed, so that if there was an advantage on the one side or the other, it should be an advantage in favour of the soldier?—Yes; but it is not at present.

9060. Then do you approve of deductions from pay?—No, and I never have. I think it is almost a breach of faith. I think the men should be told, "You will get so much," and get it.

9061. You think these deductions lead to a great deal of dissatisfaction?—Yes; some of the deductions have been struck out; some of the stoppages that used to exist are struck out now, but there are still some left in which ought not to be.

9062. (*Sir Charles Welby.*) The messing allowance removed those stoppages?—Yes; but then there is hair-cutting and washing, and, as you know, when you engage servants, especially female servants, you either give them higher pay or give them so much for washing.

9063. (*Mr. Beckett.*) And to refer once more to the Army Board, you look upon it as a most useful institution, do you not?—Yes, but I think it might be made more useful.

9064. I was going to ask you that?—I think they do not initiate anything.

9065. You think a greater power of initiation should be given to them, and that they should meet regularly?—Yes.

9066. (*Sir Charles Welby.*) Mr. Brodrick has announced the Government's intention to leave the power of initiative to the Army Board in future, in that Memorandum which was read in the House of Lords two or three nights ago?—Then I missed that.

9067. (*Chairman.*) Is it your opinion that in ordinary times, apart from the pressure of war, the company officers have too much of their time taken up with the accounts of their companies?—I do think so.

9068. Even in ordinary times?—Yes. Of course, it is much better in ordinary times, but over and over again I have known company officers having to pay up because they got wrong in their accounts.

9069. Would you, as a General, send a young company officer, who was not an expert in accounts, to the Paymaster to be coached?—You could do that, of course, but I would sooner see the accounts done by the Paymaster. I think that a great deal of the officer's valuable time is taken up by those accounts, which he might more profitably spend in preparing work for his men. As I was saying before, some of us are much stupider at accounts than others, and a lot of these officers, perhaps, spend hours over these accounts and make nothing out of them, and the end of it is that they have to pay up because the accounts are wrong.

9070. In your opinion, are the present regulations very complicated; do they give you much trouble from their complication?—Yes, they are very complicated, and they are constantly changed. To keep the regulations in your head is quite impossible; you are obliged to be incessantly referring.

9071. The regulations, I take it, are complicated because the changes in policy are so frequent and constant. The regulations only express decisions that have been arrived at?—Yes.

9072. And those are constantly varying?—Yes; but then, I think they should re-publish the regulations more often. I think that when they rescind a regulation it should come out of the book altogether, and not appear again.

9073. Do you think there ought to be a permanent committee for revising regulations here?—I have not

thought that question out, but I should think it is quite likely that it might be of very great value.

9074. (*Colonel Miles.*) Do not you think that the districts ought to be represented too?—Yes, I think so; so many regulations are drawn up without any reference to any General Officer exercising command.

9075. (*Chairman.*) Yes, they are referred to the Heads of Military Departments here, but not to the General Officer?—No, and of course it is the General Officer in command who knows where the shoe pinches, whereas it is possible that a General Officer who may be at the War Office doing the regulations has never been a Commanding Officer in his life, and he does not know where the difficulties come in.

9076. He may have been at the War Office for 20 years?—Yes.

9077. (*Sir Charles Welby.*) If some discretion was given to Generals to deal with exceptional cases which are not exactly met under the regulations, that in itself would do away, to a great extent, with the necessity of drawing a regulation to meet every conceivable case?—Yes; but the only thing you must remember is, that men differ very much in their views. I might deal with a case in one way and my neighbour commanding a division of the Army Corps might deal with it in a totally different way; and this, I consider, would be objectionable in the matter of discipline, which should be guided by the same principles throughout. I see a little difficulty in that.

9078. You cannot dispense with the central authority altogether?—I am afraid I do not quite see how you could if you are to insure uniformity. I am afraid it might give rise to difference of opinion; one General may be very crotchety and bad tempered, and he may settle the thing in a hurry, while another may go carefully into the matter.

9079. (*Chairman.*) There must be uniformity of treatment?—I think there must.

Mr. J. T. LA BROOY further examined.

Gen. H.R.H.
Duke of
Connaught
and
Strathern,
K.G., &c., &c.

19 March 1901.

Mr. J. T.
La Brooy.

9080. (*Sir George Clarke.*) You are the Civil Assistant of the Chief Superintendent at the Arsenal, are you not?—Yes.

9081. You have put in a paper explaining the question of stocktaking. You draw, I see, a sort of line between the quarterly stocktaking which is done in foundries for the purpose of establishing a foundry rate?—Yes.

9082. And the larger stocktaking which takes place at the close of the financial year?—Yes, I have drawn that distinction.

9083. As regards the larger stocktaking of semi-manufactured articles, that, I take it from your memorandum, is not to be regarded as having the same use and object as the stocktaking of a great commercial firm?—It is intended to enable us to get at the cost of our current productions. We are bound to recover the precise cost of our productions, and the way we arrive at that cost is this: We take stock of all semi-manufactured articles—we value that stock (I have a sheet here showing how the valuation is made). We deduct the value of the semi-manufactured articles in hand at the end of the year from the total amount of expenditure recorded against the order for manufacture of the articles, and we say the remainder is all expenditure which has been incurred in producing the completed stores which we have turned out during the year, and the average cost of production of those stores is thereby arrived at.

9084. But you have on paper, have you not, a statement of the whole of the work and material expended on all the articles under manufacture at the time—you have already got that on paper?—Yes.

9085. So that this is only supposed to be a verification by looking at it that this work has been actually accomplished up to date?—Our cost ledger shows what wages and what material have been expended on the manufacture of a certain article, but that manufacture may not have been brought to an absolute finish; there may have been some articles complete, some incomplete—the stocktaking is of the incomplete articles. We take each stage reached by the incomplete articles, value that out and deduct the expenditure on those

incomplete articles from the total money booked against the order. The remainder represents the cost of the completed articles. That is done with this idea: If we recover the estimated price we must wait till the full run of that class of work is exhausted before we arrive at the complete total cost, and we should require a huge profit and loss account.

9086. So that the object of stocktaking is merely to get at the cost by a sort of independent check of articles?—Yes.

9087. Not as a valuation of stuff?—Not as a valuation with a view to striking an account of profit and loss for distribution amongst proprietors.

9088. Then a great deal of this stocktaking is a purely paper operation, is it not? As you are probably aware, the foremen have to begin, perhaps, three weeks before stocktaking, preparing long lists of things which the work-takers are afterwards supposed to go through and check, which they cannot do always, so that a large part of this check is only a paper operation, is it not?—The work-taker is required to check all he certifies for; the lists produced beforehand are the lists showing what state the work has reached. The work-taker professes to go through and satisfy himself that so many articles have reached this stage, so many other articles that stage, and so many others that stage, and he values out accordingly.

9089. Apart from the outside check, which the work-taker is supposed to accept, you have all the materials either in your own or in the Central Office, or in the hands of the foreman, for arriving at a complete and accurate statement of the values of individual articles, have you not?—I do not know to what extent there may be things brought to light by the independent verification of the work-takers—that is to say, a man may find things under a bench, or something of that kind that had been neglected on paper. Some years ago, I remember, when first this stocktaking was largely resorted to in the gun factory, and, indeed, in every other factory, there were a large number of articles found which had been partly produced, or wholly produced, and not presented for payment, and therefore did not appear on paper as having any existence, but

Mr. J. T.
La Brooy.

19 March 1901.

their existence being ascertained we had to take account of them.

9090. But that state of things could not arise now, could it; because each article is supposed to be seen by the work-taker in the course of the work as it is going on?—It ought not to be possible, but there are limitations.

9091. The total cost to the country of stocktaking you estimate roughly, I believe, at a little over 26,000*l.* a year?—That is one way of viewing the transaction. That is, if you regard it as preventing the factories from making a certain out-turn—that is considering the factories are closed for two days.

9092. (Mr. Mather.) That is absurd, is it not? You might as well count in Sundays, might you not?—It is only mentioned as a suggested mode of considering the transaction. The actual expenditure in wages for the taking of stock I have shown separately at, I think, 1,070*l.* 8*s.*

9093. (Chairman.) That is the real expenditure?—That is the real expenditure.

9094. The 26,000*l.* is an imaginary expenditure?—Yes. It is not put forward as the view of the Chief Superintendent.

9095. (Sir George Clarke.) That, I take it, represents the wages expended in factories alone?—And the wages of the work-takers.

9096. Do you yourself think that this performance which very much hinders work, especially at a critical time like the present, is really worth while as a paper transaction?—That is to say, whether we could work entirely without it.

9097. There would be no loss to anybody, would there, though it is possible that your estimates of the value of articles for the Army or the Navy or for India, might not be quite as accurate as they are under this system?—I am afraid to say whether the auditors would be willing to accept the costs otherwise arrived at as real charges.

9098. Then the stocktaking is imposed, is it, by the Auditor-General?—To meet requirements in ascertaining the exact cost; they are not satisfied with anything short of the exact cost.

9099. (Chairman.) That course was laid down by Parliament, was it not?—Yes.

9100. (Sir George Clarke.) Taking the Central Office, the present cost of the Central Office is about 68,000*l.* In the Army Ordnance Factories Estimate presented to Parliament the total sum set down for establishments is only 28,450*l.* a year, all the rest of this large sum must, therefore, be included under B., wages and police. It is the fact, is it not, that there is an establishment of clerks at the Central Office, an establishment of work-takers, and an establishment of writers?—Yes.

9101. Is there any place anywhere where Parliament could discover what is the cost, at any time, of the Central Office?—No.

9102. Then a great deal of that cost is hidden away under charges generally, is it not?—Yes. If this indirect expenditure statement given in this blue book were considerably extended and made into a balanced account with entries on both sides, it would be easy to make the account in such a form that the cost of the Central Office could be readily ascertained.

9103. Do you not think, as a matter of account, that it should be somewhere plainly stated in a way in which the man in the street could understand, what is the cost of the central administration of the Ordnance Factories?—I do not know that I am prepared to go into the question of should or should not. As the account is rendered we show separately, following as closely as possible the form of the Estimate presented to Parliament, in one line the Chief Superintendent and his assistants, and Superintendents of Factories, in another, the superior clerical staff, in another line you will observe we lump together the foremen, work-takers, and time-keepers all together, then book-keepers and writers, then receiving, issuing, and moving stores; and you see, following those headings, several of them enter largely into the cost of the Central Office. We could not show the cost of the Central Office, except by means of a balanced account, wherein such proportion of these as belong to the Central Office, would be shown per contra on the account.

9104. The Central Office has an establishment which is regulated by the War Office for all officers, for all work-takers, and for all writers, has it not?—The War Office does not interfere as to the number of work-takers or the number of writers; it is only as to the number of persons drawing more than 150*l.* a year; the people on the wages list drawing over 150*l.* a year the War Office regulates; but not the number receiving under 150*l.* a year, except that it insists that a writer taken for clerical work should not enter at a higher rate than 22*s.* a week, unless by special representation to the War Office.

9105. Then, if you pay low enough, you can have practically, can you not, any extent of clerical staff you like without informing the War Office?—Yes.

9106. It is merely a question of the amount of the payment?—Yes.

9107. (Chairman.) But who settles that clerical staff if it is not the War Office, the Chief Superintendent?—The Chief Superintendent does, and when need arises, representations are made to him as to the necessity for an increase in the subordinate clerical staff.

9108. (Sir George Clarke.) Is it not the case that nearly the whole of the Central Office is on overtime almost always?—I am sorry to say that during the present pressure there has been a great deal of overtime, and there has been also some sickness.

9109. And even before the war, there was a large amount of overtime worked, was there not?—Yes.

9110. How is the Central Office divided for administration?—I think I have a list which has been put in, showing how the duties under the Chief Superintendent in that office are divided.

9111. Then the writers and clerks and book-keepers, I suppose, are under the Accounts Branch?—Yes.

9112. Who supervises this large number of men?—For all supervision there is one staff officer, Mr. Davison, who is assisted by two second division clerks. Just at the present time it so happens that these two second division clerks who are assisting Mr. Davison, are young men with very little experience, and, consequently, I have, for the last few months, at some inconvenience to myself, allowed a gentleman who had been promoted as staff officer, and whose work I want very sadly in another Branch, to continue in the work accounts assisting Mr. Davison, and instructing these two second division clerks in their work. But that is only a temporary arrangement, which I am anxious to put an end to as soon as possible, because, amongst other reasons, I want to reduce my own amount of overtime.

9113. Then you think, do you, the amount of superintendence which young and inexperienced second division clerks can give to the much older men who make up the Works Accounts Branch must be insufficient?—Yes, I am convinced of that.

9114. And you think that from want of supervision of an efficient character, as much work as might be got out is not got out of them?—I cannot say is not got out of them, because I have not tried the experiment; I have been fearful of trying it, but I regard with apprehension the time when I shall be obliged to take this Mr. Harvey away from that branch and remove him to another.

9115. As regards the superintending staff generally, do you think it is sufficient?—I am afraid it is sadly deficient. Without entering into any question of increased complexity of work or greater accuracy or higher nature of work, I would merely observe that whilst the out-turn of the factories is nearly four times what it was in 1880, we have now a smaller clerical staff, with less pay and poorer prospects.

9116. I believe you have special difficulties as regards Enfield, is not that so?—Yes, there is a special difficulty as regards Enfield, which I have represented to the Chief Superintendent, and which I know he has represented to the Director-General of Ordnance, that is to say, as to the insufficiency of the clerical staff. I do not know whether the Committee wish for details of that insufficiency.

9117. Is there an independent branch of the Accountant-General's department in the Arsenal, engaged in auditing the Arsenal accounts?—Yes, there is.

9118. Do you find that that department keeps in close touch with you so as to avoid references and

correspondence with the War Office?—I have members of that department frequently coming into the Central Office, and ascertaining, by personal reference, what the meaning is of something that they cannot quite follow from the books themselves; they sometimes point out that there is some discrepancy apparently; but the explanation is afforded them, and then no more is heard of it.

9119. But a considerable number of queries come down from the War Office, do they not, often as to things which could be very simply settled up locally?—I should like to see the method of personal reference rather more extended. I look on the number of papers we have to deal with as a very great evil.

9120. And if this local reference does not take place frequently the objects of a local audit are largely defeated, are they not?—I do not quite know what you would state is the object of a local audit. There is one thing for which the local auditing would be necessary. They have to examine very bulky books—wages books and stores books—the large wages check books and ledgers; and the cost of transit of those books would be enormous. They go to the factories, they come to the central office, and they examine these books direct. It is merely a matter of a messenger taking the books from one office to the other, which is a matter of a few minutes; whereas if we had to send the books up here it would cost a good deal and take up much time. I have recently had a superintendent complain that he has had his books taken away from him for five weeks, which is a long time. To send them up to the War Office would mean sending up a whole number of books relating to several factories, and one set of books might possibly be kept for months in that case lying idle while other books were being examined.

9121. (*Secretary.*) But no one has ever suggested they should come to the War Office, have they? The principle is that all these books should be locally examined on the spot?—Yes.

9122. That is to save their being sent up here?—Yes, that I understand to be one object, and that object is met. Sir George's question was whether the very object of local audit was not defeated if there were not personal references, I understood.

9123. (*Sir George Clarke.*) Yes, that is so. But there are, as a matter of fact, a very large number of queries coming from the War Office which might in very many cases be settled locally, are there not?—Yes, I do feel that it would be a gain to have personal reference increased.

9124. There is, in fact, a tendency on the part of the Audit Branch there to refer things to London in order to show that they are active, I suppose?—I am afraid that is so.

9125. I think it is the case that there is a very large amount of correspondence over a number of trifling things?—Yes.

9126. Can you give any examples of that?—I am not prepared with examples here. Of course the point of view from which one regards it has also to be borne in mind. One regards a thing as trifling, and I have cried out, saying, "Surely such and such a thing as 'this trifling query might have been otherwise disposed of,' and even though another mode of dealing with such queries has been adopted in consequence, I have been told the query was by no means trifling, and really I ought not to make such a complaint; so that I am rather afraid to express my own judgment about the matter, while I have no doubt as to the correctness of that judgment.

9127. Your point is that with regard to the carrying out of the work for which the Arsenal was created, it does take up time?—Yes, time which I think could be more profitably employed.

9128. Do you find you have frequently to deal with different departments of the War Office on the same question?—Yes, I find, for instance, that the question of comparison of prices of our own productions with trade productions, or comparison of prices of our own productions as against the estimated cost of those productions, or, as against the cost of producing the same or similar articles in a previous year, is taken up by two or three different branches—by the Director of Contracts, by F. 12, and by several branches of the Director-General of Ordnance; and in addition they are also dealt with by the Comptroller and Auditor-General.

E 15090.

9129. Then on top of the Accountant-General's audit comes the Auditor General's audit?—Yes.

9130. That is also done at Woolwich?—Yes.

9131. Working alongside with the other?—Yes.

9132. I suppose those two departments work in touch with each other?—One cannot take up any document which one department has audited, without seeing an array of ticks which tells one that the other department has already audited it.

9133. Do they audit on the top of each other, or do they arrange that one should audit one part of the thing and the other the other part?—It seems to me that they audit in very great detail in some parts, whereas in other parts they do not follow each other with the same detail. Some questions, such as comparisons of prices, both sections go into very carefully, and all the big accounts, these published accounts of capital and balance sheets and indirect expenditure statements are examined in great detail by both offices.

9134. But what has an audit department to do with the comparative cost of things?—The comparison of cost of production in one year with the cost in the previous year may possibly lead to the discovery of errors in accounting which they would proceed to set right.

9135. Then they examine simply to perceive if errors can be discovered, do they?—I think there is also the comparison with the cost of trade supplies from the point of view of financial control.

9136. (*Chairman.*) That was a duty placed on the department by Parliament, was it not?—Yes, but I am not sure whether that particular portion of those duties is very much attended to, because the Comptroller and Auditor-General asked to be furnished with trade prices, and I think that it was held that those prices could only be furnished in confidence. After some discussion before the Public Accounts Committee that was dropped by the Comptroller and Auditor-General, so that he does not deal so largely with comparison of trade prices with our prices, but he compares the cost of one year's production with that of the previous year or years.

9137. (*Sir George Clarke.*) The cost of preparing the Appropriation Return every year is very large, is it not?—This annual account?—Yes.

9138. Have you any idea how much it is?—That is not kept separately, but it is part of the cost of the whole work of the account section, which you see in this list of duties.

9139. And a large part of that section would be occupied in that work, would it not?—Yes; to a certain extent, of course; we must keep some record of cost. Then there is the bringing out of results, the final outcome of the cost account, which would enter into the preparation of this particular thing. This book exhibits only the balancing, as it were, of the cost records.

9140. And the detail that that Appropriation Account goes down to is sometimes as low as a penny, is it not?—Centesimal parts of a penny even.

9141. (*Chairman.*) The Appropriation Account is also prepared pursuant to the instructions of Parliament, is it not?—Yes.

9142. (*Sir George Clarke.*) In your estimate of stock-taking, you do not add anything for evaluation, do you?—No.

9143. It would be a very large sum, and a great deal of labour would be involved, I suppose?—Yes, a great deal of labour is involved, and labour of good men.

9144. (*Chairman.*) You have told the Committee that the object of this quarterly stocktaking is to get at the cost of the articles?—Yes, produced by the foundries.

9145. What committee or what person instituted the quarterly stocktaking?—A Departmental Committee appointed to secure, as far as possible, uniformity of Ordnance Factory accounts.

9146. Who presided over that?—Sir William Anderson, the late Director-General of Ordnance Factories, who had had experience before he had that office; he was head of the firm of Easton, Anderson and Co.

9147. (*Mr. Mather.*) Did they lay that down, or was he given a free hand by the War Office?—I do not think it was referred to the War Office except incidentally in the Report which was presented. There were three Reports presented by that Committee. In the

Mr. J. T.
La Brooy.

19 March 1901.

Mr. J. T.
La Brooy.

19 March 1901.

Reports all changes made were embodied, and each Report was submitted to and obtained the Secretary of State's sanction.

9148. How does the quarterly stocktaking enable you to get better at the cost of an article?—It shows you on the transactions of the quarter, at the rates adopted and ruling for the quarter, whether there has been a profit or a loss; and then the rates that govern all issues of productions during the subsequent quarter are adjusted accordingly—raised or lowered or left alone.

9149. Do you mean to say if there is too much profit it is reduced; say, if there is too much profit on a particular article, something is taken off other articles?—On a particular class of castings, yes.

9150. Supposing there is too much profit on a particular class of castings?—The rate that governs the issue of that particular class of castings in the succeeding quarter would be reduced.

9151. And therefore something would be put on to some other class of articles?—No. It means that we should not in the end have to make a large adjustment, such as you will find on page 8 of this published account.

9152. Is your object to get at the true cost of these castings?—Yes, so that the average price adopted, when you take the whole year's transactions together, should be as near as possible the actual price.

9153. (Mr. Beckett.) The cost price?—Yes, there may be a profit in one quarter; then we try to avoid that profit, in fact, steer a little bit on the line of loss, so as to secure that the average price for the whole year shall be as near as possible the actual cost price.

9154. (Chairman.) Then are you trying to find out the actual cost price, or are you trying to arrange that a casting should work out more or less at a price?—No, we are trying to arrive at the actual cost price.

9155. But if you are trying to arrive at the actual cost price, what is the reason for reducing the profit in one quarter when it has been shown to be large in the preceding quarter?—These articles produced by the foundries have to be issued, not from the foundry right away but in aid of orders for work to be done.

9156. Precisely, you have to supply articles, let us say, to the Government of India?—I beg your pardon, it is not that. These are castings or things which are made and which have to be issued with a view to the production of other work, just as we should issue material purchased at the same stage in aid of those orders. They are issued at an estimated value for the production of other work done by us, and the endeavour is to get as close as possible to the actual cost of these things, so that the cost of the other work produced from these castings might be right.

9157. Then if you are trying to get at the true cost, and not at a fictitious cost, what is the object of reducing the profit; if there is that profit in the casting, well and good. What is the object in reducing it?—We should be making the customer, who in the end receives that particular article produced out of those castings, pay unduly high.

9158. Why?—We should be benefiting all other customers at his expense.

9159. Why? How? I do not understand that?—We are supposed to work, not having either profit or loss.

9160. That is my question. Are you working to get the true cost of the castings, or are you working to get at a convenient cost?—We are working to get the true cost of the casting.

9161. Then, if owing to having an unusually clever workman or anything of that kind, the casting costs less, and there is a larger profit on it, why do you reduce that profit?—Because if you stick to that profit, you are making the particular man who eventually walks off with the casting pay, and put a profit into your hands for distribution amongst other customers.

9162. Why?—Because in the end our recovery is supposed to be without profit or loss.

9163. Then you are trying to work to a fictitious price and not to the real cost price, are you not?—I should rather say the fictitious price was that which involved profit or loss.

9164. (Mr. Mather.) You are giving the most favoured customer the benefit of any fluctuation which may

arise in the cost of your work from purely exceptional causes, and no calculation you can possibly make on your basis would allocate to that particular job what that customer ought to pay. You think you have done his work cheaper than anyone else's, but you have done nothing of the kind. The total value of the work turned out comes upon the average on the year to so much per ton, or so much per pound, say—then to be just to all your customers around, you must have an average price based upon a year's results. Some means, of course, must be taken in order to see whether your prices might not be benefited by some expenditure of capital, and so on; but it is quite a fictitious and absolutely fanciful arrangement to suppose you are doing justice to your customers, is it not, by pricing each individual article which your foundry turns out day by day, or week by week, in that way?—The idea was that more frequent balances would enable us to get more closely to the actual cost of production.

9165. (Mr. Beckett.) Is your customer always under the impression he is taking a thing at cost price?—Yes.

9166. (Chairman.) There is agreement to supply your customers at cost price?—Yes.

9167. (Mr. Mather.) But you see it is cost price *cum* certain charges?—Charges making up the total cost to the public.

9168. But some of these charges are fixed, some of them accidental, and your customers must all round pay their share of these charges which must be debited to every article you make for every customer?—Yes.

9169. And the general expenditure of a year being examined, the cost of all you produce during the year will enable you each year to allocate to these customers their fair share of the cost which you have incurred. But to expect that you can fairly allocate to each particular thing you turn out, whether it is only a part of a great number of things of the same sort you are turning out, and do justice to all your customers on that basis, is absolutely fictitious and romantic.

9170. (Chairman.) Surely you debit to each department, do you not, its proper share of the cost as in business in private life?—Yes.

9171. You have an establishment producing shells at so much; it would then sell its shells at a price to pay each department the charges with which it was debited, and the cost of the material and production—is not that the case?

9172. (Mr. Mather.) It must be so. Take foundries, because these are the chief departments with regard to which this stocktaking is done. If your books are properly kept, you know every week in the ordinary business sense the price per ton of cast iron or of steel, or whatever it may be, brass, bronze, and everything else?—Yes.

9173. There is no necessity, is there, to ascertain the cost of the method you go through in order to see what each customer must pay—it is arrived at per ton by the week from your books—wages, materials, accessories, coke, coal, sand, blacking, and all the various things which are appurtenant to a founder's occupation?—Yes.

9174. That at once determines, does it not, how much these castings cost you per ton or per pound? That you take into the work you do always at that price per ton or per pound, and spread it over all the work you do in the year?—Yes, but you do not know precisely how much of the stuff has been used up, and in addition to that actual expenditure on wages and material, there is a price put on to cover all fixed charges.

9175. That is so. All the incidental and fixed charges come on to standard charges, which we call rent, rates, taxes, and so on—that comes to a standing amount per annum, alike for all your customers?—Yes, alike for all customers.

9176. Then at the end of the year this general stocktaking of the whole concern includes the foundry merely for gauging the amount of work in progress—how much has been done during the day preceding the stocktaking, or if the article has been in the foundry a week or a month, to see how much labour has been expended on it; just as you take a census of a population, you take it in transit, so as to make your books balance?—Yes.

9177. Then what you charge your customers for all these articles is estimated week by week from the

ordinary book-keeping of the establishment; you do not require to know anything more than that, and for that purpose a very small staff is required even for a very large concern, is it not?—The current issue is at estimated rates.

9178. At the end of the year, when you come to a general stocktaking, which must be done under an average of the whole works, you then look at the amount of the material in work, the amount of labour spent upon that material, which is estimated by competent persons, and only by persons you employ all the year round?—Quite so.

9179. And there is no extra charge paid during that time for any clerical work, or any other kind of work?—Quite so.

9180. It may be, if you have to weigh up a quantity of material you might have to get extra labour, but it requires no expense beyond your annual expenditure for clerks, and that kind of people, so that I do not see where Woolwich gains in the slightest degree by the employment of one clerk or one man to do all you have described in regard to these quarterly stocktakings, it is simply making a great amount of work, a great amount of trouble, a great amount of writing and book keeping for no purpose. I presume you are not familiar with the ordinary methods employed in concerns that have to work to a profit?—I know the method adopted in some, but the idea here was that by more frequent balancing you would obtain more nearly the current cost of production.

9181. But you cannot balance nearly a thing of that sort; you must take a definite space of time, a year or an epoch?—In this case the definite space of time is the quarter.

9182. But it is quite fictitious, and too short a time to enable you to spread over each contract or each work, if you take the fair portion of cost that ought to be debited to that particular work.

9183. (*Chairman.*) Can you give us any further explanation; I do not understand it at all?—The principle underlying stocktaking is the same, whether you have it yearly or quarterly; it is only a question whether it is requisite to take it more frequently.

9184. What is the advantage of having it more frequently; you say it is to get more nearly to your current prices, I understand?—Yes.

9185. (*Mr. Beckett.*) Would not half-yearly do as well?—That is merely a matter of convenience. Mr. Mather has conceded the principle that stock should be taken after a definite space of time. The duration of that space is a matter of convenience or expediency.

9186. (*Mr. Mather.*) But why should Woolwich, or any establishment of the Government, have any further checks on measurements of what they are doing, from time to time, than any other concern in the country, where it is far more important that they should know the cost than it is at Woolwich, because they have to make a profit?—That is not a question which I am prepared to answer further than by saying that we have to satisfy each customer that for each article produced we are charging actual cost.

9187. Can you tell me what is the actual cost of the methods you have for regulating piece work? Take all the clerks' work connected with the time-keeping and the checking off from the booking of piece work. Have you got that separated in any way?—Including day work and piece work, and including also not merely cost of work taking, but the cost of calculating the wages payable in the Wages Branch, and the cost of all the time-keepers who are engaged on the ticket check, it comes to about 48,000*l.* in the course of the year.

9188. (*Sir George Clarke.*) Does that include the Wages Branches and the separate factories?—It includes the Wages Branches, and the separate factories added in.

9189. (*Mr. Mather.*) That is for how many employes?—About 25,000—that was the expenditure last year.

9190. Do you know how that expenditure is allocated; how much to Woolwich, how much to Enfield, and how much to the other place?—No, I cannot give the cost accounting separately—some portion I cannot give simply because the cost ledgers are all kept at the Woolwich Office for out-station factories as well—but, if you think it worth while taking the work-taking staff, I could give separately how much it was.

9191. Does that include the making up of the books at the General Office?—Yes.

9192. And making out the pay sheets?—Yes, everything up to the stage of the money being actually handed to the men.

9193. Then you have no other clerical charges besides that 48,000*l.*, which includes the whole of the clerical work at your three establishments?—It does not touch stores—this is wages and cost accounting alone.

9194. The Stores Department, of course, is a separate thing altogether?—Yes.

9195. But it includes the expense of the clerks necessary to make up the results of making time, piece work, and so on, does it not?—Yes, it includes all that.

9196. (*Sir George Clarke.*) Would it include the Estimate Branch?—No, it does not include the Estimate Branch; this is the record of the attendance of the men, and the record of the orders on which the men have been expending their time, and the record of what is done with the material on which that time has been bestowed.

9197. (*Mr. Mather.*) Then do the same persons who take this piece work time, day work time, and the entry of the men into the works and so on, make up the books complete for the payments?—No.

9198. Are they the same persons, or are there other persons?—There are other persons than those who make up the books for the Paymaster, who collate the information given them by two different sets of people, the information given them by the timekeepers, the check-takers, and the information given them by the work-takers. The work-takers value out the men's time in relation to the work to which they have been devoting their time; the check-takers give a record showing that at a certain period such and such a man deposited his ticket and proceeded to his work.

9199. That looks a stupendous sum compared to anything I am acquainted with in any private concern in proportion to the number of men employed in the same character of work. Could you separate that again please, and tell me how much of that 48,000*l.* is due to the system of piece work which prevails at Woolwich?—I am afraid not, because all the work-takers are also engaged in taking the day work. The 48,000*l.* is for all our out-turn of about three and a half millions.

9200. But there has been comparatively little day work at Woolwich, has there not; I understand the whole of it is piece work?—I have here particulars taken of one quarter for all the factories—not merely Woolwich—and the proportion was this: piece work 67 per cent., day work 32 per cent., sick pay 1 per cent.

9201. (*Sir George Clarke.*) That is a little over one-third day work?—About one-third.

9202. And a great proportion of that is unskilled labour?—It varies in the several factories, but everywhere it includes also the pay of the foremen.

9203. (*Mr. Mather.*) I understand the system which is aimed at at Woolwich is to put every man on piece work by any kind of arrangement which can possibly be suggested by the wit of man, irrespective of the trouble it takes anyone to calculate, or to invent a means of arranging piece work on very intricate work?—I am afraid that is a wider statement than I can assent to.

9204. Then I will put it in another way. You are, perhaps, not aware that in concerns analogous to Woolwich,—ordnance factories and projectile factories,—and so on, piece work is by no means usual; in fact, it is simply on projectiles that piece work is found to be profitable?—I know piece work is comparatively little resorted to, but how far that may be due to the action of trades unions, which object to piece work, is another matter; whether it is because of economy that firms will not introduce piece work, or whether it is that firms are not allowed to introduce piece work, I cannot say.

9205. You may take it from me that there is no difficulty in putting piece work in force in the Engineering Branch.

9206. (*Chairman.*) Was the rule as to piece work laid down by the Parliamentary Committee?—No, it was introduced some time in the sixties as a mode of inciting the men to exert themselves.

9207. Who by?—Simply by each superintendent at his discretion.

Mr. J. T. La Bree.

19 March 1901.

Mr. J. T.
La Rooy.

19 March 1901.

9208. (Mr. Mather.) But the curious part of it is that the wages upon which piece work is based at Woolwich are arbitrary wages, they are not fixed by any custom of the trade, are they? They start at a certain sum per week per man, which I believe the man has nothing to do with, do not they?—I cannot quite follow that; a man's earnings depend upon what he produces.

9209. You must first of all assume that the man to work at his best will receive a certain weekly wage?—Yes.

9210. That weekly wage is fixed by something, is not that so?—Yes.

9211. But that weekly wage has no reference to the wages prevailing in the trade outside Woolwich, has it?—The endeavour is to see what time a man working on day work would take in doing a certain operation—an average man—not a particularly skilled man.

9212. That is the beginning of the piece work system. As I say, that amount of day work wages ought to be, of course, the basis for the piece work system?—Yes.

9213. Who fixed that day work wage? What I ascertained the other day from my long investigations at Woolwich on this point, was, that the basis on which piece work was calculated was the daily wage of the artisan in his own trade—taking, for instance, a turner at a lathe who is a skilled man. Outside Woolwich he would be getting what they call the trade wages which we all accept and pay, whether the men belong to a union or not makes no difference; we pay this accepted minimum wage fixed by the men themselves. That is taken as the basis; but at Woolwich I found the basis of their piece work was lower than what we outside are paying, and when I asked the question, "Who fixed that rate of wage?" I was told it was an arbitrary amount fixed to begin with by some official, whoever it might be, and upon that the piece work was founded?—How do you arrive at what is being paid outside? Surely it differs in different districts, does it not?

The Witness withdrew.

Mr. C. Harris.

Mr. CHARLES HARRIS examined.

9219. (Sir George Clarke.) In the memorandum you have forwarded to us you say: "In any commercial undertaking finance is supreme." I suppose by that you draw a line between commercial finance and War Office finance?—Certainly. What we call finance is not really finance at all; it is better described perhaps as economy.

9220. And you say in that memorandum, that because the Accountant-General and his officers, year after year, have exercised their functions, they are, therefore, "experts in Army finance to a degree which no Military officer approaches"?—Yes.

9221. By that you do not mean to say, do you, that no Military officer has intellect enough to understand these things, but that by a constant perusal of these accounts at the War Office you get a grip over them which we cannot hope to get?—I was thinking not so much of accounts, as of the preliminary consideration of a proposal that may come on from an Executive Department. The Accountant-General's Officers get to be able to estimate the cost of that proposal, and to know how it will work out in terms of accounts, from their familiarity with accounts, with a much greater degree of accuracy than any Military officer whose work I have ever seen on paper.

9222. In the first place you are the head of the Local Audit Branch at Woolwich, are you not?—In the first place I am a principal clerk in the War Office, but I am also local auditor of the Woolwich Factory and other Army factory accounts.

9223. Who presides over the Branch at Woolwich actually?—I preside over it. I have what is called a staff clerk who is always at Woolwich, but any minutes of any importance he writes he sends to me to sign. If I am going to Woolwich I sign them there, and all queries on accounts I sign, so that although I am generally too busy here to spend much time at Woolwich, it is practically a matter of indifference whether I sign them here or there.

9214. No, it is almost universal—within 2s. a week it is universal. Much more is paid in London than in the North of England, but these prices are so regular that when a change of trade comes it is always a question with the trades unions whether they will ask for a rise of 2s. or whether they will agree to a drop of 2s. Upon that we pay for piece work, and a man working on the piece work system is supposed to gain, say on a wage of 36s., 8s. or 10s. a week. I was only struck with this fact, that looking at our own pay sheets with regard to our skilled workmen, your pay sheets show for the same class of men a lower scale?—I am afraid our information does not go on quite the same lines, because we have had scores of cases in which men have been entered into the Ordnance Factories rated at 37s. 6d. a week, and in reply to inquiries addressed to their former employers we have had it distinctly stated: "This man, when employed by us"—a few months previously, observe—"was getting 33s. a week," and that was the highest wage for the district for that class of work. There has been as big a difference as 4s. 6d. or 5s.

9215. Between the highest wage and your wage?—Between the highest wage in that district and the wage at which we had entered the man; that is to say we had entered the man at a higher rate, a rate which may have been lower than the London district rate, but we practically make a Woolwich district of our own.

9216. I may take it from you that the 48,000l. is the annual expenditure on the Clerical Staff to which I have referred to in the three concerns?—The Staff taking that record of time during which the workmen are employed and following it through?

9217. Yes, merely for those who take time-piece work time?—Piece work and day work, and the record of the work on which they are employed, too.

9218. Certainly! booking time as we call it?—Booking time and work to lead up to the payment of the men, and to lead up to the recovery of the whole expenditure afterwards.

9224. Then, in addition to that, you are head of the Branch which keeps the accounts of the Director-General of Ordnance, and in that capacity you are financial adviser to the Director-General of Ordnance?—No; up to a few weeks ago I was doing the work relating to Army Vote 9, as well as the work relating to Army Factories; the work was too much for any one man, and something less than six months ago it was divided. Till Christmas it may be said that I had a hand in both branches; since Christmas I have had nothing whatever to do with Army Vote 9.

9225. Then besides that, you are, as you stated at first, a financial officer acting directly under the Accountant-General?—Yes.

9226. So that when you start a query as auditor at Woolwich, you can write direct to the factories there; then when the reply comes up here you become the person who deals with the explanation which is offered, and you write another minute here which you pass through other people, and perhaps up to the Accountant-General before it comes back?—Yes. If when the reply to my query comes from the factories I think there is anything in the matter which requires to be brought to the attention of the Assistant Accountant-General or the Accountant-General, I submit the matter to the Assistant Accountant-General, who submits it to the Accountant-General if he thinks fit.

9227. Besides that you had a fourth capacity, had you not, as Secretary of the Committee on Ordnance Factory Accounts?—Yes.

9228. That Committee was formed in January or February 1890, was it not?—Yes.

9229. And its charter was to inquire into the system of keeping the accounts at the several factories with the view to producing uniformity?—That was the original reference to the Committee, but immediately that reference was set up a great many important questions, raised by the Exchequer and Audit Department, which came rather outside that reference, were referred to the Committee; so that, practically, it

became a Committee on the whole question of Ordnance Factory Accounts.

9230. Was its charter explicitly changed and enlarged?—The terms of reference were never formally changed, but in the first report of the Committee which was issued in 1891, the notice ran: "The Committee was appointed in February 1890 to 'inquire into the system of keeping accounts at the Ordnance Factories 'with a view to producing uniformity.' The scope of the inquiry has since been extended by the reference to the Committee of many questions which have arisen in regard to the Factory Accounts."

9231. On the 16th March 1893, the Committee expressed regret that it was not then able to make final recommendations, and several years after that it was engaged, was it not, in the much larger investigations to which you have referred, that is to say, investigations involving the whole question of the economy of manufacture in every Branch?—Yes; the Committee was actively engaged up to about the end of 1897.

9232. Who were the members of that Committee?—The Director-General of Ordnance Factories—Sir W. Anderson—was chairman. The original members were Mr. Major, who was then Assistant Accountant-General, Mr. Tapp, Civil Assistant to the Director-General of Ordnance Factories, and Mr. Hurst, Accountant and Auditor, as he had been called, under the old system in the Ordnance Factories.

9233. So that there was only the Chairman who could be said to have had any experience in the management of any manufacturing business?—I think it might fairly be said that Mr. Tapp had had experience in the management of public business. He had been all his life in the Ordnance Factories, and he had been principal clerk for a considerable number of years.

9234. May I take it that as regards the general policy of the Committee, it was, broadly speaking, to introduce individual piece-work wherever possible, and to break up the fellowships which had existed in some parts of the factories?—That was by no means the policy with which the Committee set out, but after its first report, having (as one might say) whitewashed the piece-work system existing at Woolwich, the Committee found that that system was liable to very gross abuse, had led to abuses, and had utterly failed either to get a fair day's work for a fair day's pay out of the men, or accurately to represent the cost of what the men did. One of the remedies which the Committee recommended for that state of things was the introduction of individual piece-work as distinct from gang piece-work wherever it was possible.

9235. As regards the Carriage Department the great change which you introduced was that you put the saw mills, did you not, on individual piece-work—putting the labourers on day work?—Yes, I think that that was the principal change actually made in the Carriage Department.

9236. Was that done at the end of 1896?—Yes.

9237. Before that period I was able to show, was it not, that I had effected a saving of nearly 700% in the Wood Workers Branch alone—that Branch having been disorganised before I went there by transference from the Laboratory?—I do not remember whether that came before the Committee, but I will take it from you.

9238. A saving resulted from this change as far as I can make out of about 300% a year?—It was 42 per cent. of the wages bill of the shop.

9239. And the reason of that saving was evidently, was it not, the satisfactory state of the piece-work prices, which I fixed after considerable trouble?—Yes; as far as I know, the piece-work prices that, after some debate on the general principle, you fixed, worked very satisfactorily. I think a few of them were reduced within the first year, but the general working I have always heard was extremely satisfactory.

9240. And the economy produced was purely a question of the proper fixing of the prices, was it not?—No, I think the economy produced was a question of the organisation of the shop, because the prices had been in your control for two years, but when the organisation of the shop was changed, this saving resulted.

9241. (Mr. Mather.) Who reorganised the shop?—The question of whether the shop should continue on gang piece-work or whether a system of individual piece-work should be substituted was discussed be-

ween Sir George Clarke and the Committee at very considerable length. Sir George Clarke protested in the strongest possible terms against any change being made; he repeated again and again his conviction that such a change would lead to no good, and the Director-General of Ordnance Factories finally ordered that the change should be carried out.

9242. (Sir George Clarke.) And the saving or loss, as you have said, turned entirely on whether the piece-work prices fixed were satisfactory, did it not?—Subject to what I have said about the question of organisation being an antecedent condition, yes.

9243. I mean, it depends on the price, does it not?—It depends on the price, but the chief factor was the moral effect on the workmen.

9244. The second great change was the division of the wood-workers machine shop into two parts, which also I opposed, because I felt it would be certain, as it has done, to lead to inconvenience. Would you explain what the nominal advantage of breaking that fellowship into two—the whole working under one roof—could be?—The facts I will read to the Committee from this paper, if I may. "In the wood-workers' machine shop of the Carriage Department, there are two considerable gangs of men, under different foremen. The earnings of these two gangs were pooled. The Committee on Ordnance Factories Accounts considered it most desirable to break up these large gangs, and, as a first step, to record and distribute the earnings of the two gangs separately. To this the Superintendent demurred, and it was stated that the men were constantly shifted from one gang to the other. A worktaker having been introduced, it was found that this was not the case. The division into two gangs was finally effected, and it was found that one gang was receiving about 30% a week more, and the other 30% less than it earned, the reason being that the piece-work prices for the work were wrong, i.e., they did not represent the amount of labour involved in it." The main object of breaking up the gang was as a first step towards getting the accounts to show accurately the cost of what the men did. At present we will say the box work was being charged for wages at the rate of 30% a week more than it should have been, and the carriage work 30% a week less, or it may have been the other way, I really do not know which. The first object was to set that right. The second object was, that when you get a man whose earnings have no perceptible relation to the work he does, you cannot expect that man to put his best foot foremost. When you have brought the individual man into the most direct possible relation to his individual earnings, then you may expect that he will have, at any rate, some inducement to do a good day's work.

9245. But how did you bring the matter home to the individual men, when the fellowships remained at something like 60 men apiece?—It was only a first step in that direction.

9246. Then what would be the difference between the men who were working about 120 in one gang and the men working in two gangs of 60 each?—The division of a gang of 120 into two gangs of 60 each was preliminary to the division of 60 into very much smaller gangs, and, if possible, to individual piece-work.

9247. The statement that you have read about the 30% is capable of being shown to be quite fallacious; the prices have never been touched since, and they have run out uniformly, showing that the prices were fair between both. It comes to this, does it not, that the Committee wished to put that shop, with all the multiplicity of individual operations, on piece-work?—If it were practicable to do so.

9248. Take one case—a small-arm ammunition box costs 4½d.; that box has 37 different machine operations on it, and involves the labour of 41 different people. Do you realise my objection to the vast amount of labour on paper which would be necessary in booking up the operations of individuals whose operations would involve only the fraction of 1d.?—Certainly, on the facts you have just recited, I should say that that type of work does not lend itself to individual piece-work.

9249. That type of work is representative of the type of work which runs through that machine shop. You can realise, therefore, my objection to this, can you not? It was simply that I did not wish to be burdened with more paper, and I was frightened at the amount of paper which would be involved in

Mr. C. Harris.

19 March 1901.

Mr. C. Harris.
19 March 1901.

attempting to introduce piece-work into such a shop as that. Can you realise that?—Certainly. But I would say, first of all, that one of the two gangs does work of a very different character; and, secondly, the Committee, so far as I know, never made a definite recommendation, nor did the Director-General ever convey to you a definite order to put either of those shops on individual piece-work; but we wanted to get as small gangs as was possible.

9250. And I am quite sure you feel, with me, that it is excessively disadvantageous to a shop that the time of a foreman, to whom I look to be always about to try and cheapen operations, should be taken up with paper work?—I agree with you absolutely.

9251. Under these circumstances he does not have time to think of the economy he should produce, and the work also suffers, because the superintendence is not what it should be?—Absolutely.

9252. And you understand, in my objection to both these things, that that was at the bottom of them?—I think the foremen have too much paper-work to do, or do too much paper-work, now. I quite agree with you on that.

9253. As auditor of the factories, is it the duty of the auditor to point out that prices are too high?—One of the duties of the auditor is to compare factory prices year by year, and factory prices with outside trade prices.

9254. Do you remember, the other day, calling attention to the high prices in the forgers' shop of the Carriage Department, and you wrote on that occasion, "We know some of the work done by forgers in the Carriage Department is very costly"; and you instanced saddle-trees as one of the cases. Are you aware I reduced the price of saddle-trees from 2*l.* 9*s.* to 2*l.* 0*s.* 3*d.*?—I am aware the price has been reduced, because I have myself been drawing attention to this matter for at least five years past. In the first year I drew attention to it, I think the loss on the manufacture of saddle-trees in your department was 7,000*l.* in the one year.

9255. You say loss. How do you mean loss?—The difference in price between the contract price and the cost. The price paid to your forgers' shop alone for rough forging one part of the saddle-tree was more than the finished price of the saddle-tree in Long Acre. I am fully aware some reduction of price has been made.

9256. Do you remember a contract being made for saddle-trees for 24*s.* each?—I do not remember the particular contract.

9257. You would not know, then, that, out of 405 of that contract, 100 had to have new parts fitted to them before they got into service at all?—I consulted the Chief Inspector of General Stores officially on the subject of the quality of the contract saddle-trees (he inspects both your saddle-trees and the contractors'), and he assured me, on paper, that the quality of the contract saddle-trees left nothing to be desired.

9258. Are you aware that the rates paid in my forgers' shop are decidedly low, and all through this time of pressure I have had great anxiety and exceeding difficulty in keeping the number of men required to do the work?—I have no information as to that.

9259. And you would not know that forgers' prices largely rule the cost of field carriages?—Yes, I should know that, I think.

9260. Would you know that in two orders given to the trade as to field carriages, the loss by giving those orders to the trade exceeded 140,000*l.*, which would have provided the Army with more than 27 additional batteries?—I dealt with that in my capacity, then, as head of the Branch dealing with Vote 9 expenditure. Therefore, I am aware of those facts. It only shows, I think, that the prices which, under exceptional stress, were charged by the contractor, were extremely high.

9261. But, on the other hand, it goes a little bit to show, does it not, that the prices in the Carriage Department are not so high?—There is no good competition for that class of work from a price point of view at present.

9262. Of course, you are aware that both the firms who make these carriages have been employed for many years in making field carriages of precisely the same type?—I think the orders they have had have been few and far between, as far as Government orders are concerned.

9263. Certainly, but they have had considerable private orders, have they not?

(Chairman.) But the contractor, in his price, would have to allow for interest on money, and such things, which is not done by the Ordnance Factory.

9264. (Sir George Clarke.) Do you remember a case the other day in which Sir Henry Brackenbury, after a long correspondence, offered to pay a cheque for 21*s.* 6*d.* to settle up a matter rather than to go on with the discussion?—Yes, I have the paper here.

9265. Could you explain what was wrong about that 21*s.* 6*d.*?—Certainly. The contractor sent in some iron work for the Building Works Department of the Ordnance Factories. From his final bill there was deducted a sum of 1*l.* 1*s.* 6*d.*, and the Branch which examined the bill asked what that deduction represented. The answer was that a certain part of the iron work had not been delivered, and then the answer went on, "This difficulty has been remedied here by an issue from store, and a corresponding charge has been set up against the item concerned in our local account." Then some purely technical question arose as to how the deduction should be brought to account. It was finally referred to me. Before that, however, the Chief Superintendent of Ordnance Factories repeated: "It merely represents a short delivery of materials by the contractors, which was made good by an issue from store. No wages are involved, and, consequently, no indirect expenditure." I then asked to be referred to the issue from store which represented this sum of 1*l.* 1*s.* 6*d.* The reply ran: "The 1*l.* 1*s.* 6*d.* in question represents an estimated charge for making good the deficient supply of material by the contractor. The material utilised was taken from scrap, and its actual value is merged in the Building Works Department expenditure on the item, but is quite untraceable as a distinct transaction. Under these circumstances, the net amount only of this bill (138*l.* 18*s.* 6*d.*) should go to the item. Our minute of 6th June was written under a misapprehension—there was no issue from store." I then said, after examining the account at Woolwich, to the Chief Superintendent, "I have had the Expense Ledger Account of this job examined, but I cannot find that the value of the scrap said to have been used on the job has been charged in that account; nor, indeed, do I see how it can have been charged there, except by some transfer voucher crediting 'scrap' and charging the job; and, if any such transfer had been made, it should be capable of being identified." There followed, then, a further and long explanation from the Chief Superintendent: "This 1*l.* 1*s.* 6*d.* is a composite sum, and cannot now be resolved into its elements. There is a small deficiency, which is met by utilising some scrap. Labour, which is charged direct to the 'item' is done on the scrap, how much is not now ascertainable. The 1*l.* 1*s.* 6*d.* is, therefore, not the value of the scrap, as scrap, but the estimated value of it when it has been rendered fit to take its place with the rest of the steel," and so on. I then submitted the paper to my chief, the Assistant Accountant-General, saying, "I should like you and the Accountant-General to see this paper, as an example on a small scale of the difficulty of ascertaining a simple fact relating to a matter of account in the Building Works Department under existing conditions," and I continued pointing out the various contradictions.

9266. (Mr. Mather.) Do you call that a simple fact?—If a man makes a deduction of 1*l.* 1*s.* 6*d.* from a contractor's bill, I think it is a simple fact.

9267. Which he gave you the explanation of immediately?—But the explanations were one after the other contradicted and amended.

9268. To me it looks the most fastidious and the most ridiculous possible inquiry to have been made from the War Office; if we were to run our concerns as manufacturers in any branch of industry on a system of that sort, we should all be in the Bankruptcy Court in a week.—I quite think so, if that were an isolated instance.

9269. There is no instance of that character which could not be settled in two moments by simply a question from Sir George Clarke or the Superintendent at Woolwich?—Sir George Clarke was not concerned.

9270. I mean anyone who has authority to do such a thing as that could give the explanation in two

moments without requiring further interference from anyone?—I sent and asked for the information and absolutely failed to get it. It is my duty as local auditor to ask for an explanation. I carried out my duty by inspecting the books and asking for it, and I could get no explanation.

9271. I wonder how much it costs the country to refine down such trivial transactions as that, and employ such important persons in doing it?—It is not altogether a trivial matter, because what it shows is that neither the record of materials in the Building Works Department, which is a very large and costly department, nor the record of wages is reliable.

9272. The sum was accounted for, I understand, but was not accounted for in the manner in which you thought was the just direction in which the material went?—I am afraid you are under a misapprehension. There was nothing at all in the accounts to support this deduction of 11. 1s. 6d. from the bill. What appeared was that certain material which for four years I had been urging the Superintendent of Building Works to bring on charge and account for, and which he had persistently refused to account for, had been taken and been supplied to make good the Contractor's deficiencies, and there was no record of the thing in the accounts whatever.

9273. (*Chairman.*) Instead of the Contractor being called upon to make good his own deficiencies, they made good from Government material?—Quite so.

9274. (*Mr. Mather.*) I understand the transaction had been finished and the contractor had been charged with the amount of material which had been given to him from the scrap heap. I understood that was the case?—He was charged 11. 1s. 6d.—whether that was the amount of material used or what that 11. 1s. 6d. represented, there was absolutely nothing in the books to show.

9275. (*Sir George Clarke.*) Have you had at the War Office the explanation from the Superintendent of Building Works of the transaction?—I think there is a copy of the final minute from the Superintendent of Building Works with this paper. Remember, this explanation, which reads perfectly satisfactorily standing by itself, did not come until after those minutes had been written.

9276. (*Mr. Beckett.*) How did the matter end eventually?—Eventually the record stood.

9277. (*Sir George Clarke.*) What I want to bring out is this: Have you seen this scrap heap which he wishes to be taken on Ledger Account?—I think I have seen it, but many years ago.

(*Sir George Clarke.*) I have seen it, and I have not the slightest idea how any man could take on to account the odds and ends accumulated from the demolition of buildings.

(*Mr. Mather.*) In every concern in the world the scrap heap is taken as a whole and is utilised for odd jobs about a concern, and it is impossible to make a Ledger Account of it; all you know is that as long as the scrap heap is not taken away or stolen, it is utilised to fill up the little interstices that occur; but I understood this transaction to be that the Superintendent or official had already explained to Mr. Harris or the clerk concerned, that the transaction was recorded; there had been a certain amount of material supplied to the contractor to make up what he had not delivered, and from his bill they deducted what they considered the value of that little piece of scrap.

(*Witness.*) His first statement was that it was an issue from Store, which does not mean from the scrap heap.

9278. That was a clear mistake?—His second statement was that there were no wages concerned. His third statement was that it was not an issue from store, and his fourth statement was that there were wages concerned.

9279. And finally you got back to the scrap heap?—Yes, but straws show which way the wind blows, and the final result was that neither his wages accounts nor his other accounts can be trusted as a record of these minor matters.

9280. I quite see that a charge might be brought against the Superintendent of the Building Department if the transaction was not recorded in any way. He might not have recorded it in your way, and in the way which is the official way, but if he had carried out

the transaction to its ultimate issue fairly, namely, charged the contractor with the amount of scrap materials he found to make up this little want of completion on the part of the contractor—if that had been recorded and allowed for in the contractor's bill, what can there be to complain of?—But the wages he had paid had not been recorded, and how much scrap had been used it is impossible for anyone to say.

9281. (*Sir George Clarke.*) He says the contractor was charged for it at triennial contract rates; what more could he have done?—He should have recorded, when he put a man on to do work to make good a contractor's shortcomings, the wages of that man as being so employed, and as primarily charged against that contractor.

9282. But as regards this scrap heap, surely it would be exceedingly difficult to get all this lumber put on to a ledger account. I really do not see how you could get the things named, there are no means of identifying them, are there?

(*Mr. Mather.*) You might do it, of course, by increasing the clerical staff in a large concern like that *ad infinitum*, multiplying Mr. Harris by a dozen, and adding clerks in each department; but to compare it with a business concern running to a profit is an absurdity.

(*Witness.*) Whether this is such a scrap heap as would be considered an ordinary scrap heap of a business concern I cannot say. I only know that this stuff is carried all over the Arsenal, that a good deal of money is spent in carrying it about, and the position I have taken is, that if it is worth collecting it is worth accounting for.

9283. (*Chairman.*) The Committee understand that there is a quarterly stocktaking which takes place at the factories?—That is only on what are called foundry accounts.

9284. That quarterly stocktaking has been carried out, has it not, in consequence of a recommendation of the Committee you have just been talking about?—Yes, the Committee recommended that the foundry accounts should be balanced quarterly, that being the system that the Chairman of the Committee had pursued as a commercial man.

9285. What is the precise object of taking those quarterly stocktakings?—I should explain that our system of foundry accounts is a sort of profit and loss account. You charge the foundry account with all wages, materials, and a due share of general charges for indirect expenditure, you credit it with the value of the castings produced and transferred to manufacturing orders at certain schedule rates.

9286. At certain schedule rates for the castings?—Yes.

9287. Who fixes those rates?—The manager or superintendent of the factory. They are estimated rates, and in order to see how far the earnings of the foundry, so to speak, at those rates, are paying the expenditure on wages, iron, coal, and so on, these quarterly statements are prepared showing expenditure and earnings. The object is to get the rates to balance the expenditure as nearly as possible.

9288. The rates for the castings?—The rates for the castings, so that you may get as accurately as you can at the cost of the castings. Many things made at the Arsenal start, so to speak, from the casting, and the cost of the casting is a very important item in the prime cost of the article.

9289. I do not see how you get by that system at the cost of the casting. The cost of the casting is fixed, as I understand, by the Superintendent, acting, I suppose, in consultation with the foremen?—The estimate is made by the Superintendent. That estimate is adopted provisionally, and is tested by the profit or loss it produces at the end of the quarter; if it works out within 5 per cent., we say "that is all right; we may take the estimates of the Superintendent as 'being borne out by the facts'; if it begins to show a difference of 10 per cent., the clerk in charge of the accounts at Woolwich reports to the Superintendent or manager that these estimates require reconsideration and overhauling, so as to bring them into touch with the facts.

9290. Is your object to arrive at the true cost of the castings, or to work up to a conventional price?—The

Mr. C. Harris.

19 March 1901.

Mr. C. Harris. object is to arrive as nearly as possible at the true cost of the casting, but in a foundry you cannot practically arrive at a cost in the same way as you arrive at cost in, say, a gun shop; you cannot put down the wages of every man in that foundry to some article he is making, you cannot put down every pig of iron, every ton of coal that comes in to a certain order: the coal is for general use, and the iron is for general use, and so on.

19 March 1901.

9291. Surely a natural system would be to charge all the departments of a factory with so much, as their proportion of the general cost of rates and taxes, and so on, and then to make out an average price for the article they produce in each department, which would cover the cost of material and labour, plus their proportion of these general charges?—That is so, from the point of view of what one may call the manufacturing shops, but to the manufacturing shops the raw material is the casting. If you buy that casting in the trade, it comes in and is charged to the order on which it is employed in the manufacturing shop at so much the pound or cwt.—

9292. (*Mr. Mather.*) But that is not a case to take at all, is it, as a parallel case to that which the Chairman is putting to you? In every large concern—and it is only with a large concern you can compare Woolwich—the work is carried on as you carry it on at Woolwich for the purpose of ascertaining the exact cost of casting per ton or pound, according to the metal, in order to arrive at the just allocation of the work to each order for a customer, and what amount of casting he has taken?—Precisely.

9293. You must not compare it, I mean, with the bought casting?—Not in the least; I was going to explain to the Chairman that whereas the casting, when it gets into the manufacturing shop, is raw material at a certain price, the question is, when you have made that casting yourself, what price to put on it; and the simplest method we have been able to devise of putting a price on that casting, is this system of allowing the manager or superintendent to estimate the cost of the casting, and check that estimate by bringing it in a tabulated form into comparison with the facts, once a quarter. That is the system followed in the works at Crewe—the Crewe foundry system is practically identical with our own.

9294. But the Crewe foundry does not get at the cost of the casting, but the cost of the article?—But it gets at the cost of the casting first.

9295. I think you will find that at Crewe they know the cost of their castings, not by stocktaking, but simply by an ordinary process of book-keeping. I can tell you in my concern, every week throughout the year, the fluctuation in the price of castings, including the number of “waster” castings—expenditure for anything that may occur in one week's work at a larger rate than in another week is all known, and then, at the end of the year you know what the actual cost of your castings, either iron, brass, or steel, has been. But for the estimated purposes of the trade you take the average cost, say, of a month, of your castings, one way or the other, and you have the actual fact in that month by a process of book-keeping. Each week there is charged so much metal, so much wages, so much sand, lime, coke, everything which is required in a foundry—brushes, the smallest articles used—it all goes into columns every week in the ordinary way, and though one may find a slight fluctuation in this process week by week, it is divided by the total profit of the foundry per week, and you have the regular price running all through the year?—You appear to watch it more closely than we do, but otherwise the general system appears to me to be the same.

9296. But we have no stocktaking at all; it is an ordinary method of book-keeping with us?—Then your prices in any given week are liable to be thrown out by the fact that the amount of material sent to the foundry and, therefore, charged to that account, is not the amount which has been actually consumed by the foundry and therefore converted into castings.

9297. We take it week by week at an average price at which we are to put our castings in touch; it has run for a long time and that is the only way you can work a business; why the Government factories should require anything closer or better I cannot understand. It is more economical if you watch it week by week, especially as in a foundry where you use, brass, iron, steel or bronze, it is most important to know what relation your bad or imperfect castings bear to the total weight of metal used, and the total amount of

wages paid?—Quite so, and I think our system might be elaborated in that direction.

(*Mr. Mather.*) I do not call it elaborate; it comes in the ordinary way of book-keeping by the clerks in the concern, and it is done in a few moments. Every Monday morning the previous week's work is entered up, so that we have only a few items to deal with: those are taken from the books and entered up, so that for the whole year you may make your estimate accurately for your own benefit and for the benefit of your customers.

9298. (*Chairman to the Witness.*) Do you see any particular advantage in your system as to these quarterly stocktakings?—As regards the quarterly stocktakings in the foundry, I am not in any way particularly bound to them. I find that in a report of mine written in the year 1895, I spoke of omitting them in case of pressure. I find that in December 1899, the Ordnance Factories did omit this quarterly stocktaking without mentioning the fact to me, and in fact it is not in any way a rule laid down by me or through me, or that I am particularly concerned to watch; it was a rule introduced by Sir William Anderson on what he conceived to be its merits, as a practical man.

9299. Then, if it can be so easily dispensed with in time of pressure, of what utility is it in getting at the true cost of articles?—Although you may get more output from your foundry, you get your prices running further away from the facts; in the last year 1899–1900, I find there were considerable balances on the foundry accounts.

9300. What do you call “running away from the facts”?—I mean the amount of money actually spent in the foundry is not exhausted by the prices charged for the castings produced. I think there are some examples of these quarterly balance sheets by which I can show what I mean. There is a foundry account for the quarter ended September 1900. (*The Witness explains the Account.*) That is to say that we had failed to account for the money actually expended in the foundry by 763*l*.

9301. Out of this material, and out of these wages, you made so many finished articles which, at your prices, would have represented a sum leaving a profit of that much?—Yes. That, of course, is a finished article from the point of view of the foundry, but from the point of view of the manufacturing shop, it is raw material.

9302. (*Mr. Mather.*) How do you proceed after this to fix your price for castings on the particular work you have to produce?—That has been charged day by day at the estimated rates fixed by the Superintendent—those quantities, calculated at those estimated rates, produced that much. This account is merely a test to see how far those estimated rates corresponded with the facts. Originally these rates were drawn up without any account of this kind; they were drawn up from the practical knowledge of the Manager, but they are corrected from time to time in accordance with the results.

9303. Because, of course, the price of metal varies month by month?—Yes, quite so—that is why it is necessary to adjust quarterly, and that is why these quarterly accounts are kept.

9304. Of course the method I have described to you—the weekly book-keeping of a foundry, takes the cost of the iron on the day?—Yes, it is more exact.

9305. Can you explain to the Committee who instituted the system of piece-work throughout the whole concern, apart from work upon things such as boxes? Let me give you an example—piece-work on a gun carriage which costs, I suppose, before it is finished, 7000*l*. or 8,000*l*.—is not that so?—The cost is very large.

9306. On such a piece of work as that, in any manufacturing concern in the country, it would be impossible to work piece-work; I mean to say, no one in working to profit would venture to establish a system of working piece-work on that particular class of manufacture. What led to its being done at Woolwich?—Of course, gun carriages have become complicated; the gun carriage of 40 years ago was a simple thing. As gun carriages have become complicated, they have been made in a factory in which piece-work was established from the earliest days, and they have grown up with it.

9307. Then the present arrangement of piece-work at Woolwich, I understand, is the carrying forward

into present day construction a system which prevailed when all the articles constructed at Woolwich were much simpler in character?—Yes, in a sense, but I am afraid that that, standing by itself, might be misleading. The system on which piece-work is paid for such a carriage as you describe, is this: First of all, there are different component parts which go to make up the carriage—there are the plates and the various parts—there is a plate of such and such area, machining that plate costs so much, there are certain holes to be drilled, certain slotting to be done, drilling is so much, and so on; the whole thing is built up from piece-work elements. Whether that plate ultimately goes into a complicated carriage or whether it is used for a comparatively simple structure, hardly seems to affect the conclusion.

9308. Plates are a small matter; it is what we call boiler work: but when you come to the construction of the carriage, putting together all the parts, the bearings and preparing for the bearings, there you have a complication of works, have you not, which we should regard as impossible to carry out under a piece-work system that would accurately represent the proper cost of the article?—I can only say as regards that, that the whole system was very thoroughly inquired into by Lord Morley's Commission, which investigated Woolwich matters in the year 1887. The then Superintendent of the Carriage Department, General Close, was examined very closely indeed on this piece-work question, and he stuck to his guns throughout, that piece-work, although he admitted it had certain imperfections and difficulties, was preferable.

9309. I have no doubt it renders the work of superintendence probably easier from some aspects?—That is one advantage.

9310. But, on the other hand, I think it very much detracts in such work as that of a gun carriage from the proper duty which the foreman and the manager of the shops ought to be performing day by day?—One of the arguments in favour of it is that it saves superintendence.

9311. Superintendence, of course, may be much more valuable to the concern than a certain amount of money spent upon clerks' book-keeping, than getting out all this piece-work time, which is exceedingly costly?—Yes.

9312. And you have to balance one with the other to find where the advantage to the country lies?—Certainly.

9313. My experience at Woolwich the other day led me rather to incline to the belief that the duties of the foremen were taken a great deal from the work in which they were specifically engaged, and were devoted largely to keeping up this piece-work system; and I have seen nothing to show me that any advantage is derived from piece-work over day-work, looking at it all round?—I should say, looking at it all round, that there are conditions peculiar to Government establishments that do give an advantage to piece-work; at any rate, on a piece-work system you can say this: that there is some definite return for the expenditure of a definite sum of money. In a Government establishment, without some guarantee of that sort, there is considerable danger that there may be very little return indeed for the expenditure.

9314. But I cannot conceive of any place like a Government establishment being worked upon the ordinary principles of a workshop or manufactory, where your results should not be exactly the same as that of a private manufacturer, and where you cannot work as closely to cost as they do, if you use the same system?—There is the difficulty that everybody concerned in the management of private manufactories knows that he has got to produce profit, or dividend, or something equivalent, at the end of the year.

9315. Excuse me—in my own experience nothing is known about profit or dividend throughout the whole establishment, excepting in the Head Manager's Department. Amongst the workmen, and amongst all those who are responsible for the cost of the work, there is nothing engaging their attention all the year round, but trying to make a work in the time booked against it with the material; that is the only thing they have to consider, and the only thing they do consider?—Quite so, that is what I mean—I mean profit to the firm, not to the men.

9316. They do not consider profit, because they have no knowledge of profit?—I think the question between

us is only a question of words; they may not consider profit, but they are aware of it. Their main object in life is to cheapen manufacture; now, no one with any experience of Woolwich Arsenal can say that the main object at Woolwich Arsenal is to cheapen manufacture.

9317. The incentive to cheapen manufacture at Woolwich is precisely the same as it is with the same class of men in my own works?—How is it so? More than three-quarters of the things at Woolwich are not produced by the trade at all, and are made under no competition in regard to price.

9318. I am assuming that the same material, the same ability, and the same experience, that is represented by a manager, a superintendent, or a foreman of a department, is exactly the same we have to employ?—It is the same ability, but it is directed in a slightly different channel.

9319. And I cannot conceive where any difference comes in. The object of all men who are placed in such positions of responsibility is the same everywhere; they know nothing of profit with us, and nothing of the results?—They know nothing of the results, but they know, unless there is profit, they will go out.

9320. They know that if there is no profit the concern will be bankrupt, in course of time, true; but they would also know, I should think, in regard to Woolwich, that their productions are compared, and comparable at any time, with the productions of the country outside?—Only a very small proportion of them.

9321. I cannot imagine anything which is not comparable with things outside?—Do you mind looking at these accounts? (*Showing the Annual Accounts of the Ordnance Factories.*) None of the things on this page are trade articles.

9322. That goes without saying. I am not talking about that, I am talking of the gun-carriage?—Then are we to limit it to the gun-carriage?

9323. Now, limiting it to that class of work, I omit the Projectile Department, and speaking of what I call construction, where a work has to be built up by degrees, where a great number of parts are made by different men of different trades—that is the kind of thing I wish to illustrate my view by. Upon that point of view I say that the practice at Woolwich differs from that of any concern I know of?—I thought we were discussing the broader question of how far the things made in Woolwich Arsenal were made in competition with trade prices.

9324. No, we were discussing, first of all, the piece-work being applied to an article which I say, in the trade generally, cannot be made by piece-work if it is to be sold at a profit?—If you mean that the work in the erecting shop of the Carriage Department would be better done on day work, it is a point open to argument. Former Superintendents thought it better to put it on piece-work; the present Superintendent might think it better to have day work.

9325. I should like to know whether these complicated gun carriages have ever been made by day work from first to last, because that is the only way in which you can test it. Take a typical case and make one and compare it. If you find your day work comes out at the same price as your piece-work does, then you may discharge a great number of people you have now, who have salaries year by year in order to keep up this complicated system of accounting for the piece-work.

(*Witness.*) I do not think the accounting would be simplified. You would still have to record not simply what operations a man performed, but you would have to record precisely what operations he performed, and precisely what time he spent on each, in order that you might book, against the cost of the part that he was making, the wages value of his time. I doubt very much whether there would be simplification in the accounts.

9326. We find that it is so.—But then you do not have to produce anything like that.

9327. Like a gun-carriage?—No, like this account. That form of account is laid upon us by Parliament, and that is a thing which does not exist in any commercial concern.

9328. Now you are going to another question which might explain to me the whole thing. If you are, working from the point of view that Parliament requires

Mr. C. Harris.

19 March 1901.

Mr. C. Harris. you to put down the price of every bolt, nut, screw, washer, and those trifling things which may be made in your works at Woolwich, then I have not much to say; but I do not think Parliament knows the tremendous cost it entails on the country.—That is the position as between ourselves and Parliament—that form of account has to be produced.

19 March 1901.

9329. And that is an order of the House, is it?—That is an order of the House; our proceedings are generally dictated by the House.

9330. Can you tell me what it costs per annum to take all the accounts connected with piecework, to adjust and arrange piecework, to take the time at the gates, and to book the time of the day workmen?—No, I cannot tell you about the gate time, because that is under the superintendents, but I think I have a paper here which shows what the taking of piece-work costs. It has constantly been said in discussions on Ordnance Factory matters that the Central Office is an excrescence existing in addition to other offices, and costs something like 60,000*l.* a year. I once analysed that statement and I found that the cost of what is called the Central Office in 1898–99, including work-takers at Woolwich, Enfield, Waltham, and Birmingham, 21,549*l.*, was 61,943*l.* Part of the work that office does was taken over with the staff from the various factories concerned. The charges of which the several factories were relieved in the process of centralisation were so and so, amounting to 53,137*l.* “The process of transfer occupied some years, during which the average output of the factories was 2,350,000*l.* In 1898–99 it was 3,160,000*l.*, an increase of 24 per cent. Assuming that the expenditure in salaries remains unaffected by increase of output, while the expenditure in wages increases proportionally, the comparison for 1898–99 would stand as follows:—” The cost in the factory offices, if the old system had remained in force, would have grown to a total of 69,748*l.* The actual cost of the Central Office Branches concerned in 1898–99 was 51,679*l.*; giving a saving by centralisation of 18,064*l.* “This saving is, to a certain extent, hypothetical, depending on the assumption that the wages bill would have increased proportionately to the output. If no allowance is made for the increase of 34 per cent. in output the comparison would stand:—” Total cost saved in factory offices, 53,137*l.* Total cost in Central Office 51,679*l.* Net saving 1,458*l.* Then there is another year worked out which showed a saving of 6,818*l.* “Without, therefore, taking into account the important savings in the actual working expenditure of the factories, which have resulted from the establishment of the central control, it may safely be said that the net result of the formation of the Central Office has been a saving in cost of clerical labour.” The amount for the recording of wages included in those figures is 21,000*l.* per annum on a wages bill of now two and a half millions.

9331. How many men does that mean? Is this solely for piece-work?—No, for day-work also.

9332. Does it mean taking time?—The cost of taking time, and taking piecework.

9333. Those two items?—Those two items, and the function of those men is to relieve the foreman of the duty of himself making those records, and enabling him to devote himself to better work.

9334. Is the foreman relieved of doing that work?—Yes.

9335. That is for Woolwich alone, is it?—No, Woolwich is 16,000*l.*; it includes Enfield, Waltham, and Birmingham.

9336. Woolwich has how many men employed?—The number has gone up enormously of late; but, I think, in normal times it might be put at about 12,000. This statement deals with a figure above normal. At present there are 24,000 men in the Factories.

9337. Would it cost 16,000*l.*, say, for 10,000 men?—Rather more than 10,000 men—12,000 men, I should say, at the least.

9338. It is rather remarkable that the total amount of time-keeping and piecework adjustment, and all other matters connected with the clerical work of making up wages and keeping time, is less by one-half at Elswick, with about 2,000 more men?—That is only the recording of wages, the working up of the wages in cost ledgers is additional to that.

9339. Then this is only recording, is it?—Yes.

9340. But for a less number of men you spend considerably more than double the amount per annum that they do at Elswick?—I do not know what the Elswick figure is or what it represents.

9341. It represents more than you have accounted for here; it represents piece-work, day-work, the booking of all time, the taking of time at the gates and it amounts altogether to under 9,000*l.* per annum for 13,500 men, which is a very different figure from yours?—Yes, the conditions are altogether different.

9342. I think the one explanation which silences criticism for the time being is the fact that you have these accounts to compile?—You must remember also, that this account is the only machinery by which anybody at Woolwich can be held responsible for anything he does, speaking from an economical point of view, not from a technical point of view, as to the quality of his work; but as to the cost of his work and the value of his economical administration of his business, this is the only machinery by which he can be judged, and therefore by which he can be held responsible for anything.

9343. That seems to be a very broad statement, but my own experience would not lead me to say that was possible.—That is so in a Government establishment.

9344. I am referring to a Government establishments, because I see no difference really in the principles of management, or in the methods of checking and financial control in a private concern that ought not to be equally effective in a Government concern.—But for the vast majority of the items in this book, there is no contract price.

9345. No, but there is a cost price?—There is no contract price, there is no standard by which you can compare it; you cannot produce a profit and loss account showing that any particular shop or any particular department, taken as a whole, has worked at a profit or loss.

9346. You can only take it from the knowledge of your managers or superintendents, who ought to be competent men, that they are working at prices at which they could enter the markets of the world and make a profit.—Neither the superintendents nor the managers can possibly form an opinion on that point: how can they?

9347. I mean, it is available for them to form it, because the information is there.—But it must be worked up.

9348. (*Sir George Clarke.*) As to all the items which are made which have not outside counterparts in their contracts, how do they give any standard at all, what is there to compare them to?—You can compare the cost in one year with the cost in the next.

9349. But you cannot get any standard out of that at all?—Yes, that is something.

9350. (*Mr. Mather.*) You have eventually to go outside to find even what your system does. You have no standard to measure yourselves by, except the standard of a similar trade outside Woolwich, the mere comparison between one year's cost and another within your own gates would mean nothing taken alone, would it?—I think it is better than nothing.

9351. It would only show whether you were going higher or lower within yourselves, or whether you were making improvement within yourselves?—Yes.

9352. But to compare the thing with a trade concern you are bound to go outside?—Certainly, and we go outside wherever we can, and where we cannot go outside we compare ourselves with our own position the year before.

9353. I see no possibility of your working at a less cost as compared with outside concerns, if you adopt the same principles and the same methods and the same scale which obtain in the management of outside businesses. We have no one to help us like you are supposed to have helping the Woolwich superintendents, have we?—No, but you have this—you know what the public will give, is willing to give, for what you produce. The unfortunate public has to pay what we like to charge, for what we produce.

9354. You must first of all come to the cost price of articles before you come to the public. Customers with you are performing Government obligations. With us we are selling our productions.—That is so, That is where you have the whip hand.

9355. But as to the actual price of an article depending on the extent of skill and management of workshops, of tools and appliances, and all those things going to make up economy of workmanship, we are both in the same boat?—Quite so.

9356. After that, what we get for our work, whether we can sell for a profit or loss, depends on other things beside the manufacture. There are definite laws now fixed by the practice of the whole world in manufacturing such things as you have to do at Woolwich, which control you and control all your superintendents and managers just as they control us?—Quite so, but the final control which in the case of a private concern is exercised by the selling price of its products is absolutely absent in our case.

9357. You have the same information at Woolwich as we have?—Pardon me, we do not have it brought home to us.

9358. (Sir Charles Welby.) It has been told to the Committee that there is a tendency in the local audit office, which you represent, to refer queries up to the Accountant-General's Office at the War Office, rather

than to settle them at Woolwich by personal interviews. Have you anything to say in reply to that suggestion?—I would say in reply to that, that I never refer anything up to the Assistant Accountant-General or the Accountant-General unless it involves a principle of importance. If it involves a principle of importance it is necessary, because they are responsible for what I do, and they should know what questions of principle are raised, and how they are regarded by both sides. I therefore refer the matter to them. If a man, for instance, has been overpaid wages, as happens constantly, it is not a matter which can reasonably be adjusted by my visiting the Superintendent; a written paper goes in on the matter and the matter is settled. If a question of principle arises I constantly discuss it, not with the Superintendents, because the accounts are kept under the responsibility of the Chief Superintendent of Ordnance Factories; and I therefore discuss either with him or with the Civil Assistant or with his Accountant. I am constantly in personal communication with them on queries of all sorts, both my own and those raised by the Audit Department.

Mr. C. Harris.
19 March 1901.

The witness withdrew.

Adjourned to to-morrow at 11 o'clock.

TWENTY-EIGHTH DAY'S MEETING.

TWENTY-SECOND DAY'S EVIDENCE.

At the War Office.

Wednesday, 20th March 1901.

PRESENT:

MR. OLINTON DAWKINS (CHAIRMAN).

Mr. E. W. BECKETT, M.P.
Colonel Sir GEORGE CLARKE, K.C.M.G.
Mr. W. MATHER, M.P.

Colonel H. S. G. MILES, C.B., M.V.O.
Sir CHARLES WELBY, Bart., C.B., M.P.

Mr. H. G. GIBSON, *Secretary*.

Lieutenant-Colonel F. S. ROBB examined.

9359. (Chairman.) You have been Deputy Assistant Adjutant-General, I understand, since November 1898?—I have been at the War Office since 1896, and Deputy Assistant Adjutant-General since 1897, but I was in Egypt for three months, so they dated my appointment 1898 when I returned. I have really finished my term here more than five years altogether.

9360. What are the particular duties with which you are charged in the Adjutant-General's Department?—Practically the duties specified against A.G. 1 on page 61 of the War Office list, except the more important questions which come under the various headings, and personal questions relating to officers; those are taken direct by the clerks to the Deputy Adjutant-General.

9361. What are the personal questions; is that discipline?—No, that comes under A.G. 4. The posting of officers, officers' leave, medical boards extra duty pay, posting of officers to drafts, and so on, anything connected with the officers themselves.

9362. Then, I gather that you deal more particularly with drafts?—Yes, drafts all come under me.

9363. In your opinion, and in view of the fact that we are now going to have six large Army Corps Districts, could any of the work in connection with the drafts be decentralised?—I think not. I think if you take a man from one command to another you ought to have some disinterested agency to do it. The unit that

gets the draft will always think that the officer who has detailed that draft has sent it the worst men and kept the best, and if the whole power of detailing a draft, say, from the North-East District, rests with the General Officer at York, the officer who gets the draft always imagines the unit in the North-Eastern District has been favoured. This is one reason why I think it is advisable to keep it in the hands of the War Office.

9364. You think the man in India will think the man in the North-east District is sending him his bad bargain?—Yes.

9365. How do you prevent that at the War Office?—By tying down the conditions under which the men are sent as tightly as possible. We give instructions that men are to be taken in strict order of seniority, and if we think there has been any favouritism about it, we call for a return showing those who proceeded and those who were exempted, and we can tell by this return and by the regimental numbers whether any men have been wrongly eliminated. We do not often have to resort to such a check, but occasionally we do if we think there is anything wrong.

9366. But if the work were decentralised it would still be possible, would it not, to lay down that a man to be sent to India should fulfil such and such conditions of service and age, and so on?—Quite so, but you would then have every district detailing drafts on its own plan,

Lieut.-Col.
F. S. Robb.
20 March 1901.

Lieut.-Col.
F. S. Robb.

20 March 1901.

and unless they knew the ultimate destination of a unit, a matter which must often be kept secret, they might detail men who would not be sufficiently matured to accompany it.

9367. Subject to the conditions laid down. I mean if you laid down that the men who were required for India were to be of such and such service, and such and such physical qualities, would there then be any difficulty in theory if the district in India corresponded with the district in England?—In theory there would be no difficulty, but the question of drafts is very technical; you not only have to look to present requirements, but you have to look forward seven or eight years, to see what result it will have on a particular battalion. Have you seen a rank-and-file return.

9368. Yes, I have?—You have to consider in detailing the drafts what effect it will have on the men who will run off in seven or eight years time—seven years of course if they are at home, eight years if they are abroad, and what we have to strive to do is, as far as possible, not to let more than a normal number of men run off in a year; 200 is, roughly speaking, normal in a battalion. We have to see that we do not so overcrowd any category of service in a battalion abroad so that more than that number would run off in any one year. I think we should look after that more carefully than an Officer Commanding an Army Corps would or could.

9369. And that could only be done in the central office in your opinion?—I do not see that any good would result from doing it outside a central office. We get in one year from India the draft requirements for that particular year. Decentralisation would mean that India would have to send to England six returns of draft requirements instead of one. Between the time when India sends the return and the time the drafts are sent units may have shifted about, which would mean that every time a unit is shifted a General Commanding an Army Corps would have to send the particulars to the Army Corps to which it went, so that I think, so far from saving trouble, you would rather increase it by decentralising.

9370. If any question arose out of drafts the Government in India would at once send to this office, would it?—Yes, it would. There is no reason why we should not treat India as a separate command, and let it correspond with Officers Commanding Army Corps. At present we have in this office the complete information necessary to inform General Officers Commanding Army Corps what to do, whilst in the case of decentralisation they would have to find out from one another what to do, it would not be a saving of trouble.

9371. Before the report of the Decentralisation Committee, what was the custom with regards to drafts?—I do not think there has been much difference about drafts; the only difference we made was that we allowed a small percentage of exceptions to the discretion of General Officers Commanding Districts, and I think perhaps we allowed more exemptions—we certainly allowed more exemptions in the Artillery. It is a very difficult thing to lay down proper exemptions from a draft, because our attempts in that way are so easily defeated by Officers Commanding units. Supposing we say a certain class of man is to be exempt from a draft, such as a gun driver, a Commanding Officer can take care not to select his gun drivers from categories of service that would not be required for drafts. We once called for returns, and we found practically that all the gun drivers in the Artillery were taken from men with less than four years' service, that is, that other men already exempt from drafts were not detailed as gun drivers. The result was we could hardly find sufficient men for the drafts.

9372. Then your contention is that you have to keep this central control in the interest of India and the foreign stations which are receiving the drafts, in order to counteract the tendency of the officer here to keep his best men, and shed his worse men?—Exactly. I will give an instance which occurred only two days ago to show that tendency. In the Artillery we make little circles of different stations abroad, to control the promotion of non-commissioned officers above a certain rank. One of these little groups consists of the Cape, Mauritius, and St. Helena; the Officer Commanding the Artillery at the Cape controls that little group. A staff-sergeant was reduced to Sergeant at the Cape, and they thereupon posted him to the company at Mauritius. There was already a supernumerary

sergeant at Mauritius, so that made a second supernumerary sergeant there. The result is that, as regards all the non-commissioned officers at Mauritius below that rank, their promotion will be delayed, whilst in the companies at the Cape the promotion has been quickening. For all we know it may have been absolutely in the interest of the Service that that officer acted as he did, but you will never persuade the non-commissioned officers of the company at Mauritius that it was in the interests of the Service; they will always imagine it was in the interests of the men under the immediate command of the officer who decided the question.

9373. (Colonel Miles.) Did that case come here?—It was reported here because they were so extremely angry in the Mauritius that it had been done; it was sent here as an appeal case.

9374. (Chairman.) As regards the staff of your Department, you have one senior clerk under you, I believe?—Yes, partly. There has been a good deal of alteration in the staff of the Branch since the War Office list was printed. For instance, one First Division clerk has gone and we have had a considerable addition to the lower clerks, altogether I think there are 47 clerks in the branch at the present moment.

9375. Rather more than half of them are Military clerks, I believe?—At the present moment we have 15 Military clerks, we have not had an increase of Military clerks.

9376. Rather more than half will be civilians then?—Yes.

9377. Have you any opinion yourself as to the desirability of employing in your particular Department Military or Civilian Second Class clerks?—Yes, I have very strong opinions on the subject, I would not have Military clerks employed in anything except very technical work of a non-confidential nature, such, for instance, as drafts, regimental establishments and statistical returns. As regards the rest, I think we could get on very well with Second Division clerks.

9378. Because you treat them with more confidence, or because they are more intelligent, or what?—I think, in the first place, they have very much broader views. The early training of a Military clerk does not conduce to breadth. He is very good at statistics, very good at returns, but, with certain exceptions, he is rather narrow in his interpretation of regulations, and there are disciplinary reasons against employing them on other work. There are, of course, brilliant exceptions, but insufficient to secure a constant supply. I find from working with Second Division clerks that we get very good value out of them. There are several in the list in A.G. I extremely good men, who can keep up the continuity of office procedure perfectly well. I am strongly opposed to there being any First Division clerks in the sub-division.

9379. Would you sooner have an officer?—Much sooner, not only in the interests of the Department, but I think in the interests of the First Division clerks themselves. I think a man who has passed the examinations which a First Division clerk has to pass has a perfect right to expect to control a Branch, and if he gets into a Military Branch with Military officers, either he or the Military officer has to control the Branch, and someone has to decide who does it. You see on page 61 of the War Office list the order in which they come on that list, which puts the officer at the head and the clerk below, but I believe it was suggested some time ago that the clerk controlled the Branch and the officer was merely there to give advice. I think that suggestion came from Mr. Hopkins, who was then principal clerk of the Adjutant-General's Department.

9380. When I say you would repose more confidence in the Second Division clerk, I do not want to insinuate anything against the Military clerk, beyond the simple consideration that they, being more in touch with Military matters, might possibly gossip more than the Second Division clerk would?—Quite so. I think the fact of their being in touch, and having friends outside in the different units, diminishes their value at Headquarters.

9381. Do you see any difficulty in keeping half your Department Military clerks and half Second Division civil clerks?—I see absolutely no difficulty, and what I would suggest is that the whole Sub-division which has so outgrown its original limits as to be perfectly hopelessly disorganised as regards practical work

should be broken up into what might be called watertight compartments. We could then have a Department given up entirely to statistical returns and establishments, and such other matters which the Military clerks would be perfectly capable of dealing with, and have them under one officer in a separate room; then all the other papers of organisation and administration, personal matters, and other questions which it would be inadvisable for Military clerks to deal with, could be dealt with in another room.

9382. (*Mr. Mather.*) You are speaking now of the Adjutant-General's Department as a whole, are you?—I am speaking of my own Sub-division. Perhaps I ought to say that I have had experience of the Intelligence Division, so that this is not the only Department of the War Office I have had experience in, and I should say that in this one sub-division of A.G. 1 far more papers come in than come in the whole of the Intelligence Division, and the Intelligence Division is broken up, I think, into seven sections now. From my experience of the two I should say the Intelligence Division works far better for that very reason. The purview of A.G. 1 is quite beyond one officer's power.

9383. (*Chairman.*) Apart from the question of clerks, is there anything in the work of your sub-division which, in your opinion, would admit of decentralisation?—I think decentralisation might be applied to almost everything in it in a way.

9384. But not to drafts, I think you told us?—I thought we had finished with drafts and were proceeding to the other subjects. The question of decentralising drafts I may say has been gone into carefully by the Drafts Committee, and we came to the conclusion on that Committee that it was inadvisable to decentralise it, and we could not see any immediate advantage in doing so because we believed it would multiply work. I still believe that to decentralise drafts would be to multiply work rather than to save it. I do not think that an unnecessary amount of draft work does come through this office. I think possibly it is exaggerated. I saw that the Adjutant-General was asked the other day whether we detailed men by name. I do not think you can do any decentralisation there, but as regards the other matters in the list of work, the posting of non-commissioned officers and men to battalions and depôts, we do decentralise that except during the trooping season. During the trooping season we endeavour to bring as many men home to fill vacancies as possible, because it is only right that as there are many picked billets at home, as many men should get them from abroad as from home. We should have anyhow to get their names in order to give them passages and order them home, and the result is we find it more convenient to have the names sent in at one time than to have them coming in at all times of the year as they are recommended. So that although there is this much centralisation in the Department I do not know that there would be much saving. It also affords a wholesome check on the balance being kept on the number of appointments filled by non-commissioned officers abroad and at home. As regards the question of married soldiers, I think that is a matter which, except as regard to framing regulations, might be entirely taken out of our hands.

9385. What is the question as to married soldiers?—A special question whether a man who does not fulfil the necessary qualifications for the married roll is to be allowed on it as a special case. It particularly hits us with regard to the Artillery. Artillerymen who do not fulfil the conditions are always asking us to be allowed on the married roll. The reason for that is that a great many companies and batteries of Artillery have more men married without leave than they have vacancies for on the married roll, whilst in a very large number of companies and batteries there are absolutely no men married, so that they send us to know whether a married man in one company may be allowed to cover the vacancy for a married man in another company. I do not see why we should not decentralise that, and give the power to Officers Commanding Royal Artillery in Districts to deal with the matter. It gives us a lot of trouble here, and sending the matter up here is really like taking a sledge hammer to crack a nut.

9386. What is meant by "The word"?—"The word" is, I think, purely a matter connected with London; I think that must come from here, but I do not deal with it.

9387. What is the word?—It is merely a parole, I think.

(*Sir Charles Welby.*) Could not that be managed by the officer of whatever Army Corps contained London?

(*The Secretary.*) Cannot the General Officer Commanding the District settle it now?

(*Witness.*) I fancy the whole thing is done by him.

9388. (*Colonel Miles.*) But do you really do it?—It does not actually come to me, but it comes here; it is only a piece of paper which comes here by an orderly every day. I fancy the fact of its being put in here is because it has to do with the King, so that if you were to strike that out of the work of A.G. 1, nothing would result from it, but I am very vague about it.

9389. (*Chairman.*) What are election orders?—Election orders are orders which are issued at election time with regard to keeping soldiers away from the polling places, these also I do not deal with.

9390. (*The Secretary.*) General Officers Commanding can deal with that, cannot they?—Yes, I should think so. I do not see why that should not be done by General Officers Commanding, providing sufficient was laid down by regulation. That also is a very trivial matter, which only comes occasionally.

9391. (*Chairman.*) But an accumulation of trivial matters may make a large heap?—Yes. Leave of absence is, of course, decentralised; the only people who have to come here for leave of absence are those who have no Commanding Officer at home. For instance, if a man is home on six months' leave from India, and requires an extension of three months, he has no Commanding Officer or General to grant it him; therefore his Commanding Officer is here in this office.

9392. He would have to come to somebody?—He would have to come to somebody.

9393. (*Mr. Mather.*) His Commanding Officer might be in India?—If his Commanding Officer is in India, his only home is here. Therefore those on leave from abroad communicate direct here for that reason.

9394. Is leave granted under those circumstances on inquiry; do the authorities here make an inquiry?—They would not necessarily communicate with India, they would grant it on their own authority and report to India, that is what we do with soldiers, I do not deal with officers' leave.

9395. There is no such delay as that?—No, it is in order to avoid delay that this procedure has been adopted.

9396. (*Colonel Miles.*) Does that refer to the leave of men?—No, furlough comes immediately afterwards in the list.

9397. I thought you did not deal with officers?—I do not; I am only talking generally. Furloughs are actually what I deal with, and furloughs come almost entirely under Commanding Officers. There are certain occasions where, if they exceed a certain amount of time, or are granted from abroad, they are referred to us. But the word furlough in the list really means regulations relating to furloughs rather than granting furloughs.

9398. (*Chairman.*) I suppose, as regards regimental and garrison institutes and canteens, that refers to the regulations?—Except in a few cases. For instance, there are certain objects laid down on which funds accumulated can be expended, and anything that goes outside those objects has to be referred to up here. We have to be very careful about those things, because you will find every now and then an officer who has control over a regimental institute is very strong, say, on teetotalism, or on some denomination.

9399. He has some particular fad?—Yes, and anything like that we have referred up here in order to hold the balance and prevent discontent as to the expenditure of funds. As a matter of fact, very few things are referred. There is one point referred here, and that is, whether an institute may be managed on the tenant or regimental system. It is laid down in the Army Act that a tenant canteen cannot be held without the authority of the Secretary of State for War, and it must have a licence. I doubt whether justices would issue a licence to any Officer Commanding an Army Corps, and the law would have to be altered to enable them to do so. We had a case only the other day where, even with the Secretary of State's authority for a tenant canteen, the justices at Dorchester refused a licence; so if they refused it on the Secretary of State's

*Lieut.-Col.
F. S. Robb.*

20 March 1901.

Lieut.-Col.
F. S. Robb.

20 March 1901.

authority it is quite probable that with only the authority of a General Officer they would more often refuse.

9400. (*Mr. Mather.*) It depends on the justices?—Yes.

9401. (*Chairman.*) Your point is the justices would be more willing to defer to the Secretary of State than to the General Officer Commanding?—Yes.

9402. "All questions on the above subjects relating to Militia, Yeomanry, and Volunteers." What does that mean?—That is really a good deal done by the Inspector-General of Auxiliary Forces; his branch has been considerably increased lately. Such matters are referred to us so as to ensure that the procedure adopted as regards the auxiliary forces and the regular Army are practically identical.

9403. (*Mr. Beckett.*) Would not it be possible still further to decentralise the arrangements for the Yeomanry and Volunteers; if these Army corps were once established, could not all the arrangements in connection with them be made by the General Commanding the Army Corps, without reference to the War Office?—That is rather a large question: some could and some could not. The points referred to in the list really relate more to regulations on these subjects than procedure. I do not see any reason why there should be more or less centralisation in the Volunteers and Militia than in the case of the regular forces, except that there is much more tendency on the part of officers of the auxiliary forces to come up to the War Office than there is among officers of the regular forces.

9404. (*Chairman.*) Will you please continue with the list. Do you lay down regulations with regard to guards of honour, and so on?—Perhaps it would be better to state what the procedure was with regard to the late ceremonies. There we took the orders of the King, and the orders which were issued from here as regards the whole of England were threshed out by the Deputy Adjutant-General, I working under him. We gave all the orders as regards bringing troops from all parts of England, Scotland, and Ireland, to London. We got them as far as London, and then the Home District took it up. I do not think we can decentralise that; we could not give the Home District authority to order troops from Ireland and Scotland up to London.

9405. (*Sir George Clarke.*) Does that mean these particular questions only arise when troops from an outside command have to be brought up to London?—No, I do not think it does. Perhaps I should explain to you that this is part of the work done by the Deputy Adjutant-General; I do not deal with it personally, but I have seen papers on the subject, and I think we take all orders from the King as regards his movements. I do not think he ever communicates direct through the Household with the General Officers Commanding Districts, except the Home District.

9406. (*Mr. Mather.*) Take the case of Portsmouth, and the ceremonies at the death of the Queen, and in connection with it, did not the King communicate directly with the General Officer Commanding in Portsmouth, in connection with the movements of troops, and the use of troops?—I cannot say that as I do not deal with it, but I am certain a good deal of it came through here.

9407. As regards regimental district confidential reports, I suppose they must come here?—Those are the only records we have of the state of efficiency of units, but at the present moment I believe they are in the hands of a civilian clerk, and they are read through by him, and the parts which appeal to him are marked and referred to the Deputy Adjutant-General, but I do not deal with them myself, and so cannot speak with certainty. Those I think ought to be dealt with by an officer.

9408. You mean to say it is left to the judgment of the civilian clerk?—Yes, whether there is anything in it which merits bringing it to the notice of the Deputy Adjutant-General or not.

9409. It seems to me you are there employing a civilian to deal with Military matters?—I think those matters ought distinctly to be brought before a Staff Officer. I do not want to suggest that the particular civilian clerk who does this does not do it well, but I think it is a distinctly Military matter on which the future of a Military officer may depend, which ought to be done by a Military officer. There is no doubt that the number of officers in the Adjutant-General's Department is not nearly enough to carry on the work.

9410. If you were to replace your senior civilian clerk by an officer, could not he do that work?—Certainly; I have strongly advocated that to the Adjutant-General. I do not in the least want to disparage the individual clerks, it is the system of dual control and divided responsibility to which I take exception.

9411. (*Chairman.*) Then as to leave and training of Army Reserve; that must be centralised, I suppose?—That must be so. As to the leave, that means leave to those going abroad. I think we ought to know at Headquarters how many of our Army Reserve reside abroad, because, as an extreme case, the whole of them might be residing abroad, and if they were called up there would be no reserve at all. There is no actual right to leave to reside abroad; we can always refuse it if we want to, and we might say to districts you may have so many of your men residing abroad—you must not exceed it. We could do that, but the actual numbers that come through are not very large.

9412. (*Sir Charles Welby.*) That is another of these transfers, is it?—Yes, certainly. But the most troublesome subject on the list is "Miscellaneous general questions."

9413. (*Mr. Mather.*) They may be legion, I suppose?—Yes, we have extraordinary references made. The other day we even had an offer of a pet lamb, and when you take into consideration that there are "miscellaneous general questions" coming from every part of the world, there is no finality.

9414. What led to the offer of a pet lamb?—A man wrote and said he heard the War Office wanted a pet lamb, and he had one to sell.

9415. (*Mr. Mather.*) That was probably a bit of satire?—No, I do not think so, he was probably a man of weak intellect. We very often have men write up to ask us to decide bets for them.

9416. (*Chairman.*) I think that is the fate of all Government offices, is it not?—Yes, I should think so.

9417. (*Mr. Mather.*) What sort of bets do they ask about?—The public have arguments about regiments and their customs, and they ask us to decide the bets made about them.

9418. (*Sir Charles Welby.*) Is there any particular reason why all these miscellaneous questions should be dealt with by the Adjutant-General. It seems to be more a sort of work for some central bureau for inquiries?—But they are Military questions, and they must have some Military opinion, and the Adjutant-General Department, I suppose, is the particular Department in the War Office which would give a Military opinion.

9419. (*Chairman.*) The pet lamb would necessitate a Military opinion, would it?—I suppose the individual who referred it to the War Office wanted one. Under the "Miscellaneous general questions" comes, of course, the whole question of what I might call outside interference—dealings with the public, which give us a great deal of trouble—the public who will not take "No" for an answer. We have printed notices to answer the ordinary type of question; for instance, people write and ask when is such and such a regiment coming home, and we send a printed notice saying no information can be given on the subject at present; but they will not take that for an answer, and they write back and say they want a written and signed letter in order to show that the matter has been gone into.

9420. (*Sir Charles Welby.*) Would not it be possible in future to have a printed notice saying that applications of this kind should be addressed to the Officer Commanding such and such an Army Corps?—I put forward that suggestion some time ago, but nothing has yet been done on it. Our procedure when anyone worries us with anything is to send it down for report, and we report the reply from here. It seems to me that it would be better to have a printed paper saying that the matter is one to be dealt with by the Officer Commanding the Army Corps, and any further communications should be addressed to him, but the number of people who will accept that ruling if it is unfavourable to them are very few and they are sure to appeal.

9421. It does not matter whether they will accept it or not, if they can get nothing further, does it not?—No, but then they will go to a Member of Parliament.

9422. (*Sir George Clarke.*) But if you forward this letter to the General Officer, would not the General

Officer begin to correspond with you about it?—Most certainly not; if we refer it in such terms that it is a matter for him to deal with, and we do not want to hear anything more about it. I think we could do our part all right if the public would accept it, but I doubt whether the public would accept it.

9423. (*The Secretary.*) Including the Members of Parliament?—Yes, they are our difficulty.

9424. (*Mr. Mather.*) Are not you allowed to exercise your discretion in throwing correspondence into the waste-paper basket; are you obliged to reply to every note of any kind on any subject?—Practically we are. Anonymous correspondence and an occasional abusive letter we take no notice of. I do not, however, think that either the Secretary of State or the Commander-in-Chief would like us to make a practice of taking no notice of correspondence.

9425. To any signed letter you give a kind of reply, do you, printed or otherwise, whatever the subject may be?—Practically, unless, as I say, it is something abusive, but if it is in the form of an inquiry, we take notice of everything.

9426. (*Sir George Clarke.*) Does that miscellaneous correspondence prevent or delay replies to other and more important questions?—Yes, very much indeed. It makes it impossible occasionally to attend more important questions. The Secretary of State has impressed upon us the necessity of replying with the utmost celerity to outsiders.

9427. (*Mr. Mather.*) On any subject whatsoever?—He has not said on any subject whatsoever, but we have practically no discretion.

9428. (*Mr. Beckett.*) Speaking roughly, how many letters should you say come to you per day on miscellaneous subjects?—I have never counted, but I know it is one continuous stream.

9429. (*Sir George Clarke.*) Then you must find yourselves so choked up with a mass of this work that you have not time to work out the more important questions?—Constantly; I often do not get to what I call my proper work till the quiet time in the evening, about 5 o'clock, and so the important work suffers.

9430. (*Chairman.*) That is a question of staff, is it not?—Of course, the sub-division is very much understaffed, it has grown out of all proportion. The only people in the sub-division who can sign their names to a letter are the Military officers, and the number of papers that come into it are more than they can properly attend to. I have now an assistant who is learning the work with a view to succeeding me, but even two officers cannot do the work of the sub-division, which I deal with, properly, it wants thoroughly breaking up.

9431. It is a question of staff?—It is more. It is a question of staff, and of reorganisation.

9432. (*Mr. Beckett.*) Should you say that the greater part of your correspondence on miscellaneous subjects was on irrelevant topics which would not require an answer if left to your own discretion?—It is rather making a leap in the dark to make such an assertion, but I should say that of the miscellaneous questions referred from the outside more than half could be dealt with in the districts if we could only induce people to go to the districts, and a large proportion are irrelevant. A great many questions, even questions put in the House of Commons, are on matters which, if the Member went to even the last joined subaltern, he could get answered. We have already three times this Session been asked what are the terms of service of a reservist in Section D, and any subaltern would be able to turn up the particular section of the Reserve Forces Act which would give the information. All those questions have to come to us to answer.

9433. Would you say with regard to questions asked by Members of Parliament, that at all events a very large portion of them need not be addressed to the Secretary of State for War at all, and that the information required could be got from other quarters if it was not the object of the Member to get his name on the paper. Is that your opinion?—It is my opinion that he could get the information elsewhere. I cannot say what prompts a member to ask a question. I have often wondered.

9434. (*Chairman.*) With regard to the posting of officers to Artillery and Infantry units and depôts, what do you say?—That I do not know; that is done by the Deputy Adjutant-General.

9435. But that is all done up here?—That is all done up here.

9436. Could that be relegated at all to the Army Corps districts?—I do not think so, not unless both units were serving in one command.

9437. That would also apply to transfers and exchanges, I suppose?—Yes, but postings of soldiers between battalions and batteries, as far as they come to Headquarters, I deal with. In the Artillery we go on the principle that any Commanding Officer may transfer or post between the units serving in his command. That is to say, at Aldershot, where there are three Brigade Divisions, the General Officer can interchange men between those three Brigade Divisions.

9438. (*Sir Charles Welby.*) Officers and men?—No. I am talking about men only; we decentralised that as regards the men during the last two years. In the same way a Lieut.-Colonel of Artillery has three batteries under him, and we allow him to make interchanges within his own command, so that the scope of interchange depends on the command an officer is exercising.

9439. (*Mr. Mather.*) How do you deal with the officers?—I do not deal with officers, but I do not think it could possibly be done in that way.

9440. (*Chairman.*) As regards the promotions to Warrant rank, could not that be done in the districts?—It could be done in the districts. We should have to alter the Royal Warrant for it, but even then I do not think we should gain anything, because eventually they will have to come up here as the names appear in the Army List—sooner or later they come up here. Practically the promotion of a Warrant Officer merely means that he is selected in the district. His name is sent up here, and if he fulfils the conditions, there is no question of going into the matter; it is approved as a matter of course, and the name is passed to the Military Secretary to note in the Army List.

9441. (*Colonel Miles.*) Then there does not seem to be any reason for bringing it to your office, it might go straight to the Military Secretary of the Army List, might it not?—It might do if the Royal Warrant were altered.

9442. As long as the proposed Warrant Officer fulfilled the necessary qualification?—There is no reason why it should not go straight to the Army List. I think we have no authority in the Adjutant-General's Department to promote him if he does not fulfil the conditions, it is contrary to the Warrant.

9443. (*Chairman.*) Master Gunners, I suppose, stand in the same position as Warrant Officers?—Master Gunners are of three classes; the first and second are Warrant Officers, the third are non-commissioned officers. The whole question connected with the posting and transferring of Master Gunners is one which will have to be considered when we revise the Royal Artillery Standing Orders. I have hopes when we do that we shall be able to decentralise very considerably. The system in vogue, which existed at one time in the War Office, was that everything above a battery command was taken in hand by this office, every promotion and every posting. I think we ought to aim at giving Officers Commanding Artillery in districts and to Lieut.-Colonels Commanding Brigade Divisions of Artillery considerable latitude. It is a very difficult subject, because it practically means breaking up the Artillery into separate organisations, each running itself, which is totally opposed to the whole of the Artillery tradition, but I think it must come; then we shall get all these minor questions of promoting, posting, and moving Master Gunners, Warrant Officers, and clerks left to the districts.

9444. (*Sir George Clarke.*) The breaking up of the Artillery into regiments for the purpose of administration is universal in the Armies on the Continent, is it not?—I believe it is. I have never heard of any other nation that has our system.

9445. (*Chairman.*) What are armament pay returns?—Those I do not deal with, I think they go straight to Colonel Hay, the Artillery adviser, but under certain conditions armament pay is issued in the Royal Warrant, and I suppose it has to be checked to see that the proper amounts are drawn.

9446. As regards Military clerks. Do you practically supply Military clerks?—That reference as far as I am

*Lieut.-Col.
F. S. Robb.*

20 March 1901.

Lieut.-Col.
F. S. Robb.

20 March 1901.

concerned relates solely to Artillery Military clerks. All other Military clerks are dealt with in the Quartermaster-General's Department. They are a branch of the Army Service Corps.

9447. (*Colonel Miles.*) Are Military clerks under you or under the Quartermaster-General?—The Military Staff clerk is under Q.M.G. 6; I do not deal with him at all. These clerks under reference are the Artillery Military clerks.

9448. They are quite separate, are they?—They are quite separate, and the whole system of their pay and organisation is now under consideration. There is a big scheme, called the Military Staff Clerks Scheme, which is under consideration, but which has been necessarily put by owing to the war pressure, but I hope when it is decided we shall be able to put the whole administration under the districts and divest this office of the "Orderly Room" work connected with them. It will require a good deal of manipulation as regards places like Mauritius, the Cape, St. Helena, and other localities abroad, but I do not think it is impossible to get rid of it from here.

9449. You may happen to know that there is a good deal of dissatisfaction amongst Military clerks as to their status?—Yes. Under the old warrant a Military Staff clerk, the moment he was appointed, got a tremendous rise in rank; he became sergeant at once. The new system introduced a lower grade of Staff clerk which used to be filled by what was called a temporary clerk, and I think the younger men who get appointed Staff clerks think that on being appointed as Staff clerks they ought to have the rise in rank which the old class of clerk got. There might be dissatisfaction from that reason. I am talking of the Artillery clerks only, I do not deal with any others.

9450. Then as regards the Militia and Yeomanry training arrangements, what do you say?—I think that could be decentralised a good deal. The difficulty of course in respect to that is that there are some districts where there are Militia and Yeomanry where there is no training ground, and the moment you come to moving men between two districts, a central authority has to come in. But if these Army Corps have a certain amount of training ground, I can see no reason why it should not be left entirely to the Officers Commanding the Army Corps.

9451. (*Sir George Clarke.*) Then "training arrangements" here mean transference of troops to a place where they can be trained?—Practically it means deciding the time and place of the training, that is to say, what time of year a particular Militia battalion is to be called out. That of course not only depends on Military matters, but it depends on the local trade. Certain Militia regiments can only train at particular times of the year. Then other questions arise; for instance, some Militia regiment may have been for years training at some out of the way place where they have had a pleasant time, but little opportunity of training properly, such regiments are brought occasionally up to Aldershot and other military centres, where they do not have such a pleasant time, from a social point of view, but better training. I do not see, however, why, provided general principles are laid down on which we have hitherto acted, Officers Commanding Army Corps should not be able to do this work, but the chief reason is, as I say, that in some districts there are no facilities; where you have a large command, or an Army Corps, there is more chance of an opportunity of carrying it out.

9452. As regards the curriculum of training, I gather that A.G. 1 has nothing to do with it?—Nothing whatsoever, that is done by A.G. 4; I understand that the Adjutant-General is anxious to have what he calls a training branch of the Army, which will generally superintend the whole system of training in the Army, the officers of which will probably travel about and see that the curriculum is generally uniform, and that there are not different systems of training in vogue.

9453. (*Mr. Beckett.*) It falls on the Inspector-General of Cavalry, does it not, to decide that the curriculum is followed out in the case of Yeomanry?—All training is under A.G. 4, but the inspection would devolve on the Inspector-General of Cavalry. If there is a training branch instituted, it would probably be in very close touch with the Inspector-General of Cavalry.

9454. (*Mr. Mather.*) Returning for a moment to the question of drafts, when an order is made upon a General Officer Commanding a certain district for a

certain number of men, do you mention simply the number and leave to him the selection of these men?—No, we tell him categories of service from which they are to be drawn. We know exactly from these rank-and-file returns, which perhaps you have seen, what categories of service the men are in.

9455. Is each man noted by name?—No.

9456. You simply say a certain number of men of such a category are wanted?—Yes. Let me show you the return (*the witness explains the return*).

9457. Then you send instructions to the General Officer Commanding where the men are serving as to exactly what you require?—Yes.

9458. And he simply carries out the instructions?—He carries out the instructions, and orders the Officer Commanding the Battalion or other unit to take the men in strict order of seniority and detail them for draft, but we give him a certain percentage—I think it is 5 per cent.—of special exemptions.

9459. He may exercise his discretion as to those for certain reasons, may he?—Yes, and we also exempt particular soldiers who are specially required, such as pioneers, trained signallers, and practically what we call the regimental staff.

9460. Do not you consider this mode of drafting men from place to place could be done between the General Officers Commanding various places, and that it need not come through the Central Office?—I think we should get into trouble if we left it to them. The best way is to take a concrete case. The majority of our drafts, of course, go to India. We should have to place India in communication, we will say, with Aldershot for certain units; India would have to correspond with Aldershot, and say, "I want so many men," then, instead of India sending one return per annum to the War Office, and of us telling the different Army Corps what to do, India would have to send a return for each Army Corps, and neither we nor the India Office would in the least know what was going on.

9461. As a matter of fact, I suppose, there is not much delay entailed by the present system, is there?—There is no delay, because we make our estimates of drafts a considerable time beforehand.

9462. And it by no means disorganises the arrangements of the General Officer of the District, does it?—No, because we take the drafts in the winter, at a time which is convenient, as the annual training is over. I can also show you how we make our estimates (*the witness explains*).

9463. It is a considerable business which is going on continually through the year, I suppose?—It goes on during the trooping season, from the autumn to the spring.

9464. You spoke of your department being hopelessly disorganised; what do you mean precisely by that?—Among other things we never know in A.G. 1 who deals with papers. This one paper happened to go through my hands yesterday, it is quite an unimportant paper, but it will show the Committee what I mean.

9465. Where does it come from?—The paper was originally started by myself. At the Queen's funeral a company of Volunteers, for reasons of their own, had chosen to turn out in scarlet instead of great coats. The General Officer Commanding their District was asked why it was done. An explanation came back which we did not consider a proper one, and we asked the Officer Commanding the Home District whether he considered it a valid excuse. He knew what facilities this particular corps had of finding out what the proper order was. I dealt with the matter myself, and drafted the latter instructions, and yesterday, having heard nothing further about it, I asked what the result had been, and it then turned out that the answer had come back to the Department and had been taken by a civil clerk to, and dealt with by, the Deputy-Adjutant-General.

9466. A civil clerk in what branch?—In A.G. 1; and it had been taken direct to the Deputy Adjutant-General, therefore the Staff Officer who had been working the case under the Deputy Adjutant-General had it taken out of his hands, and it was being dealt with by another man.

9467. That was a mistake in the distribution of the letter, I suppose?—No, I think it was more the system.

9468. How did the letter get into the hands of this particular clerk?—From the Central Registry.

9469. Was not that the initial blunder?—No, It is all in the same branch, A.G. 1. The papers go to the clerks' rooms. The clerk, seeing that the matter had been dealt with by me in my own handwriting, should have sent the paper up to me to continue it; instead of that, he took it to the Deputy Adjutant-General.

9470. (*Chairman.*) That was a mistake on the part of the clerk, was it not?—That was a mistake on the part of the clerk, but it should not be in his power to decide such a matter.

9471. That is not a matter of organisation, is it?—What I mean is that it is really more than a mistake on the part of the clerk, and that it is a flaw in the organisation which makes it possible; we never know in A.G. 1 whether a civilian clerk or a Military officer deals with a paper. Such a mistake could not happen in A.G. 4 or in Q.M.G. 2, where the clerks do not take papers to the Senior Staff Officers.

9472. You can lay that down, can you not?—It is difficult to lay it down ourselves, because, as I understand, the Military officers in A.G. 1 are not responsible for the office organisation, it is entirely under the permanent officials.

9473. (*Mr. Mather.*) Why do you not make your own organisation? Cannot you lay down a rule that when you have dealt with a paper, the clerk is to bring it back to you, with the answer?—I have been trying to do it for four years, and have not succeeded, nor is there any likelihood of success under the present dual control and the existing traditions of the sub-division.

9474. You are chief of a Department, why cannot you organise your own Department in your own way?—I am not chief of a sub-division, the office organisation is not under Military officers. The statement that I am head of A.G. 1 would be combated by the senior civilian clerks.

9475. Who organises it for you then?—The senior clerk. I do not have anything to do even with moving clerks from one branch of my sub-division to another.

9476. That may be, but you may make recommendations?—Yes, I can make recommendations, but that is insufficient.

9477. You can say, "I am head of this Department, and I insist on this being done."—No, I cannot, for it is not conceded that I am head of the sub-division. It is a divided responsibility, the preponderance of which lies with the civil element.

9478. (*Chairman.*) But surely if you lay down a rule that any question with which you had been dealing should be brought to you directly it came back into the office, that rule would be observed?—I am afraid it is not always observed.

9479. Have you ever laid it down?—I have constantly spoken on the subject, and on one occasion the Adjutant-General had up one of the clerks and spoke seriously on the matter.

9480. But have you ever laid it down in writing?—I do not think you quite understand that although I am nominally at the head of this sub-division I am not really at the head of it all. Quite recently I asked a subordinate clerk, if I and a senior clerk gave him diametrically opposite orders, which he would obey, and he informed me that, under existing traditions, he would be bound to disregard mine.

9481. (*Mr. Mather.*) Who is your chief?—The Deputy Adjutant-General and the Adjutant-General.

9482. When you have an organisation or disorganisation in your Department, by which you cannot work and by which you cannot perform your duties efficiently, which is what it comes to, why do you not go to your chief at once and insist that there must be some change made, or you cannot be responsible for your work being turned out properly?—I have represented it very often, and what is more, I have put forward a paper to the Adjutant-General, which I believe has been generally approved; he has accepted my views, and I believe it is eventually going to be put right, but it has not yet been put right.

9483. One can almost imagine in ordinary affairs of life a procedure of that kind would prevent a matter being put right. Why is not a personal representation made by you to your chief and an investigation insisted on?—I have represented it, and the Adjutant-General and Deputy-Adjutant-General have done their best to remedy matters by dealing as little as possible with the clerks direct. More than that, they cannot do

without an increase of officers, and an abolition of the dual control.

9484. It is a small evil which should be remedied?—I have represented it, and it has been put on paper, but the recommendations have not yet been carried out.

9485. The putting on paper is fatal to any remedy, is it not? A recording of the fact by putting it on paper means that that evil will never be cured apparently; to get out of that trouble, why do you not go direct to your chief?—I have spoken to my chief several times on the subject, and he is quite in accord with me. I think you minimise the evil I complain of; it is not a matter which a few words can put right.

9486. Then why does he not give the order to have it remedied at once?—He has not got it in his power to carry out my suggestions and break up the Department.

(*Chairman.*) That is a different thing; we are dealing with letters. The one is the consequence of the other.

(*Mr. Mather.*) The one instance you have given as to disorganisation is as to this letter, which was probably a mistake. That is a mere trivial detail, which in any department of life ought to be settled at once by a personal interview between yourself and your chief. Surely it does not require a paper?—That would not require a paper. This was merely an example of what frequently occurs. In one case the same thing happened with a Draft Bill, which, when it became law, was found to fall far short of the intention.

9487. Then passing to any other question—what other example of disorganisation can you give, because your words struck me as being so indicative of something terribly wrong that I want to have your phrase "hopelessly disorganised" explained?—Were those my actual words?

9488. Yes, you did.—My expression means to a very great extent that we absolutely have not the staff to carry out the work, that the work as laid down in the War Office list is not apportioned to the different persons concerned, that the organisation is based on the very opposite lines to those which promote efficiency. The sub-division has outgone itself, and is now too unwieldy, the control is divided and ill-defined, and the proportion of officers to clerks is far too few. It is nowhere laid down that I know of, what the actual work of the Deputy Adjutant-General is, or of the Deputy Assistant Adjutant-General. The War Office list is no guide.

9489. But throughout the War Office there must be naturally some adjustments, according to the kind of business that comes up. You may possibly have to attend to some small matters occasionally which perhaps properly belong to the Deputy Adjutant-General; you cannot draw a very fine line?—No. But my point is that the system in other branches which I recommend for adoption do not present these elements of disorganisation.

9490. One can understand if you were under-staffed, that your work gets into arrear, and, therefore, would become confused, and that there was delay and all sorts of things. In that matter of clerks, if you find your Department under-staffed, to whom do you go for assistance?—In the point of clerks, I have to go to Mr. Sewell, the Principal.

9491. Is he the Principal Clerk?—He is the Principal Clerk of the Adjutant-General's Department.

9492. If you say, "I want one or two more clerks," what happens?—I asked him the other day to get two more clerks; he put forward an application and he got them.

9493. What do you mean by putting forward an application?—

(*The Secretary.*) He addresses a minute to the Permanent Under Secretary of State.

(*Witness.*) I think he would get them from the Civil Service Commission.

9494. (*Mr. Mather.*) I want to know whether it means a transference of clerks from another Department, or engaging two new clerks?—New clerks.

(*The Secretary.*) Yes, it is a question for the Permanent Under Secretary of State.

9495. (*Mr. Mather.*) You have made application for clerks, you say?—Yes.

9496. What happened?—He got me the clerks.

*Lieut.-Col.
F. S. Robb.*

20 March 1901.

Lieut.-Col.
F. S. Robb.
20 March 1901.

9497. Then now you are all organised?—No. The addition of two more clerks does not reorganise the sub-division. I have explained that the whole sub-division ought to be split up, each section being placed under a Military head with indisputable control, and the work of each branch of it ought to be absolutely correctly defined for each—that is what it wants.

9498. That is as to your own department?—That is as to my own sub-division.

9499. There are sub-sections under that sub-division are there not?—There are three, but even of those not one is dealt with individually by myself.

9500. (Chairman.) You could put forward a scheme, could you not?—I have put forward a scheme.

9500A. And you are waiting for an answer?—Yes. The scheme which I put forward to the Adjutant-General, and which he accepted, requires the addition of a considerable number of officers.

9501. (Sir Charles Welby.) Has it been before the Committee?—I believe it has. That means money in the first place, and officers in the next place, and it is very difficult at the moment to lay hands on an officer, even if the proposal is approved financially.

9502. (Mr. Mather.) We are coming now to this: the hopeless disorganisation to which you refer, has nothing to do with the trivial matters, but the system in your department is wrong. For the proper execution of work you require sub-sections in your department; you control the whole, and you want an officer at each sub-section?—Exactly. If I may explain what I mean is that the work of the department is too much crowded into the neck of a bottle, too much comes through one man; it wants breaking up, and a lot of the work stopped by junior officers before it comes to me, and the divided control should cease.

9503. By the one man, you mean yourself?—I do not say necessarily myself, but to the head of the branch.

9504. You have to do a lot of work which might be done by some sub-officer, you mean?—Certainly.

9505. And when that is done, you think there will be less disorganisation in your branch, do you?—Yes, I am certain of it.

9506. (Sir George Clarke.) Reading through the schedule of your duties, it seems to me they are nearly all addressed to Military matters, involving a knowledge of the life of the Army?—Quite so.

9507. But except yourself and the fifteen Military clerks, there is no one in the sub-division who has any knowledge of the Army, except on paper, is there?—Exactly, except, of course, the Deputy Adjutant-General in such matters as he deals with.

9508. Would you not, therefore, transfer as much as possible of this military work to military clerks in the future, leaving Lower Division clerks only to deal with things in which knowledge of the Army may be said to be unnecessary?—I do not think I should be inclined to give the military clerks more than I have said—statistical returns, establishments and drafts.

9509. Establishments meaning canteens?—No, I mean the regimental establishments.

9510. You have said distinctly that you would have no higher division clerks in your division at all?—Certainly not; as long as they remain, there will still be the divided control of which I speak.

9511. How does your subdivision work with the Inspector-General of Auxiliary Forces and the Inspector-General of Cavalry?—I work a good deal with the Inspector-General of Auxiliary Forces. I worked a good deal more with him before he had his own two Deputy Assistant Adjutants-General, which he now has. I very often used to take his instructions on Militia questions, and sign letters myself on his authority. I do that less now, because he has his own Deputy Assistant Adjutants-General, but in some cases, for instance, I have drafted orders for Volunteer camps, but I have done it partly under his instructions, and partly under the Adjutant-General's instructions. The Inspector-General of Auxiliary Officers seeing a matter from the Volunteer Force point of view, and the Adjutant-General looking at it from an Army point of view, I take my instructions from both those officers on the same subject.

9512. Then, practically, in addition to being head of A.G. 1, you sometimes act as the executive officer of

A.G. 2 and A.G. 3?—No, I do not act for A.G. 2, though occasionally for A.G. 3, but as I have explained I am only head of A.G. 1 on paper.

9513. And the Inspector-General of Cavalry?—No, I do not take instructions from the Inspector-General of Cavalry. I have very little to do with the Inspector-General of Cavalry. I often send him papers on Cavalry matters asking for advice, and in the same way his Assistant Adjutant-General attends the Drafts Committee to advise the Committee on technical matters connected with Cavalry, but practically I never take my orders from the Inspector-General of Cavalry, although I do plenty of executive work with regard to Cavalry.

9514. Is not there a good deal of overlapping of your respective duties?—There is a certain amount of overlapping, but I do not know quite how it could be got over. May I give you an example such as the posting of non-commissioned officers to the permanent staff of Yeomanry. The list of candidates is kept by the Assistant Adjutant-General to the Inspector-General of Cavalry, which is practically the Inspector-General of Cavalry himself. He makes the selections, but I actually give the executive orders to move a man from the particular Cavalry regiment to the particular Yeomanry regiment. I do not think he has any executive functions at all. He is an Inspector.

9515. Then in that case you act as his executive officer?—No, as the Adjutant-General's executive officer.

9516. The Committee have had evidence that a contradictory decision was received with regard to the question of the appointment of a Brigadier of Yeomanry that had arisen in consequence of this overlapping?—I do not deal with officers.

9517. With regard to the Royal Artillery officers, the War Office List gives Colonel Hay on page 60, but it does not show him on page 61 as belonging to A.G. 1. Does he belong to A.G. 1?—Colonel Hay does not necessarily belong to A.G. 1. He is the Artillery adviser to the Adjutant-General. I think it is incorrect to put him as belonging to A.G. 1. Sometimes he acts as adviser to A.G. 4; sometimes as adviser to A.G. 1; and sometimes he acts as the direct adviser to the Adjutant-General.

9518. Then taking this official list of duties here, I gather from your evidence that it is entirely misleading?—Entirely.

9519. As regards your jurisdiction in these matters, therefore, your jurisdiction only extends over some of these things?—Only some of them.

9520. Do you act directly under the Deputy Adjutant-General, or have you direct access to the Adjutant-General?—I have direct access to both of them.

9521. So that you have not in every case, but possibly in some cases, a narrow neck of a bottle between you and your titular chief, the Adjutant-General?—Most of the things I take to the Deputy Adjutant-General, which he decides himself. I take his decisions and act on them. If they are important letters I take them back to him to sign. If they are unimportant letters I sign them myself. In the same way I go direct to the Adjutant-General on certain points. There is nothing laid down about that. I was in the same appointment under Sir Redvers Buller. I took far fewer papers direct to Sir Redvers Buller than I do to Sir Evelyn Wood. The personal equation comes in a good deal. If the papers are important I take them back to the Adjutant-General to sign. If they are unimportant I sign them myself. Occasionally, but not often, a matter which I take to the Deputy Adjutant-General which he does not decide himself, he himself takes to the Adjutant-General, but that is very rare. If he says the matter is one for the Adjutant-General, I usually take it to him myself.

9522. Then you exercise your own discretion whether you go direct to the Adjutant-General or whether you go to the Deputy Adjutant-General?—Exactly; I know the questions which the Adjutant-General himself likes to deal with, but there is nothing laid down about it—a Staff Officer gets to know it from experience.

9523. Then there is nothing laid down definitely as regards the relations between your branch and the Deputy Adjutant-General—there is no definition of the duties, is there?—There is a paper in the department which practically amounts to this: that the Junior Staff Officers of the branch, that is to say,

Lieut.-Col.
F. S. Robb.

20 March 1901.

A. G. 1 and A. G. 4, are not to give decisions. As a matter of fact, every paper which comes into the War Office does require a decision, and it would be impossible to act up to that ruling, but what we do is to give decisions, only on unimportant matters; whatever is important we take to the higher authority:

9524. Do you consider you have authority enough vested in yourself to settle a great many questions which need not go beyond you?—Yes. By far the majority of questions which come to me I do settle myself; there would be a break down if I did not.

9525. I gather from a lot of these scheduled duties being taken out of your hands and going to other people that you have practically little control over the subdivision?—Very little; over the clerical portion I have none

9526. That is to say, the Second Division clerks do pass papers out of your office and have to do so?—I do not understand the question.

9527. Supposing a paper comes referring to the posting of an officer of the Royal Artillery?—I do not deal with that; I do not deal with officers; that would go to the Deputy Adjutant-General.

9528. I mean, if the Registry works on this schedule, it must send to A. G. 1 a whole heap of papers, which, according to your evidence, would not come before you at all?—I can explain that. They send them to the branch and they all go to Mr. Leach, the senior clerk. He is not a Military officer, but he decides which of those papers shall be dealt with by the Deputy Adjutant-General and which by the Deputy-Assistant Adjutant-General. He, in his room, has power to pass the papers to me or to pass them to the Deputy Adjutant-General whether I have dealt with them before or whether the Deputy Adjutant-General has dealt with them before. My papers are sent up from his room after he has seen them. Latterly, however, some of the papers have gone direct to the other clerks.

9529. That means that your subordinate has a power of distribution of papers in your sub-division and removing those papers from that sub-division, and handing them to someone else?—I do not think Mr. Leach would call himself my subordinate, nor do I think that a senior clerk of his standing should be the subordinate of a junior staff officer, he deals with far more important papers than I do. He has the power to which you allude.

9530. Then I do not understand it?—It is extraordinary, I admit. He acts as head clerk to the Deputy Adjutant-General; in that capacity he takes papers to him direct.

9531. Then he has a triple allegiance—a small allegiance to yourself, a larger allegiance to the Deputy Adjutant-General, and a third allegiance to the Under Secretary?—And you might also include an allegiance to Mr. Sewell, and to the Inspector-General of Auxiliary Forces.

9532. I may take it, may I not, summing it up, that you really have not the control of this long list of people?—I have no control over a very large number of them.

9533. And when you speak of "hopeless disorganisation," in your mind is there something more than the disorganisation of this sub-division; have you got in your mind the whole distribution, or want of distribution, of work throughout the whole of the Adjutant-General's office, and do you think it is not merely a question of reforming this subdivision but a much larger reform, affecting the whole of the work of the Adjutant-General's office?—I do not want to make any suggestion as regards Branches A. G. 2, 3, and 4, but when I talk of "hopeless disorganisation," I mean the relations of A. G. 1 and of the various officers and clerks composing it, which I believe are quite unique.

9534. (Mr. Mather.) Was that the answer you gave to me?—I think so; that is included in the answer I gave to you.

9535. (Sir George Clarke.) The sub-divisions, in fact, work so much together, and their entire action is so important, that one of them being in a wrong state upsets them all, and you could not have a proper organisation without radically rearranging the duties throughout the Adjutant-General's office?—I want to keep to A. G. 1. I have no reason whatever for suggesting that A. G. 2, A. G. 3, 4, 5, and 6 are in want of reorganisation. I can only say that A. G. 1 wants a thorough reorganisation so that everybody may

know exactly what their work is. I may say that constantly officers from other branches, from the Ordnance Branch and from the Quartermaster-General's Branch, come to me, and particularly from the Intelligence Division, which is another house, and which does not so often come into contact with the Adjutant-General's Department; constantly officers come to me and ask me questions about posting officers and other matters which I do not deal with, and say they would naturally imagine from the War Office List that I dealt with them, but I do not.

9536. (Colonel Miles.) It is clear that you are not satisfied with the organisation of your branch?—I am not, it is clear.

9537. Do you happen to be aware that it is a trouble of old standing, and that your predecessors have found the same trouble?—I am aware of it; I have spoken to them many a time about it.

9538. And so far as you know they are very much of the same opinion as yourself?—I think we are absolutely of the same opinion.

9539. And that it has in the case of some of your predecessors even come to a crisis?—So one of them has informed me.

9540. You are the chief executive officer of A. G. 1, which I take it is the chief Executive Branch of the Adjutant-General's office, is it not?—I think it is; it certainly is the largest and most comprehensive Branch of the Adjutant-General's Department. I have explained I am only nominally chief of it.

9541. Without asking you to give an opinion as to other branches, which I think you are quite right not to do, you have, I think, over 40 clerks?—Yes.

9542. Whereas A. G. 3 have two officers and six clerks?—A. G. 3 have now three officers, and one of the clerks is dead; I do not know whether they have appointed another one.

9543. A. G. 3 then has three officers and six clerks, A. G. 4 has two officers and 10 clerks?—Yes, so it appears from the War Office list.

9544. So that, looking at it casually, it would look as if the proportion between the Branches was not very satisfactory?—I have represented that already in the paper I have submitted to the Adjutant-General.

9545. I want to make it clear that the senior clerk who works under you is not under you?—He is not under me, sometimes I do not see him the whole day.

9546. He comes to you when he decides a paper is to come to you, and he does not when he decides it is not for you?—I should not like to say that. Sometimes he sends me up heaps of papers, but I do not necessarily see him.

9547. (Chairman.) If you sent for him he would come?—Certainly he would.

9548. (Colonel Miles.) With regard to the Second Division clerks you have, they are not under you in any sense regarding their future, are they; you would not be answerable with regard to their promotion?—I am asked once a year to report on their qualifications, but I have no voice in their promotion.

9549. Would they be moved about in the office without reference to you?—Certainly.

9550. I want to take you for a moment to the question of drafts. As I understand you, the objection to handing over drafts to Army Corps Commanders relates more to the disadvantages of such a course than to its impracticability?—Yes, I think that is so.

9551. You would not say in so many words that it could not be done, but you would be inclined to say that it is not wise to do it, is that what you mean?—If a battalion in India required 200 men from its linked battalion at Aldershot, I do not see that the General Officer Commanding at Aldershot could not send 200 men to that battalion, that is what you mean, is it not?

9552. I meant rather more than that. He could also send them with the full knowledge, if it is given to him, that is now in the possession of the Drafts Committee, could he not?—Yes, I think we could lay down instructions for his guidance, except any matter affecting the composition of a draft which it would be necessary to keep confidential.

9553. Do not you think it would be an advantage and a benefit to diffuse into Army Corps in districts the

Lieut.-Col.
F. S. Robb.

20 March 1901.

very important principles upon which drafts are detailed, upon which principles really depend the successful working of the present system?—I think the more you can diffuse that knowledge the better, in fact, comparatively recently we have issued a pamphlet with that very object in view.

9554. Would not it, so to speak, drive home that pamphlet, if they had the practical working of the information to which that pamphlet points?—It would, certainly.

9555. Your fear, I take it, is that by putting out the drafts, the drafts for the foreign battalions will not be as equitably selected by the home battalions as if it were done by the War Office?—I do not think I said that. What I meant was, you will never eradicate from the units abroad the notion that they are being improperly treated. Already we constantly have complaints that drafts are inequitably selected even under our present system, and I am sure that that feeling will be accentuated if a man who was believed to be interested had absolute control over the selection of the drafts.

9556. (Mr. Mather.) But why?—I am afraid it is human nature.

9557. I had it put to me at Portsmouth, speaking to the General Officer Commanding, that one of the reasons why they would like to have the management of these drafts themselves, was because they could select the best men to go, whereas he was quite sure at the present time the best men did not go out to India or elsewhere. That was one of the complaints made to me, and one of the reasons given.

9558. (Colonel Miles.) I was President of the Drafts Committee when it was first convened, at the time of the Wantage Committee, and in some cases it was found that the home battalions had unduly suffered in the interests of the foreign battalions. Have you found that so? May I put it in other words? We have sometimes thought too much of the importance of the personnel of the foreign battalions, have we not?—I think you might as a general principle lay down that the home battalion, which is a nursery, suffers, and it is intended to suffer; you may say that the interests of the foreign battalion are paramount.

9559. That is the correct view, and we carried that to such an extreme point sometimes that we injured the home battalions, speaking of the past time, that is to say, that we called upon a regiment sometimes to send out too many men in one year, when it would have been able to recuperate and send a bigger draft, with less loss to itself, in the following year?—It is possible since then we have made some improvement—perhaps we have taken advantage of your experience in that matter. We may have improved matters by adopting only one establishment for battalions at home.

9559A. Do not you think that when in due course you come to a district you will be able to supervise drafts without assistance or supervision from the War Office?—I think the experience I have gained here would be of assistance to me in doing so.

9560. And do not you think other officers who have held similar appointments in the War Office could do the same thing?—I think possibly after an officer has had training here at the War Office he might look at it more from an Army point of view.

9561. Again, is it not a point that by doing that we shall get more to look at it from an Army point of view?—I think from the point of view of human nature that the nearer you are to the source of supply the more you are likely to sympathise with Officers Commanding units, who do not want to part with their best men, and I am sure that the units abroad would think so. I think there is a great advantage in having the power of detailing drafts removed from the source of supply as far as possible for that reason.

9562. (Sir Charles Welby.) With regard to this question of drafts, is it not broadly your position that it is vitally necessary to administer the draft system on scientific and far-seeing lines, that is to say, that you recruit on a territorial system as far as you can, and there is only a limited area for recruits to be drawn from, while it is of the utmost importance that your demand for recruits for a particular regiment should be as far as possible equal one year with another, and that there should not be heavy demands at one moment and small demands at another moment?—That question, properly speaking, is one for A.G. 2, which works with A.G. 1, and Q.M.G. 2, is the supply of drafts. It is a

question of the supply and demand of recruits, and the officer who looks after the recruiting branch in this office has all that centralised under him. He would hold the balance.

9563. But it touches very closely your work of drafts, does it not?—Yes, if A.G. 2 cannot supply the men we cannot detail the drafts.

9564. I suppose A.G. 2 is represented on the Drafts Committee, is he not?—Yes, Colonel Crutchley is on the Drafts Committee.

9465. Is it not the fact that up to the institution of the Drafts Committee a few years ago this drafting work was done on comparatively haphazard lines?—I was not here then, but I have been told it was not so carefully done as it is now.

9566. That is to say, that the drafts were told off rather from the point of view of the exigencies of the moment, without full regard being paid to the ultimate effect?—That is so; practically we never detail a draft without looking forward to the time those men will go to the reserve.

9567. And the effect of that was that very serious consequences often resulted; that is to say, a big batch of men would become due to go to the reserve at a particular moment, that the battalion would be very much depleted, and therefore a very large batch of recruits would have to be brought in to fill their places. Those recruits could not be obtained from the district in which the regiment properly recruited, and therefore, say a Devonshire regiment, or a Lancashire regiment, would have to be flooded with recruits from London or Ireland, which was destructive of the whole territorial system?—Yes, and more than that, in order to regulate that outflow of reservists as far as possible, we had to offer large bounties to men in India to extend their service.

9568. May I take it the reason why you are a little apprehensive about decentralizing this question of drafts, is the fear that an Army Corps Commander would be inclined to give rather more weight to the exigencies of the moment than to the ultimate effect of his proceedings on the battalion at a time when the battalion might have passed entirely out of his ken?—Quite so, there might be such a tendency.

9569. To pass to another branch of the subject, I understood you to say that you do not deal with officers at all in A.G. 1. Is that so?—Practically you can say that I do not, but I should have to think whether any particular questions relating to officers are dealt with. If any question relating to an officer does turn up that I deal with it is very very seldom, and it is for some particular technical reason.

9570. At all events this heading in the list of A.G. 1's functions "On posting of Officers of Artillery and Infantry units and Depôts" is absolutely misleading, is it not?—As regards myself, absolutely.

(The Secretary.) It is done by the clerks in the branch.—It is done by the Deputy Adjutant-General.

9571. (Sir Charles Welby.) Practically A.G. 1 consists of two branches, that is to say, the Deputy Adjutant-General's branch and your branch, and also a third branch, Colonel Hay?—No, Colonel Hay has no branch.

9572. But so far as he has a branch it is in A.G. 1, is it not?—No, he has to deal with A.G. 3 and A.G. 4 as well. He is an adviser to the different branches of the Adjutant-General's Department; it is entirely wrong to show him as belonging to A.G. 1.

9573. But some of his functions are shown in A.G. 1, the posting of Artillery officers to units, for instance?—Colonel Hay does not do that.

9574. So that your branch is really a branch consisting of the Deputy Adjutant-General's and your branch together?—Yes, to a certain extent that is so. But some of the work is also done by the Inspector-General of Auxiliary Forces, and the Deputy-Adjutant-General's work is not only limited to A.G. 1. It is very complicated.

9575. And you think it an advantage if those functions could be separated and sorted out?—I think so, not only to the advantage of the branch, but also to the advantage of the other branches, who are very much misled by this arrangement, and who do not understand the division.

9576. I should like for a moment to take you to the case of the Volunteers who appeared at the Queen's

funeral in irregular uniform. Is not that a question of discipline rather than a question for A.G. 1?—I think not. A great many questions in A.G. 1 eventually become discipline questions. This was a question of why they wore a wrong dress. That would not be a discipline question until it turned out that there had been a direct disobedience of orders, or if it became a serious case only. If serious notice had to be taken, then we should transfer it to A.G. 4 to take disciplinary action.

9577. Then it is part of the functions of A.G. 1 to secure that troops on parade appear in proper uniform, is it?—As a rule it would never come to us. Only if having been noticed by an officer on the Headquarters Staff that something had gone wrong, he naturally took it up.

9578. Would not the proper course, if he noticed this thing outside his immediate functions, be to draw the attention of the General Officer Commanding the District to it, and leave him to deal with it entirely?—Quite so, this was done, but there were two districts concerned in this case. The General Officer Commanding the Scottish District accepted this officer's explanation, that he had no opportunity of ascertaining what the proper dress was; the General Officer Commanding the Home District would know what opportunities that officer had on arriving in London of ascertaining what was the proper dress. Otherwise if it had been left entirely to the General Officer Commanding the Scotch District, and he had been aware of all the facts of the case, it was a matter he could perfectly well have dealt with.

9579. I suppose a possible explanation of the clerk having taken a case behind your back to the Deputy Adjutant-General would be that, in his opinion, rightly or wrongly, it was a case for the Deputy Adjutant-General to deal with rather than the officer at the head A.G. 1; that is a conceivable explanation, is it not?—I think not; heaps of papers I deal with are dealt with by the Deputy Adjutant-General. The check would see that I had dealt with it, as it was in my handwriting.

9580. Eventually?—No, any question which is brought to me which requires decision at all according to the Memorandum existing in the sub-division I take to the Deputy Adjutant-General. I am not supposed really to give a decision on any case, but if I acted absolutely up to that the work would not get on, it really means any decision on any important matter. This case having been originally taken up by me, ought not to have been taken out of my hands. What I complain of is that it is possible owing to the organisation of the branch for such incidents to occur. I think they are impossible in other branches.

9581. With regard to the disorganisation which prevails in your branch, how long was it you say you have been at the head of A.G. 1?—I have been in A.G. 1 since 1897.

9582. Have you ever brought to the notice of your superiors till within the last few weeks, the fact that there was a hopeless state of disorganisation there?—No; I have often spoken about the divided control, but it has only become recently acutely apparent, although it has existed for a long time in the way of dissatisfaction between the junior staff officers and the senior clerks; still I have never put forward any actual proposal for reorganisation until comparatively recently.

9583. Was that because no very great practical evils manifested themselves till the time of pressure resulting from the war?—I think friction in a branch always means evil, there always has been friction, and it has been of very long standing, but, undoubtedly, the recent pressure has brought out the faults of the sub-division. I have endeavoured to carry on as far as possible under existing circumstances, but the sub-division has been gradually becoming unwieldly; it is now about double the size that it was when I joined it. It has outgrown itself.

9584. But you have never thought it your duty to represent officially the evils resulting from this state of things until lately, have you?—I have never put it formally on paper until a few months ago; I have often complained, represented my anomalous position, and the previous Deputy Adjutant-General, Sir Francis Clery, who has been a good deal at the War Office, told me there always had been this difficulty between the Senior Clerks and the Junior Staff Officers, owing to the anomalous relations between them, but the faults

brought out by the recent pressure of work convince me that the existing organisation is not capable of standing the strain of a war, and that it requires thorough reconstitution.

9585. As far as you know, has Sir Francis Clery, or any Deputy Adjutant-General or Adjutant-General, till this new scheme put forward any proposal for changing the state of things?—I have not heard—I do not know.

9586. With regard to the Registry, have you any observations to make as to the way they do their work, and how it affects your branch?—I do not have much to do with the Registry. I see the result of their work, but the Clerks deal chiefly with the Registry. I say to them "draw such and such a paper" and they draw it for me, I do not have any actual dealing with them. There is nothing I know about the Registry that I could criticise, because I do not know the scope of their work.

9587. (*The Secretary.*) But you would know whether the papers which ought to come to you from the Registry are marked to another Branch, would you not?—I have not noticed anything wrong.

9588. (*Sir Charles Welby.*) Or any great delay in the letters coming to you?—There is a great delay, but I think it is more owing to the congestion of work in my own sub-division; the clerks are here late every night; they work very hard indeed.

9589. With regard to these "general miscellaneous questions" which you say constitute the chief burden on your branch, do you think it would be of assistance to you if there was a kind of central inquiry office which could deal with all miscellaneous correspondence and inquiries in the same way that C. 2 deals with Parliamentary questions?—Although C. 2 deals with Parliamentary questions they send over to us all which require a military opinion, and if you had a central bureau you would have to do the same.

9590. That is why I ask whether you think any system of that sort would be a relief to you or not. Of course, a central bureau of that sort would have to go to the various branches concerned to get the information, but it is possible they might be able to clear off a number of questions without troubling the Head Office; is it not?—You must either have a Military Inquiry Office, or you must submit the question to a Military Officer for an opinion.

9591. You say that without qualification, do you?—Yes, as to every question of a military nature, I think so.

9592. Perhaps your pet lamb case rather misled us. That was not a typical case was it?—No, I only quoted that as the most extreme case I could think of.

9593. I mean, do you get many letters on subjects which are really hardly of a military character at all?—I think not. What I particularly wish to emphasise about "miscellaneous general questions," is that they are mostly questions which could be decided without coming to the War Office at all—that they could go to the Army Corps or even in a great many cases, they could go to some one with ordinary military knowledge, but if they do come to the War Office they should be dealt with by a Staff Officer.

9594. Then is it your opinion that the true remedy is to persuade the public that it is not necessary to come to the War Office as the fountain head for everything?—Yes, exactly. If we could persuade the public to go to local people instead of coming up here, we should take out of this Office an enormous amount of unnecessary correspondence. May I give an instance which occurred recently? A local company of Volunteers was arriving from South Africa and the local Mayor wanted an Army Order issued as to arrangements for its reception, so we told him it was a purely local matter for him to adjust at the District Headquarters. A very short time after this Lord Strathcona's Horse had to be escorted from the railway station to the Docks, whereupon he asked us to provide a band, and he was again told it was a matter for local action. One would have thought that, having been told in one case that it was a local matter, he would have applied to the District Headquarters in the other case.

9595. A process of education by printed forms would not give you much trouble would it, you could have replied to both those inquiries by a printed form could you not?—I think so, if the public would only accept

*Lieut.-Col.
F. S. Robb.*

20 March 1901

Lieut.-Col.
F. S. Robb.

20 March 1901.

them, but our experience in a very great many cases is that the public will not accept a printed form.

9596. (*Chairman.*) As regards questions of extra duty pay which really have to be decided by your Department, we understand they go now first to the Finance Department which causes needless reference. If they came to you first and your Department acted upon them, would that save these needless references?—It would quicken the work because it would be settled in one branch instead of in two.

9597. The branch which really has to settle it?—The branch which states the ground on which it is settled. Occasionally, but not often the financial people object to extra duty pay which we recommend, but the occasions are very rare, and the grounds being invariably military, I think we could practically settle any of them.

9598. If they came to you first?—If they came to us first.

9599. And you would only pass those on which you wanted some financial advice?—If there was anything very intricate. Of course the result of the present system is this, that as we rely on the financial branch to give the ultimate consent, we do not study the pay warrant particularly closely; we look upon them to study the pay warrant. If the matter was in our hands we should study it very much closer, and I daresay occasionally a transfer of clerks from the financial side to the military side would assist us in the way of having someone at our elbow with a certain amount of financial knowledge, but I do not put forward the proposal on the ground that we should do it better; it is only on the ground that we should hasten the procedure.

9600. (*Sir Charles Welby.*) Do you think it would be a distinct advantage to you if you had a branch of the Accountant-General's Office at your elbow so to speak, and in close touch with you, to which you could refer when any financial points arose?—I think not. I think that is more a question of office structure than anything else. It is our misfortune that the house is so widely separated. It is only a question of how long it takes you to go from one room to another. I am constantly over on the financial side, and they are constantly on my side. We work together quite harmoniously.

9601. You do work in close contact with them?—Yes.

9602. And you are satisfied with your relations regarding them?—Yes, perfectly. There is one more point I should like to accentuate, and it is this, that if any big scheme of decentralisation is adopted, we cannot expect uniformity, and we must not question want of uniformity. It is impossible that two Generals will run their two Army Corps exactly on similar lines, and people will find that a person doing exactly the same work as themselves in one Army Corps, is better situated than they are, and they must accept that position. If they go to an outsider and say, "Ask a question as to why this man, who is doing the same work as myself, is better situated than I am," we shall at once defeat any attempt at decentralisation.

9603. In spite of regulations, there must be such cases?—Yes, there must be any number of such cases of want of uniformity. It has this advantage, that there is a possibility of instituting comparisons.

9604. (*Mr. Mather.*) And there might be certain methods, I suppose, which one uses, which might be of advantage to the other?—Quite so.

9605. A cast-iron rigid system would not be advisable?—No, I think not, it would prevent initiative.

9606. (*Chairman.*) It has been suggested that certain work which is now done in your branch, might be with advantage transferred to the Inspector-General of Auxiliary Forces, for instance, the establishment of auxiliary forces, the arrangements for annual training and manœuvres of Volunteer Corps. That is only a transfer within the Department itself, is it not?—Yes.

9607. But as a matter of classification, would not that go better to the Inspector-General of Auxiliary Forces?—I think, naturally, it is going there. Up to a very short time ago, the Inspector-General of Auxiliary Forces, and the Inspector-General of Recruiting, were one and the same man, and there was no officer to assist in A. G. 3 at all—there was no officer

whose whole duty was given up to the auxiliary forces. Now these duties are divided up.

9608. Now that there is, you think the Auxiliary Forces ought to be put under him, do you?—Yes, provided a proper touch is kept with the officers who deal with the Regular Forces. If the present system is permanent, all the overlapping between A.G. 1 and A.G. 3 that is necessary is to ensure that the procedure as to the Auxiliary Forces is not opposed to the procedure as to the Regular Military. I think all the executive work as regards the Auxiliary Forces might be done in that way in A. G. 3, subject to that limitation. The papers would still have to come through us as a check. I think it would be of assistance in relieving this sub-division of some of the pressure, and as a matter of fact, it is gradually becoming so. As an example, at the present moment we are having a discussion between the two branches about the new establishment of the Yeomanry. There are war establishments and administrative establishments. The former are published in "War Establishments," and the latter in a circular once a year. In the Army Order dealing with the re-organisation of the Yeomanry, I have drafted the establishment according to the administrative establishment which is really what we want financial authority for. On the other hand the Auxiliary Forces Branch want to publish a "war establishment," which seems to me to be more in place in a Field Service Manual, so that we are having an argument which eventually I think will have to be settled by the Auxiliary Forces conforming themselves to the same rules as the Regular Forces.

9609. (*Mr. Beckett.*) May I ask what is the difference between the administrative establishment and the war establishment?—The administrative establishment is a very much less detailed establishment; for instance, we put so many privates in the administrative establishment, whilst we break them up in a war establishment, such as orderlies to medical officers, batmen, &c. who are really only privates detailed to particular duties. War establishments are much more in detail, but the total numbers may not differ to any appreciable extent.

9610. (*Colonel Miles.*) But that necessitates a good deal of reference to the financial side, does it not?—Yes, we cannot do anything; we cannot give a decision at all as regards establishment without financial authority.

9611. Then do not you think it would be an advantage if you had part of the Accountant-General's Branch in closer touch with you?—Do you mean to say that we should have a Vote like the Quartermaster-General's Department?

9612. Yes?—I do not know that we should gain anything by that.

9613. (*Mr. Beckett.*) I suppose in making your establishments you assume you will get the 35,000 men asked for?—You allude to Yeomanry? We are basing it on that assumption.

9614. Supposing you do not get them, will that effect much change in your financial arrangements?—Of course there will be a saving, I take it. If they take money for 35,000 men, and they only get 10,000, there will be a saving on the Vote, but all that affects A. G. 1 is the regimental establishment—and it would depend on how many of those regimental establishments should be filled up.

9615. As to the distribution of those 35,000 men, does that fall within your department?—We should have a voice in it, but it would not be actually decided by us. It would be considered also by "D" the Mobilisation branch, by A. G. 2, the Recruiting branch—barracks would hardly come in, otherwise it would come into the Quartermaster-General's Branch as well.

9616. You see it involves raising many regiments?—Yes.

9617. And I was wondering whether it fell to your Department to say by whom and where those regiments should be raised and where they would be located?—We should have a voice in it.

9618. The Inspector-General of Auxiliary Forces I suppose would have a voice?—Yes, and the Inspector-General of Recruiting, the Inspector-General of Cavalry perhaps, if they are to remain under him.

9619. At which end do you begin; do you get your recruits and then decide how you are to form your regiments, or do you form a skeleton scheme of regi-

ment, and get your recruits to fill it up?—The first thing we shall do with Yeomanry is to bring up existing regiments to the higher establishment; some of them are only two squadron regiments; they will be increased to four squadron regiments, and we shall probably not begin to raise new regiments of Yeomanry until we fill up the existing ones, which are 38 in number, I think. If they are filled up it will take up more than 20,000 men. However, if any particular county wanted to raise a regiment we should not refuse to allow it to do so within reasonable limits.

9620. (*Mr. Mather.*) You have mentioned the matter of questions put by members of Parliament in connection with military subjects. Would you prefer a plan, if it could be arranged, by which members of Parliament requiring information should communicate direct with the War Office by letter, instead of putting questions in the House of Commons?—I should think that the amount of trouble involved in answering a letter and drafting an answer to a question is very much the same. Of course as far as the political head of the War Office is concerned, he probably would prefer it to be done in that way than to have to answer questions in the House.

9621. I am asking you only to get your opinion, because it has been said that questions of a trivial nature, and frequently petitions put to the Under-Secretary in the House, enable the Under-Secretary to finish a subject at once, which is not worthy of being a subject of correspondence, and there is an end of it, whereas if application were made direct, either personally or by letter to the Department itself, without a question in the House, it might lead to a great deal of correspondence and trouble. It is a matter of two evils; you are bound to have it one way or the other, and you think, I gather, that it is better to leave it as it is?—I think as regards the majority of questions, such as those I mean which are answered by my sub-division,

it does not matter very much to us whether they are answered by letter, or by a question in the House.

9622. I thought you said one of the troubles you had was the questions in the House, and the time taken up thereby?—Quite so, but I think a letter from a Member of Parliament would take as much trouble in answering as the question.

9623. You have no suggestion to make on the matter?—No, I am afraid I cannot offer any suggestion unless we could induce them to decentralise, and go to some other authority than the Secretary of State.

(*Mr. Beckett.*) I think you would find, if it became the custom for Members of Parliament to communicate with the War Office, instead of asking a question in the House, that the questions would be reduced by one-half.

9624. (*Mr. Mather.*) It has been discussed in Parliament from time to time whether these questions might not be dealt with in some other way, but it has come to questions being more trivial, and more numerous.—You mean to say it would induce a correspondence.

9625. I thought if from your point of view the trouble of answering letters would be less than the trouble you have now in getting up an answer for the Secretary of State, or any other official, it might be that Parliament would be inclined to encourage Members obtaining information for their constituents by writing:—you see what I mean?—Yes.

9626. And I should think, if that were done, Members would not be so ready to sit down and write a note asking for information from your Department, as they are now to hand a paper to the Clerk in the House, just as the fancy strikes them?—I think the actual work to the sub-division would be exactly the same in both cases. As regards the deterrent effect on members I cannot speak.

After a short adjournment.

Colonel ALEXANDER MARIN DELAYOYE examined.

9627. (*Chairman.*) You are Assistant Military Secretary for Education, are you not?—Yes.

9628. That is to say, you are, under the Military Secretary, practically the head of military education in the War Office?—Yes, you can put it that way.

9629. There have been a good many changes in regard to the organisation in connection with military education, and at one time was there not a Director-General of Education?—Yes.

9630. Could you give us a history of the changes that have been made in the office?—Yes. When I joined the Department there was a Director-General of Military Education, and besides there were two Assistant Directors of Military Education and a Deputy Assistant-Director of Military Education.

9631. What was the relation of the Director of Military Education to the Military Secretary in those days?—The Director-General always had to refer matters to the Military Secretary for the Commander-in-Chief, and to other departments for the Secretary of State; he never had any particular authority of his own.

9632. Was his status and position greater than that which you hold as Assistant Military Secretary?—Certainly; when I joined Lieutenant-General Sir Beauchamp Walker was D.G.M.E., and he was succeeded by a full General, and they have always been senior officers of General's rank.

9633. Have you any knowledge why the change was instituted?—This present change?

9634. Yes?—It was considered that it was not absolutely necessary to have so important an officer as the Director-General of Military Education in charge of the Division.

9635. Did the change result in the head of the Department being made more dependent than he was before? Have you less power than the old Director-General of Military Education?—Certainly.

9636. You have to refer more?—I have to refer everything.

9637. What has been the effect of that upon the military educational policy?—Well, of course the last 18 months have been abnormal.

9638. Let us look at normal times?—In normal times I dare say that it might occasion—I cannot say it would occasion—more delay than it did before.

9639. Then it would not really make much difference?—No.

9640. Do you speak only of the delay occasioned by having to refer?—I may say that now as Assistant my opinion I might have, unless it coincides exactly with that of my immediate chief, might very possibly never be heard of.

9641. Unless it coincided with his opinion, or he approved of it, it might be suppressed?—Certainly.

9642. What was the practice in the old days?—The Director of Military Education gave his opinion, and there it was; it might not be carried out, but at any rate you had the opinion on paper.

9643. Had he any power of appealing from the Military Secretary to the Commander-in-Chief, or to anyone else?—The Military Secretary is supposed to answer in the name of the Commander-in-Chief, and when the Military Secretary answers, it is presumed to have been before the Commander-in-Chief.

9644. What does your work principally consist of?—The military institutions refer directly to me—the Military College, the Military Academy, the Ordnance College, the Staff College, the entrance into the Army through the Militia, in fact all entrance into the Army.

9645. It is put down on page 57?—Yes.

9646. But as regards the regulations now for the examination giving admittance into Sandhurst and Woolwich, the examination is prescribed, is it not, chiefly by the Civil Service Commission?—The Civil Service Commission examine for us, under an Order in Council, but if the military authorities considered that any change was necessary they would naturally represent it to the Civil Service Commissioners and they would carry it out.

9647. Would the Civil Service Commissioners accept and put into force the representation as matter of course, or would you discuss it?—It is quite possible that if they did not agree it would be discussed, but in all my recollection I have never found that the Civil Service Commissioners have in any way opposed any proposal of the War Office.

*Lieut.-Col.
F. S. Robb.*

20 March 1901.

*Col. A. M.
Delayoye.*

Col. A. M.
Delavoye.

20 March 1901.

9648. You correspond with them, at least you deal with the Civil Service Commission with regard to the conditions of the examination?—Yes, for entrance through Sandhurst and Woolwich chiefly, there are a few other small examinations.

9649. Do they not deal with the competitive examination of Militia officers also?—No, not now.

9650. Who deals with that now?—I do.

9651. Entirely?—Yes.

9652. You lay down the conditions of examination?—They are laid down.

9653. You advise upon them; they are laid down eventually on the authority of the Commander-in-Chief or the Secretary of State?—Of the Secretary of State, on the recommendation of the Commander-in-Chief.

9654. Do you appoint the people who examine?—Yes.

9655. It is through you that the question of the examination of University candidates is settled also?—Yes.

9656. And similarly the examination of officers in Militia and Yeomanry in tactics?—All that is under me.

9657. Do you think the change in the Department—the conversion of the Director of Military Education into the Assistant Military Secretary—has worked well in the cause of military education?—I do not think it has made any difference. As I say, from the moment it was started, times became abnormal; no sooner had I become Assistant Military Secretary than war was declared, so that it has not had a fair trial.

9658. (*Sir George Clarke.*) Do you not regard the question of military education of officers and men as a very important matter with regard to the interests of the Army at large?—I should say it was about the most important matter.

9659. Do you regard the evident weakening of the Educational Department as an evil which must affect those interests?—You see, what I have just said does not tend to prove that there has been a weakening.

9660. But it would follow, would it not, from the lowering of the rank and status of the head of the Education Department, that the influence which that Department wielded now must be less than formerly?—Yes, it would; as I said before, unless the assistant's views tally with those of his chief, the assistant's views will go to the wall.

9661. And when there was a Lieutenant-General at the head of the Education Department he had much better opportunities for enforcing his views on matters of military education than you now have?—Certainly.

9662. Do you deal direct with the Commander-in-Chief about any matters, or do you only deal with the Military Secretary?—I deal with the Military Secretary.

9663. The effect of this change was, apart from the weakening of the Department as a whole, a division of education into two parts, that of officers and men?—Yes.

9664. The officers going to the Military Secretary and the men going to the Adjutant-General?—Yes.

9665. Do you think that separation of education into two halves under two perfectly distinct branches of the War Office was a good thing?—No, I do not, and I do not think it was intended at first.

9666. Could you say how the separation of military education into two parts came about?—The Adjutant-General considered that the education of the soldier and the soldier's children should be under him.

9667. Is there any logical basis for that, considering that the education of officers must also be a part of the general training of the Army, which forms part of the duties of the Adjutant-General?—Well, you see, the actual educational part of the education of the officer never has been under the Adjutant-General to the best of my recollection, and that goes back some time.

9668. When training was definitely assigned to the Adjutant-General, it would have been more logical to have included the training of officers as well as men?—The training, either of officers or men, is really quite a different thing from the education—the school work of the two.

9669. But the after training, the military training of the officers and the men must to some extent—?—

They are both under the Adjutant-General now; the field training, and all questions referring to examinations for promotion, and for the testing of Field Officers, and all that, would naturally be referred by whoever was head of Military Education to the Adjutant-General.

9670. Then, when you are dealing with this sort of subject now, do you deal with the Adjutant-General?—In dealing with them now I should pass them to the Military Secretary, and he would send them to the Adjutant-General.

9671. There is nothing laid down about that; that would be an accident?—It would not be an accident, because it would be simply carrying out the rules which have been going on for years. You might look upon field training, and all that sort of thing, as drill, which naturally is under the Adjutant-General.

9672. But the training of the Army as a whole must depend to a considerable extent, must it not, upon the education of the officer?—Certainly.

9673. And the view that the officer will take of his duties in relation to the training of the Army afterwards, will largely depend on the education with which you fit him out with when he starts?—Certainly.

9674. And, therefore, the question of military education of officers has a very important bearing upon the training of the Army at large?—Yes.

9675. I understand that you are strongly of opinion that homogeneity and power were lost to some extent by the separation which occurred?—Yes.

9676. Could you decide anything of yourself, or do you have to refer almost everything to somebody else?—Latterly, owing to the enormous pressure of work which has fallen on the Military Secretary, I have had a comparatively free hand, but I should say that in the piping times of peace I should have to refer everything, and would not be able to decide any matter myself; I mean that, of course, I would decide a minor point, which naturally all assistants can do, but any real point I should not be able to decide.

9677. (*Mr. Mather.*) For instance, what do you call a real point?—Any alteration of a regulation in regard to entry into the Army.

9678. Do you mean any change in the quality of the education or the curriculum necessary?—I should not be able to decide that certainly.

9679. That is what you would call a large point?—Yes.

9680. (*Sir George Clarke.*) In normal times you are of opinion that you would not have any real responsibility for anything?—No, certainly not, no assistant has any real responsibility.

9681. Presumably the Director-General when he was a Lieutenant-General had some responsibility?—Yes.

9682. So that the incidence of responsibility has been changed by the abolition of the Director-General?—Yes.

9683. In dealing with other departments, or rather with the Military Secretary, do you deal with him by minutes or by conference?—Whenever possible I see him.

9684. But I suppose there is a considerable amount of minute writing?—Well, that is avoided as much as possible.

9685. Is it not the case that there is now more difficulty and more delay in getting questions connected with military education settled than there used to be in the days of the Director-General?—That I should say would probably be owing to the abnormal conditions; I do not see why there need be any more delay in getting a question settled under the one than under the other, but I think the Military Secretary has as much as any one man can do of his own work.

9686. (*Sir Charles Wolley.*) Under the present abnormal conditions or at all times?—At all times.

9687. (*Sir George Clarke.*) But there must have been more motive power in the Education Department in the old days than there is now?—I am not so sure of that. I think there is a good deal of motive power at present, judging from what is going on now. There are all sorts of questions pending now.

9688. Power of initiation, perhaps, but not power of settling or taking action?—Are you referring to me?

9689. To the Department generally?—No. As I say, just now of course there is delay, and that is in consequence of the extraordinary circumstances.

9690. When the Director-General existed and was a Lieutenant-General, had he to deal both with the Military Secretary and with the Adjutant-General, or could he go direct to the Commander-in-Chief?—He could go direct to the Commander-in-Chief.

9691. Whereas you now have not got direct access to the Commander-in-Chief?—I should not go to the Commander-in-Chief without speaking to the Military Secretary first; I do not think it would be right.

9692. You have got only military clerks in your Department?—I have got a civilian; my chief clerk is one of the Higher Grade of the Second Division.

9693. Do you find military clerks satisfactory from your point of view?—From my own experience no. I have got one man who is a Warrant Officer—a Staff Sergeant Major—and I was very fortunate in getting him, he was very well known to all staff officers down at Aldershot, and he is an excellent man, just as good as my chief clerk, I should say, but he is one in a hundred. The others are perfectly incapable of writing a letter from a minute; if you ask them a question the chances are that they will answer it wrong, and from my experience they are really of very little value. They certainly have a knowledge of discipline, they are exceedingly reticent, and I have no fault to find with them in that way, but what you would expect of an intelligent clerk you do not get. Another thing is that when you have succeeded in educating a man up to being of some value it is to his interest to leave you and to go away, in order to get his promotion somewhere else, so that you are always teaching them, and as soon as they are of some value away they go.

9694. Do you select your own military clerks?—No, I apply for a clerk and pray that he may be able to write a legible and good hand, and I get one sent to me.

9695. (*The Secretary.*) Surely it is not enough for you that he should write a good hand?—Of course it is not.

9696. Do you not pray for anything more than that?—Yes, but look how much you pray for and do not get.

9697. (*Chairman.*) You are agreeably satisfied if he has got a legible handwriting?—I am obliged to be.

9698. (*Mr. Mather.*) To whom do you pray on appeal?—I pray on appeal to the Quartermaster-General.

9699. (*Sir George Clarke.*) You think that the Army might supply the kind of a clerk you require if you could select him yourself?—I would not be able to select him; I have no knowledge of them. If I get a remarkably bad one I can turn him away at once, and say that he is perfectly useless, and they would send me another, but that all means continual change and trouble.

9700. But there are men in the Army at present who probably would be fitted to carry out your work if you could get hold of them?—Certainly, if I could get hold of men like Skeats; and I could put my hand upon some others in the War Office who are very excellent men.

9701. As regards reticence you find the military clerks perfectly satisfactory?—Perfectly; there is a great deal of confidential work naturally in my Department, and I have never in all my experience been able to trace anything wrong to one of them.

9702. (*Colonel Miles.*) I should like rather to understand the change that has taken place. The duties were originally performed by the D.G.M.E., and are now divided between the Military Secretary and the Adjutant-General?—Yes.

9703. The position is not substantially altered. You are now under the Military Secretary more directly instead of being under —?—Under the Director-General.

9704. And the same class of papers and the same work falls to you now as then?—On, no, because they all fall to me now, whereas a good many fell to the Director-General. I am single-handed, and I do the work now of the Director-General, the Assistant-Director, and Deputy Assistant-Director.

9705. But you are head now, and instead of having a direct head, who devoted himself entirely to education, you have one if not two heads?—Well, I have one head.

9706. You had one head, the D.G.M.E.?—Yes, the Military Secretary is my chief, but there are, of course, matters which the Adjutant-General touches upon.

9707. The education of the soldier, which is the Army Schools Department, under Colonel Jones, is now placed in the Adjutant-General's Department?—Yes, A.G. 5.

9708. And the education of the officer was intended originally to be dealt with by the Military Secretary?—And is so now.

9709. There is a proposal, is there not, to hand over part of the education of the officer to the Adjutant-General?—Not that I have heard.

9710. Is not the point really this: whether in normal times these two high officers, the Adjutant-General and the Military Secretary, can devote sufficient time to the technical questions which arise with reference to education, such as the syllabus for examination and the limits of age?—No, I do not think they can. I do not think they have time, and they never had. The Director-General used to devote his attention to those things, and when he had mastered the subject he would go to the Adjutant-General or to the Military Secretary for the Commander-in-Chief, and give them the exact point and say, "Now then, will you approve."

9711. You say it is doubtful whether these functionaries have the time to devote to these questions which do require careful study?—I do not think under any circumstances, certainly in future, they would be able to devote much time. They do their best, I have no doubt, but I think it is too much to expect of them.

9712. Take the institution which I have the honour to be Commandant of: I am partly under the Military Secretary and also partly under the Adjutant-General?—Yes.

9713. I think I am shown in the War Office List under both of them?—Yes. With regard to the Staff College, all that the Military Secretary has to do is to examine the officers, and when they are in the college any communications are addressed by you to the Military Secretary, but the applications for entry into the Staff College all go to the Adjutant-General; I never could quite understand why, but it has always been so. There is no reason why the department or the Division that examines these officers should not enquire into the conditions that the Commanding Officer sends in, because you cannot prevent an officer from going up for the Staff College if he fulfils the conditions. Therefore, all that need be done is for them all to apply to one person, whoever is looking after education, who if there is any necessity would pass it to whoever is concerned, and ask if he may come in or not. That division of the arrangement for the Staff College is confusing, certainly; men come to me and ask me different points, and I say, "You had better go and see "A.G. 4, who deals with that, until you have got into "the college I cannot do anything with you."

9714. Take a question like the syllabus of examination for educational subjects, are they entirely dealt with by the Military Secretary?—Yes, but he would probably consult with the Adjutant-General.

9715. It would very likely come under the Adjutant-General?—I have no doubt it would be referred to him.

9716. (*Sir George Clarke.*) As regards this bifurcation from outside establishments, when their papers come of questions coming to the War Office, that would also apply to the Sandhurst College to some extent, and also to the Ordnance College at Woolwich?—It would apply to the Ordnance College, but not to Sandhurst. We have absolutely nothing to do with the boy until he becomes a cadet: the Civil Service Commissioners examine him, and they send us a list of the successful candidates, and then I take them in hand and deal with them, but the names sent in to attend the examination, inquiry into character, and all that, has been handed over to the Civil Service Commissioners.

9717. And as regards any proposals from a college for a change in the details of the entrance examination, who would deal with such a question as that?—One of our colleges?

9718. Yes, a military college: in the case of an alteration in the terms and details of the entrance examination, who would deal with such a question?—That must come here; that would be referred to the War Office, and then the War Office would, if it

Col. A. M. Delavoye.

30 March 1901.

Col. A. M.
Delavoye.

20 March 1901.

considered it necessary, communicate with the Civil Service Commissioners.

9719. The War Office being whom?—The War Office being whoever is in charge of education.

9720. Your office?—Yes.

9721. Having consulted and threshed the matter out with the Military Secretary, and possibly with the Adjutant-General?—The question would come, and then it would be referred to the Military Secretary, the Adjutant-General, or whoever it was considered necessary to consult, and then I should be told to communicate with the Civil Service Commissioners.

9722. May I take it your time is very fully occupied now by the plurality of offices which have devolved upon you?—My time is fully occupied, but there is nothing that I cannot do.

9723. But you think that at the present time there is no one who has time for thinking out and studying questions of military education?—I will not say that. At the present moment I should think that it must be pressing upon their time very much to have to do it; but there is no doubt about it that they do it and that it is done.

9724. That means that important questions of principle in military education have to be sandwiched in with the other work of people who have already a great deal to do?—Oh, yes.

9725. (*Sir Charles Welby.*) As regards your position as head of that branch of military education which concerns itself with officers, your relations to the Military Secretary now are practically the same as your relations were to the Director-General of Military Education, when there was such an office?—Yes.

9726. That is to say, the two offices have really been combined in one person, and the Military Secretary is practically Director-General of Military Education now, as far as officers are concerned?—Yes.

9727. As the head of the officer's branch of military education, you had no more power under the old system to settle matters off your own bat than you have now?—No, less I should say.

9728. That is to say, you refer now to the Military Secretary exactly the same points which you previously referred to the Director-General of Military Education, or rather fewer?—No, I refer now to the Military Secretary what was referred to the Director-General.

9729. Do you settle for yourself questions which under the old system you referred to the Director-General and which he settled?—Yes.

9730. And, therefore, to that extent, his abolition has not produced a multiplication of procedure, but elimination of one stage in the discussion?—Yes, it has.

9731. Should you say that the Director-General of Military Education, when he existed, in normal times was fully occupied?—Certainly not.

9732. Would it not be fair to say that the great mass of the work of the Department was carried out by you as regards officers, and by Colonel Jones as regards men, and that the Director-General was, after all, little more than a very imposing but rather expensive figurehead?—Well, that was the view we took of it when Sir Coleridge Grove and I went into the matter.

9733. That aspect of the case might be modified in the first case by the extra pressure due to the war, to the increase of the Army generally, and to the fact that there is at least a possibility that military education may be treated more seriously in the future than it has been in the past?—Well, I will not admit that it has not been seriously treated in the past.

9734. I will not say seriously, but treated from a broader point of view?—I mean military education has been touched upon so continually, and so many changes have been made in it in one way and another that I cannot say that it has been in any way neglected or overlooked.

9735. Do you think that if the Director-General of military education were re-established now he would be fully occupied with the work of his department, or that he would still be, as I think you said yourself he was in the past, a rather lightly burdened official?—He would not have more actual work to do, you see, so long as the office was constituted as it was; naturally his two assistants took all the laborious part of the work

off his shoulders, but the points connected with education, and references that are made, and all that, would occupy his attention; although I cannot say that he would break down under the strain.

9736. (*Mr. Beckett.*) Are you satisfied that the present system produces the best possible results as regards the military training and education?—Do you mean coming into the service?

9737. Yes?—No. We get a certain number of lads into the Army through colleges, where they are supposed to get a sound education in those subjects which are to be of use to them in their after-career, and I think that those colleges, with certain modifications, which I believe are going to be looked into, will, and most certainly ought to, produce a very good article indeed. Another way we have of getting young officers is by passing them through the Militia, and when you offer a small number of commissions and you have a large number of candidates, there is no doubt about it that the successful men are theoretically very well up, but they are theoretically well up only in the military subjects, and I cannot say they are well up in the subjects of general education; I should say they are very badly up in them.

9738. And as regards the training of officers after they have entered the Service, what do you say?—That is entirely, as I said before, an Adjutant-General's question.

9739. I thought the Adjutant-General only concerned himself with the training of the men?—No—and officers.

9740. (*The Secretary.*) As regards examination for promotion in the Army?—That comes under me—examination of them only. There is no doubt about it that in the last 20 or 30 years there has been an enormous improvement, it is impossible to say the improvement. When I joined the Service nobody ever dreamt of looking at a military book, and certainly if you opened your mouth about anything connected with your profession you were looked upon as an unnatural creature.

9741. (*Mr. Beckett.*) And as regards the authority exercised by your department over the training of the officers, you think the present arrangement of business is quite satisfactory?—I think so; I do not see how any Director-General, or anything you like to call him, could interfere with the present system of training of officers; that goes into the autumn manœuvres and the work at camps, like Aldershot; he might suggest anything, and, of course, he can now, but I do not think you could make any improvement in that way. There is only one thing, I should like, if possible, to make these promotion examinations a little less cumbersome.

9742. But it does not rest with your department to decide what form they are to take—these promotions?—No, but I can initiate it and put it forward and suggest.

9743. Would you have to suggest to the Adjutant-General, or to whom?—I should suggest, of course, to my immediate chief, and he would pass it to the Adjutant-General.

9744. (*Mr. Mather.*) You are, I suppose, entrusted with the duty and authority of drawing up changes in the curricula of the various examinations under which you pass these officers from time to time?—Yes.

9745. You have liberty to make suggestions and alterations?—Certainly; I have full liberty to make suggestions.

9746. And to make the alterations?—If approved.

9747. Without reference?—Oh, no; I say, if approved I may make the alterations.

9748. Under those circumstances do you find approval difficult to obtain, or is it usually granted to you on request?—It is always granted to me if, as I said before, my views entirely tally with the person whose approval I am seeking.

9749. I want to know how far your expert professional knowledge as the chief educator of the Army, for that is what you are really in other language?—It is a very proud title.

9750. There is no one superior to you as an expert?—I should know something about it; I have been a good many years at it.

9751. You are really the chief educator, so far as passing the officers through examinations is concerned;

you perform the work, and there is no one above you in that respect?—Yes, I perform the work.

9752. If you require alterations to be made in the systems of examination for the various branches of the Service, you are responsible for putting those alterations into form, and no one, as a rule, I presume, disputes your suggestion, but it is at once acceded to?—Well, I should say that in probably six cases out of ten I should have my way, and in four I should not.

9753. And that decision as to the four—the rejection of the four—would be delivered by someone who was not an expert on educational matters?—It would be delivered by somebody to whom I would naturally be obliged to bow as my military superior.

9754. Your immediate superior is charged with many other duties besides that of education?—Certainly.

9755. Whereas you are entirely devoted to education?—Yes.

9756. And from that point of view the decision as to what ought to be done so far as education is concerned, naturally ought to rest with you?—I do not want to appear conceited, but I think my opinion should influence the decision.

9757. It is a mere matter of common sense if you are in charge of the education of the Army.—But pardon me; I am not in charge of the education of the Army.

9758. If you are not charged with the education of the Army, who is?—The Military Secretary.

9759. He is nominally charged with it, but the whole of the work is done by you?—Very well.

9760. I wish to bring out the anomaly of the situation. Have you anything to suggest to the Committee in the direction of making an alteration in your own responsibility and your own position?—No, I would rather not.

9761. As the educator of the Army, I mean?—No, I would rather not; I am bound to say that my views are listened to, and every attention is paid me; as I say, I have absolutely no difficulties whatever, and I am not sure whether, if they were to bring in a bigger man into the business, they would pay any more attention to him than they do to me.

9762. I am far from suggesting anything of that kind; I suggest only that you should be responsible, being the man who has to perform the service; you are the educational expert for the Army, whether you like the title or not; you are the military educationist of the Army, charged with the very serious duty of making the British Army, so far as its intelligence is concerned, equal to any Army in the world. Have you anything to suggest in the direction of obtaining more power or responsibility or authority than you possess at present, for the sake of education?—No, I would rather leave that to the Committee to suggest, if they want to suggest anything.

9763. The Army, for its officers, looking to the future cost, depends entirely upon cadets applying for admission to the Military Colleges?—I am sorry to say that in the future we shall have to consider how to obtain at least 1,000 per annum what we call first appointments; the Military College, as now constituted, only gives us with one year's course 230 per annum, because the balance of 70 goes to India. The Academy have now got packed as tight as they possibly can; they are very

badly packed, but there are 302 cadets in the Academy now, and I think that would possibly, with the assistance of a few from the Militia, supply our wants, but certainly not for infantry and cavalry without going to the Militia for a far larger number than I think we ought.

9764. Is that in consequence of the want of accommodation in the colleges?—Yes.

9765. If you had more colleges you could get more cadets?—I do not think you want more colleges; you want a re-arrangement of the accommodation. I do not think you want to go in very much for building.

9766. That is not a point I care much about; I understand your reply to my question has taken the form of having in your mind the accommodation for the training of cadets rather than the number of cadets that come up to be trained?—Yes.

9767. Is there any lack of cadets coming up to be trained?—None whatever.

9768. Therefore from that source from which they come you can get any number the Army may require?—Certainly.

9769. Would you kindly say in what condition of education the cadets as a rule come up to you?—Very good indeed; they are only admitted after a very stiff competition, and consequently they come into our hands very well equipped for what we have to do with them afterwards.

9770. Therefore you can take these youths straight away into the curriculum of your college without any preparation on general subjects?—Yes, they have had all that, and we could not prepare them afterwards; after they get into the college we take them on to their military subjects.

9771. And therefore there is no change required on account of the incompetency of any of these cadets to take hold of your military subjects?—No.

9772. As a rule the majority come from the public schools, I suppose?—Yes.

9773. (*Sir George Clarke.*) Might I sum up the general effect of the changes in your department by saying that there was some focussing of military education as a whole in the previous days, and that there is no focussing of military education as a whole now?—Not as a whole, because it is divided into two.

9774. That is the main effect of the change?—That is the main effect of the change.

9775. One other question on a different matter: do you think that the one year's course at Sandhurst is sufficient for the preparatory training of the Infantry and Cavalry officers of the present day?—No, I should like to see it 18 months, and that is going to be considered.

9776. (*Sir Charles Welby.*) Is there, in your opinion, any essential connection between the education of officers and the education of men which makes it a drawback that those two should be separated and administered by different officers?—None.

9777. (*Mr. Mather.*) Is there any training in the colleges in military account keeping?—Yes, at the military college.

9778. You have had complaints made about company officers?—Yes. I cannot say that they join their battalions in any way safe against the depredation of the Pay Sergeant.

The witness withdrew.

Lieutenant-Colonel JOHN STEVEN COWANS, examined.

9779. (*Sir George Clarke.*) You are head of the Transport sub-division of the Quartermaster-General's Department?—Yes.

9780. And your duties consist in dealing with papers relating to the roster of troops going on foreign service and stationed at home and abroad?—Yes.

9781. So that you keep a register of relief for the army abroad?—Yes.

9782. And you also superintend the movements, embarkations, and disembarkations of troops?—Yes.

9783. Is it possible to decentralise any part of that work by simply ordering embarkations to be managed entirely by the General Officers Commanding the

District where the embarkations take place?—No, I do not think it would be possible; I do not think you could decentralise any of the work connected with embarkations.

9784. Your function of course would be to make an arrangement with the Admiralty for the provision of a transport, and that having been done, and the embarkation having to take place, say, in the Southern District, could not the General Commanding that District make all the other arrangements concerned?—Not without his being really a fifth wheel to the coach; all the detail would have to go through his office from the War Office, and he would have to give it to the various districts or army corps again.

Lieut.-Col.
J. S. Cowans.

20 March 1901.

*Lieut.-Col.
J. S. Cowans.*
30 March 1901.

9785. And you think all those duties must remain centralised in the War Office?—I am perfectly certain of it, if it is to be properly carried out, as regards embarkations.

9786. Another duty of your branch is conveyance of stores at home and abroad; what does that mean?—We have an officer D.A.A.G. Transport at Woolwich whose office is really part of the Quartermaster-General's Department (whose name does not appear in the War Office list to which you are referring), but who practically does the movements of stores at home by War Department vessels and by rail too, and we also have an officer, Colonel Beckett, at the Admiralty (temporarily appointed) who deals with and systematises all the despatch of stores for South Africa and stations abroad.

9787. That also you think must remain centralised in the War Office?—I am sure it must, because we are in the best position to decide to which stores, ammunition &c. priority is to be given in all allotments to ships.

9788. "Consideration of travelling expenses and allowances": what consideration does your branch give to those travelling expenses? Do you give financial consideration?—Yes, we do where there are any special military circumstances connected with any case; we do not deal with a very great many of those, because much of that has been decentralised already.

9789. You propose annual estimates for the above services?—Yes.

9790. With regard to travelling expenses and allowances, do you express a military opinion upon them?—That is so, when the Finance Branch refer to us.

9791. A military opinion upon whether those allowances are justified or not?—Exactly.

9792. And they would be the deciding body as to whether the thing should be disallowed or not?—Yes, in a way, that is to say their opinion would guide allowance or disallowance.

9793. (*The Secretary.*) The Financial Branch would not decide?—No, not exactly, we would say whether it was justifiable or not, and they would allow or not as the case would be; there is no decision about it by Finance Branch—we consider the matter in conjunction with them, and invariably deal with appeals.

9794. (*Sir George Clarke.*) The decision does not rest with the Financial Branch?—The ultimate payment does, but not the decision.

9795. The decision is taken by you?—Yes.

9796. (*Chairman.*) You are merely passing a Bill for payment then?—Yes, a civilian member dealing with it might possibly not know whether it was a justifiable charge, or not.

9797. And he would take your opinion?—Yes.

9798. (*Sir George Clarke.*) Then there is the preparation of annual estimates, that means you have a vote of your own?—Yes.

9799. And you estimate under the Transport Votes for the the probable requirements of the year?—For all the movements of the troops, stores, &c.

9800. Does your branch administer that vote when once it has been settled?—Yes, we are not interfered with in any way.

9801. Do you keep all the accounts of that vote yourself?—No, we do not actually do that; we give all the orders for the moves, &c., and keep within the limit of our vote, unless there are any special moves or anything decided upon after the estimates are framed. If such additional items are necessary from a military point of view, we then consult our Finance Branch.

9802. The accounts are kept for you?—Yes.

9803. So that you have to apply to another department if you want to know how your vote stands at any moment?—Yes.

9804. Then there is railway work in connection with mobilisation: what is that?—It is rather in the air at present; there has been but little done in connexion with that yet, pending a settled disposition of the Forces for Home Defence.

9805. As regards the working of your office, your staff is purely civil, is it not?—Yes, purely.

9806. Is it work which is better done by civil clerks?—Infinitely better by civil clerks, I think; there is a great amount of confidential work which could not be,

or should not be, done by military clerks; for instance, with regard to the question of movements of regiments and so on, it would be very undesirable if military clerks had anything to do with it, as it is apt to get out.

9807. Do you in these matters deal directly with the Quartermaster-General?—Yes.

9808. Bringing up to him such papers as you think proper?—Yes.

9809. Under you you have an acting principal?—No, Mr. Wyatt is now acting principal to the Quartermaster-General's branch; the first man that you see on that list is Mr. Welch, and I have no one but him at the head of the branch.

9810. You have no one higher than a Second Division clerk?—That is so.

9811. And you think it best to do the clerical work of your office entirely by second division clerks?—No, I think there ought to be someone at the head of it, and we have constantly pressed to get one of higher rank.

9812. Should that be an officer or an Upper Division clerk?—I do not think it would want an Upper Division clerk even, a capable staff clerk might suffice, and I think an Upper Division clerk would be rather wasted.

9813. Is the work of your sub-division very heavy?—Yes, very; we have always worked overtime since long before the war began.

9814. As so much of the work is purely military work, has not most of it to be brought up for your personal consideration?—A great deal of it, except just the straightforward work, for instance, if there is no question about an officer's passage, e.g., if the Adjutant-General asks us to provide a passage, and it is perfectly straightforward, orders are issued by means of a printed letter.

9815. Most of the work is of a kind which you could not entrust to a Second Division Clerk to dispose of without bringing it up for your own consideration?—No, I do not think you could, because decisions affecting Military Officers, or on Military points, should be considered by a Staff Officer.

9816. Do you find much overlapping of your duties with the Adjutant-General's Department?—Not overlapping, but we work a great deal in with A.G. 1.

9817. (*Colonel Miles.*) You are a member of the Drafts Committee?—Yes.

9818. You work drafts with A. G. 1?—Yes; that is what I was referring to just now.

9819. Do you think that drafts could be more decentralised than at present?—I do not; naturally drafts have to be detailed with regard to whether they are going to Colonies, or with regard to the ultimate destination of a battalion, for instance, a battalion going from a colony to a colony would have a different category of draft to one going from a colony to India and *vice versa*.

9820. And that information you think could not be centred in the Home Battalion, information both with regard to the Foreign Battalion and the Depot?—The orders from here would have to go about the category of each draft.

9821. Yes, but those instructions could go from time to time?—Practically that is what is done now; we detail so many men of a certain year.

9822. But there are a great many references back to you from districts where those categories cannot be properly carried out—not to you but to A. G. 1?—I believe there are a certain number.

9823. And it would save that? With regard to moves, all moves of units in Great Britain are carried out by you?—No; only moves of units from one district to another are.

9824. But moves within a district?—Are carried out by the district.

9825. If we go to larger Army Corps Districts, that process could, of course, be extended to the Army Corps Districts?—Unless it affected Ireland in any way.

9826. Presuming Ireland were a separate Army Corps District, it would be as now; it already carries out its moves between districts without reference to you?—Yes, but, as you know, the moves which take

place every year are arranged in a series, so that if a district moved one battalion it would necessitate the move of probably five or six battalions in that series, and a move of a battalion to Ireland would probably start a series of moves in that command.

9827. But the intermoves in Ireland are not done by you?—No.

9828. The reliefs for Ireland are carried out by you, so many battalions to go, and so many to come?—Yes.

9829. But the inter-Ireland moves are carried out by the Commander of the Forces there?—Yes.

9830. And that same process might be adopted in the new Army Corps Districts?—Yes.

9831. And you might even be able to go a step further and let Army Corps arrange moves between one district and another?—Yes, if they were initiated from here so as to complete a series of moves. That is done now very much (for instance as regards Militia units); we very often tell a district to move a battalion from one district to another, and they make the whole arrangements. We simply say what railways and what systems they are to use, and they carry out the move.

9832. You are more and more tending to decentralise moves?—Yes, after the last Decentralisation Committee we could do little more; there are one or two things I could suggest, but the bulk of the work had been decentralised long before the appointment of the above Committee.

9833. With regard to moves of individuals, what rules hold good?—Orders are issued from this office (Q.M.G. 2) only for embarkations.

9834. You have a certain amount of correspondence with regard to travelling allowances and passage cases?—Yes.

9835. A passage case is where an officer has to go abroad?—Quite.

9836. It may be at the public expense, or for certain reasons, at his own expense?—Yes.

9837. In the cases which arise with regard to passage cases and travelling allowances, do you have much correspondence with the Finance branch?—No, comparatively speaking very little; most cases are generally quite straightforward, and there is not a great number of successors' passages, or cases where there has been a transfer, &c., thus necessitating financial consideration.

9838. It is exceptional to have difficult passage cases?—We very seldom have them.

9839. I have seen cases where we had sometimes to go to the Treasury?—We have referred none to the Treasury for years.

9340. Are you speaking of the exceptional time which has occurred during the war, or before the war did you find there were many?—There have been many more of them since the war began, because there have been transfers from India and elsewhere to South Africa, and there is the question of who is to pay the successor's passage, but we have had very little correspondence, comparatively, about it, with the financial branches.

9841. At present you are in charge of the Vote, are you not?—Yes.

9842. The Vote is Vote 6?—Yes.

9843. That is the whole Vote for Movements?—Yes.

9844. The amount allotted for travelling allowances is not a large sum. Do you know what it is?—I have got the average expenditure in my papers with me.

9845. I think it is about 80,000*l.* Do you not find that it is a troublesome vote to administer? It is a vote on which a good deal of correspondence arises in one way or another?—I suppose it is.

9846. I mean in proportion to its small amount?—No, not abnormal. The average expenditure on the whole is about 800,000*l.* a year.

9847. Vote 6A 2 is the actual travelling for individuals. (The Secretary.) It is about 50,000*l.* to 60,000*l.* in normal years?—Yes.

9848. (Colonel Miles.) It is upon that item that all travelling claims for individuals are paid?—Yes.

9849. Although you are administering the Vote, you do not see the accounts?—No.

9850. If you order a certain move of troops, you do not know what it costs unless you go down and look at the accounts in F. 5?—We get it made up once a month, showing expenditure under all subheads.

9851. But you do not see the individual cost of an individual service?—No.

9852. You, the Ordering Department, are entirely dislocated from the Paying Department?—Yes; we estimate of course for all expenditure.

9853. But you do not see the actual result of your operations?—No, till we ask for it; we can always have it on asking, and do have it for estimating purposes from time to time.

9854. But it does not come under your usual cognisance?—No.

9855. (Mr. Beckett.) I suppose you get to know how far the result corresponds with your estimate?—Yes.

9856. (Chairman.) You can always ask and get it?—Yes, and we very often do.

9857. (Colonel Miles.) With regard to a service you might think expensive, you would not know what it cost unless you saw the exact amount, and it might not accord with the Estimate?—We know to within a very small amount, because the Estimates are as a rule drawn up in conjunction with our Finance Branch.

9858. But I mean the individual detail which goes to form the Estimate, such as the movement of one regiment from one place to another?—We never see that ordinarily.

9859. It might be such a service that were it brought to your notice, you might be able to produce economy?—No, in every move of every regiment we go into the cost in our Annual Estimates most carefully.

9860. But you do not see the actual bill when it comes in?—No, but we know whether it is an expensive move, or whether it is an inexpensive one; we know within a very few pounds what it does cost.

9861. Do you not think it would be an advantage if the branch seeing the accounts were in close connexion with you?—I think they are in as close connexion as they could be.

9862. That it should actually form a branch of your office?—Even if there was anybody in Q.M.G. 2., I do not think we could work any quicker, because one of the members of F. 5 comes over every day, or we go over to them every day, we have never had any difficulty whatever with them, or any delay.

9863. You are in favour of civilian clerks?—Yes, for my branch, I do not say throughout the office.

9864. Do you attach any importance to the argument that it is desirable to keep the moves of units confidential?—Yes, I do; I think there is an immense amount of struggling to get what units consider particularly good stations, and I think it would be very undesirable that they should get out. Someone has to go to a not very pleasant place occasionally, and they ought to take them in turn.

9865. That is at present within the Quartermaster-General's arrangement?—Yes.

9866. How does the question of the civilian or military clerk affect that?—I think if you had a military clerk, he would probably be corresponding or talking about the move outside the office, and might easily work it round in some way, whereas it is of no real importance to a civilian where or when any regiment moves.

9867. Do you mean bring undue influence?—Not quite, but they might bring indirect influence that the move should take place at an inconvenient moment with regard to one's plans. As a matter of fact, I keep all the moves to myself; I always look them up directly they are made out, and they have not got out during the last two years.

9868. (Sir George Clarke.) You have only got eight clerks?—Yes, but three clerks are employed temporarily and there are two writers.

9869. And if those were eight soldiers, their friends in the Service spread over the British Army must be very few in number, and it must be only quite occasionally that they would have a friend in a battalion who was going to be sent abroad?—May be, but I think the Second Division Clerk is infinitely superior to anything you will find in a regiment; in brigade or district offices I have met very few who would come up to any of the clerks here.

Lieut.-Col.
J. S. Cowans.
20 March 1901.

Lieut.-Col.
J. S. Cowans.

20 March 1901.

9870. You put it on the question of education as much as on the question of confidence?—Yes; the same number of military clerks could not have done the work in the last year that these men have done, it is quite impossible.

9871. (*Sir Charles Welby.*) We may take it on the whole as regards the administration of your Vote, that you are satisfied with your present relations with the Finance Department?—Absolutely.

9872. One question about the Registry: Are you satisfied with the way that the Registry does its work as far as it affects you? Should you say, that on the whole, it distributes the correspondence without undue delay, and distributes it correctly as a rule to the right department?—Yes, as a rule, certainly; there have been some difficulties lately by an office order that papers that have not been dealt with in a branch are not to be given to that branch.

9873. You mean that the discretion of an officer to call for any paper on any subject connected with the War Office has been somewhat limited of late?—We have had a certain amount of trouble about it; we very often have to get an officer's papers to see the circumstances under which he is going abroad or coming home, although those papers have not been dealt with previously in our branch. For instance, an officer being retired from the Service, &c.

9874. You have been somewhat hampered in your work by this recently laid down rule?—Yes, but it is working better now, as we have been exempted somewhat from the rule.

9875. That is a rule that has been for good or bad reasons imposed on the registry?—Yes.

9876. Rather than anything inherent in the registry's own work?—I have nothing to complain about the registry.

9877. (*The Chairman.*) I gathered from you that you thought your department was under-staffed, and that your duties were certainly severe, but you do not want any junior officer to be placed under you; it would be quite sufficient if you had a good superior staff clerk?—I think so, in charge of the branch really; we have not even a Staff Clerk at present in charge.

9878. You mean that although most of these questions come up to you, you are not really overwhelmed?—No, I think one officer in Q.M.G. 2 ought to be able to do it, working over-hours to a certain extent; there is no reason why he could not do it. But a second officer will be necessary when the mobilisation railway work is taken in hand again.

9879. And in normal times could he do it within ordinary hours?—Certainly.

9880. You find no difficulty at all about getting knowledge as regards the progress of your Vote, or as regards the cost of any particular move if you choose to ask for it?—Not for a moment; we have had no trouble whatever with the Finance Branch, and we work perfectly smoothly with them. If one of F. 5, which is the Finance Branch, were in our office, I do not think it would expedite matters in the least, as he would have to go over and ask sanction probably.

9881. He would have to refer to his superior?—Yes, and as we see one of them every day, the thing is settled straight off.

The witness withdrew.

LIST OF APPENDICES.

ADMINISTRATION.

No.	Page
I. Draft of letter to certain high officials connected with the Administration of the War Office on the general conduct of business in that Department, with replies received	409
II. Memorandum showing Duties of various Departments of the War Office, and responsibility of its Principal Officers to Secretary of State, under the Order in Council of 7th March, 1899	419
III. Notes by Colonel Watson, C.M.G., on system of registering papers in War Office	422

FINANCIAL CONTROL AND AUDIT.

IV.—(a.) Memorandum by the Accountant-General on Treasury Control over Army Expenditure	424
(b.) Memorandum on Audit of Army Accounts by Exchequer and Audit Department (drawn up by the Comptroller and Auditor-General)	426
(c.) Memorandum by the Accountant-General on the War Office Audit of Accounts	426
(d.) Memoranda by Subdivisions of the Accountant-General's Department on the nature and extent of their audit	428
(e.) Memorandum by Mr. J. M. Bull, on Expenditure under Vote X. (Works)	438
(f.) Statement of numbers of letters written by the War Office to the Treasury during the two years 1898 and 1899	439
(g.) Statement showing the nature and extent of the Stocktaking in the Ordnance Factories conducted by—	
(1) Officials of the Ordnance Factories, and	439
(2) Officials of the Accountant-General's Department	440
(h.) Letter from Mr. James F. Hope, M.P., on the surrender of unexpended balances at the close of each financial year	441

CONTRACTS.

V.—(a.) Draft Regulations drawn up by Committee	442
(b.) Draft of letter to certain railway companies and other commercial houses asking information as to their system of purchase, with their replies:—	
Army and Navy Co-operative Society, Limited	443
Civil Service Co-operative Society, Limited	444
Sir W. G. Armstrong, Whitworth & Co., Limited	444
Midland Railway	444
London and North Western Railway	445
Messrs. Vickers, Sons, and Maxim, Limited	445
Messrs. Rylands and Sons, Limited (Memorandum by Mr. Mather, M.P., a Member of the Committee)	446
Great Northern Railway	447
Co-operative Wholesale Society, Limited	448
(c.) Memoranda by the Director of Contracts on certain points arising in evidence:—	
(1.) Contract for packing cases	449
(2.) Contract for mule harness	449
(3.) Contract for steel balls	450
(4.) Contract for manganese bronze	450
(d.) Statement furnished by the Director of Contracts showing copper purchases for six months before and six months after metal brokers ceased to be employed	453
(e.) Memorandum by the Director of Contracts on contract for tents	453
(f.) Memorandum by the Director of Contracts on contract for spiral steel springs	454
(g.) Memorandum by the Director of Contracts on increase of Staff required for his Department	454
(h.) Memorandum by Colonel Steevens on points arising in the evidence of Director of Contracts	456
(i.) Statement showing total numbers and values of contracts placed by the Director of Contracts during 1898-99	459
(j.) Statement of number and value of contracts made by the Director of Contracts on behalf of the Ordnance Factories during 1899-1900	459

DECENTRALISATION.

No.		Page
VI.—(a.)	Draft of letter to General Officers Commanding Military District, with their replies :—	
(1.)	Lieut.-General Sir W. F. Butler, K.C.B.	461
(2.)	Major-General Thynne, C.B.	461
(3.)	Major-General L. V. Swaine, C.B., O.M.G.	461
(4.)	Lieut.-General Sir W. F. Grenfell, G.C.B., G.C.M.G.	463
(5.)	General E. F. Chapman, C.B.	464
(6.)	Major-General Sir W. F. Gatacre, K.C.B.	465
(7.)	General Right Honourable Sir Redvers Buller, V.C., G.C.B., G.C.M.G.	466
(8.)	General H.R.H. the Duke of Connaught	467
(9.)	Major-General Sir T. Fraser, K.C.B., O.M.G.	468
(10.)	Lieut.-General Sir B. C. Baker Russell, G.C.B., K.C.M.G.	470
(11.)	Major-General Sir J. F. Maurice, K.C.B.	473

APPENDIX.

APPENDIX I.

ADMINISTRATION.

DRAFT of LETTER to certain HIGH OFFICIALS connected with the ADMINISTRATION of the WAR OFFICE on the GENERAL CONDUCT of BUSINESS in that DEPARTMENT, with replies received.

War Office, S.W.
9th January 1901.

DEAR SIR,

A COPY of the reference to the Committee appointed to inquire into the method of conducting business at the War Office is enclosed, and an expression of your opinion is invited, as early as may be convenient to you, on the question contained in the first paragraph and on any points that may seem to you to arise out of it. It is, of course, understood that the expression of your views will be treated as confidential if desired.

I am, &c.,
(Signed) CLINTON DAWKINS,
Chairman.

Government House,
Farnborough, Hants,
January 10th, 1901.

SIR,

WITH reference to Mr. C. E. Dawkins's letter of the 9th instant, I beg to report that, in my opinion, the present method of conducting the administrative and financial business of the War Office is, in some respects, satisfactory; but that its distribution as between the civil and military departments of that office is, speaking generally, most unsatisfactory, and, in the interests of the public service, a redistribution, I should prefer to say of responsibility, rather than of business, is urgently required.

I observe that my opinion is also invited "on any points that may seem to me to arise out of the paragraph." I am not sure that I understand what is here intended.

If the Committee upon inquiry see reason to agree with me that there should be a redistribution of responsibility within the War Office, I shall be happy to attend at any time and give them my views at such length as they may think desirable. But I do not apprehend that they wish me to sit down and write my views upon so vague a text as the paragraph in question. I have not the material to do so, and if I had it, I have not the time.

As for the question of confidence, I should prefer to leave myself in the hands of the Committee. I have been a long time in the War Office, and have, as far living soldiers are concerned, I believe a unique experience of it; I have formed definite opinions, but I by no means suggest that they are infallible. Any observations I may be asked to make will, if published, be open to corrections, while, if given confidentially, they may escape criticism. I have, subject to the opinion of the Committee, no desire to claim that my opinions should be treated as confidential.

I am, &c.
(Signed) REDVERS BULLER,
General.
H. J. Gibson, Esq.
War Office.

57, Lowndes Square, S.W.,

14th January 1901.

SIR,

I HAVE the honour to acknowledge the receipt of your letter of the 9th instant, covering the terms of the reference made to your Committee by the Secretary of State for War, and asking for my opinion on the first paragraph of that reference and on any points arising out of it.

The conduct of the administrative and financial duties of such a vast business as that which centres in the War Office is a subject giving rise to so many debateable points that it is impossible to deal satisfactorily with them in reply to one abstract question. I propose therefore to restrict my reply to stating, what I conceive to be, the principle on which the conduct of that business should be based, and I shall be happy to attend the Committee and give such detail evidence as it may require.

The Government of this country being Government by the civil power, it follows that the administration of the great departments of State must be under the direct control of that civil power, advised and aided by such technical and expert assistance as the nature of the various administrations may demand. The extent to which the Secretary of State for War requires expert assistance of a military and of a civil character to enable him to secure the efficiency of the Army, while guarding and preserving the prerogatives of the Crown and the interests of the public, must be the measure of the division of duties between the civil and the military employees of the War Department. In dealing with the question of civil control over military expenditure, it is essential to remember that the civil check which formerly existed in every command throughout the Empire was completely abolished a few years since, and that the only civil check over Army expenditure now existing is that maintained within the War Office.

The question contained in the last few words of paragraph 3 of your reference seems properly to form part of the subject dealt with in the paragraph referred to me. I will not further deal with it here than to say that I have had considerable experience of the working of the Contract Branch and that I shall be prepared to give evidence upon it if the Committee should require it.

I have, &c.,
Clinton E. Dawkins, Esq., (Signed) HALIBURTON.
&c., &c., &c.

MEMORANDUM BY THE DIRECTOR-GENERAL OF ORDNANCE.

If the reference on the first paragraph is to be confined within the four walls of the Order in Council, the only points in which I can suggest improvement are:—

The office of the Director of Contracts should be broken up, and the several sections which deal with the contracts for Q.M.G., I.G.F., and D.G.O. should become sections of the departments of those officers respectively, and those officers should make their own contracts, subject to review by the Accountant-General.

The sections of the office of the Accountant-General which deal with the accounts of Q.M.G., I.G.F., and D.G.O. should similarly be placed in the several departments of those officers, and the heads of the sections should be the financial advisers of Q.M.G., I.G.F., and D.G.O. respectively. This has already been done, at my suggestion, as regards D.G.O.

There should be a military head over all the administrative and supply services (I suggest a Military Under Secretary of State), whose duty it should be to see that all proposals are considered from all the administrative and supply points of view. It is, in my opinion, quite impossible for the Commander-in-Chief, who is charged with the executive duties of command, training, and inspection of the troops, to supervise the administrative and supply departments as well; and they are not sufficiently brought together now under any one head. The Military Under Secretary would submit papers direct to Secretary of State without the intervention of Permanent Under Secretary.

All the above proposals could be carried out under the existing Order in Council.

Parliament and the Treasury should be asked to give greater freedom to the Secretary of State. A few weeks ago, we wanted, for very urgent reasons, to keep on a foreman of carpenters for three months beyond the age for retirement. It was urged as a reason against the proposal, by the Assistant Under Secretary of State, that it would require an application to the Treasury, and report to Parliament.

H. BRACKENBURY, D.G.O.

15th January 1901.

MEMORANDUM BY THE INSPECTOR-GENERAL OF FORTIFICATIONS.

My experience in the War Office has consisted in being Quartermaster-General for under a year and Inspector-General of Fortifications for about 2½ years.

While so employed I have usually found enough to do in the immediate work of my own office, and have made no special study of the manner in which business is carried on in other branches.

But the following points occur to me as worthy of your attention:—

Initiation of Work.

Under present arrangements work is initiated by the circulation to heads of departments of reports from Generals of districts and Foreign Military Attachés, by direct communication from the Secretary of State or the Commander-in-Chief to one of the departments concerned, or by the circulation of the report of some special committee.

Conduct of Work.

A subject once started is dealt with by minutes between departments or by conferences. When settled the result is communicated to all concerned. But months, or even years, may pass before this takes place.

Central Board.

I think it would save time in the long run, and prevent a great deal of useless work, if all *new proposals* starting in the War Office were referred at once to a Central Board. They would then be discussed by all the heads of departments, and would either be dismissed as useless or be referred to some special committee for report, or be accepted and then passed to the department more immediately concerned to work out.

If this course be adopted, and if the Central Board is to be of real practical utility, it is essential that its procedure should be carefully laid down. The regulations should state what subjects are to be brought before it, who has the power to refer questions, how far the proceedings should be recorded and individual opinions noted, and how voting should be carried out. Also what deputies have the power to sit, and whether or not they can vote. No subject, unless of a purely formal nature, should be dealt with without due notice, and, if possible, a short explanatory statement being sent round beforehand to all the members.

The Board should, of course, be carefully guarded against being flooded by small questions, or by questions of routine that can be dealt with by one or other of the departments.

Department of the Inspector-General of Fortifications.

The work of the department of the I.G.F. is carried out by the Corps of Royal Engineers, assisted by a body of specially engaged surveyors, and at Headquarters by a certain number of civil clerks.

Temporary civil assistance can be obtained for special work. The department is hedged round by a network of checks, such as I believe do not exist at all in civil life.

As far as I know a civil architect makes his own arrangement for contracts, a civil agent carries on the business of his employer subject only to one audit.

Let the same amount of liberty be granted to the I.G.F., that is to say, let him make his own contracts; let him be subject to only one audit; let him get what staff he requires, and settle their conditions of service; let him be provided with such funds as he considers necessary for the proper maintenance of forts and barracks; and let him (as he does now) bring forward for annual estimate or for loans such new services as Army changes render necessary; and lastly, let him make his own regulations; and then he can fairly be held responsible for the proper discharge of the duties that he has to carry out.

Civil Clerks.

As far as I can see the association of civil clerks with officers in carrying on the duties at Headquarters works satisfactorily. The officers, of course, have more technical knowledge. But their conditions of service do not allow them to stay long in one appointment, and the civil clerks help to give continuity to the work. The clerks in the military branches, however, complain that they do not obtain the same amount of consideration in the matter of promotion as those who work on the civil side, and I believe they have good cause for complaint.

R. HARRISON, Gen., I.G.F.

14th January 1901.

MEMORANDUM BY QUARTERMASTER-GENERAL.

I will preface the few observations I have to make, in compliance with your letter of the 9th instant, with the remark that throughout my service I have been principally occupied in the endeavour to carry out systems of the last 45 years to the best possible advantage rather than in inventing others.

As regards the relations between the civil and military sides of the War Office, my personal experience has been satisfactory, and I have always found all the civil authorities only too anxious to meet all reasonable demands whenever possible.

I see no great fault in the existing system.

Possibly some changes may be desirable, but the working of any large system depends principally on the manner in which the work is carried out. It is easy enough to put grit into the machine.

I do not advocate an entirely military War Office; it might be run successfully in the present temper of the country, but opinion swings as regularly as the pendulum, hot fits give place to cold, and I can well imagine pure militarism becoming exceedingly distasteful.

Looking to the constitution of the country and our mode of government, I think a semi-civil semi-military administration of the War Office is the safest.

A great cause of delay in work at the War Office is the necessity that exists of going to the Treasury for any expenditure, no matter how small, that is not covered by estimate and Royal Warrant. I suggest that the Secretary of State should be accorded certain financial powers to meet this, but then comes in the inevitable question, will the holder of the purse strings, i.e., the House of Commons, stand it?

I also advocate financial power, in a minor degree, being given to G.O.C. Districts: the system works well, I believe, in the four large Indian commands (I speak from personal knowledge as to one); it increases the feeling of responsibility and of making both ends meet, and causes executive officers to feel that the necessity of a monetary request should be proved before it can be expected to be granted. Many of our officers do not realise this and look upon the refusal of a request for money as the result of a faulty system.

Ultimate financial control must, I think, remain with the civil side, but, with this proviso, departments should be as little as possible interfered with in the administration of expenditure under their votes.

(Signed) CHAS. M. CLARKE,

11th January 1901.

Q.M.G.

MEMORANDUM BY SIR RALPH KNOX.

Transaction of Business.

With the exceptions (1) of the control by Director-General of Ordnance of the factories which produce guns, arms, and ammunition for both Navy and Army; (2) of the inspection of Naval manufactures by the staff of the same Officer, and not by a Naval Officer; and, (3) of the contracting for Naval stores by the Director of Contracts; with these exceptions the various duties discharged by the chief officers of the War Office are distributed between them in accordance with the best principles of administration.

In ordinary times the division of the labour works well, and even the presence of war has not shown that any real difficulties have arisen in combining the results of that divided labour.

In this distribution of duties, of course the functions of each chief Officer act and react upon each other, and at many points impinge upon one another, with the result that the lines that have been drawn are occasionally not well maintained.

The tendency of every executive official is to increase his power, and as far as possible to throw off the check and control which the constitution of his department and the limits of his duties impose. The extraordinary desire to get hold of the work of other officials, when the transfer will serve either of the objects referred to, is quite remarkable. Their desire is, in the usual phrase, to be made responsible for the duties entrusted to them, the real meaning being that absolute power should be conferred upon them, and that the ordinary machinery of control should not be applied. The constitution of the War Office has been directed to the prevention of the development of such a system. The duties of the officers are well defined, and their every action and its result is made known, and their accounts are designed and examined by officers independent of them. By this means, in the truest sense, they are held responsible. The arrangement of their duties may, of course, be varied; endless changes of system have been made in my time, but I can think of no change in this respect, with the exception of those I have referred to, which would better the present allotment of the work.

In the Finance branches, the work is also very logically divided, far differently from the division adopted in former days. It is now "subjectively" classified, the work of each section being, as far as possible, self-contained, and not clashing with that of the others. A glance at the War Office List will show this.

The Contract Branch, again, is distinct from the Accountant-General's Division, and from the Military Division, and by reason of their independence they constitute the checks so necessary in dealing with very large financial transactions.

The Contract Branch, being distinct from the Military supply sections, limits the personal equation between the branches requiring the supplies and the contractors, a most important consideration. By this arrangement, moreover, uniform methods of dealing with the contractors of all trades are maintained; another object of paramount importance.

The audit applied by the Accountant-General is quite separate from the spending or contracting divisions, and thus, being subjected to the examination of his Controller and Auditor-General, possesses that independence which renders it complete and effective.

The Permanent Under Secretary maintains his control over the general work of the department by means of the Registry, the Regulation Branch, and the Parliamentary Subdivision, being assisted by the Assistant Under Secretary, under whose immediate charge, in his position of Chief Clerk, is the work of the Registry.

By this distribution of duties the whole executive work of the Army is in the hands of the Military Branches of the Office, acting under the direction of the Commander-in-Chief, the present organisation of the department having been adopted with the object of meeting the objections attaching to the system of a Surveyor-General, who as a high Officer, whether military or civilian, independent of the Commander-in-Chief, had an executive power controlling, in detail, the demands of the other military authorities. The military officers are parties to all the business of the department, and practically carry on the whole of the correspondence with the General Officers, the outside public, and the other departments of the State.

Turning to that part of the subject which relates to the methods of carrying on the work of administration, I may say that since the War Office was constituted under a Secretary of State, it has never had a fair chance, for it has never had a home. The fact that the office has been scattered in several buildings, divided by long distances, has rendered it impossible to conduct the business with despatch, and, what is worse, has made personal communication most difficult and dilatory, causing an incalculable waste of time. Indeed, I am convinced that the failure by the Ministry of the day to complete the scheme for the erection of a joint Admiralty and Horse Guards, some 15 years since, was the greatest administrative blunder of the century. The country will never know the injury it has suffered from the want of a little backbone in the political leaders of that time.

Above all things are required more conference and intercommunication. The Army Board was intended to form the prime opportunity for this among the chief officers of the department. As it has been worked it has completely failed in its object. If carried on in a thoroughly business-like manner, it should be the means by which every new proposal, for the improvement and development of the Army, is worked out; each member of the Board when wishing to make a proposition, which his experience and observation lead him to think would improve the Army, should submit it to the Board in as complete a form as he can, so far as it affects his own department. The other members of the Board would then consider it as it affects the various services in their charge, and the whole scheme would thus be fully elaborated under the direction of the Commander-in-Chief. This Board should also be directed by the Secretary of State to work out any schemes which he himself may desire to inaugurate.

This method possesses the advantage that all the members of the Board, being aware of the principal business at the time under consideration, are prepared to take up that part of the proposal that may affect them; and, above all, it operates as a check upon each officer making proposals in regard to business for which he himself is not primarily responsible.

This last would be a great point gained.

The Board should have before it full agenda of the business to be considered, and printed abstracts of the papers or schemes to be deliberated upon.

Full minutes should be made, and the differences of opinion of the various members recorded.

In addition to this Board, there should be formed a Standing Committee of the more subordinate officers of the departments for considering the questions of detail so constantly arising which cannot be settled without consulting other branches, and for discussing differences of opinion in regard to any subject under deliberation. This Committee should meet twice a week.

I would, however, again insist upon the difficulty of working this system, and upon the waste of time involved, while the office is scattered about in separate buildings all over the town. It can only be done under present conditions, and that unsatisfactorily, by increasing the staff to make up for the time lost by the officials who will have to spend so much of the day in the street and away from their offices. This is being remedied, but the new building will not be completed for several years.

Financial Control.

It is not a small thing to regularise an expenditure amounting to some 20 or 24 millions a year. It is not a small thing to frame estimates for such annual expenditure, and invariably to avoid a deficiency; and yet these ends have been for many years secured by the financial system that has prevailed at the War Office. That system entails central financial control and audit.

The financial control mainly consists in requiring all services proposed to be fully and thoroughly estimated. It is not unnatural that a person, even though he be admirable at cheapening a bargain, should have a tendency to minimise the estimated cost of a scheme that he may desire to carry out at the expense of the public, or even to disregard altogether the cost involved. The finance department imposes the check which compels the Minister to be aware of the full cost of all proposals before he approves them for submission to the Treasury, and thus secures for the department of the State responsible for the total expenditure of the country, and charged with the function of raising from

the people the taxation to meet it, the most accurate forecast of the growth of that expenditure which long experience and expert practice can produce.

It is this system which for a long period of years, associated as it has been with an admirable central audit and record of expenditure, has avoided any deficiency in the annual Army balance sheet. The Estimates have been accurate and sufficient, and the audit, under the control of the framer of the Estimate, has compelled a compliance with the limits which the Estimate has imposed.

It is impossible to decentralise these duties, they must necessarily be discharged at Headquarters. They cannot, except as regards the elementary processes, be distributed over a dozen different districts.

Auditors could certainly be sent to the various districts to conduct a local audit, and where the accounts are extraordinarily bulky, as in the case of the Woolwich and Pimlico Store accounts, a permanent local and concurrent examination is carried out; but it would be an extravagant plan to provide a local examination of the great variety of accounts which exist in a district.

These accounts, when rendered to this office, are distributed to the various sub-divisions familiar with each class of expenditure, where the great mass of the work can be done by subordinate people under the direction of one chief, whose whole time is not taken up by their supervision, but can be also devoted to more important points of financial control; whereas, to provide the efficient local audit in the district, the auditors would require to be skilled in nearly all classes of accounts and the regulations governing them. It would be very difficult and costly to provide a properly qualified staff, and endless varieties of ruling would arise if the decisions were to rest with the local auditors.

The scheme of local administration in the German Army is conditioned by the existence of a local controlling officer, called Intendant, charged with large powers, being both a financial controller and a local check upon the demands of the General Officer; he is, however, bound to communicate to the central authorities all variations on the part of the General from the standard limits.

This system, or one closely resembling it, was attempted in the British Army, many years since, by means of the Control Department, under the Surveyor-General, but it existed for a very short time, owing to the enormous friction that sprung up between the Generals and the newly-formed department. Since that time the tendency has been to transfer full power, within the regulations, to the local general, subject to an effective and independent audit.

A money limit to the amount to be expended on pay, supplies, and stores cannot be laid down for each district; the force maintained within it, as well as the sources of supply, are too uncertain. The expenditure must be governed by regulations, and, therefore, can only be properly checked by means of accounts, subject to detailed examination, and by stocktaking. An audit, to be effective, should secure accuracy in the accountant and the due appropriations of the money, as well as deter from fraud. Examination by the Paymaster is not enough, the Paymaster himself being the officer who receives the money to disburse, and who must, of course, account for it.

I think, however, further financial power should be conferred on the Secretary of State by the Treasury, and on the General Officer by the Secretary of State.

Some changes have recently been made in this direction, but, in order to avoid excessive correspondence as to matters involving comparatively unimportant expenditure, I would go further. Under Indian rules a limited sum of money is placed at the disposal of the principal generals, under very well considered restrictions. I append these rules. I would urge that some such rules be established for the generals in command in the British Army.

Similarly the Secretary of State should have power over, say, 2,000% per mensem, under similar restrictions.

Pressing and unforeseen demands cannot fail to arise in a service such as that of the British Army, and such a sum as I have suggested to meet contingencies, seems a very moderate one. By such a concession the department would be relieved from some really unnecessary correspondence.

Such special expenditure should always be fully recorded in detail in the accounts.

13th February 1901.

R. H. KNOX.

MILITARY ACCOUNT CODE, INDIA.

Financial powers of the Commander-in-Chief in India and Lieutenant-Generals Commanding.

Para. 15. (The provisions of this paragraph cover sanctions to expenditure of cash or stores within the limits laid down, such limits including both cash and the value of stores taken together.)

The Commander-in-Chief in India can finally sanction expenditure not provided for by the regulations and the orders of the Government of India, but not beyond power of sanction by the Military Department, up to a limit of Rs. 2,500 in each case, and not exceeding Rs. 10,000 in any one month, taking all four commands together, provided always that no permanent alteration of existing rules is involved, that the amount so sanctioned is non-recurring, in the sense that its sanction would not involve the charge becoming permanent, or extending into another financial year, that there is nothing irregular in the character of the expenditure so sanctioned, and that the authority is used only for charges which are now recognised as fit subjects for military expenditure, but which have hitherto required confirmation by superior authority. A further condition is, that the amount can be met from the sum provided for the particular command in the budget estimate of the year, under the particular head of the grant affected. But when it is not possible to thus meet the expenditure, this condition may be so far relaxed that the Commander-in-Chief may (within the limits of his sanctioning powers) reappropriate funds for the purpose required when they are available from the same grant in the budget of another command, or other commands, always on the condition, however, that the total sum provided under the particular grant affected in the budget estimate for all four commands, is not exceeded.

Para. 16. With a view to diminish, as much as possible, references to the Government of India and the Commander-in-Chief in India, on comparatively unimportant matters, the lieutenant-generals commanding are empowered to finally sanction expenditure, not provided for by regulation, up to a limit of Rs. 1,000 in each case, but not exceeding a total of Rs. 2,500 in any one month, under the conditions laid down in para. 15, with the following exception:—

When it is not possible to meet the expenditure from the sum provided for the particular command in the budget estimate of the year, under the particular head of the grant affected, a lieutenant-general commanding may transfer funds from one head to another of the same grant in the budget of his own command, on the condition that the grant affected for the particular command concerned is not exceeded as a whole.

Lieutenant-Generals commanding are also, where not otherwise provided for by the regulations or orders relating to supplies, empowered to finally write-off, in communication with the Controller of Military Accounts of the command, the irrecoverable value of public money and stores, or other articles of military equipment, the property of Government, which may have been lost, damaged, or destroyed, provided that the loss, damage, or destruction, in each case, does not involve a sum exceeding Rs. 1,000, and that it has resulted from accident, or from other cause not implying grave misconduct on the part of any person in the service of the State. Whenever the amount of loss exceeds Rs. 1,000, or the loss, though not exceeding Rs. 1,000 in amount, has resulted from grave misconduct (e.g., theft, fraud, wilful damage, or culpable negligence) on the part of a public servant, the case should be submitted by the lieutenant-general commanding for the orders of the Government of India with the Controller's report thereon. This power is in addition to the power to sanction expenditure referred to in the first clause of this paragraph. The provisions of this clause are also applicable to the general officer commanding a field force in regard to the write-off of stores and equipment, &c., the property of Government, lost, damaged, or destroyed, on active service, where a considerable force is employed on active service, and is commanded by a general officer who is not under the orders of the lieutenant-general of a command.

Para. 17. In exercising the above powers, the Commander-in-Chief in India and lieutenant-generals commanding will previously ascertain from the Central Controller and the Controllers of Military Accounts, respectively, and heads of spending departments concerned, whether funds are available to meet the cost of sanctions to any proposals submitted to them. The Controllers and heads of departments should not

report, as available for redistribution, a saving under one head of a grant when the grant, as a whole, is likely to be exceeded. When, however, the amount concerned does not exceed Rs. 50, no such reference is necessary, provided that such absolute sanctions shall not exceed, in the case of the Commander-in-Chief in India, Rs. 500 in the aggregate in any month, or, in the case of the lieutenant-generals commanding, half that amount.

Para. 18. The heads of all Army Departments will accept the sanctions of the Commander-in-Chief in India, and lieutenant-generals commanding, issued under the above arrangements, as authority for all items of expenditure within their respective financial powers, instead of referring such cases to the Government of India.

Para. 19. If, in the exercise of the powers thus conferred upon the Commander-in-Chief and the lieutenant-generals commanding, these officers shall issue any orders or instructions resulting in expenditure, which, in the opinion of the Controller, needs the approval or sanction of the Government of India, they are required to make a report of the same at once to the Government of India, in the Military Department (through the Commander-in-Chief in the case of lieutenant-generals commanding), accompanied by the Controller's report on the case.

War Office, Pall Mall, S.W.
11th February 1901.

SIR,

I APPEND herewith my observations on some of the terms of reference which have been submitted for the consideration of the Committee on War Office Reorganisation.

2. With reference to paragraphs 12 and 13 of the accompanying Minute, and the reorganisation of two branches of the Adjutant General's Department, I beg leave to refer the Committee to a confidential memorandum which I lately submitted to the Secretary of State.

I am, &c.
(Signed) EVELYN WOOD,
Adjutant-General.

The Chairman of the Committee on
War Office Organisation.

1. Any scheme of War Office reorganisation must of necessity be framed to suit the future requirements of the Army. It is, therefore, impossible to render any report on the subject until it has been definitely decided:—

- (a) What the future system of Army organisation and administration is to be.
- (b) What are to be the scope and extent of the duties and responsibilities of General Officers Commanding future Army formations.
- (c) What is to be the Military and Civil Staff of General Officers Commanding.

2. With the Army organised in suitable formations, the bulk of the administrative and financial business now transacted at the War Office would automatically be delegated to General Officers Commanding. The Military officials at Headquarters would then be in a position to carry out their proper functions, viz.: to consider large questions of Imperial Military policy, schemes of offence and defence, training, administration, the framing and bringing up to date of regulations, drill books, &c. In other words, the War Department would become, as the name implies, an office where Military problems and policy are considered and perfected for purposes of war.

3. Although the Adjutant-General's Division is not what is known as a "spending" department, it is necessary that all its branches should be in a position to frame estimates and financially consider the cost of the present or proposed personnel of the Army.

4. Under the present system, although Company Officers, Commanding Officers, and General Officers Commanding have, under the Pay Warrant, &c., certain powers relating to pay, this Division has none at all, and every trifling detail connected with pay has to be submitted to the financial side for approval.

5. This, of course, applies only to minor matters such as extra duty, working, armament, and lance pay, and certain allowances which are really decided on purely Military grounds. They are quite separate from questions of finance, and require therefore only an intelligent knowledge of the Service and its regulations to decide. These petty matters require no actual financial knowledge and could be undertaken by this Division. The advantage accruing would be that the work being done by one branch instead of two, greater despatch would be ensured.

6. No extra cost would be involved. On the contrary, there might be a saving in that fewer clerks would probably be required on the financial side. From past experience my impression is that the difference in the expenditure which would have resulted in the last few years, had the Military view on such questions been invariably adopted, would not have been found to justify the amount of time, labour and stationery which the constant and repeated reference of such minor questions between the branches entailed.

7. In the larger financial questions which require technical handling, reference to the financial side is of course absolutely necessary and no harm arises, so long as that side restricts itself to the purely financial view of the matter and leaves the Military aspect to those who have practical knowledge of that side of the question.

8. The chief difficulty arises when the possibly divergent views of the Financial and Military branches are weighed and the balance adjusted. When two Departments, so absolutely different in nature and working alongside one another, disagree, the Military side urging on the grounds of efficiency and the financial side deprecating on the grounds of expense, the question at issue should be laid before the deciding authority by an absolutely unbiassed party.

9. The question as to whether cost or efficiency is the more important appears to have been decided hitherto in favour of the former, for the Central Department, which sums up the case, and has the last word before the matter is laid before the Secretary of State, has had a financial and not a Military training.

10. It would, therefore, be only natural if this final summing up leans more to the financial than the Military side of the question, and it is not surprising that the financially trained gentlemen who have this power of assessing the respective values of the Military and financial views and of holding the balance between them should end by assuming that they possess Military knowledge themselves.

11. It was only lately that one of them laid down, for the Secretary of State's guidance, certain precepts as to the allotment of the time of officers to their duties and criticised the relative efficiency in Military training of officers and men.

12. In some of the branches of this Division, the Staff, so far as regards officers, is most inadequate. This question has, however, been taken up on another paper.

13. It is most desirable that a Training Branch should be formed in A.G. 4, separately from the other work of that subdivision, and equipped with a distinct Staff of at least five Staff Officers.

14. With regard to the status and pay of the Clerical Staff in this Division, I am of opinion that much of the work—especially in the Training and Returns Branches—could be satisfactorily performed by Military Staff Clerks under the supervision of a competent Civilian. There is, however—mainly in A.G. 4—much that is of a responsible and confidential nature, in which it is for obvious reasons undesirable to employ Military Staff Clerks.

They should not be appointed to branches which deal with many important confidential papers, i.e., none in the Discipline Branch Subdivision of A.G. 4. They might be usefully employed in branches dealing with—(1) Instruction and Training; (2) Deserters; (3) Returns.

15. The system under which the promotion of Second Division Clerks is carried out does not appear to be satisfactory to the Military side, which should be represented on the Clerks Promotion Committee. It must be remembered that many of the Second Division Clerks in my Division perform a great part of their work direct with the Officers of the Headquarter Staff. These Staff Officers, who are the best judges of a

clerk's capabilities—because they are thoroughly conversant with the nature, extent and character of his work—have hitherto had no voice on the question of his promotion, and their recommendations, it is feared, have probably not the weight which they ought to carry.

(Signed) EVELYN WOOD, A.G.
11th February 1901.

DEAR SIR,

25th February 1901.

I beg to enclose my remarks on the present arrangements for conducting work at the War Office, and must apologise for not having sent them before. The heavy work I have had in other directions has prevented my being able to submit them earlier. I have no wish for them to be treated as confidential so far as I am concerned. They are at the Committee's disposition to treat confidentially or non-confidentially, as they consider most advisable.

Yours, &c.,
(Signed) COLERIDGE GROVE.

C. E. Dawkins, Esq.

1. I much regret that the pressure of public work does not permit of my entering into the question of the internal organisation of the War Office as fully as I should wish. The time at my disposal will only allow me to summarise shortly the changes which appear to be desirable.

2. Before doing this, however, there is one point which I must make clear. I do not think that the alterations which I am about to describe will, alone, go very far towards producing a sound Military organisation. They will expedite the conduct of business at the War Office, but they will not give us an army. I have no wish to travel beyond the reference to the Committee, or to enter upon matters not placed before it. I therefore confine myself to saying that, in my opinion, the causes of the defects in our Military system lie far deeper than in such questions as the distribution of work at the War Office. They are constitutional rather than official, and no improvement in our method of conducting Military business will have much effect as long as the principles on which it is conducted are unsound. I make these remarks only to guard against possible misapprehension, and having done so, I will now state some of the directions in which, as regards the War Office, I think that changes are desirable.

A.

3. The Accountant-General's Department ought to be transferred from the Civil to the Military side of the War Office, leaving with the Financial Secretary only a small staff of clerks sufficient to enable him to carry out any necessary calculations or enquiries.

4. The separation of finance from the Military department does harm in two ways. In the first place, it leads the Military officials at Headquarters (and indeed the Army generally) to look upon finance as a matter with which they have no concern. They think of the advantages which will accrue if some particular proposal is carried out, but they do not think of the fact that its carrying out may mean the diversion to it of a certain amount of money which might better be spent on something else. The administrative training of a soldier never brings him face to face with the fact that in Military matters, as in all others which involve expenditure, the whole question with regard to any suggestion is, not whether the objects sought after are in themselves desirable, but whether they are more or less desirable than other objects which would cost the same amount of money. They fail to look at Military expenditure as a whole, or to realise that the sum which any nation can spend upon its army must ultimately have a limit, and they are too apt to think chiefly of the advantage of some special proposal irrespective of other wants. Further, not being accustomed to deal with finance, the rough estimates they make of what their proposals will cost are not very reliable, and are generally under estimates. These results are partly the outcome of long ingrained habits. But they are intensified by the fact that at the centre of the Army, I mean at Headquarters, the general survey of our Military requirements as a whole and the detailed calculation of the cost of all individual proposals, is done, not by the Military officials who have to

initiate and to carry out, but by a non-Military department which does neither. Apart from the general disadvantages I have referred to, the effect of this in the War Office itself is to produce much avoidable cross reference and discussion and in consequence unnecessary work and delay.

5. The cure for this is to make the Military officials at the War Office and in the General Officers' commands absolutely responsible for the complete financial bearing of all proposals they put forward. There must be no separate Accountant-General's Department to take this load off their backs. In other words, this department should be fused with the Military side and Military and financial considerations be taken into account by the same man at the same time.

6. The second disadvantage which attends the separation of finance from the Commander-in-Chief's offices is that apparently by some sort of natural law, whenever one branch or department is constituted to check and review what is done by others, this reviewing department swells and grows till at last it gets as big as, or bigger than, all the others it has to supervise. This is just what is happening in Pall Mall. The War Office list shows that the whole of the Commander-in-Chief's Departments, namely, the Adjutant-General's, Quartermaster General's, Inspector-General of Fortifications, Director-General of Ordnance's, Military Secretary's and Mobilisation Branches employ between them 106 officers and 393 non-commissioned officers and Civilian clerks, making a total of 499. The Finance Branch employs 470 officials of various classes. I find it difficult to believe that the pay for the Army and its supplies can require as many people to look after it as all other Military arrangements put together, and if not, this large assembly of financial clerks must necessarily mean increased clerical work without corresponding advantages.

B.

7. The number of small matters which, under the Royal Warrant for pay require the approval of the Secretary of State before action can be taken, have diminished of late years, but are still far too many. Even now such questions as whether a Second Lieutenant shall be exempted from his examination for Lieutenant, or whether a Quartermaster keeping the records at Woolwich shall be kept on beyond 55, cannot be decided by the Commander-in-Chief, but have to be referred to the Secretary of State. This excessive centralisation in the War Office itself prevents any decentralisation outside, for the Commander-in-Chief cannot delegate to Generals Commanding Districts powers which he has not got himself.

8. The relation of the Commander-in-Chief to the Secretary of State should be closely similar to that laid down by the Order in Council for the heads of the Military Departments towards himself. These heads are charged with the direct administration of their departments, but are under the general control and supervision of the Commander-in-Chief, and have to submit important questions to him. In the same way the Commander-in-Chief should be charged directly with the whole administration of the Army under the general control of the Secretary of State. At present far too much of this direct administration is carried right up to the Secretary of State, with the result of overloading him with detailed work which could be better done by men with Military training. There is a steady tendency at the War Office, due to outside causes, which it would be beyond the scope of the Committee's reference to enter upon, for the Secretary of State to do more and more of the Commander-in-Chief's work, a confusion of functions which cannot be attended with good results.

C.

9. This confusion has been increased by the system introduced in 1895, under which all letters written from the War Office are written in the name of the Secretary of State, and all letters written to it are addressed to the Under Secretary of State. This may seem a trifling matter, but it is much more important than appears. There is a great deal in a name, and the consequence of this change has undoubtedly been to make both officers and men think that the real man who gives them orders and decides their cases is not the General Officer over them, or the Commander-in-Chief over him, but the Civilian and political head of the Army. Military discipline may be—possibly is—neither a strictly equitable nor a logically defensible

thing. But no army has ever yet got on without it, and when there are so many outside causes tending to weaken it, as at present, it is a pity to do anything inside the army working in the same direction. That the change I have mentioned does work in this direction I have no hesitation in saying.

10. Letters from the Military side of the War Office should, in the first instance, be written by the department concerned in the name of the Commander-in-Chief. If his decision is appealed against, the case should go before the Secretary of State and the second answer go in his name. But for a Subaltern at home on leave from his battalion abroad, who applies for a fortnight's extension, to be told that the Secretary of State has granted it him would be comic, were it not that it has more injurious effect on discipline than might at first sight be supposed.

D.

11. The substitution of officers and Military clerks for many of the Civilian officials at the War Office would have great advantages for the Army, and, indirectly, would diminish work at the War Office. One difficulty we labour under is that the general principles on which our Army is recruited, organised, and administered, the objects it is intended to serve and the manner in which it is to be utilised are very little understood by the ordinary regimental officer. Every officer or non-commissioned officer that we can pass through the War Office and send back to his corps carries with him knowledge which he disseminates around him with excellent consequences. The better our system is understood the fewer are the questions or applications to the War Office, and whenever we send an officer who has been employed in Pall Mall to do staff work in a district, the correspondence with that district diminishes. The officer settles, from his own knowledge, matters which another would have referred. For this reason I think the substitution in many cases of Military for Civilian clerks would be beneficial, and it would possibly also lead to our decisions being more willingly agreed to. Further, it would be much easier to get rid of any one who did his work indifferently. But as regards the actual way the work is done, I feel bound to say that I do not think that Military men either would—or could—do it better than it is done by many of the Civilian clerks on the Military side of the War Office. The work of some of these gentlemen is beyond all praise.

12. In conclusion. It will be seen that the general drift of my suggestions is towards charging the Military side of the War Office more completely than is done at present with the whole ordinary administration of the Army both executive and financial. The necessary expert assistance to deal with finance should be handed over to it, and the clogs which the Royal Warrant now imposes on the direct action of the Commander-in-Chief should be removed. If these changes be made, a certain amount of real decentralisation will be possible—until they are it will be only apparent.

(Signed) COLERIDGE GROVE, M.S.

25th February 1901.

MEMORANDUM BY THE ACCOUNTANT-GENERAL.

1. The War Office exists for the purpose of administering the land forces of the Empire, and organising them for offence and defence.

2. This administration embraces, *inter alia*, the measures necessary—

- (1) To obtain the personnel of the various forces, officers, men, and civilian employés.
- (2) To train (or educate) them for their various duties.
- (3) To ensure discipline.
- (4) To provide adequate remuneration in money or kind, pay, food, clothing, accommodation, treatment in sickness, pensions, &c.
- (5) To provide the necessary arms and armaments.
- (6) To locate the forces to the best advantage for general defence, and to provide transport.
- (7) To erect permanent defence works.
- (8) To manufacture, or procure, an immense variety of munitions of war and stores.
- (9) To arrange beforehand for the organisation and expansion of the forces in case of war, and for their mobilisation.

(10) To obtain, and keep available, information as to the power of other nations, and generally as to any facts or statistics which may be of import for Military purposes.

(11) To regulate the Military relations of the Mother Country with India and the Colonies.

(12) To see that these various objects are attained with a due regard to economy, that estimates of probable expenditure for each year are put before Parliament, that the expenditure is properly checked, classified, and accounted for, both by the various accountants concerned, and in the general accounts presented annually to Parliament.

3. To put the matter in another way, the War Office are very large employers of labour, all over the world, and labour of a very special kind, and utilised under an immense variety of conditions. Their purchases are immense. They manufacture largely. Their matériel is of a highly technical kind. They own great quantities of land at home and abroad under great varieties of tenure, and are constantly engaged in building. They possess a considerable fleet of boats for various purposes. And they are subject, as regards their expenditure, to a variety of rules considered necessary by the Legislature and involving much labour. Moreover, they have constantly to justify their action, down to the very minutest details, to Parliament.

4. Of course the War Office does not *immediately* perform all these functions. A large proportion of the work of administration is necessarily delegated; and I think I may add that it is admitted on all hands that that delegation should be as full as may be practicable. But the central organisation, the initial instructions to the delegated authority, the decision on all questionable points, these must remain with the great Head Department. The immense amount of important work which deals with the Army as a whole, its policy, its finance, its relations to Parliament, this cannot be decentralised. Nor is it possible to prevent the War Office from being the court of appeal to which the Army and the Public shall look for ultimate decision in all doubtful matters.

5. The Secretary of State for War is the head and centre of this large organisation. His office, speaking generally, is divided into three large divisions:—The Military Branches under the Commander-in-Chief, the so-called "Central Office" under the Permanent Under Secretary, and the Finance Branch under the Financial Secretary.

Military Branches.

6. Of these divisions, the Military Branches are the most important, for efficiency must obviously be more really vital than cost. They comprise the division of the Military Secretary, which deals mainly with the personnel of officers; the Mobilisation Division; the Military Intelligence Division; the very important Adjutant-General's Department, which deals with the raising of the forces, their strength, their training and discipline; The Quartermaster-General's Division, which deals with the quartering of troops, their food, their transport, the supply of horses, the personnel of the Army Service Corps and Pay Department; the Division of the Inspector General of Fortifications, which deals, as the name implies, with works of defence and barracks; the division of the Director-General of Ordnance, which deals with the supply of guns and the multifarious stores, including clothing, which an Army requires, and also with the Ordnance and Clothing Factories; and the Medical Division, Veterinary Division, and Division of the Chaplain General.

7. It is scarcely within my province to animadvert on the general organisation of the Military Branches.

8. As regards minor points, it is indisputable that Military men should take the place of direction and supervision in the various divisions; and that being so, I do not think it desirable that clerks of the Higher Division should serve with or under them. No doubt a man of ability and tact will make himself useful anywhere; but a clerk of the Higher Division is himself expected to be a leader and director; that is his office. If he is placed in a position of permanent subordination he is wasted, while if he asserts himself there is friction. Of course, the drawback to administration by Military officers is the shortness of tenure at Headquarters—a tenure limited to five years by regulation, and often materially curtailed—for in war times naturally every officer wishes to go to the front, and the Office loses its administrators when it most wants

them. Nor is it easy to see how this drawback can be removed; for if the tenure be prolonged, the individual gains as an experienced administrator, but he loses touch with the Army. Any difficulty of the kind should, however, in my opinion, be met, not by the appointment of Higher Division clerks to *double* the officers, but by arranging that officers do not vacate their appointments simultaneously. Whether the clerks serving under the officers should be Second Division Civilian clerks or Military clerks ought, I think, to be left to the decision of the Military authorities concerned. They are mainly interested. Both methods of providing the subordinate staff possess advantages—and disadvantages.

Central Branch.

9. The duties of the "Central" Branch are less determinate than those of the Military and Finance Branches, and even the designation seems to imply a difficulty in defining its exact functions. Practically the "Central" Branch takes up certain duties which are neither military nor financial: the registration and custody of correspondence, the editing of regulations, the dealings of the Office with Parliament, and the custody and distribution of Parliamentary and other reports affecting the Army. To these functions are added the storage and distribution of stationery.

10. In an office conducting, and, as far as one can see, necessarily conducting, such an immense correspondence as the War Office, the registration and custody of "papers" must necessarily be work of importance. It is not, perhaps, work requiring high administrative talent, but it is work that calls for a certain amount of organising power, and I think the registry should be under a Higher Division clerk. The suggestion has been made that the registry should, in addition to its present functions, exercise a kind of police over the office correspondence generally—"jogging up" when there is delay, or insufficiency of action, and watching "papers" to their legitimate close. I confess I do not see how any external Branch—external, I mean, to the Branch mainly concerned with the subject-matter of the "papers"—can usefully perform this duty. The correspondence of the Office is too vast to make it possible that every paper should be so watched. How is the selection to be made? Every Branch, every sub-division, should do this work for itself, can alone indeed do it effectually. The Superintendent Officer in the Military Branches, the Principal in the Civil Branches, ought to see that there is no delay anywhere, and that what is immediate is dealt with at once, and pushed through.

11. With regard to the Central Branch's editorial functions in connexion with all new regulations, it might perhaps seem at first sight that their work was superfluous, for all Branches must perforce prepare the matter of their own regulations, and might seemingly be trusted to put them into form. Here there is, no doubt, a certain duplication of work. Experience, however, has shown the advantage of having a central hand to harmonise the orders given to the Army, and, on the whole, I am not prepared to say that "C. 3" does not justify its existence.

12. I agree with what I understand to be the view of the Assistant Under Secretary that the distribution of stationery to the Army and the War Office is work which does not fall naturally within the attributions of the Central Branch, and is work from which that Branch might properly be relieved.

13. The "Central" Branch, from its position, seems naturally called to be a kind of Secretariat to the Secretary of State; and as such should be utilised, I consider, more than it is now, in bringing together, "focussing," as it were, the views of the various Branches of the Office on any subject of importance which has been discussed by several branches from various points of view, and has to come before the Secretary of State for decision. No doubt the use of this function will vary according to the individual Secretary of State's habits of work, some preferring to have a question brought before them in all its bearings, others choosing rather to cut a way for themselves to its core. But when the thing has to be done—when, for instance, the Army Board, or War Office Council, has to be "seized" of some important and intricate matter, the Central Branch should prepare the "brief."

Finance Branches.

14. The Finance Branch is divided into two sections, of which the first, and smaller, is the Branch of the Director of Contracts, and the larger the Branch of the Accountant-General.

Contract Branch.

15. The Committee have already, as I understand, gone at some length into the organisation of the Contract Branch, and its relation to the various Military Branches for which it may be said to cater,—and I need scarcely go over the ground again. That there should be a central Contract Branch dealing with contract questions, and their ramification into labour questions, as a whole, seems to me indisputable. Any bidding against each other on the part of the various Branches is obviously to be deprecated. Of course, there ought to be harmony.

Accounts Branch.

16. Coming now to the Accounts Branch, in which I am mainly interested, it may be as well to clear out of the way all non-contentious, or practically non-contentious matters. Thus we may take it as admitted that Army Accounts, whether of money or stores, should be audited, and that the audit should be independent; nor does there seem to be anything specially Military in the function. Further, the central book-keeping connected with the Army Accounts—the necessary record of receipts from the Treasury and of expenditure to be presented to Parliament, all this is non-military also. Again, the central preparation of the Estimates, the bringing together the data on which Parliament has to vote supplies, is a class of work common to all departments of the State, and not specially Military. So, too, the distribution of the estates of deceased officers and men, the arrangements for paying the various allowances to the families of soldiers on service—all this is civilian work—and the same may be said of the adjustment of our financial relations with India, the Colonies, Egypt—often intricate and troublesome. There would scarcely be any object in burdening with such duties the already congested Military Branches. I think I may take it that a civil Accounts Branch will continue to exist.

17. The *crux*, of course, is as to its independent powers of advice and criticism.

With regard to this there are some three schools:—

- (1) There is the school which advocates that the Military Branches be entirely responsible for their own finance, with no advice in the administration, and no more check than is involved in the after audit of the accounts.
- (2) There is an intermediate school which considers that the Financial adviser—a Civilian it may be—shall be part and parcel of the Military Branch, serving under the Military Chief, and responsible to him alone; and
- (3) There is the school which advocates, what in effect is the present system, that the Financial Adviser shall be altogether independent of the Military Branches, and responsible only to the Financial Secretary and through him to the Secretary of State.

18. As to the first of these theories—I am looking at the question so far as I can without prejudice—I recognise fully all the advantages claimed by its advocates, promptitude of action being the chief. But to my mind the disadvantages far outweigh them. What I have already said as to the ephemeral tenure of the military administrator tells here heavily. He has bare time to learn his administrative business; he has none to spare for finance. Of course there are brilliant exceptions. But, taken generally, his training is not that of the economist, and his ideal is rather that of efficiency than the saving of money. While as to the check of audit,—audit can prevent peculation, and save waste and small losses, but audit, apart from policy, can never seriously affect expenditure.

19. With regard to the second and third theories, it may be desirable to state the present practice of the Office, which is not altogether homogeneous. By old tradition, the Military Branches which deal with *personnel*, as the Adjutant-General's and Military Secretary's Branches, have no direct financial functions, though I make it a rule to refer to them when the pay of officers or men is affected. The Military Branches dealing, on the other hand, with supplies and transport, or warlike and other stores and clothing, or buildings,

have direct financial functions. In theory they frame their own estimates, though practically their estimates are framed in concert with the Accounts Branch; and they authorise expenditure. But even so, the mode of procedure is not quite the same in all the three cases. The Director-General of Ordnance, by an arrangement with which he is, I understand, fairly satisfied, has made over the larger part of his purely financial work to the Accounts Branch—with the understanding, to which we readily agreed, that he should at all times have access to our information and advice. The Quartermaster-General's people, though without a formal undertaking of the same kind, are in hourly touch with us on all money questions. As to the Inspector-General of Fortifications' Branch, I confess that I think our power of check over the expenditure in the Districts leaves somewhat to be desired. But on the financing of the Vote and of the Loans, we are in constant communication.

20. To return, however, to the point from which I started, it seems to me that the suggestion that the Financial Adviser should be under the Military Administrator, would be a mistake. He would lose his independence, and his advice would grow to be worthless. As explained in paragraph 9, the position is not one which the competent Higher Division clerk would accept.

21. And here I can but repeat what I said to the Committee in my examination. The War Office, notwithstanding its own large financial transactions, is unlike any commercial undertaking in this, that it does not work to a money profit. It neither is, nor can be, subject to the check of a dividend. In a commercial undertaking that is the one great point on which all energies are concentrated. There is no danger that it will be overlooked. But there is very great danger, in Army and Navy administration, that the administrators shall concentrate their energies on other questions than those of cost. And, consequently, it is desirable that there should be an independent and efficient Branch to see that the question of cost receives due consideration. With regard to these points, I would draw attention to a Memorandum on the Financial Control of Army Expenditure, drawn up by Mr. Harris, the Auditor of Factory Accounts.

22. In the foregoing remarks, I have dealt rather with general principles than details. Nor do I propose to trouble the Committee on one or two points of minor importance, in which I propose, at a more convenient season, to make changes in the Accounts Branch. One point, however, I should like to emphasise. The Assistant Under Secretary, has, as I understand, suggested a re-arrangement in the Accounts Branch, by which the Principals shall be removed from the active direction of sub-divisions, and made staff officers. If the Assistant Under Secretary had himself ever served in the Accounts Branch, I feel inclined to doubt whether he would have made this proposal. The sub-divisions deal, and must deal, with the great mass of the correspondence, much of which goes to the outside public, and it is, to my mind, of the utmost importance that the details of the work should be closely supervised by the Principal. To make him purely a staff officer dealing with selected questions, would be a mistake.

23. Perhaps I might also add that the duty of answering inquiries as to the exact whereabouts of a soldier, or his death, should be transferred from the Accounts Branch to the Military Branches. In old pre-telegraph days, this information had to be extracted from the Accounts. It is now obtained by other means, and the duty in itself is not in any way financial.

24. It may be as well, in conclusion, to have a record of my own personal position as Accountant-General of the Army. Under the Exchequer and Audit Departments Act of 1866, every "department" of the State is charged with the preparation of "Appropriation Accounts," and the Act provides that a "public officer" shall be appointed by the Treasury to perform that function. By Treasury Minute of the 14th August 1872 the Treasury define the duties of the "public officer" in question—who is to be designated "the Accounting Officer"—and fix his responsibilities. The Minute states *inter alia* that the Accounting Officer must be a permanent official, and the head of a department, and that he is to be "responsible for the financial administration of the grant for the Service under the control" of his department. The duties and responsibilities are further explained in the Treasury Minute of the 26th November 1883, and in a circular sent out to all public

i 15090.

departments on the 6th June 1882, from which the following is an extract:—

"It happily occurs but seldom that heads of departments or Accounting Officers order expenditure not permitted by superior authority, but it is very desirable that they should understand how serious a responsibility attaches to such an act."

"Accounting Officers will understand that if they are desired by their superior officers to order a payment which under Act of Parliament, Order in Council, Queen's Warrant, Treasury Minute, or otherwise, they believe to be wrong, they must represent their objections and the reason for it, to such superior officer in writing. If the order is then repeated in writing, they may obey without further responsibility, but if the officer directing the payment is not the supreme chief of the department, they should ask to obtain the authority in writing of such chief before obeying. The responsibility is then transferred to the directing officer, who will be held personally liable. The report of the Public Accounts Committee shows that the action of the Treasury in enforcing such liability will be supported by the Committee, and my Lords are anxious that there should be no misunderstanding on this point throughout the Service."

It follows from this that the Accountant-General, as "Accounting Officer" for all Army expenditure, occupies a somewhat exceptional position among the War Office officials, and has peculiar duties and responsibilities. He represents, as it were, the financial conscience of the department. It is for him to see:—

- (1.) That none of the money voted by Parliament is expended without due authority, under the rules laid down by Parliament itself and the Treasury.
- (2.) That the money voted is not deflected to purposes other than those which Parliament contemplated.
- (3.) That the Votes shall not be deliberately exceeded.
- (4.) That losses, and unremunerative expenditure generally shall not be written off without proper authority.

He is, in short, the custodian of the public purse, with responsibilities on the one side to the Treasury, and on the other to the Audit Office, and he is answerable to the Accounts Committee of the House of Commons.

Further, the duties of the Accountant-General are laid down as follows in the "Memorandum," presented to Parliament, "showing the duties of the principal officers and departments of the War Office," under the Order in Council of the 7th March 1899:—

"The Accountant-General, as permanent head of the Finance Division, and Accounting Officer for all Army expenditure of cash and stores under the Exchequer and Audit Act, is charged under the Financial Secretary with compiling the Estimates for submission to Parliament; with issuing money for all Army Services; with securing that accounts of all expenditure of cash and stores are correctly and punctually rendered; with auditing and allowing all such expenditure, and recording the same under its proper head of service in the annual account for Parliament; with issuing all warrants for the payments of moneys; with making all imprests to accountants and others; with the preparation of the annual account for Parliament; and with advising the Financial Secretary upon all financial questions."

FRANK T. MARZIALS.

War Office,
26th February 1901.

MEMORANDUM BY MR. C. HARRIS ON FINANCIAL CONTROL OF ARMY EXPENDITURE.

In any commercial undertaking finance is supreme. Everybody concerned in the management knows that he is working to produce a dividend; accounts are the main machinery of administration, and the centre of the whole system is the profit-and-loss account, which is the measure of both efficiency and economy.

The Army, on the other hand, is necessarily and essentially non-productive; there is no question of profits or dividends; efficiency is not expressible in terms of money; and accounts, in consequence, are no longer the main machinery of administration, the supreme test of success or failure, but a disagreeable necessity from which everyone is anxious to escape as far as possible. This essential difference dominates the

whole conduct of business in the War Office, and determines its financial system.

Money for Army services is voted by Parliament under certain votes and subheads of votes designed to show the immediate character of the expenditure to be provided for, not its ulterior purpose. For instance, the money spent in the Ordnance Factories is voted by Parliament as wages, materials, machinery, and so forth; there is nothing whatever in the estimate to show what guns, carriages, and other stores the country is to get for the money.

The accounts of voted expenditure, called Appropriation Accounts, show simply the total amount disbursed within the financial year under each vote and subhead. As their name denotes, they were primarily devised to show, and to enable the Exchequer and Audit Department to certify, that money voted by Parliament to the Crown for a particular object was in fact *appropriated* to that object. The whole system dates from a period when it was above all necessary to guard against a tendency on the part of the Crown to obtain money for one purpose and spend it on another; to get Votes of Parliament (e.g.) for the Royal Navy, and spend them on increasing the standing Army without the consent of Parliament, or on even more questionable objects. These Appropriation Accounts, though sufficient for the purpose of Parliamentary control from this point of view, afford no more information as to the ulterior purpose of the expenditure recorded in them, or as to the results obtained, than the Estimates themselves; and the accounts kept by the War Office and in the various military districts are designed simply to produce the Appropriation Accounts, and to secure the honesty of those through whose hands the expenditure passes. Viewed as *accounts*, apart from the vouchers, which show whether the payments made are according to regulation or contract, they serve no other purpose.

The system is, in fact, so rudimentary that no even moderately complicated commercial business—and the administration of the British Army is probably more complicated than any business in the world—could be conducted successfully without something further; something that would classify and exhibit the expenditure according to the purposes for which it is incurred, distinguishing between “capital” and “maintenance,” between the working expenses of different branches of the organisation, and so on; something that would supply at least some general test of the economic efficiency of the organisation and working of the concern, such (e.g.) as the train-mile unit in railway management.

In only one part of the Army system is anything of this kind attempted. In the Army Factories, manufacturing accounts are kept in addition to the Appropriation Accounts, to show what articles are produced for the wages, materials, &c., expended, and what each article costs. Even then it is difficult to make a just comparison between the trade and factory prices of articles, and still more difficult to secure anything in the nature of “payment by results” in factory management; but at least these accounts admit of being used as a machinery for bringing home, to those entrusted with the management of the factories, some measure of responsibility for economic results.

But, outside the factories, there is nothing of the kind. In a few instances, some little advance on these lines would be possible. Take, for instance, the Army Ordnance Department, the main business of which is to supply the Army with stores of all kinds. For this purpose, it has depôts at various places in each district. It would be possible to collect the expenditure of this Department under the various votes and subheads of the Appropriation Account—Staff, Wages, Buildings, &c.—into accounts which would show separately the capital expenditure on extensions, and the total working expenses of each depôt. It would be possible, further, so to record the goods received, held in store and issued, as to work up to an annual cost per ton handled, or some unit of the kind, by means of which the economic results of the working might be compared, depôt with depôt, and year with year. If something of this kind were done, and if the officers of the department, from the head downwards, depended for their continued employment or promotion mainly on the results so shown, they might be said truly to be *responsible* for the conduct of the business, and might be allowed the “free hand” by which, in business, such effective responsibility would be naturally accompanied; but with the free hand, and without corresponding accountability, while they might be said to be responsible for efficiency in a military sense (i.e., divorced from economy),

for economy there would be no responsibility at all. For efficiency admits of being tested by inspection, and, in case of failure to supply stores, by the complaints of the troops; but of economy there would be no test whatever.

As we come to the more military parts of the organisation, the difficulty increases. Take, for instance, a transport company of the Army Service Corps, regarded as comparable with the teams of an ordinary carrier. The pay of the men is in one vote, their food, clothing, barracks, vehicles, harness, horses, in others, all indistinguishably mixed up with expenditure of the same immediate character, for other men and for different purposes. There is no account which shows what the company costs, or what carriers’ work it does in return; and, indeed, the fact that much of its energy is devoted to purely military training, of no immediate economic value, would make the task of producing any useful account on these lines one of surpassing difficulty. When, finally, we come to the purely combatant parts of the Army, there is no longer any economic unit by which the return for expenditure could be gauged, or to which a scheme of account could be directed.

The above explanation, and a glance at an Army Appropriation Account, will make it evident that, generally speaking, the Army accounts will not show the financial effect of any administrative change or executive act. No auditor, however skilled, could pick out of them the necessary information to show the financial effect of such change or act; and indeed, in the majority of cases, the accounts would never reveal that any change had taken place.

Thus, except in the factories, the Army account system, from the very nature of the case, fails utterly to produce anything that a business man could call financial responsibility. In the War Office, the “financial responsibility” of the head of a military department means no more than his obligation not to exceed, deliberately or avoidably, the sums which he himself has estimated to spend, without obtaining the authority of the Secretary of State; and there are other not less striking differences between the conditions of administration in the War Office and in commerce. To make the administration of a railway at all comparable with that of the Army, we must suppose four radical changes:—

1. That the whole system is worked as a “free ferry,” supported out of the rates, and earning nothing.
2. That it has an absolute monopoly, there being no other concern with which its expenditure can be compared.
3. That normally it is not really worked but only “exercoised” with a few dummy passengers and make-believe parcels of goods; but that at uncertain intervals it has suddenly to do its real work, always under new conditions and always at extreme pressure, so that the test of constant steady working is absent.
4. That the only accounts it keeps are just sufficient to produce an annual statement of cash expenditure, without distinction between capital and maintenance, under such heads as—

Staff and wages.

Food.

Clothing.

Rolling stock and stores of all kinds.

Permanent way and buildings.

Given so uncommercial a state of things, is it not clear that, unless there is to be complete irresponsibility in matters of economy, some uncommercial form of control is necessary?

Now the sole form of control which the Army Estimates and accounts offer is limitation of the totals of particular votes and subheads. Some control of total expenditure, exercoised by the Treasury, is, of course, an unavoidable necessity; but from a War Office point of view this control, however necessary, is essentially irrational, in that it is based, not so much on a consideration of the proposals of the military departments on their merits, as on the state of the exchequer. The control of the Secretary of State over particular votes and subheads, if exercoised in the same way, without full examination of details, would be equally irrational, because the total of each subhead is the resultant of an indefinite number of causes affecting all districts and all arms of the Service, and stands in no perceptible relation to any one question of policy or administration. Such control, which could only take the form of arbitrary reductions of the sums asked for by the military departments, would be bad from every point of view. It has been said that the existence of a fixed

limit forces the head of each military department to exercise strict economy, in order to make his money go as far as possible; but, in fact, no such fixed limit does or can exist, unless efficiency is to be sacrificed and responsibility destroyed. Circumstances arise which make it necessary either to increase a particular vote or to sacrifice really necessary services. If the vote is not increased, the military head can no longer be held responsible for efficiency. If, on the other hand, it is conceded that, for due cause shown, an increase in estimates will be granted, the virtue of the supposed fixed limit is gone; it is always open to the head of a department to put forward a necessary service and say that it cannot be carried out without an increased vote, however extravagant the general character of the administration of his department might be. It is not that he would deliberately commit, or connive at, extravagances; but how is he to know, in the main, whether his department is working economically or not? There are no accounts to show him, and he naturally believes, until something happens to convince him to the contrary, that there are no savings to be made.

The essential function of the Finance Department is to enable the Secretary of State to exercise a rational, instead of an irrational, control over estimates and expenditure. It examines the structure of the estimates, and any special proposals brought forward during the year, to secure that the cost of the programme is estimated as completely and accurately as possible—often a difficult task, by reason of the complicated secondary effects of an apparently simple proposal—and that the Secretary of State, in deciding, may have

before him all the materials necessary for the formation of a judgment on the "business" merits of the proposals.

It also examines the accounts of expenditure, to see that the money is devoted to the purposes approved by the Secretary of State and that (so far as vouchers can show) his orders and regulations have been duly observed. This examination is no mere duplication of the audit of the Comptroller and Auditor-General. It embraces points of economy and administration and secures that expenditure is sanctioned by the proper authority within the War Office itself; the audit of the Comptroller, like the professional audit of a commercial concern, is directed to points of correctness of form and statement of account, and secures that expenditure which it is beyond the powers of the Secretary of State to sanction is duly authorised by the Treasury or by Parliament.

Knowledge of the details of the estimates gives special value to the examination of the expenditure under them; familiarity with expenditure and with the way it comes into account is essential to the proper criticism of estimates. It is because the Accountant-General and his officers, year after year, have exercised these functions jointly that they are experts in Army finance to a degree which no military officer approaches. Of the value of their criticism in bringing out the true financial aspects of proposals, and in securing reconsideration of hasty and ill-considered schemes, innumerable examples can be furnished.

C. HARRIS,

Auditor of Factory Accounts.

4th February 1901.

APPENDIX II.

MEMORANDUM showing the DUTIES of the various DEPARTMENTS of the WAR OFFICE, and the RESPONSIBILITY of its PRINCIPAL OFFICERS to the SECRETARY OF STATE, under the Order in Council dated 7th March 1899.

The Secretary of State exercises administrative control over all Army Services, and the heads of all the principal departments, both Military and Civil, are responsible to him for the discharge of the duties assigned to them.

He is assisted by the Under Secretaries of State and the Financial Secretary.

A War Office Consultative Council, presided over by the Secretary of State, will meet when required for the discussion of such subjects as may be referred to it by the Secretary of State.

The Council will consist of the Under Secretaries of State, the Financial Secretary, the military heads of the principal Military Departments, and of such other Officers as may, on special occasions, be summoned to attend its meetings.

FINANCIAL DEPARTMENT.

The Financial Secretary is charged with financially reviewing the expenditure proposed to be provided in the Annual Estimates for Army Services; with financially reviewing any proposals for new expenditure, or for any proposed redistribution of the sums allotted to the different subheads of the Votes for Army services; with the financial control of the Manufacturing Departments of the Army, and with controlling and recording all contracts for Army services; with the audit of all Army expenditure; and with advising the Secretary of State on all questions of Army expenditure.

Department of the Accountant-General.

The Accountant-General, as permanent head of the Finance Division, and Accounting Officer for all Army expenditure of cash and stores under the Exchequer and Audit Act, is charged under the Financial Secretary with compiling the Estimates for submission to Parliament; with issuing money for all Army services; with securing that accounts of all expenditure of cash and stores are correctly and punctually rendered; with auditing and allowing all such expenditure, and recording the same under its proper head of service in the annual account for Parliament; with issuing all

warrants for the payments of moneys; with making all imprests to accountants and others; with the preparation of the annual account for Parliament; and with advising the Financial Secretary upon all financial questions.

Department of the Director of Contracts.

The Director of Contracts is charged, under the Financial Secretary, and in concert with the heads of the Divisions concerned, with the supervision of all contracts for transport; with the purchase or sale of supplies, stores, clothing, lands, and buildings; and with the supervision of all special local purchases. He will report the cost of production of stores in the Manufacturing Departments, in comparison with the rates at which similar stores could be purchased from the trade.

MILITARY DEPARTMENT.

Department of the Commander-in-Chief.

The Commander-in-Chief exercises general command over Her Majesty's Military Forces at Home and Abroad, issues Army Orders, and holds periodical inspections of the troops.

He is the principal adviser of the Secretary of State on all military questions, and is charged with the general supervision of the Military Departments of the War Office.

He is charged with the general distribution of the Army at Home and Abroad;

with the preparation and maintenance of detailed plans for the mobilisation of the Regular and Auxiliary Forces;

with the preparation of schemes of offensive and defensive operations, and with the collection and compilation of military information;

with selecting fit and proper persons for appointment to Commissions in the Regular Forces, and with proposing fit and proper Officers, whether of the Regular or Auxiliary Forces, for promotion, for Staff and other military appointments, and for military honours and rewards.

The Military Secretary deals with appointments, promotions and retirement of Officers of the Regular and Auxiliary Forces; with selections for appointments to the Staff, &c.; with the grant of honours and rewards, &c.; and with regulations for the admission

of candidates to the Army. He is also charged with the educational qualifications required from candidates for Commissions in the Army; with the education and examination of Officers; with the administration of the Staff College, Ordnance College, Royal Military College, and Royal Military Academy, the Duke of York's Royal Military School and the Royal Hibernian Military School.

The Director of Military Intelligence deals with the preparation of information relative to the military defence of the Empire and the strategical consideration of all schemes of defence; the collection and distribution of information relating to the military geography, resources and armed forces of foreign countries, and of the British Colonies and possessions; the compilation of maps; and the translation of foreign documents. He conducts correspondence with other departments of the State on defence questions, and is authorised to correspond semi-officially with them on all subjects connected with his duties.

The Officer in charge of Mobilisation Services deals with all questions connected with the mobilisation of the forces, including Field Army Establishments, and with the tactical examination of all schemes of defence.

Department of the Adjutant-General.

The Adjutant-General is charged with the discipline, military education, and training of the Officers, Warrant Officers, non-commissioned officers and men of the Regular and Reserve Forces and Militia of the United Kingdom, and of the Yeomanry and Volunteer Force of the United Kingdom when subject to Military law or when assembled for training, exercise, inspection, or voluntary Military duty;

with patterns of clothing and necessaries, with the maintenance of returns and statistics connected with the personnel of the Army;

with enlisting men for, and discharging men from, the Regular and Auxiliary Forces.

He will submit proposals for the Establishments to be provided for in the Annual Estimates, and it will be his duty to advise the Secretary of State on all questions connected with the duties of his department. In the absence of the Commander-in-Chief he will act for him.

Department of the Quartermaster-General.

The Quartermaster-General is charged with supplying the Army with food, forage, fuel and light, and quarters, with land water transport, and with remounts; with the movement of troops, and with the distribution of their stores and equipment; with administering the Army Service Corps, the Pay Department, and the establishments employed on the above Services; and with dealing with sanitary questions relating to the Army.

He will make such inspections as may be necessary to secure the efficiency of the Services under his control.

He will submit proposals for the Annual Estimates for the above Services, and it will be his duty to advise the Secretary of State on all questions connected with the duties of his department.

Department of the Inspector-General of Fortifications.

The Inspector-General is charged with the construction and maintenance of fortifications, barracks, and store buildings, and the inspection of Ordnance Factory buildings; with military railways and telegraphs; with the custody of War Office lands and occupied buildings; with advising as to the design and issue of Royal Engineer and submarine mining stores. He will submit proposals for the Annual Estimates for Engineer Services.

He will advise as to the general distribution of the Corps; as to the appointment of Officers to, or their removal from, responsible positions in connection with works; on all questions relating to the technical instruction of the Corps of Royal Engineers. He will make such inspections as may be necessary to secure the efficiency of the Services under his control, and it will be his duty to advise the Secretary of State on all questions connected with the duties of his department.

Department of the Director-General of Ordnance.

The Director-General is charged with supplying the Army with warlike stores and equipment and clothing; with the direction of the Ordnance Committee, and the Manufacturing Departments of the Army; with dealing with questions of armament, of patterns (other than those of clothing and necessaries), of inventions and designs, and with the inspection of all stores, whether supplied by the Manufacturing Departments or by contractor. He will administer the Army Ordnance Department and the Army Ordnance Corps, and will make such inspections as may be necessary to secure the efficiency of the Services under his control. He will submit proposals for the Annual Estimates for the above Services, and it will be his duty to advise the Secretary of State on all questions connected with the duties of his department.

The Chief Superintendent of Ordnance Factories is charged with the administration and working, so far as possible upon a commercial basis, of the Ordnance Factories at Woolwich, Enfield, Waltham, and Birmingham. He will submit estimates of the expense necessary to carry out the orders he may receive for Army, Navy, India, and Colonial Services; and will prepare the accounts of expenditure incurred in the factories for audit in the Finance Division and submission to Parliament.

The Chief Mechanical Engineer will give such advice and assistance as he may deem necessary, or as may be asked for by the Chief Superintendent, or by the Superintendents of Factories on all matters relating to the introduction, extension, improvement, and maintenance of all machinery and appliances in the Ordnance Factories. He will have free access to all Ordnance Factories, workshops, and other buildings, and will report to the Chief Superintendent on the general character and output of the work, with especial reference to speed and feed, piece-work rates, wages, quality and cost of labour, and he will advise generally as to the most economical methods by which the work can be carried out.

He will report direct to the Chief Superintendent, who, if the recommendations involve the saving or expenditure of money, will transmit them to the Financial Secretary, through the Director-General of Ordnance.

The Director of the Clothing Factory is charged with the administration of the Army Clothing Factory at Pimlico.

Department of the Director-General of Army Medical Services.

The Director-General is charged with the administration of the Medical Establishments of the Army; with the Medical Staff Corps; with the preparation of Medical and Sanitary Statistical Returns; and with the supply of Medical Stores to the Army; and will report to the Commander-in-Chief, Adjutant General, or Quartermaster-General, according to subject submitted.

Department of the Chaplain-General.

The Chaplain-General is charged with the supervision of the Chaplains of the Church of England; and with all questions connected with Church of England Services.*

Department of the Director-General of the Army Veterinary Department.

The Director-General is charged with the administration of the Veterinary Establishments and services of the Army, and with the preparation of Sanitary and Statistical Returns relating to the above Services, and will report to the Commander-in-Chief, Adjutant-General, or Quartermaster-General, according to the subject submitted.

DETAILS OF OFFICE PROCEDURE.

1. The head of each Principal Military Department will be responsible for questions belonging to his department, and for submitting them (when higher

* The direction of the Chaplains of other denominations is vested in the Permanent Under Secretary of State.

authority is necessary) to the Secretary of State, in a complete form, showing fully all the considerations involved.

2. When the question affects more than one of the Military Departments, the head of the department dealing with it will refer the papers to the other department or departments concerned, in order that the question may be considered in all its bearings before submission to the Secretary of State.

3. All important questions will be referred to the Commander-in-Chief before submission to the Secretary of State. Questions which do not require the Secretary of State's decision, but which affect more than one of the Military Departments, will be referred to the Commander-in-Chief for decision.

4. The principal Military Departments have power to authorise, without previous reference to the Financial Department, all expenditure covered by regulation and provided for in the subheads of the Estimates. All papers authorising charges in Army accounts will be marked to the Financial Department for consideration by the auditors.

5. Proposals by the principal Military Departments for new expenditure, for expenditure not provided for by regulation and in the subheads of the Estimates, for changes in authorised establishments, for new patterns, for alteration in existing patterns, or for changes in the quality of supplies or stores, or in the extent of authorised reserves, will be referred to the branch of the Financial Department which deals with the subject for report. The Financial Department will return the papers, when reported upon, to the Military Department, and the head of the Military Department concerned will obtain the decision of the Secretary of State, if there should be a difference of opinion between him and the Financial Department.

6. All questions that have to be submitted to the Treasury will be referred to the Financial Department, and all letters to the Treasury will be signed by the Financial Secretary after the drafts have been approved by him.

7. Correspondence arising out of the examination of Army accounts, and all questions of the interpretation of regulations relating to pay and allowances, will be dealt with by the Financial Department in communication, where necessary, with the Military Department.

8. Appeals, by Officers and others, against decisions given in the Financial Department will be referred to the Military Department for remarks. Where the Military and Financial Departments differ in opinion on such questions, the latter will submit the papers for the decision of the Secretary of State.

9. All questions requiring the decision of the Secretary of State will be submitted through the Permanent Under Secretary of State.

The Army Board.

10. The Commander-in-Chief, the Adjutant-General, the Quartermaster-General, the Inspector-General of Fortifications, and the Director-General of Ordnance, or such of them as may be summoned, will form a board, under the presidency of the Commander-in-Chief, for the purpose of reporting upon—

- (a) Selections for promotion in the Army above the substantive rank of Major;
 - (b) Selections for staff appointments above the rank of Lieutenant-Colonel;
 - (c) Proposals for Estimates, *see* paragraph 16;
- and such other questions as may be referred to it by the Secretary of State.

11. The Accountant-General will attend the Board and give it such financial information as may be necessary; but the presence of the Accountant-General at the Board does not dispense with the necessity for submitting formally to the Financial Department all questions requiring financial consideration, *see* paragraph 5.

12. Additional Officers may, when necessary, be summoned by the President to attend the Board.

13. After a question has been considered by the Board, it will be the duty of the head of the Department concerned to complete the case, submitting it, when necessary, for the decision of the Secretary of State, *see* paragraph 3.

14. The Secretary to the Board will keep full records of its proceedings showing the questions discussed and the decisions arrived at in each case. Any member

who dissents from the decision of the majority will record his dissent in the proceedings of the Board.

15. The record of proceedings of the Board will be submitted by the Secretary for the information of the Secretary of State.

Estimates.

16. Before the detailed preparation of the Estimates is commenced, the Secretary of State, having before him the proposals made by the heads of the Military Departments for new or increased expenditure, will give the Army Board information as to the approximate amount within which the Army Estimates for the year are to be kept. He will then refer to the Board such of the proposals as he may desire them to report upon. The Accountant-General will supply the Board with any calculations or information as to the cost of the proposals before them.

17. The Board will then proceed to consider, and in their report they will indicate, the relative importance to Army requirements of the various proposals, and they will state which proposals they recommend for insertion in the Estimates of the year.

It will also be the duty of the Board to consider and to state in their report what economies are practicable in expenditure on Military Services.

18. When the Secretary of State has decided upon the proposals for Establishments and other services for the ensuing year, his decision will form the basis upon which the preparation of the detailed Votes and Appendices will be proceeded with.

Vote 6. Transport and Re-		
mounts	-	
Vote 7. Provisions, &c.	-	
Vote 8. Clothing	-	
Vote 9. Stores	-	
Vote 10. Works	-	

will be prepared in detail by the Military Departments concerned.

19. The other Votes will be prepared and completed by the Financial Department, which will also finally incorporate all the Votes, complete the Army Estimates, and submit them to the Secretary of State.

20. When the Votes for war matériel for the Navy and Army have been decided upon, the Financial Secretary, in consultation with the Director-General of Ordnance, the Director of Naval Ordnance, the Accountant-General of the Army, the Director of Army Contracts, and the Chief Superintendent of Ordnance Factories, will prepare a statement apportioning between the Manufacturing Departments and the contractors the sums provided under each item of the Army and Navy Store Votes, and the sum estimated to be spent on orders from India. This will form the basis of the Estimate for the Ordnance Factories.

Contracts.

21. The head of each Military Department will initiate all demands for services under his charge which require contracts to be entered into at headquarters, and tenders for such services will only be invited upon his requisition. Upon the tenders being referred to him by the Director of Contracts, he will state what tender should, in his opinion, be accepted. The lowest tender will not be passed over unless the head of the department concurs with the Director of Contracts in doing so; in that case, unless such a course is governed by approved precedent, the authority of the Financial Secretary will be obtained, to whom also will be referred any differences of opinion between heads of departments and the Director of Contracts as to the tender to be accepted.

Any points, other than those of mere detail, which arise upon the review by the Director of Contracts of local contracts, concluded in home and foreign commands, or of local purchases, will be considered and reported upon by the head of the department to which the service belongs.

22. When differences with contractors cannot be locally settled, and an appeal is made by a contractor to the War Office, the Director of Contracts will refer the papers, with his remarks, for the opinion of the head of the department concerned. The latter, when necessary, will obtain such information as may be required from the Officer responsible for the execution of the contract, and will then return the papers, with his opinion, to the Director of Contracts for disposal. When differences of opinion arise between the Director of Contracts and heads of departments, the matter will

be submitted for the decision of the Financial Secretary, and, when necessary, of the Secretary of State.

Army Orders.

23. Army Orders will be drafted in the department dealing with the subject matter of the order, and will be initialled by the head of the department as a guarantee of the necessity for, and the correctness of, the proposed order.

24. When orders and regulations affect more than one of the departments of the office, it will be the duty of the Army Regulation Branch to circulate the draft to every branch concerned.

25. All orders and regulations will be referred by the Army Regulation Branch for the consideration of the Commander-in-Chief before being submitted for the approval of the Secretary of State. When approved, they will be signed by the Commander-in-Chief.

Correspondence.

26. All letters from the War Office will be written in the name of the Secretary of State for War, and with the exceptions contained in paragraph 26, will be signed by the head of the department dealing with the question, or by an Officer authorised to sign for him.

27. Letters addressed to public departments, except to the Treasury (*see* paragraph 6), to Members of Parliament, to municipal or other public bodies, will be signed by an Under Secretary of State.

28. Records of correspondence will be kept in the departments dealing with the subject matter of the letters.

29. All letters to the War Office, and all returns, reports, &c., will be addressed to the Under Secretary of State, and will be distributed by the Registry to the various departments concerned.

APPENDIX III.

NOTES BY COL. WATSON, C.M.G., ON THE SYSTEM OF REGISTERING PAPERS IN THE WAR OFFICE. (*See* Question 6546.)

1. The importance to any administrative office of a thoroughly satisfactory system of registering its papers cannot well be over-estimated. Upon it, to a very great extent, depends the ease and speed with which the work of the office can be performed. The more perfect the system the more completely is all unnecessary and useless correspondence eliminated.

2. In the case of a large establishment such as the War Office, with its numerous branches, complicated system and enormous mass of correspondence on so wide a range of subjects, it becomes of paramount importance.

3. The object is to so classify and keep the papers that, at the shortest possible notice, all those relating to any given subject can be produced.

4. To enable this to be done the following general principles must be kept in view, viz. :—

- i. Each paper and each of its enclosures must be separately identified.
- ii. The papers must be arranged in files or bundles, each relating to one subject and one subject only.
- iii. A two-fold index or register must be kept so that :—
 - (a) Given the register number, the subject can be ascertained; and
 - (b) Given the subject, the register number can be ascertained.

iv. A record must be kept of transits so as to be able to locate papers in circulation.

v. No arrears of work must be allowed to accumulate even for a *single day*, either in registering fresh papers, in recording transits, or in putting away files returned to registry in their proper pigeon holes.

vi. There must be a proper system of "bringing forward" arrangements.

5. 4 (v.) above will usually render it necessary for the registry branch of the office to begin work earlier and continue it later than the other branches.

6. The following remarks should be prefaced by the statement that if anything in them appears to reflect upon the War Office Registry, it must be understood that it is the system that is criticised, and not the individuals who carry it out. The latter are invariably and uniformly civil and obliging in every way, and help us to the best of their power; but they have difficulties to contend with which hamper their efforts and render the task of keeping the correspondence in order a very troublesome one. It is desired to lay particular emphasis upon the point alluded to above, namely, that criticism is levelled against the system and not against those who have to work it.

7. As there has been no opportunity of carefully examining the present system of keeping the War Office Registry Books, the subject has necessarily been approached from the point of view of the outsider who has to deal with the papers subsequent to registration,

8. The following remarks, therefore, do not profess to cover anything like the whole ground, but they may, it is thought, suffice as a basis for discussing the best means of improving the present system of registering those papers which appertain more especially to this Branch (I.G.F. 3). They are not intended to be taken as a "cut-and-dried" scheme for remodelling the system of registration of War Office papers generally. They represent merely certain modifications in, and developments of the present system which the experience gained in I.G.F. 3, during the last few years, shows to be required for I.G.F. 3's papers.

9. As will be seen, some of the suggestions now made have already been introduced experimentally in part and found to work well, requiring now merely the imprimatur of official recognition; others, involving an initiative greater than I.G.F. 3 can give, have not yet been tried, but of these the desirability is believed to be capable of conclusive proof.

10. The work administered in I.G.F. 3 under the Barrack Reconstruction Fund and Military Works Loan has comprised many very large schemes, involving the expenditure of great sums of money and spreading over several years. Though based in the first instance on broad statements and comprehensive general principles, yet, as the work progresses, it becomes absolutely necessary to examine questions of designs of individual buildings, estimates, contracts, bills, staff, &c. in detail.

Difficulties which are, perhaps, of minor concern in less extensive correspondence become of first importance in the case of these larger schemes.

11. It is at once evident that, after a few months, and much more after a few years, the mass of correspondence dealing with one of these large schemes is very considerable indeed, and that, therefore, to enable the administration to be efficiently performed, it becomes essential to break up the mass into a series of "files" of manageable dimensions, each dealing with a well-defined portion of the scheme, and to rigidly maintain a system of registration (or arrangement of the papers) which shall ensure the correspondence dealing with these portions (or "separate subjects") being kept distinct.

This is, of course, merely a development of the principle of separation of subjects which has long been prescribed in the King's Regulations, and which must of necessity form the basis of any sound system of registration.

12. Experience proves, however, that extreme care is necessary to preserve what may, perhaps, be styled the "exclusiveness" of the file, and that, unless great attention is paid to this point, a file which has been started to deal with one particular subject will end with a discussion on an entirely different one, not unfrequently having meanwhile touched upon several equally distinct subjects. Numerous examples of this are in existence.

13. The initial difficulty, however, lies in the determination of the exact limits of the portions of the correspondence that require to be treated as "separate subject." This is the keynote of the whole system, and upon the judgment shown in it, coupled with the

strictness in subsequently adhering to the limits decided upon, will depend the degree of success obtained in simplifying the correspondence and facilitating work.

14. Without a thorough knowledge of the technicalities of the work, and of the principles upon which it is administered, it is practically impossible to determine the proper limits for these "separate subjects," and no satisfactory result can, therefore, be expected unless the aid of the branch dealing with the papers is invoked to assist the purely clerical Registration Branch.

15. Some attempt has been made to supply this aid in the case of I.G.F. 3 papers by arranging with the Horse Guards Branch of C.1 to send letters on Barrack Loan subjects to I.G.F. 3 in the first instance to ascertain how they should be marked up; and, in so far as this has been done, much good has resulted. But the arrangement is as yet unrecognised. It is thought that, if it could be officially sanctioned, one great difficulty in the way of a satisfactory system of arranging the correspondence in "files," each dealing with a well-defined "separate subject," would be overcome.

16. One of the greatest sources of inconvenience and delay in dealing with papers is the difficulty of obtaining "former papers" because they are in use in another Branch. These delays have in the past frequently been of the most serious character; days and weeks, and sometimes *even months*, having been lost in waiting for former papers without which it has been impossible to deal with some new paper (and this, it may be remarked, is probably one of the most common causes for the delay in sending replies to their letters, of which G.O.C.'s not unreasonably often complain).

This difficulty must probably always exist in some degree, but there is not the slightest doubt that its present magnitude might be very materially reduced by the adoption of a sound system of subdivision of correspondence into "files," each dealing with a "separate subject."

17. It is clear, however, that to obtain the best results, it is necessary, when deciding on the limits of the "separate subjects," to take War Office procedure into account, and to classify the papers in some sort of relation to their circulation amongst the various branches of the War Office, arranging as far as possible that the portions of correspondence (or "separate subjects") requiring reference to any one group of branches are kept as distinct as possible from those which have to be referred to another group. If this be not done, all action is of necessity stopped as regards one portion of the question, while the file is with branches which have to consider another portion; whereas, if the files are suitably arranged, it is often possible to make progress with both portions simultaneously.

18. Taking some of I.G.F. 3 papers, for example, correspondence dealing with *Designs of Buildings* may have to be referred to Q.M.G., D.G.A.M.S., D.A.S., or the Army Sanitary Committee, &c., while it does not concern the branches dealing with finance, and would seldom have to be subsequently drawn from Registry by any Branch of War Office except I.G.F. 3. On the other hand, questions of finance, contracts, &c. require to be referred to D.A.C. and F.B., whereas they do not usually concern the before-mentioned branches.

19. Moreover—and this is an important point which is often lost sight of—the initiative in separating the subjects and starting the files must be taken in the War Office.

That this is the case a little consideration will show.

For instance, assume that a large scheme has been started by a letter from the War Office to a G.O.C., and discussed in a file of three or four letters, in which the main features of the scheme have been settled. G.O.C. then writes to War Office about one particular portion of the scheme. When writing, he must quote one of the War Office letters in the above file, and, with a merely mechanical system of registration, this letter of G.O.C.'s will be marked up to the letter he quotes, and so on with every succeeding letter. Thus it is inevitable that, unless the initiative is taken in the War Office, the whole of the correspondence will be in the same file, and this, as already shown, will in the course of a few months contain so many "separate subjects" as to be quite unmanageable, thus causing great delay, and seriously increasing the risks of confusion and error arising.

Again, as not unfrequently happens, the G.O.C. may quote a wrong War Office letter, and unless the initiative of setting this right (which often requires technical knowledge) is taken in the War Office great inconvenience and confusion result.

20. It will doubtless have been gathered from what has been said so far that the experience gained in I.G.F. 3 points clearly to the conclusion that the "file," and not the individual paper, should be the registration unit. It is believed that in the full recognition of this principle lies the key to the solution of many of the difficulties at present met with in connexion with the registration of papers.

21. To speak plainly, it is considered that every registered paper without exception should be assigned to a particular file bearing a distinguishing title and number, and that the papers in each file should be numbered consecutively, the first paper being clearly marked "initial paper." The paper would thus be identified by its file number plus the sub-number indicating its place in the file.

Incidentally there would be the further advantages—

- (i) that it would be easy to see at a glance the proper order of the papers in the file, and whether any were missing; and
- (ii) that the present necessity of what is called "marking up" would no longer exist.

22. Moreover, every paper in the same file should bear identically the same title (*viz.*, that of the "file") under the heading "subject" on the front page of the jacket; for, should the contents of the paper show that this title is unsuitable, it is probably an indication that the paper has been marked up to a wrong file, or that it is advisable to start a new file.

It is, moreover, clear that one of the desiderata of a registry, *viz.*, the power to identify and produce promptly the papers on any given subject when the register number is not known, can only be attained by a suitable classification of the papers into files with systematically allotted titles of which a complete index is kept.

23. As a matter of fact, an Index of Files of M.W.L. papers is now being kept in I.G.F. 3; and I.G.F. 3's "noting books" are now arranged on the basis of the "file" system, and the papers themselves have for some little time past, as an experiment, been marked on the outside of the jackets with a stamp on which the number of the file and the order of paper in the file are shown as described in paragraph 21 above.

24. Each "file," moreover, should, it is considered, contain its own "précis," which, for the sake of convenience, should be kept in the top paper. This précis should contain:—

- (a.) A brief history of the subject dealt with, covering the period prior to the date of the "initial" paper of the file. It is not intended, it would be impossible, that this should entirely obviate the necessity of referring to other files; it should, however, be sufficient to give a general idea of the origin of the subject, whilst at the same time giving references to the papers where the full history can be found. (It is desirable that this brief history should also be given in the "initial" paper in case the précis should at any time be lost.)
- (b.) An abstract of each paper in the file. (This would be identical with the branch "notings" of the file mentioned in paragraph 23.)
- (c.) References to papers dealing with cognate subjects or to subjects referred to in Stations letters in the file which have been extracted or "separated" for action to other files.

25. It will very probably be thought that the keeping up of these précis (which should be done by the Branch concerned and not by the Central Registry) will cause a great deal of extra work; and it is quite true that in one direction extra work is entailed, but the system has been experimentally tried in I.G.F. 3 for some considerable time past, and it has been found that the saving of labour in other directions more than outweighs this objection, and it will readily be perceived that when a file is passed for action to a Branch or an individual who has not seen it before or not for a long time, the existence of a précis, which will enable it to be seen in a few moments how the precise point for action has arisen, is a great boon.

26. As already pointed out, the aid of the technical Branch dealing with the papers is necessary to

enable the correspondence to be arranged in proper files; and it is considered that official recognition should be given to this by vesting in the several branches the requisite amount of control over the papers with which they are primarily concerned, and by making them correspondingly responsible for the arrangement of these papers. Apart from all other considerations, the fact that the Branch principally dealing with any particular papers is the one that suffers most if they are unsuitably arranged makes it a "common sense" principle to hold that Branch responsible for their arrangement, and to give it the control necessary for the purpose.

27. However satisfactorily the existing W.O. series numbers may be found to work in other branches of W.O., yet the whole weight of experience in I.G.F. 3, goes to show that, for I.G.F. 3 work, at any rate, the infinitely preferable system is to have one and the same series number for the whole of the papers primarily dealt with by this Branch, no matter what subjects they may relate to. Fortunately for I.G.F. 3, at the commencement of the Barrack Loan Work, the series number 24/ was set apart for papers dealing with these services, and this has practically come to be the identifying number for I.G.F. 3 papers.

Its existence is, however, in reality, inconsistent with many of the earlier series, e.g., 7/ 8/ 10/ 18/, and from time to time some little difficulty arises owing to this.

The existence of this "Branch" Series No. 24/ for I.G.F. 3 papers has undoubtedly much facilitated the arrangement of I.G.F. 3 papers in suitable files, and proves, it is believed, what a great advantage it would be, could official recognition be given to the arrangement which, by the courtesy of C. I., is already partially in existence, viz., the complete control of I.G.F. 3 over the opening, marking up, and closing of all papers on the 24/ series. And it would be a further advantage if it could be arranged that (except by agreement with I.G.F. 3), no other branches should open papers or write letters on the 24/ series.

28. This, however, opens up, more or less, the whole question of the system of registering W.O. papers generally, with which these notes do not profess to deal, for it is felt that it must be a matter for serious consideration to what extent it is possible to deal with I.G.F. 3 papers differently to those of other branches of the W.O.; but without some such arrangements as are above indicated, it is considered that it will be very difficult, if not impossible, to maintain a proper system of "files" which, as already stated, is believed to be the only really satisfactory basis for a sound and successful system of registration.

29. It may perhaps be said that while, so far, much has been said as to the necessity of preventing more than one subject being dealt with in the same file, but little, if any, reference has been made to the need for ensuring that each file shall contain all the information necessary for dealing with the "separate subject" to which it relates.

It is true that at the present time this is a very real difficulty, the necessary information being not unfrequently scattered over several bundles of papers. But this is due primarily to the fact that the "file" system as described in the foregoing remarks is not in existence, and it is believed that, if it were in existence and worked in the manner described, this difficulty would practically vanish. Moreover, the maintenance of the file précis (see paragraph 22) would form a very useful safeguard in this respect.

30. While dealing with the subject of registration, one other point may perhaps be touched upon, viz., the advantage that would result from the adoption of a uniform system of "filing" the papers both at W.O. and at District Headquarters. The risk of wrong W.O. register numbers being quoted by G.O.C.'s would be materially reduced, and all that would be necessary would be to notify to G.O.C.'s from time to time the arrangement of the "files" in W.O. This, it may be remarked, is at the present time actually being done by I.G.F. 3 to some extent, and, as a tentative measure, in the case of M.W.L. (Barrack) Services.

31. Were this system adopted, the main correspondence (i.e., the letters passing between W.O. and G.O.C.) would be identical at both places, and the only difference in the two files would be that the W.O. one would contain in addition the W.O. Minutes, whereas the District Headquarters file would contain the local subsidiary correspondence instead.

Summary.

32. In conclusion and to "sum up," it has been found, by long experience in I.G.F. 3, that the existing system of registering W.O. papers does not meet all the requirements of a Branch dealing with large and comprehensive Barrack Building Schemes. The foregoing "notes" explain, it is hoped sufficiently clearly, the difficulties that exist and what has been done to meet them, and show that the modifications required may be classified under the following heads, viz.:-

1. The official recognition and development of the system of arranging I.G.F. 3 papers in "files," each dealing with a well-defined "separate" subject.
2. Official recognition of an arrangement by which C.I. shall consult I.G.F. 3, before registering, as to the marking up of 24/ papers so as to ensure that they shall be given the desired titles and placed in the desired files.
3. All I.G.F. 3 papers (no matter on what subject), and these only, to be on the No. 24/ series.
4. I.G.F. 3 alone to have the power to open or close papers on the 24/ series, or to write letters thereon.

(Signed) C. M. WATSON, D.I.G.F.

4th March 1901.

APPENDIX IV.

(A).—MEMORANDUM BY THE ACCOUNTANT-GENERAL ON THE CONTROL OF TREASURY OVER ARMY EXPENDITURE.

1. The Treasury control over the War Office is exercised in three forms—

- (a.) Control over estimates.
- (b.) Control over the total expenditure under each vote, and, in certain conditions, under each subhead and item of the estimates.
- (c.) Control over details.

(a.) Control over Estimates.

2. This, in its initial and larger stage, is the control of the Chancellor of the Exchequer, who settles generally with the Secretary of State for War, and with the Cabinet, what is approximately to be the total sum submitted to Parliament on account of Army Services in any given year. If the proposed total shows any appreciable increase, the Secretary of State will probably justify the demand for more money, by

explaining to what cause the demand is due, as, e.g., a general scheme of reorganisation in the regular or reserve forces, an increase in the armed strength, an improvement in the soldiers' pay, a large proposal for the rearmament of the troops or of forts, the necessity for increased accommodation at particular stations, some general change in clothing, &c., &c.

3. A general total having been arrived at, the War Office proceeds to draw up the Estimates in detail, and submit each vote separately to the Treasury, with a covering letter, explaining more or less fully, as the circumstances may require, the reasons for any increase or decrease in the various items as compared with the sums taken in the previous year. The Treasury either accepts or demurs. The vote itself cannot be submitted to Parliament until Treasury sanction has been obtained.

4. The form of the estimate, it may be observed, is laid down by the Treasury, and no alteration of arrangement or classification of proposed expenditure can be made without the sanction of that department.

(b.) *Control over the total expenditure under each Vote and in certain conditions under each subhead and item of the Estimates.*

5. The moneys voted by Parliament are, of course, regarded as absolutely devoted to the services for which Parliament has voted them. But the Estimates are prepared in January or February, and cover expenditure to be incurred up to the 31st of March in the following year, and within the intervening 13 or 14 months, circumstances naturally arise involving a change of financial aspect and even policy. Prices vary, new demands present themselves. A deficiency in one direction has to be met by a surplus in another. Speaking generally, the Secretary of State has power to transfer money from one item to another in the same subhead of each vote, provided the subhead itself is not exceeded. But, speaking generally again, deliberate transfers between different subheads of the same vote, and still more between vote and vote, require Treasury sanction. In practice the formal previous sanction of the Treasury for a transfer between two subheads of the same vote is not asked for, unless some change of policy is involved; for instance, a rise in the price of food or forage would be met, as a matter of course, by a saving on fuel or rents, if there happened to be any saving available on those items. But formal application is always made towards the close of the financial year for authority to meet any probable deficits on particular votes by probable savings on other votes.

6. The difference between the amounts estimated and voted and those actually spent, under each subhead of each vote, are exhibited and explained in the Annual Appropriation Accounts. These accounts are formally submitted to the Treasury after the end of each financial year, and presented to Parliament.

(c.) *Control over Details.*

7. The issue of pay is regulated by Royal Warrant, and all allowances are governed by regulations approved by the Treasury. Under the term pay is comprised everything of the nature of salary or wages (except hired labour paid at the market rate), not only of Officers and soldiers, but also of persons of every description employed with or in connection with the Army, except those belonging to the ordinary civil service of the State.

No provision of a Royal Warrant can be changed without the authority of another Royal Warrant, and no warrant affecting finance can be submitted to the Sovereign until it has been referred to the Treasury. Special cases are, however, dealt with under the provisions of the Royal Warrant of 27th October 1884, known as the Dispensing Warrant, which enables the Secretary of State, with the approval in each individual case of the Treasury, and a report to Parliament, to go beyond the grants admissible under the Pay Warrant. As regards allowances, which may be defined as issues in kind to individuals or corps or money payments in lieu thereof, the rates or scales of allowance cannot be varied without Treasury approval, but in other respects the Allowance Regulations can be altered at the discretion of the Secretary of State.

8. Similarly with regard to pensions and other non-effective payments, the Secretary of State has no power to depart from the terms of the Royal Warrants except by recourse to the Dispensing Warrant with Treasury approval in each case.

9. When establishments have been fixed and included in Army Estimates, no addition should be made to the numbers of any rank during the financial year, but if unforeseen circumstances render unforeseen appointments or additions necessary, which will not cause an excess on the amount provided for in each vote, the same are to be notified to the Treasury with an explanation, even although the additional appointments may not cause an excess on the total of the vote.

10. All new civil situations, whether included in the Army Estimates under Establishment, New Works, or otherwise, are to be submitted to the Treasury if they carry with them rights to pension under the Superannuation Act. Appointments of hired men at market rates, or on scales of pay or wages fixed by regulations approved by the Treasury, do not require Treasury approval, unless they will cause an excess on the sum taken in the Estimates.

11. No new work, i.e., fortification or Army building, of any magnitude provided for in Army Estimates is to be commenced without the previous sanction of Parliament; but if the work be urgent the Treasury have power to sanction commencement, without waiting for the vote of the year.

The funds for works and buildings services voted in Army Estimates are divided under separate parts, viz. :—

Part 1.—For new works, alterations, repairs, and maintenance, estimated at 1,000*l.* and upwards in each case.

Part 2.—For new works and alterations estimated at less than 1,000*l.*

Part 3.—Ordinary repairs and maintenance, estimated at less than 1,000*l.*

Each service voted under Part 1 is shown as a separate item and treated as such by the Treasury. The Treasury also treat as distinct items the totals of Part 2 and of Part 3 for all home stations and all foreign stations respectively.

Excesses, Part 1—

(1.) In the case of works the total cost of which is estimated at less than 6,000*l.*, the approval of the Treasury is required if the approved estimate is exceeded by more than 10 per cent. or 300*l.*, whichever is greatest.

(2.) In the case of works costing 6,000*l.* or more than 6,000*l.*, the approval of the Treasury is required if estimate is exceeded by more than 5 per cent. or 1,000*l.*, whichever is greatest.

(3.) The same principle is applied if there is any excess in the provision made for the year for any particular work.

Any work of an urgent nature required during the year and not provided for in Army Estimates, the estimated cost of which exceeds 1,000*l.*, requires the previous sanction of the Treasury. When funds are not available on Parts 2 and 3, services of an urgent nature estimated to cost less than 500*l.* may be undertaken without previous Treasury sanction, a quarterly statement being submitted to the Treasury of such services; while for services over 500*l.* special Treasury sanction must be obtained. Treasury sanction is given in such cases on the understanding that the excesses will be met by savings on the vote generally.

Treasury sanction is also necessary in the following cases:—

(a.) For the purchase, sale, or exchange of land or premises, when the estimated value exceeds 1,000*l.*

(b.) For interest payable on purchase money for land or premises, if there is anything unusual in the claim either as to amount, rate, period, or in any other way.

(c.) For services executed jointly with colonies (e.g., Malta drainage).

(d.) For contributions towards cost of works, &c., made to public bodies or private individuals.

(e.) For the insertion in Army Estimates of a service estimated to cost over 30,000*l.*

12. There are besides special rules requiring Treasury sanction for certain administrative acts; the underlying idea being generally to secure an impartial tribunal in cases in which the department might be exposed to undue outside influence. These are—

(a.) The discharge of a loss, deficiency, or overissue of cash or stores of any kind. General Officers Commanding have lately been given powers under this head up to 1*l.* for cash and 10*l.* for stores, provided there is no proof or presumption of theft or fraud. The Secretary of State for War deals with losses of stores (except in cases of theft or fraud) up to 100*l.*

(b.) The granting of an increased price to a contractor under a formal contract.

(c.) Compensation to a contractor for loss due to departure from terms of contract.

(d.) Abandonment of claims for excess cost of stores, &c., purchased against contractors in default; and of fines for delay in execution of contracts, if extra expense to the public has resulted from the delay.

(e.) Rewards to inventors exceeding 25*l.* in any one case or 50*l.* in the year; and royalties exceeding 15 per cent. on the value of patented articles or otherwise of exceptional amount.

(f.) Gifts of public property to Colonial Governments, public bodies, or individuals.

GENERAL REMARKS.

13. All financial rules appear elaborate when put into print. But generally it may be stated that the Treasury rules as to the control of Army expenditure are reasonable, having in view the objects to be attained, and are reasonably applied. Sometimes, no doubt, the departments differ; but, if the matter is of sufficient importance, the Secretary of State can always appeal to the Chancellor of the Exchequer, and, in last resort, to the Cabinet.

Nor does the appeal to the Treasury, in practice, involve appreciable delay. If the question is of real urgency, the Treasury are always ready to meet us, and a personal conference or semi-official note will, in nine cases out of ten, obtain an immediate decision, which can be acted upon pending more formal confirmation; while in war time it is fully recognised that both the Secretary of State and, even to a greater extent, the officer in command of the Army, must possess almost unlimited power to order necessary expenditure.

14. Financially it is, in my opinion, of advantage that there should exist an outside tribunal, free from external or internal influence, to which the department can appeal where additional expenditure is in question; when it may seem desirable to temporarily depart from the provisions made by Parliament; when a relatively important loss of money or stores has to be considered; or when some special composition has to be made with a contractor.

15. In the above remarks I have not touched particularly on the kind of control which the Treasury exercises over the establishments, and to some extent over the organisation of the War Office, a control which the Treasury exercises over all public departments.

FRANK T. MARZIALS.

War Office,
24th January 1901.

(B.)—MEMORANDUM ON THE AUDIT OF ARMY ACCOUNTS AS CONDUCTED BY THE EXCHEQUER AND AUDIT DEPARTMENT.

The audit (furnished by the Comptroller and Auditor-General) applied to Army Accounts by the Exchequer and Audit Department is divided into four sections, as follows :—

1. Appropriation audit.
2. Detailed test audit.
3. Store audit.
4. Manufacturing audit.

1. The Appropriation audit is defined by Parliament under the Exchequer and Audit Departments' Act, 1866 (29 & 30 Vict. c. 39. s. 29), which provides that "in conducting the examination of the vouchers relating to the appropriation of the grants for the several services enumerated under Schedule B." (which includes Army Accounts), "the Comptroller and Auditor-General, after satisfying himself that the accounts bear evidence that the vouchers have been carefully checked, examined, and certified as correct in every respect, and that they have been allowed and passed by the proper departmental officer, may admit the same as satisfactory evidence of payment in support of the charges to which they relate."

The Appropriation audit embraces the whole of the receipts and expenditure which are recorded in the War Office Ledger, and carried thence into the Appropriation Account. The examination by his officers of the warrants, abstract accounts, and pay lists in the manner prescribed by the Exchequer and Audit Departments' Act (without a detailed examination of the manifold supporting vouchers), followed as it is by a check of all the transactions through the subsidiary books into the ledger, enables the Comptroller and Auditor-General to certify to the correctness of the appropriation of the receipts and expenditure for Army Services.

2. The detailed test audit, which was brought into operation under Treasury minute of 20th March 1876 (see Appendix 1 of the Report of the Public Accounts Committee, 1876), enables the Comptroller and Auditor-General to give a detailed examination as to authority to any part of the Army expenditure. It is customary to select for detailed examination one or more Votes, or portions of Votes, varying the programme from year to year, and the transactions in respect of them are examined thoroughly, the attention

of the War Office being drawn to any rates of pay and allowance or charges which are not strictly in accordance with the authorities and regulations. Special attention is also paid to the various points which may have been noticed by the Appropriation Auditors in their examination, these questions being referred to the detailed audit for further inquiry into all the circumstances of, and authority for, payments of an exceptional or unusual character. The detailed audit is applied equally to accounts which may or which may not have already undergone a check by the War Office. A continuous check is also applied to the expenditure in connection with salaried civil establishments and military education, and a concurrent audit of all military pensions granted is carried out with the object of stopping at an early date, if not of preventing, the issue of pensions not in accordance with regulations.

In his Report (paragraph 1) on the Army Account of the year 1886-7, the Comptroller and Auditor-General reported to Parliament that in the course of the preceding 11 years the whole cycle of Army Votes had been examined in detail, and gave a summary of the results obtained during that period.

With regard to non-voted accounts, in respect of which balances are included in the Army balance-sheet, a test examination prescribed by the Lords Commissioners of His Majesty's Treasury is applied and the results are included in the Comptroller and Auditor-General's Report on the Appropriation Account.

3. The audit of store accounts by this department was instituted by a Treasury minute of 15th November 1886. This examination is based upon the regulations issued by the War Department, the primary object of the audit being to ascertain that the existing regulations secure efficient control over the receipt and disposal of stores, and that these regulations are strictly observed. Under this audit a check is applied to a portion of the cash vouchers for stores purchased, and also of the production statements of the Ordnance Factories and Clothing Department, with the view of testing whether the quantities paid for and charged to the Army Votes have been duly brought on store ledger charge.

4. A test audit of the Army manufacturing accounts is carried out under the Army and Navy Audit Act (52 & 53 Vict. c. 31). The chief aim of the examination is to see that the cost results truly represent the cost of production, and this object is effected by tracing the allocation of the value of the labour expended and materials issued, from the earliest records, through a necessary series of abstracts into the cost ledgers.

FINANCIAL CONTROL AND AUDIT.

(C.)—MEMORANDUM BY THE ACCOUNTANT-GENERAL ON WAR OFFICE AUDIT OF ACCOUNTS.

1. The moneys required for Army service are voted by Parliament, and placed, as required, to the credit of the Paymaster-General at the Bank of England.

At home payments are made—

- (1.) By War Office draft on the Paymaster-General.
- or
- (2.) By the Paymaster-General on a running order from the War Office.

2. The payments by running order on the Paymaster-General (2) are by very much the least important in character and amount, and it may be as well to clear them out of the way before going further. They comprise, mainly, payments for retired pay, half-pay, and non-effective services generally—apart from soldiers' pensions—and the Paymaster-General acts in respect of such issues exactly as any other War Office Accountant would do, and renders a vouched account which is of a simple character and easily examined.

3. The payments made by War Office draft on the Paymaster-General (No. 1 above) are of much greater importance, and may be said to embrace roughly the whole bulk of Army expenditure. They may again be divided broadly into two classes—

- (a.) Final payments, i.e., payments made definitely, after full examination at the War Office—payments therefore in respect of which no further account is necessary, the transaction being entirely closed by the issue of the money and its acknowledgment.
- (b.) Payments technically called "Imprests," which are made to any person, mainly a Paymaster, who will have to render an account of the way in which the money has been expended.

4.—(a.) Final payments.—These payments amounted in 1899-1900, the last completed financial year, to

19,910,590*l.* (see statement annexed). Roughly, and not to go into confusing details, they comprise payments made in this office to contractors in respect of claims amounting to over 100*l.* The claims in question embrace—speaking roughly again—all the immense variety of articles coming under the general designation of stores, and supplies (food, forage, fuel), rents, transport by ship and rail,* buildings, lands, medicines, &c. For convenience, the payments for capitation, &c., to Volunteers, are also paid direct as final payments.

As regards these final payments, it is clear that they must be thoroughly examined at the War Office, for no one would think of paying an account, as presented, without exercising a strict control over services and details. Where, as in the case of buildings and medicines, for example, some professional check is required, that check is applied in the administrative branch—the Branch of the Inspector-General of Fortifications, or Director-General, Army Medical Department. Otherwise the examination, which comprises computation, comparison with contract, seeing that payments are in conformity with regulation, devolves upon the Accounts Branch.

5.—(b.) “Imprests,” or payments by the Paymaster-General for which a further account will be required.

These imprests amounted roughly in 1899–1900 to 26,986,900*l.* (see statement annexed). As already stated, they are mainly made to Paymasters; but the Postmaster-General is a large Imprest Accountant in respect of payments to pensioners and reservists who are paid by money orders, such money orders being practically cheques drawn upon him. The Paymaster's payments, like those of the Paymaster-General, are again divisible into two classes. He, too, makes final payments for stores, supplies, &c., when the bills amount to less than 100*l.*, and final payments of pay, allowances, travelling expenses, &c., to individual officers; and he, too, has his sub-accountants, to whom he makes imprests mainly for the payment of the troops, the troops being paid in detail, not by the Paymaster, but by the Captains of companies. The Captains render accounts of the sums they have received to the Paymaster, and the Paymaster examines the accounts, and embodies the corrected charges in the accounts which he renders to the War Office.

6. Between the Paymaster's direct payments and the accounts which he forwards in discharge of his imprests there is a very wide distinction. This was explained at length in the report of the late Sir George Lawson's Committee of the 23rd May 1896, which, as I understand, is before the Committee, and I need not go into the matter here at greater length. Suffice it to say that the recommendations of the Committee of 1896 have been adopted, and that it has been recognised that a test audit suffices in respect of the charges in the Paymaster's accounts which are supported by the accounts of his sub-accountants—accounts which he has himself thoroughly examined, and in which it is scarcely possible that he should establish any personal and sinister interest. This test audit is mainly directed to seeing that the Paymaster is himself exercising a proper check upon his sub-accountants.

With regard to direct payments a more stringent check is of course necessary.

7. I enclose reports from the various sub-divisions of the Finance Branch which deal with accounts, showing, in detail, the kind of check exercised over the various charges. The sub-divisions dealing with cash accounts are—

F. 3, which receives and computes all Paymasters' accounts, controls the balances of money in the Paymaster's hands, examines all payments in the nature of pay, and distributes to the other sub-divisions any vouchers containing charges in which, from their subject, such other sub-divisions are interested.

F. 4, which deals with all charges on account of the Reserve Forces, Militia, Yeomanry, or Volunteers.

F. 5, which deals with all charges for supplies, food, forage, lodgings, transport, whether sea or land.

F. 6, which is not properly an account sub-division, as it deals with officers' and soldiers' effects, and

enquiries after soldiers, but has one account of soldiers' effects.

F. 7, which deals with all charges for retired pay, half-pay, and pensions.

F. 11, which deals with all charges for buildings.

F. 12, which deals with all charges for stores and clothing, paid directly by the War Office.

F. 12A, which deals with the accounts of the factories.

F. 13, which deals with charges for stores and clothing, included in the Paymaster's accounts.

In the above remarks, I have spoken of cash accounts alone. But F. 5 deals also with store accounts of food, forage, fuel, and medicines; while F. 11 deals also with accounts of barrack stores, and F. 13 deals with all accounts of stores and clothing. F. 13 and F. 11 are also entrusted with the duty of checking stores locally, for the purpose of seeing that stocks in hand correspond with the stocks as shown in the accounts.*

8. In conclusion, I may perhaps forestall a question. It may be asked why all direct payments are not made through Paymasters, instead of partially through the Paymaster-General, when a sum of over 100*l.* is involved, and through Paymasters when the sum is less than 100*l.* The reply is that the larger contracts for the Army generally (e.g., guns and munitions of war) are necessarily made at headquarters; that it is not held desirable to place larger sums of money than is necessary in the Paymaster's hands, and moreover that, for the purpose of financing the Army, it is extremely desirable to have at the War Office the earliest information as to the rate of expenditure throughout the year, and its possible amount—information which only comes in tardily through the Paymaster's monthly accounts.

At foreign stations all payments, of whatever amount, are made by the Paymaster.

9. I annex a statement showing roughly the amount issued on imprest and as final payments during the year 1899–1900. It may be added that imprest issues given under the head of “Treasury Chest,” represent the amounts issued on account of Army service at foreign stations.

22nd January 1901.

FRANK T. MARZIALS.

IMPRESTS and final Payments made by the Paymaster-General during the year 1899–1900, on Orders from the War Office.

(This does not take into account non-effective payments issued by the Paymaster-General on standing orders from this office.)

* Rail expenditure stands on a somewhat exceptional footing. After many experiments it has been found most convenient to the railway companies and to the War Office that all railway fares, whether the bills amount to 100*l.* or under, should be submitted directly to this office by the railway companies, and paid by this office through the Paymaster-General.

* The nomenclature of the sub-divisions in the Finance Branch is not symmetrical, nor are they symmetrically grouped. A proposal of mine to re-number and re-group has been postponed, pending the report of the Committee.

(D).—MEMORANDA BY SUB-DIVISIONS OF ACCOUNTANT-GENERAL'S DEPARTMENT ON NATURE AND EXTENT OF THEIR AUDIT.

ACCOUNTANT-GENERAL.

The Committee have asked to be supplied with a statement showing with reference to Head 2 of enclosed reference:—

1. The nature and extent of the audit applied in the districts to all local expenditure.
2. The nature and extent of the audit at the War Office both as regards accounts received from the District Paymasters, and accounts, such as bills, &c., that come direct to the War Office.
3. The nature of the existing financial checks on the War Office, in other words the extent to which the War Office is controlled by the Treasury and Audit Office.

H. J. GIBSON,
Secretary.

9/1/01.

For replies to 1 and 2 from various examining branches, see following statements.

For reply to 3, see Appendix IV., memoranda (a), (b), and (c).

F. 3.

Question 1.

The report of Sir George Lawson's Committee of 1896 is the best answer to question (1) as to the nature of the Paymaster's audit.

Briefly, he applies an independent audit to all payments made by Officers Commanding Companies, or by others who draw money from him on imprest, and sees that all these and the payments which he himself makes directly are in accordance with regulation or are made under authority.

Question 2.

Nature and Extent of the Audit given by F. 3 to Paymasters' Accounts.

A. The accounts of Paymasters are rendered monthly, and the charges therein are divided for audit purposes into two groups:—

I.—Charges coming through Company Pay Lists.

Generally referred to as "Regimental."

The pay list includes charges for pay, good conduct pay, and the multifarious forms of extra pay, extra duty pay, messing allowance, &c.

Audit in F. 3.

Only one-eighth of the pay lists are completely examined at the War Office, or, stated in another way, each pay list is examined three times in two years, at varying intervals.

The work of computing the amounts and checking forward the men's names from the previous month is done entirely by a staff of temporary boy copyists, the examination being generally done by clerks on the permanent establishment.

The scope of the examination is, of course, to secure that all charges are strictly in accordance with regulations.

The detailed method of examination is described in the printed pamphlet "Instructions for Examiners in F. 3."

This will show that the examination of a pay list is of a more complex nature than might at first sight appear. Messing allowance, for instance, is popularly supposed to be simply an addition of 3d. a day to a soldier's pay, but the complicated nature and conditions of the regulations governing the issue have been the cause of much misunderstanding, numerous overcharges, and consequent correspondence. (A reference to Army Order 65 of 1898, and its present equivalent, paragraphs 87-94 of the Allowance Regulations of 1900 will illustrate this point.)

A considerable amount of attention has also to be given to the balance sheets of Company Officers showing their liabilities and assets, and the state of their accounts generally. The officers in question are frequently quite inexperienced in financial matters, and consequently in danger of losing money.

To seven-eighths of the pay lists a "limited examination" is applied. This practically means checking the totals into the Paymaster's General State and

seeing that certain forms and certificates are completed.

II.—Charges which do not pass through Company Pay Lists.

Generally described as "District" services.

These consist of all payments to officers not made by Army Agents, the pay of clerks, nurses, labourers, &c., payments to contractors, claims of officiating clergy and doctors, deferred pay and other direct payments to soldiers.

Audit in F. 3.

Those of the nature of "pay" are thoroughly examined by F. 3 to the extent of one-sixth, or, in other words, the "district" charges in each Paymaster's Account are examined twice in each financial year at varying intervals.

In five accounts out of six all that is ordinarily done is to secure a receipted voucher for each item.

Charges for deferred pay always receive extra attention, as the regulations governing the issue are very complicated, and the division of the charge between the British and Indian Exchequers is important. On the other hand, payments which are indirect, such as the pay of departmental subordinates, are less closely watched, even in a fully examined account.

The bulk of the charges under Votes 3 to 10, and under the Non-Effective Votes, are dealt with by other sub-divisions and in different ways. As the Paymaster's Account remains in the custody of F. 3, it falls to that Branch to extract from it all charges and credits under those Votes which are dealt with by other sub-divisions, and to forward them to the proper quarter for examination or review. The various claims are computed according to the instructions which may have been given and included in a covering "Schedule," which is registered and despatched by F. 3. On return of the Schedule, which is carefully watched by F. 3, any disallowances which may have been made are noted by that Branch for recovery.

C.—Classification.

When an account is completely examined, the classification is reviewed, and mistakes, which are often very numerous, are pointed out to the Paymaster. "Classification," it will be understood, is the apportionment of expenditure to the various heads under which the money has been provided by Parliament in the Estimates, and is necessary in order to secure that there shall have been no misapplication of public funds.

D.—General Observations.

It should be clearly understood that the above rules are not applied blindly, but that an endeavour is made to subject all accounts examined to an intelligent review.

For instance, when the personnel of a Pay Office appears to be weak, the audit is more severe, and careful instructions are given as to the irregularities that come to light, to ensure an improvement in the Paymaster's work. To balance this extra labour, the accounts of an office known to be in good working order are not scrutinised so closely.

Special attention is also given to weak spots and to the working of new regulations, but whenever this is the case, something else has to be given up. For example, messing allowance is for the time fully examined, and we give up, as a set-off, the checking of hospital stoppages and regimental establishments.

Every effort is made to secure prompt audit, and it is recognised that when audit gets very much into arrears, it is little or no good.

Since the war began it has not been possible to examine the accounts on the same system as in peace time, as the untrained staff added to the Branch is of little use for examination purposes, and can only be employed on the mechanical work of securing vouchers, &c.

E.—Agents' Accounts.

The pay and allowances of Staff and Departmental Officers at home, and the great bulk of the pay and corps pay of Regimental Officers, both at home and abroad, are drawn through the Agents' quarterly accounts.

These accounts are thoroughly examined, as many are badly rendered and the amounts involved are

considerable; we find that, when the Agents are in doubt about an item, their practice is to charge the amount, trusting to the War Office examiner to throw it out if incorrect.

Regimental Officers have the option of drawing their pay either from the Agents or the Paymaster, and this increases work owing to the risk of double charges.

G. P. WIGHT.

16/1/01.

F. 4.

The charges against Army Votes which F. 4. deals with are:—

1. Cash issues to officers and men of Militia and Yeomanry, made by Company Officers and Paymasters.
2. Payments made by the General Post Office to Army Reservists on money orders drawn up by Paymasters, and reclaimed by the Postmaster-General direct from the War Office.
3. Annual and other grants to Yeomanry and Volunteer Corps, paid, as final payments, direct from War Office.

I. The audit in the districts is conducted by the Paymasters, and is complete as to all payments made locally, other than those made direct by Paymasters themselves.

II. F. 4. examine the whole of the payments unaudited locally, and, generally, not more than 12½ per cent. of the rest (i.e., one company of the unit).

Militia.

The payments of the men's pay and their bounties are made by Officers Commanding Companies, and are audited by Paymasters. But a rather higher percentage of the charges for bounties is examined by F. 4. than is the case with the pay. Bounties are paid only occasionally, and are governed by special conditions, and Paymasters and others require additional guidance in dealing with them. The rates of pay, &c., are similar to those in the Regulars, with which Paymasters are fully acquainted. The percentage of pay-charges in the Militia, which are examined by F. 4., is higher than that of similar payments in the Regulars examined by F. 3., because the Militia come out once a year only, and their methods of keeping accounts are thus under review very seldom, and because the Militia Company Officers and Colour-Sergeants have not the same familiarity with the operation of paying their men, &c., as their fellows in the Line have. Apart from these points, the system is the same as in F. 3.

The direct payments by Paymasters consist of officer's pay and allowances, travelling charges, and regimental allowances.

Army Reserve.

All payments of Army Reserve pay are effected by money orders issued by Paymasters. The value of these orders is recovered from the War Office on a claim sent direct by the General Post Office. The claim is checked in full with the lists sent in by Paymasters.

Yeomanry.

The charges for the pay of the Yeomanry are dealt with in the districts on the same system as in the Militia, but they are examined in full by F. 4., as upon them, to some extent, depends the issue of the annual grants to the force.

These grants are claimed once a year, direct from the War Office, by the Commanding Officers; the claims are examined in full; and the War Office pays direct the amounts earned. By this means audit is confined to that conducted by the Controller and Auditor-General, the payment by the War Office being final and Commanding Officers being required to render no account, but merely a statement showing under a few general headings the manner in which the money is expended, e.g., clothing, saddlery, ranges, &c., &c.

Volunteers.

The bulk of the payments to the Volunteer force are annual capitation grants which are paid on two occasions in the year, direct from the War Office, as in the case of the Yeomanry. The grants are either for efficiency, in which case claims are sent direct by the Commanding Officers to the War Office in the form of books, made up to the 1st November in each year, showing the conditions for efficiency performed by each member of the corps, or for attendance at camp, in which case returns showing names and dates of attendance are rendered by the Commanding Officer. The efficiency books are examined in full, as received between 1st November and 31st March, and the payment is made in one sum during the first week in April. The camp returns are examined in full, and payment made as soon as possible after the close of the camp. There is no audit other than that of the Exchequer and Audit Department, the payments being final and Commanding Officers being required to render no account, but merely a statement showing manner of expenditure.

The above applies to the greater part of the payments to the Volunteers, but there are some few payments, such as outfit allowance to Volunteer Officers, which are made from time to time during the year, but the method of payment, &c., is the same as for the capitation grants.

The only issues made through Paymasters are the allowances, &c., earned by Volunteer Officers at Schools of Instruction. These are paid direct by Paymasters and are examined by F. 4. in full.

(Signed) R. H. BRADY.

15/1/01.

F. 5.

F. 5 has financial control of the expenditure on the movement of troops and stores, and the purchase of remounts (Vote 6), on provisions, forage, fuel and light, rents and tithes, advertisements, barrack services, and the allowance in lieu, viz., ration, messing, forage, fuel, light, lodging, stable, field and colonial (Vote 7), on the medical and surgical supplies (Vote 2), and on veterinary supplies (Vote 1).

Audit in Districts.

The Paymaster is charged with paying only such services as are covered by regulation. Should the Paymaster receive a claim outside regulation, he returns it to the Officer Commanding for reference through the proper channel to the War Office for decision, if considered necessary.

The Paymaster is supplied with the material particulars of all contracts, including prices and conditions of payments, to enable him to verify claims.

The Paymaster audits all claims abroad and those less than 100l. at home, and sees that:—

- (1.) The rates, names, &c. are correct;
- (2.) The services charged for are in accordance with regulation;
- (3.) The claims are, when necessary, supported by the requisite certificates from Army Service Corps Officers who have examined them;
- (4.) Deductions are made for purchases in default;
- (5.) Receipts are given for all monies paid;
- (6.) The computation is correct;
- (7.) Rent and tithe claims are in accordance with conditions of lease, &c.;
- (8.) Gas claims have been checked as regards meter readings;
- (9.) The charges generally are properly classified.

When he has satisfied himself that the claim is correct, he pays it and renders it to the War Office in his monthly account.

Audit at War Office.

(1.) Of the Paymasters' accounts, five-sixths are "partially" and one-sixth "fully" examined. The partial examination is restricted to seeing:—

- (a.) That a voucher exists for every charge and credit;

Vote 7 only.

- (b.) That all supplies paid for are brought on charge in the supply account;
- (c.) That the classification is correct;
- (d.) That a receipt is secured for each charge;
- (e.) That all credits which have been promised are duly brought to account;
- (f.) That the charges on accounts of rents and tithes are correct. (These charges are also recorded in the proper War Office ledgers.)

"Full" examination takes note of all the points dealt with in "partial" examination, and, in addition, the other points dealt with by the Paymaster in his examination.

Agents' Accounts.

(2.) The Army Agents' accounts relate to allowances issued to officers, and as they are rendered direct to this office by the Agents, they are "fully" examined here.

A. S. C. bills.

(3.) Claims of 100l. or upwards come directly to the War Office from the Army Service Corps Officers, and they are "fully" examined at headquarters before payment is made.

Railway bills.

(4.) Railway and steamship companies (for coastwise journeys) render their claims for the fares of officers and men travelling direct to this office, supported by the warrants that have been handed to the booking clerks in exchange for the railway tickets.

The bills are computed in this office and compared with the warrants, the fares and the route taken are checked, and it is seen whether the charge is admissible against the public, or recoverable from the soldier who used the warrant. If the latter, steps are taken to see that the recovery is effected.

Sea Transport bills.

(5.) Army sea transport services are carried out by the Admiralty on the requisition of the Military authorities at home and abroad.

The Director of Transports, Admiralty, makes all contracts and agreements with shipping companies, and examines the claims against such contracts and agreements, especially in regard to technical points. He then passes them to the War Office, where, before being paid, they are subjected to an audit to ensure that:—

- (a.) The charges are generally correct and on account of Army service; for this purpose the Admiralty papers and contracts are open to War Office inspection;
- (b.) The grants of passages to officers and others are in accordance with Army Regulations.
- (c.) The charges for supplies of stores (coals, victualling, &c.) from Navy yards are generally in order and admissible against Army Votes.

Officers' claims.

(6.) Travelling claims of officers not on the staff of districts are rendered direct to this office by the officers concerned.

These are examined in the same manner as the Paymaster examines a travelling claim before payment.

Remount accounts.

(7.) All amounts are purchased at home by the Inspector-General of Remounts, who renders an account to this office supported by the necessary vouchers. This is "fully" examined, and it is also seen that the animals purchased are duly taken on charge by the various corps concerned.

(The accounts for remounts purchased in the Colonies are included in the Paymaster's account, and dealt with in this office as an integral portion of that account.)

Supply Accounts.

The provision and forage accounts, showing the quantities received from contractors and consumed by the troops, are compiled by the Army Service Corps and rendered direct to this department by the responsible Army Service Corps Officer. They are "fully" examined in this department, that is, it is seen that the quantities taken on charge agree with the quantities charged for by the contractor in his claim for payment, and that the quantities consumed are those allowed by regulation for the number of troops concerned.

The accounts rendered by Medical Officers for supplies consumed in Military Hospital, those rendered for fuel by Officers Commanding Corps, and those rendered by Governors or Wardens of Military Prisons and cells for supplies issued to prisoners, are forwarded to the Army Service Corps Officer of the district, who verifies them as to rates and computations before passing

them here; but this is not regarded as an audit, because it is this Army Service Corps Officer who passes the contractor's bill for the supplies in question to the Paying Officer, and he is, therefore, the direct accounting officer.

Surgical and Medical Accounts.

The contractor's claims for payment for these supplies are rendered to the Army Medical Department at Headquarters, where they are fully examined and passed to this Branch for payment. Before payment is made a percentage of the items, computation, &c., are checked.

The supply accounts are rendered to the Army Medical Department at Headquarters by the several Medical Officers in charge of hospitals, &c. They are fully examined in the Director-General's Branch, and a test audit is made in this Branch of about 10 per cent.

Veterinary Accounts of Medicines and Appliances.

Both the contractor's claims and the supply accounts are rendered to the Director-General, Army Veterinary Department at Headquarters, and are dealt with by the Director-General and this Branch on similar lines to the Medical Accounts.

F. 6.

1. No payments are made locally on the authority of F. 6, except those which the Paymaster is instructed to make on account of Effects, Orphans Savings Bank Balances, or Arrears of deceased pensioners and others. These would not be audited locally.

2. The only account received for audit by F. 6 is the Quarterly Effects Account, rendered by Messrs. Cox and Co., Army Agents, in which issues authorised by this section to representatives of deceased officers and soldiers are charged. These Effects Accounts are examined throughout, a proper receipt being secured from each payee, and the total amount correctly expended is allowed against the respective years of Effects and Heads of Service.

These are payments by an agent of sums belonging to deceased men, for whose correct distribution we are responsible, and it seems doubtful if we could properly dispense with an audit, or be satisfied with a test audit.

The audit of late years has not been very productive, but in ordinary years it only occupies one man's time for about 10 days once a quarter.

(Signed) A. J. MAJOR.

14/1/01.

F. 7.

A.—Accounts of Local Expenditure.

The accounts rendered to F. 7 are of the following classes, viz.:—

- (1.) Chelsea Out-Pension Accounts (Home).
- (2.) Chelsea Out-Pension Accounts (India).
- (3.) Chelsea Out-Pension Accounts (Colonial).
- (4.) Chelsea Out-Pension Accounts (Schedules to District Paymasters' Accounts abroad).
- (5.) Chelsea and Kilmainham In-Pension Accounts.

(1.) All payments included in the above accounts are made locally; but except in the case of the Indian accounts (which are audited by the Indian authorities), and of the Kilmainham Hospital Account (which is audited by the District Paymaster, Dublin), there is no local audit of any sort. The pensioners' life certificates are, however, examined locally, and are not sent to this office at all.

(2.) Owing to the great variety in the rates of soldiers' pensions, and the varying terms for which temporary grants are payable, it has been found necessary to completely audit all pension accounts at the War Office. The main part of the audit consists in checking forward the quarterly rate of pension from one account to the next; in checking all first charges against the original admission roll showing Chelsea's award of pension; and in seeing that payment ceases for all men whose death certificates have been sent to this office by local registrars.

(This latter is part of the machinery for checking personation.)

The actual money orders on which pensions have been paid are *not* examined at the War Office, nor are the totals of the advice lists, which have been already checked at the General Post Office.

The foregoing remarks apply with little modification to all out-pension accounts, but the vouchers are more completely examined in cases where the pensioners reside elsewhere than in the United Kingdom or Canada.

As regards the Chelsea and Kilmainham Hospital In-Pension Accounts, the audit by the War Office is as complete as possible, though it is, owing to the nature of the accounts, in many respects only a test audit.

B.—Paymaster-General's Non-effective Account.

This account is completely audited at the War Office, every voucher being examined and noted in the non-effective registers. No pay list is received with the account—only a schedule of the payments made.

(Signed) G. W. B.

16/1/01.

F. 11.

The expenditure dealt with by F. 11 comprises charges in connection with War Department works and lands.

I.

Local payments at Home Stations are confined to charges under 100*l.*, as explained in paragraph 161, Financial Instructions.

All contracts for works on which local payments will be made are passed to the Paymaster for notation. The bills of the contractors are first rendered to the local engineer officers under whose direction they are examined in regard to the technical details, and to the work actually performed, and when duly certified, are passed to the Paymaster. They are then computed and examined, to see that the charges are in accordance with the provisions of the contracts, and that they are rendered by the proper contractors; if found correct, and within the 100*l.* limit, they are paid, care being taken to ensure that proper receipts are furnished by duly authorised persons.

Charges for engineer stores are dealt with in the same manner, care being taken to ensure that a reference is given to the store account in which the articles are brought on charge if they are not used directly on the works. In the latter case a certificate of their being so used would be given by the local Engineer.

Charges for wages of civilians and working pay of soldiers employed directly under the Royal Engineers on repairs and minor building services are, when certified by the Engineer, audited and paid by the Paymaster.

In all cases a record must be kept by the Paymaster, to provide against double payment for the same service.

II.

Audit of District Accounts.

The Audit at the War Office of the District Accounts is similar to that of the Paymaster, but it also ensures:—

- That only those payments are included in the accounts which should be made locally;
- That the charges are classified under the correct headings in the Army Estimates;
- That all rents due from tenants of War Department property are duly collected by the Paymaster or by the War Department Land Agent;
- That funds have been duly authorised from Headquarters to meet the charges;
- That charges are posted in a ledger in which full particulars of the service are given, and if the sum authorised or the amount taken in the Estimates are exceeded, that special attention is called to the fact.

Certain special accounts (Salisbury Plain, Connelmore Brickfields) are sent direct to the War Office without any local audit.

Pre-Audit of Bills.

In the case of payments at the War Office which comprise those over 100*l.* and purchases of stores under that amount for supply to foreign stations, the bills are computed in the Finance Department, and in regard to professional details, are examined in the Inspector-General of Fortifications' Department.

In the pre-audit, care is taken to insure that:—

- The professional examination has been duly given;
- The name, address and signature of the Contractor are correctly given;
- Certificates are furnished by the Headquarters or local Engineer Officers as to the work performed or the stores purchased;
- In the case of stores, reference is given to the store account on which the articles are brought on charge;
- Contract authority is given for the purchase, or, in default of such authority that the purchase does not exceed the regulated amount, 50*l.* or 100*l.*
- Previous payments under the same authority are correctly stated;
- Authority has been given for the funds to be spent on the particular service;
- The sum authorised, and the total amount provided in the Estimates for the whole item, or in the case of minor services, the total sum authorised for a district, have not been exceeded;
- The bill, if allowable, is posted against the item in the ledger in which the above particulars are recorded;
- The classification agrees with the headings in the Estimates;
- Credit is given for any stores sold to the Contractor which must be classified to Appropriations in Aid, not to the item in the Vote;
- The cost of work done for other public departments is recovered and credited to the War Department;
- Any royalty that may be due on patented articles is duly paid;
- Charges for minor repairs are such as should be borne by the public, and if not, *e.g.*, barrack damages, that credit is duly given;
- In the case of charges for work done by one contractor in default of another, any excess cost is duly recovered.

In the examination of payments for the purchase of land the audit ensures that:—

- The purchase money agrees with the amount settled in the negotiations, and quoted in the conveyance, &c.;
- The approval of the Secretary of State for War, and if the purchase money exceeds 1,000*l.*, also the sanction of the Treasury, have been obtained;
- If there are any payments proposed for interest, &c., &c., such payments are duly provided for in the contract, and the calculations are duly checked;
- Funds are available out of sums provided in the estimates or loans for the purchase, and that the proper head and item are charged;
- The costs charged, surveyors' fees, &c., are duly certified and are such as are payable by the War Department.

G. W. STEVENS.

F. 12.

The local expenditure audited by F. 12, consists mainly of:—

- (a.) The pay lists of the civilian subordinates of the Army Ordnance Department and Inspection Department at Woolwich and Pimlico, and
- (b.) Payments for stores by District Paymaster, Woolwich, and for clothing by District Paymaster, Home District, on account of contracts under 100*l.*, and on account of local purchases (up to 25*l.* for stores and 20*l.* for clothing).
- (1.) There is practically no audit applied in the districts.
- (2.) At the War Office:—
 - (a.) The pay lists of civilian subordinates are audited as follows:—
 - Names are identified, rates and periods, &c., checked and computed, and receipts secured.

- (b.) Bills on account of contracts for stores and clothing are subject to a complete audit as follows :—

The contractor's name and address are identified; the bills are compared with the terms of contract as to quantities, rates, deductions for material supplied to contractors, &c.; classification checked; certificates secured as to receipt into store, inspection and bringing on ledger charge; time of delivery is watched; deductions on account of fines and penalties (if any) are secured.

This examination takes the form of pre-audit in the case of all payments made by War Office, and of local payments for clothing; payments by the District Paymaster, Woolwich, are post audited.

- (3.) The following are referred to the Audit Office. All papers on which—

(a.) Payment is, made for clothing, and stores, or on account of royalties, rewards to inventors, compensation to contractors, &c., &c.

(b.) Repayment is obtained from Admiralty, India Colonies, &c., for stores issued or services rendered.

(c.) Recovery is made from contractors on account of penalties, or for loss or damage to stores lent, &c.

(d.) The write-off is approved of losses or damages of equipment, clothing or stores.

All bills paid by the War Office for clothing and stores received from contractors (bills sent to Audit Office immediately after payment).

All payments of wages to civilian subordinates of the Army Ordnance Department and Inspection Department; all local payments for stores and clothing, and local recoveries on account of stores issued, &c., and of charges against the troops for barrack damages, &c. (Charges and credits appear in District Paymasters' Accounts which are sent to Audit Office.)

F. 12. A.

A.—Cash Expenditure dealt with :—

Payments locally and at the War Office, out of the O.F. Vote, except Sub-head E. (Buildings) dealt with by F. 11, and Sub-head G. (Non-effective Charges) dealt with by F. 7; also Wages (Vote 9) at Woolwich, Enfield, Birmingham.

I. The O.F. Paymaster and Cashiers simply pay; they do not audit.

II. War Office Audit.

- (1.) *Wages.* (1 to 2½ millions annually.) All paid locally. War Office audit is carried out locally and secures :—

(a.) That the total amounts charged against the public in the Monthly Cash Accounts are in agreement with the totals earned as shown by the local wages books, and that due proof of payment is furnished. This check of totals is *in full*.

(b.) That the earnings, sick pay, &c., of the individual workmen are correctly calculated and in accordance with the regulations. This check is applied to a *very small percentage only* (one clerk, 15,000 to 25,000 workmen).

- (2.) *Establishments, Materials, Machinery, &c., paid locally.*

Audited in full at the War Office, attention being directed to the following points :—

Establishments.—That payments to Officers, &c., are made in accordance with regulation and within the authorised establishment, and that proof of payment is furnished.

That computations are correct (F. 3).

Materials, &c.—That bills are properly certified and proof of payment furnished, and that they are charged to the proper Heads of Service under the Parliamentary Estimates. That payments under contract are in accordance with the contract as regards prices and quantities, and that any question of fines for late delivery has been settled by due authority, and that payments not under contract are within the powers assigned to the local authorities, and that the prices paid have been reviewed and passed by the Director of Contracts.

That computations are correct (F. 3).

- (3.) *Materials, Machinery, &c., paid at the War Office.* Audited in full, as above. (Computed in F. 12 A.)

B.—*Store Accounts dealt with :—*

Material and Machinery Ledgers of the Ordnance Factories, Inspection Departments, Brennan Torpedo Factory (Chatham), and Balloon Factory (Aldershot).

I. No audit by any local military authority.

- II. War Office audit is local, attention being directed to the following points :—

That all purchases are duly brought on charge in quantity and value.

That the quantities written off charge are duly vouched for as issued, and their value duly brought to account in the manufacturing or expense accounts, or otherwise recovered. (Test audit only.)

STATEMENT OF DUTIES performed in F. 13.

Store Accounts Description.	Annual Number (1899-1900).	F. 13. Nature of Examination.	Proportion of Examination.	Staff employed (Normal).				Remarks.	
				Second Division.	Military Staff Clerks.	Assistant Clerks.	Boy Copyists. (A.C.D.).		
Ordnance Reserve	158	Ledgers are computed throughout, balances being checked. All vouchers are examined for signatures and alterations, the altered vouchers being cross-checked.* Vouchers for purchases and issues on payment are checked with cash accounts. Transactions in transfer and expense vouchers are examined. Accounts are watched that there are no abnormally large balances, and that regulation have been complied with.	All accounts are examined in full, except that one-sixth only of the vouchers are checked with the ledgers. Authority 7968/7548 —3/8/97. × In the case of local inspection and stock-taking, the examination at present is generally dispensed with, if the accounts, &c., have been found in good order.	Supplementary 1, Second Division. 2	—	2	14	—	Local check under paragraph 1274 and certificate to ledger under paragraph 1298, Reg. A.O.S., 1900. Proceeded in future to examine only 25 per cent. of ledgers in full at War Office +, but all vouchers will be dealt with as now, and retained at War Office.
Barrack Expense	288	State, receipts, issues, and castings checked. Cash credits secured. Issues examined to ensure that stores are disposed of according to regulation. Ledger balances watched, and observations made on any undue accumulations. Vouchers examined as above *.	In case of 25 per cent. the examination is complete. In the case of remaining 75 per cent. the check of the ledgers is dispensed with. (See 57/ Gen. No. /93; see also x.)	1	1	—	—	—	Local audit by Officer Commanding Barracks under paragraph 196, Reg. S.F.B., 1899. All vouchers as above +.
Royal Artillery Armament and Militia and Volunteer Artillery.	265	State, receipts, issues, and castings checked. A proportion of ammunition and stores on charge are examined to see that quantities and numbers agree with proportions laid down. Issues of practice ammunition checked.	All accounts examined, except as at x.	2	—	—	1	—	No audit locally over Accounting Officer. Any change must be further considered.

Statement of Duties performed in F. 13—continued.

Store Accounts Description.	Annual Number (1899-1900).	F. 13. \ Nature of Examination.	Proportion of Examination.	Staff employed (Normal).				Remark
				Second Division.	Military Staff Clerks.	Assistant Clerks.	Boy Copyists.	Writers (A.C.D.).
Royal Engineer (excluding Head L.) and W.D. Vessels.	256	State, receipts, issues, and castings checked. Cash credits secured. Contractors' bills checked with receipts. Stores on charge checked with authorised establishment.	All the accounts were examined, except as at x.	2	—	—	—	—
Equipment	1,398 Regulars, Militia, Yeomanry, and Volunteers.	State, receipts, issues, and castings checked. Expenditure of ammunition checked, and 10 per cent of stores on charge compared with authorised establishment.	All examined except as at x, which has been very partially tried.	2	—	1	3	—
Clothing	1,085	To ensure that all articles issued to the unit from public stores, and provided locally, are brought to account, that all articles struck off charge are properly accounted for, that correct vouchers are furnished, and all deficiencies adjusted.	All examined except as at x.	4	—	6	2	3
Line Militia	589		Cost of small articles, badges, straps, ornaments, &c. to be ignored in preparing lists of discrepancies. If vouchers are not forthcoming, but the accounts show they have been rendered, the entries may be accepted up to 25 per cent. Public clothing in wear, except capes and home-pattern head-dresses, need not be followed up, 7968/8900.					

Local audit and test stock-taking, by Inspecting Officer, under paragraph 979, Engineer Regulations 1900, and certificate, Appendix XIV. Proposed to examine 25 per cent. only.

+ Vouchers as above. Ledgers rendered under paragraphs 985 and 998. Local audit and certificate by Examining Officer under paragraph 19, Appendix I, Part I, Equipment Regulations, Militia, &c. alike. Proposed 25 per cent. + Vouchers as above.

Clothing.—No local audit accounts are rendered by Quartermaster and Commanding Officer. If 25 per cent. only be examined there should be a local check, as in the case of Equipment Accounts.

Stock valuation preparation of tables for Appropriation Account— I. Stores in reserve. II. Clothing in reserve, and various returns for report on the account of Army expenditure (The Novel).	—	Posting remains of Ordnance and Mobilisation Accounts. Valuing out totals according to conditions of equipment. Totalling values and total numbers according to general classification.	Staff Clerk, 1*	1*	—	2*	—	* This has to be largely increased—say, to 14 persons—for several months, borrowed from other sections of F. 13.
Pimlico Storekeeper's (half-yearly).	2	(I.) I. State, receipts, issues, and earnings checked, and balance sheets compared with the 24 ledgers comprising each account. II. Checking Vote 8, contractors' bills, and other charges into the receipt vouchers of the account, and cross-checking all vouchers for stores issued on payment, with the cash credit vouchers rendered with pay lists. Also, in the cases of issues to regiments, seeing that corresponding vouchers to the Pimlico issues have been included in the Quartermaster's Accounts. III. Generally, seeing that all issues are authorised, and in accordance with regulations. IV. Examining the wages book of C.O.O. employes at Pimlico. V. Examination of the Factory ledgers at present done will be transferred to F. 12 on 1/4/01.	We have recently decided to examine only 50 per cent. of Storekeeper's vouchers at I. Staff Clerk, 1.	Supplementary 1 Second Division.	—	5	—	
Cash (Vote 8)	2,316 Schedules to pay lists.	Containing 68,119 company requisitions— 1. Vouchers checked into schedules. 2. Rates checked with price list. 3. Receipts secured. Detailed issues of clothing checked with scale. Credits due to public secured. 4. Seeing that certificates are signed by responsible officer. (Classification checked.) Items 2, 3, and 4 are previously checked by Paymaster under paragraph 293, Financial Instructions.	To November 1899 examination was done in full. From December 1899 25 per cent. only of company requisitions examined, except those from bad accountants, which were examined in full.	3	—	2	4	This is part of the pay lists, and is checked by Paymaster, as at T, and might be treated as other parts of the pay list by F. 3.
	T					6

R. H. HOBART,
F. 13.

F. 13 (WOOLWICH).

Description.	Nature of Examination.	Staff employed.
1. Compilation of Woolwich Army Ordnance Department Account.	Keeping an account in ledger form of all receipts and issues of stores by the Army Ordnance Department at Woolwich, balancing the same half-yearly, and comparing the balances shown by these ledgers with those shown by the "tallies" kept in the store-houses.	
2. Examination of the above account -	<p>(a) Comparing contractors' bills with the quantities brought to account in the ledgers as above and certifying such bills before they are passed for payment.</p> <p>(b) Examining all vouchers for issues made with a view to ensuring:—</p> <ul style="list-style-type: none"> i. That a receipt in full has been obtained for each issue made. ii. That the stores issued have been duly brought to account by the consignee. iii. That cash credits have been obtained for all stores issued on payment. iv. That stores issued for temporary purposes, or to contractors or other non-accountants, have been duly returned, or that charges for losses or damages have been made. v. That issues for expenditure in workshops or storehouses are only made in accordance with regulations. <p>(c) Comparing the numbers or quantities of stores shown as found by stock-taking with the balances shown by the ledgers, and preparing and submitting for financial approval statements of the surpluses and deficiencies disclosed, with a view to the adjustment of the ledgers.</p> <p>Comparing the quantities of stores written off the Army Ordnance Department ledgers with those brought to account in the workshop ledgers and <i>vice versa</i>. Checking the half-yearly or annual balancing of these accounts.</p> <p>This is a sub-account to that referred to at (1) and is prepared from the same vouchers. The balances shown by these sub-ledgers are verified as opportunities offer, either by stock-taking or by comparison with Ordnance Factory records, and items outstanding beyond a reasonable period are called attention to.</p>	1 clerk in charge. 1 warrant officer. 30 ledger keepers 3 boys.
3. Examination of the workshop ledgers of the Chief Inspector of General Stores.	Comparing the quantities of stores written off the Army Ordnance Department ledgers with those brought to account in the workshop ledgers and <i>vice versa</i> . Checking the half-yearly or annual balancing of these accounts.	
4. Compilation of an account of stores issued by the Army Ordnance Department to the Ordnance Factories for repair, conversion, &c., recording the return of such articles to store and striking an annual balance of those outstanding.	This is a sub-account to that referred to at (1) and is prepared from the same vouchers. The balances shown by these sub-ledgers are verified as opportunities offer, either by stock-taking or by comparison with Ordnance Factory records, and items outstanding beyond a reasonable period are called attention to.	
5. Valuation of the balances shown by the above accounts on 31st March in each year.	For publication in the Army Appropriation Account.	
6. Stock-taking of stores in the Army Ordnance Department at Woolwich and in the Ordnance Factories.	Counting, weighing, or otherwise ascertaining the numbers or quantities of stores in stock and reporting such quantities with a view to their comparison with the ledger balances and adjustment of differences as shown at (2) (c) above.	2 retired clerks.

17/1/1901.

B. H. HOBART,
F. 13.

(E).—MEMORANDUM ON EXPENDITURE UNDER VOTE X. (WORKS AND BUILDINGS), BY MR. BULL, LATE PRINCIPAL OF F. 11.

The control of the Finance Department over expenditure under Vote X. (Works and Buildings) stands much as it did in the days of the Surveyor-General of Ordnance, that is, is practically non-existent. The Parliamentary Estimates and applications for authority to depart from them pass through the Accountant-General's Branch, but that Branch has no real grasp of the subject. It does not know how the estimated cost of any particular building is arrived at, and it does not examine or criticise the estimate in any way, while of the frequent and heavy excesses which occur as work progresses, only very general explanations are, as a rule, given by the Inspector-General of Fortifications.

The accounts which purport to show the cost of the buildings do not show it, except in the rare instances in which a building is erected entirely by contract. In the case of other buildings, the accounts do not show the pay of any soldiers employed, the cost of some of the material (Army stores) used, &c., the expenditure for these items being shown under other Votes.

Similarly the Accountant-General's examination of the accounts is superficial. Where work is done under a lump sum contract, there should, theoretically, be little to be done except to see that the payments made are within the amount of the contract, and are supported by certificates that the work has been done. But, as a matter of fact, so many variations from the original plan are allowed in practically every lump sum contract that it becomes to a great extent a measurement contract, involving the examination of a large number of items. The Accountant-General does not even attempt a full examination, as he only checks the vouchers of the expenditure for compliance with the regulations and financial rules, for the receipt, and for seeing that the charge is brought to account against the correct head of service. The greater part of such examination as takes place is conducted by the Inspector-General of Fortifications, who checks the vouchers for prices, rates, contract conditions, &c. But the accounts rendered to this office do not admit of thorough examination. Thus, for work done there is only a charge of (say) "1,125 feet cube brickwork, &c. at 9½d." This quantity is arrived at by the addition of several similar items in the various measurement books of the work; but those measurement books are neither examined nor produced. In fact, a mistake even in addition will not be discovered. Similarly, for labour directly employed, there is only a charge of (say) "1,042½ hours, five bricklayers, at 10d.," but the time sheets, on which the charge is founded, are not examined nor produced.

In short, the examination, both by the Inspector-General of Fortifications and the Accountant-General, is practically confined to seeing that the voucher is consistent with itself, and correct on the face of it; no attempt is made to see whether it corresponds with fact.

For this, reliance is placed on certificates which are given by the responsible officers. And though the examination of the Accountant-General is thus restricted in scope, and the opportunities for testing the value of these certificates by independent verification of the "facts" certified to, are necessarily very rare, instances in which the certificates are demonstrated to be worthless are frequent enough to throw grave suspicion on the value of the whole system.

Thus, the following irregularities have been brought to light:—

- (1.) A bill has been put forward for work as completed which in reality had scarcely been begun.
- (2.) An unauthorised building has been erected by labour which has been described on the voucher as expended on repairs.
- (3.) Pay lists for extra pay to soldiers have been put forward showing that the men have worked so many hours a day for a definite period, whereas no attempt had actually been made to keep a record of the hours worked, because the men had really been working for so much a month, or by piece-work. In one case, an officer, in reply to a War Office inquiry as to the correct hourly rate

of pay, ingeniously stated that the rate was immaterial, as if we altered the rate, he should alter the number of hours actually worked so as to arrive at the same total payment to the man. In another case, the whole of the information on the voucher as to locality, date, &c. was afterwards admitted by the officer to be false.

- (4.) Soldiers have been described on vouchers as civilians, and have sometimes, owing to misdescription, received money to which they were not entitled.
- (5.) In the following instance an opportunity occurred of going behind the certificates on the vouchers: It was noticed that in every district in England the practice had arisen of charging for a superior and expensive kind of pipe. But as this kind was not on the market, and had to be specially made, it raised a doubt as to the correctness of the description, and caused an inquiry to be made as to whether an inferior and cheaper kind had not really been used. The result was that the bulk of the charges were admitted at once to be wrong, but in some cases the officers even then maintained in their replies the correctness of the description, until, on samples being demanded, the incorrectness of the description was proved in all but a few cases.

In fact, the results which would be naturally looked for under a system of defective control and audit of expenditure have followed; bad estimating, and a tendency on the part of the officers responsible for expenditure to think that if the expenditure is, in their individual opinion, for the good of the service: it is of little importance whether the vouchers are in accordance with the facts so long as they will pass the examination in this office.

To give the Accountant-General a real grasp of the subject, each proposal for expenditure should be passed to the Financial Branch and carefully examined and criticised as a preliminary to its inclusion in the Parliamentary Estimates, and it should be possible, by a comparison of the cost of similar works in the different districts, and in different years, to arrive at an approximation of what many of the proposed works should cost. Should the estimate be considerably in excess of such cost, the Inspector-General of Fortifications should explain the reason. The detailed estimates might also with advantage be examined.

The Accountant-General ought also to carry out the whole of the examination, and he should endeavour to make it more efficient than it is at present by frequently calling for and examining the measurement books of some of the services selected at random. A much more efficient check would be exercised if the vouchers for certain of the services (it would be impossible thus to examine all the services unless the staff were very large) were thus thoroughly examined than is possible under the present system. Now every rate and price is ticked by the Inspector-General of Fortifications, but no attempt is made to see that the quantities are really correct by examining the measurement books on which the vouchers are founded.

This examination, and also that of the detailed estimates, would be more effective if technical assistance were available, but the official employed should be permanently detached from the staff of the Inspector-General of Fortifications. The surveyors at present engaged on the work are under his orders, and may be moved at any moment from the War Office to an out station. They have clearly no inducement to increase the stringency of the examination.

As a further check, engineer offices should be liable to inspection at uncertain intervals by the Accountant-General in the same way as pay offices and store accounts now are. At these inspections the time-sheets of civilian subordinates, and of soldiers, would be examined and compared with the vouchers submitted to this office, the works might be visited, the measurement books, &c. examined, and some of the items recorded be checked by actual measurement.

By such means as these some attempt might be made to supplement the deficiencies of the present system.

20th February 1901.

J. M. BULL.

(F.)—STATEMENT OF NUMBERS OF LETTERS WRITTEN BY WAR OFFICE TO TREASURY DURING THE TWO YEARS 1898 AND 1899.

1898.

	Sanctions.	Refusals.	Referred back for further information, &c.	Total.
I.—Works	188	4	20	212

(2.) Superannuation Grants.	321*	—	—	321
V.—Miscellaneous	112	10	15	137
Total	950	27	76	1,053

Average time taken in settlement, 9 days.

1899.

I.—Works	178	9	20	207
II.—Estimates	116	4	2	122
III.—Pay, &c.	125	8	3	136
IV.—(1.) Army Pensions	162	28	6	196
(2.) Superannuation Grants.	495*	—	—	495
V.—Miscellaneous	186	10	13	159
Total	1,212	59	44	1,315

Average time taken in settlement, 10 days.

* These have not been analysed, but as they are mostly formal claims for superannuation, &c. provided for by Acts of Parliament, it has been assumed that they were all sanctioned.

I. "Works" includes all letters on the subject of excesses on building estimates, &c., and questions of hire, purchase, and transfer of land.

II. "Estimates" includes correspondence about estimates and supplementary estimates, and all questions of increased "personnel" and staff.

III. "Pay and Allowances" includes all applications for increased and special rates of pay and allowances not covered by the regulations.

IV. "Pensions" includes (1) Correspondence about Chelsea pensions awarded under Article 1207, Pay Warrant; (2) Applications for pensions or gratuities under the Superannuation Act.

V. "Miscellaneous" includes specially questions of compensation, and applications for power to write off claims abandoned.

(G.)—STATEMENT SHOWING STOCK-TAKING IN ORDNANCE FACTORIES CONDUCTED (1) BY OFFICIALS OF ORDNANCE FACTORIES, (2) BY OFFICIALS OF ACCOUNTANT-GENERAL'S DEPARTMENT.

(1.)

C.S.O.F.

WITH reference to the statement made to the Committee last Wednesday that complete stock is taken at the foundries once a quarter, will you kindly state for the information of the above Committee:—

1. What proportion of the total value of the stock in the Ordnance Factories is taken each year by your own officials?
2. What authority (War Office or other) requires it?
3. What special regulations are there for foundry stock-takings and by whom laid down?
4. What do you estimate (very roughly) is the annual cost of the various stock-takings?

The annual stock of the value of semi-manufactures, I suppose, stands by itself and is absolutely necessary.

15/2.

(Signed) H. J. GIBSON.

Mr. GIBSON.

It has been the practice from time immemorial for store officials to test the actual stock of raw materials and miscellaneous articles in store as compared with the tally boards kept by the store-holders. This is done partly by occasional surprise visits by the officials themselves, partly by men under these officials whose duty it is to keep constantly testing actual stock as against the records. There is no account of surprise visits. For the continuous stock-taking at all stations by Ordnance Factories employes, apart from F. 13, the expenditure in 1889-1900 amounted to 509*l.*; the value of the stock taken was 216,297*l.* In addition, there was an expenditure by the Ordnance Factories of 147*l.* on stock-taking in conjunction with F. 13, the value of the stock thus taken being 49,661*l.* The total value of the raw material remaining on 31st March 1900 was 572,576*l.*, and the gross value of issues in the year, including conversions, sales, &c., was 2,097,950*l.* This continuous stock-taking is the arrangement for periodical overhaul of our whole stock (every three years at least) referred to in 70/Gen. No. 18854 of 1897.

Arrangements for quarterly taking of foundry stock were made by the late Committee on Uniformity of Ordnance Factories Accounts and were included in the general instructions issued with the third report of that Committee. I enclose a statement marked A. showing the cost of such stock-taking in June, September and December last, together with the value of the stock taken at those periods. The cost of such stock-taking in March is merged in the annual stock-taking of semi-manufactures, but is not believed to vary largely from the average cost in the other quarters. For further information of the Committee I forward copies of the balance sheets produced as the result of the September stock-taking.

The general stock-taking of semi-manufactured articles at the close of the financial year, on which the prices of our productions and the recoveries from requisitioning departments are based, cost last year 1,070*l.* 8*s.* 2*d.*; the semi-manufactures then taken were valued out at 1,078,133*l.* 11*s.* 2*d.* It has been frequently represented to me that this stock-taking involves a loss to the country of the productive power of the factories for two days in the financial year, or say, roughly, about 25,000*l.*, for value of stores whose production is thereby prevented. I am, unable, however, to see how, under our financial conditions, this stoppage of work can be avoided as, unless the value of the remain is precisely determined, we cannot accurately price our productions.

(Signed) E. BAINBRIDGE,
Colonel,
C.S.O.F.

13/3/1901.

ORDNANCE FACTORIES.

N.B.—The cost of the stock taken in March is merged in the cost of the general stock-taking of semi-manufacture.

(2.)

F. 13.

Would you please state—

- (1.) What staff is employed by you in taking stock at the Ordnance Factories.
- (2.) What proportion of the total value of stock is taken each year; please render a statement for the last three years as soon as possible.
- (3.) What may be said to be the estimated cost of the staff so employed.
- (4.) By what authority is the amount of stock to be taken determined.

15th February. (Signed) H. J. GIBSON.

Mr. GIBSON.

- 1. The two War Office Remain Officers at Woolwich take this stock as part of their duties.
- 2. Rather under 50 per cent. of the total value has been taken during the last three years, as shown below:—

Value of material, &c., in Ordnance Factories during three years to 31st March 1900:—

(H.)—LETTER FROM MR. JAMES F. HOPE, M.P., ON THE SURRENDER OF UNEXPENDED BALANCES AT THE CLOSE OF THE FINANCIAL YEAR.

House of Commons,
March 1st, 1901.

Sir,

In response to your invitation, conveyed to me lately by Sir Charles Welby, I beg to submit, for the information of your Committee, some observations on the compulsory surrender of balances at the end of the financial year, enforced on the several departments of Government by the present financial system of the country.

1. I first became acquainted with the practice in question during the time I acted as private secretary to the Postmaster-General. Together with other features in existing financial arrangements, it forced attention as tending to impair alike the sense of responsibility, the initiative and the zeal of departmental officials. No man cared to effect economies for the sake of an infinitesimal reduction in the National Debt; and no man had the inducements to follow up his work and throw himself into its progress and development which the ordinary methods of industrial enterprise under like conditions would have afforded.

2. The impression thus formed was confirmed by conversation with gentlemen who had acquired special experience in the matter, and who informed me of the reckless and useless expenditure occasioned by the practice during the last weeks of the financial year, with the object of avoiding a reduction in the next year's estimate on the ground that a lesser sum had sufficed. I can personally vouch for one instance (stated to be of regular occurrence) in which the identical goods ordered by the Admiralty in March at 2s. per unit were sold as old stores in April at less than 8d.; unhappily, for the sake of further "business," I am not allowed to give the names.

3. On making inquiries in Paris, I found the same practice prevailing in France, although possibly its effect may be somewhat lessened by the fact that the period within which supplies granted for a particular year may be spent (*l'exercice*) extends over 15 months. Nevertheless, the existence of abuses similar to our own was not denied by two gentlemen in the Ministry of Finance with whom I talked on the subject, and was strongly insisted on by the eminent economist (and ex-minister) M. Jules Roche, who told me he had frequently denounced the practice in public, and who described it to me as "idiot" and "absurde."

4. I afterwards went to Berlin, where I found an entirely different system, which was explained to me with much courtesy and trouble by Dr. Müller, acting leader of the *Freisinnige* or Radical party. I also obtained from the Imperial Treasury, through the kindness of Mr. Gastrell, our commercial attaché, information, in answer to certain of my questions, which exactly confirmed what Dr. Müller had said. The system, Mr. Gastrell was informed, had been adopted expressly on the ground of economy.

5. According to this system all estimated expenditure is divided sharply into recurrent and non-recurrent items. On the latter an unexpended balance may be carried over as a matter of course. On the former it must ordinarily be surrendered: but it may be carried forward if voted with the note "*Dieser Fonds ist übertragbar*" ("this sum may be carried over"). I understand that the Supply Committee, which revises and reports on all the estimates before they are voted by the Reichstag may put in or strike out the above words in any item; but on this point I write from memory.

6. Through the kindness of Dr. Müller I have been supplied with what I may call the Appropriation and Revenue Accounts for the year 1896-97. Excluding the Revenue Departments (which are peculiarly dealt with) there are 14 sets of estimates, on eight of which I find balances were carried forward on recurring expenditure, amounting in all to nearly 18,000,000 marks, of which nearly 16,000,000 were on Army votes. The votes for the Foreign Office, Home Office, Admiralty, Judicature, Railway Department, and General Pension Office, also supply instances of the same kind. On non-recurring expenditure nearly 128,000,000 marks were carried forward, of which over 95,000,000 were for the Army. The grand total carried forward on the year was over 140,000,000 marks, of which 54,000,000 were brought forward on the ordinary estimates and 87,000,000 on

i 15090.

extraordinary estimates. The form of the accounts with extracted examples is given below.

7. From Berlin I went to Vienna, where I found the system the same as the French. I did not hear of any abuses occasioned by it; but my time for inquiry was very short, and of two informants one was very guarded. This gentleman, a leading financier, would not admit that the Austrian system was bad; but he quite agreed that the German system was good so long as large balances were not allowed to accumulate over a term of years.

8. I am informed that objection is likely to be taken to the introduction of the German system into England on constitutional grounds. I submit that such objection affords an illustration of what can only be called constitutional idolatry. In the first place, the existing practice was not universally adopted in England until the year 1863 (*see* Tod's *Parliamentary Government*, Longmans, 1889, p. 44). References to the passages cited by Tod disclose no evidence of any very strong feeling on the subject at the time the change was made; and a gentleman, possessing exceptional knowledge of the period, and himself well acquainted with Mr. Gladstone (the then Chancellor of the Exchequer) has informed me that he considers the reform in question rather as an instance of that Minister's love of exactitude, than an example of a reform adopted to satisfy an urgent constitutional demand. It may also be remembered that during the time of the change, the reduction of the debt and the advantage of retrenchment were more strongly present to the minds of politicians than the efficiency of the land and sea services, and the increasing needs of an expanding empire.

9. If it be urged that the control of Parliament over expenditure would be impaired by the change, it may first be asked to what the control at present amounts. I write from brief Parliamentary experience; but I do not think I am wrong in saying that no proper discussion—much less revision—of the estimates *qua* estimates at present takes place in Parliament at all. General questions of policy are raised, small grievances are ventilated, and the actions of ministers and officials are impugned; but a serious attempt to overhaul the estimates on financial grounds would be treated as a matter of confidence by the Government, and would be ill-received by a House largely consisting of Members eager to disburden themselves of ideas with which the subject of finance has but a remote connection.

10. Assuming, however, that effective Parliamentary control exists, or could easily be brought about, it is hard to see why such control could not equally well be exercised under either system. It is true that the Committee of Public Accounts of 1862, say, in their first report, that under the *then existing* system "no satisfactory comparison could be instituted between the votes and the expenditure under the votes." I submit that opportunity for such comparison is exactly what the German system does provide. When you have set out the amount voted, the amount spent, the balance carried over, and the further amount proposed to be voted, and when the executive can be called upon to explain, if necessary, the reasons for the balance, in all this there is surely abundant material for the most rigorous and exhaustive comparison. And if it be found that large balances are piled up without due cause, the remedy is simple. Next year's vote can be cut down. I may add that a former Secretary of the Treasury has told me that he is no advocate of the present practice.

11. If desired, an additional check might, perhaps, be devised requiring either that the balance should not be greater than the amount spent in the year *from* which it is carried over; or else that the vote of the year to which the balance is transferred should not (without a supplementary estimate), exceed the sum actually spent the year before. But the need of such precautions is apparently not felt by the Reichstag which demonstrably exercises a greater control over the expenditure it sanctions than does the House of Commons, and which has had the advantage of framing its rules *de novo*, untrammelled by the formulæ or traditions of kindred bodies. Dr. Müller's Radical principles would certainly not have allowed him to speak to me with the approval he did of his own system, had it tended to increase the power of the Executive at the expense of that of the Legislature; while, with regard to the question of audit, everything I could learn, both from Germans and Englishmen abroad, points to the auditing of the Chief Accountancy

3 K

Office (Oberrechnungshof), being of the most minute and rigid character. That the Imperial Government has the power of obtaining money from other than Parliamentary sources is another matter which I cannot here discuss.

12. I am conscious of certain other objections to the suggested change; but this paper is, perhaps, sufficiently long as it is, and it will be time to deal with them when they are raised. I should also have liked to say something on the question of transferring excesses to meet deficiencies, and on the means adopted in France and Austria to meet exceptional expenditure during the recess. As, however, I understand your Committee have decided not to go into these matters, I will conclude with a brief anecdote which I hope is not impertinent to the general subject. A journalist of

great experience (who is unfortunately at the other end of the world, so that I cannot ask leave to give his name), told me that when in Egypt several years before the Soudan expedition, the then Sirdar, now Lord Kitchener, explained to him at length his plans for the reorganisation of the Egyptian Army, and added afterwards: "You know I could not do this at home." "Why?" said my friend, "do you mean to say the Egyptian Government give you all you want?" "No," said the Sirdar, "not nearly enough, but what they do give me, I can spend as I think right."

I am, Sir,

Very faithfully yours,
(Signed) JAMES F. HOPE.

Clinton Dawkins, Esq.

APPENDIX V.

ARMY CONTRACTS.

(A).—DRAFT REGULATIONS DRAWN UP BY THE COMMITTEE.

The Director of Army Contracts is charged, in concert with the Supply Departments, with the purchase, sale, or hire of all supplies, stores, clothing, lands, and buildings required for the Army which are not within the powers of purchase specially assigned to heads of Supply Departments and to General Officers Commanding. He will also be charged with the review and registration of all contracts. His duties will be performed subject to the regulations hereinafter laid down for his guidance.

1. Requisitions for purchase are to be accompanied by full particulars as to pattern, make, description, and

quality of the articles demanded, and where patterns, specifications, or drawings exist or are required, these shall either be attached or shall be referred to by identification numbers. When the article is of a new design or special character, carefully prepared specifications and such drawings or patterns as may be necessary are to be furnished for the guidance of manufacturers.

2. The Supply Department on making a requisition may name the date by which delivery is required, or, on the tenders being passed to it, will approve the date named in the tender which it is proposed to accept.

3. If, on receiving a demand, the Director of Contracts anticipates special difficulty or abnormal expense

in fulfilling it, he shall call the attention of the Supply Department thereto.

4. On receiving a requisition the Director of Contracts will at once proceed to make a contract or to purchase the articles demanded—

- (a) by calling for tenders by public advertisement;
- (b) by inviting tenders from selected firms;
- (c) by direct negotiation in special cases, or on any emergency;
- (d) by purchase through a broker or agent;
- (e) by giving an order on a running contract.

5. While every attention is to be given to purchasing at the lowest possible price, full consideration is to be given to the record and character of the firms tendering, and the probability of their executing the order satisfactorily and punctually.

6. The Director of Contracts (in concert with the Supply Departments and General Officers commanding districts) will maintain and revise, at least once a year, the lists of contractors from whom tenders are invited. The Supply Department concerned and General Officers commanding districts may at any time recommend additions to or removals from the list, and such a recommendation shall be followed, unless, after discussion with the Supply Department or General Officer commanding, a case is of sufficient importance to require reference by the Supply Department to the Financial Secretary. Any contractor who has failed on six consecutive times to make a reasonable tender for any article which he provides will be removed from the list, unless special reason shall be shown to the contrary, and shall not be replaced till 12 months have elapsed from the date of his removal without the authority of the Financial Secretary.

7. The Director of Contracts, or the head of any Supply Department, may at any time inspect or delegate a responsible officer to inspect the works of any contractor who holds a contract or who is on, or is proposed to be placed on, the War Office list.

8. On receipt of tenders the Director of Contracts will refer all tenders to the Supply Department concerned, except such as are excluded by mutual consent, and will give the Supply Department concerned an opportunity of expressing its views upon them. If the Supply Departments should recommend a tender which is higher than the lowest, or should object to the lowest tender, that recommendation or objection should be discussed personally, when practicable, by the Director of Contracts with the Director-General of Ordnance, the Quartermaster-General, or the Inspector-General of Fortifications, as the case may be, and in the event of failure to agree, the head of the Supply Department concerned will submit the case for the decision of the Financial Secretary, subject to an appeal from his decision to the Secretary of State if so desired.

But, in the case of contracts for an amount not exceeding 500*l.*, in each case the Director-General of Ordnance, the Quartermaster-General, or the Inspector-General of Fortifications, may decide as to the tender to be accepted.

9. Heads of Departments may make purchases up to a limit of 100*l.* in all cases, and in cases of urgency, where they consider immediate action essential in the public interest, they may make any purchase, or enter into any contract within the Vote authorised by Parliament, in such manner as they think fit, reporting all such cases forthwith to the Director of Contracts, with the reasons for their action.

10. As soon as a contract has been placed the Director of Contracts will forward full particulars thereof to the Supply Department concerned, the head of which will be primarily responsible for securing fulfilment and delivery within the Contract time.

11. All questions arising during the execution of contracts will be dealt with by the Supply Department concerned, or by the General Officer commanding, except that no alteration of a contract, or of its subject matter affecting prices shall be made without the concurrence of the Director of Contracts.

12. If the Supply Department should fail to secure satisfactory fulfilment of a contract, full particulars will be given to the Director of Contracts by the department concerned, which may suggest what further steps should be taken. The Director of Contracts will then take such action as he may deem desirable to secure delivery and more satisfactory results in future. He will inform the Supply Department of the action he has taken.

13. All proposed fines, or purchases in default, or removals from the list of contractors, or claims by contractors arising out of their contracts, shall be submitted by the Director of Contracts for the approval of the Financial Secretary.

14. The Supply Departments and the General Officers Commanding will keep a register of all contracts made under the powers assigned to them, and will regularly report the same to the Director of Contracts.

(B.) DRAFT OF LETTER to certain RAILWAY COMPANIES and other commercial houses asking information as to their SYSTEM of PURCHASE, with their REPLIES.

War Office, S.W.,

16th January 1901.

DEAR SIR,

In connection with my work as Chairman of the Committee on War Office business I am anxious to have information in regard to your practice in buying { stores and materials. } stock for sale or use.

1. Does each department of your business prepare its own requisition for the articles required for sale in the department, specifying all particulars as to make, quality, &c.?
2. Are the articles required for each department bought by a departmental employee, possessing technical knowledge { of the trades, whose products are sold in the department, } or is the whole of your { stores and materials } stock or a great part of it bought by a general buyer, possessed of no greater technical knowledge of particular articles or trades than is acquired by an experienced buyer in the course of the performance of his duties; and would such buyer move about the country or have a staff under him to move about to study markets and make inquiries?
3. Could you state what proportion of the purchases are effected by tender?
4. If you employ a general buyer to make your purchases or to arrange your contracts for purchase, is it his duty, or the duty of the requisitioning Department, or the duty of any other employee specially charged with the business to watch progress on the part of the contractors and to see that articles bought are duly delivered at the dates of delivery specified in the contracts?
5. How is the last-mentioned duty practically carried out? Is there inspection of progress before contract delivery time, or do you rely on penalties or legal remedies of buying in default?
6. Do you, in fact, enforce penalties to any substantial extent?

I shall be much obliged if you will kindly answer the above questions, and the Committee will treat your answers as confidential.

I am, &c.,
(Signed) CLINTON DAWKINS,
Chairman.

Army and Navy Co-operative Society, Limited.
105, Victoria Street, Westminster,
London, S.W.,

DEAR SIR,

19th January 1901.

In reply to yours of the 16th instant, I am happy to give you the following information, and trust it may be of service to you:—

1. The stock-keepers prepare and submit to their departmental managers all orders for goods required—the orders are “in detail” when they are what is

known as repeat orders, that is, further orders for goods which have been previously supplied—or for goods which are of a known nature, and, “in short,” when confirmatory of selections made by departmental managers. Orders up to 10l. are made direct by managers; over that sum they are confirmed by the countersign of the managing directors.

2. All goods are purchased by the departmental managers, who have a full practical knowledge of the products or manufactures which are sold in the departments under their charge. There is no one general buyer, but each departmental manager is responsible for the purchases made, and within reasonable limits he travels to such centres of commerce or manufacture, both in England and on the Continent, as may be necessary for his business, and it is his duty to be in close touch with all market fluctuations likely to affect his purchases.

In some departments the branches of which are varied in nature, while general in application or akin in use, the departmental manager, while having a general knowledge of all branches, and a thoroughly practical knowledge of one or more, would be assisted by his sub-manager, sub-managers, or foremen in the choice of goods for branches of which they have a more technical knowledge than he, but the departmental manager would be primarily responsible and could not shift responsibility of bad buying to other shoulders. Such sub-managers would in some cases accompany him on his journeys to purchase goods.

3. Tenders are not called for in respect to purchases for trade.

4. Any contracts entered into are made by the departmental buyer subject to the approval of the managing directors, or the Committee of Direction, according to the importance of the contract.

The manager of the department is primarily responsible for seeing that the terms of the contract are adhered to, whether for delivery, quantity, or quality. The stock-keepers under him are, of course, responsible to him that everything is correct, and have to report to him any failing on any point.

5. All goods are examined on receipt, and if found in any way inferior, are refused; short deliveries would be notified, and the shortage would have to be made good.

The society has nothing that it sells generally which requires supervision during the time of manufacture, but, when exceptional cases arise, visits are made from time to time during construction, progress noted, and, if necessary, corrections insisted on.

In event of a firm failing to fulfil its contract, the matter would be dealt with in accordance with the terms of the contract under sanction of the Committee of Direction.

6. Any penalties would, at the discretion of the Committee of Direction, be enforced. The Committee of Direction would, of course, have the matter fully before them, and their action would be guided by circumstances.

I am, &c.,

(Signed) H. LAWSON,

C. E. Dawkins, Esq., Secretary.
Chairman,
War Office Organisation Committee,
War Office, S.W.

The Civil Service Co-operative
Society, Limited,
28, Haymarket,
London, S.W.,

SIR, January 17th, 1901.
I beg to acknowledge the receipt of your letter of yesterday's date, and have much pleasure in giving you the following information:—

1. The stock-keeper of each department prepares a list of all articles required, with full particulars for the respective buyers.

2. The articles required are in each case bought by a departmental employee possessing technical knowledge of the trade.

3. All our purchases are made either from samples or on the open market.

4, 5, and 6 would not apply to our system.

If I can in any way be of further service to you, I shall be happy to furnish any other information you may desire.

I am, &c.,
(Signed) A. G. REPTON,

C. E. Dawkins, Esq., Secretary.
Chairman,
War Office Organisation Committee.

Elswick Works,
Newcastle-on-Tyne,
23rd January 1901.

SIR, In reply to your letter of the 16th instant, we have the honour to forward herewith the information which you desire.

1. Each department prepares its own requisition for the articles required in the department, as the requirements of the departments vary so considerably, e.g., the mercantile shipbuilding department requires totally different material from the warship department, or the ordnance department, steel works, and engineering departments.

2. We have no general buyer for each department, the articles being bought by tender, and determined on the merits of known quality, price and delivery, under the direct control of the managing director. In many cases, such as oil, and other stores, samples are sent in and tested by the chemical department, also mechanically, and the choice is made according to price and quality. During the execution of the contract, samples are taken from time to time and tested to see that the standard quality is maintained, and should there be any deviation from this we insist either on the material being replaced or a corresponding allowance being made; the latter course being adopted only in such cases as will not in any way affect manufacture.

In the case of timber, after obtaining tenders, we send an expert to the large timber merchants throughout the country, and he examines the stock and selects such portions of it as he considers will answer our requirements.

3. Tenders are invited for almost the whole of our requirements, but there are a few special items for which tenders are not taken.

4. Wherever possible, we watch the progress on the part of contractors, provision having been made for this, and having a record of all orders placed, delays are at once observed and steps taken to ensure delivery as early as possible. This, of course, only applies to items where times of delivery have been taken.

5. The last mentioned duty is carried out by a clerical staff who keep the record referred to in paragraph (4) under the supervision of the managing director.

We do not, as a rule, inspect before contract delivery time, but rely upon our legal position, although we very rarely have had occasion to exercise this right.

6. We do not enforce penalties to any considerable extent, nor indeed at all when we are satisfied that the contractor has used his best endeavours to forward the work. We find it very difficult to get makers, especially in times of pressure, to agree to penalties without adding considerably to the price and time of delivery, and indeed, in some cases, such as steel makers, they refuse to agree to a penalty at all. The amount we receive from penalties is comparatively small.

We shall be glad to afford any further information which you may require at any time.

We have, &c.

For
Sir W. G. ARMSTRONG, WHITWORTH & Co., Ltd.,
(Signed) W. NOBLE,
Director.

C. E. Dawkins, Esq.,
War Office, London.

Secretary's Office,
Derby, January 25th, 1901.

Dear Sir, In reply to your inquiry, dated 22nd January 1901, I beg to inform you—

1st. Each Department prepares its own requisition for the articles required, specifying all details. The requisition is signed or otherwise duly approved by the Head of the Department.

2nd. Articles required for all departments, as per requisition, are purchased by the Superintendent of Stores, acting under the authority of the Stores Committee of Directors. The supplies are provided for in the majority of cases by ordinary contractors, or, in the case of unusual items, by special contracts.

The qualifications of the Stores Superintendent are bounded by such knowledge of the large variety of articles and trades represented as may be gained by experience and training in the Stores Department. The Stores Superintendent has an adequate clerical and outdoor staff.

3rd. As indicated in No. 2, the large majority of purchases of stores are effected by competitive tenders. The contracts are of three classes, namely, (1) annual, (2) contracts for shorter periods, and (3) special contracts for unusual items.

Broadly speaking, seven-eighths of the Company's requirements are obtained in this way.

4th. The duty of seeing that the orders of the Company receive due and proper attention at the hands of the contractors, and that the supplies of stores are of the proper quality, and in accordance with the orders given, rests with the Stores Superintendent, and ultimately the Stores Committee of Directors; and all inspections of goods are conducted by the Stores Superintendent, or on his behalf. Permanent way materials, however, undergo a technical inspection at the hands of the Company's Engineer; certain important iron and steel goods require technical inspection by the Locomotive Superintendent, and some portion of the timber required for the building of the Company's carriages and wagons undergoes a similar inspection by the Carriage and Wagon Superintendent. It still rests with the Stores Superintendent, if the results are found satisfactory, to issue the forwarding instructions to the contractors.

5th. We rely mainly upon the penal clauses of the contracts as our remedy in default of delivery of stores.

6th. The necessity for the enforcement of penalties for default has been very small. It has been found that a methodical system of keeping contractors constantly reminded of their obligations has excellent results, and renders any extreme step almost unnecessary.

I am, &c.

(Signed) A. L. CHARLES,
C. E. Dawkins, Esq., Secretary.
War Office, London, S.W.

London and North Western Railway,
Secretary's Office,
Euston Station, London, N.W.

25th January 1901.

Dear Sir,

In reply to your letter of the 22nd instant, I have the pleasure to give you the following information in reply to your various questions with regard to the practice of this Company in buying stores and materials:—

1. Each department gives an estimate of the quantity of each article which may be obtained under contract, and which they will require during the year. Sealed standard patterns of every possible article are kept, and the patterns may be inspected a week or two before the tenders have to be sent in.

2. The tenders are opened by the Directors and are summarised and submitted to the Stores Committee, who consider and decide which tenders shall be accepted. The letters of acceptance are then sent from the Head Office and the various departments advised of the names and the prices of the successful contractors. The articles, when received at the various stores, are subject to examination by the Storekeeper, who is, of course, a skilled man (each department having one of its own) and, if they are found equal to the standard pattern, are passed into his stock and issued as required by requisition. If the goods are not satisfactory, they are returned to the contractor.

3. As much as possible of the Company's requirements are obtained under contracts, but, of course, there are a number of patented articles which have to be bought, and also unsettled markets justify the purchasing, at times, from hand to mouth, such as tin, iron, oils, and copper, &c., and in such cases the Directors are consulted at their monthly meeting, and in urgent cases by correspondence with the Chairman of the Committee.

4. Each storekeeper orders monthly what he wants and he has to see that the contractors supply satisfactorily and within reasonable time; if they do not, the matter is reported to the Committee and authority obtained to purchase against the firm at fault. Only in the case of timber required, exclusive of sleepers, crossings, and telegraph poles, have we an experienced man to buy in the open market, and the storekeepers advise him of what they want. He reports his purchases each month to the Stores Committee.

5. When construction work is being carried out by a contractor at his own works, the department interested has the power, and uses it, to send an inspector to watch the mode of manufacture. The Directors use their discretion as to the enforcement of penalties—a penalty clause is always embodied in the contract.

6. Penalties are not often enforced; we frequently buy against contractors and charge them with the difference in cost, both for non-delivery in reasonable time and also for articles supplied inferior to standard.

I am, &c.

(Signed) T. HOUGHTON,
C. E. Dawkins, Esq., Secretary.
War Office Organisation Committee,
War Office.

32 Victoria Street, London, S.W.

February 5th, 1901.

SIR,

WE have the honour to refer to your letter of the 16th ultimo, upon the subject of our general practice in buying stores and materials, and we beg to reply to the various questions in the order mentioned in your letter under reply.

1. Each department prepares its own requisition for the articles required in that department, specifying, as far as possible, the make, quality, &c.

2. All stores and materials are bought by a general buyer of good commercial experience, who, although not technically trained, has at his command the whole of the technical staff, whom he can consult upon all matters requiring technical knowledge, such as machines, &c., and who are sent, when necessary, to inspect the articles before the purchase is made. The final decision as to the purchase of stores is always left to one of the Directors, with whom the responsibility rests.

A daily record is kept of the fluctuations of the market prices of metals.

3. For all large quantities of material required by certain dates tenders are invited, and when these are accepted they are made more or less the subject of yearly or half-yearly contracts, this depending upon the quantity and nature of the material required, and supplies are drawn from time to time from these contracts.

4. Special men are employed to visit the works of the contractors to watch the progress of the work and accelerate deliveries with a view to the specified dates of delivery being adhered to. We find it more convenient for this work to be carried out by the works, as they are more in touch with the contractors, and are in a better position to judge when and how deliveries of certain materials should be made.

5. The duty involved in paragraph 4, i.e., inspection, is carried out:—

(a) Before the contract delivery time, and in the works of the contractor, in such cases where this inspection is necessary; and

(b) In other cases the material is delivered to our works, and is inspected there by a staff specially appointed for the purpose; and the material is not accepted until it has passed either inspection (a) or (b).

Where it is possible to insert penalty clauses in the tender, this is done, but as a general rule contractors do not care to accept such clauses. In fact, in the present state of the engineering trade, it is quite the exception to be able to insist on penalties being specified with the order. When penalties are specified in a contract, they are never enforced if reasons can be clearly shown why the goods have not been delivered to time. If, however, there has been culpable inattention to work we may inflict a portion of the penalty, but this is entirely in the hands of the director managing this part of the business.

6. We do not, in fact, enforce penalties to any substantial extent. We find that in nearly every case non-delivery is due to circumstances beyond the control of the contractor, and this is especially the case in

contracts for new material, of which the contractor has not a special knowledge of the details of manufacture, where, in many cases, to estimate a time of delivery is almost an impossibility.

We trust that the above information will meet your requirements, but should any further details be required, we shall be very pleased to furnish the same upon hearing from you.

We have, &c.,

(Signed) VICKERS, SONS, AND MAXIM, LTD.,
A. T. Dawson,

C. E. Dawkins, Esq., Director.
Chairman,
War Office Organisation Committee,
War Office,
Pall Mall, S.W.

REPORT by MR. MATHER, M.P., (a member of the Committee) of his PERSONAL INVESTIGATIONS into the SYSTEM adopted by MESSRS. RYLANDS AND SONS, LIMITED, in the PURCHASING DEPARTMENTS of their FIRM.

This firm is both a manufacturing and a buying and distributing concern, and has a turnover of many millions sterling per annum. It owns eleven mills and factories—eight in Lancashire, two in London, and one in Crewe—in which about 10,000 people are employed.

Most of their mills are devoted to the manufacture of cotton and other textile goods through all the processes from the preparation of the raw material to the finished articles. One or two are used for furniture making, and for the construction of packing cases, cardboard boxes, pattern cards, &c., which are in constant use in the distributing warehouses.

Each factory is under the direct control of a separate manager, who is held responsible for its efficient working.

The purchasing of the materials used in the mills is all done by expert buyers, who are under the management of a central office in Manchester, which is divided into five or six departments.

The firm has three large warehouses, one in London, one in Manchester, and one in Liverpool, the last being treated as a branch of the Manchester house.

These warehouses are divided into a large number of departments, the business of each of which is left separate and distinct from that of the others. In these warehouses are stored the vast quantities of goods which are either purchased or are manufactured in the Company's own mills, and in each of them about 1,000 people are employed in receiving, storing, selling, and distributing the large stocks always kept on hand for immediate use in trade.

Each of the several departments—of which there are no less than 40 in the London warehouse, and even more in the Manchester warehouse, though some of them are grouped together so as to make the total number in London about 29—is under the charge of a separate buyer, who acts as its head, and is responsible for its being constantly supplied with goods, according to the requirements of the trade.

Each buyer is an expert in knowledge of the goods he has to buy for his department and is appointed (all other qualities of character, &c. being satisfactory) because he can be trusted to buy what is required at the best time, of the right quality, at the most favourable price, and from contractors or agents who can be relied on for specified and punctual deliveries.

Some goods he has to be constantly buying; for others, he has to place contracts for stocks to be delivered at specified periods. He is free to buy wherever he best can do so, and is under no compulsion to procure goods manufactured at the Company's own mills. Nor is he expected to deal with firms and contractors with whom the Company has been accustomed to do business, but is at liberty to pass these and deal with others, should he consider it advantageous to do so.

The buyer does not consult the managing director as to his purchases, except on occasions when he may feel uncertain of his own judgment in buying in advance of the actual requirement of his department, or when the proposed purchase in a single line of goods is for an unusually large amount. Except for these restrictions, he has no limitations in placing contracts or making purchases to keep up the stocks

in his department, and make them suit the demands of the salesmen and customers. His one duty is to keep his department well and fully supplied, but not overstocked, with the goods for which there is a constant demand.

The quality of the goods he purchases is checked by the fact that any complaints as to their inferiority or unsaleableness, made by either salesmen or customers, go direct to the managing director, as daily do all invoices, letters, referring to goods, and other correspondence, to be read and considered by him before being distributed to the several departments.

A stockbook is kept of each department, in which are entered day by day accounts of all goods that come in or go out, and these stockbooks are periodically inspected by the managing director of the warehouse, who watches the balances, and can check at any moment any tendency to pile up stocks beyond what he deems prudent, having regard to the ordinary requirements of the department, and to the market prices prevailing at the time.

The keynote of the system of Messrs. Rylands is that all buying must be done by experts, who know the articles used in their departments, and keep themselves constantly familiar with the conditions of the trades which manufacture those articles. New firms, novelties, states of markets, fluctuations of prices—all that may affect their judgment in purchasing or in making contracts—are constantly studied by them; and the close touch they keep with the sources of supply places them in an exceptionally favourable position for buying to the best advantage, at the right time, and on the most remunerative terms. Allowed to buy goods as they think best, whether through tenders or by outright purchase, and checked only by the Managing Director's inspection of their stockbooks on the one side and by the reports of salesmen or complaints of customers on the other, the buyer is left free, but responsible, open to criticism, but absolutely trusted. He is well paid in proportion to the amount of trade done in his department, and has the chances and prospects of promotion, but he gets no commission on the business of his department, no bonus, no share profit. The firm selects good, capable, trustworthy, practical experts, pays them well, trusts them fully, and gives them full responsibility. In some cases the buyers are shareholders in the company.

The buyers visit manufactories, attend markets, travel when and where they deem it advisable to go, only leaving for the Managing Director a memorandum stating where they have gone to and when they expect to be back. They are free also to receive visits at the warehouses of agents, manufacturers, and contractors. Thus keeping themselves constantly in personal touch with the men with whom they deal, as well as with the markets and the factories and other sources of supply, they are not only well qualified to make purchases to the best advantage, but being known to be practical experts, they are not exposed to the chances of being deceived as less experienced men are, and they can discriminate between those who quote low but do not fulfil their contracts punctually and correctly, and those on whom they can place absolute reliance for quality of goods, punctuality of delivery, and reasonableness of prices.

In making purchases or placing contracts, although the lowest prices are always asked for, the lowest quotations are not always accepted, for an expert buyer knows that low quotations are not an infallible test of cheapness. A manufacturer who may have quoted very low may have made a mistake in his calculations, and will be tempted, perhaps, to postpone execution of the order in the hope of buying his raw material cheaper. This leads to delay and to excuses for the non-fulfilment of contracts.

The system at Messrs. Rylands' for ascertaining the amounts of stocks in order and of stocks in hand and undistributed is very simple and efficient.

Every buyer enters in a book day by day all the amounts for which he has contracts, whether for immediate or deferred or periodical delivery, and this book is sent to the Managing Director at frequent intervals. Stock is taken in full detail twice a year.

All articles put into stock are priced at the time of entry, and all articles taken out of stock are duly noted at the time. A subtraction, therefore, of the latter from the former gives at any moment the amount remaining in stock. Moreover, all stocks are classified and arranged according to their classification; and at each period of stocktaking the buyers are instructed to indicate by crosses placed in a column of the stock sheets specially provided for the purpose, the number

of times the goods have been previously taken into stock, putting one cross for each stocktaking. By this system it is easy to ascertain what is old stock and what is new, what is going off well, and what is becoming obsolete, and to compare the old stock with the newest and latest developments, for the purpose of eliminating what is unsuitable and replacing it by what is in greater demand. Great importance is attached to this, as it is the object both of the buyers and of the firm to get rid of articles which are out of date, and to make room for articles best qualified to please their customers, and so to secure the largest possible "turnover" in the department.

The regular accounts for receipts and payments and of stocks are kept by book-keepers who are members of the staff. But as regards audit, each of the several establishments of the firm, whether mills or warehouses, has its books audited separately by independent accountants, who visit each in turn, and present to the head office a certified statement of the accounts and balances of each. These separate audits are accepted as final, and are grouped together for the general balance sheet which is presented to the shareholders at the annual meeting.

REPLY of GREAT NORTHERN RAILWAY to CIRCULAR LETTER re PURCHASE OF MATERIALS, &c.

(1.) Does each department of your business prepare its own requisition for the articles required in the department, specifying all particulars as to make, quality, &c.?

(2.) Are the articles required for each department bought by a departmental employee, possessing technical knowledge, or is the whole of your stores and materials bought by a general trader, possessed of no greater technical knowledge of particular articles or trades than is acquired by an experienced buyer in the course of the performance of his duties? And would such buyer move about the country or have a staff under him to move about to study markets and make inquiries?

(3.) Could you state what proportion of the purchases are affected by tender?

(4.) If you employ a general buyer to make your purchases or to arrange your contracts for purchase, is it his duty, or the duty of the requisitioning department, or the duty of any other employee specially charged with the business, to watch progress on the part of the contractors, and to see that articles bought are duly delivered at the dates of delivery specified in the contracts?

(5.) How is the last mentioned duty practically carried out? Is there inspection of progress before contract delivery time, or do you rely on penalties or legal remedies of buying in default?

(1.) Yes; each department prepares its own requisition for stores and articles required in the department, specifying particulars as to make, quality, &c.

(2.) Formerly the Committee of Directors dealing with the business of a particular department made purchases for that department, but the tendency has been to concentrate in a new committee called the Stores Committee—consisting of a certain number of Directors specially chosen—the buying for all departments. There is a Superintendent of Stores, who is responsible for the sending out of invitations to tender, and who receives the specifications prepared by the departments, which are embodied in the invitations to tender. The Stores Superintendent is a man with general rather than technical knowledge. For the technical knowledge reliance is placed upon the head of each department checked by a chemist and analyst who acts on behalf of the Directors for all kinds of stores. It is the duty of the Stores Superintendent, aided by the technical officers of each department, to keep himself informed as to the firms best fitted to supply the various articles.

(3.) Practically all purchases are made by competition, and as the result of invitations to tender. Special cases arise where an article required may be patented, or machinery stores of an exceptional character, for which particular manufacturers have a special reputation.

There are exceptions to this general principle—for example, hay, straw, and fodder for the company's horses. These are bought by an inspector, acting on the instructions and under the control of a Committee of Directors called the Horse Committee, who keep a close watch on the quantity bought and prices paid.

Tallow, again, is bought through a broker on instructions from the Stores Committee from time to time.

(4.) It is the duty of the Stores Superintendent, who has charge of all general stores, to see that a stock is kept equal to the requirements of the departments. He learns from the departments the probable consumption of the various stores for the six months of the year.

In the case of contracts made for important articles, such as locomotive engines, goods waggons, railway carriages, and important machinery and steel rails, &c., the responsibility rests with the head of the consuming department—the Locomotive Engineer in the one case and in the Engineer of the Permanent Way in the other—for seeing that time is being kept by the manufacturers or contractors. In the case of engines, waggons, coaches, and machinery, it is the duty of the Locomotive Engineer to keep touch during construction by means of an inspector, and to see that both as regards quality of work and keeping to time in construction the contractor is doing his duty. Progress reports are made from time to time.

(5.) In the case of rolling stock and machinery, inspection takes place during construction. As regards steel and other materials for locomotive work requiring test under the specifications, the tests are made before the articles are accepted. Timber for carriages and waggons is inspected before delivery, and in all these cases the inspectors are under the control of the engineer, the head of the department.

Plates, &c., for girder work are inspected at the rolling mills, and tests made in accordance with the specification.

Steel rails may be inspected before delivery; they are inspected after delivery, tests are applied, and they are rejected if not satisfactory.

These inspectors are under the Chief Engineer.

(6.) Do you in fact enforce penalties to any substantial extent?

(6.) It is not found practicable to enforce money penalties for default to supply either as regards quality or time. If goods are supplied not up to standard they are rejected, and the most effective penalty for late delivery or unsatisfactory performance of work is to leave out the contractor, and to refuse to entertain his tenders.

Contracts for coal are not made on invitations to tender, but largely by negotiation under the direction of the Committee. Contracts are made for periods of three, six, or twelve months, as the case may be, specifying either a quantity per week, or a minimum and maximum quantity which may be taken.

With regard to general stores and smaller articles for general consumption, contracts for periods are made, some for specific quantities for a period, and some for quantities which may be required for three, six, or twelve months. For example, leather goods, oils of various kinds, varnishes, hardware, cloth, carpets, lamps, pipes, sanitary tubes, &c.

Invitations to tender for some things are by open advertisement, and others from firms on a list of selected and approved firms.

There is one very important principle which the experience of the company has led the directors to lay down, viz., not to have two buyers in the market for one class of goods at the same time, and therefore the tendency is, as already stated, to concentrate the buying of all stores, articles, and machinery required in the hands of one committee. The committee calls in consultation the heads of departments in order to obtain expert advice as regards qualities and work. For example, timber is largely used both by the Locomotive Department and the Permanent Way Department. Some kinds of timber are common to both departments. On the other hand, each department uses special kinds of timber which the other department does not. In such cases the advice and assistance of the locomotive engineer and the engineer of the permanent way would be available to the committee.

Our method of dealing with tenders is as follows:—The tenders are ordered to be sent, sealed, to the secretary, the date and time being specified. They are opened by a director, numbered consecutively, and initialled by him, and entered in a book which the director initials. The tenders are then handed over to the secretary to be scheduled by his department for the purpose of convenience of comparison of prices. They are then submitted to the committee of directors, who decide which tenders shall be accepted.

It will be seen that the object of this procedure is to prevent the tenders of one firm or of any firm being known outside before the decision is arrived at.

It is our practice to exclude tenders which may arrive late.

Co-operative Wholesale Society, Limited,
Manchester,

DEAR SIR, March 5th, 1901.

WE beg to reply to your inquiry of the 16th January, as follows:—

1. Each department prepares its own requisition for the articles required for sale in the department.

2. The articles required for each department are purchased by the buyer of the department, who, as a rule, possesses technical knowledge of the goods sold in the department.

In some of the departments, however, which cover a wide range of small articles, the buyer may not have a special technical knowledge of each class of article, but he will have a good general knowledge, gained by his experience as a buyer, and in most cases has expert assistants under him.

We have also a system of "joint buying" as between our central establishment at Manchester and our branches at Newcastle and London, and it is put into operation whenever such joint action is considered advantageous in the way of getting better terms than

if each buyer acted singly. In these cases, one buyer is deputed to purchase the requirements of all. This system is frequently extended to the Scottish Co-operative Wholesale Society, Glasgow, who in many ways join with us in purchasing our joint requirements.

Our productive departments obtain their raw material, whenever advantageous and practicable, through our distributive departments.

With regard to studying markets and making inquiries, in addition to the ordinary business channels of information, our buyers make frequent journeys for these purposes. For instance, the managers of our corn mills attend the principal corn markets, the manager of our woollen mills attends the London wool sales, the managers of our boot and shoe works attend the London leather sales, our sugar buyer visits France and Germany periodically to keep in touch with the sugar market, beet crops, &c., our dried fruit buyer visits the vine districts of Greece and purchases fruit on the spot, likewise Spain for Valencia raisins, &c. Occasional visits are also made to America and Canada.

We have, besides, our own permanent buyers stationed in New York, Montreal, Sydney, Denmark, Sweden, Germany, Ireland, &c., for the purchase of produce and giving us information regarding crops, markets, &c.

In the case of important deputations or visits, especially abroad, the buyer is usually accompanied by a member of the Committee.

All important purchases or contracts not required actually for current requirements are reported specially to the Committee, and the general purchase books are also placed before the Committee weekly.

3. In our trading departments (distributive and productive) purchases are seldom, if ever, made by tender.

We, however, obtain tenders for plant, machinery, engines, boilers, &c., when fitting up any of our premises, and we also obtain tenders for building materials when building our own warehouses, works, &c.

4, 5 and 6. In proportion to our trade, our contracts are not numerous. Our trade, as a rule, is regular week by week, but subject to the usual larger demands for various goods and produce at their particular seasons.

When a buyer makes a contract, he enters the particulars in his purchase book, and from there the same is posted to a contract book which is kept in the office. The deliveries are also posted up to the same account, and in this way the position of each contract is seen at a glance at any given point. As a rule, the contracts are kept in order by correspondence from the office, or, in exceptional cases, by the buyer. We have seldom any great difficulties with our ordinary business contracts, and any claim we may make for default is usually readily paid.

In many cases, the main terms and conditions of sale and purchase are fixed and controlled by Trade Associations, and no trader of repute would act against the obligations of his Association.

When purchases are made from samples, the samples are invariably retained and compared with the goods after arrival.

Each buyer has a brief summary of stocks (at least of the principal kind of goods) placed before him every morning, from which he can see at a glance the balances of available stock at any place, the balances undelivered by manufacturers and merchants, or what is in transit.

We have more difficulty with our contracts by tender for plant, machinery, engines, building materials, &c., and at times are put to considerable inconvenience through delay.

Visits are made to manufacturers, &c., when considered necessary whilst the contracts are in progress, by our architect, engineer, building superintendent, or a member of the Committee, to see the actual state of the work in hand. In these matters of delay and defaults, we rely more upon mutual arrangement and application of ordinary business pressure rather than on penalties and legal remedies. As a matter of fact, contractors are very reluctant to accept a penalty clause in their contracts.

The above remarks include the main features of our purchases and contracts, but many smaller matters of detail are omitted in order to avoid making our reply too complex and confusing. Particulars of these details and their bearing on the main points could, perhaps, better be explained personally.

If you think an interview would be of service to your inquiry, a member of our staff would be happy to wait upon you by appointment.

Yours truly,
Pro Society,
(Signed) J. BRODRICK.

C. E. Dawkins, Esq.,
War Office Organisation Committee,
War Office, London, S.W.

MEMORANDUM by the DIRECTOR OF CONTRACTS on certain points arising in EVIDENCE.

(C.)—(1.) CONTRACT for PACKING CASES,

Questions 561 and 2811.

Contract 19.5.99, for 7,900 Packing Cases for delivery of 4,297 from 9.6.99 to 11.8.99 and of 3,603 from July 1899 to March 1900 by equal instalments.

This order was placed with the concurrence of the Director-General of Ordnance. The first notice was i 15090.

received from Principal Ordnance Officer of any delay was on 5th September 1899.

Between that date and 25th November the firm was written to four times, in each case giving promises of speedy deliveries. On 25th November they wrote that the difficulty lay in the elm for the ends, that they were doing all they could with the English elm they had obtained, and that they had placed an order with a London firm of agents for a supply of American elm, but had only had a telegraphic confirmation of the purchase.

On being again pressed they stated (3.1) that the shippers had undertaken to despatch a consignment of elm from America by 31.12.99.

On 6.2 they stated that they had not received the elm, but would send in 100 packing cases during the next week. The deliveries continuing unsatisfactory, we purchased, on 9.4, 4,379 cases in the firm's default, upon which no excess cost was incurred.

The firm completed the remainder of the Contract in the end of August or the beginning of September.

The contractor's previous reputation with the Department had been good, and his execution of this Contract was most disappointing.

He was one of the few firms whom the Pimlico Clothing Department previously considered capable of making their packing cases, and, of these few, he had about the best reputation. From the time we were informed of the default the packing case market was considerably excited, very large number of cases being required, not only for the Army Ordnance Department at Woolwich, but also for Pimlico and the Supply Reserve Depot at Woolwich. Purchase in default would have been resorted to earlier, but for the fact that other firms were fully employed, and there was no reason for supposing that it was possible then to improve the position.

No excess cost was leviable on this Contract, but the firm suffered to the extent of 230*l.* on two other purchases in default made just before.

It will be noticed that the Principal Ordnance Officer in his evidence (Q. 561) omits to say that the purchase in default was made, not as might be inferred after the 17th August, but nine days after the order was due for completion.

(2.) CONTRACT for MULE HARNESS.

Questions 684 and 2849.

On 10th July 1899, about three months before the outbreak of war, the Chief Inspector of General Stores purchased, on the instructions of the P.O.O.—

1,250 neck straps,
420 pole straps, and
400 trek chains,

amounting in value to 659*l.* 8*s.* 4*d.* (the Principal Ordnance Store Officer's limit, by the Secretary of State's decision, being 25*l.*), dividing the order at the same prices between two Birmingham firms. When, on the 26th July 1899, the order was brought to our notice, we pointed out that the price of the leather work was considered high (*e.g.*, pole straps, were bought at 8*s.* 2*d.* each, while the last price to the War Office was only 6*s.* 3*d.*), and we asked the Director-General of Ordnance whether the concurrence of the Contract Branch should not have been asked at the time. The items purchased were completed articles, and could have been obtained by competition in the ordinary way as soon or sooner. The Director-General of Ordnance replied the order was very urgent, and the purchase was approved. The objection raised was a formal one, and merely to the fact of the Principal Ordnance Officer exceeding his authority. No objection whatever was raised to the purpose for which the stores were required being carried out by the Principal Ordnance Officer.

The next demand of the value of about 10,000*l.*, to which the Principal Ordnance Office refers, was received in Contract Branch on 29th September 1899. The same day this demand was received orders were actually placed for about nine-tenths of the quantity. It was impossible to place the remaining items with the Birmingham firms, as the Birmingham and Walsall trade were absolutely full up, and being kept at work night and day on the new complete sets of mule harness. The greater portion of the balance had, therefore, to be entrusted to London houses, and these

were accepted on 10th October 1899 for the best offers that they could make, except for 500 head collars left open on a question of time. The Principal Ordnance Officer could not possibly have obtained the miscellaneous parts more rapidly by local purchase, because all available sources of supply had been used up in getting the complete equipment. The moment (i.e., on 12th October 1899) it was pointed out to us that Chief Inspector-General Stores might help in converting some of the articles, we wrote:—

"D.G.O.,

"To see. Concur in C.I.G.S. making the 500 head collars not ordered. No objection, also, to his converting an additional quantity if you consider it desirable.

"I do not understand P.O.O. to mean that C.I.G.S. can assist as regards the other items; but, if it is so, we have no objection to additional orders being given to him. We should like to know soon what has been done."

Nothing could have been more explicit than this, in showing our complete accord in every possible assistance being made available.

As regards the units leaving this country without their equipment, and thereby risking disaster to the British Army, as suggested in the evidence, the units did not require the harness until they got their mules, which were to be supplied to them in South Africa. The harness in complete sets was being dispatched to that country as fast as it could be manufactured, and it had been arranged that any required before its arrival should be purchased locally in South Africa, where it had been ascertained that plenty could be secured.

Under these circumstances, any assistance that could have been rendered by the Chief Inspector of General Stores, in making up complete sets from parts in store and parts to be purchased, became, comparatively speaking, of secondary moment, bearing in mind that large quantities of complete sets were being manufactured for immediate despatch.

28th January 1901.

A. M.

(3.) CONTRACT for STEEL BALLS.

Questions 1712 and 2948.

Firm A are known to us as agents and general merchants, and were noted for Steel Balls on the recommendation of D.G.O.F., under these circumstances:—

Copy of telegrams. (September, 1891):—

D.A.C. to D.G.O.F.:—

Your demand No. 102 for 2,000 Steel Balls for derrick revolving slide—no offers received from firms invited—as no recent order is traced will you name one or two likely firms.

D.G.O.F. to D.A.C.:—

Previously obtained from Firm B; Firms C and A are likely firms.

The "large order" referred to in Question 1712 is presumably that given on 5th December, 1900, when on a tendering for 3,500, D.A.C. ascertained that Firm A, who quoted lowest, obtained their supplies from another firm, and that the Firm D, who were next, made their own. C.S.O.F. thereupon minuted as follows:—

"Kindly divide the order between Firm A and Firm D. We shall then be able to compare the quality of the balls they supply"; and orders were placed accordingly.

As regards Question 1713, it is known that Firm A have bought some Steel Balls from Firm E, as the latter firm stated this in connection with recent inquiries as to their standing. The case referred to in this question is a tendering for 2,000 Steel Balls, for which Firm E quoted lowest at 51s., and Firm A next, at 59s. per 100. Firm C quoted 71s. 6d., and Firm D, 91s. 6d. C.S.O.F., on being consulted, replied as under on 22nd December, 1900:—

"We specially require balls which can be thoroughly depended upon, and if Firm E supply

Firm A, their supplies would probably not be such as we require, nor of course would be those of Firm A. Firm C also has not given satisfaction. Please therefore place the order with the Firm D, upon whom we can depend."

This was the first complaint on the subject, and order was placed with Firm D. as recommended.

(4.) CONTRACT for MANGANESE BRONZE.

Questions 1718 and 2949.

Firm A supplied a sample lot of their metal in 1894, and D.G.O.F. reported on 20.4.94, that it did not compare favourably with "Firm B or C, being lower in tensile strength than either of these."

In reply to our letter notifying this adverse report, Firm A wrote on 28.5.94 as follows:—

"The report . . . is so different to our own and our customers' experience, including this very material supplied to the Arsenal itself by ourselves through War Office contractors, that we trust you will do us the favour to ask the Woolwich authorities to give us the actual results of the test bars and also the corresponding tests of the test bars with which our material compares unfavourably."

They stated verbally that the great gunmaking firms preferred their metal.

D.G.O.F., on 29.6.94, reported that he had told Firm A "the results obtained when testing their material," and had pointed out that it did "not comply with the specification."

In November 1894, D.G.O.F. reported further, but whether this referred to the same or another sample is not clear from the papers:—

"The sample submitted by Firm A gave very satisfactory results, but it remains to be established whether the metal will be suitable for hydraulic purposes such as we require the Manganese Bronze for. To enable Firm A to carry out tests, we have lent them a casting pattern, and any recommendation must remain in abeyance until we see whether they can meet our requirements for this work."

They were accordingly noted for Manganese Bronze, but were told that before orders could be placed with them it must be shown that their metal is suitable for our purposes. (4.12.94.)

On 18.3.95 they complained that they had not been invited to tender, and D.G.O.F. later on forwarded letter from Firm A, dated 28th March 1895, as under:—

"Replying to your favour of 20th instant, we beg to remind you that we have already submitted samples of our patent bronze, which have more than stood your own official tests which govern the supply of Manganese Bronze to your Department, and as the result of these tests, on the 4th December last we received a letter from the Secretary of State for War informing us that our name was included in the War Office list of firms who are invited to tender for Manganese Bronze."

"Instead, however, of our being since invited to tender for your requirements, we are simply asked to send a sample 1 cwt. of metal to be used for making intricate castings, which, whether made of our or any other material, may or may not turn out satisfactorily, according to the amount of care and skill bestowed upon same by your work-people."

"We are quite prepared to guarantee that our material, if treated with the same care and skill as Firm B's Manganese Bronze, which you are now using, will produce at least as good results, but it is only natural that your people should have a prejudice against using a new material."

"We trust you will excuse our asking if you will kindly arrange to have some precisely similar castings of our own and Firm B's Manganese Bronze made and tested in our presence at the Arsenal, when we feel sure you will at once see the correctness of our statement."

"We send you by Book Post our new illustrated pamphlet of our Patent Bronzes, and on pages 19 to 22 of same we give a list of the different users, which we think should be a sufficient guarantee of its excellence."

Upon this letter the following minutes arose:—

"D.G.O.F. to D.A.C., 11.4.95.

"The enclosed letter from Firm A, dated 28th March, is forwarded for your information. We have been endeavouring to obtain a quotation from them for 1 cwt. of their bronze in order to ascertain its fitness for our work, which cannot be fully determined by test results obtained from a few selected samples. We require a material which we can cast ourselves, and if their metal requires so special a treatment that it is beyond our skill, then it is evidently not suitable for us. The proposal at "A" cannot be accepted, but if they will quote a price, as already asked, and it should be reasonable, we will then give it, as in all such cases, a fair trial."

D.A.C. to D.G.O.F., 16.4.95.

"Do you see any objection to our inviting them to tender on the next occasion? Then, if they come in by price, we can go into the question of a trial order."

D.G.O.F. to D.A.C., 18.4.95.

"It would be useless to invite them to tender until we have tried their metal and obtained satisfactory results."

"We have this morning received quotation from Firm A, viz., 60l. a ton, and have ordered 1 cwt. for trial."

It is not clear whether the further sample was supplied. On 21.6.95 C.S.O.F. reported that he had not then received it and again on 3.9.95.

Orders continued to be given to Firm B for their metal, and on 10.8.99 D.A.C., after giving an order for 40 tons, minuted to C.S.O.F. as under:—

"This makes a total of 135 tons of this special alloy bought since Christmas without competition. Can you not see your way to try samples from other firms, in view to putting an end to this monopoly?"

C.S.O.F. replied on 15.9.99:—

"We have no objection to making further trials with (say) 5 cwt. each from Firms C, D, and A, if these firms are now in a position to supply to our specification. Perhaps Firms E and F could also send in small trial lots."

These five firms were asked to supply accordingly, and all submitted samples. Firm A replied on 25.9.99, as under:—

"We have not the slightest difficulty in casting Improved Manganese Bronze at our works here according to the specification given in your letter, which will stand considerably higher tests than those named by you. We will, therefore, send a sample lot of 5 cwt. to the Royal Arsenal, Woolwich, and when it is desired to make some specimen castings from it we should like one of our workpeople to attend at Woolwich to give the necessary instructions for casting it, so that the best possible results can be obtained. We may tell you that we supply many hundreds of tons of this material every year for British Admiralty use, and in every case it has given the greatest possible satisfaction."

On 24.1.00, C.S.O.F. made the following report:—

"(1.) The sample lots submitted by Firms F, E, and D were quite unsuitable for our requirements, as the test pieces gave unsatisfactory results."

"(2.) Test pieces taken from the samples submitted by Firms A and C complied with the mechanical tests, but cylinders made from these supplies failed under water pressure. As the greater proportion of the manganese bronze used here is required for hydraulic work, these two firms cannot be recommended for the supply of this material."

In reference to this trial Firm A wrote on 17.2.00 as under:—

"Some two or three months since, we received a letter from the Director of Army Contracts asking us if we were in a position to supply manganese bronze to the War Office to stand certain tests (these tests, I may tell you, were of a somewhat peculiar nature, and we had never been asked for them by any other user of manganese bronze), requesting us, if we could do this, to send down a sample lot for testing."

"This was done, and the tests obtained were considerably above those mentioned by the Director. We then naturally concluded that, this being the

case, the matter, so far as trials were concerned, was at an end, and that we should be placed on your list of Contractors for manganese bronze for the future."

"To our surprise, however, we were informed by the Arsenal authorities that, although the only requirements governing the specification and the supply of this material furnished to the War Office were the tests mentioned above (with which we had amply complied), yet they (the local authorities) had a further test of their own which it was requisite our material should pass, before we should be allowed to supply the Royal Arsenal."

"This test, as explained to you, is from our point of view a highly unsatisfactory one, as it is absolutely impossible under the conditions existing to properly compare trial castings; our castings having of necessity to be prepared in the presence of, and with the assistance of, the Arsenal foreman and workpeople, whereas we are not allowed to be placed in a similar position by being present at the manufacture of the sample produced by the authorities themselves, and in fact are only allowed to see the finished article ready for testing without being acquainted in the slightest extent with the processes it has undergone in its manufacture."

"Under these circumstances, I think it only right to inform you that we are on the Admiralty list for manganese bronze of all descriptions, for hydraulic gun and gun-mounting work, and also supply the great gunmaking firms, for one of whom, in fact, we held the contract for manganese bronze and gun mountings for over 12 months, supplying them with manganese bronze rams, hydraulic cylinders, and all descriptions of manganese bronze work for this purpose."

In reply to our inquiries, the Admiralty stated on 12.3.00 that Firm A's "Bronze has been used for propeller blades and for framings of small engines, and up to the present it has given no cause for complaint."

The gunmaking firm answered on 7.3.00:—

"We have extensively used the Manganese Bronze supplied by Firm A in the shape of stampings for fuzes and in the shape of ingots for foundry purposes. We have on all occasions obtained satisfactory results, their material fulfilling the specified tests."

The C.S.O.F. was asked for remarks on this correspondence, and observed as follows:—

"This firm have had every facility to enable them to become acquainted with our requirements. The difficulties to which they refer have arisen in connection with trial orders for ingot metal required for castings which, when finished, have to stand hydraulic pressure. . . . The firm are in the same position as Firm C (see par. 2 of Minute of 24.1.00). Their material passed the tests laid down in the specification, which is the nearest guide we can give to our requirement. Like Firm C's, however, it failed when it came to be manipulated. The mere compliance with the specification tests cannot be taken as a final proof of the suitability of the material. Nor can we, in view of the time, labour, and expense involved, add to the specification the stipulation that the material shall be found capable of making a satisfactory casting. We can get material which will both stand the tests and make the castings; and it is for the firm to discover the way to compete with this quite satisfactory metal. As stated at the beginning of our Minute of 17.4.00 above, we have given the firm every facility to enable them to become acquainted with our requirements, and it is difficult to see that we can do more."

The D.A.C., therefore, told Firm A on 3.5.00, that the Department was not prepared to note them for manganese bronze ingot on their present record. In acknowledging, Firm A asked for a further trial when the pressure of work somewhat relaxed.

On 14.5.00 Firm C applied for a further trial, and, in passing this request to C.S.O.F., D.A.C. suggested that "it might be advisable to give Firm A a similar trial."

C.S.O.F. replied on 2.6.00: "We will give Firm C a further trial, but we do not consider that it is any good going to Firm A again at present," on which

D.A.C. pointed out that, in view of the previous discussion and correspondence, the Department could not "well refuse Firm A a further trial." The C.S.O.F. answered, on 4.7.00, as under:—

"I do not see that we are called upon to go out of our way to incur the trouble and expense of a third trial of Firm A's Manganese Bronze ingot, and unless there is some very cogent reason for reopening the question so soon with them, I think the matter should be allowed to drop, for the present, at all events, especially as the firm appear to have acquiesced in your decision in their letter of 5th May."

Since then the following further minutes passed:—
D.A.C. to C.S.O.F., 11.7.00.

"The firm did not acquiesce. They have verbally protested and pressed for a further trial. I do not want to cause any unnecessary trouble, but it seems desirable to satisfy them if possible."

S.O.F. to D.A.C., 19.7.00.

"If you wish, we will make a further trial, but at present it would be very inconvenient."

D.A.C. to C.S.O.F., 20.7.00.

"I would like to try Firm C's and Firm A's about the same time. When can you conveniently do both?"

C.S.O.F. to D.A.C., 16.8.00.

"I had made arrangements to try Firm C's as soon as supply is received. Trial of both cannot conveniently be made for some time. Do you wish trial of Firm C's deferred, please?"

D.A.C. to C.S.O.F., 18.8.00.

"Under the circumstances, no. But I should like Firm A's to be taken up as soon as possible afterwards."

C.S.O.F. to D.A.C., 6.9.00. Noted.

D.A.C. to C.S.O.F., 16.10.00.

"Can you say what progress has been made with Firm C's trial, and when you will be able to give Firm A his trial?"

C.S.O.F. to D.A.C., 30.11.00.

"This metal has been tried and it does not meet our requirements, a reservoir cast from it having failed to stand a water pressure of less than 200 lbs. per square inch. Do you still press for a third trial of Firm A?"

D.A.C. to C.S.O.F., 4.12.00.

"I should like Firm A's to be tried again."

C.S.O.F. to D.A.C., 3.1.01.

"As you are aware, I am not in favour of making any further trial of Firm A's Manganese Bronze, and have only agreed to do so in view of your strongly expressed wish that another (the third) test should be made. These trials are expensive, and I think Firm A should be called upon to bear the cost of the trial if the result prove that their metal does not stand the necessary test."

"To avoid mis-statements by the firm it should be clearly understood whether they wish the test to be carried out—

"(a) entirely by the O.F., or

"(b) under the superintendence and direction of their own representative and on his sole responsibility."

"Will you make this clear to Firm A, and let me know what course they prefer?"

On 10.1.01 Firm A was written to by D.A.C., as under:—

"In reference to your letter of the 11th October last and to previous correspondence, I am directed by the Secretary of State for War to acquaint you that the Department is prepared to make a further trial of your manganese bronze, on the understanding that you bear the cost of the trial if the result prove that your metal does not stand the necessary test."

"I am to request you to be good enough to state whether you wish the test to be carried out—

(a) Entirely by the Ordnance Factories' officials, or

(b) Under the superintendence and direction of your own representative and on his sole responsibility."

On 16th January 1901, Firm A replied as under:—

"We are in receipt of your esteemed favour of the 10th instant, and in reply beg to inform you that we will gladly pay the costs of any trials of our improved manganese bronze, should it be found in any way inferior to the metal you are now using."

"We would wish that these trials should be carried out in the presence of the Ordnance Factories' officials and of our own representatives, and for the manganese bronze you are now using and our improved manganese bronze to be manipulated at the same time, and in precisely the same manner, and to be subject to precisely the same tests."

"We would also suggest that test bars should be cast from the respective metals for tensile, transverse, torsional, and compression tests, and that castings of various articles in general use at the Arsenal should be cast from the respective metals, and tested under precisely similar conditions, care being taken that the bars and castings should only be manipulated when the Ordnance Factories' officials and our representatives are both present."

"Trusting these proposals will meet with your approval, and hoping to hear from you that the trial may now take place."

The reason for pressing for the third trial was that a representative of Firm A called early in 1900, and stated that he had reason to doubt the bonâ fides of one of the workmen in charge of the casting. On the Admiralty and the gunmaking firm confirming the statements as to the satisfactory character of the firm's bronze, a private note was sent to Donaldson at the Ordnance Factories, telling him of the representative's suggestions, and asking him to communicate with Colonel Bainbridge, who is therefore aware of all the circumstances. This explains the subsequent action, including Firm A's desire to be present at the trial.

NOTE.

D.A.C. - Director of Army Contracts.
D.G.O.F. - Director General of Ordnance Factories.
C.S.O.F. - Chief Superintendent of Ordnance Factories.

(A letter from Firm A, dated 11.10.00, asking for a further trial was enclosed.)

(D).—STATEMENT FURNISHED BY THE DIRECTOR OF CONTRACTS SHOWING COPPER PURCHASES FOR SIX MONTHS BEFORE AND FOR SIX MONTHS AFTER METAL BROKERS CEASED TO BE EMPLOYED.

Comparison of Quantities and Prices of Copper Ingot bought during the Six Months preceding and the Six Months succeeding 5th February 1897, the Date on which it was decided to buy this Supply direct from the Trade instead of through Brokers.

Q. 1774. This is the statement of copper purchases made for six months before and for six months after the date upon which brokers ceased to be employed.

20/1/1901.

(Signed) A. M.

(E).—MEMORANDUM BY THE DIRECTOR OF CONTRACTS ON CONTRACT FOR TENTS.

Orders placed since the Commencement of the War (omitting Valises and Pin-bags).

(1.) Up to the beginning of October all orders for tents had been obtained by Warrants issued under running contract with Firm A, 2nd March 1897. The quantities ordered were largely in excess of the estimated annual requirements, and as Firm A was quite full up it was decided, towards the end of September 1899, to place further quantities by competition.

(2.) A demand was accordingly put forward, dated 30th September 1899, for 170 tents of sorts, and 1,100 roofs of sorts. Ten firms were invited to quote, three offers were received, and the order was divided between Firm B and Firm C, a new firm, 16th October 1899. Firm A was not sent to.

(3.) The next demand, dated 13th October 1899, for 20 tents store was also divided between Firms B and C, 28th October 1899, there being no complaint at that date of either firm. On this occasion 10 firms were sent to and three offers were received. Firm A was declined.

(4.) The next demand, dated 26th October 1899, for 670 roofs, 5,000 tents, and 150 walls was allotted to Firms B, A, and D, Firm C being passed as in arrear. We were aware that Firm A was, at this time, somewhat full up owing to the large warrants issued, but as these were altogether in excess of what he had contracted to do, there was no reason for thinking that he would not now keep fairly to his contract time. We had still no complaint as to Firm B. On this occasion we sent to 10 firms and got five offers.

(5.) The next demands, dated 1st November and 9th November, included 470 tents, 1,360 roofs, and 580 walls, and were divided between Firms B and A, 2nd December 1899. Eleven firms were sent to, only three full offers were received, one of these, Firm C, was passed being reported in arrear. A fourth offer (Firm D's) was only for two items out of 10 required. We had still no warning as to Firm B being in arrear.

(6.) The next demand, dated 1st December 1900, was for 2,000 tents D'Abri, which were apparently of no urgency, and were not shown as being for war service. Of these, 1,600 were placed with Firm A, and 400 with Firm B, 15th December 1899.

(We had, on 11th December 1899, received a default report on one of Firm B's contracts, but the arrear did not appear at that date such as to warrant our excluding him from a contract for a supply not wanted quickly.)

The papers in the case are not available, and it is not clear whether the order could have been advantageously placed other than with these two firms.

(7.) The next demands were dated 6th December and 6th January. These demands included 3,000 roofs, 8,800 tents, and 500 walls. The earlier of the two was, in the first place, put to tender, our ordinary list of 10 firms being applied to, five responded, four were accepted as far as their offers went, but as one offer (that of Firm D) was only for small portions of the requirement, the bulk of the order had necessarily to go to Firms B, A, and C. The fifth offer (that of Firm E) for trifling quantities at prices about double the others was declined. A portion of the supply was kept back and put to tender to three new firms F, G, and H, all of whom were subsequently accepted, 15th January 1900. The balance of the two demands was again put to tender to a largely extended list, the result of our inquiries. On this occasion we tried 26 firms, received 11 offers, and placed eight orders (2nd February 1900), four of which went to new firms K, L, M, and N.

(8.) The next demand, dated 21st January 1900, included 1,500 roofs and 10,130 tents of sorts. Some of these had been placed on the tendering referred to in preceding paragraph. For the balance 27 firms were tried, and 17 offers were received. The order was divided amongst 11 firms, including four not previously employed—O, P, Q, and R. Firm B were passed on this occasion, and Firm A was given an order for delivery long ahead.

(9.) The next demand, dated 20th February 1900, was for an urgent supply of 200 walls and 200 roofs required for immediate shipment to enable a field hospital to be equipped. We had on this occasion to obtain offers by telegram; we sent to 12 firms, accepted eight, including Firm S, a new firm. On this occasion, owing to the great urgency, we had to get 100 walls from Firm B, although we were, of course, aware that it would interfere with his existing orders.

(10.) The next demands, dated 8th February 1900, and 20th February 1900, included 1,200 roofs, 600 walls, and 1,600 tents and were sent to a list still further extended; 37 firms were tried, but only 12 offers were received, 10 of these were accepted. Firm A was given an order for tents required for the most part consequent on increase to Artillery batteries, and not specially urgent.

(11.) Special orders were further placed with Firm P, 21st March 1900, for 1,000 bell tents made of French duck; with Firm T, 29th March 1900, for 1,500 single

circular tents made of Birkyre's Indian cloth; and 22nd March 1900, with Firm U, for 3,000 single circular tents of American cotton duck.

Firm T were a new firm for tents and are in a large way. We had previously tried to get them to make up tents from our duck, but without success. Firm U was the first order to America.

(12.) On 6th April 1900, we obtained at a few weeks' notice 81 H.P. marquees for Salisbury Plain. This is noticed, as we introduced on this occasion another new firm V. This firm has its supplies made up on the Continent.

(13.) The next demand, dated 21st March 1900, included 7,240 roofs, 3,434 tents, and 320 walls. For this we again extended the list, applying to 40 firms. We received 16 offers and accepted (4th May 1900), 11 firms, including one new firm, W. Firms A and B were passed on this tendering. Outside the tendering 2,000 single circular tents of cotton duck were placed, 10th May 1900, in aid of the demand with an American firm, X.

(14.) The foregoing does not include various special purchases from stock or special tents, such as green rot-proof tents, for which we are necessarily limited in competition.

(15.) It will be observed that our last order to Firm B, apart from a small special order wanted at once, was dated 30th December 1899. At the latter date the arrear of Firm B was not alarming, the supply not being very long overdue, and on this tendering the offers received left us little choice. Firm A has been given some later orders, but not, as a rule, for very urgent deliveries. Firm A is by far the largest and most experienced contractor on our list. No other firm can turn out nearly so many tents, and his services in this emergency have been very valuable. We are now passing him, having succeeded in extending competition. It is only due to Firms A and B to say that when they took their contracts (as a rule at low prices) they could have had no idea of the enormous drain on the labour available for tent making. Their resources have been limited by reason of their labour being taken away by other firms in South and East London, with whom we had placed subsequent contracts.

(16.) If D.G.O. had given us earlier an approximate forecast of his requirements, we would have been able to make earlier provision to meet them by extending competition or by placing orders abroad. As it is we have received during the war 16 different demands for tents, mostly for quick delivery. This piecemeal method has multiplied our work and has made it almost impossible to provide for reliable deliveries, as each order placed interfered, to a certain extent, with the previous ones. We have gradually extended the basis of supply from three to 21 firms. Considerable quantities of tents have been ordered for periods much in anticipation of D.O.G.'s requirement. It is presumed that immediate wants are now in a fair way of being met, as P.O.O. has recently refused offers of tents not strictly to pattern, stating that "he now hopes to get along."

(17.) If D.G.O. had earlier agreed to take cotton duck, such as is used in Germany and America, there would have been no difficulty in obtaining ample supplies, but on 29th January 1900, he refused a large and reasonable offer of German tents, such as are used in the German service, and on 22nd January 1900, he stated that cotton duck was not suitable. We passed him various offers of American tents of this material, but he did not propose to take advantage of any of them, and it was not until 16th March 1900 that he agreed to take tents of this material.

D.A.C. decided to invite seven selected firms, and four tendered:—

Firm B	-	-	-	-	37s. each.
Firm A	-	-	-	-	40s. "
Firm C	-	-	-	-	42s. "
Firm D	-	-	-	-	43s. 9d. each.

D.A.C. submitted tenders to D.G.O.F. and asked his concurrence in accepting Firm B. At request of D.G.O.F., Firm B was asked by D.A.C. to submit a sample, which he did, and D.G.O.F. reported on 14th January 1898 as under:—

The sample spring was "satisfactory, except in a few minor details, which have been pointed out to a representative of the firm. The order for the 250 may now be placed with this firm."

This was done on 17th January 1898.

Nothing more was heard of the order until 31st October 1898, when D.G.O.F. reported as follows:—

"Firm B have made several attempts, but have completely failed to supply suitable springs. On the 14th December last they submitted a sample spring which was satisfactory, save in some minor points, which appeared capable of being easily overcome; but supplies of 12 and 18 springs, made on the 25th June and 1st July respectively, were not in accordance with the drawing and specification"; and also, that as a subsequent delivery of 12 was unsuitable, he recommended that the order be divided "between Firms C and A for the earliest possible delivery."

D.A.C. obtained quotations from Firms A and C by telegram. The former quoted 37s. each, and the latter 39s.

On 3rd November 1898, 150 were ordered from Firm A and 100 from Firm C.

No communication has since been made to us as to the delivery, but if the delivery was not made until September 1900, it seems to prove that the selection of Firm A and Firm C by the factory authorities was not very successful.

21/1/1901.

A. M.

(G.)—MEMORANDUM BY THE DIRECTOR OF CONTRACTS ON INCREASE OF STAFF REQUIRED FOR HIS DEPARTMENT.

Enclosed is a copy of a Minute addressed to the Permanent Under Secretary of State in November 1898 representing my opinion at that time as to the minimum staff required by the Director of Army Contracts for the proper performance of his duties in time of peace.

The war pressure, which began in September 1899, and has continued till to-day, has only served to confirm and extend the views then expressed.

The post of Assistant Director has been filled as suggested, but experience has shown that two Principals are required below him to control the large mass of papers which have to be dealt with.

In place of four First Class Clerks in charge of the sections, I have had to employ seven, and I am satisfied that the minimum number which should be permanently attached to the Branch is five, in order to secure that, as any one of these clerks is removed to other work, an officer with some experience of the work may be available to take his place.

The five Staff Clerks asked for before are the very lowest number necessary. There must be at least one in each of the five divisions.

The number of Second Division Clerks and Abstractors must vary with circumstances, but unless there is an immense falling off in the work I do not consider that the number should be less than:—

22 Second Division.
10 Abstractors or Assistant Clerks.

The number at present employed is:—
33 Second Division.

9 Abstractors or Assistant Clerks.

The number of Writers and Boy Clerks should be four as before.

The addition of the two Travelling Inspectors just sanctioned by the Treasury will be valuable assistance in

(F.)—MEMORANDUM BY THE DIRECTOR OF CONTRACTS ON THE ORDER FOR SPIRAL STEEL SPRINGS.

Demand for 250 spiral steel springs to Specification, received September 1897. Firm A were recommended for the supply by Director-General of Ordnance Factories.

systematically carrying out the outdoor duties which I have always pointed out to be most desirable, but the consideration of their reports will rather add to than reduce the work of the Branch.

The Staff I asked for in 1898 was :—

- 1 Assistant Director.
- 1 Principal.
- 4 Higher Division Clerks.
- 5 Staff Clerks.
- 9 Second Division Clerks.
- 10 Abstractors.
- 4 Writers and Boy Clerks.

The staff recommended for the Contract Branch in the Draft Report of the Committee on War Office Establishments was :—

- 1 Assistant Director.
- 1 Principal Clerk.
- 3 Assistant Principals.
- 1 Higher Division Clerk (under instruction).
- 5 Staff Clerks.
- 9 Second Division Clerks.
- 14 Assistant and Boy Clerks.

The volume of work upon which my demand and this recommendation were made was represented by :—

- 46,050 papers.
- 10,171 letters written.
- 37,307 tenders issued.
- 18,393 tenders received.

Since 1897-98, e.g., for the year from 1st April 1900 to 31st March 1901, the volume of work may be taken as :—

- 119,807 papers.
- 36,608 letters.
- 105,385 tenders issued.
- 42,205 tenders received.

Calculated on the basis of the first nine months.

I now ask for a staff consisting of :—

- Assistant Director.
- 2 Principals.
- 5 Higher Division Clerks, four of whom should receive 50% a year as heads of rooms, unless otherwise receiving special remuneration.
- 5 Staff Clerks.
- *22 Second Division Clerks.
- 10 Abstractors or Assistant Clerks.
- 4 Boy Writers as before.

This compares with the following staff now in the Branch :—

- Assistant Director.
- 1 Assistant Principal.
- 2 Acting Assistant Principals.
- 4 Higher Division Clerks.
- 3 Staff Clerks.
- 33 Second Division Clerks.
- 9 Abstractors.
- 10 Boy Clerks and Writers.

If my suggestion of transferring the passing of all bills and claims (not the payment) arising out of contracts were carried out, thus making the Contract Branch the division under the Financial Secretary for considering all claims of a special or commercial character as distinguished from those arising in the nature of personal emoluments under Royal Warrant and Regulations, which would remain with the Accountant-General, the Contract Branch would have a staff under its control which could be trained to contract work, and would be available at once to meet the pressure which on the outbreak of war becomes a very first necessity to provide for.

I offer this suggestion mainly with a view to secure that elasticity of staff without extra expense which has been so conspicuously absent from the organisation of the Contract Branch up to the present time, and which in a Branch feeling the first pinch connected with meeting the requirements of a Military expedition, must be regarded as a most essential condition of its efficiency.

15/1/1901.

A. MAJOR.

WORK OF THE BRANCH.

Year.	Papers received.	Letters written, including some Forms.	Tenders issued.	Tenders received.
1882	24,767	8,767	16,094	8,877
1883	20,786	6,996	12,181	7,302

---	---------	--------	---------	--------

P.U.S.

The post of Assistant Director of Contracts, which became vacant in August last, has not yet been filled up. It is, I submit, most necessary that this should be done without further delay. The Director of Contracts is brought very closely into touch with the outside world, and with the enormous mass of responsible work that passes through his Branch; it is not unreasonable to expect that he should be supported by an officer with a recognised official title. My Assistant has to interview a large proportion of the callers, to deal with a great deal of the correspondence, and to act constantly on my behalf. The Director of Army Contracts is at present, without doubt, the largest purchaser of general stores in the world, and looking upon him in this light, the commercial public expect to find a fully authorised Assistant to represent him.

In fact there is no other appointment of analogous responsibility in this or in other Departments of corresponding importance which has not one or more assistants relative with their positions titularly designated.

The Director of Contracts at the Admiralty (who buys considerably less) has, as you are aware, an Assistant, and similarly the Director-General of Stores (the chief buyer at the India Office) has a Deputy.

I also consider that, as the duties of the first Assistant here are quite equal to those of an Assistant Accountant-General, that the salary of the two appointments should correspond.

Further, as it is necessary that the Assistant Director should be relieved from the enormous weight of detail which at present falls upon the second officer of the Branch, I consider that he should have below him a Principal who would control matters of routine, and send forward only the more important papers.

Below the Principal, I must press for four First Class Clerks. I have no objection to one of these being a learner, but the other three should be permanently attached to the Branch, and removed only for promotion.

Owing to the heavy mass of work falling to D.C.I., and to the fact that the two other sub-divisions are already over-weighted, I have been forced to divide the former into two halves, separating the miscellaneous stores from the textile fabrics and leather goods. This portion has now been working independently for some little time, and I shall be glad to

* To be reduced whenever possible.

have your authority for constituting it a definite sub-division as D.C.4. The four First Class Clerks would take charge of these four sub-divisions. I am convinced that the only satisfactory way to work the Branch is by separate units under individual control.

Under the First Class Clerks I require four Staff Clerks, and an additional Staff Clerk to control the issuing of tenders and the ledgers.

At present I have nine Second Division Clerks. With the two additional Staff Clerks asked for, I think we may be able to manage without an increase here.

I must ask for at least two more Abstractors. The Staff, therefore, for which I press, is:—

Proposed Staff as compared with Present Staff:—
Assistant Director.

1 Principal.	1 Principal.
4 First Class Clerks.	2 First Class Clerks.
5 Staff Clerks.	3 Staff Clerks.
9 Second Division Clerks.	9 Second Division Clerks.
10 Abstractors.	8 Abstractors.
4 Writers and Boy Clerks.	4 Writers and Boy Clerks.

I ask for this as a minimum, after very careful consideration of the actual needs of the Branch. It has been undermanned ever since I have been here, but the work has now grown so enormously, and is still so much on the increase, that the position is becoming serious. I am reluctantly forced in the interests of the Public Service to solicit your early attention to the subject. For a precise comparative idea of the volume of work dealt with in the Branch now and formerly, I would refer you to the figures contained in page 8 of my last Report, and which for convenience are attached to this paper. They show that the work of 1898 is about three times that of 1883, while the Staff has only insignificantly been increased. Indeed, as regards First Class Clerks, there is actually one less now than there were then. Many of my clerks stay night after night beyond hours, and some of them get few or no Saturday afternoons. This goes on all through the year, and, besides being (I submit) intrinsically wrong, is not a satisfactory method of working during peace time a Branch which is one of the first to feel the effect of any preparations for war, and which, in any emergency, would be called upon perhaps more than any other Branch in the office.

If the patent work and preparation of material for the Ordnance Council is transferred, I shall need one First Class Clerk and one Second Division Clerk in addition to the above.

(H.)—MEMORANDUM by Colonel J. STEEVENS, Principal Ordnance Officer, on points arising in EVIDENCE of the DIRECTOR OF CONTRACTS.

Ordnance Office,
Royal Arsenal, Woolwich,
5th February 1901.

SIR,

In accordance with the instructions from the Chairman of the Committee, I beg to append the following remarks and statement regarding evidence given by the Director of Contracts on the 23rd ultimo in connection with my evidence of the 15th idem.

I will refer to the number of question and answer of Director of Contracts' evidence which bears upon my previous evidence, and make my further remarks against them.

2799 to 2803. The denial to my statements in Answer 2799 is qualified by admitting the facts in the answers which follow. I had made no mention in my evidence that I had either discovered the tent makers or employed them. Upon examination of the list of firms subsequently "discovered," it can be seen that nearly the whole of the tent makers employed are detailed at page 2461 of the "London Post Office Directory" as "tent and marquee makers," and those not included are four in number, of which only one firm did extensive work. Among the names of those tent makers who were "discovered" are Firms S, D, P, H, Q, &c., &c., in connection with which I would beg to draw attention to Question 2803.

2804 to 2806. The reason why the Director-General of Ordnance refused to take American tents of cotton duck in the first instance was, that if the contracts which the Director of Contracts had made had been fulfilled, there would have been no necessity whatever

at a later period of eventually having to accept the cotton duck tents. Had the Director of Contracts informed the supplying department that he had made such and such contracts, but that there was no chance of their being fulfilled, that department would have known better how to act. How those contracts were fulfilled is exemplified in a report made to the War Office on the 27th February 1900, as under:—

"Statement showing Position of Contracts for Single Circular Tents."

Name of Contractor.	Nos. due on Contract.	Nos. should have been received.	Nos. actually received.	Overdue, not delivered.
Firm A - - -	9,500	6,500	3,747	2,753
Firm B - - -	3,070	2,320	Nil	2,320
Firm C - - -	550	250	Nil	250
Firm D - - -	1,080	480	320	160
Firm H - - -	275	50	25	25
Firm L - - -	1,100	100	Nil	100
Firm M - - -	220	20	Nil	20
Firm N - - -	50	6	Nil	6
Total overdue -				5,634 "

2809. The incapacity of this firm to supply tents has been of old standing, and is not confined to the pressure referred to. There has always been difficulty in obtaining supplies, and if the Director of Contracts was unaware of the fact, I pointed it out to him in December 1899, when he was placing so many contracts with the firm.

2817. My evidence regarding a contract for 20,000 (not 200,000) tent mallets with one firm for completion by 14th June 1900, and upon which we received 127 only up to the end of December 1900, was intended to show how misleading such contracts were to the department responsible for making the supplies to the Army, without any indication from the Contract Branch, that although the contracts were made, there was but little prospect of their being carried out. This is only learnt from the bitter experience when supplies become due.

2821. As regards the reply of the Director of Contracts to this question, the first inspection made of Firm B's premises to see what they were doing was made by the Director of Contracts' Branch on the 3rd May 1900. This firm was one of the greatest defaulters, and had been given contracts which should have produced 350 tents a week during the early part of the year, before this inspection was made, but during the first three months of the year, we had received 17 only. These very heavy contracts were given without this inspection taking place. I name the date of inspection as 3rd May from information given by the Director of Contracts to the Secretary of State at the meeting of the 4th May referred to elsewhere. The Secretary of State asked if inspection of this firm had been made, which was answered in the affirmative, and upon the Secretary of State asking "When?" the Director of Contracts replied, "Yesterday." (The proof of this statement of mine will doubtless be found in the records of inspection in the Contract Branch).

2823 to 2826. In connection with the purchase of bedsteads the Director of Contracts makes the following statements:—

- That the price at which purchased shows that they were totally different articles to the bedsteads purchased by him, that they would be of a totally different nature.
- That the articles purchased were not properly inspected.
- That the price at which purchased, i.e., 4s. 7d., would show them to be of a totally different nature, and that you cannot compare a bedstead bought at that price with one bought at 7s. 9d.
- That the Principal Ordnance Officer exceeded his authority in approving local purchase.

In connection with those statements I beg to observe as follows:—

- Upon notifying the approval of local provision it was stated from my office "Each bedstead to consist of two trestles and three bed boards," such description being the exact Service pattern.

6. Every bill before being put forward for payment must bear the certificate of an officer that "the articles have been duly inspected and are fit for the Service." (The bill having been sent to the War Office for payment it is presumed the bill was correctly certified, or it would not have been paid.)

(c.) The vocabulary rate, which is fixed by the Accountant-General's Branch of the War Office from mean average rates of payments or manufacture, shows the cost of these field service bedsteads to be 3s. 3d., and it is, therefore, no criterion that because the Director of Contracts pays the excessively high price of 7s. 9d. that they cannot be obtained at 4s. 7d.

(d.) Paragraph 1001, Regulations for Army Ordnance Services, is as follows:—

"The Principal Ordnance Officer will be empowered to comply with all demands . . . either by issuing the articles demanded, or by arranging for their purchase locally when it is not convenient to make the supply from Woolwich."

When I gave my evidence on the 15th January no objection that the P.O.O. had exceeded his powers had been made, but I understand it has since been, verbally to the D.G.O. I have not seen the papers, but I have been told that the Director of Contracts has been informed that the P.O.O. had not exceeded his powers in the action which he took.

2829 to 2849. These are the questions dealing with the purchase of parts and material for conversion of mule harness. The facts taken from the papers are as follows:—

3.9616.

6/7/99.—D.G.O. ordered P.O.O. to "convert this harness to be available for six, eight, or ten span as quickly as possible."

8/7/99.—P.O.O. reports. ". . . Arrangements have been made to purchase certain pole and neck straps, trek chains, &c., as quickly as possible, and, as far as leather work is concerned, the C.I.G.S. informs me he expects to have all ready in 10 days to a fortnight."

3.9737.

14/7/99.—P.O.O. reported, "The enclosed is forwarded in reference to 57/3/9616 (Minute 8/7). I shall be glad to receive covering authority for the purchase of the articles enumerated therein, to enable me to furnish the C.I.G.S. with the necessary purchase order."

1/9/99.—D. of C. wrote to D.G.O., "I do not see any authority in 57/3/9616 for these purchases. The articles could apparently have been obtained by me. In any case should not my concurrence have been obtained at the time, before the C.I.G.S. took steps to make these purchases?"

13/9/99.—D.G.O. replied, "No doubt, according to strict procedure, you should have been consulted, and would have been, if there had not been such anxiety to save every moment possible in obtaining supplies so that work could go on. It is hoped that, under the circumstances, you will concur."

The foregoing were the facts of the first conversion of harness.

Towards the end of September I received orders for the conversion of an additional 150 sets, and the records are as follows:—

23/9/99.—Memorandum by P.O.O. on that date. "I have just seen 57/3/9787, wherein D. of C. makes objection to our purchasing parts of harness for conversion six-span mule harness. Telephoned D.D.G.O., who says, must go to D. of C. for the parts required for further conversion of six-span harness just approved."

I should like here to draw attention to the loyal endeavour of the D.D.G.O. to prevent any apparent action of carrying out work appertaining to the D. of C., although I admit I argued that under the circumstances we should go on, as I felt the importance of such action, and anticipated difficulties by any other course. The D. of C., however, had previously stated "The articles apparently could have been obtained by me," *vide* quotation above. (With reference to Question 2830 and answer, it will be seen that the decision was not that of Sir Henry Brackenbury.)

25/9/99.—Demand sent up for purchase by Director of Contracts. (Any reference to this demand being i 15090.

dated 15/9/99 must be a misprint. The notes of my verbal evidence show 25/9/99.)

11/10/99, P.O.O. reported—

"The enclosed telegram refers apparently to 900 head collars for six-span mule harness in my demand of 25th September, P. 3, D. 1025.

" On a previous conversion of 200 sets, we bought the material and parts locally, *vide* 57/3/9616, and, on seeing the disapproval of our action, I telephoned up to your office, and was informed that demands should be forwarded. This was done on the 25th September, the items required being those detailed under G.S. parts at the end of the demand. Among the items were 900 head collars—400 have been ordered, you will see, for delivery in six weeks, and I am asked if the balance will do in eight weeks. I replied that such order was useless, and indeed the 400 in six weeks is of no use.

"The demand is now two weeks old, so that supply of 400 will be obtained in two months, and the balance in two and a half months."

* * * * *

It was upon the above minute being passed to the Director of Contracts that he, the following day (12th October), wrote as described in Answer 2847. Mr. Gibb, in Question 2481, very aptly puts the case, and with absolute correctness.

Had I not seen (unfortunately as it appeared to me at the time and still more unfortunately as events turned out) the previous protests of the Contract Branch to our action, we should have (between 23rd September, the date of my telephone, and the 11th October) provided all the material and had the mule harness ready, instead of which, in connection with the failure of the Director of Contracts' attempted purchases to meet this service, I wrote to him on the 4th December as follows:—

"There are still 16 units of the Army Corps which have been unsupplied with harness owing to the want of items due on these contracts."

7161/4210.

In concluding my remarks on this subject it should be hardly necessary to refer to the answer to Question 2842, which is, perhaps, qualified by the answer to the question which immediately followed.

2850 to 2866. Purchase of horse hair. There is but little to be said, except, perhaps, upon points of personal explanation and justification which I wish the Committee to be acquainted with. There were four general and four stationary hospitals in the original scheme upon which the Army Corps was to be sent to South Africa. There were equipments for only one general and two stationary hospitals in existence. To provide further equipments at this time could only be done by the most prompt action. Inquiries had been made as to the period of time in which they could be got ready. Upon the 27th September I telegraphed to the War Office:—

"My estimate of time in which equipment for hospitals could be provided was based on purchases made direct without routine demands being prepared for action by Director of Contracts."

When the order was given, action was taken in the manner described in my telegram, and the hospital equipments were ready. Horse hair was not the only item to be provided, there were 50 to 100 other items which past experience had impressed upon me could not have been provided in time with the intervention of routine purchases by the Director of Contracts. In connection with the latter portion of the reply of the Director of Contracts to Question 2857 I can only refer to the results of the purchase of mule harness previously referred to by the Contract Branch in support of my experience and action.

I must also refer to Questions and Answers 2855, 2864, and 2865, the answers imply that I made these purchases and omitted to report; that the purchase "was merely discovered when the bill came up for payment." This is misleading. Horse hair was but one of from 50 to 100 items. The whole purchase would have been reported when completed, not item by item, there was neither thought nor wish to hold back the report, which is implied. The reporting of such action would be a matter of routine entirely, and could not be otherwise, the bill had to go to the War Office to be paid. To show how reports are made reference is invited to my report of the purchase of mule harness six days

after I had reported that it would be necessary to purchase.

2867 to 2884. Corn crushers.

The circumstances and action taken are as follows :—

16/8/99 (Saturday morning). Orders received to place five corn crushers on each of two ships at Birkenhead on "the 18th instant or as soon after as possible."

After ascertaining that we had only four in store, two being sent off to each ship, an inspector went to London to buy the other six. He was unable to effect the purchase, being Saturday. He returned to Woolwich. In the meantime notification had been received that the vessels were to sail on Wednesday, 20th.

The purchaser therefore went to Manchester on Monday, he went there as being near Liverpool, and facilities for putting on board. He left Manchester on Tuesday morning, having made the purchase with verbal guarantee that they should be on board Tuesday evening. The purchaser, therefore, went to Manchester on Monday and returned on Tuesday, he went nowhere else, and did not stay away Sunday, Monday, Tuesday, Wednesday, and Thursday, as described by Director of Contracts in Answer 2869. In reporting on this question to the Director of Contracts the D.G.O. said :—

"I hope you will agree with me that P.O.O. used a wise discretion in this case of urgency."

There are many other statements in Mr. Major's evidence which appear to be at variance with the above facts, but I do not know from what source he obtained his information.

Regarding Question 2870, I apparently and unintentionally misled the Committee in stating the corn-crushers were bought at Woolwich, the intention of that term was, and is, to indicate *from* Woolwich, or under local arrangements. When we talk about stores being bought at Woolwich or any other place it does not necessarily mean the purchase was actually at the place but under local arrangements at that place.

2885 to 2905. Upon the subject of stretcher sling.

The following report of mine describes exactly the situation.

27/3/1900 P.O.O. reports to War Office :—

"Upon the 24th January last I sent contract demand (P. 3, D. 1237) for—

Slings, stretcher, 3,500.

"The only contract made up to date is with a firm, 31/3/1900, for 900—delivery at 100 a week commencing 24th April.

"Thus, the only definite result of my demand is a prospective 100 a week to begin three months after date of my demand.

* * * * *

"I have requested C.I.G.S. to manufacture at once to meet this issue, and beg to submit for your covering approval."

2933. Enamelled ware.

As regards my evidence on the subject of what passed at a meeting held on the 4th May, the Secretary of State after hearing reports (read by me from notes), instructed the Director-General of Ordnance to send in a statement of the facts and figures which had been discussed.

My report written at the time reads, as to enamelled ware, as follows :—

"Enamelled Ware.

Date of Contract.	Articles.	Number.	Date of Completion by Terms of Contract.	Actually delivered 4th May.
13 Dec. -	Pots, tea -	430	21 Feb. -	58
30 Dec. -	Do. -	600	10 Mar. -	35
	Total -	1,030		93
13 Dec. -	Pans, bed -	200	7 Feb. -	56
30 Dec. -	Do. -	200	21 Mar. -	Nil.
	Total -	400		56

"These are only two of a large number of items in which the firm have failed utterly in keeping their contracts :—

"At the Secretary of State's meeting, the Director of Contracts informed the Secretary of State that this firm was one of the best possible for this class of goods and reported that they had failed, owing to the impossibility of procuring tin-plate with which to manufacture. The Financial Secretary also explained the state of the tin market. I should have explained that this enamelled ware is not made from tin-plate, and, therefore, like the suggested difficulty of contractors obtaining duck for making tents, does not explain or bear on the question."

The original of the above paper was, with figures regarding other stores discussed at the meeting, taken by the Director-General of Ordnance to the Permanent Under Secretary for the Secretary of State.

It will be seen from the above extract that enamelled ware was the point of discussion, and that it contains three points, following on my report that the firm had utterly failed in keeping their contracts, viz. :—

That the firm was one of the best for this class of goods.

That they failed because they could not obtain the plate, and

That contractors could not make tents because they could not get duck.

I have never heard any question of inaccuracy on either of the three points raised. I differed in opinion on the whole of those points, and hence recorded them in the paper made out and handed in to the Secretary of State the day after the meeting.

There is only one other point in connection with the Director of Contract's evidence that I should like to refer to, and that is in answer to Question 2940, he states, "The gentleman who went as my representative did not profess to know." This is precisely the point to which, in my evidence, I called attention as to the method of sending anyone to purchase stores when he did not know what it was he wanted to buy.

I have, &c.

(Signed) J. STEEVENS, Colonel,
Principal Ordnance Officer.

APPENDIX VI.

DECENTRALISATION.

(A.) DRAFT OF LETTER to GENERAL OFFICERS
COMMANDING, with their REPLIES.

War Office, London, S.W.

January 9, 1901.

SIR,

I AM directed by the Secretary of State for War to request that you will be good enough to answer the following questions in view of the Report of the Decentralisation Committee, and of the enclosed statement of measures carried out in consequence thereof.

What is your experience (favourable or otherwise) of the effect on the work of your command of the alterations made in consequence of the Report of the Decentralisation Committee of 1898, and do you think any further extension of decentralisation as affecting your command is desirable, and in what direction?

I am &c.

EVELYN WOOD, A.G.

Sent to:—

Lieut.-Gen. Sir W. F. Butler, K.C.B.	-	Western District.
Maj.-Gen. R. T. Thynne, C.B.	-	North Eastern District.
Maj.-Gen. L. V. Swaine, C.B., C.M.G.	-	North Western District.
Lieut.-Gen. Sir F. W. Grenfell, G.O.B., G.C.M.G.	-	Malta.
Gen. E. F. Chapman, C.B.	-	Scottish District.
Maj.-Gen. Sir W. F. Gatacre, K.O.B.	-	Eastern District.
Gen. Rt. Hon. Sir R. H. Buller, G.C.B., G.C.M.G., V.C.	-	Aldershot District.
Gen. H.R.H. The Duke of Connaught	-	Ireland.
Maj.-Gen. Sir T. Fraser, K.O.B., C.M.G.	-	Thames District.
Lieut.-Gen. Sir B. O. Baker Russell, G.O.B., K.C.M.G.	-	Southern District.
Maj.-Gen. Sir J. F. Maurice, K.O.B.	-	Woolwich District.

STATEMENT prepared in the WAR OFFICE, showing the CHIEF CHANGES approved in consequence of the RECOMMENDATIONS of the DECENTRALISATION COMMITTEE of 1898.

1. Discipline and Interior Economy.

(a.) General Officers Commanding have been relieved from the necessity of referring to the War Office in regard to:—

Appointment of Adjutants in regular Army.
Securing efficiency in Signalling.
Numbers of officers and trained men to be called up to preliminary drill of Militia.
Releasing prisoners to go with drafts for foreign service.
Disposal of horses when unserviceable, &c.

(b.) Extended powers have been granted to General Officers Commanding in regard to:—
The grant of "extraordinary" leave, both sick and on private affairs.
Giving permission to travel abroad.
Transfers of soldiers from one corps to another.
Re-appropriation of barrack accommodation.

2. Recruiting, Discharge, &c.

General Officers Commanding will no longer refer to the War Office in cases of:—

Boys not coming up to standard, &c.
Special discharges hitherto referred to the War Office.
Re-engagement to complete 21 years' service.

3. Contracts and Purchases.

General Officers Commanding will no longer have to refer to the War Office:—

Contracts for meat and forage (hitherto referred in a few special cases).
Contracts for works not exceeding 2,000l.

4. Works.

(See (3) as to Contracts.)

(i.) Purchases and sales of land.

The negotiations will be conducted locally, the terms arranged being reported to the War Office for approval.

(ii.) New services under 1,000l. and maintenance services under 1,000l.

General Officers Commanding may use the funds allotted them after consideration of their estimates, at their discretion, provided they execute all services marked imperative by the War Office, and carry out "periodical services" (painting, &c.) as they become due.

(iii.) Simplification of procedure.

General Officers Commanding will be allowed discretion in making minor changes in plans, and in settling the method by which services shall be executed (i.e., by lump sum or by measurement, contract, &c.). They will authorise minor encroachments and deal with existing lettings, not exceeding 100l. a year.

5. Stores.

Reference to the War Office will not be required for:—

Sale of condemned stores.

Issues of equipment in excess of regulated proportions (unless very large).

Issues of equipment on repayment.

General Officers Commanding will have extended powers in regard to:—

Local purchases of stores, medicines, &c.
Promotions, &c. of subordinates.

6. Pay and Allowances.

Reference to the War Office will not be required for:—

Various special issues of extra duty pay, acting staff pay, staff pay during leave, working pay, &c.

Forfeiture of pay by Army Reservists.

Claims of civil medical practitioners.

Families: Admission to hospital; grant of separation allowance; allotments of pay.

Various special deviations from scales of allowances.

7. Schools.

Many reports and references to War Office abolished, e.g., in cases of soldiers' children attending civil schools, or in appointing pupil teachers, &c. Speaking generally, all questions relating to adult schools will be dealt with in the districts, excepting those of inspection and examination.

8. Miscellaneous.

Various references to War Office abolished, e.g.:—

The attendance of Naval or Marine witnesses at courts-martial, &c. will be arranged for by the district direct.

Questions of defective ammunitions will be referred to the Chief Inspector, Woolwich, direct. The Chief Inspector will report through the War Office.

Similarly General Officers Commanding are to conduct certain correspondence in regard to classes and instruction direct with the schools concerned, instead of through another General Officer.

9. Returns.

Over 50 returns are abolished or rendered less frequently.

* The changes approved have been carried out except in regard to Works, for which new regulations are now in preparation.

(1.) LETTER from G.O.C. WESTERN DISTRICT.

Devonport,
8th February 1901.
SIR, In reply to War Office letter No. 7968/8803 of the 9th January, I have the honour to report that everything done in consequence of the Report of the Decentralisation Committee of 1898 has been of benefit to the working of the command here. In my opinion, however, much more remains to be done before anything resembling a true system of decentralised administration can be arrived at. To particularise the precise points to be embraced in a true system of decentralisation is not easy. Speaking generally, I would say that question addressed to H.R.H. the Duke of Connaught, No. 330, and answer thereto, might form a valuable guide to the decentraliser. I think that a district should in a large degree resemble an organ in the human body, doing its work in the general system unfelt under normal conditions of health, and only felt when it is out of order.

I am, &c.

(Signed) W. F. BUTLER, Lieut.-General,
Commanding Western District.

The Secretary,
Committee on War Office Organisation,
War Office.

See also printed memorandum, Appendix VI. (d.).

(2.) LETTER from G.O.C. NORTH-EASTERN DISTRICT.

York, January 31, 1901.
SIR, WITH reference to War Office letter of 9th January 1901, No. 7968/8803, I have the honour to report that my experience of the effect on the work of this command of the alterations made in consequence of the Report of the Decentralisation Committee of 1898 has been altogether favourable, and specially so as regards the increased powers in dealing with contracts for provisions, recruiting, transfers, and discharges, and in the arrangements for officers' classes made directly with the school or branch concerned.

2. Assuming that the changes in regard to works are conveniently arranged in Regulations, there does not seem necessity for further decentralisation, except in enlarged general independence in financial matters.

I have, &c.

(Signed) REGINALD THYNNE, Major-General,
Commanding North-Eastern
District.

The Secretary,
Committee on War Office Organisation,
War Office.

(3.) LETTER from G.O.C. NORTH-WESTERN DISTRICT.

Chester, January 31, 1901.
SIR, WITH reference to War Office Letter No. 7968/8803, dated 9th January 1901, I have the honour to report that I consider that the alterations made in consequence of the Report of the Decentralisation Committee have had an excellent effect, but I am of opinion that work would be further expedited between the War Office and districts, if each Department at the former had a registry office of its own in place of one huge Central Registry Office only. The number of letters arriving daily at the War Office is stupendous. Each envelope has to be opened, the purport of each letter mastered, a record kept of its contents, and finally passed on to its special Department to deal with. This system requires a huge staff of clerks, is very ponderous, and causes frequently serious delay. Also the undefined word "discipline" causes many letters going unnecessarily to the Adjutant-General to deal with when they should in the first instance, at any rate, go to the Department concerned. The result is that these letters are dealt with by the Adjutant-General without any reference to the Department, because they are matters of discipline.

Now to obviate the delay in the first point I would suggest that all letters sent to the War Office should have on their envelopes the name of the Department, which is, in the first instance, at any rate, to deal with the matter and give at least an opinion, and could if it concerns "discipline" be passed on to the Adjutant-General. If, however, a General Central

Registry Office is for matters of safety considered imperative, I would suggest that in addition to the name of the Department the envelope should show the number and date of the enclosure, no envelope containing more than one subject letter, thus Cavalry N.W.D., No. 305, 10/1/01.

This brings me to the second point. Is it absolutely necessary to have an Adjutant-General's Department? Is it not this Department that causes all the viciousness of the centralising system and the baneful overlapping at the War Office? I am of opinion if each branch of the Service were presided over by an Inspector General, for instance, who should deal under the auspices, in large questions, as in a large commercial house, under the Commander-in-Chief, delay, overlapping, and confusion would cease. It might be advanced as a reason for retaining that office that discipline, for instance, would not be equally administered throughout the Army if each branch conducted its own. But this reason holds no water in the face of every regiment, so to speak, carries on its own interior discipline without reference to its neighbour. There is nothing that the Adjutant-General does to-day that could not be equally well performed by placing those duties in a distributed form by heads of branches, and the great gain of such decentralisation would at once be felt to much advantage in the district.

I will not enter further into this matter as I would be moving away from the points now called on for report, but as these points appear to me important as affecting the districts I have deemed it necessary to place them on record.

Unless very considerable improvements can be introduced into the Barrack Branch of the Inspector-General of Fortifications Department, and into the Director of Contract Branch, I am strongly of opinion that some of their work should be deputed to the G.O.C.'s of districts. I will give a rough account of the circumstances connected with the orders I received when it was decided to erect a hut encampment at Lichfield.

On 26th July the order was given to build huts at Lichfield for a battalion of militia, and we were asked to try and obtain offers locally for supply and erection.

On 7th August, War Office wrote that they had made a contract for supply only, and we were to arrange for erection locally. On 9th August they informed me of their contract with the firm, but it was not till 4th September, 26 days later, that the contract made with this firm was sent to Chester.

In the meanwhile we were dependent on the statements of the firm as to what the actual terms of the contract were, and differences of opinion between them and the War Office soon made themselves evident.

The D.A.C. made the contract, and when the firm wrote to inform me that weather-boarded sides were to be substituted for iron, a telegram was sent to War Office to ask which was correct. The I.G.F. wired reply, "Your telegram referred to contract branch," from which it was evident that the I.G.F.'s office actually did not know what contract the D.A.C. had made, and it took 26 days to let us have the actual terms of the contract.

A contract made by the G.O.C. would not have been subject to this want of combination, and I think I should have been able to obtain a contract for supply and erection.

The differences of opinion alluded to were as to whether the supply contractor should pay the transport to the site of the huts, a distance of 3 miles, or to Lichfield Station, the War Office maintaining the former, and the contractor the latter; also the contractor declined to supply things mentioned in the "Specification," viz.:—paint, varnish, glass, and cover plates for flues of stoves, all of which the War Office told him he was bound to supply. This was very embarrassing to me in an emergency work for which funds were cut down to a minimum.

The end of it was that the War Office gave in on all points.

Now I think a G.O.C. would have been able to make a better thing of the contract than this. The amount of correspondence which passed between me and the War Office about these huts was excessive and involved much repetition and some contradictions.

This instance which I have quoted at some length seems to me conclusive in showing that the present machinery of the War Office for contracts is so cumbersome and indirect, so wanting in proper combination between the Contract Branch and the Works Executive,

that I have no hesitation in saying that with experienced officers to back him up a G.O.C. ought to be entrusted with much more extended powers to carry out works of magnitude, and to make the necessary contracts for them.

It is a bad principle for a large Central War Office to attempt to carry out the details of making and executing contracts, and under the present system, it is apparently unequal to the strain of emergency work.

I would therefore recommend that the power lately given to the G.O.C. to make contracts up to 2,000*l.* (para. 518, Eng. Services) might very well be extended to include works up to 5,000*l.* at least; and for extraordinary works in an emergency the G.O.C. might very well be entrusted with the work up to larger amounts. If he wants War Office assistance he can easily ask for it, but it would be good policy to let him do as much as he is able to do.

I have lately received authority to carry out an emergent work (Warwick Rifle Range) over 2,000*l.* in value at discretion, and I think and hope that I shall be able to prove the benefit of this course.

Certificates.

I think something might be done to make certificates given by officers a reality.

At present it looks as if more importance was attached to completing certain forms in order to satisfy a financial audit than to their being framed in such a way as to carefully guard the honour of the officers who have to furnish them.

I admit that in some of the more recent forms the certificates are more real than they used to be, but many instances still exist to the contrary. I may mention two or three.

Army Form O. 1771, Claim for Travelling Expenses. At the end there is a certificate by the commanding officer that he has "carefully examined all parts of the "claim, and found it correct." This is in most cases an impossibility; and if it were possible for him in simple cases to make such a statement truthfully (provided he could spare the time for such an examination as this would involve) it is clearly unnecessary in the face of the amount of audit which a claim undergoes.

To begin with, the officer preferring the claim might have some credit given him for honesty; in many items, such as cabs in unfrequented places, he alone can vouch for the accuracy of the claim, and no amount of covering certificates of a perfunctory nature can assist in establishing the truth of the claim. The C.O. is really only a medium of communication and should not be expected to be more.

In some cases officers are required to sign that they have paid money to their men before they have received it.

This has occurred in the case of Army Form O. 1779 (Bill for Military Working Parties). Officers were asked to sign last column on third page of that form before they had received the money.

Nothing of this kind ought ever to occur.

G.O.C.'s might be given the power of appointing a cavalry brigadier to command a yeomanry brigade in camp when they deem this advisable. I had a case in the spring of my first year here which will explain the reason for my suggestion.

I wrote a letter to the War Office, suggesting that a cavalry colonel should be appointed to command a Yeomanry brigade while in camp, adding that I had private reasons for recommending this. I presumed that my letter would be dealt with either by the Inspector-General of Cavalry or by the Inspector-General of Auxiliary Forces. But as my application suggested "discipline," it went to the Adjutant-General's Department, and their reply to me was, that my application was unprecedented, and that I must disclose my private reasons. In answer to this letter, I wrote that the request was not unprecedented as it had been sanctioned three years before, and that I had sent my private reasons to the Inspector-General of Cavalry. By the same post I wrote a private letter to this officer, acquainting him of the above correspondence and of my private reasons. Two days did not elapse before I heard from him in reply, informing me that he had settled this matter a fortnight ago, I heard no more from the Adjutant-General.

"B" Branch.

The powers granted as to disposal of unserviceable horses have worked well and done away with much unnecessary delay and consequent expense and clerical labour.

As regards reappropriation, the powers granted to G.O.'s. C. as defined in Queen's Regulations, para. 362, are very restricted, and it is considered that a freer hand should be given in this matter. In each district there should, I consider, be a standing committee to consider all questions of reappropriation or improvements. This committee should consist of the district engineer, "B" staff officer, and P.M.O. who should, after considering all proposals, lay them before the G.O.C. with their recommendations. The present system of O.C. units and heads of departments submitting their recommendations is a good one, but after consideration by the committee the G.O.C. should decide which are to be taken in hand, and as soon as it has been decided by the War Office what amount of money is allotted for the district, the G.O.C. should have full power to carry out the service he considers most necessary, without further reference to War Office, making his own contracts and being responsible for their being properly carried out.

It is true that the G.O.C. accepts these contracts and then refers them to the War Office for approval. He must accept the lowest tender unless the lowest are on the list of ineligible persons or are unable to carry out the contract, and he cannot place a firm on the list of persons ineligible to hold Government contracts without previous reference to War Office. Surely a G.O.C. and his staff must be in a position to judge from their local knowledge whether or not a man is fit to hold Government contracts.

The present system does not appear a sound one. The G.O.C. enters into the contract on behalf of the Secretary of State. He passes over firms that he considers to be unfit when he sends the tenders to the War Office. He gets a reply that his proceedings are approved. So far this appears sound, but he may be told later on that one of these very firms is to be considered fit to hold contracts. Either this revision by the War Office should be real—in which case the G.O.C. accepting a contract for the Secretary of State might be told he should not have done so—or it should be done away with.

I am strongly in favour of doing away with it and making G.O.'s. C. responsible in every way for supplying the wants of those under their command. There would appear to be no good reason why he should require overlooking in this particular duty any more than in the other functions appertaining to his command.

When a G.O.C. has after careful inquiry come to the conclusion that a contractor is not fit to hold a contract, it does not encourage him and his staff to devote their time to such important matters in future when he is informed that, in the opinion of a local superintendent of police, the man in question is respectable, and when this opinion is given more weight than that of the G.O.C., as recently happened in this district.

Pay Department.

With reference to the recent suggestions regarding decentralisation of War Office business, that the alterations already carried out, so far as pay duties are concerned, have been beneficial in saving time and decreasing correspondence, and if extended in the following cases I am of opinion that the results would be satisfactory.

1. That station paymasters should as far as possible pay all charges (both pay and allowances) on account of all troops stationed in their regimental districts, including travelling claims of individuals, pay of acting clergymen and church orderlies, civil medical practitioners, provost establishments, schoolmasters and school orderlies, gymnastic instructors and assistants, working parties of all kinds, extra duty pay, medical subordinates, &c., which are now paid by the district paymaster.

2. That all the station pay accounts should be sent to the headquarters of the district, where they might either undergo the test audit now carried out at the War Office or be embodied, as far as regards the totals of the different items, in a district general state.

3. That contractors' bills of 100*l.* and upwards, now sent to the War Office for payment, be paid by the

district paymaster, which would ensure all the charges appearing in the one district account.

4. That with a view to lessen the very great correspondence and time taken in connexion with auditing officer's travelling claims, a system similar to that now in use in Ireland be adopted, i.e., by allowing some fixed rate per mile for fares and a book of distances between the different military stations—a similar arrangement being applied to carriage of baggage—at rates according to the scale of baggage allowed to the various ranks.

I have, &c.,
(Signed) L. V. SWAINE,
Major-General Commanding
North-Western District.

The Secretary,
Committee on War Office Organisation,
War Office.

See also printed memoranda, Appendix VI. (b) and (c).

(4.) LETTER from G.O.C. MALTA.

SIR, Malta, February 13, 1901.

1. IN accordance with War Office letter dated the 9th January 1901, No. 7968/8803, I have the honour to forward herewith replies to the questions therein asked with reference to the effect on the work in this command of the alterations made in consequence of the report of the Decentralisation Committee of 1898, and to the desirability of any further extension of decentralisation.

2. It will be observed that the replies are embodied in the proceedings of a committee of senior officers which I assembled to consider and report upon the matter. This committee consulted my chief staff officer, and other staff and departmental officers capable of affording information; and it was, in my opinion, the best medium for obtaining a full consideration of the question.

3. I concur in the report and suggestions of this committee.

4. As regards the Royal Engineer Department—after two years command of this station where important works are in progress—it is my opinion that unnecessary delay takes place in construction. The following instances I commend to the consideration of the Secretary of State for War.

About two years have elapsed whilst considering the proposals and details of erection of a new barracks at Pembroke Camp.

Also 12 months have elapsed since it was considered necessary to build additional barrack accommodation at Floriana.

Practically no stone has been laid yet in building either barracks.

I have, &c.
(Signed) F. GRENFELL, General,
Commander-in-Chief, Malta.

The Secretary,
Committee on War Office Organisation,
War Office.

REPORT.

A.—The heads of departments are unanimously of opinion that the alterations that have been made in consequence of the report of the Decentralisation Committee have worked satisfactorily in every respect.

B.—The following suggestions for further diminishing correspondence have been made by heads of departments, and after due consideration the committee are of opinion that their adoption would be the saving of much correspondence.

Chief Staff Office, A. Branch.

Monthly
states.

1. That monthly states rendered to the War Office be dispensed with, or at least considerably modified. Each unit sends a copy of its monthly return (A.F.B. 105) to the War Office and another to the headquarter office from which the general return is made up. As the strength of each unit is shown on the weekly duty state a variation return would be sufficient.

2. That when officers are admitted to hospital on the recommendation of a medical board it is unnecessary that a copy of the proceedings of the board be forwarded to the War Office under a covering letter.

Officers
admitted to
hospital on
recommendation
of medical
board.
Proceedings
of D. C. M.

3. That the proceedings of district courts martial be sent direct to the J.A.G. by General Officers Commanding Brigades, and not through the C.S.O. as now.

4. That the return of men granted furlough now rendered monthly to the War Office (Q.R., para. 1,939) be discontinued.

Return of
men
granted
furlough.

5. That the index of general orders (Q.R., para. 2,087) rendered half yearly to the War Office be discontinued.

Index of
general
orders.

Royal Engineer Works.

6. That in all cases of purchase the station should submit an estimate of cost, care being taken that such estimate does not fall short of actual expenditure, and that when the necessary funds are provided by the War Office, the purchase should be proceeded with at once.

Purchase.

7. That saving in Part 3, Sec. XII., Regulations for Engineer Services (Repairs and Maintenance) should be available for execution of minor alterations services, the cost of which does not exceed 10l., and that saving in Part 1 of above section (Service undertaken in Military Loan Act) should be available at the discretion of general officers commanding, to meet excesses on items of a cognate nature.

Control of
expendi-
ture.

8. That in all cases only pencil sketches or lino drawings should be submitted to the War Office with sufficient detail to show that there is no considerable deviation from approved designs, and that when these are approved, the preparation of working drawings should proceed at the station without the necessity of further reference; should these sketches or plans show any marked deviation from such approved designs, it will be for the War Office to say if such deviation can be approved, but on no account should any material alterations be made in a design once approved without War Office sanction for such alteration. This should secure uniformity in designs, which might otherwise be of a widely divergent nature.

Prepara-
tions of
plans for
services.

Paymaster's Department.

9. That extra duty pay issued under Pay Warrant 837-838 (Regimental Staff Duties and acting Warrant Officers not otherwise provided in Pay Warrant) should be sanctioned by general officers commanding, provided that except in the case of a warrant officer for the duties of more than one position the rate shall not exceed 1s. a day, and that for the duties of one position the rate shall not exceed 6d. a day.

Extra duty
pay.

10. That cavalry rates of pay for non-commissioned officers and men doing mounted infantry duties should be approved by general officer commanding as can be done for officers (under Pay Warrant, para. 220).

Cavalry
rates of
pay.

11. That the present system be abolished, and a system on the following principle be substituted. Each soldier to be credited with compensation in full for all his clothing, and any clothing he requires be issued to him on payment. Free issues from the quarter-master's stores would thus be abolished, and everything issued on payment. The compensation to be at a fixed daily rate per rank, and credited to the man's clothing account monthly in arrears.

Clothing
compen-
sation.

This would abolish a great number of vouchers (with many signatures) now used. The man's clothing account would be credited with the compensation when due without a voucher. The authority being the date of enlistment there would be but one voucher for the battalion for clothing on payment.

12. That the chief paymaster should be in direct communication with general officers commanding as regards sanctioning extra duty pay, &c., and not through chief staff officer as at present, except for appeal.

Financial
responsi-
bility.

13. The committee approves of the principle of local audit, but is of opinion that to carry it out successfully, the subordinate ranks of the Army Pay Corps should consist of officers of higher rank and more experience, thus freeing the higher grades to carry out local audit.

Local audit.

Chief Staff Office, B. Branch.

Minor re-
appropriation Q.R.
para. 362.
Dole. sub-
para. (iii).
Amend
sub-para.
(vi).

Appoint-
ment of
barrack
wardens.

Army
forms.

14. That the general officer commanding may sanction barrack room, hospital ward, and stabling accommodation being reduced. Details of the change being at once transmitted to the War Office.

No increase, actual or probable, in allowances and other expenses, after deducting any savings, is to exceed 20% per annum.

15. That general officers commanding make their own appointments, when suitable men can be found locally, reporting their action to the War Office. Under the present system, of having to obtain War Office sanction, considerable time is lost and inconvenience caused.

16. That A.F.O. 305, monthly return of transport, be rendered quarterly instead of monthly, owing to the few changes that take place.

Ordnance Department.

Damaged
stores.

17. That general officers commanding should have full power to approve or otherwise amend the recommendations of all boards and courts of inquiry, on loss or damage to Stores, without reference to the War Office, except in cases of a very exceptional nature.

Damaged
stores.

18. That general officers commanding should have greater power to dispense with boards or courts of inquiry in the case of damage or loss of stores, when in his opinion the case is sufficiently clear in the written evidence to come to a decision without cross-examination of witnesses.

19. Finally, the committee are of opinion that the general officer commanding be generally empowered to use his authority and have real control within his district, subject to General Regulations and the audit of his accounts. In short, they thoroughly agree with the General Recommendations, paragraph 3 on page x of the Report of the Committee appointed by the Secretary of State for War.

(5.) LETTER from G.O.C. SCOTTISH DISTRICT.

Headquarters,
Scottish District, Edinburgh,
January 28, 1901.

SIR,

In acknowledging receipt of War Office letter 7968/8803, dated 9th January 1901, I have the honour to state that the whole of the measures of decentralisation that were approved of by the Committee of 1898, are, in themselves, very desirable, and the working of them has been found satisfactory. I observe, however, the Medical Department is not included in the list as sharing in the benefits of decentralisation. I hold it of great importance that in considering the matter the Army Medical Department should not be excluded. In stating my opinion regarding the further measures of decentralisation which are possible, I venture, in the first instance, to forward extracts from Edinburgh letter, A/18957/3/00, dated 17th April 1900. I am of opinion that a General Officer Commanding a District, more especially one containing such a large number of auxiliary troops as Scotland, should hold financially a totally different position from what is contemplated by existing regulations, and should have on his staff one or two officers who should be capable of advising him regarding all financial matters, and should assist him in framing the budget estimates connected with the command.

2. In dealing with the spending departments, viz., the departments of Royal Engineers (barrack building, manœuvring areas, and rifle ranges) and Army Service

Corps, including transport, travelling expenses of troops, and in the larger questions affecting volunteers, i.e., the issue of capitulation grants and the loans issued to corps for building purposes, if the General Officer is given authority in all these particulars it is essential that contracts of every kind be locally made, and that no reference regarding them should be submitted to the War Office. In the same way I would propose that in regard to leases, the General Officer Commanding be empowered to sign instead of the Secretary of State for War, and that the services of the legal adviser to the Crown for Scotland be placed at the disposal of the General Officer Commanding, who should also be consulted in regard to his selection.

3. Real administrative decentralisation must follow financial decentralisation, and cannot be undertaken without it. The first step to be made towards any real decentralisation must originate in the Treasury and in the Financial Department of the War Office.

4. As a preliminary to real decentralisation I would most strongly urge that the records in local district offices and in subordinate offices be supplied with the files or digests representing the history of particular cases which may be locally important, that the history of all barrack buildings and all particulars regarding them be kept locally instead of being accumulated in the War Office. By having such records available, officers of the local staff and officers in command will be capable of ascertaining all they require to know in regard to each case, and will form their own opinions instead of submitting matters for decision to superior authority. The real truth is that the staff of district offices and of local subordinate commands must be strengthened and the War Office staff reduced. No file referring to a local question is required at the War Office, and all papers that are submitted from a district should be returned for record to the local officer commanding, an extract or digest as necessary being retained at the War Office.

5. I attach reports from various staff and departmental officers which deal with matters of detail.

I have, &c.

(Signed) E. F. CHAPMAN, General,
Commanding Scottish District.

The Secretary,
Committee on War Office Organisation,
War Office.

Extracts from Mobilisation Report.

4. To enable mobilisation to be carried out rapidly and satisfactorily, decentralisation should be adopted as the governing principle; in the recent mobilisation the centralisation in all departments has been excessive and has paralysed the action of commanders and subordinates in a marked degree.

5. What has been realised during this partial mobilisation is that if a rapid mobilisation of forces and Auxiliary Forces is to be necessary, each separate command must be self contained, and that until complete decentralisation is an accomplished fact the clothing and equipment must be distributed from more than one centre, i.e., that the Pimlico clothing establishment should have at least three branches conveniently placed for the supply of the northern and southern areas of Great Britain and for Ireland, and that the equipment of the troops should be actually held in the ordnance depôts in each command.

7 (3) Centralisation, as I venture to assert, has been carried out to an extent that is excessive. Until district commands are required to carry out the work of mobilisation on an improved system, and with independence, the full value to be obtained from officers during a time of pressure cannot be secured.

I venture to think that a General Officer Commanding should at all times have on his staff an officer trained in the financial methods of the War Office, and that he should be required to accept a large measure of financial responsibility far greater than has ever yet been contemplated.

With reference to War Office letter 7968/8803 of 9th January 1901, I have to report as follows:—

1. C. 2105, Confidential report of Staff Clerk Section. The Staff Clerk Section having been abolished, it is suggested that this annual return should no longer be rendered.

2. The demand for wines, spirits, extractum carnis, &c., required from Reserve Depot, Woolwich, might be rendered only when supplies are actually required.

The consumption of this class of supplies in the Scottish District is very small, and a quarterly return would appear to be very unnecessary.

3. It would simplify Army Service Corps work if, when possible, the hospitals and cells at small stations, such as Berwick-on-Tweed, Glencorse, &c. were supplied with groceries, &c. by local firms instead of the service being carried out by large firms carrying on business at a distance.

The supplies required at many of these out stations are very limited in quantity, and if local contractors could, as a rule, be accepted, the work both of medical and of supply officers would be facilitated.

4. There are two barrack returns which were called for last winter which now seem to serve no local purpose, viz. Monthly and Weekly returns of Barrack Accommodation available.

5. I would also suggest that the Annual Barrack Demand should be prepared by the A.S.C. for submission through the D.A.A.G. (B) to the General Officer Commanding, and that it should be passed afterwards to the C.O.O. merely to enable him to supply. Such demands should not be checked by the Ordnance Department as regards quantities, as the Barrack Department are obviously the best judges of their own requirements. It should also be recognised that the latter department should habitually demand in excess of ordinary requirements, so as to be prepared in case of any sudden eventuality necessitating the issue of extra barrack furniture and equipment.

6. The MS. return rendered annually in April showing the quantity and value of supplies in hand on the 31st March, including fuel in regimental charge, is apparently of no local value and might be abolished.

7. Many matters of a purely financial character, and which cannot be settled without reference to the Chief Paymaster, are passed through B. Office. Much unnecessary correspondence is thus caused, and it is suggested that, as far as possible, complicated financial questions should be dealt with exclusively by the Pay Department.

(Signed) C. W. TELFER-SMOLLETT,
January 22, 1901. Lt.-Col. D.A.A.G. (b).

I would suggest that with reference to this Department the following might with advantage be abolished:—

1. Referring ranges for final sanction to War Office, the G.O.C. with D.I.M. advising (after having inspected the range) should sanction.

2. I would suggest that it is unnecessary to send in annual return of ranges in the district for volunteers. Range books always are kept in the musketry office, and all questions with reference to these ranges must pass through the hands of the D.I.M.

3. I do not see any necessity for the Annual Return of Ranges for Regulars being sent to War Office. The G.O.C. is responsible for musketry of district, and decides where it is to be carried out.

(Signed) D. MACKENZIE STUART,
Capt., D.I.M., Scottish District.

In my opinion the decentralisation does not go far enough.

The General Officer Commanding should be responsible for everything concerning the men in the command, and should enter into contracts for all that the men require, clothing, rations, housing, arms, equipment, ranges, &c.

On these details there should be no reference whatever to the War Office, but the General Officer Commanding should deal direct with the Secretary of State for War for whatever money he may require.

(Signed) G. M. KIRKE,
Edinburgh, Colonel, D.E., Scottish District.
January 19, 1901.

I think the principle of decentralisation might with advantage be extended with a view of rendering districts more self-governing.

As regards this Department, I would suggest abolition of the following returns:—

Monthly copy of Departmental Orders issued by C.O.O. to War Office under para. 145, Regulations for A.O. Services, 1900.

The work of this Department would be considerably eased if the various books of regulations were simplified, as I think is in many cases quite possible.

(Signed) C. E. MEERES, Major,
Chief Ordnance Officer,
January 23, 1901. Scottish District.

THE medical administration of the district in regard to "professional" and "statistical" work is in close touch with the Medical Division of the War Office, and on these points further decentralisation appears to be impracticable.

In all other matters, "as in those cases dealt with in detail in the report," the fullest possible decentralisation is recommended, and the decision of the G.O.C. should be final. I am not, however, prepared at present to offer any suggestions as to how this may be further extended.

(Signed) T. P. BOONBY, Colonel,
Edinburgh, P.M.O., S.D.
January 26, 1901.

The number of questions connected with pay and allowances which have arisen during the past year in this district, many of which have had to be referred to the War Office for decision, clearly demonstrate the desirability of the G.O.C. being given the power of deciding such questions locally.

But to enable him to deal with the financial questions which must inevitably arise in large districts, it is essential that he should have on his staff an officer A.P.D. capable of advising and assisting him to deal with all financial matters connected with his command.

This officer should be in a position to bring to the notice of the G.O.C. any order or arrangement of a financial nature that, in his opinion, militated against the expeditious compiling and audit of accounts, and in all respects he should be the sole adviser to the G.O.C. on every matter connected with his own and the other pay offices in a command.

Another most important point which cannot be too strongly urged, and which would materially affect decentralisation by reducing correspondence, is that the forms for pay and clothing accounts might be modified and rendered much more concise, without in any way diminishing their efficiency as a check on undue expenditure.

In their present state they are both intricate and cumbersome, and entail a vast amount of unnecessary clerical labour.

The constant issue of regulations in connexion with pay and allowances adds very materially to the correspondence in a district owing to the doubts which arise as to how they should be interpreted.

In my opinion everything connected with pay and allowances should be most clearly defined, and the form of pay list used should be of the simplest possible nature.

(Signed) G. H. ANSON, Colonel,
Edinburgh, C.P.M., S.D.
January 24, 1901.

(6.) LETTER from G.O.C. EASTERN DISTRICT.

Headquarters, Colchester,
1st March 1901.

SIR, WITH reference to War Office letter 7968/8803 dated the 9th January, 1901, I have the honour to reply as follows to the various points enumerated on the list attached thereto as "Chief (Changes approved by the Decentralisation Committee)." My reply is based on reports of the various heads of branches under me, but I would preface it by saying that I cannot

reply as fully or as confidently as I would wish on all points for several reasons.

The many changes in almost every branch of the Staff in the Eastern District, since the recommendations of the Committee have been given effect to, the large amount of extra work during the last 18 months, quite outside the ordinary routine of a district, and other causes, have prevented the working of the steps taken towards decentralisation being observed as closely as would otherwise have been the case. It will be noticed too that some of the changes recommended do not appear to have been carried out, and others have not yet affected this district sufficiently to practically test their value.

Speaking generally, the recommendations of the Committee have been beneficial and have lessened work. No case has come under notice in which any inconvenience has resulted from them, and I certainly have no cause to suggest in any particular a return to what existed previously.

Under the working of the new system, the Chief Paymaster, whose duties were previously chiefly those connected with the payment and disbursement of money, has become the financial adviser of the General Officer Commanding, and his work has considerably increased in scope and importance.

I. Discipline and Interior Economy.

In the Royal Artillery the appointments of adjutants are not left to the districts but are still made from the War Office. This apparently must continue. The transfers, appointments, and promotions (above the rank of sergeant) of non-commissioned officers have to be referred to the Commanding Royal Artillery, Woolwich, in the case of Royal Horse and Royal Field Artillery, and to Commanding Royal Artillery, Dover, in the case of Royal Garrison Artillery. I do not think this could be satisfactorily worked in the district without reference to some central office, nor, again, are transfers and appointments in the Royal Engineers yet decentralised, probably on account of the highly technical nature of the corps. The Commanding Royal Engineer does not consider they can be left.

1. Districts.

All other points in this section have worked satisfactorily.

1 (b.) The extended powers have been utilised to advantage.

II. Recruiting and Discharge, &c.

The change has saved work and been an advantage. It is recommended, however, that General Officers Commanding be empowered to grant discharges of all kinds.

III. Contracts and Purchases.

The carrying out locally of contracts for meat and forage have worked without a hitch and caused no trouble, nor have they in any way interfered with economy.

As to contracts for works under 1,000*l.*, none have yet come into operation in this district, but placing the responsibility on the General Officer Commanding must be advantageous.

IV. Works.

Here again there has been no experience of the extended powers to warrant a decided opinion, but all the authorised changes seem to be in the right direction.

The Commanding Royal Engineer, however, is inclined to think that, in the matter of sales of land, "General Officers Commanding have not sufficient knowledge of all the bearings from a public point of view." General Officers Commanding should have free access to legal opinion (Treasury solicitors or local ones of high standing) in matters connected with sale and purchase of land. Personally, I consider if the legal advice of the Treasury solicitor is at my disposal, there should be no difficulty in dealing with questions of sales of land.

I consider the concession as regards minor changes in places to suit local conditions, minor encroachments of existing lettings, even considerably in excess of 100*l.* a year, are all likely to prove a success.

V. Stores.

The extension of the General Officer Commanding's powers in these particulars has been much appreciated on all hands. It seems to point to the advisability of still further increasing them both in the matter of issues of stores and of local purchases.

As to promotions of Army Ordnance Department subordinates, there are still cases that have to be referred to the War Office, which might be left to the General Officer Commanding. For instance, in the case of a foreman and others on probation, no reference to the War Office seems necessary, and the confirmation might be left to the local authorities. The General Officer Commanding's approval should at any rate be sufficient in all cases where no increase in the Estimates would take place by the promotion.

VI.—Pay and Allowances.

All the extended powers in these matters have been beneficial, and have saved correspondence, without sacrificing economy. The powers of the General Officer Commanding (*see* para. 163*A* King's Regulations) might be much extended, not only in cases of over payments, but in the case of losses of stores, &c., when the General Officer Commanding is of opinion that no blame is attributable to individuals.

In the case of the grant of extra duty pay not specifically mentioned in the Royal Warrant, the General Officer Commanding might have further discretionary powers. The saving of correspondence to the Paymaster and all concerned would be a material one in this event.

There are now many cases in which the Lodging Allowance Regulations press hardly on officers, especially in the case of temporary vacation of quarters, which cause officers to be suddenly, and without notice, ordered into barracks. I think advantage would be gained by making para. 262 *et seq.* Allowance Regulations more elastic, and increasing General Officer Commanding's discretion.

VII.—Schools.

Correspondence has been saved and greater efficiency secured.

VIII.—Miscellaneous.

This can only be answered generally, but the advantages have clearly rested with the changed systems.

IX.—Returns.

The saving of clerical labour by the reduction of periodical Returns has been considerable, and has been much appreciated. I think there are yet many Returns that might be abolished, and I have acted upon the last part of para. (4), page X, of the General Recommendations of the printed Report of the Decentralisation Committee, with a view "to check the tendency to re-introduce reports and returns."

In conclusion, these matters will continue to be closely watched, and any possible alteration and improvement will be put forward as suggestions.

I have, &c.

(Signed) W. GATACRE,
Major-General,
Commanding Eastern District.

The Secretary,
Committee on War Office Organisation.

(7.) LETTER from G.O.C. ALDERSHOT.

SIR, Aldershot, 4th March 1901.

I HAVE the honour to acknowledge the receipt of War Office Letter, No. 7968/8803, dated 2nd March, enclosing a copy of a letter of similar number, dated 9th January, and its enclosure.

In the latter letter, I am asked to report what is my experience of the effect on the work of my command of the alterations made in consequence of the Report of the Decentralisation Committee of 1898, and secondly, do I think any further extension of decentralisation as affecting my command desirable, and in what direction.

I have been here so short a time that I have not the experience necessary to enable me to report fully in answer to the above two questions. Writing from an experience of about two months, I should say that the answer given by General Sir Evelyn Wood to Question 1082, Report of Decentralisation Committee, is as true now as it was then. Sir Evelyn Wood says: "While I was at Aldershot, I found an increasing tendency to let me do very much what I wanted." It seems to me that my experience points to the same tendency existing now. Whether that tendency can fairly be called by the large name "Decentralisation,"

is another matter. At the time the Report of the Decentralisation Committee appeared, I ventured to remark that they had made the usual mistake, and that they had begun at the top instead of at the bottom, and I am of that opinion still. No attempt seems to me to have been made to affect the responsibility of General Officers, as compared with the responsibility vested in the War Office; but in connection with the general volume of work, arrangements were made which purported to allow General Officers Commanding more freedom in dealing with a few minor questions than they had formerly enjoyed. Certain other questions were directed to be dealt with by General Officers direct with Woolwich instead of, as formerly, with the War Office. As to these changes, the relief afforded within the War Office may have been appreciable, but I do not see that General Officers are much better, or even quite so well, off.

None of the proposals of the Decentralisation Committee appear to me to have been based upon any system. Certain work seems to have been thought too immaterial to be brought up to the War Office, and so, therefore, cast on the Generals, but no change was made in the responsibility of the Generals, and the power of interference possessed by the War Office remained unchanged. In what I am saying, it is in no degree my intention to impute blame or suggest neglect. I merely represent the way the War Office system affects an officer subject to its influence. The first subject on the list sent to me, on the list of matter that had been decentralised, is the appointment of Adjutants, and it is claimed that these appointments are now allowed to be made by General Officers Commanding. So they are, when no question arises with regard to them, but the moment any question does arise, a General Officer is sharply reminded that he has no responsibility. As an illustration of this, please see War Office Letter, No. 102/2d. Dr. Gds/25, dated 20th February 1901, where, as soon as I make an application regarding a Provisional Adjutant, I am immediately ordered to send up a Report from the Commanding Officer concerned showing why my recommendation is necessary. In the face of such a letter, can it fairly be said that that work is decentralised?

Again, it is claimed under Subject 6, Pay and Allowances, that "Reference to the War Office will not be required for various special issues of extra duty Pay", and the Royal Warrant has been amended in that direction. During the past year, my two predecessors in office have, under that Warrant, granted certain special issues. These have been promptly disallowed at the War Office, and I am engaged in a Correspondence defending the action of Officers who have left this station and trying to prevent wretched men being fined a pay that was issued to them by properly constituted authority (War Office Letter 102/63/49. 12th February, 1901).

I could multiply instances of this nature. I have given two that have occurred in the last weeks. In my opinion, decentralisation is desirable and is possible, but that it should be sought by a careful organisation rather than by the temporary extension of authority to perform odd jobs. What is wanted in our Army is a thoroughly well understood chain of responsibility. If such a thing is introduced, decentralisation will be able to proceed rapidly along previously arranged and well understood lines, and at the same time supervision will be preserved.

At the present time, no officer can actually say what his powers are, and supervision, therefore, becomes extremely difficult.

I have &c.
(Signed) REDVERS BULLER,
General,
Commanding Aldershot District.

The Secretary,
Committee on War Office Organisation,
War Office.

(8.) LETTER from Gen. H.R.H. DUKE OF CONNAUGHT.

SIR,
Royal Hospital, Dublin,
28th February 1901.
CONTINUING my letter, dated 18th instant, and in accordance with War Office 7968/8803 of 9 January 1901, I have the honour to submit the following sug-

gestions as to the desirability of the further extension of decentralisation as affecting my command.

To conduct the negotiations respecting land locally, as suggested by the Committee, requires a qualified War Department Land Agent. I have raised this question on other papers. Works.

The Chief Engineer in Ireland should have greater powers as regards land questions, and be enabled to settle all financial points connected therewith direct with a representative of the Treasury in Dublin (? the Commissioner of Valuation).

The estimates for and the execution of all work under Part III., *Maintenance and Repair*, and of all minor items up to 100l. of Part II., *Alterations and New Services*, should be entirely in the hands of the General Officers Commanding, without any reference as to detail to the War Office.

War Office inspections should take the place of correspondence—

- 1st to form a general estimate of the amounts required.
- 2nd to ascertain how the funds have been expended and the work carried out.

The General Officers Commanding should have full powers to deal with everything connected with contracts up to 2,000l., without any reference to the War Office.

The General Officers Commanding should have full powers to deal with all re-appropriations and sites when the expense of the work entailed did not exceed 100l.

As long as there is a Commander of the Forces and a Headquarter Staff in Ireland, so long must a certain amount of detail connected with works pass through the hands of the Chief Engineer, Ireland, not for interference between the General Officer Commanding and the War Office, but so as to enable him to advise the Commander of the Forces on any point that may be raised.

There are three courses:—

- (a.) As at present.
- (b.) General Officers Commanding to communicate on detail direct with War Office.
- (c.) Increase the powers of the Commander of the Forces in Ireland to deal with all detail.

I would recommend the latter.

Decentralisation of Correspondence.

War Office letters on Royal Engineer subjects after circulation are kept at Headquarters. This is necessary.

The copying of them by General Officers Commanding and Division Officers, Royal Engineers, would be obviated if the War Office would either send three copies of each letter, or use typewriting copying ink, so that press copies could be afterwards taken.

That articles such as ladders, &c., be manufactured in the Ordnance workshops at the Curragh, Cork, and Dublin, where the necessary machinery for the purpose exists, and that the use of these workshops be not, as at present, restricted to executing repairs.

The Principal Ordnance Officer, Woolwich, authorises purchase of stores, but when the amount exceeds 10l. application has to be made to War Office (paragraph 44, Army Ordnance Regulations, 1900). The former appears sufficient and latter unnecessary (paragraph 1001, Army Ordnance Regulations).

The purchases authorised by Woolwich and under paragraph 45, Army Ordnance Regulations, are very restricted, and might with advantage be extended to stores used in barracks in particular.

A very much larger stock should be allowed to Dublin, which might hold five years' supply according to average annual issues, instead of 1½ (paragraph 991, Army Ordnance Regulations).

Every other district could then draw on Dublin for articles not provided for in their Annual Demands, and avoid the constant Intermediate Demands under paragraph 996, Army Ordnance Regulations.

This would save time and expense in the long run, and could be done without extra buildings when the Curragh Ordnance Depot is completed and decentralised.

The Reserve Stores which are to be held in Dublin and Curragh eventually will no doubt provide for the

Works.

Ordnance Store Services.

larger emergencies, but above proposal is for the daily ones.

I have, &c.
(Signed) ARTHUR, General,
Commanding Forces in Ireland.

The Secretary,
Committee on War Office
Organisation.

See also printed memorandum, Appendix VI. (E.).

(9.) LETTER from G.O.C. THAMES DISTRICT.

SIR, Chatham, 20th February 1901.
In reply to War Office letter No. 7968/8803, dated 9th January 1901, I have the honour to report that the alterations made in consequence of the Report of the Decentralisation Committee of 1898, which have been brought into effect, have worked well in the district under my command, and my experience has been entirely favourable to the increased powers which were then given to General Officers Commanding Districts.

2. I think the time has come to further extend that power, and I enclose various suggestions referring to the following Regulations, viz. :—

King's Regulations.
Royal Warrant for Pay.
Allowance Regulations.
Regulations for Army Ordnance Services.
Militia Regulations.
Volunteer Regulations.
Regulations for Engineer Services.

With regard to the last, I have made a special report after careful consultation with the Sub-District Engineers and the District Engineer. If I have somewhat exceeded the scope of the Inquiry referred to me, I have done so because of the need in this particular matter of going beyond the measures of decentralisation of 1898.

Under the present system, which renders it difficult to get works commenced till June, very often, contractors tender with the certainty that the bulk of the work must be done in the winter months. They are bound, therefore, to tender higher than if work commenced in the beginning of April. The result is that the State is annually paying for its works a higher price than is necessary and getting its work done less soundly than would be the case in summer.

I have suggested a way of meeting the difficulty; but anyhow, some way is very necessary in the public interest.

I have, &c.
(Signed) T. FRASER,
Major-General, C.T.D.

The Secretary,
Committee on War Office Organisation,
War Office.

20th February 1901.

DECENTRALISATION OF WAR OFFICE BUSINESS, 1901.

King's Regulations.

Para. 158.—Give General Officers Commanding at home authority to authorise additional issues, as abroad.

Para. 163A.—The limit of 11. might well be removed, leaving the limit (say 101.) to the discretion of the General Officer Commanding.

Para. 1005.—The General Officer Commanding to have the power to sanction the tenant system himself, except as regards canteens.

Para. 1879.—General Officer Commanding to have power to extend the period of tour of non-commissioned officers at depots, under special circumstances.

Royal Warrant for Pay.

Art. 123.—General Officer Commanding to authorise pay for any such temporary appointments.

Art. 247.—General Officer Commanding to have power to authorise such extra-duty pay.

Art. 408.—The issue of extra-duty pay to be left to the discretion of General Officers Commanding.

Art. 709.—Delegate authority to sanction issue of such extra-duty pay to General Officers Commanding. Many of the authorities of the Secretary of State for War now required by the pay warrant might be placed under the control of the General Officer Commanding.

Final audit of regimental and company accounts to be made in the district.

When War Office decisions and disallowances are received it not infrequently happens that the responsible officer has left the unit and the men affected have gone abroad, which leads to much correspondence and difficulty of adjustment.

Allowance Regulations.

Paras. 120-147.—The General Officer Commanding to have power to grant forage allowance to officers other than those scheduled, under special circumstances.

Para. 322 (e).—General Officers Commanding to have power to authorise payment of travelling expenses of servants accompanying officers other than those specially laid down.

Para. 628.—General Officers Commanding to have power to authorise replacement of remounts without reference to War Office.

In some cases the fact of the General Officer Commanding having authorised certain expenditure has to be reported to the War Office; this might be abolished, as the authority for such charges would come under notice on audit.

Regulations for Army Ordnance Services.

Para. 44.—Further extension of local purchase to sum of (say) 50l.

Para. 145.—Abolish M.S. Return of "Departmental and General Orders (local)" affecting the Department. The major portion of this return always appears in the monthly casualty report.

Paras. 221-222.—Maintenance boats and vessels :—

- (1.) Repairs by local tenders up to 100l. be arranged for locally, without previous reference to War Office.
- (2.) Slight structural alterations might be permitted to boats and vessels.

Militia Regulations.

Para. 347A.—Candidates for municipal officers: leave to discretion of General Officer Commanding.

Para. 376.—General Officer Commanding to settle complaints. His decision to be final.

Para. 377.—Give General Officer Commanding power to convene such courts.

Para. 388.—Disallow appeals to War Office.

Para. 396.—General Officer Commanding to have power to grant extra leave to adjutants.

Para. 398.—Ditto.

Para. 459.—General Officer Commanding to have power to sanction leave exceeding three days without reference to War Office.

Para. 507.—General Officer Commanding to have power to grant forage allowance, when necessary, to field officers of submarine miners without reference to War Office.

Para. 513A.—General Officers Commanding to have power to authorise such issues.

Para. 624.—The General Officer Commanding to have power to sanction such pay.

Paras. 712 and 713.—The General Officer Commanding to have the power to issue such gratuity.

Para. 728A.—Give power to General Officer Commanding to authorise further visits if he considers them necessary.

Para. 739.—The General Officer Commanding to have power to grant travelling expenses under special circumstances besides those specified.

Paras. 745-751.—The General Officer Commanding to have power to grant travelling expenses, under special circumstances, besides those specified.

Para. 1026.—The General Officer Commanding to have power to shorten these periods if, in his opinion, the clothing has been subjected to exceptional wear and tear.

Para. 1206.—Make General Officer Commanding's authority sufficient.

Volunteer Regulations.

Para. 401.—Acceptance of municipal office; leave to General Officer Commanding to decide.

Para. 438.—General Officer Commanding to convene such courts of inquiry and submit proceedings to War Office for decision.

Para. 444.—General Officer Commanding to have power to sanction further leave.

Para. 528.—General Officer Commanding to have power to grant permission to adjutants to reside away from headquarters.

Paras. 535-537.—General Officer Commanding to have power to deal with such cases unless the corps applies to go out of his district.

Para. 593.—Give General Officer Commanding power to authorise payment of any additional expenses.

Para. 594b.—General Officer Commanding to have power to grant these allowances without reference to War Office.

Paras. 614, 618.—General Officer Commanding to decide such questions of compensation, &c.

Para. 632.—General Officer Commanding to decide as to temporary return of arms to Government stores for security.

Para. 691.—General Officer Commanding to arrange inspection and report result to War Office.

Para. 784.—General Officer Commanding to have power to authorise such issues in his own district.

All correspondence affecting the attendance of officers of the volunteers at schools of instruction might be carried on between the officers commanding regimental districts and the officers in charge of such schools.

(Signed) T. FRASER, M.G.,
C.T.D.

DECENTRALISATION OF ROYAL ENGINEER SERVICES.

War Office Letter of 9th January 1901, 7968/8803.

1. Paragraph 3.—Contracts for works not exceeding 2,000l.

The powers granted to General Officer Commanding to deal with contracts for works not exceeding 2,000l. are merely nominal. They amount to little more than authority to open tenders and to accept the lowest. So long as the General Officer Commanding has no decisive voice in the selection of the firms most competent for the carrying out of any particular work, he has no option but to accept the lowest tender, because all the contracting firms approved by the War Office are assumed to be equally competent and eligible. Even if there be only a trifling percentage between the most favourable tenders, the advantages of ensuring that the contract shall be given to the firm most competent from a local point of view may be sacrificed to the fact that the General Officer Commanding must be prepared to give specific reasons for rejecting the lowest tender. No practical result can be gained by asking a General Officer Commanding, who is authorised to deal with contracts "on his own responsibility" (518), to explain the reasons for rejecting a lower tender. There appears to be no reason why the limit should be restricted to 2,000l. I am strongly of opinion that no contracts for works, more especially for defence works, should be entered into without previous reference to the General Officer Commanding of the district concerned, and the tenders should be referred to him for his recommendation. If this principle be adopted, it follows that it would save time and correspondence if all works' contracts were dealt with by General Officer Commanding.

2. I consider that, as regards works carried out by day labour, the 50l. limit laid down in paragraph 519, Regulations for Engineer services, as regards the local purchase of stores, might be removed with advantage to the prompt and efficient execution of the works. The Commanding Royal Engineer can safely be trusted to use every endeavour to obtain promptly the stores he requires with due regard to local considerations in the most economical manner, and his recommendations would require the approval of the General Officer Commanding before acceptance.

3. As regards the conditions of contracts for works, I consider that the power now vested in the Secretary of State for War as regards the rejection of inferior materials and workmanship should be vested in the

local Commanding Royal Engineer, whose decision in such matters should be final. In this connection I would quote the following extract from a report of the Commanding Royal Engineer, Chatham, dated the 7th of June 1899, viz.:—"May I be allowed in this connexion to draw attention to what appears to me to be a very unsatisfactory condition of these contracts? Under the existing conditions the local superintending officer—the Commanding Royal Engineer—has no power of rejecting bad or inferior materials without the possibility—I might almost say the probability—of the contractor appealing to the Secretary of State against any such decision. I need hardly point out how greatly the knowledge that this is so must hamper the local Commanding Royal Engineer in rejecting any material, and it certainly often leads to materials being used in works which would unquestionably be rejected if the decision of the local Commanding Royal Engineer were final, as I decidedly think it should be in such matters. The present system plays into the hands of contractors, and handicaps the War Office. I have heard it argued that if absolute power of accepting or rejecting materials were left in the hands of the Commanding Royal Engineer contractors would not tender. I do not think this would be the case with straightforward contractors. If such a power tended to prevent undesirable firms from tendering, it would be a distinct gain. It is, I believe, the custom in all civil contracts to specify that the architect who gives the final certificate should have this power. In the case now under discussion we have the anomaly of a contractor who has accepted the terms of a contract in which provision is made for appeal, disputing the decision of that appeal as being 'as unsatisfactory as it is indefinite,' and regretting their inability to comply."

4. I should like to take this opportunity of pointing out the grave inconvenience and expense involved in carrying out works under the present system of annual Parliamentary Votes, which results in two, if not more, of the best months of the year being practically lost owing to the inability to get contracts entered into until the summer. In consequence of this, the cost of works must be necessarily higher, and they have to be executed during the winter months, which is not conducive to efficiency. If Parliament were aware of this practical difficulty, they would, I venture to think, consent to approve in the previous autumn a proportion of the average expenditure on works, to be available on the 1st of the following April in anticipation of the Vote on the Estimates, so that the Inspector-General of Fortifications could select the most pressing services to be detailed during the winter, and given out to tender in March, for acceptance on the 1st of April.

5. Paragraph 4.—Purchases and sales of land.

Purchase and sale of lands are invariably carried out direct by the War Office, and no instructions have been received directing that this shall be done locally in future. I am of opinion that it would not be advisable to depute the power of conducting the purchases and sales of lands to the General Officer Commanding, as he has not the machinery necessary for undertaking the duty, which is most efficiently conducted by the existing professional staff at Headquarters.

The War Department Land Agents for the Thames District reside at Dover, and much correspondence and delays are due to this fact. It is most desirable that there should be a local agent for each sub-district, even if it entailed extra cost.

The General Officer Commanding should be empowered to obtain professional assistance in minor legal matters connected with lands, e.g., arrears of rent, breach of contract, claims for damages, &c. If the General Officer Commanding was in a position to take prompt action in such matters, much correspondence and delay would be avoided.

6. Paragraph 4 (ii) and (iii) have not yet come into practical effect, but are distinctly steps in the right direction, as tending to the more rapid execution of services with the minimum of office work.

(Signed) T. FRASER, Major-General,
20th February 1901. C.T.D.

(10.) LETTER from G.O.C. SOUTHERN DISTRICT.

Headquarters, Southern District,
Portsmouth, January 17, 1901.
SIR, In reply to your letter, No. 7968/8803, dated 9th January 1901, I beg to report that my experience of the effect on the work in this district, of the alterations made in consequence of the Report of the Decentralisation Committee of 1898, has been entirely favourable.

I forward, for the information of the Committee, reports from the various staff officers under my Command on the subject, and I recommend that the further extension of decentralisation therein submitted may be taken into your favourable consideration. There is still room, in my opinion, for further decentralisation. I strongly recommend that the spending powers of G.O.C. be largely increased.

I am, &c.

(Signed) BAKER RUSSELL,
Lieut.-General,
Commanding Southern District.

The Secretary,
Committee on War Office Organisation,
War Office.

Headquarters, Southern District,
Portsmouth, January 19, 1901.

CHIEF CHANGES approved in consequence of the RECOMMENDATIONS of the DECENTRALISATION COMMITTEE.

1. The effect of the changes approved in consequence of the recommendations of the Decentralisation Committee, as far as the duties referred to in Clause (a) of paragraph 224, Queen's Regulations, are concerned, has been most beneficial and has facilitated the conduct of the work of this Office.

2. *Schools.*—As regards schools, the local settlement of questions affecting attendance at schools has been beneficial in saving time and, in less registration of War Office decisions.

3. *Courts-Martial.*—The changes of procedure for the attendance of naval and marine witnesses at courts-martial, have proved satisfactory.

4. *Instruction.*—Changes in the conduct of certain correspondence in regard to classes and instruction, have worked well.

5. *Permanent Staff, Militia and Volunteers.*—With reference to paragraph 1856, Queen's Regulations (i.), I would suggest that a general officer commanding a district should have the same powers in regard to the posting of a N.C.O. serving abroad to the permanent staff of a militia or volunteer unit whose regimental district is in his command, as in the case of a N.C.O. serving in a home battalion, a great saving of time would thereby be effected.

(Signed) J. NAPIER, Colonel, O.S.O.,
Assistant Adjutant-General, "A,"
S.D.

Royal Artillery Headquarters, S.D.,
Portsmouth, January 16, 1901.

WITH reference to your memorandum, dated 11th January 1901, calling for a report of my experience of the effect of the changes approved as regards decentralisation of work from the War Office since 1898, I beg to state that I consider the changes made have resulted in the correspondence on subjects named in the statement attached being dealt with much more quickly than was the case when reference to the War Office was necessary, and I think that they have operated to the benefit of the public service.

With respect to a further extension of decentralisation, I would suggest that the following matters should now be dealt with:—

At present armament pay is only issued to officers who pass the examination from the date of the proceedings of the Board being received at the War Office.

As in some instances a certain amount of delay is unavoidable in transmitting the proceedings (through

the marking of papers, &c., by the Board) to the War Office, and this results in the young officers who have qualified losing armament pay for some days, I recommend that the proceedings should be confirmed by the General Officer commanding the district, as is done in the case of examination in (a) and (b) for promotion, and that armament pay should be admissible from the date of passing the examination.

This I should recommend be delegated to officers administering garrison artillery divisions.

Could be left to the officers commanding Royal Artillery of districts.

Promotion to 3rd class master gunner might be made by administering officers, garrison artillery divisions, in the same way that quarter master sergeants are now made.

Boys and trumpeters not up to standard to be dealt with by administering officers instead of reference to War Office as at present.

When placing drafts under orders, the War Office usually determine the number of men to be found by each company at home for foreign service, and this arrangement has to be frequently modified upon representation by administering officers being made to the effect that casualties have reduced the number of men available for drafts in certain units. Would it not be better to inform administering officers of the requirements of certain stations, place the necessary transport accommodation at their disposal, and leave the details to be found by each unit to be settled by those officers?

The period of two years' depot service might be extended in special cases by administering officers, instead of being referred to War Office, as now.

Much inconvenience and clerical labour might be saved if the War Office were to inform the administering officers annually that a certain number of non-commissioned officers had been ordered home from India and the colonies for posting to the permanent staff; to arrive during the ensuing trooping season, and leave it for those officers to arrange for their posting to units on arrival.

Under the existing arrangement, vacancies on the permanent staff are frequently kept open from six to twelve months, and in some cases longer, to cover non-commissioned officers who have been ordered home.

(Signed) D. DEAN PITT, Major,
For Colonel, Commanding Royal Artillery,
Southern District.

WORKS.

January 16, 1901.

A.—Section 3 as to Contracts.

At the present time contracts up to the amount of 2,000l. can be accepted by the G.O.C. from the approved list of firms (funds being available), a report being made to the War Office of the firm accepted.

2. This possibly saves a little time, but more clerical labour in this office is involved.

3. The clerical work would be reduced if the G.O.C. had full discretion to abridge the approved list of contractors, i.e., only to invite those contractors who have heretofore given satisfaction in his command. Personally, I should very strongly recommend that such discretionary power should be given to G.O.C.'s. This would, in my opinion, effectually prevent the recurrence of such a case as that which has recently taken place in this command, and which, apart from its very unsatisfactory nature, has given rise to much vexatious trouble and unnecessary correspondence. (See correspondence ending with W.O. letter dated the 9th of November 1900, 7101/P/2129).

4. On these lines alone this system might be extended to contracts of any amount, but it would involve an increase in the clerical staff of this office. Otherwise I can see no advantage in changing the present system.

Examination of Officers E.G.A. in subject "H" (Appendix VI., Q.R.).

Prom. 41 to War rank.

Appointment of Military Staff Ch. B.A. Promotion to 3rd Class Master Gunner.

Boys and Trumpeters not up to standard (para. 7, R.A. S.O. section 47). E.G.A. duties for foreign service.

Extension of depot service for N.C.O.s (para. 1, section 1, R.A. S.O. Vacancies on permanent staff, Auxiliary Artillery.

Engineer License, para. 513.

5. It would further be an advantage, I think, if contracts for stores (other than special stores) could be made on the authority of the G.O.C. up to any amount, subject to funds being available as provided in the Estimates, so that paragraph 519 of the Regulations for Engineer Services could be abrogated.

B.—(i.) *Purchase and Sales of Land.*

Hitherto the preliminary negotiations with the owners have been carried out by the War Office, I think it would be an advantage to the service if the whole of the arrangements were carried out locally, i.e., between the G.O.C. in communication with the Treasury Solicitor. The G.O.C. in this command having the assistance of the W.D. estate agent.

(ii.) *New Services under 1,000l. and Maintenance Services under 1,000l.*

The present arrangements work satisfactorily, and I do not propose any change.

(iii.) *Simplification of Procedure.*

(a.) It is difficult to say what is meant by minor changes. Trifling changes not affecting construction are sometimes now carried out without reference to the War Office. Anything beyond this, I think, should be acquiesced in by the War Office. This especially refers to fortification work, where uniformity in design is essential.

(b.) The method of executing work, i.e., by lump sum or measurement, should, I think, be left to the G.O.C.

(c.) I think the G.O.C. might authorise all encroachments where legal difficulties do not arise.

(d.) Reletting up to 100l. is already in the power of the G.O.C. It is only in the case of new lettings when the War Office have to approve, see paragraph 278, Regulation for Engineer Services. I think that the limitations laid down in this paragraph in regard to new lettings should be removed, and that the G.O.C. should have full power to approve of lettings up to any amount.

C.—The carrying out of the above suggestions will, by relieving the War Office of a certain amount of work, correspondingly increase the work in this office, and hence some additional clerical staff will be required.

(Signed) D. A. SCOTT,
Colonel on the Staff for R.E.

MEMORANDUM.

DECENTRALISATION.

1. As far as the "B" branch of Staff duties are concerned, decentralisation, as regards the War Office, has been very largely accomplished from time to time in past years, so that under the present system of Army administration the avoidable references from districts to the War Office are comparatively few.

2. The following observations have reference to the War Office paper now under consideration:—

"Disposal of Horses when Unserviceable, &c."

3. The powers of the G.O.C. in this respect do not appear to have been recently extended. The allotment of remounts to regiments and corps is vested in the I.G.R., and it is in consequence necessary that recommendations in respect to horses unfit for further service or unfit for the particular duties of the corps to which they belong, should be referred to him.

"Reappropriation of Barrack Accommodation."

4. There does not seem to have been an extension of the powers of General Officers Commanding since 1898 in regard to this matter. The powers of General Officers Commanding are, subject to certain specified limitations, controlled by the financial aspect of the proposal. Thus he is unable to authorise reappropriations for

which he has no funds available. This principle is sound.

"Contracts" (Supply Services only).

5. Coal contracts are the only ones made locally which are referred to the War Office before completion. There may be sufficient reason for this course. The contracts made at the War Office, such as for oil and candles, are few. They are made for the whole of England, or for the United Kingdom, and pecuniary advantage is thereby secured.

"Local purchases of Stores" (Barrack).

6. Officers in charge of barracks should be given power in certain cases and subject to orders of the G.O.C. to make purchases which are at present carried out by ordnance officers, often entailing much delay.

"Approval of Acting Staff Pay."

7. The power in this connexion is delegated to G.O.C. on the one hand, but it is taken away on the other, by orders being issued to army agents not to issue such acting pay without special and direct instructions from the War Office.

8. The powers of the G.O.C. should be extended in respect to the conclusion of simple agreements for the hire of land or buildings when a large rent or other very important considerations are not involved. When a hiring is now made in a district, and when the printed War Office Form does not suitably embody the terms and conditions of the hiring, the agreement or lease must be referred to Army Headquarters for consideration by, and the remarks of, the Treasury Solicitor, in whose branch of the War Office the work is, to all appearance, carried out with the greatest amount of possible deliberation. The results are much delay and correspondence, and that lessors, not understanding military methods, get tired of waiting, and perhaps dispose of their property to others. The procedure indicated is followed, although the hiring may only be for a short period, and to the value of a few pounds a year.

(Signed) M. E. R. RAINSFORD,
Colonel, A.A.G.

Portsmouth, January 19, 1901.

As a considerable increase of power is now given to General Officers Commanding in connexion with matters involving authorisation of expenditure of public money, and as the regulations governing such action, owing to the varying circumstances of different cases to be dealt with, leave a large margin of discretion to general officers, there is a necessity for the War Office auditors to be critical in their examination of accounts, so as to bring to notice any diversity of method which may obtain in different districts in deciding similar questions. No doubt such diversity does exist.

(Signed) M. E. R. RAINSFORD,
Colonel, A.A.G.

H.M. Gun Wharf, Portsmouth,
January 17, 1901.

The changes approved in consequence of the recommendations of the Decentralisation Committee on the whole work well, and save much correspondence and consequent delay in dealing with questions affecting the equipment, &c., &c., of regiments as they arise. Some further modifications might be made in returns rendered to the War Office; for instance, take the Quarterly Return of Expenditure of the Department (I attach a copy of the last rendered from this office, marked A.), so far as overtime is concerned, it is a repetition of the monthly pay lists of the quarter; it is a recent innovation, under General No. 6/3811, dated 26th June 1898, and so far as the department is concerned, takes some time to prepare, and apparently does not add in the slightest degree to efficiency.

Again take paragraph 132, Regulations for Army Ordnance Services, 1900. The question of overtime not being resorted to "unless the expense can be met out of" money at the disposal of the Chief Ordnance Officer for "wages," is unworkable, if overtime is really necessary, it must be resorted to or the service must suffer. Such questions as these should, I think, be left to the

discretion of the Chief Ordnance Officer, who is responsible to the General Officer Commanding the District, and who is not likely to resort to overtime unless real necessity arises, and the fact that all overtime that is incurred is clearly detailed in the monthly pay lists, ought, in my opinion, to be sufficient, without hampering the Department with the preparation of small and needless details in other returns.

(Signed) F. H. TURNER, Colonel,
The Chief Staff Officer, C.O.O., S.D.
Southern District.

Chief Ordnance Officer,
"S" District.

N.B.—This return should be rendered as early as possible after the last day of each quarter, and before being forwarded to the War Office should be sent to the District Paymaster to ascertain that the total expenditure agrees with the totals in his accounts.

Verified.—The total amount charged to Vote 9 A 2 for quarter ending 30th September 1900 was 4,058L. 11s. 11d.

Portsmouth,
November 7, 1900.

(Signed) E. ROBERTS, Colonel,
District Paymaster, S.D.

From Lieut.-Col. R. B. TERNAN, District Paymaster,
S.D., to CHIEF STAFF OFFICER, S.D.

SIR, Portsmouth, January 15, 1901.
WITH reference to the attached correspondence, I have the honour to report that the changes effected under the head of Pay and Allowances which affect this office have been found to work well and save correspondence. I have no suggestions to offer as to the further extension of decentralisation.

I have, &c.
(Signed) R. B. TERNAN, Lt.-Col.,
District Paymaster, S.D.

Portsmouth, January 16, 1901.

REFERRING to your memorandum of the 11th instant, forwarding a list of the chief changes approved in consequence of the recommendation of the Decentralisation Committee, I consider that those affecting my department have worked advantageously, both as regards my duties as Principal Medical Officer on the Staff of this District, and as Surgeon-General Commanding the Royal Army Medical Corps in the Southern District and Channel Islands.

With a view to the further reduction of clerical work and further extension of decentralisation as regards the War Office, I recommend that under the head of Pay and Allowances, claims of civil medical practitioners for consultations, assistance at surgical operations, &c., when certified by the District P.H.O. to be necessary and charges reasonable, may be approved for payment by the G.O.C. as laid down in Royal Warrant, Article 376, for Barbados and Jamaica.

"Weekly Returns of Sick, Army Form A. 31."

Abolish this return as regards the War Office, and substitute one from each station hospital at home stations being sent to office of P.M.O. of the district, who should compile therefrom a weekly return on Army Form A. 2,015, with the additional information of the number of vacant beds in each hospital of the district.

All weekly returns of strength and sick should be made up on the same date (A.A.G.A., A.A.G.B., C.R.A., C.R.E., P.M.O., A.O.D., A.P.D.), to ensure accuracy in strength and working out of ratios. The combined return should be signed by the G.O.C. and transmitted to the War Office every Monday.

Quarterly Sanitary Report.—Omit (A.F. C. 344).

The information is furnished on pp. 3 and 4 of the weekly return of sick from each station hospital. Special reports on any outbreak of epidemic disease are furnished by P.M.O. and called for by him from the medical officers serving under him.

P.M.O.'s annual sanitary inspection, as well as periodical visits to stations when necessary, are sufficient to ensure attention to this.

The annual return of sick and wounded on Army Form A. 33 from station hospitals should be sent in original only to office of the district P.M.O. at home stations, and from these a district return compiled for transmission to the War Office by the G.O.C. with any remarks thereon he may wish to make. The annual report on the health of the troops now furnished on 1st January each year, as part of the G.O.C.'s annual report of his district, might then be abolished as unnecessary.

The Tables 5 and 6, and 6 and 7, in Army Forms A. 32 and A. 33 respectively, regarding sickness and mortality in quinquennial periods of age and service are unreliable as regards strength, never can be relied upon for accuracy, and should be abolished in order to save clerical labour.

In A.F., B. 62, abolish the nominal roll of regimental men employed, substituting only the numbers. Commanding officers of corps have the names of their men temporarily employed; the War Office does not require this.

(Signed) CHAS. D. CUFFE,
P.M.O., S.D. Surgeon-General.

DECENTRALISATION SCHEME.

From the COMMANDANT, Discharge Depot, to the CHIEF STAFF OFFICER, Southern District, Portsmouth.

SIR, Fort Brookhurst,
January 15, 1901.
WITH reference to your memorandum re attached changes approved in consequence of the recommendations of the Decentralisation Committee, 1898, I have the honour to report for your information that the changes therein noted do not materially affect the working of the Discharge Depot, except questions referring to "Discharges, &c., Extra Duty Pay," hitherto referred to the War Office for decision, which would be dealt with more expeditiously by the G.O.C. I do not consider any further extension of decentralisation as regards War Office, as affecting the Discharge Depot, desirable.

I have, &c.
(Signed) H. B. CARDEN, Lieut.-Col.,
Commandant, Discharge Depot.

(11.) LETTER from G.O.C. WOOLWICH DISTRICT.

SIR, Woolwich, 7th March 1901.
I HAVE the honour, in accordance with the instructions of the Adjutant-General in War Office Letter, No. 7968/8803 of the 9th January, to submit the following remarks on the questions therein contained:—

1. I have had a paper prepared (A.) showing the number of documents which have passed through my office during the month of December 1900, in order to compare them with those which passed through my office in the month of December 1897, on which I submitted a paper to Mr. Brodrick's Committee. Broadly, whereas, before that Committee reported, about one in ten of my office papers went to the War Office, now about one in 35 have to be sent up. I have thought it would be interesting to show thus the direct effect on correspondence of the change in method so far as that could be so shown. But the conditions of the two months, three years apart, are obviously so different, that it would be altogether unfair to conclude that because the number of papers have increased rather than diminished that has been in any way due to the change of system. On the contrary, I think I may say absolutely that every change introduced by Mr. Brodrick's Committee has proved advantageous, that it has not in any particular increased the work within my own office, and that the changes must have considerably reduced the amount of work that would have been thrown by my district upon the War Office this year had the changes not been made. There are a few particulars in which I think it is still possible to proceed on the same lines, and these I have suggested on Table "B."

2. On the other hand, I think that the figures show that, as I stated to Mr. Brodrick's Committee, so far as the districts are concerned, all that it is possible to deal with in this way is a relatively small matter. In 1897 I mentioned to the Committee that the number of letters sent by me to the War Office in one month had been 118. In the corresponding month of 1900 they were 196. The increase is due to the continual movements and changes involved in the conditions of the war, and very largely to the great number of embarkations and disembarkations, and to the number of the sick and wounded at the Herbert Hospital who have temporarily to be accommodated at Woolwich, and the special subjects which have come into existence because of the war, such as the allowances to the wives of Reservists.

3. Whereas in December 1897 my office dealt in all with 1,115 papers, in December 1900 it dealt with 6,902. The increase was due to the conditions of the war. An immense increase took place in the number of court-martial, due to the paucity and inexperience of the officers and non-commissioned officers left in England, to the large number of very young soldiers, and to the continual arrival and departure of drafts from all parts of the country. A very large increase in the number of telegrams was due to continual war exigencies.

4. I cannot recall more than one instance during my tenure of command in which the War Office made any

objection to the exercise of my discretion in regard to my district, and I have used it pretty freely on many subjects.

5. My own impression is strongly that what is called the relative centralisation of the work of our Army as compared with other armies is involved in the circumstances of our Empire and Constitution. I cannot see how most of the questions now settled by the War Office could be dealt with locally for the following reasons.

6. If I were in command of a unit, no matter how large—corresponding directly with the War Office, say, in Germany—all my sub-units would remain the same from year's end to year's end. No changes would take place but the following:—Each year on a given day I should receive all my recruits for the year, and on a given day should discharge those that had completed their term of service. I should have to send a few officers individually away to Berlin for staff purposes, and a very few out of my district for special courses. In all other respects the sub-units would be unaffected and, except when they moved off as complete bodies for the purpose of manoeuvre for a given number of weeks, they would be all stationary on the same spot on which they had lived for 30 years or more.

7. But for us, with our world-wide Empire, all the conditions are fixed by the necessity of annual reliefs to India and the Colonies. Regiments, battalions, and batteries are perpetually moving away from Great Britain and returning to it. Independently of the movements of these units, drafts are continually going out and batches of men are coming home. The fact that this last general change takes place involves many movements at home in order to equalise the conditions of service. The fact that ground is very restricted at almost all stations except Aldershot and Salisbury involves the movement of units periodically to Aldershot as the great training centre. The establishment at a limited number of stations such as Woolwich, Aldershot, Okehampton, Hythe, Shoeburyness, Glen Imaal and Lydd of special schools of instruction, where facilities for them exist, involves the movement to and fro of large numbers of officers, non-commissioned officers, and men. Though, as far as possible, all questions that concern two different districts are settled by direct correspondence between them, it is obvious that these changes of personnel often involve matters which can only be determined in a central office. Very often different Governments, such as those of India, of Egypt, of the Cape, and of Canada, are involved in the questions which arise, more especially as to finance, between different units from or to which men have been transferred. Whilst the policy of the War Office, at least since the date of Mr. Brodrick's Committee, has been to cause Districts to correspond directly as far as possible, so that, for instance, we have to deal with the General Officer Commanding the Lines of Communication in South Africa in regard to many complaints of individual men that they have not received the Queen's chocolate, &c., yet it is obvious that these conditions entail an amount of correspondence very different from that of the German Army, and that they necessarily throw on the War Office an amount of work altogether peculiar to our Army.

8. In my opinion, the great cause from which the Districts suffer in regard to correspondence is that, because of the work thus inevitably thrown on the War Office, every man that I know within it is absolutely overworked. I believe as strongly as I possibly can in the importance of the principle enunciated by Mr. Brodrick's Committee (p. IX., General Recommendations I.) that "verbal communications" are, except as a matter of record, infinitely preferable to written. But the difficulty is, that when those with whom alone it is possible definitely to settle a question are overwhelmed with work, it is often impossible and always cruel to endeavour to get the all-important interview that would clear the air. At present the number of heads at the War Office who can settle many questions has been so much reduced that papers get congested to an extent that absolutely blocks progress. I absolutely subscribe to the description so graphically given of this congestion, in his evidence before Mr. Brodrick's Committee, by Sir William Butler, in all respects but this, that it appears to me to be mainly due to the complete inadequacy of the numbers of the Staff to deal with the actual conditions involved in the circumstances of the British Army and Empire. I venture to speak of the War Office as I find it in this respect, because an outsider may perhaps be able to say freely what an unwillingness to complain

may prevent the actual holders of office from pointing out.

9. A fruitful source of correspondence both for the War Office and the Districts is involved by both the public and private inquiries of Members of Parliament as regards individual soldiers. These usually come originally from some one who has not been attended to, because the writer has given a quite inadequate description of himself or of the soldier about whom he is interested. It is often almost impossible to identify the case from the description given, and the cross reference and correspondence involved becomes enormous. I could cite many cases of this kind during the past year that would be comic if they did not involve such a terrible loss of public time. Then, as a rule, in our Army, a man with a good case is fairly dealt with, and it is the man with a bad case who resorts to a Member. The nature of the case does not admit of any change in the previous decision, but the tracing of the whole of the facts involves an immense correspondence.

10. As I do not see how under our Constitution this, except from the self-restraint of Members of Parliament, could be greatly modified, I only submit that it must be taken into account in estimating the necessary clerical staff of the British Army as compared with others. Otherwise the effect is that the most important papers cannot get through to the people who ought to decide them. I can quote cases in which I have gone on pressing matters of the utmost importance for years without succeeding in drawing attention to the necessity, usually because those who could have decided on them had never heard of them.

11. In my judgment, it would be an invaluable thing if the General Officers Commanding Districts could once or twice a month mark a paper in such a way that it was bound to come before the finally deciding authority, whether the Secretary of State or the Army Board; but in such a way that the General Officer Commanding knew that nothing had blocked that paper. In 99 cases out of a 100 the decision of a subordinate officer is quite sufficient, because it only involves some questions of general principle not previously decided.

12. Every now and then questions arise that certainly ought to go through. In most of these, where the special circumstances of a particular district are involved, in my judgment, it would be an invaluable practice if the General Officer Commanding concerned were summoned to attend the Army Board at the time the decision is given. Many questions arise that cannot be anticipated beforehand, and decisions are apt to be given which would not have been arrived at if anyone had been present who knew all the circumstances. Otherwise we perpetually tend to government by gossip. The broad principles involved in the rule that a man and his accusers should be brought face to face and that "les absents ont toujours tort" apply very forcibly in War Office procedure as in other cases. It is only a consistent carrying out of the principles laid down by Mr. Brodrick's Committee for which I ask.

13. The present method of correspondence by which all letters are addressed to the "Under Secretary of State" instead of to the particular department concerned has led to the greatest inconvenience and confusion. As long as the duties of the several departments are clearly defined, it is obvious that after I or my Staff Officer have written a letter, all the contents of which we know well, and all the circumstances of which are familiar to us, we can easily tell to whom it ought to go, and, as nine times out of ten, it involves some subject on which or, on some analogue of which, we have corresponded with the War Office before, we know who the particular officer is who ought to receive it. When, however, this letter with thousands of others reaches the Central Office at the War Office, in order to determine where they must send it, they have to read it over again, an obvious waste of labour, and that perusal must necessarily be cursory. The number of mistakes that rise from this cause is legion. I can easily produce cases before the Committee which will show the result. I have at times had to go to the right office to get a decision reversed which had by some mistake been decided by the wrong one on principles directly in conflict with previous decisions.

14. This centralisation of correspondence, whilst it has made it almost impossible to know where any given paper will go, has certainly not produced any unity between the orders of different departments. I can produce cases in which, sometimes two or three times

in the same week, directly conflicting orders have been received by us. Often in the case of telegraphic orders the conflict between the orders of different departments is so explicit as to make it impossible to comply with both. I attribute this to overwork on the part of the very able officers employed and the want of time for that verbal conference which Mr. Brodrick's Committee so soundly recommended.

I have, &c.

(Signed) J. F. MAURICE, Major-General,
Commanding Woolwich District.

The Secretary,
Committee on War Office Organisation.

A.

CORRESPONDENCE, RETURNS, &c. dealt with in the
OFFICE of the ASSISTANT ADJUTANT-GENERAL,
WOOLWICH, during the Month of December, 1900.

Courts-martial and papers regarding	214
Returns, transfers, discharges, &c.	409

LIST of SUBJECTS referred to WAR OFFICE which might be dealt with by GENERAL OFFICER COMMANDING.

Alterations of terms of service (para. 102, Recruiting Regulations) 3 and 9 to 7 and 5.

Discharges. If G.O.C. considers case worthy (only temporary).

Posting horses to Batteries and A.S.C. from Remount Depot. Abolish reference to G.O.C. and communicate direct.

Postings A.S.C. reference to G.O.C. unnecessary. Communicate direct.

Reserve men who enlist for, and are accepted for, Colonial Corps should receive Reserve Pay whilst so employed on the distinct understanding that they are granted leave from Reserve.

Lost or injured equipment, extend limit of money to 50l. in both cases.

(12.) MEMORANDUM by Mr. MATHER, M.P. (a member of the Committee) on his visit to PORTSMOUTH.

Headquarters of Southern District.

February 22 and 23, 1901.

IN the absence of General Sir Baker Russell, G.O.B., K.C.M.G., I was received by Major-General R. M. Stewart, O.B., who, on my arrival at the Headquarters of the Southern District, assembled the following Staff Officers to meet me in conference, viz. :—

Colonel Hon. J. P. Napier, Chief Staff Officer (Discipline, Training, and Personnel);
Colonel M. E. R. Rainsford, O.B., Assistant Adjutant General, for "B" duties;
Lieut.-Colonel S. McM. Maycock (representing Colonel D. A. Scott, C.B., D.S.O., in his absence), Commanding Royal Engineer (Works);
Major D. O. Dean-Pitt (representing Colonel Commanding Royal Artillery, Southern Division);

There also attended—

Chief Paymaster Colonel E. H. Gorges;
Surgeon-General O. McD. Cuffe, C.B., Principal Medical Officer; and
Captain Lane (Company Officer) called in, and a Pay Sergeant.

Decentralisation.

1. As to food, forage, and fuel, it was the unanimous opinion that the General Officer Commanding had ample freedom and powers. Supplies.

The only control, and that is a useful one, is from the Deputy Assistant Adjutant-General (Supplies) at Woolwich, where large reserve stores are kept of articles which may deteriorate by long keeping. Such articles (e.g., preserved meats, &c.), before being purchased by the Districts largely, may be supplied from Woolwich with advantage, as Woolwich must keep a reserve stock for emergencies, and the moving of the stocks through to the Districts prevents unnecessary buying, and keeps the Woolwich chief stores supplied with fresh articles, which by long keeping would become unfit for use.

2. It is strongly felt by the General Officer Commanding and Staff Officers that the Contractors on the lists submitted to them from the War Office ought to be subject to the approval of the General Officer Commanding for all contracts under 2,000l. which he is empowered to make, since the lowest tender has to be accepted; or the General Officer Commanding should have freedom to accept, on his own responsibility, a higher tender from the War Office list if in his opinion it would be more advantageous for the Service. But the list is now much too large, and should be reduced, and only contain the names of firms approved by the General Officer Commanding, in which case the lowest tender could be accepted. Works.

In contracts over 2,000l., the General Officer Commanding could with advantage to the Service act quite as safely as for those below 2,000l., and much delay would be avoided. But if the present system is maintained, the General Officer Commanding and Staff consider that no contracts for Works should be given without his approval, as very bad cases of loss and imperfect work have occurred in consequence of the tenders of local contractors being accepted (as being the lowest), who, though on the list, are known by him not to be worthy of trust for that particular contract.

It is held that the Senior Staff Officer of Engineers, charged under the General Officer Commanding to carry out works, would get better structural work, and have more control over contractors, if the list were reduced to those who could be relied upon to faithfully carry out their contracts. This applies to all contracts below and above 2,000*l*.

No tender for Defence Works contracts should be accepted above the 2,000*l*. limit without the recommendation of the General Officer Commanding, as these works are of supreme importance, and the contractor engaged should have the approval of the General Officer Commanding and his Engineer officers.

Stores.

3. The limit of 50*l*. as regards the local purchase of stores is vexatious, and involves much delay and unnecessary reference to the War Office. The amount of limit should be largely increased, subject to the estimates under that head. The knowledge of the Commanding Royal Engineer, with the approval of the General Officer Commanding, before purchase, affords ample guarantee that the stores will be economically as well as promptly obtained. The supply of many articles required for Works, which may amount to just over the 50*l*. limit, gives rise to many delays and much correspondence with the War Office, where tenders would be asked for by the usual routine in the Contract Department. For instance, stores or heating apparatus found necessary in buildings, which were not originally deemed essential, could not be supplied if costing over 50*l*., but must be ordered by the War Office.

Referring again to Works Contracts, it is held that the hands of the General Officer Commanding, acting through the Commander Royal Engineers, should be strengthened in the direction of giving him power of rejecting bad or inferior materials or workmanship, in order that he may exercise at least such powers as an architect possesses while the work is under construction.

It would greatly facilitate the carrying out of all works, if the unexpended amount of contracts could be by some means held over after the termination of the financial year, for the completion of the contract in the following year.

Another important point. If, upon its being decided to carry out certain works, authority were given for a certain amount to be expended before the Vote was taken, the work could be commenced in the early part of the year, when the building season begins, though the Vote itself had not been formally obtained.

These remarks are made in connection with works provided for in the Estimates, and not works to be carried out under the Loans Account.

Lands hiring
re-letting, en-
croachments, &c.

4. Much correspondence, trouble and delay arise from want of authority for the General Officer Commanding to deal with small questions relating to land, viz., to re-let or hire land, or to take action to protect the property of the War Office from encroachments. Hundreds of cases occur, such as interference with shore rights, erection of fences on War Office property, and other damages. The General Officer Commanding has no power to deal with these matters promptly on his own responsibility. They must all be referred to the War Office. Whereas the General Officer Commanding, acting under legal advice and that of the local estate agent, might settle such matters instantly on the spot. Moreover, the knowledge that he and his officers had the power to do this would prevent most of the cases arising that now give trouble.

The high-class officers on the staff of the General Officer Commanding have all the experience and knowledge to decide and take action without reference to uninformed persons at the War Office, and had they the power, it would prevent a loss of their time in reporting such cases, as they now have to do.

The General Officer Commanding would in all cases take the responsibility of the decision.

Ordnance Stores.

5. On visiting the Ordnance Store Department, under Colonel Turner, at the Gun Wharf, from which shipments are made to foreign stations, I examined the system of store keeping and the system dealing with returns and reports as supplied to the War Office.

This department is practically a sub-depôt of the Woolwich Ordnance Stores. The ordnance officer under Colonel Turner is Captain Roberts, a very experienced man.

The system of receiving, giving out, and despatching stores appears to be extremely well managed, and no difficulties were complained of. But Captain Roberts had serious complaints to make concerning the vexatious procedure connected with the payment for labour: (1)

for overtime of the regular staff of workmen employed, and (2) for the payment of extra labour suddenly required for loading and despatching vessels. These extra payments are called "casualty items," and very elaborate reports have to be prepared for the War Office concerning them. The money to pay the weekly wages of every kind is sent to the Paymaster who furnishes it, and against each payment is set forth whether for regular men or extra men, and overtime against each class of men is clearly stated, viz., the hours worked and amount paid for overtime. Further, a monthly pay list is furnished by the Paymaster containing this information, and the quarterly returns furnished to the War Office summarise payments under the respective heads of ordinary pay, overtime, extra (or "casualty") labour. For all practical purposes of examination and audit nothing beyond these returns can be of the slightest use, but the War Office requires intermediate returns of the "casualty" labour, giving the name of each man employed, the number of hours he was employed, the work he did, the amount he received upon overtime, and upon what job.

This intermediate return requires a large amount of book-keeping, and is very troublesome, and it is strongly held that all such matters ought to be left absolutely in the hands of the chief ordnance officer, the monthly and quarterly returns giving sufficient evidence of the amount of money expended in extra pay for overtime and for "casualty" labour, for the purpose of informing the War Office of the amount spent beyond the ordinary pay of the ordinary staff.

Another point was brought before me, connected with the damage and loss of stores. The Regulations allow a limit of damage of 10*l*., which the General Officer Commanding and his ordnance officers may deal with on the spot without reference to the War Office. It is suggested that the General Officer Commanding might deal with damages to a much larger sum than 10*l*. without reference, as all such damages are always assessed by the General calling a court of inquiry under his chairmanship for the settlement of damages, and such a court might be trusted to decide what action should be taken in the case of damages of much larger amount than 10*l*. The power thus given might result in great advantage to the service. For instance, the other day an amount of clothing to the value of 42*l*. was lost in transit from a station in Ireland to Portsmouth. This case had to be reported to the War Office with all the circumstances connected with it. The loss arose in consequence of the neglect of an officer, who would have been called upon to pay one-half the loss by the General Officer Commanding, but reference to the War Office resulted in the whole amount being allowed; and it is held that the case was not decided upon its merits.

Damage to
of stores.

Complaint was also made that the purchase of Ordnance Stores in a district which is now limited to 10*l*. was insufficient and should be considerably increased without reference to the War Office. Intermediate demands for stores suddenly required in connection with pressing services in the district, or it may be for putting on board vessels going out with troops, &c., must be put forward on the Principal Ordnance Officer, Woolwich, and though hasteners be sent from time to time and Woolwich be not able to supply, the General Officer Commanding has not the power to purchase locally. Instances were given where this restriction operated, and the procedure to obtain what was required resulted in the stores not being got in time for shipment.

Local
Ordnance

6. The Chief Paymaster of the Southern Division, Colonel Gorges, has only been recently appointed after having served in similar capacity in several parts of the Empire. He is a very intelligent officer, and described to me the procedure with which the Committee is already acquainted, as to the manner in which he receives payments monthly by Warrant from the War Office to pay into the local bank for payments to meet expenditure, and the system of payment to the Captain of company on his demand of a lump sum week by week to pay the soldiers, and the pay list rendered to him by the Captain each month to account for the money he has received, and his subsequent examination of that pay list to see that the money is fully accounted for. These accounts and his examination are of course sent to the War Office.

Finance
master is
Audit.

The transfer of soldiers from one district to another involves the keeping of a soldier's account, as he may

Soldier's
Account

be in debt or credit at the time of transfer. Rarely does it happen that a clean sheet exists when a soldier is transferred. A duplicate statement of the man's account is sent to the Paymaster of the new district by the company officer in the district from which the man is transferred. If there is a credit or debtor balance, the Paymaster of the old district adjusts the balance by means of a form with the Paymaster of the new station. This balance is credited or debited to company officers through a form of their company pay lists. The original statement of accounts is sent with the man to his new station, and becomes the voucher for the first charge for pay in his new company. Should any debt not be accepted by the company officer in the new station, he informs the company officer at the old station, and between them they arrive at a settlement, which the respective Paymasters carry out.

I discussed with the chief Paymaster the present system in connection with clothing and the system of compensation connected therewith, which involves a considerable amount of work at the War Office. At my request he has furnished me with a memorandum on this question, which I embody in this report.

"The present system as to issue of CLOTHING COMPENSATION is as follows, as laid down in the CLOTHING REGULATIONS FOR THE ARMY:—

"If in the opinion of the officer commanding a company a time-expired article of clothing is fit for at least three months' further wear, compensation may be drawn in lieu of a new garment.

"This is charged to the public on Army Form H. 1179, and the amount remains in the hands of the company officer to the soldier's credit, to meet any charges that may be made for repairs to clothing or purchase of other articles of clothing or necessaries.

"Any balance due to the soldier on the following anniversary of his enlistment is transferred to the Pay Account.

"Soldiers paid on a pay list or voucher which does not contain a compensation account may be paid in cash at the time the articles are due.

"The present system as to debits on account of clothing is as follows:—

"No soldier is allowed to provide himself with personal clothing by purchase from tradesmen.

"But all articles of clothing or necessaries required are supplied from the public stores at prices which are published biennially, and the amounts are credited to the public on Army Form H. 1181 and charged against the man's compensation on pay account.

"In my opinion, the present system of keeping these accounts could be much simplified and much unnecessary work saved both in local offices and War Office in auditing, if an annual clothing allowance per man, based on the price of the garments to which he is entitled, was authorised, drawn by officers commanding and charged to public on one voucher per regiment or per company, and in the case of debits, if annual demands were made by units for clothing required and the value credited in a similar manner on one voucher.

"(Signed) E. H. GOREZ, Colonel,
U.P., S.D.

"Portsmouth.
"26th February 1901."

The General Officer Commanding and all his staff officers are unanimous in heartily approving of the appointment of a local auditor from the Accountant-General's Department, who should be placed in the district to finally audit and certify all accounts presented to him by the Paymaster, as well as those accounts connected with works which the General Officer Commanding is authorised to deal with.

The chief Paymaster considers this local auditor of the Accountant-General's Department would afford a solution for many difficulties and perplexities and prevent much delay and trouble. He considers such an appointment would enable a continuous audit and check to be conducted which might be relied upon. The auditor would be acquainted with the Accountant-General's rules and methods on all such matters, and would be competent to interpret the King's Regulations when required to avoid mistakes being made. The Paymaster's staff could work on lines arranged

with the local auditor, and the result would be great simplification of procedure, so that a daily check could be kept on items difficult to trace after long periods have elapsed between the event and the remarks made concerning it from the Accountant-General at the War Office, as at present.

In discussion many instances were given of the advantages to the General Officer Commanding and staff of the services of such a local auditor, if a competent man. The Chief Officer of the Ordnance Stores considered that in his department a great deal of labour and loss of time through communicating direct with the War Office would be saved by the presence of the local auditor finally settling his accounts on the spot, and would form a more perfect check than anything done under the present system. The General Officer Commanding considers that the just settlement of claims for expenses and allowances would be perfectly worked out with the assistance of the local auditor, and the requirements of Regulations more perfectly satisfied without reference to the War Office.

As regards works constructed under the direction of the Commanding Royal Engineer, it was held that the local auditor could finally deal with all the accounts which are now forwarded to the War Office for audit and payment, on the certificate of the Commanding Royal Engineer being given to the accounts presented to him, after having been endorsed by the General Officer Commanding.

As there are seven sub-divisions in the Command of the Southern District, the local auditor would have to deal with the accounts from all of these, and not only those at Headquarters. Consequently, a certain staff would be required to perform the work. But the advantages which were suggested by the General Officer Commanding, and his Staff would amply compensate for any expense attending the final settlement of accounts before they left the Headquarters for the War Office. In fact, the suggestion of a local auditor from the Accountant-General's Department, to remain constantly in the district, and to be changed from time to time, seemed to make the impression all round that such an appointment would be one of the most important reforms possible to conceive of,—applying at the right moment, and in the right place, the only financial check of real value, and simplifying the work of all officers and Paymasters, without adding largely to the local clerical staff.

7. I visited the new and old barracks at Portsmouth Barracks. for the purpose of seeing the difference between the accommodation afforded in the one and the other. The new barracks are of great magnitude, and seem to be of perfect equipment for all ranks lodged and maintained there. The order and cleanliness of every part leave nothing to be desired. The recreation rooms are equal to the best working men's clubs; the reading rooms and libraries are well attended. The moral condition of the soldier is said to be far higher than it was a few years ago, and with such barracks and conditions of life there must be a strong influence leading the man to higher tastes in amusements and the employment of spare hours. The complaints we have met with in our investigations concerning the schools for soldiers' children have been entirely removed at Portsmouth, for I saw two schools there—for infants, and for boys and girls up to the limit of school age—which are quite equal to any Board schools that I have ever seen. The only fault I could find was the lack of any manual training department for the boys, and cookery and dress-making department for the girls, which, I should think, for children of soldiers, would be of very great value educationally, as well as in preparing them for future employment.

I had a long interview with Surgeon-General Cuffe, Principal Medical Officer of the Southern District, who expressed his satisfaction with his department, and had no important improvement to suggest.

I append a list of the Returns made to the War Office by the Royal Engineer Office at the Headquarters of the Southern District; also a statement as to the duty of the Royal Engineers; and also a confidential Memorandum specially prepared at my request by the General Officer Commanding, which embodies the subject matters of a long discussion which took place during many hours at the General's house in the evening between him, his Staff, and myself.

ROYAL ENGINEER OFFICE, HEADQUARTERS, SOUTHERN DISTRICT.
List of Returns rendered to the War Office.

Statement of Stores due from A.O.D.
Report on condition of alignment marks.
Report on mooring of S.M. vessels.

SOUTHERN DISTRICT.

Southern Royal Engineer District.

Comprising Hampshire (except Aldershot), Isle of Wight, Dorsetshire, and Wiltshire (except Salisbury).

The duties of the Royal Engineers in a Military District are carried out as follows, viz :—

A senior officer of the Royal Engineers is appointed to the Staff of the General Officer Commanding the district as Colonel on the staff and District Engineer. This officer is responsible for the administration and execution of all Royal Engineer Services, and to assist him in carrying out his duties, other Royal Engineer Officers, sub-district Commanding Royal Engineers, are appointed to the several areas into which the Military District is divided and which are known as sub-districts, these areas are again sub-divided into divisions likewise officered by Royal Engineers. The officers in command of sub-districts are usually Lieutenant-Colonels who are assisted by junior officers in charge of such divisions as may be comprised in the sub-district. The subordinate staff consists of Warrant and Non-Commissioned Officers of Royal Engineers, who are employed as Military Foremen of Works, Mechanists, Clerks and Draughtsmen.

Civil Officers known as surveyors (and holding relative Army rank) are also appointed to the sub-districts under the Commanding Royal Engineer, and, where required, Civilians are employed temporarily as Clerks of Works, Foremen of Works, Clerks, &c.

In the Southern Military District there are three companies of Royal Engineers, two of which are Submarine Mining Companies and one a fortress Company, with a section of the Coast Battalion whose officers, except in the case of the Submarine Miners, are employed on the duties of Division Officers in addition to their regimental duties.

The duties of the Royal Engineers comprise the following, viz :—

Preparing plans, specifications and carrying into execution by contract or otherwise, the erection and maintenance of fortification works, barracks, hospitals, rifle ranges, ordnance buildings, military camps, submarine mining establishments, Brennan torpedo installations, military electric light installations, steam and hydraulic machinery, submarine defences, search-lights, military roads, sea walls, practice batteries for militia and volunteer artillery, &c.; the working of military telegraphs and communications, surveys of defence positions, navigation of submarine mining steamers and boats; the training of officers of Royal Engineers in submarine mining at the Royal Engineer School of Instruction, Gosport; the acquisition of lands for military purposes. The letting of War Department lands, farms, public houses, private dwelling-houses and the adjustment of tithes, rates and taxes are in charge of the Royal Engineers with the assistance of an estate agent for all the district except Weymouth.

The designs, estimates, correspondence and transactions in connection with lands, works and buildings in this, the largest Engineer District in the United Kingdom, are very numerous and entail on the Royal Engineer Staff a considerable amount of work and great responsibility.

The area of War Department land (not absorbed by sites of forts, barracks and other Military works) and let to farmers, and others, subject to resumption for Military purposes when required, is about 5,537 acres at an annual rent of about 6,720*l*. (This includes about 500 acres of leasehold property.) There are between 200 and 300 separate lettings within the district.

The mode of procedure as regards the execution of works over 400*l*. is as follows, viz. :—

A Board of Officers consisting generally of a field officer as President, an officer of the Royal Engineers and Army Service Corps, and an officer of the Army Medical Corps as members, is convened to report upon the site selected by the Commanding Royal Engineer of the sub-district. Their report is submitted for the remarks of the District Engineer, and subsequently for those of the General Officer Commanding, and when the site is finally approved by the War Office, steps are taken by the Commanding Royal Engineer of the sub-district to prepare, with the staff at his disposal, the necessary plans and estimates, which are then forwarded to the District Engineer for his approval and that of the General Officer Commanding and submission to the War Office, and on the return of the documents from the War Office, if no exception be taken to the scheme, the necessary specification and bills of quantities are prepared and tenders called for from the War Department contractors whose names are on the War Office approved list. If the estimated amount of the work does not exceed 2,000*l*., the tender is accepted locally by the General Officer Commanding. If, however, the estimate for the work exceeds 2,000*l*., arrangements are made for the tender to be accepted at the War Office.

The principal works now in course of execution in this district are as follows, viz. :—

Southsea Castle—Reconstruction of East Battery.
Browdown Battery—Revision of.
Stokes Bay Lines—Reconstruction of No. 2 Battery.
Blacknor Point Battery.
Upton Battery.
Winchester Barracks—Rebuilding.
Netley—Branch line of railway.
Parkhurst Barracks—Reconstruction.

The maintenance and repairs of works, buildings, &c., are carried out by contractors, whose contracts run for three years consecutively. These contracts are based on a Schedule of Prices for day work and materials.

(Signed) D. A. SCOTT,
Colonel.

(b.) MEMORANDUM BY MAJOR-GENERAL SWAINE ON OVERLAPPING OF INSPECTOR-GENERAL OF FORTIFICATIONS AND QUARTERMASTER-GENERAL'S DEPARTMENTS.

Experience goes to show that there are two Departments at the War Office which find a difficulty in combining their action when combination is absolutely necessary to avoid confusion in administration. These are—

The Quartermaster-General's Department.
The Inspector General of Fortifications' Department.

The cases in which these two Departments meet are those in which the expenditure of money for Engineer Services is contingent on—

- (a.) Re-appropriation schemes.
- (b.) The hiring of buildings or land for military purposes for periods under 21 years.

(a) *Re-appropriation Schemes.*

Nearly every re-appropriation scheme involves more or less Engineer expense, and when these are small enough to come under the discretion at present allowed to General Officers Commanding, and the Engineer charges can be met locally, there is no difficulty in the combination of the two Departments in such a small organisation as that of a District Headquarters Office.

When, however, reference to the War Office becomes necessary, either on account of the magnitude of the charge, or the absence of local funds to carry it out, or both, the difficulty begins to be felt. The scheme then has to be submitted on an Army Form (K. 1318) by the officer on my Staff administering "B" Branch, i.e., my Quartermaster-General, accompanied by a

statement of the Engineer expense involved. Here combination of Q.M.G. and I.G.F. becomes necessary, and this joint action does not appear to be provided for with certainty.

Example 1.

A re-appropriation of Seaforth Royal Artillery Depot Barracks became necessary under a scheme to provide a Field Artillery Depot in addition to the present Garrison Artillery Depot.

A proposal was submitted by me, and an allotment made to carry out part of it.

The scheme for the Field Artillery Depot was then withdrawn, and it became necessary to assemble a board to consider how much of the former proposal should stand under the temporary occupation only by Field Artillery.

On 27th February 1901 I forwarded the proposals of the Board to the W.O.

On 15th March following I wrote that the lateness of the time of year prevented any expenditure before 31st March, and asked for re-provision next year.

On 19th March the I.G.F. asked whether the Service had been completed.

Evidently my letter of 15th March could not have reached the I.G.F.'s Department when letter of 19th March was despatched.

Example 2.

A caretaker was wanted for a new range at Warwick now under construction.

I wrote to War Office for authority to build the necessary cottage for caretaker, as this involved constant salary of a caretaker.

War Office replied, after a reminder, that a caretaker should be appointed, and gave directions as to how he was to be obtained and paid, &c. This letter was signed by an officer of the Adjutant-General's Department.

A few days after the I.G.F. wrote to ask for a copy of my letter, as it could not be traced.

Example 3.

A re-appropriation and reconstruction of the old Depot Barracks at Chester became necessary. The Engineer Services in connection therewith were extensive.

A proposal on Army Form K. 1313 went forward, and plans of proposed alterations.

The I.G.F. replied suggesting alterations. I defended my scheme generally, and suggested one or two minor alterations to meet objections.

The I.G.F. suggested further modifications, illustrated by drawings.

I replied, stating my objections to the modifications, but expressing my readiness, if directed, to carry them out as desired.

The I.G.F. then wrote to give discretion to carry out as thought best.

Of the 1,000*l*. allotted it was too late to spend more than 500*l*. during present financial year, as the contract had to be submitted to the W.O., and the correspondence had taken so much time.

Example 4.

A store at Chester Barracks was to be converted into a barrack-room, and the usual form, with illustrative sketch, was forwarded to the W.O.

Objections came back dealing almost entirely with constructional questions, such as the position of windows and ventilators, &c. This letter was signed by an officer in Q.M.G.'s Department.

(b.) *Hiring of Buildings or Land.*

There has been for years past a regulation, not easy to understand, that hirings under 21 years are to be carried out by the Q.M.G.'s Department, while those over 21 years are carried out by the I.G.F.'s Department.

In cases under 21 years, as there is mostly some Engineer expense involved, the combination of two Departments again occurs, with the risk of their acting at cross purposes or without combination.

(Signed) L. V. SWAINE,
Chester, Major-General.
21st March 1901.

(c.) MEMORANDUM BY MAJOR-GENERAL SWAINE ON REORGANISATION OF ADJUTANT-GENERAL'S DEPARTMENT.

When I wrote my report to the Secretary of the War Office Reorganisation Committee on the 31st of last December, I had no knowledge of the new scheme explained by the Secretary of State when introducing the Army Estimates. Nor did I gather from that explanation that the six Army Corps might be made self contained (if I may use that expression). This together with a question asked me by a member of the Committee at my recent examination before that Committee, namely, whether I was in favour of retaining the Adjutant-General at the War Office, if his powers were reduced, requires a further explanation from me.

Were it intended to retain the District Commands as they are to-day, or if Army Corps Commanders are not to be placed in the same independent position as those are in the German Army, then I would adhere to what I stated in my report of the 31st December 1900.

If Army Corps Commanders are, however, to be given a free hand and receive similar powers to those in the German Army, then I am of opinion that a section should exist at the War Office similar to that in the German War Office, called "Armee-Abtheilung," with the sub-sections for "Infantry," "Cavalry," and so forth; and this section could be presided over by the Adjutant-General. But it must only be a section for administrative duties and have no command. Discipline would fall away from the new Adjutant-General, and be vested in Army Corps Commanders, and the Military Secretary would be placed in the position of the Chief of the Commander-in-Chief's Military Cabinet as it is in Germany.

L. V. SWAINE, Major-General,
Chester, Commanding N.W. District.
March 15th, 1901.

(d.) FURTHER SUGGESTIONS BY SIR WILLIAM BUTLER AND MEMBERS OF THE STAFF ON DECENTRALISATION.

G.O.C.s to be authorised to sanction all necessary expenditure of money and stores up to, but not exceeding, a certain lump sum granted annually to each district for the financial year.

No special reports of such expenditure to be made to the War Office, excepting when the expenditure is likely to be continuous for a period exceeding 12 months. The authority of the G.O.C. will always appear in the cash accounts, which are transmitted to the War Office monthly by the Pay Department. Monthly casualty returns for departments, returns of special services and purchases, &c., might be discontinued as the information given in these returns already appears in the pay list or cash.

Abolish or simplify the estimates of expenditure now prepared in districts at home.

The numbers estimated for to be paid, rationed, foraged, &c., are, as a rule, quite unreliable as data for the ensuing year's expenditure. The total expenditure in the district during the year ending, say, the 30th September, by votes, might be taken as a basis of the estimate, and an explanation given to account for any probable increase or decrease next year.

Under the existing system, the clerical staff in the various administrative offices are for weeks employed in the preparation of estimates which, when completed, are for the most part absolutely valueless.*

Centralise responsibility for training and efficiency of all Militia, Volunteer, and Yeomanry units in each regimental district area in the Colonel Commanding the regimental districts.

At present this officer is responsible only for the Infantry and not for the R.A., R.E., and Yeomanry units.

Put all contracts whatsoever up to competition by public advertisement.

This is not now the case as regards R.E. and many other services.

If a local audit of cash, store, and supply accounts by travelling War Office Inspectors could be made, it would no longer be necessary to prepare and transmit to the War Office duplicates of the cash and store ledgers, as at present, and clerical labour would be enormously reduced.

* Army Form, M. 1441, is that upon which this valueless information collected.

In civil life, banks and other large business firms with numerous branches would hardly expect their branch managers to forward monthly duplicates of the ledgers, with all vouchers for moneys paid or received during the month, to headquarters.

Canteens should be run entirely on the tenant system, and all regimental canteen accounts thereby abolished.

This has been carried out in the Western District for some time past, with the result that, whilst retail prices have been greatly reduced and quality improved, some 10,000*l.* a year (equal to nearly 3*s.* a man a month) has been received by units to be expended for the soldier's benefit. Not a single N.C.O. or soldier is, at the present moment, employed in any of the canteens of the Western District.

Simplify clothing accounts by granting the soldier a monthly, quarterly, or annual allowance to maintain his kit. Any balance unspent at the end of the fixed period to be credited to the individual concerned.

If articles of clothing and necessities could be kept in Ordnance depôts and issued to units on repayment as required, it would become unnecessary for a unit to carry from station to station any article except the clothing and badges peculiar to the unit.

Decentralise work at Woolwich by contracting for the delivery of camp, barrack, and other equipment, direct from the manufactory to Ordnance and other depôts in the various districts, where the stores would, after being compared with the samples, be finally accepted.

Each article to be marked with the name of the contractor, the station where passed, and the year of receipt, in order that responsibility might be fixed on the inspecting officer, should the quality of any of the stores be afterwards found to be inferior to the sample.

Such a system would save the cost of transport to and from, and storage at, Woolwich, as well as reduce the clerical labour now used in preparing vouchers for the receipt and issue of stores between Woolwich and the districts.

Compulsory powers should be obtained for troops to use common lands for camping, drill, or manoeuvre ground or for ranges, the War Department paying compensation only for any damage or injury proved by the aggrieved party to have been actually caused by the troops.

At present the acquisition of a camp or drill ground to be used for a few weeks annually often takes years of correspondence to arrange, compensation being claimed, as at Okehampton, for interference by the artillery practice with the children of the parish picking blackberries on Dartmoor.

W. F. BUTLER,
15th March 1901. Lieutenant-General.

ENGINEER DEMANDS ON ORDNANCE DEPARTMENT.

D.E.W.D.

With reference to the meeting in the General Officer Commanding's Office yesterday, I would suggest that attention be called to the somewhat cumbersome procedure laid down in paragraph 932, Regulations for Engineer Services, 1900.

When stores are specially required by the Royal Engineer Department, as is frequently the case, why could not the requisition be sent direct to the Army Ordnance Department and dealt with on its merits locally, under the approval of the General Officer Commanding the district, through the Chief Ordnance Officer, without reference to the War Office?

This would save a lot of paper work at present gone through, without any apparent necessity, except to put the authority for the supply of stores in the hands of the War Office officials.

(Signed) E. E. MARKWICK, Colonel,
Devonport, Chief Ordnance Officer,
12th March 1901. Western District.

NOTES.

1. *Contracts*.—G.O.C. can deal with contracts for works not exceeding 2,000*l.* (paragraph 518 Regulations for Engineers' Services); why only 2,000*l.*? Why not all contracts up to 5,000*l.* (paragraph 512 Regulations for Engineers' Services) irrespective of value of work?

2. *Execution of Works.*—Once a work is fairly started why demand such innumerable returns showing progress, past and probable? Who reads them? In the Military Works Loan, returns are still sent in for works long completed, simply so that somebody or other at the War Office may have all the expenditure in a certain branch of the loan ready for one comprehensive view; this involves much clerical work and night work, for no one can get all this work done by day, *vide* list of useless returns accompanying. I think returns might be dropped a great deal, and War Office inspections established.

3. *Control of Expenditure.*—It would save much trouble to abolish Parts II. and III., and to have the simple division between Part I. services (over 1,000l.) and minor services. Maintenance services may be Part I. or minor; it is unnecessary to distinguish them, but every G.O.C. should be responsible that he fully maintains all barracks, fortifications, &c., and expends only the balance in new services.

ROYAL ENGINEER RETURNS.

Proposed for abolition:—

1. Forecast of progress Military Works Loan.
2. Monthly Military Works Loan progress reports.
3. Monthly report on Brennan Factory.
4. Military Works Loan financial report.

ORDNANCE.

Returns to War Office which may be done away with.

A.F.C. 300.—Monthly Casualty Return of A.O.D.

M.S.—Copy of Departmental and General Orders (local) during previous month affecting the department.

G. 1023.—Stores issued on deposit or loan.

G. 813.—S.A. and M.G. ammunition in store half-yearly, not wanted in view of the annual returns.

E. E. M.
C.O.O.

NOTES BY COLONEL RICHARDSON, C.B., A.A.G. (B) WESTERN DISTRICT, ON DECENTRALISATION.

It is suggested that public competition be resorted to for all War Department purchases and services; that the prices of all accepted Tenders be no longer considered as confidential; that work at Pimlico and Woolwich be decentralised by arranging for the delivery of clothing and stores direct from manufactories to depôts in districts at home; that all accounts be audited on the spot by Treasury or War Office Travelling Inspectors who should, when considered necessary, make surprise visits to Accountants; that the present intricate system of clothing accounts be replaced by one under which a periodical allowance will be issued to the soldier to cover the cost of the upkeep of his clothing; that the pay and allowances of the officer, and if possible of the soldier, be consolidated; that no accounts or returns be rendered in duplicate; that the system of accounts which will be adopted in war time for pay, clothing, equipment, and supplies be constantly practised during peace; that the present intricate system of paying troops be changed to one which will be workable on service; that the regimental canteen system be abolished, and a district tenant system be substituted; that estimates required from districts be much simplified; that the numerous periodical returns and accounts rendered to the War Office by districts be simplified and, where practicable, reduced or abolished altogether—under no circumstances should an account or return forwarded to the War Office repeat the information already given in another return; that General Officers Commanding Districts be given a free hand to authorise any expenditure of money or stores they consider absolutely necessary, even though not strictly authorised by regulations, and that no further report than the General Officer Commanding's authority, attached to the cash or issue voucher, be required unless the amount authorised, or value of stores issued, exceeds 100l., or unless the issue of money or stores will extend beyond the current financial year.

- (e.) FURTHER MEMORANDA, FORWARDED BY GENERAL H.R.H. THE DUKE OF CONNAUGHT ON QUESTIONS OF LAND AND WORKS.

Land Agent for Ireland.

Royal Hospital, Kilmainham,
Dublin, 15th March 1901.

SIR,

I ATTACH a copy of the Memorandum which I wrote on this subject, and which your Royal Highness forwarded with a covering letter on the 8th January 1901.

The War Office reply was to the effect that further information was necessary as to the saving in time and money that might be effected, and asked that the negotiations as applied to the acquisition of Bere Island should be put forward as an example as to what part a W.D. land agent would have taken in the transactions.

I replied that this investigation would be a tedious operation, and that it would take some time to get at the information, and meantime I recommended that a Treasury or War Office official should visit my office and inspect the correspondence which has taken place, not only on Bere Island acquisition, but on a dozen of other cases of acquisition of land.

And I suggested that the necessity for a War Department Agent would be at once apparent.

I trust this course may be advocated by your Royal Highness.

I may add that the very fact of the acquisition of Bere Island taking seven years to accomplish shows in itself the necessity for an expert who would be altogether in charge of the many and various questions that arise in the negotiations for land in Ireland.

The information referred to as to Bere Island is now ready in office, but is waiting for the opinion of the Chief Crown Solicitor, without which the Treasury appear to accept nothing.

I have, &c.
(Signed) CHAS. F. C. BERESFORD.

Proposal to appoint a W.D. Land Agent for Ireland.

Royal Hospital,
Kilmainham, Dublin.

The purchase, sale, hiring, letting, and general management of land for W.D. purposes in Ireland is a matter which requires reorganisation.

The purchase is a process of extreme difficulty, and owing to the dual ownership and other causes, cannot be compared to transactions of a similar character in England.

The Chief Crown Solicitor, acting under instructions from the Chief Engineer, deals with all the negotiations and other business matters connected with W.D. land, and in all cases affecting the value the opinion of the Commissioner of Valuation is required.

The procedure for the acquisition of land is of the most tedious description, involving reference to the Ordnance Survey, valuers, landlords, agents, tenants, local solicitor and many others, and the work connected with this is a heavy addition to the Chief Crown Solicitor's other duties.

Local inquiries and negotiations, under the advice of the Chief Crown Solicitor, are frequently carried out by R.E. Officers of Districts; these officers are often inexperienced in the customs of the country and character of the people, so that delays and misunderstandings may be occasioned from this cause alone.

The constant change of R.E. officers renders it very difficult to carry on land transactions in a connected manner; points are lost sight of and circumstances essential to a case forgotten which a permanent officer would always have at his finger's ends.

The necessity for a permanent Land Agent is, to my mind, obvious.

His duties would be:—The charge of all land questions under the direction of the Chief Engineer, and subject to the advice of the Chief Crown Solicitor.

He would assist the Chief Crown Solicitor in the work connected with local inquiries, interviewing agents and tenants, and carrying on negotiations on the spot.

Valuations, however, would be made independently as at present.

He would also relieve the C.R.E.'s of Districts of many of their present responsibilities in land transactions.

Major Alexander, of the 4th Royal Iniskilling Fusiliers, a Land Agent of great experience, has been for some weeks assisting me as Acting Engineer during the absence of the D.A.A.G., R.E., and I have employed him as suggested above.

I have found his experience and advice of great value, and would recommend him for the position of War Department Agent if this was approved.

Major Alexander could not be expected to throw up his present private work as Land Agent, unless a high salary was offered to him, but he would be prepared to carry out the W.D. work in addition to his own at a salary of 500*l.* per annum.

His attendance for about two or three days per week at the office of the Chief Engineer would be sufficient for the purpose of taking instructions and reporting progress; all the local work he could best arrange for in his own office.

I recommend this appointment to be made on the return of the D.A.A.G., R.E., to duty at the Royal Hospital.

(Signed) CHAS. F. C. BERESFORD.

Decentralisation of Works.

Any process of decentralising which deals only with matters of minor importance merely touches the fringe of the question, and does not give any real or permanent relief.

A radical change in the basis of the system is wanted, which would fix responsibility, and give to the G.O.C.s of districts absolute control over all expenditure under Part III., Barrack Annual Estimates, and up to a limit of 100*l.* per item under Part II., with the necessity of reference to the War Office on the subject of plans, estimates, or other details.

War Office supervision could be effected by periodical inspection.

One inspection to check the amounts asked for by the General.

A second inspection to report on the manner in which the funds granted had been expended.

The responsible officers to stand or fall by the results.

General officers being specially selected are surely capable of such a trust.

District Engineers, being officers of long service and experience, should be considered perfectly competent to deal with the expenditure and details without reference to the War Office.

If not, they are not fit for their position.

In Ireland I would go further, and establish in Dublin a branch of the War Office which would control independently the funds allotted for all barrack construction and maintenance, subject only (so far as the War Office was concerned) to the personal inspection and supervision of the Inspector-General of Fortifications.

Fortification Works, being part of Imperial Defence, must remain centralised in London, but the control of details should be conducted by inspection rather than by correspondence.

(Signed) CHAS. F. C. BERESFORD,
8th March 1901. Colonel, C.E.I.

Under the present system constant references as to increase of pay are made between the applicants, the Engineer Officers, the G.O.C., the Chief Engineer, Ireland, and the War Office.

When I commanded the 2nd Division Telegraph Battalion on Post Office work, I had (as a Major) complete control over the rates of *working* pay for both military and civilian subordinates.

I knew the value of each man, and I raised or lowered his pay accordingly without further reference.

The system worked well.

12th March 1901. CHAS. F. C. BERESFORD,
Colonel, C.E.I.

(f.) LIST OF STORES FURNISHED BY THE CHIEF ORDNANCE OFFICER IN IRELAND THAT, IN HIS OPINION, MIGHT WITH ADVANTAGE BE MADE IN ORDNANCE WORKSHOPS.

With reference to answer to Question 8,802.

MEMBERS OF COMMITTEE.

President.

Lord HARRIS, G.C.S.I., G.C.I.E., Lieut.-Colonel and Hon. Colonel, Royal East Kent Mounted Rifles, and late Assistant Adjutant-General, Imperial Yeomanry.

Members.

Colonel the Earl of DUNDONALD, C.B., M.V.O.

Colonel Viscount GALWAY A.D.C., Lieut.-Colonel, Notts (Sherwood Rangers) Yeomanry Cavalry.

Colonel A. G. LUCAS, Lieut.-Colonel and Hon. Colonel, Suffolk Yeomanry Cavalry, and Deputy Adjutant-General, Imperial Yeomanry.

Lieut.-Colonel and Hon. Colonel L. ROLLESTON, South Notts Yeomanry Cavalry, and Major (2nd in command), 3rd Bn. Imperial Yeomanry.

Captain and Hon. Major the MARQUIS OF BATH, Royal Wilts Yeomanry Cavalry.

Captain Sir J. DICKSON-POYNDER, Bart, M.P., Royal Wilts Yeomanry Cavalry, 1st Bn. Imperial Yeomanry.

Mr. R. H. BRADE (War Office), *Secretary.*

TERMS OF REFERENCE.

The Secretary of State refers to the Committee a report by Colonel Lucas, Deputy Adjutant-General, Imperial Yeomanry, and requests them to consider what should in future be the organization, arms, and equipment of the Yeomanry force.

What, if any, change should be made in their terms of enlistment and service ; whether the annual training should be in camp more frequently than hitherto, and what period of training is necessary to fit them to serve with Regular troops in the defence of the country.

Whether the force could be considerably increased.

What rate of contingent allowance, pay, and horse allowance it will be necessary to offer in case of a longer period of training being adopted, and its being desired to increase the force considerably.

Whether any inducement should be offered to a portion of the present or of an increased force to engage to serve abroad in case of national emergency, and in such case whether a period of training with the Regular forces would be necessary.

R E P O R T.

Secretary of State,

We have considered the papers, including Colonel Lucas's report, and the points referred to us, and have the honour to submit our report.

We have not called any witnesses; six out of seven of the members of our Committee have had a long and intimate knowledge of the Yeomanry, and we believe that we know, without calling witnesses, what amount of time the Yeomanry can give to military service, and what changes could be adapted to the force.

As regards the reforms to be introduced, based upon the experience of the South African War, those members of our Committee, who have seen active service there, have of course formed certain opinions. We might have called witnesses upon these points, but, whether we found agreement or disagreement among them, it appears to us inevitable that all changes, which the military authorities may wish to introduce into the Yeomanry force, will be based, not upon the experience of a few individuals, but upon such reports as Field-Marshal Lord Roberts has probably already called for, or certainly will call for from a large number of Officers with experience in South Africa. Furthermore time was of importance; you required our opinion as to the conditions under which the annual training should take place in 1901 as well as in future years, and in order to issue the orders for 1901 it was necessary for you to have our recommendations in time for the consideration of the Field-Marshal Commander-in-Chief, as well as in time to be printed in the Estimates.

We believe that our recommendations coincide with the views of a considerable majority of Yeomanry Officers, but we venture to suggest that this report might with advantage be circulated amongst the Officers commanding Yeomanry regiments for their opinions on it. This might cause some delay in the final decision as to all the proposals it contains, but that need not interfere with the conditions which you may please to lay down, in consequence of this report, for training in 1901.

THE PERMANENT ELEMENT.

Before proceeding to discuss the points referred to us, we desire to place on record that the men, who have for more than 100 years, in face of scant encouragement and sometimes actual discouragement, sustained the Yeomanry force, come from the classes connected with land. The country gentlemen, yeomen, farmers, and certain tradesmen have for a century formed the backbone of this force, and should the present wave of enthusiasm be in time diminished, they would still be found continuing to give the same service as before. To many of them it is an hereditary duty to give some, frequently very long service to the Yeomanry, and they preserve its traditions. Being horsemen from boyhood, and having, as a rule, a horse at hand for their own use, they could and would, upon the order to mobilize, present themselves at the place of assembly the same day or the next. They are employers of labour, they are willing to give a certain amount of service to the Crown, and have hitherto paid something out of their own pockets to do so, but being employers of labour they cannot give an unreasonable amount of service, and their convenience in the conduct of their business has, and will have to be regarded.

We believe that the recommendations we submit will not conflict with this important factor. But these recommendations are also aimed at obtaining recruits for the Yeomanry from other classes than those referred to above; we believe that they will prove attractive; but the convenience of such recruits in gaining their livelihood will have, to a not less extent, to be sympathetically borne in mind.

1. TITLE.*

The force has been called, since its formation, the "Yeomanry Cavalry." The force that was recruited for service in South Africa, by means of the cadres of the Yeomanry regiments, was entitled the "Imperial Yeomanry," and if it pleased Her Majesty to add the prefix "Imperial" to the present title, the Yeomanry force would undoubtedly esteem it a very proud one, and regard it as a great honour that they should in this way be for all time officially recognized as having been closely connected with the formation, recruiting, and preliminary training of the force which has done such admirable work in the field in South Africa.

We believe that any change of title, except that we have suggested above, intended to disconnect the Yeomanry from that branch of Her Majesty's Forces with which it has always been connected, and to which it has always looked upon itself as a kind of a reserve, would produce feelings of bitter disappointment amongst the men as well as the Officers; and would not make the service more popular.

Our recommendation is that the Force continue to be entitled the "Yeomanry Cavalry," or, if Her Majesty so pleases, the "Imperial Yeomanry Cavalry," and that the distinctive^{*}regimental titles be retained.

2. ORGANIZATION.

One of the points referred to us under this heading is "whether any inducement could be offered to a portion of the present or of an increased force to engage to serve abroad in case of a national emergency."

Later on we discuss this subject, but to avoid confusion, it would be better to premise that until we come to the heading "Enlistment for Foreign Service," we are regarding the organization of the Yeomanry, and all that appertains thereto, as one for home defence, as it has hitherto been, and is at the moment.

Until 1893, the organization was regimental; in that year, an effort was made to reorganize the Yeomanry in brigades, and the Adjutants were reduced from one per regiment to one per brigade of two regiments.[†] This arrangement was found to be most inconvenient when the labour of raising the Imperial Yeomanry companies was thrown upon the Officers commanding Yeomanry regiments. With the utmost goodwill and activity, and given a convenient service of trains, an Adjutant could give no more than three days per week to each of his regiments; in some cases, we believe, one or other of the Colonels of regiments in brigade scarcely saw the Adjutant at all during the whole of that recruiting and training period, his time being fully occupied and more necessary with the other company being raised. Again, in 1893, the permanent serjeants were reduced from one per troop to one per squadron, with a regimental serjeant-major. In a time of excessive pressure, such as prevailed in January and February of this year, this number per regiment was altogether insufficient, more especially where two companies were being formed by one regiment. It should be remembered, therefore, that the recommendations which follow merely recommend not something entirely novel, but the reversion to what had obtained for nearly a century, and in substitution of what, upon trial at a critical moment, has been found inadequate.

We are not aware that any particularly useful results have been secured by the brigading of regiments. On the contrary, there is no doubt that in many cases it is very inconvenient for one of the two regiments in a brigade to assemble at a greater distance from its head-quarters than it ordinarily would. Most of the men must get home once or twice during the training to attend to some important matter of business, to pay wages, &c., and the further they are from their homes, the longer they are away from drill. The orders issued, when the brigades were formed, were that regiments were to train in brigade once every 3 years, but in practice it has been found not easy to carry out these orders.

3. PERMANENT STAFF.

We, therefore, recommend—

(1.) That an Adjutant be allowed to each regiment, and not, as at present, to each brigade only. And we suggest that together with the Yeomanry duties, he

* Colonel the Earl of Dundonald and Captain Sir J. Dickson-Poynder dissent from the recommendations under this heading. See p. 16.

† This was recommended in the Report of Lord Brownlow's Committee on Yeomanry, dated 17th March 1892, and was carried out with effect from 1st April 1893, by Army Order, No. 22, of January 1893.

would be able to assist Government most usefully in any expansion of the present system of registration of horses, or any other scheme for providing horses which Government may eventually adopt.

(2.) That Officers Commanding Yeomanry regiments should be consulted as to their experience of the effect of the reduction of permanent serjeants.

We believe that, in some cases, it will be found that the reduction has not, in ordinary times, caused great inconvenience, in others we are certain it will be found that the Yeomanry Colonels, or their Officers have had to engage drill instructors at their own expense, because the day and hour, when the men can drill, being the same in both districts the permanent serjeant is unable to be at both places.

If an increase of force is secured we can say without hesitation that the number of permanent serjeants per regiment ought to be increased.

We also respectfully request that Commanding Officers may have some voice in the selection of the permanent staff. It has happened that serjeant-majors have been forced upon Commanding Officers without their being consulted.

We strongly recommend that the regimental serjeant-major be granted warrant rank, as in the Regular and Militia services.

4. RETIRED OFFICERS OF REGULAR FORCES.

We recommend that the provisions of Article 509, Royal Warrant, be extended to apply to the Yeomanry, so that an Officer of the Regular forces may retire from the Army, receiving retired pay, for which he might not otherwise be eligible, on the condition of accepting and holding, for a number of years, a Commission in the Yeomanry, for which he must receive the usual nomination from the Commanding Officer.

This arrangement has been tried with the Militia and, we believe, with success. If the Yeomanry is to be largely increased, it is certain that considerable difficulty will be found in some counties in obtaining Officers, and an extension of the provisions of Article 509 to the Yeomanry might be the means of securing Officers in such cases.

5. REGIMENTAL QUARTER-MASTERS.

We recommend that a Regimental Quarter-Master be allowed to each regiment, but that it shall not be obligatory upon the Yeoman, selected for the office, to take a Commission. He should be granted a Commission, only when recommended by the Officer Commanding. This post is absolutely necessary when regiments go into camp, and as long as the Quarter-Master did not accept a Commission there would be no increase of expense.

6. ARMS.*

(a.) *Firearm.*

This is one of the points as to which some diversity of opinion may be found in details, but none at all upon the main point, viz., the principal arm. We believe it will be found that opinions are unanimous that the arm upon which the Yeomanry are in future to depend, in the drill of which they should be principally trained, and in the successful use of which they should be specially encouraged, is the firearm. But opinions differ as to whether the present service weapons are the best adapted for mounted men. Some who have used the long rifle make no complaint, others think that it is cumbrous and that an equally powerful, but lighter and shorter weapon could be invented. The best mode of carrying the long rifle on horseback is also in dispute. Others who have been armed with the carbine complain that its range compares disadvantageously with that of the long rifle. We are unable therefore to submit any more definite recommendation than this: that the Force should be supplied with whatever firearm is decided to be, by the military authorities, the most useful for mounted men.

(b.) *The Sword.*

We have reason to believe that it will be found that the rifle and bayonet will not be sufficient for all conditions of battle. We do not, however, recommend the

* Colonel Rolleston and Captain and Hon. Major the Marquis of Bath dissent from the recommendations made under this heading by the rest of the Committee. See pp. 14 and 15.

Colonel Viscount Galway makes a further recommendation. See p. 15.

retention of the sword, but, if it is to be taken away, we strongly recommend that the revolver should be substituted for it. It appears to us absolutely necessary that a man should have some handy weapon for use at close quarters.

(c.) *The Bayonet.*

The occasions upon which it might be put into use in battle would probably be very limited; but it has a terrorising effect, and we recommend that it should be adopted.

7. DRILL.*

The drill should be such as will encourage the Yeoman to be active and enduring on foot as well as on horseback; and whilst instructing him in all outpost and reconnoitring duties, as usually performed by Cavalry, should be such as to enable his services to be utilized to the best possible advantage as a rifleman in the attack as well as the defence of positions.

8. DRESS.†

(a.) *Drill order.*

We understand that it is the intention of the Government to introduce a service-kit of some neutral colour. It would be very advisable that the Yeomanry should adopt this, but, inasmuch as many Commanding Officers have lately supplied their regiments with new serges, it is hoped that Government might arrange to give the material free of cost, otherwise the expense would be very heavy on any regiment having to supply the men with new outfit.

(b.) *Full Dress.*

We desire to express a very emphatic opinion that the expense of the full dress uniform should be materially modified. But here again there are considerations which are not unimportant, especially in the case of Officers. Those who have already got full dress would have an additional expense thrown upon them if they are to suddenly change. An Officer wishing, and entitled to attend Court functions, is justified in preferring a smart uniform, and we deprecate the too rigid imposition of a purely utilitarian fancy. It should not be impossible to devise a comparatively inexpensive full dress, with certain ornamental additions for Court ceremonies, the possession of the latter not being compulsory.

(c.) *Boots, Gaiters, Puttees.*

As the drill of the Yeomanry in future will be probably much more on foot than it has been hitherto, it is inevitable that the long boot will have to be discarded for drill purposes, and either puttees or gaiters substituted; but we should deprecate the compulsory abandonment of the jack-boot in full dress, at any rate at present, inasmuch as it would involve a considerable waste of material.

(d.) *Greatcoats.*

We believe that the pattern known as "British Service Warm" and a mackintosh, have been found most useful in South Africa, and might be recommended for adoption as funds permit.

(e.) *Saddlery, Bandoliers, Belts, &c.*

The best patterns of these when decided upon will doubtless be recommended for adoption.

In all these cases it should be borne in mind that the Contingent Grant, even on the higher scale which we presently recommend, is not sufficient to cover the initial cost of clothing the men and finding the saddlery, and if Government desire any immediate changes of saddlery or clothing, which the military authorities may propose as the most useful, it would be necessary for Government to provide either the money or the materials.

† Colonel the Earl of Dundonald and Captain Sir J. Dickson-Poynder dissent from the recommendations under this heading. See p. 16.

* Colonel Rolleston and Captain and Hon. Major the Marquis of Bath dissent from the recommendations made under this heading by the rest of the Committee. See pp. 14 and 15.

Colonel Viscount Galway makes a further recommendation. See p. 15.

9. CONDITIONS OF SERVICE.

These are governed by Act of Parliament, and, in so far as the class which has hitherto sustained the force is concerned no such change as would involve compulsory foreign service would be of any use. Most Yeomen are employers of labour, and we do not think that it would be of any use expecting them as a body to engage for service abroad, although it is probable that a proportion would; and certainly a good number would volunteer in a crisis as they did this year. The suggestions which we subsequently make as regards engagement for service abroad might have to be dealt with by an amending, or a Special Act.

10. THE ARMY ACT.

We recommend that members of a Yeomanry Regiment which is assembled for annual training, or exercise, shall be subject to the Army Act, and that, where he may consider it desirable to exercise it, the Commanding Officer shall have the power of compelling their attendance, in the same manner as absentees from the Militia can be dealt with, sec. 23, Militia Act, 1882. We do not apprehend that the provisions of the Act as regards mutinous soldiers will have to be brought into frequent use, but it would strengthen the hands of the Officers Commanding to have the power of using them; and all the worthy members of the Force would be glad that they should have such power over men who bring no credit to it.

11. TRAINING.*

We recommend that regiments should be encouraged to go into camp as often as possible. We cannot recommend a compulsory order that regiments should always go into camp, for it is of advantage, for recruiting purposes, to occasionally change the place of training and visit another part of a county. It is a fact that at some such places it is scarcely possible to find ground suitable for an encampment, and under such circumstances a regiment would have to go into lodgings, as has hitherto been the practice; but it is undoubtedly far more expensive to both men and Officers to go into lodgings and hotels than under canvas; and we believe that the rates of pay which we recommend will leave such a margin of profit by going into camp, that that of itself will be a sufficient inducement to prefer camp to lodgings.

Going into lodgings might be made subject to the approval of the General Officer Commanding the District.

We also recommend that for regiments which go into camp, Government should provide, as in 1900, for a supply of water, and ground for camping; should defray expenses in connection with ranges and musketry course; and that the scale of camp equipment be in accordance with Appendix 10, Yeomanry Cavalry Regulations, 1898.

12. PERIOD OF TRAINING.*

In the year 1900 the training was extended to 28 days, with a minimum compulsory period of 14 days. Commanding Officers have not, up to the present, been asked to give their opinions of this arrangement, but we believe it was found that the duration of the camp was unnecessarily long, and that inconvenience was caused by men coming up and going out at different dates. Also the musketry was made compulsory during the training, if the Special Grant was to be earned. In some cases, where ranges were entirely at the disposal of regiments, this change was found to work well; in others where there was a great demand for ranges by other arms of the Service, it was found that hurry and crowding resulted, and that the men were not as carefully trained in musketry as they had been under the old system when they did their annual course of musketry at their own troop or squadron head-quarters.

We recommend, therefore, that the option should be given to regiments to assemble—

Either (1) for a period of 18 days on full pay, with a minimum compulsory attendance of 14 full days, to include not exceeding four days' leave, on full pay, of which two shall be Sundays.

And we recommend, as an additional encouragement to the men to perfect themselves with the rifle, that they should receive one day's full pay for each day's

* Colonel the Earl of Dundonald and Captain Sir J. Dickson-Poynder dissent from the recommendation under this heading (*see* page 16).

attendance on the range for the annual course and for practice for it, not exceeding, three days in the year.

Or (2) for a period of 21 days on full pay, including, as above, four days' leave, but in this case it should be compulsory to shoot the annual course during training.

13. PAY.

(a.) *Officers.*

We recommend that pay and allowances should be at Regular Cavalry rates, as were allowed this year, and that the pay and allowances should be consolidated.

This latter recommendation would dispense with a good deal of clerical work.

(b.) *Men.*

We recommend that the present rate of 7s. a day be increased to 10s. a day for all ranks.

When men are in lodgings and their horses stabled in the town, we doubt if the man can do himself and his horse for much less than 10s. a day. About 4s. a day is charged for stabling and foraging the horses in towns, the livery stable proprietors are quite capable of combining to put up the charge to this sum, and the men have no alternative but to pay what is asked. Taking into account the many small expenses to which a man is put beyond his actual board and lodging when he is out for training, we believe that the present rate of 7s. a day leaves him actually out of pocket. We consider that out of the 10s. a day which we recommend, most of the men could cover their normal expenses with the 6s. a day which remains after paying for stabling and foraging. Undoubtedly Yeomanry can do the training far more economically in camp, and we think, as we have said already, that this fact would encourage regiments to prefer camp to lodgings.

14. HORSES.

(a.) *Allowance.*

We recommend that a minimum sum of 5*l.* be allowed to each Yeoman who produces a horse approved by the Commanding Officer for the training, and undertakes to produce one if called out for service. We say a minimum sum of 5*l.* advisedly, we imagine that the object of Government is to make the service as popular as possible, and to encourage recruiting, and we think it quite possible that this grant may be sufficient to do so, but if not we think that Government would be well advised to raise it to such a sum as will make the Service attractive. If, however, the force is to be largely increased it is practically certain that there will be men willing to join the Yeomanry if a horse can be provided for them, but who have not got the necessary facilities for finding one which they can hire. It seems to us absolutely necessary, if the force is to be largely increased, that Government should devise some scheme by which horses may be provided for such men for the training. Possibly an extension of the present system of registration of horses might be possible, the owner undertaking the liability of producing a horse for the Yeomanry training; and the work of registration and inspection might, we suggest, be usefully assigned to Yeomanry Adjutants. Or, Government remounts might be sold at a reduced price to Yeomen, with the liability upon the purchaser of a certain number of years' service with the Yeomanry, the horse to be held in readiness for repurchase by Government if the reserves are called out, the purchaser to become the absolute owner at the end of the contract term. Subject to the intentions of Government, we recommend the consideration of a scheme for the provision of horses, and the establishment of a system.

(b.) *Compensation for Horses.*

The regulations as regards compensation for injury to horses are, we respectfully submit, of a very unsympathetic character. For example, if a Yeoman's horse dies of disease during training, or soon after, although it can be proved that the cause of death is due to service, the Yeoman receives no compensation. Compensation is only given when the horse is injured in the field or going to or from drill or training.

We think the responsibility should be thrown upon the Commanding Officer to certify, after enquiry by a Board, as to the cause of illness or death, and of recommending what compensation should be given, a maximum value being fixed. We also submit that Government could very well undertake to insure Yeomen's horses for the period of troop drills and training, and so secure Government against loss.

15a. CONTINGENT GRANT.

We recommend that an additional 2*l.*, as in 1900, be allowed to the present rates for each man who becomes efficient, and in addition that the Officers, who attend the annual training, should draw the contingent grants for their regiments, as is the case in the Volunteer service. This is an increased grant, but, we submit, a very reasonable one. We believe it to be a fact that when the force was originally raised in 1794, the counties bore the initial cost of clothing and equipping the men, all that the Government found at the time being the arms. Since then Government has given merely the annual contingent grant, and we doubt whether any regiment has ever been able to pay its way out of the Government grant only; we believe that it has been usually supplemented by subscriptions from the Officers, or else that the men have paid out of their own pockets a part of the cost of certain articles of clothing or equipment, or have provided them. We are certain it would be found, if an enquiry was held, and we recommend that one should be held, that some regiments are indebted to a considerable extent, and that the loan which has enabled the Commanding Officer to keep the men properly clothed and equipped has been obtainable only on the personal guarantee of himself or his Officers. The general rule is to get an undertaking from a recruit to serve for three years, upon a somewhat rough and ready calculation that the cost of his clothing and equipment will be recovered in that period by means of the Government grant; but, seeing that the contingent fund is chargeable with many other expenses, we doubt whether this is, in fact, the case. Whether it be so or not, it is obvious that a regiment, the establishment of which is suddenly raised by a squadron, must be heavily in debt for a year or two. It is not reasonable to expect the Officers to run any personal pecuniary risk in consequence, and we think that regiments which are in debt and can show that they are so, only because of some such large increase of establishment, and that they have been economical in their management of the fund, might be relieved of the debt by Government. It would also be a relief to Commanding Officers if, when an increase of establishment is sanctioned, they were allowed to indent on the grants of future years in order to pay for the initial cost of clothing and equipping the recruits of the new unit, instead of having to raise a loan.

15b. STORE-ROOMS.

Under the Regulations the permanent serjeants get lodging allowance, but no provision is made by Government for any place in which to store clothing, saddlery, and arms at troop or squadron head-quarters. It is an expense which has been borne for many years by the Officers, and we think it should be admitted that this is an unreasonable demand upon them, and that an allowance should be made for the provision of suitable buildings. The rent for such a building would of course be higher in large towns than in country districts; all we can do is to strike an average, and submit that a grant of 20*l.* per annum per store-room should be made.

16. FREE AMMUNITION.

We think that an increase in the issue of free ammunition would be decidedly beneficial. Up to 1900 the issue was confined to 60 rounds; in 1900 the issue was 90 rounds for the annual and special courses; any ammunition beyond this had to be paid for by either the Officers or the men. We imagine that the object of Government is to encourage shooting as much as possible. Our recommendation that the men should receive up to three days' full pay for their musketry course and practice would cover the cost of travelling to and from the range, and make up in some measure for the time lost by absence from business, and be a very decided encouragement; but, in addition to that, we recommend that the

rounds per man of free ammunition should be at least doubled; any surplus remaining over at the end of the year could go towards decreasing the amount of free ammunition issued in the following year to such an extent as to give the regiment always 200 rounds free per man per annum for the course and practice. We also recommend that over and above the free ammunition the men should be entitled to purchase, at half price, not exceeding 100 rounds. Some men have always done a great deal of private practice in the past, but it has been either at the expense of the Officers or of the men themselves. It is impossible to expect a poor man, not a sufficiently good shot to have much chance of winning a prize, to spend money out of his own pocket on a duty, which is not obligatory under the regulations, and takes him away from his private business. The grant of pay for musketry and the removal of the expense of paying for ammunition out of his own pocket would undoubtedly result in such a man doing a good deal more practice, whilst the keen riflemen who have done much practice at their own expense would be rewarded for their public spirit.

17. RANGES.

In many cases Yeomanry Regiments have very great difficulty in obtaining range accommodation.

We understand that the whole question of ranges is under consideration by Government; and we beg that it may be considered whether ranges, which have been provided out of, or are partially maintained out of Government Funds, ought not to be at the disposal of the Yeomanry equally with any other branch of Her Majesty's Forces.

18a. INSTRUCTION OF OFFICERS.

We recommend that the school of instruction for Yeomanry Officers be re-established and that its curriculum include a course of musketry; indeed, if the force is to be largely increased, we anticipate that more than one school will be necessary. This is a recommendation for a reversion to a former state of things. The Yeomanry school existed for more than 20 years, and there are many Officers serving who look back with gratitude to the thorough grounding which they received at it. It was abolished in 1897* upon the ground, we understand, that it did not give to Officers that acquaintance with the internal economy of a regiment, which they could get by being attached to a Cavalry regiment, and it was argued by those who wished to abolish it that the Officers would be as well taught by the regimental squadron leaders. We take leave to express a very strong doubt as to this; the capacity of imparting knowledge is not given to everyone; the squadron leader may be an excellent Officer, thoroughly acquainted with everything that a Cavalry Officer should know, but he may have no capacity for imparting that knowledge in a useful way to his pupils. We have no doubt at all that squadron leaders who have had Yeomanry Officers as pupils have done their best, but they have many other duties, and it is not likely that they have had the time, apart from any capacity to teach, to give their pupils the thorough grounding which a capable teacher can give at a school.

As regards the length of time that an Officer should be under instruction, an Army Order has recently been issued, we believe without the Yeomanry Colonels having been consulted, that the course of one month, which has been the practice for years, had been altered to two. We apprehend that this is certain to deter some gentlemen from taking a Commission who would have been willing to find in their first year the time for one month's instruction, in addition to the annual training, away from their business, but who are quite unable to find two months. We recommend that the compulsory periods of instruction shall be one month at the school or regiment, if the school be not re-established, before his second annual training, and that if an Officer fails to obtain a certificate he shall attend the school or regiment as the case may be for another month the following year, and so

* A.O. 196, of December 1896, orders the abolition, to take effect from 1st January 1897.

on until he does obtain a certificate, and that in the year after he has obtained a certificate he shall be attached for one month to a Regular Regiment, in camp if possible. We also recommend that Officers should be encouraged to get attached during their subsequent service for a month, or even longer, to Regular Regiments.

In all the above cases Officers should draw pay at Regular Cavalry rates.

18b. ADDITIONAL TRAINING, AND WITH REGULAR TROOPS.

We recommend that Yeomanry Officers should be encouraged to attend manœuvres and to get together detachments of men from their own regiments, or even from several others, for the same purpose. Under Section 46 of the Act it is contemplated that Yeomanry regiments should go out for "exercise," as distinct from the annual training, and this section might be utilized for this purpose. We feel sure that if the Officers and men could draw pay at Regular rates there would certainly be some every year who would be able to spare the time.

19. MEDICAL EXAMINATION.

Papers have been referred to us which show that a discussion has been proceeding in the War Office as to the necessity of a medical test for Yeomanry recruits. We do not think one is necessary for men who are only called upon to serve at home. The Commanding Officers are fully capable of controlling the recruiting of obviously unfit men.

20. REPRESENTATION OF THE YEOMANRY AT THE WAR OFFICE.

We respectfully submit that the force would be better understood than it has been in the past if an Officer were appointed at Head-quarters, whose special business it would be to deal with Yeomanry matters. We have no wish to suggest any change which would detract from the authority of the General Officers Commanding Districts, but the circumstances affecting the force differ considerably in different parts of England, and we submit that it would be advantageous if there were an Officer at Head-quarters, whose business it would be to concentrate information as to those varying circumstances, and the different methods which have been for long the practice in different regiments. We think that such a system would be useful in preventing changes being proposed, or made in such a way as to put some regiments at a serious disadvantage.

21. THE DECORATION FOR LONG SERVICE.

The Secretary of State for War has been approached on several occasions with a view to this distinction being extended to the Yeomanry, hitherto without result.

Voluntary military service given to the Crown is an honourable calling, and is as deserving of some distinction in the case of the Yeomanry, as in that of any other force.

22. INCREASE OF THE FORCE.

It is of course impossible for us to say with certainty that the force can be increased. That it can be largely increased from the classes who have up to now furnished its ranks we fear is improbable, under the conditions as regards the provision of horses which have governed service up to now. There are young men no doubt connected with county families, with agriculture and with certain trades in county towns and villages possessing some knowledge of the care of horses, who would be glad enough of a fortnight's open air exercise, and would gladly give some military service to the Crown; there are also, doubtless, many young men in populous centres with no previous knowledge, who would make in time smart and useful mounted soldiers, but it is certain that many of them are quite unable to obtain the loan of a horse, and might not care to run the risk of hiring one; it is possible also that the longer annual training which we recommend might so interfere with their civil employment as to be a bar to their joining the Yeomanry. As regards the first difficulty, we have already suggested that Government should seriously take into consideration the advisability and possibility of supplying horses to such men of the Yeomanry as are unable to bring their own, or to obtain horses on loan or hire. If this difficulty can be removed, we think, that having regard to the

conspicuous usefulness of the Imperial Yeomanry, which has undoubtedly attracted popular attention, it is extremely probable, indeed we might say practically certain, that there are large numbers of young men who, given a horse, would gladly join the Yeomanry. Whether or not their civil employment would be so interfered with, by absence from it for as long as 14 days, as to deter them from joining the force can only be proved by experiment.

Our colleague, Colonel the Earl of Dundonald, is anxious to make it compulsory on Officers Commanding Yeomanry Regiments to remit 7 out of 14 days of the annual training, exclusive of musketry, in the case of men of good physical capacity, first-class shots, and good riders. The Yeomanry members of the Committee are unable to give this proposal their support. They would prefer to see what results are obtained by the reforms they have proposed, and they think that the suggestion should be finally considered by the Yeomanry Colonels before any differences in the period of training are ordered.

An increase of existing establishment is not the only method of procuring a larger force of Yeomanry.

It is within the knowledge of Government that there are in the British Isles areas in which no regiments exist, or over which no recruiting is done, as well as some populous centres where new regiments might be raised.

23. FOREIGN SERVICE.

Finally, we are directed to consider "whether any inducement should be offered to a portion of the present or of an increased force to engage to serve abroad in case of national emergency, and, in such case, whether a period of training with the Regular Forces would be necessary."

(a.) *Officers.*

In order to obtain the Officers we suggest consideration of the advisability of forming what, for the want of any more suitable title, we designate the "Yeomanry Staff Corps," composed of Brigadiers, Colonels, Majors, and Adjutants, these to be selected by the military authorities, and Yeomanry Officers to be eligible for selection. For the appointments of Captains, Lieutenants, and 2nd Lieutenants, the Yeomanry Colonels might be entitled to submit the names of any of their Officers, whom they could recommend for consideration. In addition to the liability for foreign service, both Officers and men might be liable to be called out for training with the Regular troops once in their three years' engagement, and it might be left to the discretion of the Commanding Officers to give leave from the annual Yeomanry training in that year*; but, if excused from the annual training, such men should, nevertheless, earn the full contingent grant for their corps.

Ordinarily the foreign service Yeomen would be under the control and the command of the Officers of their regiments, but when called up for special drill with the Regulars they would have to be temporarily detached from that control, and handed over to that of the Staff Corps Officers.

We have to point out that if such a scheme is tried and prove successful, a good deal more work will be thrown upon the Officers Commanding the Yeomanry Regiments, since they will have to make special arrangements as regards the clothing, arms, and equipment of those men, and it seems to us certain that they will require larger staffs than have been allowed them under the brigade system. If a considerable increase of the force takes place, we have already pointed out that an increase of the permanent serjeants is necessary, if to this be added the extra responsibility of a certain number of men serving under these foreign service conditions, one of these should be a quarter-master-serjeant, who would be required at regimental head-quarters.

(b.) *Men.*

The same considerations which apply to the question of increasing the force for home defence, apply of course with even greater force to this question. It is impossible for us to foresee whether an employer will give employment as readily to an applicant for employment, who has undertaken the liability of foreign service, as he will to one, the continuity of whose employment with him cannot be so interrupted.

* Colonel the Earl of Dundonald and Captain Sir J. Dickson-Poynder dissent from this recommendation (see page 16).

Judging from the experience of the past twelve months, we are justified in anticipating that there are in the country a considerable number of young men, who are willing to undertake military service abroad; judging also from the experience of this year, there are a number of employers who do feel that a liability of this kind should not debar young men from being given employment. But the war was a very popular one, a remarkable wave of enthusiasm spread over the whole country, and it does not follow that in calmer moments employers will, as a rule, show equal liberality. As far as the classes which have hitherto sustained the Yeomanry are concerned, we have already ventured the opinion that a proportion may be depended on certainly to volunteer at a critical moment, and a proportion also, though not so great, to engage for a term of years for service abroad. We believe we can say this from our knowledge of the men who have hitherto composed the force, but we can speak with less certainty of those who may join if a considerable increase is sanctioned. They may be more affected than the first-named by those considerations. There can be, however, no possible objection, from our point of view, putting the question of expense on one side, to the experiment being made.

For example, Officers Commanding Yeomanry Regiments might be authorized to enrol from the ranks of their regiments for foreign service such men as they feel they can certify to be fair riders and good shots.

The liability for foreign service might be for a period of three years. These foreign service Yeomen, before final selection, should be medically examined, and the examination should be repeated annually during their period of liability. They would, as a rule, do the same training annually as their home service comrades, and draw the same pay and allowances, but it seems to us inevitable that some additional pecuniary advantage will have to be offered them to induce them to undertake a liability, which may interfere with their civil employment. What sum might prove sufficient it is impossible for us to say with certainty. The foreign service Yeomen will be selected on account of fitness, and under these circumstances we think something more than 6*d.* a day is reasonable. We suggest that a bounty of 12*l.* per annum, in addition to all Yeomanry pay and allowances, be offered.

24. SUMMARY.

In conclusion we summarise our recommendations, viz. :—

1. This report be circulated to Officers Commanding Yeomanry Regiments (introductory paragraph).
2. The force to retain its title of "Yeomanry Cavalry," or, if Her Majesty pleases, to be entitled "Imperial Yeomanry Cavalry" (paragraph 1).
3. Regimental Adjutants to be restored (paragraph 2).
4. If the force is increased the permanent staff to be increased (paragraph 3).
5. Regimental serjeant-major to receive Warrant rank (paragraph 3).
6. Article 509, Royal Warrant, to be made applicable to Yeomanry (paragraph 4).
7. Regimental Quarter-Master to be sanctioned (paragraph 5).
8. Arms to be the rifle and bayonet, and if the sword is withdrawn for drill purposes, then a revolver to be added (paragraph 6).
9. The drill to be such as will instruct the Yeomen in reconnoitring and outpost duties, and in the efficient use of the firearm in all situations (paragraph 7).
10. Drill Order to be adapted to the changes and conditions of the drill (paragraph 8*a*).
11. Economy to be recommended as regards full dress (paragraph 8*b*).
12. The conditions for home service not to be changed (paragraph 9).
13. Army Act to apply during annual training (paragraph 10).
14. Regiments to train in lodgings only with the consent of the General Officer Commanding Districts, ordinarily to go into camp (paragraph 11).

15. Two alternative periods of training at the option of the Commanding Officer (paragraph 12)—

(1.) For 18 days with 14 days compulsory minimum, musketry to be done locally ; or,

(2.) 21 days, compulsory minimum of 17 days, musketry to be done during training.

16. Pay not exceeding three days to be given for musketry (paragraph 12 (1)).

17. Officers' pay and allowances to be at Regular Cavalry rates, and to be consolidated (paragraph 13a).

18. Men's pay to be 10s. a-day (paragraph 13b).

19. 5l. horse allowance to Yeomen producing a horse approved by the Commanding Officer (paragraph 14a).

20. A scheme for the provision of horses to be prepared (paragraph 14a).

21. Compensation to be allowed for injury to horses on recommendation of Commanding Officers (paragraph 14b).

22. Contingent grant to be increased as in 1900 (paragraph 15a).

23. Enquiry to be held as to the indebtedness of regiments, and the debt taken over by Government where good cause can be shown (paragraph 15a).

24. A grant of 20l. per annum, per storeroom, to be allowed (paragraph 15b).

25. Ammunition up to 200 rounds per man to be issued free, and 100 rounds extra at half price (paragraph 16).

26. The Government to assist in the provision of ranges (paragraph 17).

27. Yeomanry school, or schools, to be re-established (paragraph 18a).

28. Officers and men to be encouraged to attend manœuvres, receiving pay at Army rates (paragraph 18b).

29. Consideration to be given to our suggestion that a representative for the Yeomanry be appointed at Head-quarters (paragraph 20).

30. A decoration for long service to be granted to the Yeomanry (paragraph 21).

31. The formation of a Yeomanry Staff Corps and the enlistment of Yeomen for foreign service to be considered, with a view to the experiment being tried (paragraph 23).

LANCELOT ROLLESTON.

BATH.

JOHN DICKSON-POYNDER.

R. H. BRADE,
Secretary,

2nd January 1901.

The undersigned Members of the Committee do not agree with the recommendations under the heads 6 and 7, Arms and Drill, in the Report, for the following reasons :—

The Yeomanry are, at present, armed and drilled as Cavalry, and are, in fact, the Cavalry of the Reserve Forces. We believe that any alteration of their position in this respect would be very unpopular in the force, would militate against recruiting, and would produce no compensating advantage.

As regards these heads, therefore, we recommend that the Yeomanry shall continue to be armed and drilled in the same way as may be decided on for the Cavalry of the Regular Army.

We are in agreement with the remainder of the Report of the Committee.

LANCELOT ROLLESTON.
BATH.

FURTHER RECOMMENDATIONS.

Paragraph 6 (b).—If the sword is not retained for drill purposes, I would recommend that it should still be used for escort and similar purposes.

Paragraph 7.—At the end of this paragraph, after the word “position,” insert the following recommendation :—

The Yeomanry are at present armed and drilled as Cavalry, and are the Cavalry of the Auxiliary Forces. It is also probable that on active service, as well as at manœuvres, they would be brigaded with the Regular Cavalry. I would, therefore, recommend that, as far as possible, the Yeomanry should be armed and drilled in the same way as may be decided on for the Cavalry of the Regular Army.

GALWAY.

I generally concur with the 31 proposals of the Committee, 18 of the most important of which, I observe, are practically the same as those previously made in my report ; three are partially so, and the others are new.

There are, however, certain other proposals in that report, regarding which I desire to place on record my intention to adhere.

In the portion of my report regarding Financial Results, I have endeavoured to show their approximate cost, but as I thoroughly agree with my colleagues in regard to the proposed bounty of 12*l.* per annum for each Yeoman liable to serve abroad, I will enter this sum in the estimates I have framed, instead of the 3*l.* grant which I originally recommended.

ALFRED G. LUCAS.

We, the undersigned Members of the Committee, beg respectfully to differ from our colleagues on various points which are referred to in the Report under the following headings. We also state the reasons for our difference of opinion :—

TITLE. (Page 4, para. 1.)

1. While the Committee recommend, in effect, that the Yeomanry should be armed and trained as Mounted Riflemen (paras. 6 and 7), it lays stress upon retaining the title “Cavalry” (para. 1) ; and three out of the six Yeomanry Members of the Committee present a Minority Report in favour of retaining the arming and training of the Yeomanry as Cavalry.

It is possible that the arms and drill of Cavalry may be considerably modified in the future, but the Committee can only deal with things as they are and speak of

the Cavalry as it is, viz., a force trained to consider its principal arm the *arme blanche*, either sword or lance. In our opinion it would not be possible to train Yeomanry in the limited time available so as to be proficient both in the use of the *arme blanche* and the rifle; and as proficiency in rifle shooting is of paramount importance for such a force as the Yeomanry, any temporizing with the *arme blanche* would render the force less efficient for practical purposes. We therefore consider that the word "Cavalry" should be omitted from the title, and the force be known as "Imperial Yeomanry," subject to Her Majesty's approval.

DRESS. (Page 6, para. 8.)

2. In our opinion the recommendations of the Committee as to dress are unsatisfactory, and do not recognize the necessary change consequent upon developing the force as Mounted Riflemen, nor the great expense incurred by Officers in providing themselves with the costly uniforms now worn, which must obviously militate against any large increase of the force.

As the Yeomanry only go out for a few days' training a year, we consider it superfluous for them to have two classes of uniform, one uniform only being in our opinion sufficient. We therefore recommend that regiments of Yeomanry should submit, through their Commanding Officers, to the military authorities, a uniform for their regiments, which should be suitable in pattern and colour for modern conditions of war, smart in appearance and inexpensive, and bearing such distinguishing regimental marks as are compatible with the above conditions.

TRAINING. (Page 7, para. 11.)

3. The Report (para. 11) leaves the question of training in camp so far an open one, in that it does not recommend a compulsory order that regiments should always go into camp; we hold that training in camp is absolutely necessary for the efficiency of the force, and has the further advantage of being less expensive for Officers and men. We therefore recommend it should be made compulsory.

PERIOD OF TRAINING. (Page 7, para. 12.)

4. We think that the length of training is intimately bound up with any considerable increase of the Yeomanry, which increase must to a great extent come from classes hitherto not largely represented in it, i.e., the salary and wage-earning classes. We therefore recommend that the business obligations of these classes should be specially considered, and that the compulsory training—apart from musketry, which can be done at the man's convenience—should be of short duration, not exceeding a week for a Yeoman who has passed satisfactorily his recruit's course, is a good shot, physically sound, and a fair rider. Voluntary training for a further period of seven days could be open to all.

FOREIGN SERVICE. (Page 12, para. 23 (a)).

5. With regard to foreign service Yeomen, we consider that it would be impossible to ask salary and wage earners to go out for training with the Yeomanry the same year as they train with Regulars. We therefore recommend that in the year that a man is required to undergo his training with the Regulars, his attendance at the training of his Yeomanry should be voluntary.

We are in agreement with the remainder of the Report of the Committee.

LIGHT RAILWAYS ACT, 1896.

BRIDLINGTON AND NORTH FRODINGHAM (EXTENSION OF TIME) ORDER 1901.

ORDER

Amending the Bridlington and North Frodingham Light Railway Order 1898.

Preamble. WHEREAS by the Bridlington and North Frodingham Light Railway Order 1898 (hereinafter referred to as "the Order of 1898") the Bridlington and North Frodingham Light Railway Company (hereinafter referred to as "the Company") were incorporated and authorised to construct a light railway in the East Riding of the County of York from Carnaby Station to North Frodingham AND WHEREAS it was provided by the Order of 1898 that the powers of the Company for the compulsory purchase of lands for the purposes of that Order should cease after the 14th day of July 1901 and also that if the said railway were not completed before the 14th day of July 1903 or such extended time as the Board of Trade might approve then on the expiration of that period the powers of the Company for making and completing the same or otherwise in relation thereto (except as to so much thereof as might be then completed) should cease AND WHEREAS an application was in November 1900 duly made to the Light Railway Commissioners by the Company for an Order extending the respective times limited as aforesaid by the Order of 1898 for the compulsory purchase of lands and for the completion of the railway NOW we the Light Railway Commissioners being satisfied of the expediency of granting the said application do in pursuance of the Light Railways Act 1896 and by virtue and in exercise of the powers thereby vested in and of every other power enabling us in this behalf ORDER as follows :—

Short title. 1. This Order may be cited as "The Bridlington and North Frodingham Light Railway (Extension of Time) Order 1901" and shall come into force on the date on which it is confirmed by the Board of Trade.

Incorporation of general Act. 2. Part II. (Extension of Time) of the Railways Clauses Act 1863 is hereby incorporated with this Order.

Amendment of Order of 1898. 3.—(1) Section 14 of the Order of 1898 (Period for compulsory purchase of lands) shall be read and have effect as if the period of five years had been named therein instead of three years.

(2) Section 20 of the Order of 1898 (Period for completion of works) shall be read and have effect as if the period of seven years had been named therein instead of five years.

(3) If the Company purchase or acquire any house or houses under the powers of the Order of 1898 in contravention of the provisions of Section 18 thereof they shall be liable to a penalty of five hundred pounds in respect of every such house which penalty shall be recoverable by the Local Government Board by action in the High Court and

Bridlington and North Frodingham Light Railway (Extension of Time) Order, 1901. 5

shall be carried to and form part of the Consolidated Fund of the United Kingdom: Provided that the Court may if it think fit reduce such penalty. For the purposes of the said Section 18 the expression "house" means any house or part of a house occupied as a separate dwelling.

4. All costs charges and expenses of and incident to the preparing making and confirmation of this Order or otherwise in relation thereto shall be paid by the Company. Costs of Order.

This Order made by the Light Railway Commissioners is hereby confirmed in pursuance of the provisions of Section 10 of the Light Railways Act, 1896.

Given under the Seal of the Board of Trade this Sixteenth day of July One thousand nine hundred and one.

G. W. BALFOUR,
President.

T. W. P. BLOMEFIELD,
Assistant Secretary.
